

TESTED POSITIVE FOR COVID-19 ?

CONSIDER COVID-19 TREATMENTS.

We have the tools to fight back against COVID-19. COVID-19 treatments reduce death and hospitalization in people at high risk. If you test positive for COVID-19, talk to your health care provider to see which medication is right for you.

Treatment should begin as soon as possible.

- **Oral Antivirals** should be given within five days after onset of symptoms.
- **IV Treatments** should be given within seven days after onset of symptoms.
