Corporate Oversight Division
P.O. Box 30736
Lansing, MI 48909
(517) 335-7632

# ATTORNEY GENERAL'S COMPLAINT FOR INJUNCTIVE RELIEF AND CIVIL FINES

Attorney General Dana Nessel, by and through Assistant Attorneys General Ashlee N. Lynn and Darrin F. Fowler, brings this Complaint for Injunctive Relief and Civil Fines and states as follows:

### I. Introduction

- 1. "A puppy mill is an inhumane high-volume dog breeding facility that churns out puppies for profit, ignoring the needs of the pups and their mothers. Dogs from puppy mills are often sick and unsocialized."
- 2. A puppy mill is different from a legitimate and responsible licensed breeding operation. Puppy mills do not follow the law and have a high disregard for the health and safety of the animals. All they are concerned about is making the most money with the least amount of due care for the animals.
- 3. Paul Steury runs a puppy mill. He has sold sick puppies and dogs that were raised in an unclean and ill-kept environment. When he had some pups that reached an age where he believed they had no salable value, he shot them. He has shown disregard both for consumers and the animals he sells. Through this lawsuit the Attorney General asks the Court to shut down this puppy mill.

### II. Parties and Venue

4. Attorney General Dana Nessel brings this civil action on behalf of the People of the State of Michigan and is authorized to bring this action

<sup>&</sup>lt;sup>1</sup> https://www.humanesociety.org/all-our-fights/stopping-puppy-mills

- under MCL 445.905. The Attorney General may obtain injunctive relief, actual damages, and other appropriate relief under the Michigan Consumer Protection Act (MCPA), MCL 445.901 et seq.
- 5. The Defendant is Paul Steury, an individual who runs a puppy mill. He owns the property where the dogs are bred and housed, runs the day-to-day operations, and he is directly involved with the selling of the animals. Within this Complaint, the Defendant shall be referred to as "Steury."
- Steury's puppy mill is not a registered business entity with the State of Michigan and so this suit is being brought against him in his personal capacity.
- 7. Steury's principal place of business is in Hillsdale County, located at 5900 West Burt Road, Camden, MI, 49232. Thus, this Court is an appropriate venue in which to file this Complaint.

### III. Background

8. In 2019, the Attorney General's office received three complaints against
Steury from consumers through the Humane Society of the United States,
and received one complaint that was filed with the Monroe County
Sheriff's Office by employees of the Monroe Society for the Prevention of
Cruelty to Animals. (Monroe SPCA). The complaints all related to the
selling of dogs to consumers in Michigan. The complaints alleged that
Steury and Peter Miller were selling dogs that were sick, providing
falsified documentation regarding breed, age, health, and vaccination

- history, breeding the dogs without obtaining the proper license, and also selling dogs to pet stores without obtaining the proper license. Within this Complaint, Peter Miller shall be referred to as "Miller."
- 9. Due to the troubling nature of the allegations, the Attorney General began informally gathering information about Steury and Miller.
- 10. An affidavit was obtained from Katrina Stillwagon, the president of the Monroe SPCA, who had previously filed a complaint with the Monroe County Sheriff's Office. (See Katrina Stillwagon's Affidavit, attached as Exhibit 1.) Within this Complaint, Katrina Stillwagon shall be referred to as "Stillwagon."
- 11. This prompted the Attorney General to file an *Ex Parte* Petition for Civil Investigative Subpoenas in the Hillsdale County Circuit Court, which was assigned docket number 19-728-CZ. Upon finding that probable cause existed, this Court authorized the issuance of civil investigative subpoenas and the Attorney General commenced an official investigation of Steury and Miller. The Attorney General also sent a Notice of Intended Action to both Steury and Miller advising them to cease and desist their unlawful business practices.
- 12. The Attorney General issued investigative subpoenas to Steury and Miller. On October 16, 2019, Miller and Steury complied with the subpoenas that were issued. Both appeared at the Attorney General's Office

- for investigative testimony and provided relevant business records in their possession.
- 13. Through the investigation, the Attorney General determined that Miller's role in the puppy mill operation was minimal. The investigation reveals that Miller involvement was to drive Steury to meet with consumers and pet stores that were interested in purchasing Steury's dogs. Due to the rather small role of Miller, the Attorney General has a tentative agreement with Miller whereby he agreed to pay a civil fine in the amount of \$250.00 and to no longer drive or deliver any goods for any animal operation. Therefore, Miller is not a named Defendant in this Complaint.
- 14. The investigation is now complete. The Attorney General found sufficient evidence to conclude that Steury was engaged in the unfair trade practices described in the *Ex Parte* Petition.
- 15. As elaborated below, the Attorney General has probable cause to believe that Steury has engaged in patterns of misconduct constituting violations of multiple provisions of the MCPA. In numerous instances, evidence suggests Steury sold dogs that were sick and provided falsified documentation regarding health and vaccination history. Also, Steury sold dogs to pet stores and has bred dogs, all without the requisite licenses to do so.
- 16. As documented through consumer complaints, affidavits, testimony, and records obtained under the investigative subpoenas, Steury has engaged

in the following unfair and deceptive trade practices that are prohibited under the MCPA:

- (e) Representing that goods or services are of a particular standard, quality, or grade, or that goods are of a particular style or model, if they are of another.
- (s) Failing to reveal a material fact, the omission of which tends to mislead or deceive the consumer, and which fact could not reasonably be known by the consumer.
- (bb) Making a representation of fact or statement of fact material to the transaction such that a person reasonably believes the represented or suggested state of affairs to be other than it actually is.
- (cc) Failing to reveal facts that are material to the transaction in light of representations of fact made in a positive manner.

[MCL 445.903(1)].

### IV. Factual Allegations

## A. Selling sick puppies and providing falsified health records to consumers

- 17. On February 15, 2019, Steury approached Stillwagon in the parking lot of the Monroe SPCA Adoption Center and Retail Store located at 293 W. Monroe Street, Dundee, MI 48131. (Exhibit 1.)
- 18. Steury was selling five puppies out of the back of Miller's vehicle. The puppies were being held in a filthy, rabbit-style cage and smelled of feces and urine. One puppy in particular seemed to have some neurological issues, however Steury told Stillwagon that one was not for sale. (*Id.*)
- 19. Stillwagon set up a time to purchase the five puppies the next day, for \$275.00 each. Stillwagon bought all five puppies and took them to the

- Allegan Veterinary Clinic. All five puppies tested positive for Giardia and other health issues. (See Exhibits 1 and 1A.)
- 20. Steury provided individual health records for each puppy. (See Exhibit 1B.) As the veterinarian at the Allegan Veterinary Clinic examined each puppy, she found that the health records were most likely false and that these puppies were not healthy, and possibly had not been vaccinated, as the health records had indicated.
- 21. In March of 2019, Steury contacted Stillwagon proposing the sale of seven more puppies. On March 22, 2019 Stillwagon met with Steury at the Monroe SPCA and purchased all seven puppies for \$2,000.00. The puppies were again in small, filthy, wire cages and smelled of urine and feces. Steury gave Stillwagon health records for each puppy. (Exhibit A.)
- 22. All seven puppies were taken to the Monroe Veterinary Clinic and examined by Dr. Bhupinder Pelia. All seven puppies tested positive for Giardia and appeared to be malnourished. (See Exhibits 1, 1D, 1E and 1F.) The veterinarian determined that these puppies were not healthy, and possibly had not been vaccinated, as the health records supplied by Steury had indicated.
- 23. As she was attending the veterinarian examination Steury called
  Stillwagon about another puppy for sale with some eye issues. Stillwagon
  met with Steury later that day and Steury said he had been using
  Cannabidiol 125 on this puppy's eyes. Steury did not provide any health

- records to Stillwagon regarding this puppy. A vision test was done on the puppy and the veterinarian determined that his eyes most likely had been damaged due to a non-veterinary prescribed treatment, possibly the Cannabidiol 125. (See Exhibits 1, 1G and 1H.)
- 24. On April 11, 2019 Stillwagon met with Steury again to purchase three more puppies. Again, the puppies were kept in the back of the van in small, filthy cages, smelling like urine and feces. Steury gave Stillwagon health records for the three puppies. (Exhibit 1.)
- 25. Stillwagon took the puppies to the Monroe Veterinary Clinic where they were examined by Dr. Bhupinder Pelia, who found that all three puppies tested positive for Guardia. (See Exhibits 1, 1J and 1K.) The veterinarian determined that the individual health records provided by Steury were likely false and that these puppies were not healthy, and possibly had not been vaccinated, as the health records had indicated.
- 26. On July 18, 2019 Steury invited Stillwagon to his property to purchase sixteen dogs. While on the property, Steury told Stillwagon that his two sons lived nearby and housed even more of his dogs. (Exhibit 1.)
- 27. Stillwagon purchased all sixteen dogs. The Michigan Humane Society took five of the dogs and Stillwagon took the remaining eleven to the Monroe Veterinary Clinic. Dr. Bhupinder Pelia examined the dogs and found that many of them tested positive for Giardia, Coccidia, and other health problems. (See Exhibits 1,1L and 1M.)

- 28. In only a six-month period, twenty-one out of the twenty-five puppies that Steury sold to Stillwagon, tested positive for Giardia. During the same period of time, Steury was selling other puppies directly to consumers, as well as to pet stores for later sale to consumers. Upon information and belief, since these puppies were raised under the same conditions as those sold to Stillwagon, there is a reasonable likelihood those puppies were also unhealthy.
- 29. Additionally, Stillwagon was concerned that the dogs had not been vaccinated, as the health records had indicated. (Exhibit 1.)
- 30. Certain vaccinations must be refrigerated in order to maintain effectiveness. Steury testified that he has not been maintaining the temperature where the vaccinations are stored; therefore, the vaccinations that he claims to give the puppies in his care could be ineffective. (See Steury Transcript, attached as Exhibit 2, p 35.)
- 31. Steury testified that he maintains his own vaccination records by handwriting them down in a logbook. (Exhibit 2, p 42.) However, he confirmed that it has only been since he has become a licensed breeder that he has developed a system to ensure each individual puppy has, in fact, been vaccinated. (*Id.*)
- 32. Stillwagon did not initially receive any individual health records for the dogs she purchased on July 18, 2019. However, after Stillwagon requested them from Steury, Miller dropped off fifteen individual health records to

Stillwagon at the Monroe SPCA. Each record included a specific schedule for different vaccinations, but no name or breed were listed, meaning that these health records were not pertaining to any specific dog. (See Exhibits 1 and 1N.) When asked about these records Steury indicated that even though there were no names or identifying features of a particular dog listed on the health records he knew that the vaccination records were correct because, "I do every puppy and every dog." (Exhibit 2, p 43.) Steury admitted that adult dogs would have a different vaccination record than the puppies. (Exhibit 2, pp 43-44.) Therefore, the health records here should have been varied due to the fact that the fifteen dogs purchased in this instance were not all puppies, and as such they would not have had the same vaccination schedule. Steury was unable to articulate why all fifteen health records were the same. Furthermore, Steury was unable to recall which dogs he sold to Stillwagon when he provided the health records to her, which is indicative of the fact that Steury is providing health records to consumers without knowing or verifying that they are accurate.

33. Steury testified that he does not always provide health records to consumers, and does so only when he is asked for them specifically.(Exhibit 2, p 20.) Upon information and belief, upon receiving such requests Steury has fabricated health records based on his assumptions.

34. In the state of Michigan, a dog that is four months old or older must have the rabies vaccination. MCL § 287.266. Steury testified that he just now started to administer rabies vaccinations for his dogs and that he was not aware of this requirement prior to becoming a licensed breeder with the Department of Agriculture and Rural Development (MDARD). (Exhibit 2, p 32.) Therefore, the puppies that Steury has been selling to consumers have been bred from unvaccinated adult dogs.

### B. Not acquiring the proper licenses

- 35. In Michigan a large-scale dog breeding kennel license is required when you have 15 or more dogs that are being used for breeding purposes. MCL 287.339(d). Additionally, a breeder must have a license in order to sell directly to a pet store. 9 CFR §2.1(a)(1). Therefore, Steury was required to obtain a license through the MDARD to breed his dogs and also through the United States Department of Agriculture in order to sell his dogs to pet stores.
- 36. Steury indicated to Stillwagon that he was selling his dogs to pet stores in the general area. Stillwagon specifically went to one of the pet stores and saw a puppy that she knew Steury previously had in his possession.

  (Exhibit 1.)
- 37. Steury testified that he sold dogs to a pet store in the area several times.

  (Exhibit 2, p 21.) Steury also admitted that he did not have the requisite license through the United States Department of Agriculture to sell

- animals to pet stores at the time of the transactions. (*Id* at 22.) Therefore, Steury was not acting in compliance with the law.
- 38. Steury testified that he had received his license to breed dogs through the State of Michigan the day before providing that testimony. The Michigan Department of Agriculture and Rural Development issued Steury that license on October 14, 2019. (Exhibit 2, pp 8-9.) Therefore, Steury did not have the requisite license to breed and sell animals to consumers at the time of the aforementioned transactions. When asked whether or not he had been following the regulations to operate a dog breeding kennel in the state of Michigan, Steury testified that he did not know what those regulations were prior to obtaining a license. (*Id* at p 10.)

