MI COVID response Data and modeling update

July 19, 2022

Epidemiologic Surveillance: Key Messages

COVID-19 pandemic is surging in some parts of the globe and within the United States

- COVID spread in European counties is continuing to increase
- Within the U.S., case rates increased 16% over the past week
- Midwestern states (region 5) are once again increasing

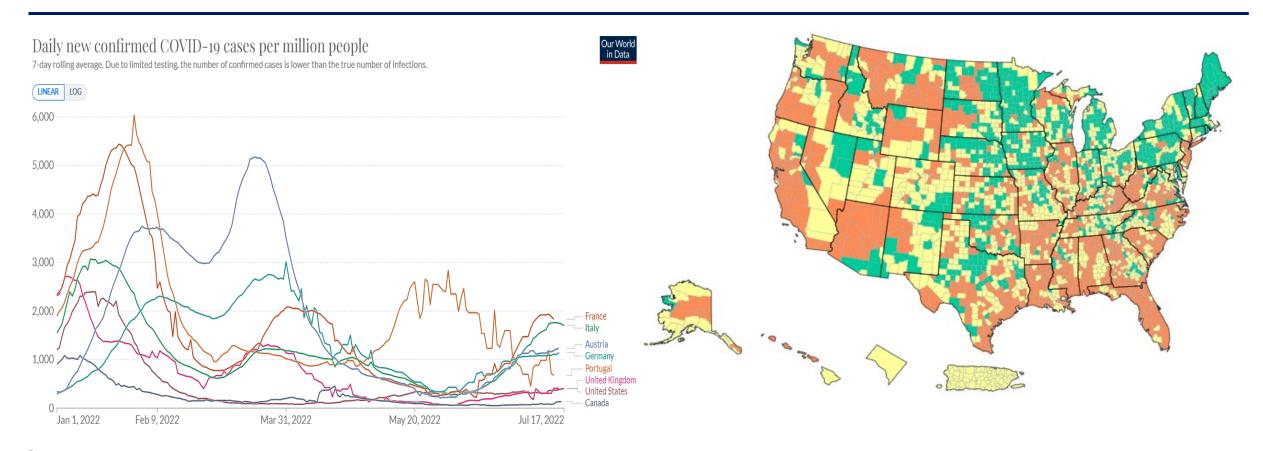

COVID spread in Michigan is no longer declining

- COVID spread is assessed from many different markers including CDC community levels and other surveillance systems
- As of July 14, 46% of Michigan counties are medium or high COVID-19 Community Levels, which is higher than last week
 - 4 Michigan counties are classified as High this week according to CDC's community levels
 - 34 Michigan counties are currently at Medium level (41%). This represents 45% of the population
- The R_t for Michigan is increasing above 1 indicating COVID is spread
- The proportion of specimens sequenced and identified as BA.5 in the U.S. and Michigan continues to rise
- 65% of SWEEP sites saw an increase in the most recent week and another 5% of sites saw a plateau

COVID-19 hospital metrics in Michigan remain lower than past surges

 COVID-19 hospital admissions and hospital census all increased this week from last week with continued signs of regional increases

Global and National Trends: BA.5 is causing resurgences

Globally, there are 562,514,654 reported cases and 6,369,703 reported deaths (Data* through 7/18/2022)

Case rates for several European countries continue to increase

United States: Reported cases (7-day average) have increased 15.7% since the prior week¶

In the U.S., the case rate is 266 cases/100,000 in last 7 days (last week: 223 cases per/100,000)

Early signs of increases in some parts of Region 5 (Midwest) states

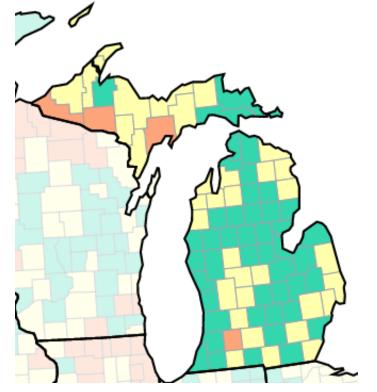

• Michigan and Indiana continue to have the lowest case rates <u>in Region 5</u> (7/15/2022)

Recent statewide trends are moderately increasing

Statewide trends MERC Regional breakdown: Positivity, cases, hospitalization 7-day average Daily values rate, and deaths Daily Positive Test Rate Positivity: 7-day average positivity, % Cases: 7-day average cases per million Hosp. rate: 7-day average hospitalization rate, % Deaths: 7-day average deaths per million Current: 17.5% Positivity, % LastWeek: 16.6% Positivity: 15.8% Cases: 171.2 Hosp. rate: 3.3% Deaths 0.0 Zoom 1m 3m 6m All Daily cases Current: 151.2 per million LastWeek: 150.3 Positivity: 13.3% Cases: 89.3 Hosp. rate: 4.5% Deaths: 2.3 % of Inpatient Beds that are COVID-19 Positive **Daily** Positivity: 20.0% Positivity: 13.7% Cases: 121.1 hospitalization § Current: 4.3% Cases: 103.6 Hosp. rate: 4.9% Hosp. rate: 3.4% rate, % Last Week: 3.9% Deaths: 1.4 Deaths: 1.4 Positivity: 19.6% Cases: 165.0 Positivity: 17.2% Hosp. rate: 5.9% Cases: 176.7 Deaths Deaths: 1.9 Hosp. rate: 4.1% Deaths: 1.4 Positivity: 21.8% 3 **Deaths** Cases: 153.1 Positivity: 16.8% Current: 1.5 Hosp. rate: 6.4% Cases: 153.1 Deaths: 2.7 Hosp. rate: 6.5% Last Week: 2.5 Deaths: 0.5

As of July 14, 4 Michigan Counties at High COVID-19 Community Level

- In the US, 35% of counties have high risk for medically significant disease and healthcare strain; in Michigan, 5% of counties are at high risk
- 3% of Michigan residents reside in a county with a High COVID-19 Community Level
- 34 Michigan counties are currently at Medium level (41%). This
 represents 45% of the population
- 45 Michigan counties are currently at Low level (54%). This represents 52% of the population

Percent of Counties

	United		Percent of MI
	States	Michigan	Population
Low	25%	54%	52%
Medium	40%	41%	45%
High	35%	5%	3%

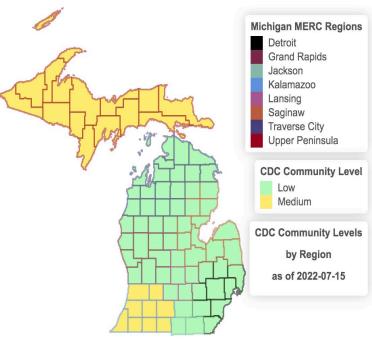

Low	Medium	High

CDC Community Levels

Michigan Region & State as of 2022-07-15

	Wildingar Hogish a State as of 2522 of 15				
		New COVID-19 Cases per 100K in previous 7 days	Percent Inpatient Beds Occupied by COVID-19 Patients (7-day Avg.)	New COVID-19 Hospital Admissions per 100K in previous 7 days	CDC Community Level
1	Detroit Region	164.7	3.5%	8.6	Low
2	Grand Rapids Region	122.5	4.4%	7.8	Low
3	Kalamazoo Region	142.0	5.1%	10.2	Medium
4	Saginaw Region	97.5	3.2%	5.9	Low
5	Lansing Region	123.5	5.2%	7.1	Low
6	Traverse City Region	97.7	4.4%	8.3	Low
7	Jackson Region	161.3	5.3%	6.6	Low
8	Upper Peninsula Region	176.0	3.2%	11.0	Medium
9	State	149.0	3.8%	8.4	Low
CD	CDC Methodology is followed, though only state available data is applied.				

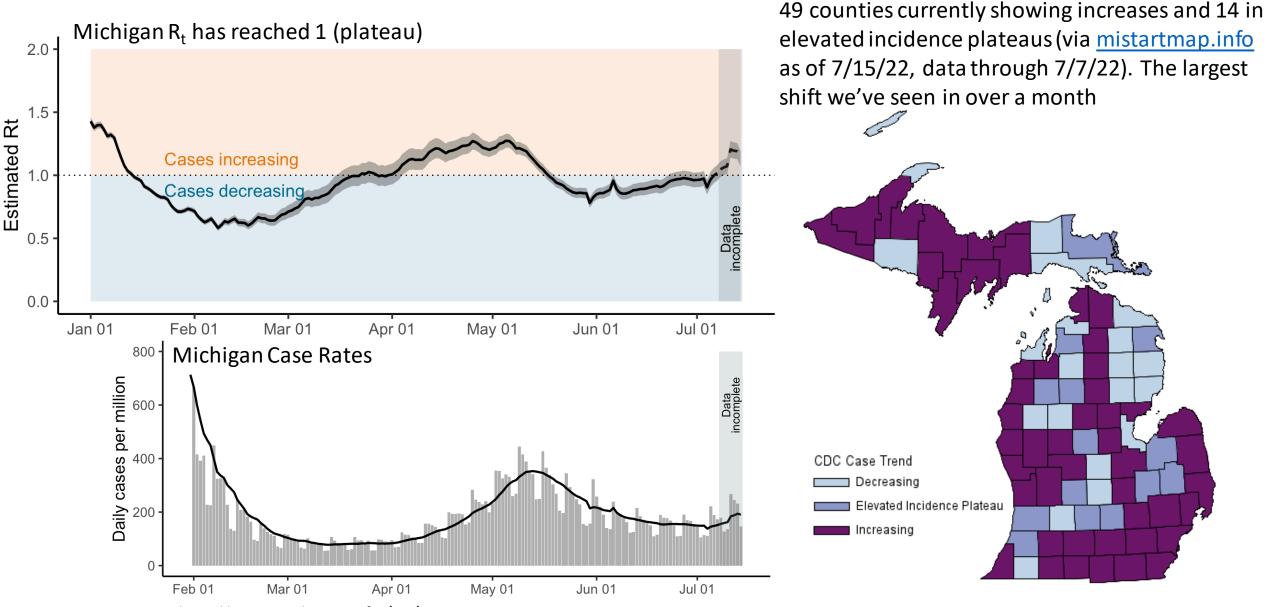

- County differences can shift week over week
- Smaller counties are more susceptible to greater shifts in COVID community levels
- Regional levels, when taking into account other COVID metrics, may help locals determine the impact of COVID-19 on communities and what actions to take

