CSS Map Template

This paper will document how to access and use a ArcGIS Explorer map. This map is designed by CSS to include data layers typically used by state of Michigan agency personnel.

Start by clicking on the  icon in upper left-hand corner of ArcGIS Explorer. Choose OPEN. Navigate to one of these locations and choose SOM Template.nmf:

\\10.25.232.163\Geog\sde_layer_files\Explorer Templates

\\10.90.231.231\gis_data\sde_layer_files\Explorer Templates

You can save this map as an ArcGIS Explorer “Basemap”. This could be useful if you switch base maps and want to return to this map. Since it is now a “basemap”, it is permanently stored with ArcGIS Explorer and can be retrieved from the BASEMAP control.