### C. Violations of the Michigan Penal Code

39. The Attorney General learned of additional violations through the investigation that were unknown when it began. The investigation led to the discovery that Steury had shot six or seven dogs sometime at the end of 2017 or early 2018, due to the fact that he could not sell them. Steury testified that the dogs were about six months old, and confirmed they were not sick or injured. (Exhibit 2, pp 35-36; 49-50.) His admission is of conduct in direct violation of the Michigan Penal Code, Section 750.50b(2)(a). The statute indicates that a person cannot kill an animal without just cause.

- 40. Additionally, due to the unsanitary conditions that Steury had the animals living in prior to the state's involvement, and the lack of vaccinations and proper veterinary care, Steury is also in violation of the Michigan Penal Code, Section 750.50(2)(a), for failing to provide the dogs with adequate care. Adequate care is defined in the statute as, "sufficient food, water, shelter, sanitary conditions, exercise, and veterinary attention in order to maintain an animal in a state of good health." MCL 750.50(1)(a).
- 41. As stated in section IV(A) above, Steury did not provide proper vaccinations or veterinary care. Also, Steury admitted that his puppy mill has not always been clean. During his testimony he stated, "[t]hat was our goal, but we do organic produce and we get busy through the summer." (Exhibit 2, p 16.)
- 42. The unsanitary conditions were also observed by Stillwagon. When Stillwagon visited Steury's property she saw more than one hundred dogs being kept on the premises in filthy conditions, covered in feces and urine, some of which were housed outside with no protection from the elements. (Exhibit 1.)
- 43. After examining the dogs that Stillwagon bought that day it was Dr.

  Pelia's professional opinion that "the puppies were not kept in healthy or sanitary conditions." (See Exhibit 1M.)

### COUNT I-CLAIMS REGARDING THE CONDITION OF THE DOGS

- 44. The Attorney General incorporates paragraphs 1 through 43 above as though fully set forth here.
- 45. Steury's actions, as set forth in sections IV(A) and IV(B) above, are unfair trade practices under MCL 445.903(1)(e), (s), (bb), and (cc), through breeding and selling dogs that were sick, providing falsified documentation regarding health and vaccination history, selling the dogs to consumers without having a license, and breeding the dogs without having a license.
- 46. Steury's misconduct is a persistent and knowing violation of the MCPA.

  Under MCL 445.905 the Attorney General may also seek civil fines for persistent and knowing violations of the MCPA, as well as attorney fees.
- 47. For this Count, the Attorney General seeks civil fines and injunctive relief.

### COUNT II- PUBLIC NUISANCE

- 48. The Attorney General incorporates paragraphs 1 through 47 above as though fully set forth here.
- 49. Steury's admission of killing dogs simply because he could not sell them, as set forth in section IV(C) above, is an admission of conduct in direct violation of the Michigan Penal Code, Section 750.50b. The Attorney General has the power to enforce criminal statutes through civil litigation. This is done under the nuisance doctrine. See Attorney Gen. v. PowerPick

- Club, 287 Mich. App. 13, 32 (2010). Through Steury's violation of MCL 750.50b Steury engaged in activity constituting a common law nuisance.
- 50. Additionally, the condition of the dogs and the premises, as set forth in sections IV(A), IV(B), and IV(C) constitute violations of the Michigan Penal Code, Section 750.50(2)(a). This misconduct also constitutes a public nuisance.
- 51. The sale of dogs without having the requisite licenses, as set forth in section IV(B), constitutes violations of MCL 287.339(d) and 9 CFR §2.1(a)(1). This misconduct also constitutes a public nuisance.
- 52. For this Count, the Attorney General seeks only injunctive relief under MCR 3.310.

### RELIEF REQUESTED

Based upon the above allegations, the Attorney General requests that this Court enter an order granting the following relief under MCL 445.905 and MCR 3.310:

- A. Preliminary and permanent injunctions enjoining Steury from engaging in the unlawful conduct detailed throughout this Complaint;
- B. Preliminary and permanent injunctions enjoining Steury from owning or operating a dog breeding operation of any kind in the State of Michigan. Steury should be further enjoined from selling puppies and dogs to consumers in the State of Michigan, and from selling puppies and dogs to

pet stores or other third parties who intend to sell them to consumers in this State;

- C. A civil fine of \$25,000 for each violation that is determined to be persistent and knowing, as authorized by MCL 445.905(1);
- D. The Attorney General should be awarded her costs and attorney fees;
- E. Award such other relief as this Court deems just and appropriate.

Respectfully submitted,

DANA NESSEL
Attorney General

Ashlee N. Lynn (P78789) Assistant Attorney General Corporate Oversight Division

P.O. Box 30736 Lansing, MI 48909 (517) 335-7632

Date: December 19, 2019

### AFFIDAVIT OF KATRINA STILLWAGON

Katrina Stillwagon being first duly sworn, deposes and says as follows:

- 1. I am a Michigan resident and I am the President of the Monroe Society for the Prevention of Cruelty to Animals (SPCA).
- 2. On February 15, 2019 Monroe SPCA Vice President Tammy Bennett and I were approached by Paul Steury (Steury) and Steven Miller (Miller) in the parking lot of the Monroe SPCA, located at 293 W. Monroe Street, Dundee, MI 48131.
- 3. Steury indicated to me that they had puppies for sale in the back of their van and wanted to know if I would be interested in purchasing the puppies.
- 4. Miller stayed in the vehicle and Steury exited the vehicle and showed me the six (6) puppies that were for sale in the back of the van.
  - 5. All six (6) puppies were tightly huddled together in a small, filthy wire cage.
  - 6. I could immediately smell urine, vomit and feces when Steury opened the door and I observed that the puppies were shaking.
  - 7. One of the puppies, a Red Merle Aussie mix, seemed to be having motor/neurological problems. When asked about the puppy, Steury indicated he probably wouldn't sell that puppy.
  - 8. I discussed prices with Steury and set up a time to meet for the following day to purchase the puppies. I then exchanged phone numbers with Steury through Miller.

- 9. On February 16, 2019 Miller arrived without Steury at the Monroe SPCA with five (5) puppies. I tried to negotiate a lower price, which Miller told me he could not accept on behalf of Steury. I then bought the five (5) puppies from Miller for \$1,250.00.
- 10. The President of Luvnpupz, Carri Shipaila arrived at Monroe SPCA to help me transport the five (5) puppies to the Allegan Veterinary Clinic. Veterinary records have been included as Attachment A. For identification purposes, this group of puppies were named the "Backstreet Boys".
  - 11. All of the puppies tested positive for Giardia and a host of other issues.
- 12. I received individual health records for all five (5) puppies, included as Attachment B. The veterinarian could not verify that the puppies had actually been given the vaccinations that the health records indicated they had received and could not verify that the correct breed had been listed. The veterinarian did conclude that the ages of the puppies did not match the health records.
- 13. In March I was contacted by Steury regarding another potential sale of seven (7) puppies that were Newfoundland and Poodle mixes (Newfy-poes) that were 10-12 weeks of age. I negotiated a price for all seven (7) in the amount of \$2,000.00.
- 14. On Friday March 22, 2019 I met Steury and Miller at the Monroe SPCA to purchase the puppies. Carri Shipaila was also present, along with volunteer Rhonda Hannahs. The seven (7) puppies were in the back of the van,

again in filthy, wire cages, and also some plastic carriers. The cages/carriers were too small for the puppies; as they could not stand up or turn around easily, if at all.

- 15. I could immediately smell urine, feces and vomit when Steury opened the back door. The puppies were all huddled together, completely frozen and quiet. Steury ripped the puppies from the cages, injuring one in the process, and handed them to us. We brought them inside the Monroe SPCA to quarantine them. I paid \$2,000.00 for the seven (7) puppies. For identification purposes, these puppies are referred to as "The Millers".
- one with a young German Shepherd mix inside, with vomit dripping from his lips, visibly dirty and very still. The carrier was too small for this dog as I observed the dog hunched over, not being able to sit up straight. I later learned that there was also another puppy behind him in the small carrier. I offered to buy the German Shepherd mix puppy but was told by Miller, who stayed in the vehicle, that the three puppies in the van, (I could only see one), were already promised to someone in Ypsilanti. Steury then gave me the individual health records for all seven (7) puppies. The individual health records are included as Attachment C.
- 17. Steury closed the door of the vehicle and stated he had more puppies for sale and possibly some adult dogs as well. I tried to get as much information from him as possible regarding the breeds and health of the individual dogs. Steury tried to sell me a Red Stud Poodle for \$1,500.00 and as incentive he said he would

sell me a miniature Aussie for \$200.00. I said I was interested, and he said he would call me in a couple weeks.

- 18. All seven (7) puppies that I had just purchased were taken to the Monroe Veterinary Clinic and were examined by Dr. Bhupinder Pelia. All seven (7) puppies tested positive for Giardia infections and were malnourished. The initial veterinary records, updated veterinary records and a letter from the veterinarian are included as Attachments D, E and F. The veterinarian could not verify that the puppies had been given any vaccinations. The veterinarian did not review the individual health records for these puppies prior to examination.
- 19. During the veterinary exam of the seven (7) puppies I received a call from Steury asking if I was interested in buying an English Bulldog puppy that was previously being sold to someone in Ypsilanti. Steury said the sale fell through and he said that something was wrong with the dog's eyes. I told Steury that I would pay \$200.00 for the puppy and he agreed to the price. We met at the McDonald's in Dundee, Michigan and Steury yanked the puppy out of the filthy cage from the back of Miller's vehicle and held the puppy by her leg. The puppy was clearly in distress but Steury showed no emotion or reaction to the puppy's cries. I purchased the puppy and Steury continued to talk to me. He took a bottle out of his pocket that was labeled as Cannabidiol 125. Steury asked me if I planned on treating the puppy's eyes, and I said yes. Steury mentioned that he used the Cannabidiol 125 to treat this dog and it had helped. No health records were provided for this puppy, as Steury said he left them with someone else. I took the puppy to the Monroe

Veterinary Clinic. A vision test was done on the puppy and the veterinarian determined that her eyes most likely had been damaged due to a non-veterinary prescribed treatment, possibly the Cannabidiol 125. A letter from the veterinarian and the veterinary records are included as Attachments G and H.

20. Steury continued to call me offering other sales of different puppies and adult dogs. We scheduled a meeting for the sale of seven (7) puppies for April 11, 2019 at the Monroe SPCA. I negotiated a price for each of the puppies, however the day before the meeting Steury called me to tell me he only had three (3) puppies left, because he sold the other puppies to other individuals who were willing to pay a higher price. I met with Steury and Miller on April 11, 2019 at the Mohroe SPCA and Steury began unloading the three (3) puppies. I placed them into a quarantine pen and then paid Steury. This time Miller was driving a different vehicle, specifically a Chevrolet pickup truck, however the back-seat area of the cab smelled of urine and feces and the cages where the puppies were being held were dirty. Steury gave me the health records for the three (3) puppies and then he told me about other dogs that he had available for purchase. The individual health records are included as Attachment I. I asked him to call me later about the other dogs and he left the premises. Shortly thereafter the puppies were taken to the Monroe Veterinary Clinic and were examined by Dr. Bhupinder Pelia, who found that the three (3) puppies were positive for Giardia infections. The veterinary records and a letter from the veterinarian are included as Attachments J and K. For identification purposes, these puppies are known as "The Noodles."

- 21. The veterinarian could not verify that the puppies had actually been given the vaccinations that the health records indicated they had received and could not verify that the correct breed had been listed. On July 18, 2019 Steury invited me and two others to his property to look at and potentially buy several adult breeding dogs, as well as some puppies. I went to his property and was there for approximately two (2) hours. During that time, I observed more than one hundred (100) dogs on the premises.
- 22. While on the property, I observed that there were four (4) different areas where Steury kept the dogs. There was a "puppy building" which contained several pens where adult dogs were being held while nursing their pupples. A few of the pens contained only pupples. The temperature that day was already nearing ninety (90) degrees. The heat in this building was stifling and there was little to no air circulation. The stench of urine and feces was almost too strong to stomach. It was difficult to breathe and there were flies everywhere. The adult dogs in this building were visibly panting, some heavily. All the dogs were dirty and caked with urine and/or fecal matter. Some of the dogs were so heavily matted that I could not discern what breed they were. I was able to come back to this building by myself an hour or so later and I went to each pen to check on the puppies. When I touched them, they were listless and warm to the touch. Some of the dogs were restrained in their pens, and therefore I was unable to touch them.
- 23. The "breeding building" was attached to the puppy building and housed primarily adult dogs in pens, but one pen had at least five (5) puppies, one of

which seemed to be deceased, as it was not moving. I asked Steury about the puppy and he told me that all of the puppies in that particular pen were being treated for an illness and would not allow me to purchase the puppies nor was I allowed to pick them up. It was extremely hot in this building, the flies still plagued us and the dogs, and I could still smell urine and feces. A couple of the dogs being kept in this building seemed visibly afraid of us and seemed extremely anxious and distressed. It was traumatizing for me to witness the conditions of these dogs, as well as the manner in which they were being handled. I have been doing this work for more than twenty (20) years and this day still haunts me. One dog in particular had recently been shaved, however not with trimmers but rather it appeared it was done by hand with some kind of shears and he was extremely scared of us.