Local Prevention Decisions Should Use Community Levels in Concert with Other Pandemic Indicators

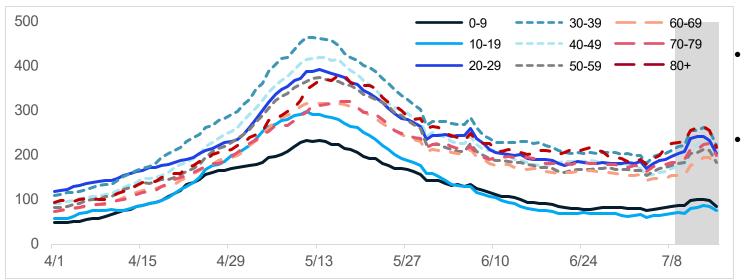

Cases are plateaued in Michigan, and are starting to increase

Sources: MDSS cases plotted by onset date as of 7/15/22.

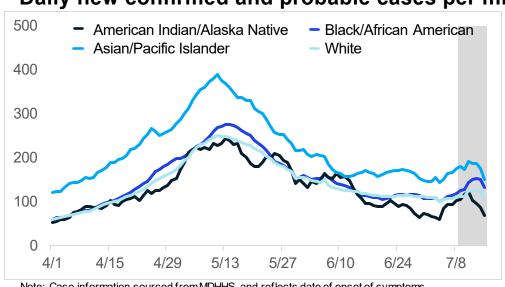

Case rates by age, race, and ethnicity are increasing

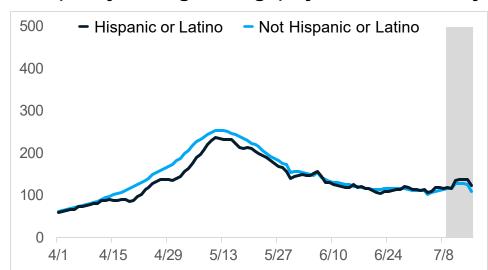

Daily new confirmed and probable cases per million by age group (7day rolling average)

- Case rates by onset date for all age groups are between 68.9 and 227.3 cases per million (through 7/8)
- Case counts and case rates are highest for 80+year-olds this week, followed by 30-39-year-olds and the 20-29-year age groups

Daily new confirmed and probable cases per million (7 day rolling average) by race & ethnicity category

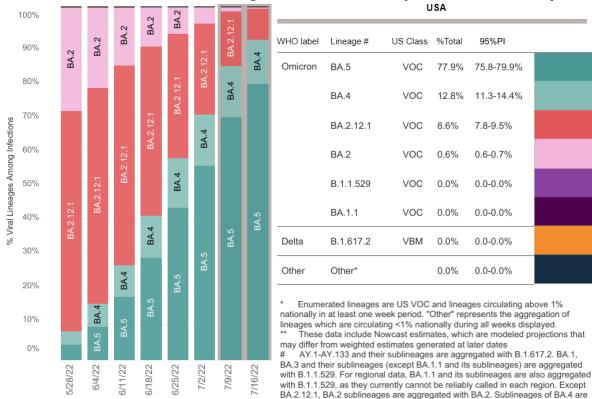

- Case rates are highest for Asian/Pacific Islander populations (175.4 cases/million)
- Between 21-26% of cases in last 30 days have missing race/ethnicity data

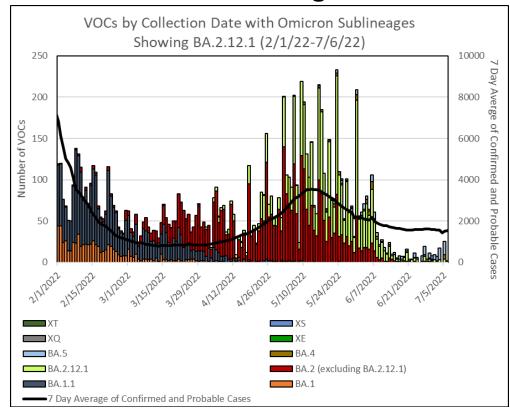

Identified COVID-19 Cases Caused by Variants of Concern (VOC) in US and Michigan

SARS-CoV-2 Variants Circulating in the United States, May 15 – Jul 9 (NOWCAST)

aggregated to BA.4. Sublineages of BA.5 are aggregated to BA.5.

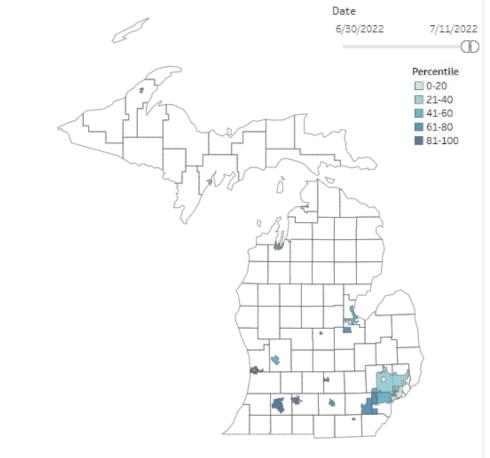

VOC Distribution in Michigan

- Since June 1, there have 836 VOC specimens sequenced
- 100% of specimens sequenced are Omicron
 - In the most recent week (July 3), a majority of specimens sequenced are BA.5 (70.5%) but the total number of specimens sequenced and reported remains low (n=44)

Michigan COVID-19 SWEEP Sentinel Wastewater Dashboard

The map below shows 20 sewershed sites in Michigan where wastewater is being monitored for the presence of SARS-CoV-2, the virus that causes COVID-19. These sentinel sites serve as a subset of wastewater surveillance in Michigan distributed across the Michigan Economic Recovery Council (MERC) Regions. Click on each site on the map to see wastewater and clinical case data over time. In the top right corner of the map, slide the white buttons to select the time period for which the site-specific percentile is calculated.

Interpreting Wastewater Should Be In Context with Other Indicators

- When levels of virus in wastewater are low, a modest increase overall in virus level can appear much larger as numbers are translated into percentages
 - This does not necessarily mean we will see major increases in transmission in the community

- When increases are seen within one wastewater site, public health officials compare with neighboring communities and other data sources to understand potential of surges
 - For example, the Ypsilanti WWTP saw increases in SARS-CoV-2 levels which correlated with increasing presence of Omicron BA.2 lineage and then followed by an increase in cases

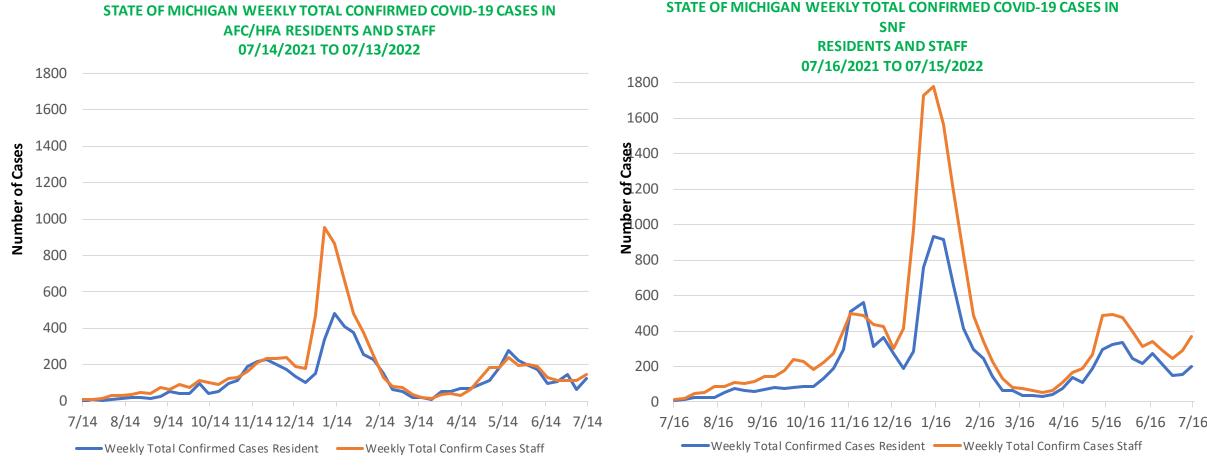

Ypsilanti WWTP

The most recent sample concentration is higher than 84% of samples collected at this site, which puts it in the 81-100 percentile category. As of 5/10/2022, the change in viral concentration over the past 15 days is increasing.

