MEMORANDUM TO THE NATURAL RESOURCES COMMISSION

Subject: Fisheries Order 254.23A
Inland Lakes - Trout and Salmon Regulations

Authority:

The Natural Resources and Environmental Protection Act, PA 451 of 1994, authorizes the Director and the Commission to issue orders to regulate the taking of fish in the waters of this state.

Discussion and Background:

Fisheries Order 254 governs regulations for trout and salmon on inland lakes. The Department recommends removing three lakes from the order.

The Department proposes the following regulatory amendments for this order:

1. Half Moon Lake (Muskegon): The Department recommends removing Half Moon Lake under Type C regulations as the habitat is no longer suitable for trout management. Specifically, in 2021, a temperature and dissolved oxygen profile was recorded on August 12th that indicated that lake was anoxic from 15 feet of water to the bottom of the lake (83 feet of water). The upper 15 feet of water was 72°F or warmer with the surface water temperature reaching nearly 79°F. Additionally, coolwater predators (northern pike and walleye) reside in the lake, which creates additional challenges for trout survival. No trout species were collected during the most recent fish population assessment in 2022. For these collective reasons, the management unit is moving away from trout management on this water and stocking ended in 2021. This waterbody will now be covered under the general statewide fishing regulations.
2. Reid Lake (Alcona): The Department recommends removing Reid Lake under Type B regulations due to an unsuccessful rainbow trout and brown trout stocking program. Angler reports for trout over the years has been very sparse and managers indicated that there is an abundant fast-growing yellow perch population creating competitive pressures on the stocked trout. Angler preferences have shifted away from trout where anglers are now more interested in focusing on yellow perch in Reid Lake. Therefore, managers will no longer conduct fisheries management for coldwater species in this waterbody. This waterbody will now be covered under the general statewide fishing regulations.

3. Youngs Lake (Luce): The Department recommends removing Youngs Lake under Type A fishing regulations due to loss of public access. Youngs Lake was recently sold to a private individual who has indicated that public access is no longer allowed. Therefore, the management unit will remove this lake from any future stocking plans or management activities.

Two of the proposed changes above will liberalize fishing regulations and one lake is no longer open to public access. Given the circumstances, the recommendation is to implement the changes for immediate effect. If supported, the Department will increase angler awareness by adding the changes to the online digital version of the Fishing Guide and through a prerecorded message for the Regulation Hotline at 888-367-7060.

Issue Pros and Cons

Adjusting trout regulations based upon recent survey information provides managers the ability to modify regulations that benefit anglers. Removal of more restrictive fishing regulations, when no longer necessary, creates more fishing opportunities. Removal of a water no longer open to public access will help inform anglers who may spend time travelling to a place where they are no longer welcome. No cons have been identified.

Biological

Implementing a change from coldwater to warmwater management on waters where stocked trout are not creating a fishery will help the Department conserve limited funds to be used in other places. Waters that no longer focus on coldwater species management need to be placed under the most appropriate fishing regulations for anglers.

Social

Anglers support regulations that are informed by available data and are biologically sound. Timely survey information and angler reports helps managers to enact the most appropriate fishing regulations for anglers.

Economic

The Department does not expect the proposed changes to have any significant budgetary or personnel implications.

Recommendation:

Relevant Divisions have contributed to the preparation of this order. This order was submitted for information and consideration on September 14, 2023, at the Natural Resources Commission meeting. This item appeared on the Department's September 5, 2023, calendar and is eligible for approval on October 12, 2023.