- 24. The next area was a fenced in outdoor yard that contained four (4) large young dogs. Steury said the dogs were Newfy-poos, approximately five (5) months old, and he was willing to sell us only one of them, as the others would be used for breeding soon. This outdoor area had no shelter for protection from the elements and had no water or food.
- 25. The last area was another fenced in outdoor yard that had more than six (6) large dogs, said by Steury to be purebred adult females, and four (4) of them were confirmed pregnant. This outdoor area also had no protection from the elements and no food or water. There were large, deep holes in the dirt in this area, presumably dug by the dogs, in which the dogs were laying. The dogs were all heavily panting and visibly distressed. One of the adult dogs had fresh wounds on

her face and muzzle, which appeared to be lacerations from some object rather than another dog. I indicated I was interested in purchasing this dog, however, Steury did not want to sell her as she was pregnant. Steury then indicated he was not willing to sell any of the pregnant dogs.

- 26. Steury told me that his two sons had more dogs on their properties, one of which is located right next door to Steury and from the road you can see buildings similar to the ones on Steury's property, with large kennels.
  - 27. I bought sixteen (16) dogs from Steury that day.
- 28. To note—when I arrived at Steury's home that day I observed a pony standing by the entrance, harnessed to a cart and secured to a hitching post. When I was leaving approximately two hours later, I saw that the pony was still in the exact same spot, and I did not see any food or water that the pony might have had access to and there was also no protection from the elements.
- 29. We transported the dogs to the Monroe Veterinary Clinic. The Michigan Human Society took possession of four (4) adult dogs and one (1) puppy. Dr. Bhupinder Pelia examined the eleven (11) remaining dogs and found that many tested positive for Giardia, Coccidia, and other health problems. The veterinary records and a letter from the veterinarian are included at Attachments L and M.
- 30. At that time I did not receive any individual health records from Steury for these dogs. However, I reached out to Steury and told him I needed the health records and on September 21, 2019 Miller dropped off fifteen (15) individual health records in the Monroe SPCA mailbox. Each individual health record

listed for any of the records. The individual health records are included as

Attachment N. Therefore, I was given documentation of vaccinations for fifteen

(15) dogs, however they were not specific to any dog. This furthers my belief that

Steury is not vaccinating the dogs and is fabricating health records.

- 31. Steury and Miller called me over a dozen times on September 23, 2019. When I finally answered the phone Steury told me that he was desperately trying to move most of the dogs that he owned. He said that a deputy from the Hillsdale County Sheriff's Office came out to his home a week prior and told him he needed to decrease the number of dogs that he had on his property. The deputy then told Steury that he would be back in a week or so to check on his progress. Steury then asked if I could take eighteen (18) dogs from him. I told him that I couldn't pay for them at this time and Steury said that he didn't care and that he just needed them gone for now. Steury then told me that any dogs he couldn't get rid of by the end of the next day he would move to his son-in-law's property.
- 32. It is my strong belief that Steury is selling these dogs to the public without regard to their health, and in some cases knowing them to be in poor health. Based on my conversations with Steury, he is aware of the licensing and regulatory requirements, and well as the health requirements for commercial breeders, but does not care that he is not in compliance with those requirements. In regard to overall care and selling of the dogs he told me that "he isn't as bad as

some of his friends" and said he hasn't gotten licensed because he "hasn't gotten around to it yet."

- 33. I personally know that Steury is selling his dogs directly to pet stores. Not only did Steury tell me this, I also went to one of the pet stores he had mentioned (Pet City Pets in Ypsilanti, Michigan) and saw and handled dogs that I know were previously in Steury's possession. Also, the Monroe SPCA building where I met with Steury and Miller used to be a pet store, and the sign on the building still says "Gator's Pet Supplies" from the previous owner. Miller and Steury may have assumed that we were also a pet store operating out of that location.
- 34. To my knowledge Steury is not USDA certified to sell puppies to pet stores and does not have a breeding license. It is my understanding that Steury previously had a USDA license to breed English Bulldogs in 2009, therefore he knows that he is violating the law.
- 35. I filed a complaint with the Monroe County Sheriff's Office. A copy of this complaint is included as Attachment O.
- 36. I have personal knowledge of the facts stated in this affidavit and will testify about them if called upon to do so.

FURTHER, AFFIANT SAYTH NOT.

Canine Distemper

Transmitted by direct or indirect contact with the discharges from an infected dog's eyes, pose or urine. Widespread, highly contaglous and usually deadly, even among older dogs. A primary killer of puppies.

Canine Adenovirus Type 1 & 2

Hepatitis is caused by Adenovirus type-1 and attacks the liver. Transmitted through contact with objects contaminated by urine, saliva and feces. Early signs are similar to distemper. Adenovirus type-2 is a respiratory infection that may be associated with kennel cough.

Canine Parainfluenza

Mild respiratory tract infection transmitted through contact with nasal secretions. Infection is more severe in young puppies.

Canine Parvovirus

Highly resistant virus with stands extreme temperature changes and exposure to most disinfedants. May cause severe diarrhea and vomiting. A highly contadious disease and especially dangerous for

Canine Coronavirus

A highly contagious, but faild and self-limiting intestinal disease that occasionally will cause death. Causes vomiting and diarrhea in dogs of all ages, but is seen most often in young puppies.

Canine Leptospirosis
Lepto is an infectious bacterial disease transmitted by contact with infected urine from roderits and other animals. Can be spread to humans as well as other animals and may cause permanent kidney damage. Recommended to use a vaccine with four serovars.

#### Canine Bordetella Bronchiseptica

(Kennel Cough)

A bacterial respiratory tract infection transmitted by nasal and oral secretions. Harsh, non-productive cough may last 1-3 weeks. Bordetella infections can occur alone or in combination with other respiratory problems.

Canine Borreliosis (Lyme Disease)
Bacterial infection spread by a bite from an infected tick. Symptoms include fever, lethargy and muscle stiffness. Lameness can occur in more severe cases.

#### Rabies

The most feared disease and is almost always fatal. Attacks the brain and central nervous system. Transmitted to humans through a bite or scratch by an infected animal.

Canine Distemper

Transmitted by direct or indirect contact with the discharges from an infected dog's eyes, nose or urine. Widespread, highly contagious and usually deadly, even among older dogs. A primary killer of puppies.

Canine Adenovirus Type 1 & 2
Hepatitis is caused by Adenovirus type-1 and attacks the liver. Transmitted through contact with objects contaminated by urine, saliva and fecas. Early signs are similar to distemper. Adenovirus type-2 is a respiratory infection that may be associated with kennel cough.

Canine Parainfluenza

Mild respiratory tract infection transmitted through contact with nasal secretions. Infection is more severe in young puppies.

Canine Parvovirus

Highly resistant virus withstands extreme temperature changes and exposure to most disinfectants. May cause severe diarrhea and vomiting. A highly contagious disease and especially dangerous for

Canine Coronavirus

A highly contagious, but mild and self-limiting intestinal disease that occasionally will cause death. Causes vomiting and diarrhea in dogs of all ages, but is seen most often in young puppies.

Canine Leptospirosis

Lepto is an infectious bacterial disease transmitted by contact with infected urine from rodents and other animals. Can be spread to humans as well as other animals and may cause permanent kidney damage. Recommended to use a vaccine with four serovars.

#### Canine Bordetella Bronchiseptica

(Kennel Cough)
A bacterial respiratory tract infection transmitted by nasal and oral secretions. Harsh, non-productive cough may last 1-3 weeks. Bordetella infections can occur alone or in combination with other respiratory problems.

Canine Borreliosis (Lyme Disease)
Bacterial infection spread by a bite from an infected tick. Symptoms include fever, lethargy and muscle stiffness. Lameness can occur in more severe cases.

Rabies

The most feared disease and is almost always fatal. Attacks the brain and central nervous system. Transmitted to humans through a bite or scratch by an infected animal

03/22/2019

To whom it may concern,

This letter is prepared on behalf of Monroe SPCA regarding the condition of seven puppies I examined on this date.

Physical examination revealed all of the puppies were mildly dehydrated and smeared in feces and mud.

Mifflin (#252) – Female, presented with bilateral nasal discharge, raspy lung sounds, and is suspected to have an upper respiratory tract infection.

Newberry (#253) - Female, presented with bilateral ear infection.

Lancaster (#249) - Male, presented with bilateral infection and is also potbellied.

All of the puppies brought to the clinic for examination tested positive for Giardia.

If you have any questions or concerns please feel free to call our office at (734) 241-2525.

Sincerely,

The Doctors and Staff of Monroe Veterinary Clinic

04/16/2019

Sincerely,

To whom it may concern,

This letter is prepared on behalf of Monroe SPCA regarding the condition of Geauga, 6 week old English Bulldog mix that I examined on this date.

The puppy has dry/inflamed skin and bilateral corneal opacity. The Veterinarian was unable to visualize the fundus and the tear production test was subnormal. The puppy was vaccinated with distemper vaccine and treated with cyclosporine ophthalmic drops for eyes. It was recommended to start her on artificial tear drops.

If you have any questions or concerns please contact our office at (734) 241-2525.

# **VACCINATE FOR THESE** ANINE DISEASES

lanine Distemper

ansmitted by direct or indirect contact with the discharges from an fected dog's eyes, nose or urine. Widespread, highly contagious and sually deadly, even among older dogs. A primary killer of puppies.

Zanine Adenovirus Type 1 & 2 lepatits is caused by Adenovirus type 1 and attacks the liver. ransmitted through contact with objects contaminated by urine, aliva and feces. Early signs are similar to distemper. Adenovirus type-I is a respiratory infection that may be associated with kennel cough.

Canine Parainfluenza

Alld respiratory tract infection transmitted through contact with nasal secretions. Infection is more severe in young puppies.

Canine Parvovirus

Highly resistant virus withstands extreme temperature changes and exposure to most disinfectants. May cause severe diarrhea and vorniting. A highly contagious disease and especially dangerous for puppies.

Canine Coronavirus

A highly contagious, but mild and self-limiting intestinal disease that occasionally will cause death. Causes vomiting and diarrhes in dogs of all ages, but is seen most often in young puppies.

Canine Leptospirosis

Lepto is an infectious bacterial disease transmitted by contact with infected urine from rodents and other animals. Can be spread to humans as well as other animals and may cause permanent kidney damage. Recommended to use a vaccine with four seroyars.

Canine Bordetella Bronchiseptica

(Kennel Cough)

A bacterial respiratory tract infection transmitted by nasal and oral secretions. Harsh, non-productive cough may last 1-3 weeks. Bordetella infections can occur alone or in combination with other respiratory problems.

Canine Borreliosis (Lyme Disease)

Bacterial infection spread by a bite from an infected tick. Symptoms include fever, lethergy and muscle stiffness. Lameness can occur in more severe cases.

The most feared disease and is almost always fatal. Attacks the brain and central nervous system. Transmitted to humans through a bite or scratch by an infected animal.

Flighly resistant virus withstands extreme temperature changes and exposure to most diskrifectants. Way cause severe diarrhea and vomiting. A highly contagious disease and especially dangerous for

Canine Coronavirus

A highly contagious, but mild and self-limiting intestinal disease that occasionally will cause death. Causes vomiting and diarrhea in dogs of all ages, but is seen most often in young pupplies.

Cantine Leptospirosis
Lepto is an infectious bacterial disease transmitted by contact with infected urine from rodents and other animals. Can be spread to humans as well as other animals and may cause permanent lociney damage. Recommended to use a vaccine with four serovars.

Canine Bordetella Bronchiseptica

(Kennel Cough)

A bacterial respiratory tract infection transmitted by nesal and oral secretions. Harsh, non-productive cough may last 1-3 weeks. Bordetella infections can occur alone or in combination with other respiratory problems.

Canine Borreliosis (Lyme Disease)

Bacterial infection spread by a bite from an infected tick. Symptoms include fever, lethargy and muscle stiffness. Lameness can occur in more severe cases.

The most feared disease and is almost always fatal. Attacks the brain and central nervous system. Transmitted to humans through a bite or scratch by an infected animal.

For healthy ears, the you should clean the ears at least once a week. For infected ears, the ears need to be cleaned every other day. Clean the ears thoroughly with ear cleaning solution prior to instilling medications. Fill up the ear canal with ear cleaning solution until the solution is overflowing. Then, massage the base of the ear. Let the pet shake its head. With a cotton swab, clean the debris that is visible in the ear. After 15 to 30 minutes (after ear cleaning solution is dry), apply medication as directed on the ear medication label. Generally, we need to use the ear medication twice a day and the ear cleaning is done once every other day. If there is no improvement in 2-3 days or if the condition worsens, notify the hospital for additional medication(s) and/or treatment(s). Use the ear medication(s) and solution as recommended until the pet is seen for the recheck.

John J. Black, D.V.M. Bhupinder Pelia, D.V.M. Deepinder Singh, D.V.M.

04/11/2019

To whom it may concern,

This letter is prepared on behalf of Monroe SPCA regarding the condition of three puppies I examined on this date.

The physical examination revealed that all three puppies were covered in fecal matter.

Orzo (#263) is an intact male who presented with bilateral aural discharge. Ear cytology revealed a yeast infection.

Ziti (#264) is an intact male who presented with weakness in the rear legs.

Rigatoni (#265) is an intact male who presented with no obvious signs of illness or injury.

All of the puppies brought to the clinic for examination tested positive for Giardia.

If you have any questions or concerns please contact our office at (734) 241-2525.