The blue line on the graph shows the levels of SARS-CoV-2, the virus that causes COVID-19, in the wastewater samples collected from Ypsilanti WWTP. Each data point is calculated by averaging the number of viral gene copies detected per 100mL of wastewater in the 3 most recent samples. The orange bars on the graph show the COVID-19 cases reported to MDHHS from the zip codes that the wastewater treatment plant serves (7-day average). Both the virus levels and COVID-19 cases are calculated per 100,000 people. Case data will not be shown on the graph when the average number of cases is fewer than 10 per 100,000 people to protect the confidentiality of individuals with infections. This will be represented by an orange dashed line with gray shading below.

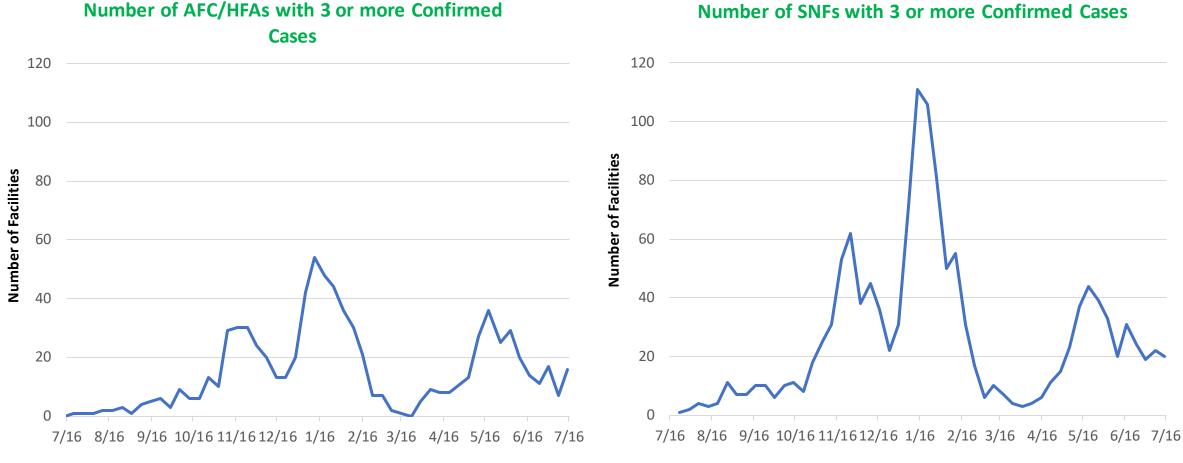

Cases Among Staff and Residents in Long Term Care Facilities

- Case counts in residents increased in both AFC/HFA (62 to 115) and SNFs (156 to 202) since last week
- Case counts in staff are increased in both AFC/HFA (115 to 147), and SNFs (288 to 368) since last week
- 30% of SNFs are reporting nursing shortages and 31% of SNFs are reporting aide shortages, which is stable from last week

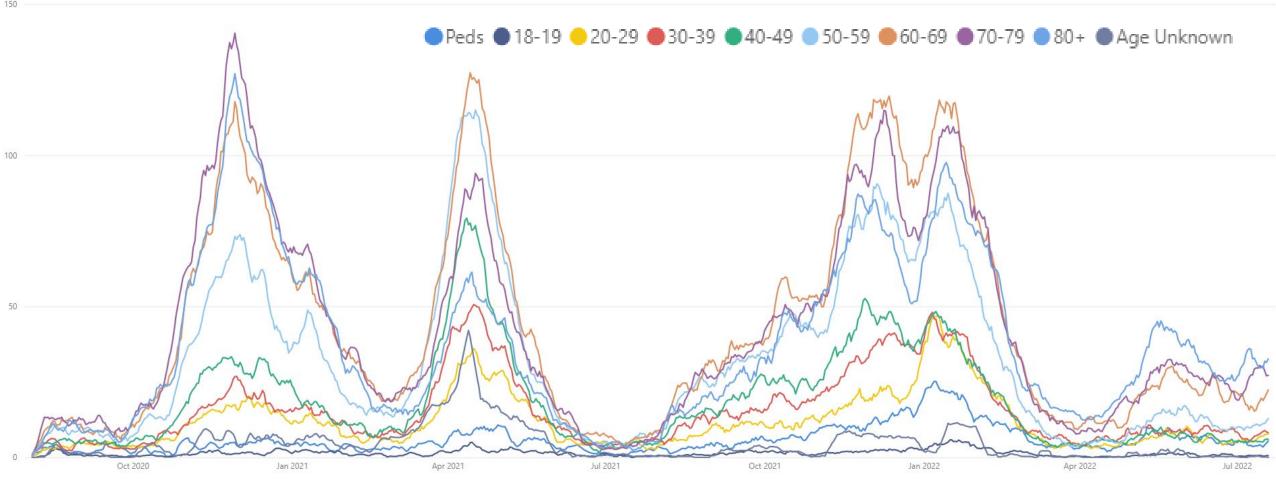

Abbreviations: AFC: Adult Foster Care; HFAs: Homes for the Aged; and SNF: Skilled Nursing Facilities

Reported Number of Outbreaks in Long Term Care Facilities

The number of Long-Term Care Facilities reporting 3 or more cases within a single reporting period increased in AFC/HFA from 7 to 16; but decreased slightly in SNF from 22 to 20 in most recent data.

Hospital admissions due to COVID -19 remain lower than past surges

- Trends for daily average hospital admissions saw an increase (+5%) since last week (vs. +8% prior week)
- Most age groups reported an increase in hospital admissions this week compared to last week
- Those 60-69, 70-79, and 80+ are seeing between 20-35 daily hospital admissions

Hospital Admissions and Admission Rates by Age Group

Daily new hospital admission per million by age group (7day rolling average)

Age Group	Average [†] daily number of hospital admissions	Average [†] Daily Hospital Admission Rate*	One Week % Change (Δ#)
0-11	3.4	2.5	+9% (+<1)
12-17	0.7	0.9	+150% (+<1)
18-19	0.6	2.2	-0% (-0)
20-29	7.6	5.5	+36% (+2)
30-39	8.4	6.9	+16% (+1)
40-49	6.0	5.1	+17% (+1)
50-59	12.0	8.9	+9% (+1)
60-69	21.0	16.5	+36% (+6)
70-79	27.0	35.2	-12% (-4)
80+	31.4	75.9	-6% (-2)
Total [¶]	118.3	10.4	+5% (+6)

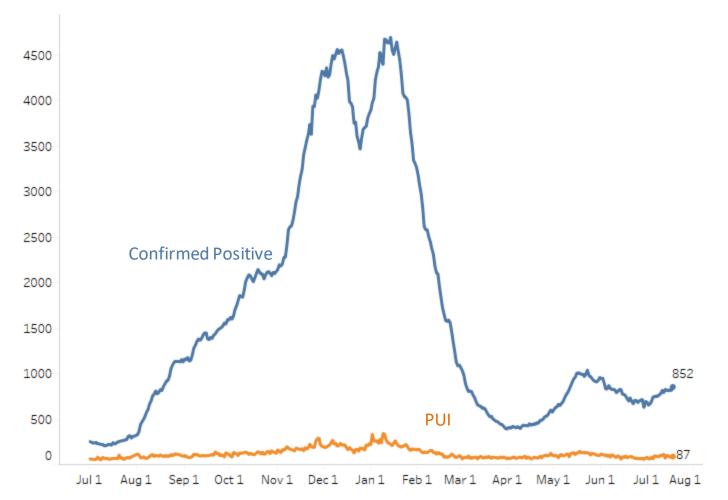

^{*} Rate per 1 million residents; † Rolling 7-day average; ¶ Total may not reflect state due to missing age data Note: Hospital Admission data reflects date data w as submitted Source: CHECC and EM Resource

- Through July 18, there were an average of 118.3 hospital admissions per day due to COVID-19; a modest increase from last week (+5%, +6)
- Most age groups saw an increase this week compared to last week
- Those between 60 and 69 years saw the greatest daily average increase at 6 which brought the daily average hospital admissions in this age group to 21.0
- Average daily hospital admission count (31.4 hospital admissions per day) and average daily hospital admission rate (75.9 hospital admissions/million) was highest among those aged 80+
- Those 60-69, 70-79, and 80+ are seeing between 20-35 daily hospital admissions

Note: for some age groups, small changes in number of hospitalization admissions can cause large change in One Week Percent Change

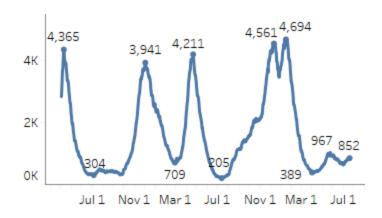

Statewide Hospitalization Trends: Total COVID+ Census

Hospitalization Trends 7/1/2021 – 7/18/2022 Confirmed Positive & Persons Under Investigation (PUI)

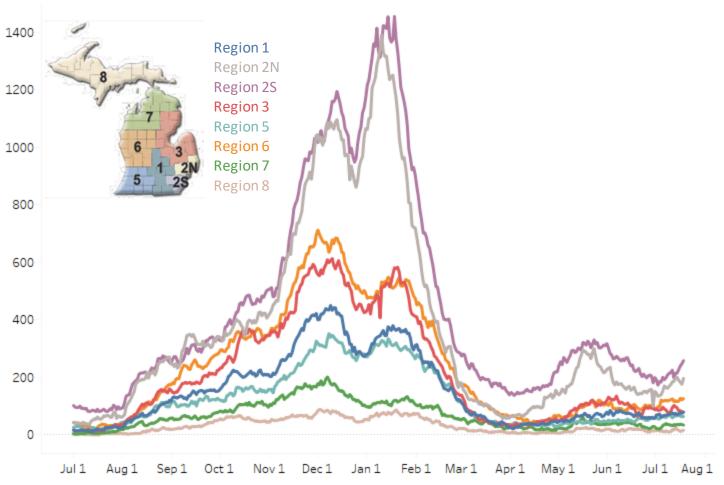

COVID+ census in hospitals has increased by 5% from last week (last week increased 10% from the previous week). Overall census is currently 852 patients.

