

Michigan Energy Education Network

The Michigan Energy Education Network (MEENet) provides an opportunity for individuals and organizations involved in energy education to share activities and plans. Energy education is broadly defined to include consumer education, technical training, K-12, and higher education. MEENet is an informal network that:

- Holds meetings to share information
- Provides opportunities for members to discuss and develop joint projects
- Helps to increase public awareness about energy efficiency and renewable energy
- Provides inspiration and support for energy education efforts

MEENet has been informally meeting quarterly since September 1999. If you would like to be on the email list and attend meetings, contact John Sarver at sarverj@michigan.gov.