Sincerely,

The Doctors and Staff at Monroe Veterinary Clinic

Elpade Sphilip

	b Degree of bane marrow response (reticulocytes K/UL); N11d 110-150 Noderate 150-800 Marked >800
• -	View the VetConnect Plus Differentials for additional information.
CHEMISTRY	c SDMA IS WITHIN THE REFERENCE INTERVAL AND CREATININE IS LOW which indicates kidney function is likely good. Evaluate a complete urinalysis and confirm there is no other evidence of kidney disease.
ļ	d Index of N, 1+, 2+ exhibits no eignificant effect on ehemistry values.
	a Index of N, 1+, 2+ exhibits no significant effect on chemistry values.
ENDOCHINOLOBY	f Dogs with no clinical migns of hypothyroidism and results within the reference interval are likely suthyroid. For dogs on thyroid supplement, recommended therapoutic levels are 2.1-5.4 ug/dL.

## TO WHOM IT MAY CONCERN,

On July 18<sup>th</sup>, I examined 10 puppies and 1 male adult dog. Most of the puppies were in the BCS range 2-3. Their hair coat was smeared with feces and urine. They had overgrown nails and were infested with fleas. Out of ten puppies, six tested positive for giardia and three tested positive for coccidia. A blood test was ran on Puppy "305", the test revealed the puppy was anemic and hypoproteinemia. This is indicative of malnutrition and parasitic infestation. Puppy "304" had bilateral mucoid ocular discharge which was treated with Ofloxacin. All of the puppies were treated with Albon for coccidia and Flagyl for giardia. We recommended flea treatment and grooming for all. In my professional opinion the puppies were not kept in healthy or sanitary conditions.

# VACCINATE FOR THESE CANINE DISEASES

Canine Distemper

Transmitted by direct or indirect contact with the discharges from an infected dog's eyes, nose or urine. Widespread, highly contagious and usually deadly, even among older dogs, A primary killer of puppies.

Canine Adenovirus Type 1 & 2

Hepatitis is caused by Adenovirus type-1 and attacks the liver.

Transmitted through contact with objects contaminated by urine, saliva and feces. Early signs are similar to distemper. Adenovirus type-2 is a respiratory infection that may be associated with kennel cough.

#### Canine Parainfluenza

Mild respiratory tract infection transmitted through contact with nasal secretions. Infection is more severe in young pupples. ...

#### Canine Parvovirus

Highly resistant virus withstands extreme temperature changes and exposure to most disinfectants. May cause severe diarrhea and vomiting. A highly contagious disease and especially dangerous for pupples.

## Canine Coronavirus

A highly contagious, but mild and self-limiting intestinal disease that occasionally will cause death. Causes vomiting and diarrhea in dogs of all ages, but is seen most often in young puppies.

Canine Leptospirosis

Lepto is an infectious bacterial disease transmitted by contact with infected urine from rodents and other animals. Can be spread to humans as well as other animals and may cause permanent kidney damage. Recommended to use a vaccine with four serovars.

Canine Bordetella Bronchiseptica

(Kennel Cough)

A bacterial respiratory tract infection transmitted by nasal and oral secretions. Harsh, non-productive cough may last 1-3 weeks. Bordetella infections can occur alone or in combination with other respiratory problems.

Canine Borrellosis (Lyme Disease)

Bacterial infection spread by a bite from an infected tick. Symptoms include fever, lethargy and muscle stiffness. Lameness can occur in more severe cases.

#### Rahles

The most feared disease and is almost always fatal. Attacks the brain and central nervous system. Transmitted to humans through a bite or scratch by an infected animal.

### VACCINATE FOR THESE CANINE DISEASES

Canine Distemper

Transmitted by direct or indirect contact with the discharges from an infected dog's eyes, nose or urine. Widespread, highly contagious and usually deadly, even among older dogs. A primary killer of puppies.

Canine Adenovirus Type 1 & 2

Hepatitis is caused by Adenovirus type-1 and attacks the liver.

Transmitted through contact with objects contaminated by urine, saliva and feces. Early signs are similar to distemper. Adenovirus type-2 is a respiratory infection that may be associated with kennel cough.

Canine Parainfluenza

Mild respiratory tract infection transmitted through contact with nasal secretions. Infection is more severe in young pupplies.

Canine Parvovirus

Highly resistant virus withstands extreme temperature changes and exposure to most disinfectants. May cause severe diarrhea and vomiting. A highly contagious disease and especially dangerous for puppies.

Canine Coronavirus

A highly contagious, but mild and self-limiting intestinal disease that occasionally will cause death. Causes vomiting and diarrhea in dogs of all ages, but is seen most often in young puppies.

Canine Leptospirosis

Lepto is an infectious bacterial disease transmitted by contact with infected urine from rodents and other animals. Can be spread to humans as well as other animals and may cause permanent kidney damage. Recommended to use a vaccine with four serovars.

Canine Bordetella Bronchiseptica

(Kennel Cough)

A bacterial respiratory tract infection transmitted by nasal and oral secretions. Harsh, non-productive cough may last 1-3 weeks. Bordetella infections can occur alone or in combination with other respiratory problems.

Canine Borreliosis (Lyme Disease)

Bacterial infection spread by a bite from an infected tick. Symptoms include fever, lethargy and muscle stiffness. Lameness can occur in more severe cases.

#### Rabies

The most feared disease and is almost always fatal. Attacks the brain and central nervous system. Transmitted to humans through a bite or scratch by an infected animal.

## VACCINATE FOR THESE CANINE DISEASES

Canine Distemper

Transmitted by direct or indirect contact with the discharges from an infected dog's eyes, nose or urine. Widespread, highly contagious and usually deadly, even among older dogs. A primary killer of pupples.

Canine Adenovirus Type 1 & 2

Hepatitis is caused by Adenovirus type-1 and attacks the liver.

Transmitted through contact with objects contaminated by urine; saliva and feces. Early signs are similar to distemper. Adenovirus type-2 is a respiratory infection that may be associated with kennel cough.

Canine Parainfluenza

Mild respiratory tract Infection transmitted through contact with nasal secretions. Infection is more severe in young pupples.

Canine Parvovirus

Highly resistant virus withstands extreme temperature changes and exposure to most disinfectants. May cause severe diarrhea and vomiting. A highly contagious disease and especially dangerous for puppies.

Canine Coronavirus

A highly contaglous, but mild and self-limiting intestinal disease that occasionally will cause death. Causes vomiting and diamhea in dogs of all ages, but is seen most often in young puppies.

Canine Leptospirosis

Lepto is an infectious bacterial disease transmitted by contact with infected urine from rodents and other animals. Can be spread to humans as well as other animals and may cause permanent kidney damage. Recommended to use a vaccine with four serovars.

Canine Bordetella Bronchiseptica

(Kennel Cough)

A bacterial respiratory tract infection transmitted by nasal and oral secretions. Harsh, non-productive cough may last 1-3 weeks. Bordetella infections can occur alone or in combination with other respiratory problems.

Canine Borreliosis (Lyme Disease)

Bacterial infection spread by a bite from an infected tick. Symptoms include fever, lethargy and muscle stiffness. Lameness can occur in more severe cases.

Rabies

The most feared disease and is almost always fatal. Attacks the brain and central nervous system. Transmitted to humans through a bite or scratch by an infected animal.

Begin Narrative By: AC Director Brett Raymo (04/23/2019)

#### **INFORMATION:**

On 04/16/2019 at approximately 3PM R/O received a written complaint from Katrina Stillwagon of the Monroe SPCA. The complaint was in regards to puppies being sold in Monroe County and possibly other surrounding counties that originate in Hillsdale County.

\*Below is a synopsis of her investigation

On 02/16/2019 individuals arrived at the Fur Factory trying to sell the puppies. The Fur Factory is located at 293 W. Monroe St. in Dundee Mi. The individuals identified themselves as Peter Steven Miller and Paul Steury. After viewing the puppies and the condition they were being kept in, Katrina decided to purchase the puppies. Katrina turned the puppies over to Luvnpupz and they were examined at Allegan Veterinary Clinic and found the pups to be sick with Giardia and whip worm. The Vet records will be included with this report. For report purposes these puppies will be referred to as the "Backstreet Boys"

On 03/21/2019 Katrina was contacted by Paul Steury in regards to more puppies that he had for sale. The puppies were brought to the Fur Factory by Paul Steury and Peter Miller. This time they had 7 puppies for sale. The puppies were observed in filthy cages, with the puppies covered in urine, feces and vomit. Katrina observed that there were three other cages in vehicle and with the dogs being in poor condition she attempted to purchase the three other dogs but were told that they were being sold in Ypsilanti. After purchasing the puppies, Steury advised Katrina that he had more puppies to sell. The seven puppies were examined at Monroe Veterinary Clinic and tested positive for Giardia and in poor body condition. While the puppies were being examined Katrina received a call from Paul Steury that he was back in Monroe County and that the sale of one of the pups in Ypsilanti fell through and that he thought the dog was blind. The dog was purchased and treated at Monroe Veterinary Clinic. The Vet records will be included with this report. For report purposes these puppies will be referred to as the "Millers".

On 04/10/2019 Katrina was contacted by Paul Steury in regards to him having more puppies for sale. Due to the condition the other dogs were in Katrina agreed to purchase the puppies. Peter Miller and Paul Steury arrived at the Fur Factory with three more puppies on 04/11/2019. The puppies were in the vehicle kept in filthy litter debris cages. These puppies were taken to Monroe Veterinary Clinic and examined. The puppies tested positive for Giardia. The Vet records will be included with this report. For the report purposes these puppies will be referred to as the "Noodles".

Completed by 04/20/2019 Katrina was able to compile a list of animal stock that Steury has puppies and adults. Steury has made it clear that he has adult dogs that are of no longer use to him and he would like to replace them with his new stock. Steury also advised that he breeds cattle and horses. For report purposes this will be referred to "Steury Stock".

WRITTEN COMPLAINT:

Monroe County Sheriff's Office	Incident Number
100 E. Second St, Monroe, MI 48161	8070-19
(734) 240-7400	Page 3 of 19

The written complaint from Monroe SPCA will be broken down into the assigned puppy groupings.

#### BACKSTREET BOYS:

Summary Overview and Background:

Friday, February 15, 2019- Monroe SPCA Vice President, Tammy Bennett was approached by Peter Steven Miller, aka Buddy Miller, and Paul B. Steury in parking lot of Monroe SPCA Adoption Center and Retail Store located at 293 W. Monroe Street, Dundee, Monroe County, Michigan with Miller proposing a sale of puppies. Bennett informed Monroe SPCA President and General Manager Trina Stillwagon who then, with Bennett, viewed the puppies which were "being displayed" as available for purchase, cash only, in the back of a vehicle driven by Miller.

Miller stayed in the vehicle; Steury exited the vehicle to show and negotiate (broker) prices for the puppies (there were six in-total able to be viewed- all said by Steury to be males - seven to eight weeks old). When Steury opened the hatch-back door of the vehicle to show the puppies he wanted to sell, we (Stillwagon and Bennett) viewed the six puppies, all huddled tightly together in a corner of a small, filthy, all-wire, rabbit-style cage. The caged puppies were observed as shaking/quivering but otherwise completely still, all whaled-eyed, with coats dirty and matted. The immediate odor of urine /feces/vomit was pungent and overwhelming as the hatch-back door of the vehicle was being opened; the puppies huddled tighter and began to whimper within seconds of the door being opened.

One puppy, a red-merle, aussie-type mix (Australian Shepherd), was observed as having significant head-bobbing/head shaking as well as tremoring indicating to Stillwagon a problem with motor coordination/neurological problems. Steury, when questioned, about the condition of this puppy, stated he thought the puppy had "neurological" issues and that puppy he probably would not sell at this time.

Negotiation for purchase price of the puppies ensued between Steury and Stillwagon with a "buy" set for sale of puppies at same location the following day, Saturday, February 16, 2019 at noon. Stipulated by Stillwagon to Steury was the purchase of all of these six puppies, including the redmerle, with an agreed upon price of \$275.00 per each puppy to be paid at the time of transaction the following day. Stillwagon obtained Miller's cell and home phone numbers for a contact in case of a need for a plan/time change; Stillwagon provided to Miller her cell phone number as well for same reason.

Side-note: two Miniature Pinschers (Min-pins) were also in the car, one black and tan in color, one red in color, both were wearing collars with tags and uncaged; both were observed, at-a-glance, as in fair to good body condition; these two dogs, when inquired about, Stillwagon was told by Miller were not for sale as they were Miller's own "service" dogs.

Saturday, February 16, 2019 - Miller arrived without Steury at Monroe SPCA Adoption Center and Retail Store shortly after noon for the purposes of selling five of the six puppies initially agreed upon the day before. The red-merle puppy, Miller informed Stillwagon had not been brought or included in

# Monroe County Sheriff's Office 100 E. Second St, Monroe, MI 48161 (734) 240-7400 Incident Number 8070-19 Page 4 of 19

this transaction as this puppy Steury thought had neurological issues and he, therefore, did not wish to sell the puppy at this time. Transaction then was completed in parking lot of Monroe SPCA purchasing the five puppies in vehicle, all males (see below identifications) for a total purchase price of \$1250 or \$250.00 per each puppy. (The two Min-pins which were in the vehicle and said to be owner by Miller were again present and freely moving around in the vehicle).

Side-note 2: Stillwagon attempted to negotiate a lower price for the puppies of \$250.00 per each (instead of the \$275.00 agreed upon the previous day). Miller was hesitant to accept a lower price on behalf of Steury, stating he thought Steury would want \$275.00 per puppy; however, Miller, after counting the \$1250.00 with nothing further said; nothing since has ever been said by Steury or Miller about the lower price being paid by Monroe SPCA for these five puppies.