Hospitalized COVID Positive Long Term Trend (beginning March 2020)

Statewide Hospitalization Trends: Regional COVID+ Census

Hospitalization Trends 7/1/2021 - 7/18/2022 Confirmed Positive by Region

This week hospitalizations have increased in Regions 1, 2N, 2S, 5, 6, and 7. Hospitalizations have decreased or remained flat in Regions 3 and 8.

Region 2S has greater than 100 hospitalizations/M. All other regions have less than 100 hospitalizations/M.

Region	COVID+ Hospitalizations (% Δ from last week)	COVID+ Hospitalizations / MM
Region 1	79 (4%)	73/M
Region 2N	196 (7%)	89/M
Region 2S	258 (15%)	116/M
Region 3	79 (-17%)	70/M
Region 5	64 (8%)	67/M
Region 6	126 (1%)	86/M
Region 7	34 (6%)	68/M
Region 8	16 (-11%)	51/M

Statewide Hospitalization Trends: ICU COVID+ Census

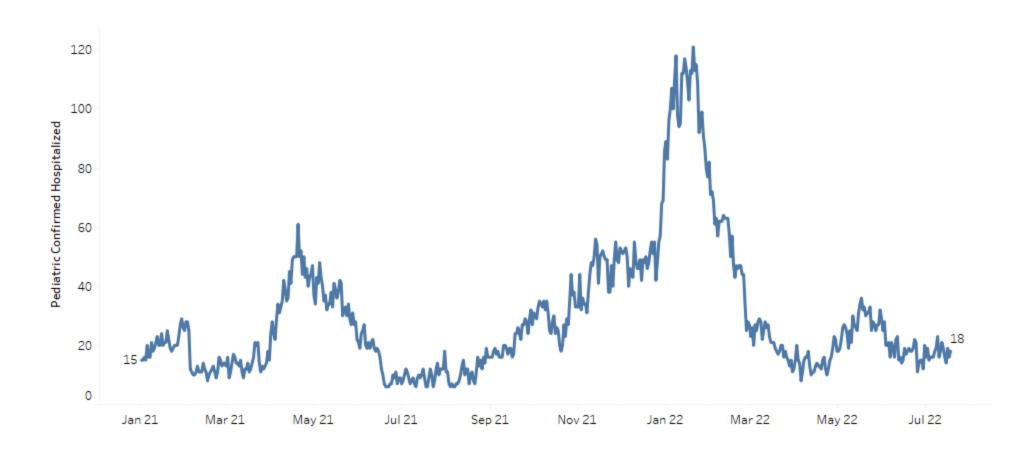

Hospitalization Trends 7/1/2021 - 7/18/2022Confirmed Positive in ICUs 1000 800 600 Confirmed Positive in ICU 400 200 Augl Sepl Octl Novl Decl Janl Febl Marl Aprl Mayl Junl Jull Augl Overall, the volume of COVID+ patients in ICUs has decreased by 11% from last week. There are 102 COVID+ patients in ICU beds across the state.

ICU occupancy is below 85% in all regions. All regions have 6% or fewer ICU beds occupied by COVID+ patients.

Region	Adult COVID+ in ICU (% Δ from last week)	ICU Occupancy	% of ICU beds COVID+
Region 1	5 (-64%)	81%	3%
Region 2N	27 (13%)	65%	5%
Region 2S	40 (0%)	79%	6%
Region 3	8 (-20%)	84%	3%
Region 5	4 (-60%)	61%	2%
Region 6	11 (38%)	72%	5%
Region 7	6 (0%)	81%	5%
Region 8	1 (-50%)	54%	2%

Statewide Hospitalization Trends: Pediatric COVID+ Census

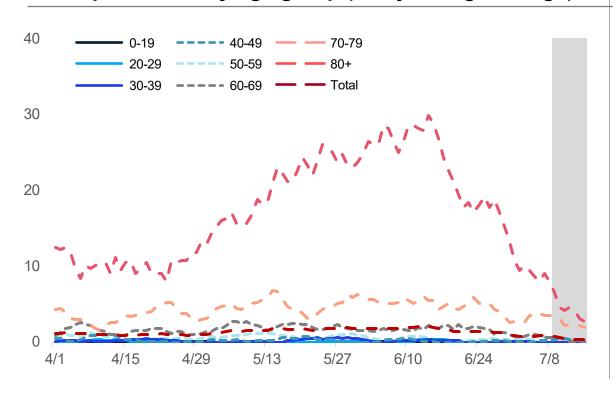

Hospitalization Trends 1/1/2021 - 7/18/2022 Pediatric Hospitalizations, Confirmed + PUI

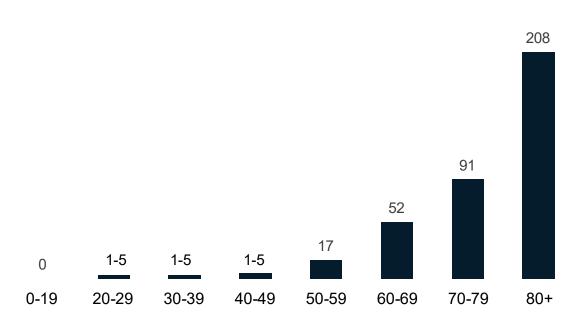

Average Daily COVID-19 Reported Deaths

Daily COVID-19 deaths in confirmed and probable cases per million by age group (7 day rolling average)

Total COVID-19 deaths in confirmed and probable cases by age group (past 30 days, ending 7/8/2022)

7.4% of deaths below age sixty

- Through 7/1, the 7-day avg. death rate has decreased (8.0 deaths per million people) for those over the age of 80
- In the past 30 days, there are fewer than 15 confirmed and probable COVID-19 deaths under the age of 50
- 30-day proportion of deaths among those under 60 years of age is 7.4%.

Harm Reduction: Key Messages

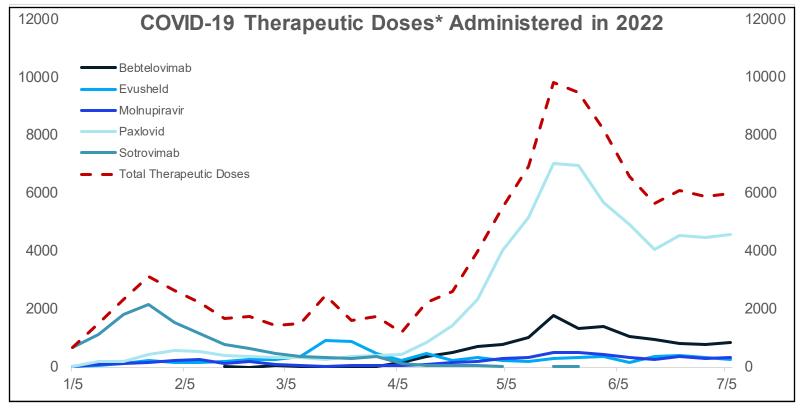

Empowering community members to make best choices for their individual circumstances and to be prepared by making a COVID plan

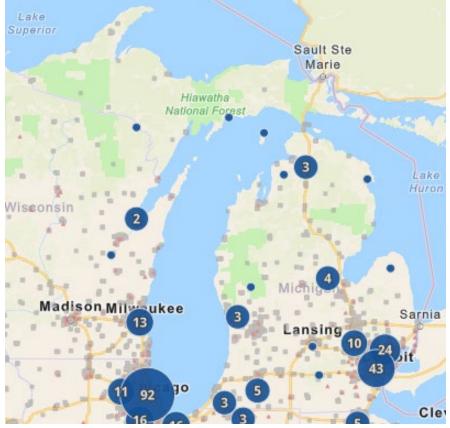

- Michiganders can take advantage of local, state, and national COVID-19 resources
- Get tested, and if positive, seek care with therapeutics (e.g., antibodies or antiviral medications)
 - Cumulative therapeutic availability and administration has plateaued since mid-June
 - Talk to your doctor or pharmacist about whether you should get antibody or antiviral treatment, and where you can find treatment
 - FDA recently authorized pharmacists to prescribe Paxlovid under certain limitations
 - Therapeutics are authorized for people who meet select criteria
 - Additional public health, regulatory, and policy efforts might help decrease barriers to oral antiviral access, particularly in communities with high social vulnerability
- Vaccinations remain the best way to protect from COVID-19, especially from severe disease
 - COVID-19 vaccines are now available for ages 6 months and up
 - Everyone 6 months and older should also get an age-appropriate COVID-19 booster, when eligible
 - Over 6.7 million Michiganders have received at least one dose (67.6%)
 - 55.5% of fully vaccinated Michiganders have received at least one booster
 - 28.4% of people in Michigan (612K+) with a first booster dose have received a second booster dose

Federal & Michigan websites assist COVID positive residents find treatment

COVID-19 resources available on federal website: <u>COVID.gov</u>
Test-to-Treat program simplifies access to COVID treatment:
<u>Find a Test-to-Treat location near you</u>

- If you have COVID-19 symptoms, do not wait to get treated
- You must take oral COVID-19 medication within 5 days of your first COVID-19 symptoms
- Use the tool to find a location that is right for you

Source: Screen capture of Michigan Test-to-Treat sites from linked website

Therapeutic administration increased during Michigan's Spring Omicron surge. Supply limitations in January 2022 required strategic distribution and should not be compared directly.

Source: HHS - Tiberius

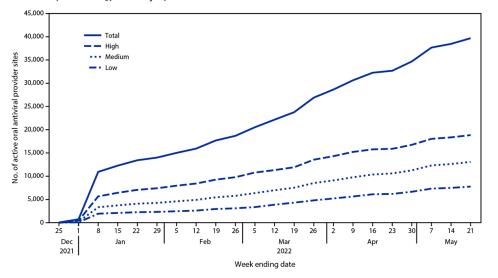

^{*}Data is reported as a single patient course, except for Evusheld, which is reported as the number of 300mg doses administered. Data Updated July 8

Dispensing of Oral Antiviral Drugs for Treatment of COVID-19 by Zip Code– Level Social Vulnerability — United States, December 23, 2021–May 21, 2022

- Lagevrio and Paxlovid are oral antiviral drugs effective at preventing hospitalization and death in patients with mild to moderate COVID-19 who are at risk for progression to severe disease
- During December 23, 2021–May 21, 2022, 1,076,762 oral antiviral prescriptions were dispensed in the United States.
 - The overall number of antivirals dispensed increased
 - However, by the end of the study period, dispensing rates were lowest in high vulnerability zip codes, despite these zip codes having the largest number of dispensing sites
- Additional public health, regulatory, and policy efforts might help decrease barriers to oral antiviral access, particularly in communities with high social vulnerability

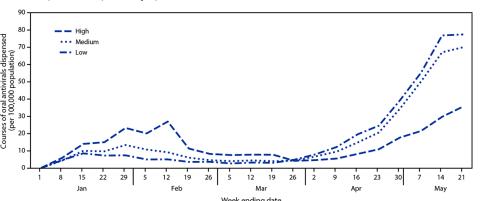

NEW THIS MONTH: <u>FDA authorizes</u> pharmacists to prescribe Paxlovid under certain limitations – new prescribing authority could improve access for some patients at high risk for severe COVID-19

FIGURE 2. Number of active provider sites for oral antiviral therapy against COVID-19, by week and zip code social vulnerability score* — RUnited States, December 23, 2021—May 21, 2022

^{*} Zip codes were classified as having low, medium, or high social vulnerability based on ranking within the lower, middle, and upper tertiles of the Equitable Distribution of the Equitab

FIGURE 3. Courses of oral COVID-19 antiviral therapy dispensed per 100,000 persons, by week and zip code social vulnerability level — United States, December 26, 2021–May 21, 2022*

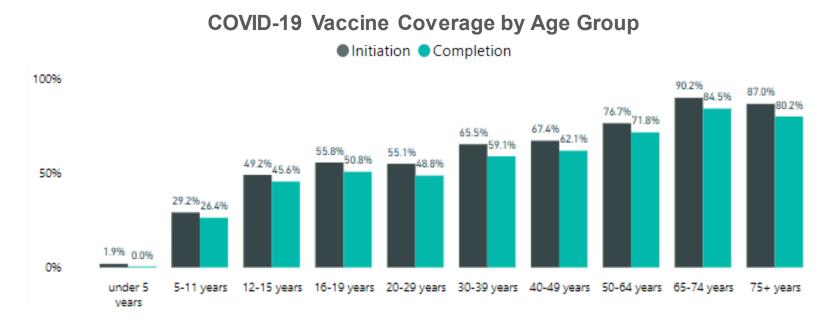

^{*} The week ending December 25, 2021, is not shown because no oral antiviral dispensing was reported during that week. Zip codes were classified as having low, medium, or high social vulnerability based on ranking within the lower, middle, and upper tertiles of the Equitable Distribution Index score.

Vaccinations and Boosters

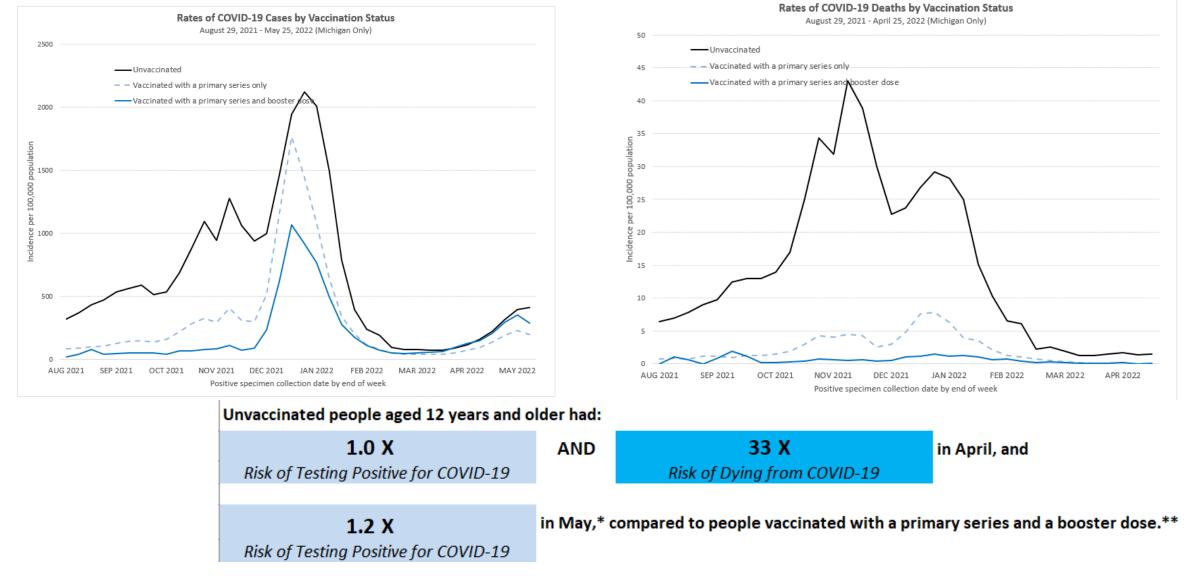

- Over 16.4 million COVID-19 vaccine doses have been administered in Michigan
 - Over 6.7 million Michiganders have received at least one dose (67.6%)
 - Over 6 million Michiganders have completed a primary series (60.7%)
 - Over 3.3 million additional/booster doses have been administered in Michigan
 - 55.5% of the fully vaccinated population has received a booster
 - 77.5% of the fully vaccinated population 65 years of age or older has received a booster
 - Nearly 612,578 Michiganders 50 years of age or older who have received a first booster dose have received second booster (28.4%)

Additional Doses and Booster Coverage

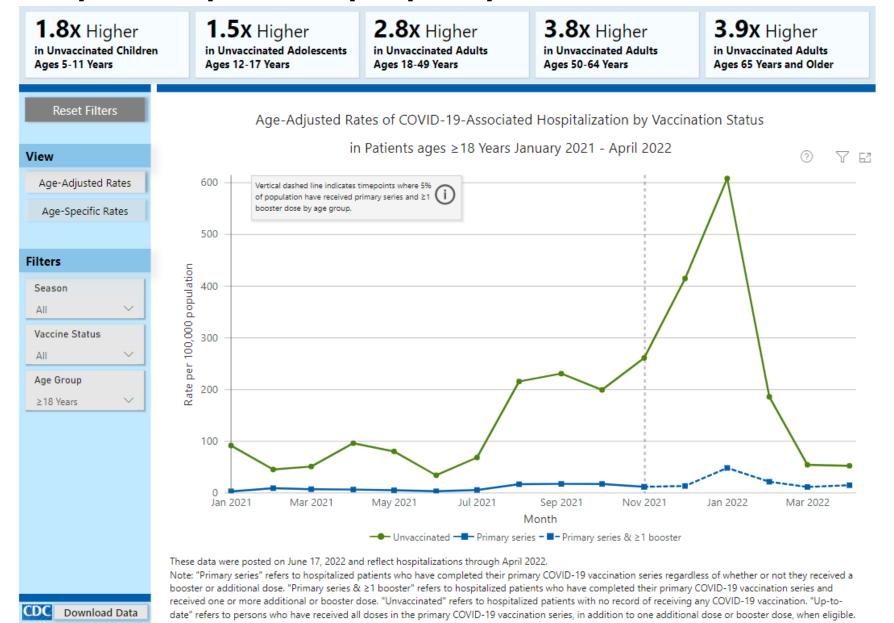

Unvaccinated people in Michigan had 33 times the risk of dying from COVID-19 in April compared to people up to date on their vaccination

^{*}These data reflect cases among persons with a positive specimen collection date through March 19, 2022, and deaths among persons with a positive specimen collection date through February 26, 2022.

Please note that these provisional data are subject to change. **Data on immune status are unavailable, thus an additional dose in an immunocompromised person cannot be distinguished from a booster dose.