Shortly after the purchase of the puppies, Luvnpupz members (President Carri Shipaila and Volunteer Rhonda Hannahs) arrived at Monroe SPCA to take physical possession of and transport to one of their veterinarians, the five puppies, for the purpose of veterinary testing and examinations as well as care and treatment for the puppies. Monroe SPCA Vice President Tammy Bennet was also present at sales transaction/Monroe SPCA throughout.

Dr. Elaine Sheikh, DVM of Allegan Veterinary Clinic performed on all five puppies individual, initial veterinary testing and examinations, and provided initial care and treatment to the puppies. The following is a summary highlighting test results and examination findings:

Individual puppies are identified in initial medical and health records as follows (breeds/dob according to Health Records provided w/individual puppies):

Puppy #1 Lt blue collar (Nick)

Aussie-poo mix, male, blk/tan, weight: 3.28lbs, dob: 12-24-2018

Puppy #2 Purple collar (AJ)

Aussie-poo mix, male, merle w/tan, weight: 2.44lbs, dob: 12-24-2018

Puppy #3 Brown collar (Brian)

Schnoodle mix, male, blk/tan, weight: 3.38lbs, dob: 12-01-2018

Puppy #4 Tan collar (Kevin)

Schnoodle mix, male, blk w/white, weight: 4.22lbs, dob: 12-01-2018

Puppy #5 Green collar (Howie)

Schnoodle mix, male, blk w/white, weight: 4.44lbs, dob: 12-01-2018

Initial/Intake Test and Examinations Summary of Findings:

All puppies were fecal tested with specified giardia test - all five puppies tested positive for giardia infections: negative for Parvo virus.

Puppies #1 and #2 (Nick and AJ) tested positive for coccidia infections and test (batch) positive for whips; Puppies #3, #4, and #5 (Brian, Kevin and Howie); test (batch) for Whips.

Physical Examinations Summary Highlights:

Puppy#1 (Nick) presented with abdomen soft and only one testicle distended. Puppy #2 (AJ) presented with abdomen slightly distended, mild eye discharge, and no testicles distended. Puppies #1 and #2 (Nick and AJ) findings of dentition appropriate for six to seven week of age puppies.

Puppy #3 (Brian) presented with abdomen gas distended and fecal matter matted to paws. Puppy #4 (Kevin) presented with cracked canine (L), grade 4 systolic heart murmur, abdomen distended; fecal material caked in paws and on back legs. Puppy #5 (Howie) presented with abdomen soft, feces matted to feet, and limping on LF leg but unable to localize source of pain. Puppies #3,4,and 5 (Brian, Kevin, and Howie) findings of dentition appropriate for eight to nine weeks of age puppies.

Note: Based on initial veterinary findings, testing, and conclusions; information provided by Steury and Miller in Individual Health Records should be regards as suspect and questionable; i.e., ages of puppies, medicine and vaccines indicates as given to puppies, even breed identification.

Additional Note: While documentation of the poor physical health of the puppies is emphasized in this report and should be able to stand alone in meeting any preponderance of evidence burden, and therefore; successful prosecution of a cruelty case against Steury as well Miller, it should be noted, the mental, emotional, social, and behavioral health and well-being of all of the puppies was equally poor at intake, and further proof that the care provided to all puppies prior to our acquiring them and while in the hands of Steury as well as Miller was wholly inadequate and in violation of Michigan's Cruelty Statues (MCL 750.49-750.70a). This is supported by submitted photographs as well as complainants' reported observations/statements. Further elaboration can be provided if needed/necessary.

\*Copy of this written complaint will be included with the report.

#### MILLERS:

Monroe SPCA President and General Manager Trina Stillwagon was contacted by Paul B. Steury by cellphone with Steury offering another puppy sale. Stillwagon accepted. A meeting was scheduled for a puppy sale to be transacted on Friday, March 22, 2019 to occur between 11:00AM and noon at Monroe SPCA Adoption Center and Retail Shop located at 293 W. Monroe St. Dundee, Monroe County, MI. The proposed transaction was set to include the sale of seven puppies said by Steury to be Newfoundland and Poodle mixes (Newfy-poos) about ten to twelve weeks-old and big. Preliminary price for seven puppies agreed to by Steury and Stillwagon was \$2000.00.

Friday, March 22, 2019 - Steury along with driver, Peter Steven Miller, aka Buddy Miller, arrived at Monroe SPCA in vehicle same as previous at approximately noon. Steury exited the vehicle to open hatch back of vehicle and show puppies to Stillwagon et al. The seven Newfy-poo puppies brought to be sold to us had been transported in numerous cages and included the filthy, wire, rabbit style

cage of previous as well as similar and plastic pet carriers and a small animal laboratory style cage in which the animal inside could not be seen - all cages and carriers were dirty - the carriers were observably overloaded/too small (the puppies inside the carriers would not have been able to stand up or turn around easily if at all).

Again with the opening of the back hatch door by Steury, the odor of urine/feces/vomit was immediate, pungent, and overwhelming; it was intense. The puppies immediately observable were all whale-eyed, filthy, and they were wet with what appeared to be (and smelled of) vomit as well as urine and feces; the puppies were observed huddled and completely still as if frozen; they were also notably all completely quiet (not a sound was made by any puppy with the opening of the back hatch door of the vehicle). Present at the pending transaction with Stillwagon at this time was Luvenpupz President Carri Shipaila. Joining Stillwagon and Shipaila in the parking lot to take puppies from Steury as he removed them from their cages/carriers was Luvenpupz volunteer Rhonda Hannahs; Monroe SPCA Vice President Tammy Bennett was also in the parking lot, nearby photographing and videotaping. Steury began removing puppies from cages and carriers, handing them to Stillwagon, Shipaila, and Hannahs who once having received a puppy, rushed him or her inside to a quarantine pen which had been prepared prior to, with a quick return to the vehicle to receive another.

During the process, three other cages and carriers were easily observable in the back of the vehicle, one with a young German Shepherd of unknown sex later identified to be male, puppy inside, tan and black in color, (estimated to be about seven to eight weeks of age) with vomit drooling from his lips- the puppy was visibly not in good health, and like the others, this puppy was completely still and quiet, and visibly dirty. This puppy additionally had dull fixed eyes which can only be accurately described as resigned; the eyes of this puppy simply seemed dead. Additionally this puppy was being kept in a carrier not even of adequate size for the puppy to hold his own head up fully should he chose to. The puppy was sitting, but because the carrier being to small/short for a puppy his size-the puppy was forced to hold his head at approximately shoulder level. (We would learn later in the day this was the case also because of the cramped conditions-there was another puppy behind him in the same carrier that not observed by us at the first meeting/transaction of the day).

Stillwagon made numerous offers to buy the GSD puppy as well as any other puppies in the vehicle, but was told by Miller (who remained in the vehicle- Miller watched us throughout in the vehicle's rear view mirror/he seemed increasingly nervous/prompting us/Steury to move things along) the puppies were on the way to Ypsilanti where "his guy" (Miller) would be buying them. Miller also confirmed there were three puppies still in the vehicle (only one of which we could see) even confirming that the two of them were GSD puppies; the third, he said nothing about.

After closing the hatch back door of the vehicle, Steury offered more puppies to Stillwagon for sale giving detailed information on some of the stock he had an including the possible sale of some adult dogs, one said to be a papered/registered Poodle, red in color, and a stud dog (and also said to be the sire of the 7 newfy-poos just purchased) that he was thinking about selling for a price of \$1500.00 firm.

As a side note: Saying Steury removed puppies from the cages and carriers, while accurate, does not convey the manner in which the puppies were removed from the cages and carriers in which they

had been placed. More precise as to what we observed would be to say, Steury ripped and tore some of the puppies apart from one another, roughly scruffing some, grabbing others and pulling them out of cages and carriers by their limbs. All of the puppies were struggling throughout the removal process so as not to be separated from one another and/or from the cage or carrier he or she was in. One puppy (later identified as female and named Mifflin) we witnessed being injured during the removal by Steury from the carrier in which can only be accurately said, she had been stuffed in to. The puppy, Mifflin, had become caught by her skin on broken plastic from the carrier. In spite of this Steury continued to pull on this struggling puppy so as to remove her from the carrier. Stillwagon and Shipaila intervened as best as they were able to with Stillwagon putting hand over the broken plastic and Shipaila helping to quickly remove the puppy before further trauma/injury could be done to this puppy. In spite of the harsh and traumatizing manner in which the puppies were being removed from carriers and cages, the only sounds made by the puppies/heard by us during this process were faint moans and whimpering.

After all seven puppies were in the building and in the possession of Monroe SPCA and Luvnpupz; Shipaila and Hannahs left the parking lot/went into the building. Stillwagon remained behind to complete the puppy sale transaction, paying Steury the agreed upon \$2000.00 cash for the seven puppies and received from Steury seven individual puppy health records.

Steury continued to talk to Stillwagon in the parking lot for approximately 20 additional minutes, identifying specific breeds, breed mixes, and individual dogs that he said he had in his stock and that he either wanted to sell outright or would consider selling for the right price. Stillwagon questioned throughout to get as much information as possible about Steury's operations, dogs, etc. Mentioned a number of times by Steury, the Red Stud Standard Poodle and Miniature Aussie also male and both said by him to be around two yours of age. Steury repeatedly proposed a sale to Stillwagon of the stud poodle for \$1500.00 and as inventive for Stillwagon to buy the poodle he agreed to also sell the Mini Aussie for \$200.00 with stipulation that those prices to be only if the two dogs were sold together.

Stillwagon hesitated on a commitment for any sales stating that she would have to consult her partner prior to agreeing to such a sale. Stillwagon asked Steury to call her in two to three weeks time to discuss and set up another sale. Steury agreed. But Steury also asked at this time if Stillwagon minded if he looked inside the store. Stillwagon agreed (believing it was likely this would put an end to our communications and thus, our investigation and evidence collection). Not so though, Steury stayed within feet of the front entrance the entire time he was in the building, looking around the building and asking a few questions to which when answered seemed to put him more at ease. Smiling for the first time, Steury stated he would call Stillwagon in a few weeks and told Stillwagon to talk to her partner about the poodle and mini aussie. Steury additionally said to Stillwagon he might have some other adult dogs to sell in a few weeks if interested; Stillwagon confirmed she was interested. Steury left the building and shortly thereafter Miller and Steury left the parking lot with Stillwagon expecting to hear from Steury again in a few weeks as agreed upon.

Shortly thereafter the seven puppies were transported by Luvnpupz and Monroe SPCA to Monroe Veterinary Clinic where they were individually examined and fecal tested by Dr. Bhupinder Pelia, DVM and staff; all puppies were also provided initial veterinary care and treatment at MVC. The

following is summary highlighting test results and examination findings: Individual puppies are identified in initial medical and health records as follows:

Puppy #247 It blue collar (Dalton)

Newfy-poo, male, chocolate and white, weight: 20.8lbs; dob 12-23-2018

Puppy #248 lime green collar (Berlin)

Newfy-poo, female, blk/wht, weight: 21.6lbs; dog 12-23-2018

Puppy #249 red collar (Lancaster)

Newfy-poo, male, chocolate/white, weight: 25.8lbs; dob 12-23-2018

Puppy #251 dark blue collar (Cashton)

Newfy-poo, male, chocolate/white, weight: 25.6lbs; dob 12-23-2018

Puppy #252 teal collar (Mifflin)

Newfy-poo, female, blk/wht, weight: 18.14lbs; dob 12-23-2018

Puppy #254 orange collar (Mio)

Newfy-poo, female, blk/wht; weight: 21.12lbs; dob 12-23-2018

Initial/Intake Test and Examinations Summary of Findings:

All puppies were individually fecal tested with specified giardia test- all seven puppies tested positive for giardia infections, negative for Parvo virus.

Physical Examinations Summary Highlights:

All puppies presented in poor body condition, malnourished, and with abdomen distension ranging from slight to moderate with the exception of puppy #249 (Lancaster) who presented with significant abdomen distension, "potbellied". All puppies additionally presented mildly dehydrated and smeared in feces and mud.

Puppy #249 (Lancaster), additionally, presented with bilateral ear infections and, as stated above, potbellied.

Puppy #252 (Mifflin), additionally, presented with bilateral ear infections and, as stated above, potbellied.

Puppy #253 (Newberry), additionally, presented with bilateral ear infections.

Note: Based on initial veterinary findings, testing, and conclusions; information provided by Steury and Miller in Individual Health Records should be regards as suspect and questionable; i.e., ages of puppies, medicine and vaccines indicates as given to puppies, even breed identification.

During examination and testing of puppies at MVC, Stillwagon received an unexpected phone call on her cell from Steury asking Stillwagon if she was interested in buying a puppy he had been unable to sell to either of the pet stores said by Steury to be located in Ypsilanti and Saline. Stillwagon questioned Steury as to breed, sex, and age of puppy as well as the price and why he was unable to sell the puppy. Steury responded to the questions saying the puppy he was offering for sale was an English Bulldog, female, eight to nine weeks old; the reason he said he could not sell her was according to him, something was wrong with her eyes, she had cataracts or something and she was probably blind. Steury additionally stated he had no use for a puppy he couldn't sell but gave no expected price instead asking Stillwagon how much she would be willing to pay for the puppy; Stillwagon offered \$200.00 for the puppy and after a lengthy pause; Steury accepted, agreeing to meet Stillwagon at the McDonald's restaurant in Dundee in 45 minutes approximately 3:15PM for the purpose of selling Stallwagon a puppy he thought to be blind.