Nationally, unvaccinated adults had 3.6 times the risk of hospitalizations from COVID-19 in April compared to people up to date on their vaccination

Pediatric Vaccination for those 6 months to 5 years: Key Messages

COVID-19 vaccines are now available for ages 6 months and up

- Everyone 6 months and older should also get an age-appropriate COVID-19 booster, when eligible
- Vaccinations remain the best way to protect from COVID-19, especially from severe disease
- The youngest children can get infected and suffer from severe outcomes
 - Hospital admissions due to COVID-19 for children follow statewide trend with youngest ages accounting for majority of pediatric admissions
 - During the Omicron surge, COVID-19 hospitalizations per capita was higher for those 6 months to 4 years than for children of other ages
 - The proportion of children ages 6 months to 4 years with COVID-19 associated hospitalization were primarily admitted for COVID-19 and over half have no underlying medical conditions
 - Compared to other vaccine preventable diseases, COVID-19 is responsible for more hospitalizations and deaths
 - In Michigan, multisystem inflammatory syndrome in children (MIS-C), over a quarter of all cases have been reported from those under the age of 5
 - Nationally, over 60% of MIS-C cases under the age of 5 have been reported among Non-Hispanic Blacks and Hispanic/Latino
 - COVID-19 is a leading cause of death among all children, including one of the leading causes of death for those under 5 years
 - Based on cumulative total incidence, COVID-19 is the leading cause of death among infectious diseases for people aged 0-19
 - Among children under the age of 5, COVID-19 is the fifth most common of all causes of death
- COVID-19 vaccine has proven to be safe for children in other age groups

COVID-19 vaccines are now available for ages 6 months and up!

Both the Pfizer and Moderna COVID-19 vaccines are now authorized and recommended for children 6 months and older. Everyone 5 years and older should also get an age-appropriate COVID-19 booster, when eligible.

More than **4,000** providers across Michigan can administer the COVID-19 kids vaccine, including:

Family physicians and pediatricians

Local health departments and federally qualified health centers

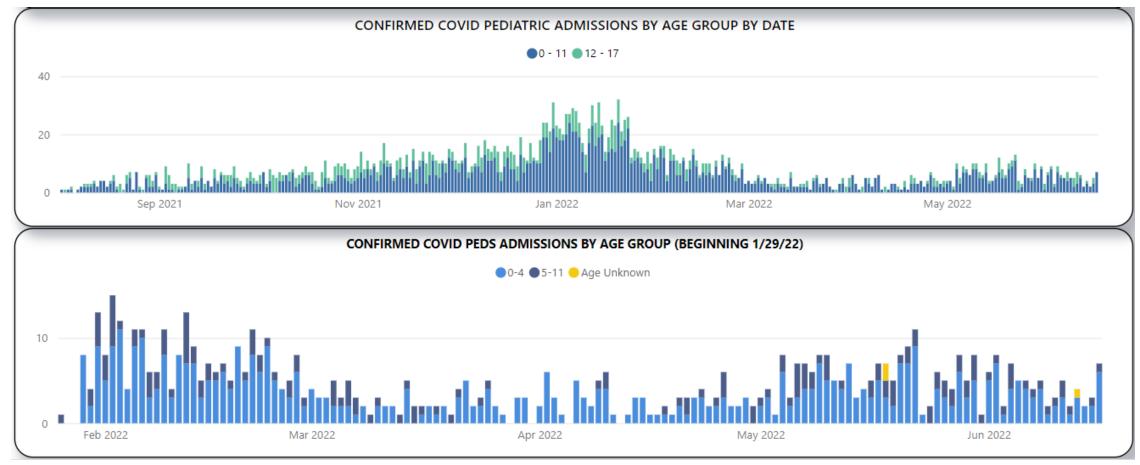

Some pharmacies (ages 3+)

Urgent cares (ages 5+)

For more information, visit Michigan.gov/KidsCOVIDvaccine or talk to a health care provider.

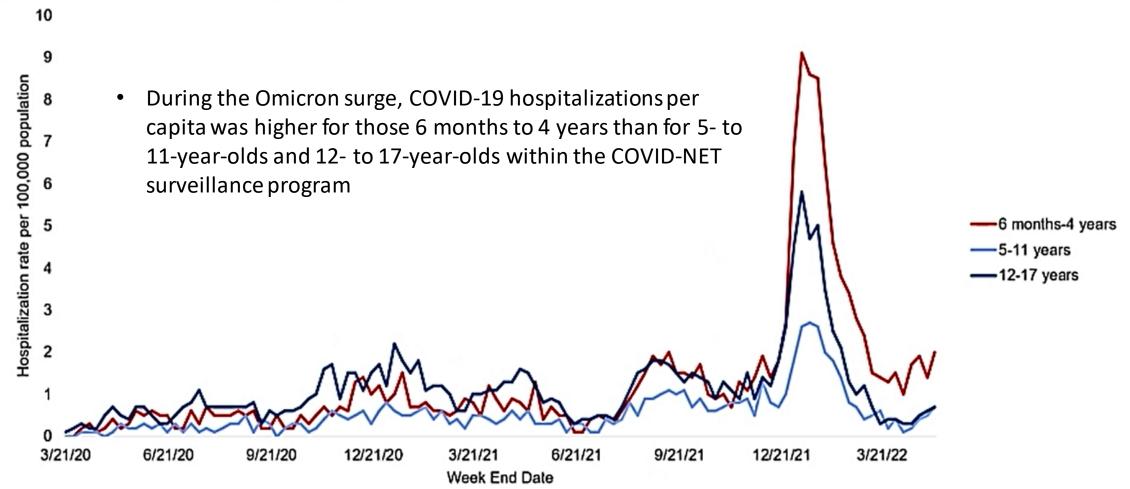

Hospital admissions due to COVID -19 for children follow statewide trend with youngest ages accounting for majority of pediatric admissions

- Hospital admissions reflect statewide infection trends where admissions are higher during surges of SARS-CoV-2 transmission
- Among those under 18 years of age, the majority of hospital admissions occurred in those 0-11 in Michigan
- Among those under 12 years of age, the majority of hospital admissions occurred in those 0-4 in Michigan

2. COVID-NET data. Accessed May 21, 2022, reflecting data from March 2020–March 2022
Reported by the CDC at the Meeting of the Advisory Committee on Immunization Practices (ACIP) to discuss immunizations for 6 months to 5 years (Moderna and Pfizer), June 22-23, 2022

Proportion of children ages 6 months-4 years with COVID-19 associated hospitalization who were primarily admitted for COVID-19, COVID-NET March 2020 – March 2022

Pre-Omicron (March 1, 2020-December 18, 2021)

87.3% 12.8%

All children in COVID-NET had a positive SARS-CoV-2 test within 14 days of or during hospital admission. "Primarily admitted for COVID-19" was defined based on the "Reason for admission" field from the case report form. If the chief complaint or history of present illness in the medical chart documents fever/respiratory illness, COVID-19-like illness, or a suspicion for COVID-19, a case is categorized as having COVID-19 as the primary reason for admission. Examples of other non-COVID-19-related reasons for admission seen in this age group include admissions for trauma or inpatient surgeries.

Source: COVID-NET data, Accessed May 21, 2022.

Reported by the CDC at the Meeting of the Advisory Committee on Immunization Practices (ACIP) to discuss immunizations for 6 months to 5 years (Moderna and Pfizer), June 22-23, 2022

Multisystem Inflammatory Syndrome in Children (MIS-C)

Michigan Surveillance

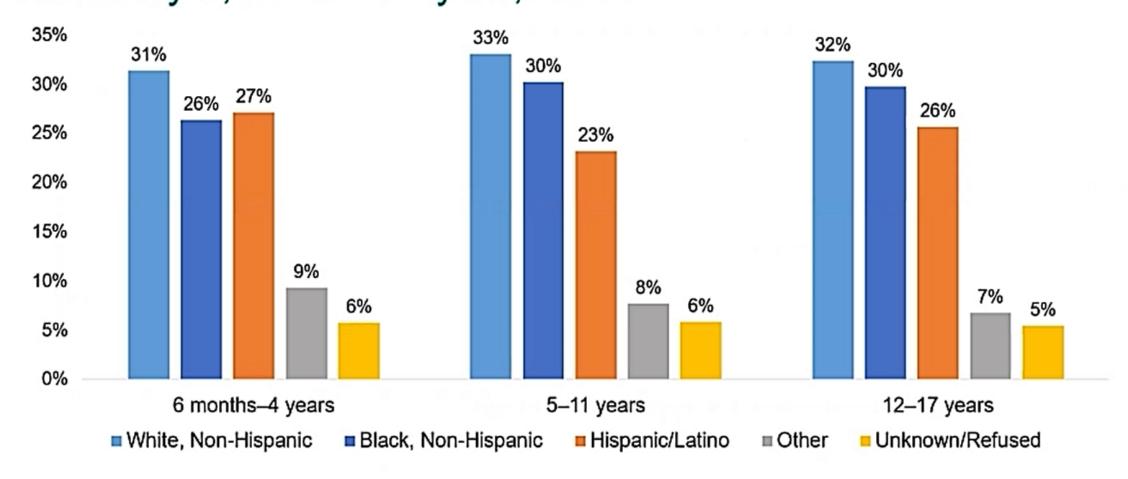

- Higher community transmissions is followed by higher incidence of MIS-C cases
- 304 cases identified in Michigan: highest numbers have occurred after most recent Omicron surge
- More than 25% of those children are those under 5 years of age
- Black/African American children are disproportionately impacted
- 63.5% (193) children with MIS-C are treated in the ICU
- Among Michigan's MIS-C cases that were eligible for vaccine (N=113), a majority of children (89.4%, n=101) were unvaccinated
 - Scientific evidence has shown that unvaccinated kids are at much higher risk of severe MIS-C outcomes¹