Stillwagon and Bennett left MVC for McDonalds immediately arriving early and locating Miller's vehicle in the back of the McDonalds parking lot. Bennett who was driving, parked her vehicle close by, but not next to Miller's vehicle, Stillwagon got out of Bennett's vehicle approached Miller's vehicle; Miller and Steury were not in the vehicle or parking lot so Stillwagon went into McDonalds locating Steury at the front counter. Steury immediately greeted Stillwagon (even offering to buy her lunch, which she declined), stating Miller was in the restroom, and he (Steury) was just waiting for his shake. As he received his shake, Miller approached and we went to Miller's vehicle.

This time, Miller opened the passanger-side, sliding door, immediately revealing the GSD puppy which we had seen earlier; the puppy was still in the same cage in the vehicle, but the cage had been moved to the other side of the vehicle (directly behind the driver's seat). The laboratory style cage was now directly inside the opened door, behind the passenger seat. Steury opened this cage revealing a puppy inside whose limbs were literally splayed in all directions (the puppy would have fit into the cage in no other manner). Steury reached into the cage, grabbing and pulling the puppy out by her left-front leg; dangling the puppy by the leg as he attempted to scruff her while also turning toward Stillwagon. The puppy who had been silent at all times previous, was now struggling, crying-out, and whimpering loudly as Steury handled her in this brutal manner. Steury gave no indication he was affected by the puppy's distress; Stillwagon, on the other hand, struggled to remain calm while reaching out to quickly to take the puppy from Steury. The puppy, once in Stillwagon's arms, huddled close, clinging to Stillwagon and quieting to a faint whimper almost immediately.

Stillwagon paid Steury the agreed upon \$200.00 for the puppy.

Steury appearing to be in no hurry to leave, as Miller was still in the back of the van moving cages/carriers around, continued to converse with Stillwagon, at one point, pulling from his coat pocket and showing to Stillwagon a small bottle, labeled CBD Oil 125, which he said he had gotten from a store owner near his home and had used to treat the puppy's eyes. Steury even asked Stillwagon, if she intended to try to treat the puppy's eyes (Steury stated a number of times that he believed the puppy had cataracts but he also stated he thought she might be blind) to which Stillwagon answered yes. During the conversation about CBD oil as treatment, Steury mentioned, without prompting, that he had used the CBD oil to treat the red merle, aussie puppy Stillwagon had been previously interested in buying, saying that puppy, after being treated with CBD oil for a while,

Monroe County Sheriff's Office	Incident Number
100 E. Second St, Monroe, MI 48161	8070-19
(734) 240-7400	Page 10 of 19

had gotten better and no longer had neurological problems. Stillwagon told Steury she was still interested in buying the red merle, aussie puppies; Steury stated the puppy had already been sold.

While Steury was conversing with Stillwagon, Miller, who was still in the back of the van, opened the carrier with the GSD puppy inside; removing the puppy and holding him, "scruffed" to be viewed by Stillwagon; the puppy moaned faintly but did not struggle; the puppy appeared ill and listless. Miller proposed a sale of this puppy as well as a second GSD puppy still in the plastic carrier (also tan and black in color, dirty, dull, and whale-eyed, completely still and quiet). The price of the puppies Miller proposed selling was \$300.00 dollars for one, \$250.00 for the other; \$550.00 dollars total and the exact price Miller said he had paid for the two puppies. Stillwagon declined, stating she was tappedout at this time. Stillwagon told Miller, she was interested in purchasing the two GSD puppies if they were available for sale the next run. Miller said it was a possibility but the price of \$550 for the pair was firm; he said he did not want to lose money on them. Miller had already stated that "his guy" had refused purchasing the puppies because according to Miller, he said they were not purebred. Miller sounding irritated, stated they were purebred GSD and that they were papered. Miller roughly returns the GSD puppy to the carrier with the other. The carrier, it should be noted, was not of adequate size to hold one puppy comfortably, let alone two. Goodbyes are said Steury reiterating he will call Stillwagon in two to three weeks and Stillwagon walking away toward Bennett's vehicle with the puppy, just purchased, still quiet and clinging to her. Miller and Steury leave the McDonalds parking lot in Miller's vehicle, followed shortly thereafter by Bennett and Stillwagon leaving in Bennett's vehicle.

Bennett and Stillwagon returned to Monroe SPCA Adoption Center and Resale Shop where they met-up with Shipaila and Hannahs to bathe the seven puppies purchased earlier in the day. The seven puppies identified as Newfy-poos were transported to Luvnpupz and in foster homes since. The eighth puppy, the so called English Bulldog (later named Geauga) has been in the physical possession of Monroe SPCA and in a foster home since.

Note: No records of any kind were provided with the "English Bulldog" puppy, Geauga. When asked about health records for this puppy, Steury stated he had accidentally left them with the guy in Ypsilanti.

Puppy identified as:

Puppy #256 pink collar (Geauga) English Bulldog mix, female, brindle and white, 6 weeks of age, weight: 9.12lbs

Initial/Intake Test and Examinations Summary of Findings:

Puppy #256 (Geauga) presented in poor body condition, malnourished, with mild abdomen distension, flea infestation, and dirty, dry, and brittle coat. Puppy #256 (Geauga) additionally presented with significant bilateral cornea clouding and no cornea action (little to no sight at time of testing and examination).

A Schirmer Tear Test was performed on the puppy by Dr. Bhupinder Pelia DVM at MVC with results

of "no tear production" and veterinary conclusion that both eyes of the puppy had likely been damaged due to a non veterinary prescribed treatment being performed on the puppy for a previous injury or illness. Dr. Pelia found no medical reason for the puppy having no tear production as the ducts of both eyes were open, developed, and unblocked. The puppy was prescribed Cyclosporine Opthalmic Drops for the eyes to be given daily for three to four weeks; Puppy #256 (Geauga) is currently still receiving the eye drops daily with a follow-up/recheck visit to be scheduled and occur soon.

Note: When Dr. Pelia was asked by Stillwagon if someone putting CBD Oil in the puppy's eyes could be the cause of the damage to her eyes and no tear production in the puppy, Dr. Pelia responded in the affirmative with a "yes".

Additional Note: While documentation of the poor physical health of the puppies is emphasized in this report and should be able to stand alone in meeting any preponderance of evidence burden, and therefore; successful prosecution of a cruelty case against Steury as well Miller, it should be noted, the mental, emotional, social, and behavioral health and well-being of all of the puppies was equally poor at intake, and further proof that the care provided to all puppies prior to our acquiring them and while in the hands of Steury as well as Miller was wholly inadequate and in violation of Michigan's Cruelty Statues (MCL 750.49-750.70a). This is supported by submitted photographs as well as complainants' reported observations/statements. Further elaboration can be provided if needed/necessary.

\*Copy of this written complaint will be included with the report.

It should be noted that on 03/29/2019 Peter Miller came into Monroe SPCA unannounced looking for Katrina Stillwagon to sell more puppies.

#### NOODLES:

Monroe SPCA President and General Manager Trina Stillwagon was contacted by Paul B. Steury by cellphone a number of times since the last sales transaction (03/22/2019) with Steury offering another puppy sale (and providing more information on adult dogs and puppies in his possession/on his property as well as dogs and puppies in the possession/on the property of Steury's son and son-in-law). Stillwagon accepted. A meeting was scheduled for a puppy sale to be transacted on Thursday 04/11/2019 to occur between 11:00AM and noon at Monroe SPCA Adoption Center and Retail Shop located at 293 W. Monroe St. Dundee, Monroe County, Ml. The proposed transaction was initially set to include the sale of seven puppies said by Steury to be as the following breed-mixes/numbers of et al: three newfoundland and poodle mixes (newfy-poos), about ten to twelve weeks-old and a little smaller than the last newfy-poo puppies, all three male and owned by Steury; two newfy-poo puppies both male and about eight weeks old and owned by Steury's son and two GSD puppies both male (observed in Miller's vehicle on 03/22/2019; one of which Steury now said had problems with his back legs) and owned by Miller.

Pricing on the puppies was set/negotiated as follows: Steury accepted our offer of \$275.00 per each of the three, ten to twelve week old Newfy-poos, Steury was to check with his son who he said had

the two, nearly eight-week-old newfy-poos to see if his son would accept a price of \$300.00 per puppy (his son, Steury said wanted \$500.00 per each puppy, but Steury also said he through his son would sell the two for the price offered by Stillwagon of \$300.00 each because he "wanted to sell them quickly" as they were eight weeks old now"). And Miller, Steury stated, accepted our offer of \$200.00 per each puppy for the two GSD. Over the course of a number of phone conversations with Steury contacting Stillwagon each time, negotiations on prices continued with Steury giving more information and attempting to sell to Stillwagon a number of adult dogs.

Wednesday 04/10/2019: Steury, in a phone call, informs Stillwagon he now only has three puppies, the ten to twelve week old newfy-poos for sale. The two GSD puppies, Steury states, Miller has sold to someone else instead, and the two nearly eight week old newfy-poos belonging to Steury's son, Steury states, his son will be selling to someone else; Steury says, his son has a buyer willing to pay the \$500.00 per each he wants for them. A sales transaction for the three puppies, ten to twelve week old make newfy-poos was confirmed for the following day.

Thursday 04/11/2019 Steury along with his driver Peter Steven Miller aka Buddy Miller arrived at Monroe SPCA as previous at approximately noon; this time, however, Miller was driving a different vehicle (description of vehicle: dark gray, older model Chevrolet Pick up Truck, king cab with attached tow-hitch). Steury exited the vehicle, opening the half, back door of the truck directly behind the vehicle's passenger seat, to begin unloading the three puppies, all newfy-poos and all males (as we had expected) being kept in cages/carriers in the back seat of the cab. Steury handed the first puppy to Luvnpupz President Carri Shipaila and the second puppy to Monroe SPCA President and General Manager Trina Stillwagon who then quickly carried the puppies inside, placing each one in a quarantine pen which had been prepared for the arrival prior to with Shipaila returning for another, and Stillwagon returning to the sales transaction.

As previous, the cages and carriers which held the puppies were observed as filthy and included a wire rabbit style cage, the interior of the vehicle was also filthy and littered with debris. Other than the three puppies which had been brought to sell to us, and which we now had in our possession, no other puppies or dogs were observed in the vehicle. The odor from the vehicle Steury and Miller arrived in on this day, while intense, pungent, and again smelling of urine and feces, did not seem to be as overwhelming as on the two previous occasions in which the vehicle driven then by Miller was an older model Plymouth Minivan and reeking of vomit/urine/feces.

With the sales transaction complete, Stillwagon paying Steury a total of \$925.00 (\$275.00 per each puppy, or \$825.00 for the three puppies and an additional \$100 for the fee to be paid by Steury to the driver), and receiving from Steury individual Health Records for the three puppies; Stillwagon remained in the parking lot in discussion with Steury for approximately ten more minute. See/hear video/audio: Stillwagon in parking after sales transaction completed with Steury offering more puppies and some adult dogs for sale - giving detailed information on some of the stock he has. Monroe SPCA volunteer Cindy Hoffman was present for discussion, also video and audio recording discussion.

Again Stillwagon hesitated on a commitment for any sales but indicated interest, stating she would have to consult with her partner prior to agreeing to any such sales. Stillwagon asked Steury to call

# Monroe County Sheriff's Office 100 E. Second St, Monroe, MI 48161 (734) 240-7400 Incident Number 8070-19 Page 13 of 19

her on Thursday or Friday of the following week to discuss and set up another sale. Steury agreed. Immediately following discussion in parking lot and as previous, Miller and Steury left the parking lot, and Stillwagon entered the Monroe SPCA building.

Note: the second puppy removed from the vehicle and handled to Stillwagon (later identified/named Ziti), was leaking soft runny stool, pale in color from his rectum as he was carried from vehicle. through parking lot, into and throughout Monroe SPCA's building to guarantine pen. This puppy Ziti continued to leak similar stool from his rectum once placed inside the x-pen and for the next approximately 45 minutes, sometimes with him squatting and whimpering as he strained to defecate. And while again and like the previous puppies, these puppies were dirty, covered in feces and smelling of urine/feces, whale-eyed, mostly guiet, listless/limp as they were being handed-off/carried. and not by any stretch of the imagination, any of them exhibiting behavior which would be broadly considered and accepted as normal and/or healthy puppy behavior, this puppy Ziti, was a noticeable stand-out in that he was moaning/whimpering and foaming at the mouth (a white froth) with his jaw chattering as he was carried and placed inside the pen (inside of Monroe SPCA). Ziti additionally when placed inside the pen, moved immediately to the farthest corner of the pen, hanging his head low, and avoiding all eve-contact. Because as stated earlier, Ziti had dripped and leaked stool everywhere including inside the pen, Shipaila entered the pen so as to clean what was now a sizable mess. Each time Shipaila would enter the pen to clean, the puppy Ziti, indicated extreme distress, letting go low whimpering which was continuous and increasing in volume to become melancholy crying. Still avoiding eye contact and trying to make himself small, the puppy Ziti, again and a number of times began foaming (a white froth) from the mouth with his jaw chattering uncontrollably. During this time of decompression, the three puppies were provided dry puppy kibble in a food bowl which they all were interested in but seemed not to know what to do with; when the dry kibble was stead presented to them on the floor, all three puppies, included Ziti, immediately began gobbling the dry puppy kibble.

Shortly after intake, the three puppies were transported by Shipaila and Stillwagon to Monroe Veterinary Clinic where they were individually examined and fecal tested by Dr. Bhupinder Pelia DVM and staff; all puppies were also provided initial veterinary care and treatment by MVC. The following Summary highlighting test results and examination findings:

Individual puppies are identified in initial medical and health records as follows:

Puppy #263 blue collar (Orzo)

Newfy-poo, male, brown and white, weight: 23.10lbs; dob 01/19/2019

Puppy #264 green collar (Ziti)

Newfy-poo, male, black/white, weight 19.12lbs; dob 01/19/2019

Puppy #265 red collar (Rigatoni)

Newfy-poo, male, black/white, weight 20.10lbs; dob 01/19/2019

Initial/Intake Test and Examinations Summary of Findings:

## Monroe County Sheriff's Office 100 E. Second St, Monroe, MI 48161 (734) 240-7400 Incident Number 8070-19 Page 14 of 19

All puppies were individually fecal tested with specified giardia test - all three puppies tested positive for giardia infections, negative for Parvo virus.

Physical Examinations Summary Highlights:

All puppies presented mildly dehydrated and "covered in fecal matter."

Puppy #263 (Orzo) additionally presented with bilateral aural discharge and with ear cytology revealing yeast infection in both ears

Puppy #264 (Ziti) additionally presented with weakness in rear legs, a closed umbilical hernia, and an elevated temperature of 103.2 degrees.

Puppy #265 (Rigatoni) presented with "no obvious signs of illness or injury."

Puppies #263 (orzo) and #265 (Rigatoni) were given DHPP vaccines; Puppy #264 (Ziti) was not given DHPP vaccine due to temperature elevation (indicating illness/infection); puppy #264 (Ziti) was also prescribed an antibiotic (Simplicef-100mg) for treatment of suspected URI.

Note: Based on initial veterinary findings, testing, and conclusions; information provided by Steury and Miller in Individual Health Records should be regards as suspect and questionable; i.e., ages of puppies, medicine and vaccines indicates as given to puppies, even breed identification.

Shipaila and Stillwagon returned to Monroe SPCA Adoption Center and Resale Shop after initial Veterinary visit with the three puppies where they met-up with Monroe SPCA Vice President Tammy Bennett and Executive Director Ashley Randall to bathe the three puppies purchased earlier in the day. These three puppies, all identified above, were transported by Shipaila to Luvnpupz on Thursday, April 11, 2019; they have remained in the physical possession of Luvnpupz and in foster homes since.

Additional Note: While documentation of the poor physical health of the puppies is emphasized in this report and should be able to stand alone in meeting any preponderance of evidence burden, and therefore; successful prosecution of a cruelty case against Steury as well Miller, it should be noted, the mental, emotional, social, and behavioral health and well-being of all of the puppies was equally poor at intake, and further proof that the care provided to all puppies prior to our acquiring them and while in the hands of Steury as well as Miller was wholly inadequate and in violation of Michigan's Cruelty Statues (MCL 750.49-750.70a). Taken in totality, evidence submitted by Monroe SPCA and Luvnpupz also points to a pattern of behavior on the part of Steury as well as Miller which is wholly inconsistent with one who recognizes, complies with, and/or adheres to the laws, regulations, and even ordinances (state, federal, county, et al) which apply to them and/or to the operations conducted by either or both men, Steury and Miller, as well as the associates/relatives of Steury who according to Steury are conducting similar operations. This is supported by submitted photographs as well as complainants reported observations/statements et al. Further elaboration can be provided if needed/necessary.

Monroe County Sheriff's Office	Incident Number

#### STEURY STOCK:

The following is a list of "Steury et al dog and puppy stock currently know about - these are dogs and puppies Steury has mentioned to/discussed with Stillwagon as being sold by Steury and available to buy and/or being considered by Steury as possibilities he will sell (if the price is met) and/or dogs and puppies Steury has mentioned, and therefore, they are known as being in his or close relatives possession/on property et al. Prices included have been given to Stillwagon by Steury as the prices he will sell or is considering sell for.

Poodle (1), standard; male, "stud"; red; 1.5 to 2 years old. Said by Steury to be "papered". \$1500.00 firm.

Miniature Aussie (1), male; tri-color (predominantly black), approximately 2yrs old and 20lbs. \$200.00 if bought with the Poodle above; wants \$300 but will accept \$275.00 if Stillwagon wants to purchase without poodle.

Note: the above dog would be of high priority to help/rescue as quickly as possible as this dog based on the price for acquiring him is extremely low, particularly for a stud dog. It is well documented in USDA inspection reports et al that dogs which are considered difficult and/or which are considered to have little to no monetary value, in puppy mills, particularly Amish puppy mills, are killed, often by hanging or drowning, sometimes simply by withhold food/starvation.

Newfy-poos (11 total), 6 females (being kept by Steury to become brood-bitches, 5 males), colors not known but likely chocolate and white or black and white; dog: 01/19/2019. These six females are litter mates to the three "Noodles" puppies just acquired on 04/11/2019; two more litter mates, both males, were offered to Stillwagon as for sale, however, according to Steury he was able to sell these two at \$500 per each in Ypsilanti, MI; above Standard Poodle said by Steury to be the sire of these eleven puppies. Price initially wanted by Steury, \$500 per each; price agreed to/accepted by Steury for three "Noodles" \$275 per each.

Newfoundland (1) female, color unknown, 4yrs old. Said by Steury to be "papered" and to have turned four in February 2019; additionally said by Steury to have recently "thrown" a litter. Price \$1500.

Newfoundland (1) female, color unknown, 4yrs old. Said by Steury to be "papered" and to be turning four in May 2019; additionally said by Steury, "she didn't take this season "meaning this dog, a brood-bitch, produced no offspring this breeding cycle. Price \$1500

Note: The above dog would be of the highest priority to help/rescue as quickly as possible as it is

\*\*AC Director Brett Raymo\*\*

<sup>\*</sup>Copy of this written complaint will be included with the report.

<sup>\*</sup>Along with the written complaints, copies of the medical records and photographs for the "Backstreet Boys", "Millers" and "Noodles" will also be included with this report.

well documented in reports by the USDA, ASPCA, HSUS, and others that brood-bitches that don't produce offspring in puppy mills, particularly Amish puppy mills are killed, often by hanging or drowning, sometimes simply by withholding food/starvation.

Newfy-poo (1), female, color unknown; 1.5yrs old. Said by Steury to have thrown a litter this year. Price wanted \$1500.00; price willing to accept from Stillwagon, \$1000.00 (since she is a mix/has no papers).

Newfy-poo (1), female, color unknown; 1.5yrs old. Same as above said by Steury to have thrown a litter this year. Price wanted \$1500.00; price willing to accept from Stillwagon, \$1000.00 (since she is a mix/has no papers).

Shih tzus (4) female, colors unknown, ages approximately 1.5yrs to 2yrs old. Said by Steury to be siblings. According to Steury, he wants to get out of breeding Shih-tzus. Price initially proposed by Steury per each, \$1600; price agreed to/willing to be accepted by Steury, \$800 to \$900 each.

Shih tzu (1), male, color and age unknown. Price for male same as above, Steury is agreeable to/willing to accept a prices of \$800 to \$900 for this dog.

Cavi-poos (10 to 12 approximation) sexes and individual specific colors unknown. Six said by Steury to have been just born week of 04/11/2019. Unclear/unknown as to how many of the 10 to 12 puppies are in the possession of Steury, and how many are in the possession of his son and/or son-in-law. What is known is that Steury has stated he will have Cavi-poos available for sale soon, that he, his son, and his son-in-law are breeding the cavi-poos so as to produce the preferred coat color in the puppies of tan and black, so they look like Yorkies and that Cavi's are new acquisitions of breeding stock. Price of the cavi-poos Steury is considering selling \$500 per each.

King Charles Caviler Spaniels and Poodles, most likely miniature, adults and/or older puppies then also be in the possession of Steury, and/or his son, and/or his son-in-law as part of their breeding stock. Numbers and individual specifics are unknown at this time.

Poodle miniature (1) confirmed to be in the possession of Steury and part of his breeding stock. No other information is known about this particular dog at this time.

French Bulldogs (6); sexes and individual specific colors unknown (although colors of some have been confirmed by Steury to be the bred for and preferred color of blue as well as the color/pattern merle which when described by Steury as the color of the bulldog you bought, referring to the English Bulldog acquired on 03/22/2019. Additionally Steury confirmed these dogs to be litter mates of the English Bulldog acquired by Stillwagon. Prices to vary depending on each puppy's coat color; prices for blue coated puppies \$2700 per each puppy; price for brindle and brindle/white coated puppies \$2000 to \$2200 per each puppy; price for puppies of all other coat varieties, approximately \$1700 per puppy.

Note: Breed identification should be suspect and questionable as the "English Bulldog" puppy sold to Stillwagon on 03/22/2019 does not appear to be of the breed English Bulldog or French Bulldog or if

# Monroe County Sheriff's Office 100 E. Second St, Monroe, MI 48161 (734) 240-7400 Incident Number 8070-19 Page 17 of 19

either or both of those specific breeds, she would be mixed with some other breed or breeds, in any case she would be a mix of some number of breeds, most likely some breed-variety or varieties of bulldog and, possibly Boxer.

Bulldogs, some variety thereof, i.e., English, and/or French, and/or mixes of same, similar et al: adults and/or older puppies would also be in the possession of Steury, and/or his son, and/or his son-in-law as part of their breeding stock. One or more dogs of the breed, Boxer, or Boxer mix may also be in possession of same. Numbers and individual specifics are unknown to us at this time.

Schnoodles (7); sexes and individual specific colors unknown. All seven puppies said by Steury to be born recently. No price given yet.

Schnauzers and Poodles, most likely both, miniature, adults, and/or older puppies would also then be in the possession of Steury, and/or his son, and/or his son-in-law as part of their breeding stock. Numbers and individual specifics unknown at this time.

Some number, at least (1) and likely more than 1, of the breed(s) Australian Shepherd, or Australian Shepherd/Poodle mix (Aussie-poo), or some mix of Australian Shepherd and/or Poodle are in the possession of and part of the breeding stock of Steury, and/or his son, and/or his son-in-law. We know this because of the 2 Aussie-poo puppies (Nick and AJ) sold to us by Steury on 02/16/2019 as well as the red-merle, Aussie-poo with neurological issues, observed by us on 02/15/2019, but not sold to us. Actual numbers and individual specifies, however are unknown at this time.

Newfy-poos (8) sexes and individual specific colors unknown. All 8 puppies said by Steury to be young and not weaned yet. Also stated by Steury in a phone call on 03/19/2019 to be been just born. Additionally stated by Steury, these 8 puppies are at his son's house (ten miles down the road). Prices unknown until Steury talks with his son. Also meaning Steury's son also, likely, has more dogs in his possession/on his property as breeding stock, however actual numbers and individual specifics are unknown at this time.

Newfy-poos (5), sexes and individual specific colors unknown. According to Steury these puppies were eight weeks old on 04/22/2019. No price proposed. Steury advised these puppies are on his son-in-laws property. Steury's son-in-law likely has more dogs in his possession/on his property as breeding stock, however actual numbers and individual specifics are unknown at this time.

German Shepherd Dog (2), male, both tan and black (or sable and black), long haired, approximately eight weeks old on 03/22/2019. Confirmed to belong to Peter Steven Miller aka Buddy Miller by Miller as well as Steury. Offered for sale to Stillwagon for \$300 for one and \$250 for the other. Puppies offered again for sale after initial offered declined for \$400 for the pair.

Miniature Pinschers (min-pins) (2) one black and tan, the other red, sexes and ages unknown. Confirmed as belonging to/being owned by Miller by Miller himself. These two dogs have been observed traveling in Miller's vehicle with him as he transports sick puppies (confirmed to have transmittable illnesses) into Monroe County elsewhere for the purposes of selling said puppies.

## Monroe County Sheriff's Office 100 E. Second St, Monroe, MI 48161 (734) 240-7400 Incident Number 8070-19 Page 18 of 19

Note: Steury has stated to Stillwagon that he is looking to acquire and start breeding Yorkies and his interested in and considering acquiring Corgis. Steury stated that he probably breed the Corgis with the Poodles and Cavaliers.

Steury had a girl by the name of Jolene send pictures of some of the dogs he has in his possession.

\*A copy of the Steury stock will be included with this report and so will the pictures provided by Jolene.

#### **VEHICLES INVOLVED IN TRANSPORT:**

Plymouth Voyager Minivan Plate Number: 2401J7

The plate came back to: Kathleen Miller and Peter Miller

2349 E. Montgomery Hillsdale, Mi. 49242

Chevy Silverado Plate Number: C3360

The plate came back to: Peter Miller

2349 E. Montgomery Hillsdale, Mi. 49242

### POSSIBLE ADDRESSES STEURY AND/OR RELATIVES/ASSOCIATES:

This information was provided to R/O by Monroe SPCA.

Paul B. Steury DOB: 09/1976

Possible residence at: 5900 W. Burt Rd.