Age Group	Count	%
<1	11	3.6%
1-4	74	24.3%
5-11	146	48.0%
12-15	54	17.8%
16-20	19	6.3%

Race	Count	%
Black/African American	106	34.9%
Caucasian	146	48.0%
All Others/Unknown	52	17.1%

Ethnicity		
Not Hispanic/Non-Latino	227	74.7%
Hispanic/Latino	27	8.9%
Unknown	50	16.4%

MIS-C patients by race & ethnicity for children and adolescents ages 6 months-17 years by age group February 1, 2020 – May 31, 2022

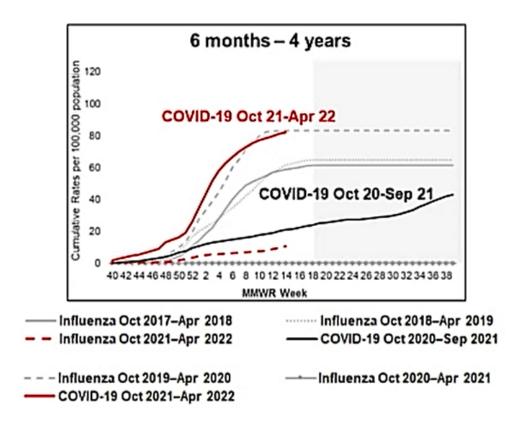

Age is missing for 1 case.

Source: CDC data. Accessed June 7, 2022

Reported by the CDC at the Meeting of the Advisory Committee on Immunization Practices (ACIP) to discuss immunizations for 6 months to 5 years (Moderna and Pfizer), June 22-23, 2022

Cumulative influenza- and COVID-19-associated hospitalization rates per 100,000 children ages 6 months-4 years, FluSurv-NET and COVID-NET, 2017–2022

Among children ages 6 months-4 years

- Oct 2020–Sep 2021 COVID-19 hospitalization rates were lower than influenza hospitalization rates during 2017–18 through 2019–20 (prepandemic) influenza seasons
- Oct 2021–Apr 2022 COVID-19 hospitalization rates were as high or higher than influenza hospitalization rates during 2017–18 through 2021–22 influenza seasons

Reported by the CDC at the Meeting of the Advisory Committee on Immunization Practices (ACIP) to discuss immunizations for 6 months to 5 years (Moderna and Pfizer), June 22-23, 2022

⁴ COVID-NET data, Accessed May 21, 2022.

⁵ Vaccine-type invasive pneumococcal disease annual rate for children <5 years in 1998-1999 was 80 per 100,000, of which about 50% were hospitalized.

COVID-19 death rate among children by age, United States, March 1, 2020—April 30, 2022

- Based on cumulative total incidence, COVID-19 is the leading cause of death among infectious diseases for people ages 0-19
 - COVID-19 is the seventh most common of all causes of death for people ages 0-19
- Among people ages 1-4, COVID-19 is the fifth most common of all causes of death

COVID-19 Vaccine Has Proven to be Safe for Children in Other Age Groups

- In preauthorization trials for Pfizer-BioNTech COVID-19 vaccine, vaccinated children aged 5–11 years reported mild to moderately severe local and systemic reactions
 - No serious vaccination-related events were noted
- After authorization of Pfizer-BioNTech COVID-19 vaccine for children aged 5–11 years during October 2021, and administration of approximately 8 million doses, local and systemic reactions after vaccination were reported to VAERS and v-safe for vaccinated children aged 5–11 years.
 - Serious adverse events were rarely reported
- Parents and guardians of children should be advised that local and systemic reactions are expected after vaccination and are more common after the second dose

8.7 million* COVID-19 vaccinations have been given to children ages 5-11 years old

Health check-ins to v-safe completed for over 42,000 children after vaccination[†]

Side effects were common but mild and brief^s

Pain where shot was given

Fatigue

Headache

Mild side effects are a normal sign the body is building protection

Few myocarditis cases have been reported

Vaccination is the best way to protect children from COVID-19 complications

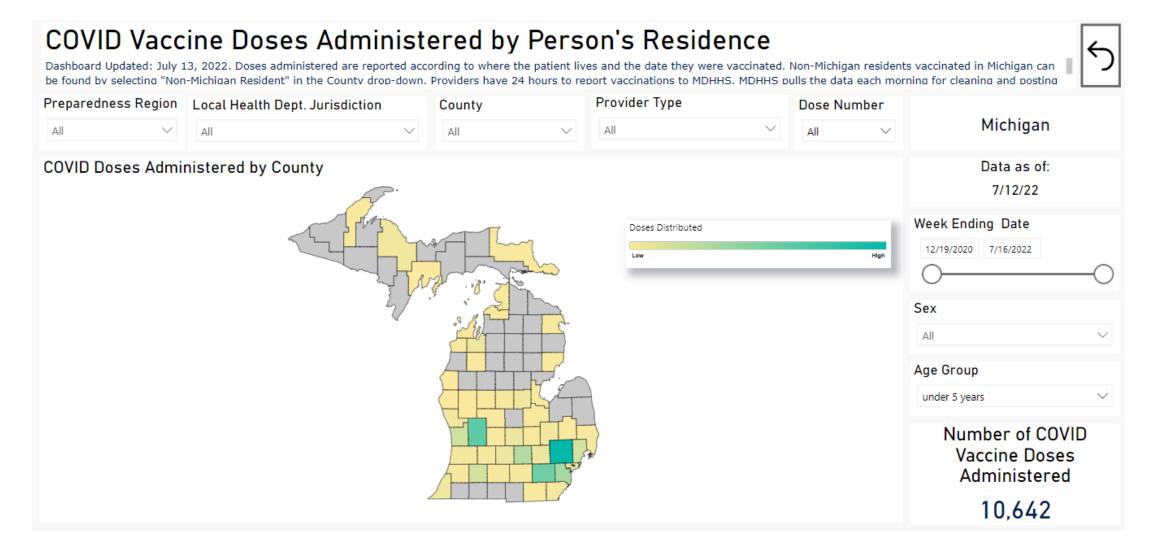

⁵ After the 2nd dose, about 2/3 children had a local reaction such as arm pain; 1/3 had a reaction beyond the injection site

Wisconsin, Michigan

Illinois, Minnesota

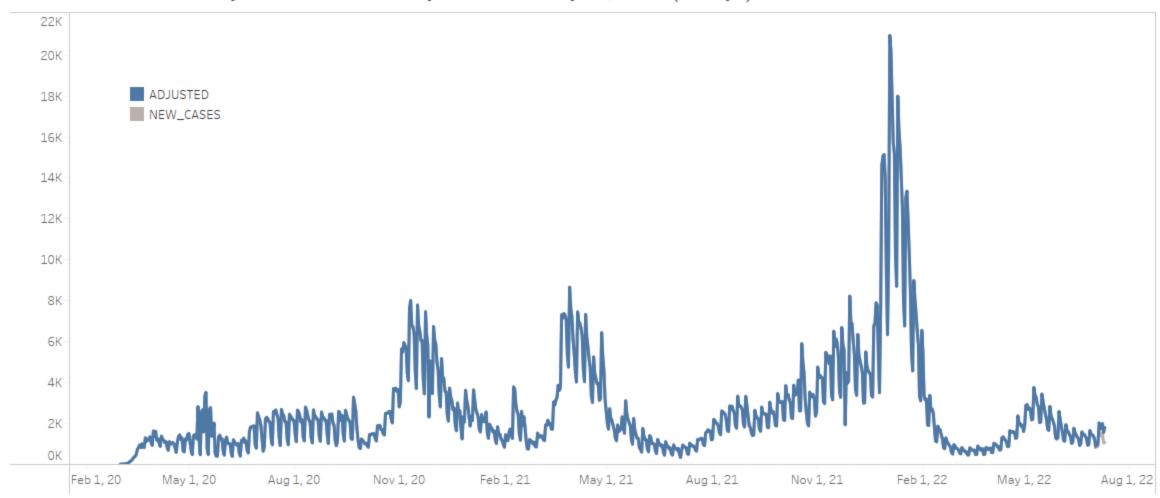

CDC COVID-19 Community Levels are defined by County Case Rates and Health Service Area (HSA) Hospitalizations

COVID-19 Community Levels – Use the Highest Level that Applies to Your Community					
New COVID-19 Cases Per 100,000 people in the past 7 days	Indicators	Low	Medium	High	
Fewer than 200	New COVID-19 admissions per 100,000 population (7-day total)	<10.0	10.0-19.9	≥20.0	
	Percent of staffed inpatient beds occupied by COVID-19 patients (7-day average)	<10.0%	10.0-14.9%	≥15.0%	
200 or more	New COVID-19 admissions per 100,000 population (7-day total)	NA	<10.0	≥10.0	
	Proportion of staffed inpatient beds occupied by COVID-19 patients (7-day average)	NA	<10.0%	≥10.0%	