Camden, Mi. 49232

Rosina Steury or E. Steury 6100 W. Burt Rd. Camden, Mi. 49232

Rosina is the registered owner of the phone used by Paul Steury.

### Monroe County Sheriff's Office 100 E. Second St, Monroe, MI 48161 (734) 240-7400 Incident Number 8070-19 Page 19 of 19

Martin Steury 7600 Sampson Rd. Camden, Mi. 49232

Monroe SPCA was able to locate this information from Pintrest - bulldog puppies and also on www.dogbreedersdirectory.com out of Camden, MI.

Peter Steven Miller DOB: July 1950 2349 E. Montgomery Hillsdale, Mi. 49242

R/O made contact with Hillsdale Animal Control. Hillsdale Animal Control is under the Hillsdale County Sheriff Office. Deputy Jeff Schommer is assigned to their Animal Control Division. Deputy Schommer is familiar with Elmer Steury and Peter Miller. A copy of the report will be sent to Deputy Schommer.

R/O also left a message for the Darren Fowler of the Michigan Attorney General's Office to make contact with R/O. On 04/17/2019 Michigan Attorney General's Office announced that they were going to start handling puppy mill cases.

R/O will also submit this report to the Monroe County Prosecutor for review for charges.

STATUS: Open

End Narrative By: AC Director Brett Raymo

25

1 A Probably. 2 Q When is your busy season? 3 A We don't have a busy season. 4 Q What is the most amount of dogs that you think you've 5 had on your property at one time? 6 A Didn't keep track. Probably around a hundred, maybe a 7 little more. I don't really know. I didn't keep a 8 record of that. 9 Q You didn't keep a record of how many dogs you had? 10 A No, we didn't. But I guess from forward we will 11 because the state we got to keep a record of our dogs 12 from now on. 13 Q What did they say that to you? What are you talking 14 about? A The Polly McKillop, when they give us our state 15 license. 16 17 Q This would be the dog kennel license that you handed 18 me? 19 A That's county license. The other one. 20 Q This document is the state license that you're referring to? 21 A Yes. 22 23 MS. LYNN: I'll mark that as A. 24 (Whereupon Plaintiff's Exhibit A was marked

for identification.)

- 1 Q (By Ms. Lynn) When did you receive this?
- 2 A Which?
- 3 Q There's a copy there.
- 4 A This here?
- 5 Q Yeah.
- 6 A Yesterday.
- 7 Q You received this yesterday?
- 8 A Both of them.
- 9 Q Okay. Let me just have a chance to look at it.
- And do you know what guidelines and rules you have
- to follow now that you're licensed?
- 12 A They give us all the paperwork.
- 13 Q This is your county license that I'm handing you right
- 14 now?
- 15 A Yes.
- 16 MS. LYNN: I'll have that as B.
- 17 (Whereupon Plaintiff's Deposition Exhibit B
- 18 was marked for identification.)
- 19 Q (By Ms. Lynn) Did they give you paperwork as to what
- rules you need to follow in order for you to comply
- 21 with your county license?
- A Not county -- no, the county didn't, just state. Then
- wanted to get a USDA license.
- 24 Q You said that you want to get a USDA license?
- A (Witness nodded his head in the affirmative.)

- 1 Q People in your community?
- 2 A Yes.
- 3 Q You also wrote on here that you don't have health
- 4 papers from some of the dogs, and you only gave them to
- 5 consumers when they asked for it; is that correct?
- 6 A Yes.
- 7 Q Do you keep health records for each dog that you have
- 8 on your property?
- 9 A You mean the breeding --
- 10 Q The vaccination records, any vet records.
- 11 A Yes, we have all that.
- 12 Q For every single dog?
- 13 A You mean when we vaccinate our females and the males
- 14 and everything?
- 15 Q Yes.
- 16 A And the puppies. Yes.
- 17 Q Have you always had that documentation?
- 18 A Yes.
- 19 Q Where do you keep those documents?
- 20 A In the logbook.
- 21 Q Do you personally fill them out?
- 22 A Yes.
- 23 Q Are they always a hundred percent accurate?
- A Yes, to the best of my knowledge they are.
- 25 Q I see that you had listed Pet City Pets as one of the

1 people that you sold to, or businesses, and you did 2 provide these invoices. MS. LYNN: I'll have these labeled as Exhibit 3 D. 4 (Whereupon Plaintiff's Deposition Exhibit D 5 was marked for identification.) 6 7 Q (By Ms. Lynn) I'll hand you a copy to look at if you need it. When did you start selling to Pet City Pets? 8 9 A I wouldn't know. Is there dates on there? I guess --Q Is this -- are these the only documents that you have? 10 11 A Yes. 12 Q Have you ever sold to Pet City Pets without receiving 13 an invoice? A No. 14 Q So there's nine sale invoices from Pet City Pets. Does 15 16 that sound correct? A Yes. 17 Q How did you start selling to them? 18 A I'm not sure. I would think maybe I knew this Peter 19 Miller, that he took pups up there, might have been 20 through him. I can't really say for sure. 21 22 Q Did you ever go with him to Pet City Pets --A Yes. 23 24 Q -- or with any -- yes? 25 A Yes.

- 1 A I've never took none there.
- 2 Q The vet would travel to you?
- 3 A Yes.
- 4 Q And what did that veterinarian come out to your
- 5 property for?
- 6 A Well, multiple things, check on other animals and the
- dogs, puppies. He's been our vet for many years.
- 8 Q And the documents that you had provided, it was for
- 9 rabies vaccinations September 20th, 2019, and October
- 10 2nd, 2019. I didn't see any other rabies vaccination
- 11 records. Is that the first time --
- 12 A Yes.
- 13 Q -- that you've had any of the dogs vaccinated for
- 14 rabies?
- 15 A Yes.
- 16 Q You know that you're required -- after a dog reaches a
- 17 certain age that they're required to be vaccinated for
- rabies, correct?
- 19 A We're finding all that out, yes.
- 20 Q What about Fieldstone Veterinarian Care in Jonesville,
- 21 Michigan? Did you take dogs to that particular vet?
- 22 A Yes.
- 23 Q How many times?
- 24 A Don't know.
- 25 Q What would you bring the dogs there for?

- to just keep it cool, you put it in the basement.
  Q Does the vet ever tell you you need to keep any of the
- 2 Q Does the vet ever tell you you need to keep any of the
- 3 medication or vaccines at a particular temperature?
- 4 A I don't -- don't know. It's depends on the medication
- 5 he would tell us.
- 6 Q Do you have a way of determining what the temperature
- 7 is in the icebox that you have?
- 8 A It's -- it's not freezing, but it's cold enough to keep
- 9 the ice so it's 33 degrees. I don't know.
- 10 Q But if a vet had told you that you need to keep a
- 11 vaccination or a medication above or below a certain
- temperature, you wouldn't have a way to determine what
- that temperature is at your property?
- 14 A I could.
- 15 Q How?
- 16 A Put a thermometer in the icehouse.
- 17 Q Do you use a thermometer in the icehouse?
- 18 A We don't.
- 19 Q What do you do with the dogs that you can't sell?
- 20 A Katrina was getting them.
- 21 Q What do you do with dogs that are sick and you can't
- sell them?
- 23 A Never had one.
- 24 Q Have you ever had to shoot a dog because it was sick or
- 25 not being sold?

- 1 A Yes, I think we -- we had to already.
- 2 Q How many?
- 3 A I wouldn't know. Maybe -- maybe six or seven. I'm not
- 4 sure.
- 5 Q Why did you have to shoot them?
- 6 A Now I guess I was talking before I was thinking. I
- 7 think that was right when we started. That might have
- been -- was it a couple -- 2017. I don't remember for
- 9 sure. It was right when we started and didn't --
- 10 didn't have a -- I think it was some older -- older
- 11 puppies that we never got sold.
- 12 Q So because you couldn't sell them you shot them?
- 13 A Yes.
- 14 Q What did you do with them?
- 15 A I don't remember, probably buried them.
- 16 Q That was in 2017?
- 17 A I don't remember.
- 18 Q Have you shot any this year?
- 19 A No.
- 20 Q Why not?
- 21 A Didn't need to.
- 22 Q So right now if you had six or seven dogs that you
- couldn't sell would you shoot them?
- 24 A No.
- 25 Q Why not?

24

25

1	five weeks and six weeks.
2	Q Where do the stickers come from?
3	A Off the bottles. Or the six that comes off the
4	bottles. The NeoPar they just send on some stickers
5	with along with the vaccine.
6	Q How do you know that you've given this vaccination to a
7	particular dog?
8	A It's in my logbook.
9	Q On the first page there's no name listed for the dog.
10	How do you know which dog it was that you
11	A We didn't have no names. We don't give all names
12	our puppies names, but since the state was there we
13	started just using numbers.
14	Q So that's recent that you started using numbers for
15	each individual dog?
16	A Yes.
17	Q And by numbers you mean they have a collar on that has
18	the number corresponding to the vaccination?
19	A Yes.
20	Q When did you start doing that?
21	A A week ago probably. I don't know for sure.
22	Q And why did you start doing that?
23	A State's recommendation.

Q How do you know for this particular dog, this

Aussie-poo, how do you know with a hundred percent

1 certainty that the vaccination corresponds to that 2 particular dog? 3 A Because I give it to him. Q I'm handing you a series of 15 health records. 4 MS. LYNN: This will be labeled Exhibit J. 5 (Whereupon Plaintiff's Deposition Exhibit J was marked for identification.) 7 8 Q (By Ms. Lynn) These are the records that we got from 9 Katrina that Mr. Miller provided her for the 15 dogs 10 that she purchased from you -- or got from you. 11 There's no dog information listed on this, there's not 12 a name, there's not date of birth, there's not a breed, 13 there's not a sex. There's nothing. So how do you know that this vaccination schedule is correct for each 14 15 individual dog that you sold to Katrina? A Because I do every puppy and every dog. Well, not the 16 17 females, but every puppy that she got would be the 18 same. 19 Q What about the adult dogs? 20 A The adult dogs, they get the same vaccine. 21 The same exact schedule? 22 A The -- the adult dogs -- the half-grown that she got, 23 yeah, it would be the same schedule, but if she bought 24 older dogs, they didn't have NeoPar, but they had all 25 the rest of the -- the wormer and the vaccine.

1 Q So if she would have boughten any older dogs, these 2 vaccination records would not be correct? 3 A She -- she didn't ask for them right at the time that she bought them and then she said she's in -- she's 4 5 trouble with the sheriff -- or something, and she needs -- needs to have these, so I couldn't remember which 6 7 dogs she got, so I just give her -- give her these health records and told her that she can fill them out 8 9 because I don't remember which puppies that she bought. 10 Q So you had no idea that these vaccination records 11 matched the dogs that she got? 12 A I know they matched anything -- any -- anything a year 13 old or something like that that what we raised. But if 14 she got any adult dogs from that -- from that batch of 15 dogs that she bought, I don't know. I told her that. 16 I can't remember which ones she bought, but this is 17 what we do to all our puppies. 18 Q But adult dogs it would be different? A Only thing we -- they would all get -- everything's the 19 20 same except they -- they don't get no NeoPar because 21 the vet don't require that. Q And the NeoPar is, I'm sorry, which -- is that the 22 23 Pyrantel? A No, the NeoPar is that four-week one up there. 24 25 Q Well, that sticker is on every single health record

- 1 Q So he knew that you didn't have a license at this -- at
- 2 that point?
- 3 A Yes.
- 4 Q Did Rick Hoover give you anyone else's information for
- 5 like a vet in Indiana?
- 6 A Not that I'm aware of.
- 7 Q Did he give you any other person's names that would be
- 8 wanting to buy dogs from you?
- 9 A No.
- 10 Q And you mentioned that you have a contact at Pet City
- Pets. Do you remember that person's name?
- 12 A Stuart is all I know.
- 13 Q Did Stuart know if you were licensed or not?
- 14 A I don't know.
- 15 Q Did he ever ask?
- 16 A I assume he did, but I'm -- I couldn't say for sure. I
- 17 can't remember that.
- 18 Q Going back to the six or seven dogs that you shot in
- 19 2017, you said they were older puppies, so what does
- 20 that mean?
- 21 A Oh, that was -- that was before this here, what you
- said -- what this -- our paperwork here says that
- 23 anything just back to 200 -- September 24th of '18. I
- don't remember when it was, it was back further than
- 25 that.

- 1 Q You had said in 2017.
- 2 A Yeah, so I don't know if it was exactly '17 or if it
- 3 was of '18. I don't remember that. That's -- that's
- 4 all I can say, it was just some -- we was just getting
- 5 started, and it was some older puppies that -- and I
- 6 suppose I don't remember if we couldn't sell them or
- 7 what.
- 8 Q Were they sick?
- 9 A I don't remember that they was.
- 10 Q An older puppy, is that like six months old, two years?
- 11 A I'd guess maybe six months old.
- 12 Q Did you ever consider taking them to the shelter?
- 13 A I didn't know of any place like that or we probably
- would have, which we -- now we have more. We was just
- 15 getting started, and we didn't know all this stuff.
- Now we have more contacts, and I think we -- we have a
- 17 place that's going to take our females after we're
- 18 done.
- 19 Q Done what?
- A Breeding them.
- 21 Q What place is that?
- A I don't have the name yet. I just heard of it.
- 23 Q From who?
- A Some of the other dog breeders.
- 25 Q In your community?