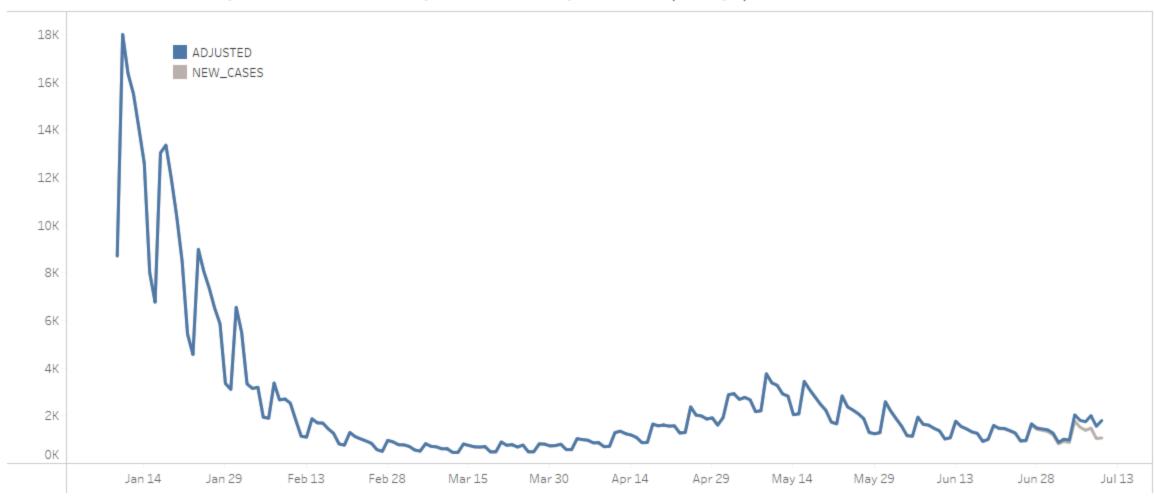

Adjusted new cases by on-set

New confirmed cases by onset actual and adjusted as of July 12, 2022 (-2 days)

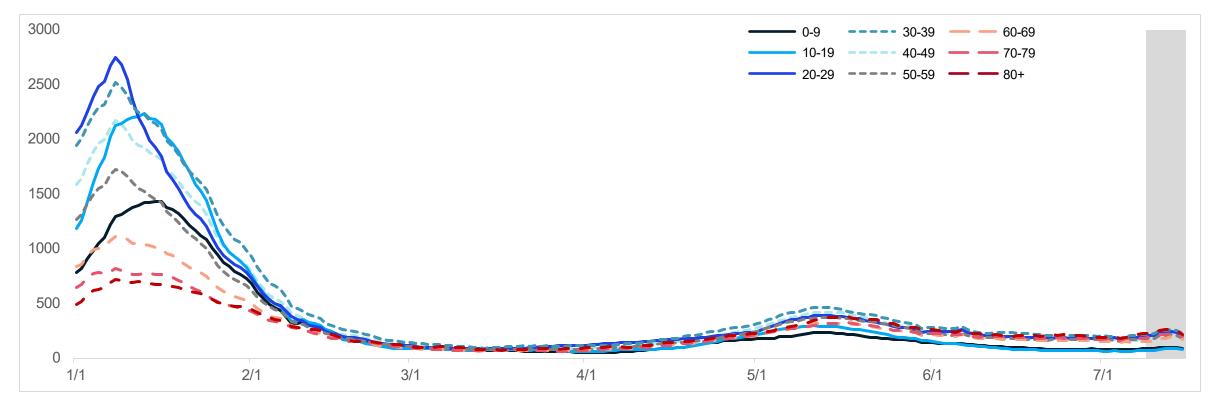

Adjusted new cases by on-set, recent trends

New confirmed cases by onset actual and adjusted as of July 12, 2022 (-2 days)

Case Rate Trends by Age Group

Daily new confirmed and probable cases per million by age group (7day rolling average)

- Case rate trends for all age groups experienced a plateau over the last week
- Case rates by onset date for all age groups are between 68.9 and 227.3 cases per million (through 7/8/22)
- Case counts and case rates are highest for 80+-year-olds this week, followed by 30-39-year-olds and 20-29-year-olds
 age groups

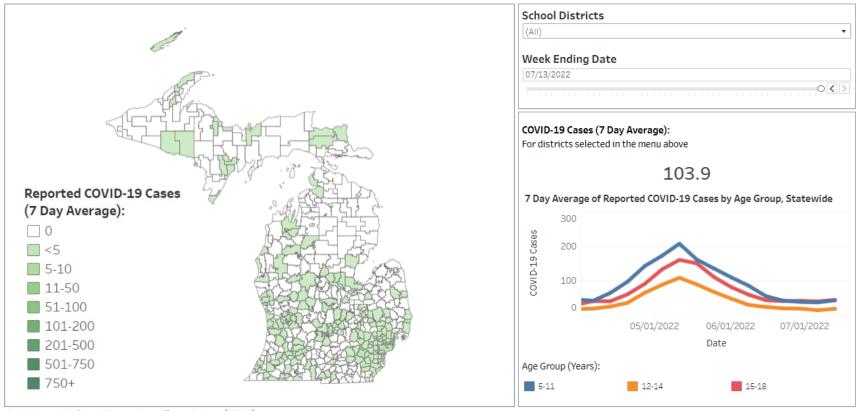

New MDHHS dashboard shows cases among K-12 age individuals by ISD & School District

· Case rates among school-aged populations have plateaued

Interactive dashboard is available & updated weekly at https://www.michigan.gov/coronavirus/stats/k-to-12-aged-isd-reporting

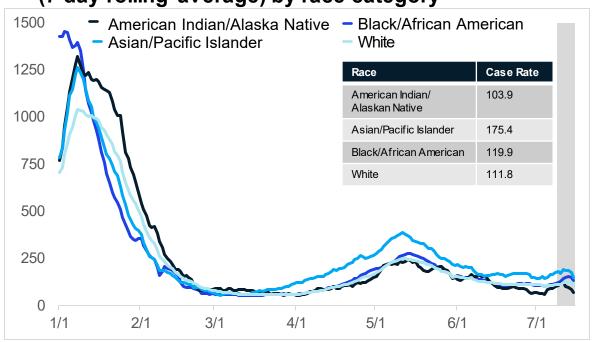

Michigan School District COVID-19 Case Reporting

The map below displays the 7-day average of newly reported COVID-19 cases for school aged residents (ages 5 to 18 years) by their Michigan school district. The geocoding is based on the residential address on record and not the student's enrollment. The 7-day case average for the defined date range can be viewed by hovering over the jurisdiction on the map or by selecting the school district from the drop down list in the right panel. Adjusting the date scale will change the 7-day average on the map for the selected date.

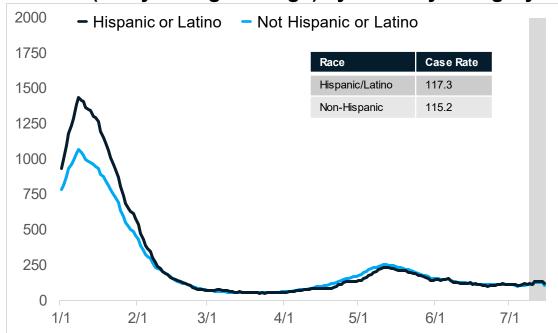

Case Rates by Reported Racial and Ethnic Group

Daily new confirmed and probable cases per million (7 day rolling average) by race category

Daily new confirmed and probable cases per million (7 day rolling average) by ethnicity category

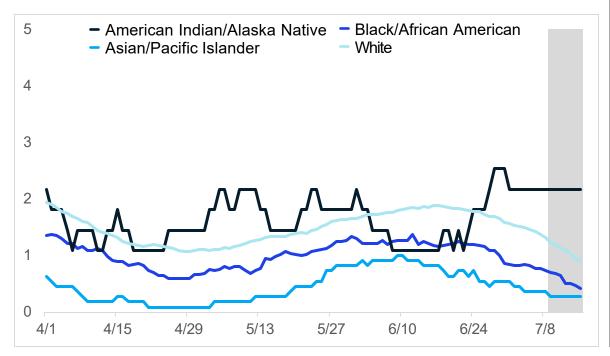

Updates since last week:

- Cases per million have plateaued for all reported racial and ethnic groups
- In the past 30 days, 20.9% (↓ 0.3%) of race data and 25.8% (↓ 0.3%) ethnicity data was either missing or reported as unknown

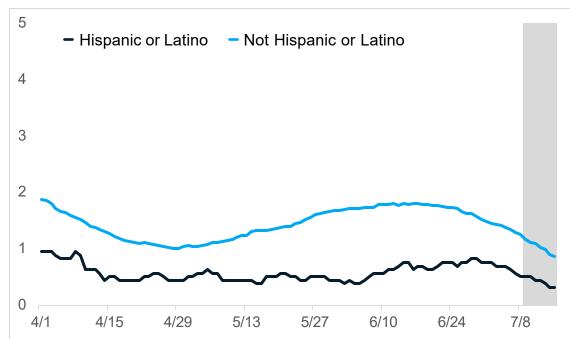

Note: Case information sourced from MDHHS and reflects date of death of confirmed and probable cases. Source: MDHHS – Michigan Disease Surveillance System

Daily average deaths per million people by race and ethnicity have plateaued or are decreasing

Average daily deaths per million people by race

Average daily deaths per million people by ethnicity

- Deaths are lagging indicator of other metrics
- Currently, the American Indian/Alaskan Native population has the highest death rate (2.2 deaths/million)

Note: Death information sourced from MDHHS and reflects date of death of confirmed and probable cases. Source: MDHHS – Michigan Disease Surveillance System
