

STATE OF MICHIGAN
DEPARTMENT OF ENVIRONMENTAL QUALITY
LANSING

RUSSELL J. HARDING
DIRECTOR

JOHN ENGLER
GOVERNOR

November 7, 2002

Mr. Ricardo A. Solomon, Chairperson
Wayne County Board of Commissioners
600 Randolph
Detroit, Michigan 48226

Dear Mr. Solomon:

The Department of Environmental Quality (DEQ) received the locally-approved update to the Wayne County Solid Waste Management Plan (Plan) on March 8, 2002. The Plan is approved with the following agreed upon modifications as outlined in the July 8, 2002 letter to Mr. Robert N. Ratz, Director, Land Resource Management Division, Wayne County Department of Environment (WCDE), from Ms. Lynn Dumroese, DEQ, Waste and Hazardous Materials Division (WHMD), and as confirmed in an August 8, 2002 letter from Mr. James Murray, Director, WCDE, and Mr. Michael Brinker, Chairperson, Wayne County Solid Waste Planning Committee.

On Page A 26, the Facility Description for New Center Recycling indicates this facility receives construction and demolition waste. The DEQ is aware that the Host Community Agreement between the city of Detroit and New Center Recycling states this facility is prohibited from storage or processing of construction and demolition waste. By Mr. Murray and Mr. Brinker's letter, Wayne County's intent was to have the facility description information negotiated in the Host Community Agreement take precedence over the facility description information in the Facility Description Sheets. For clarification purposes, the following language shall be added to [Pages 21](#) and A 2: "If the facility description information included on the Facility Description Sheets conflicts with the Host Community Agreements, the facility description information in the Host Community Agreements supersedes information on the Facility Description Sheets."

On Page A 32, a clarification is needed in regard to the total area permitted found on the Facility Description for the S & J Transfer Station and Processing Facility (Facility). This clarification does not require a modification to the Plan; however, it is needed because it is not clear what the term "pending" means. This site has not received an Operating License; however, Wayne County's intent was to include the Facility in the Plan and authorize seven acres for the total area of the Facility property. Therefore, the following sentence should be added to the Facility Description Sheet for this Facility: "Seven acres is automatically consistent with the Plan for the Facility and does not need to be sited according to the siting mechanism."

On Page A 44, the Plan lists facilities that will be removed from the Plan. The DEQ's records indicate the K & K Rail Siding Transfer Station (Transfer Station) had received an Operating License in 1994; however, this Transfer Station has not renewed their license since then. The courts ruled in the case of Michigan Waste Systems – Ottawa County versus Department of Natural Resources, that an existing disposal area cannot be excluded from a County Solid Waste Management Plan and as defined in Rule 102 (p) of the administrative rules promulgated pursuant to Part 115, Solid Waste Management, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, an "existing disposal area" means, in part, any of the following: (i) A disposal area that has been issued a construction permit under the act or (ii) A disposal area that has engineering plans approved by the Director before January 11, 1979. It is clear that the Transfer Station qualifies as an existing disposal area and, therefore, cannot be arbitrarily removed from the Plan. Mr. Paul Russo, who is the last known contact person for the Transfer Station, indicated in a letter dated September 3, 2002, that this Transfer Station has stopped operations and the current site will not be used as a transfer station in the future. Based on the information in Mr. Russo's letter, it does not appear that there is any objection to the Transfer Station being removed from the Plan. Therefore, the DEQ has determined that the Transfer Station shall be removed from the Plan. The DEQ records do not indicate the other facilities listed on Page A 44 are existing disposal areas; however, by Ms. Dumroese's letter, the DEQ did request Wayne County to submit any documentation that was available from these facilities. Mr. Murray and Mr. Brinker provided additional documentation confirming that the last known contact person for the other facilities listed on Page A 44 was notified; therefore, in order to alleviate any future discrepancy, this documentation shall be added to the Plan.

Another clarification is needed regarding the Wayne County Solid Waste Ordinance (Ordinance) found in Appendix G. The Ordinance references technical standards that the DEQ evaluates during their review of a construction permit and allows variances for some of these technical items. Mr. Murray and Mr. Brinker's letter clarifies that the Ordinance found in Appendix G is enforceable per Michigan Compiled Law 324.11538(8) with the Plan so long as the following paragraph is added to [Page 61](#):

Technical standards found within the Ordinance are enforceable if standards are equivalent to the technical standards in Part 115 and the Part 115 administrative rules. No standard within the Ordinance is enforceable if less restrictive than Part 115 or the Part 115 administrative rules. Wayne County's Ordinance was developed to provide reporting and operational standards for solid waste facilities located within Wayne County and to reference State standards for technical criteria. Wayne County understands the DEQ delegated authority under Subtitle D requires consistent technical standards for landfills. Decisions made by the DEQ regarding the enforceability of technical standards shall be final.

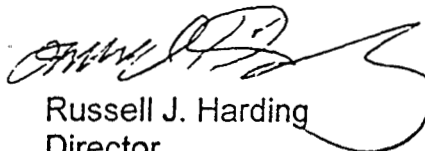

With these modifications, Wayne County's updated Plan is hereby approved, and Wayne County now assumes responsibility for the enforcement and implementation of this Plan. Please ensure that a copy of this letter is included with copies of the approved Plan distributed by Wayne County.

By approving the Plan with modifications, the DEQ has determined that it complies with the provisions of Part 115 and the Part 115 administrative rules concerning the required content of solid waste management plans. Specifically, the DEQ has determined that the Plan identifies the enforceable mechanisms that authorize the state, a county, a municipality, or a person to take legal action to guarantee compliance with the Plan, as required by Part 115. The Plan is enforceable, however, only to the extent that Wayne County properly implements these enforceable mechanisms under applicable enabling legislation. The Plan itself does not serve as such underlying enabling authority, and DEQ approval of the Plan neither restricts nor expands Wayne County's authority to implement these enforceable mechanisms.

The Plan may also contain other provisions that are neither required nor expressly authorized for inclusion in a solid waste management plan. DEQ approval of the Plan does not extend to any such provisions. Under Part 115, the DEQ has no statutory authority to determine whether such provisions have any force or effect.

The DEQ applauds your efforts and commitment in addressing the solid waste management issues in Wayne County. If you have any questions, please contact Ms. Rhonda Oyer Zimmerman, Chief, Solid Waste Management Unit, WHMD, at 517-373-4750, or you may contact me.

Sincerely,

Russell J. Harding
Director

Re: Wayne County Solid Waste Management Plan – 2000 Update

Dear Ms. Dumroese:

The Wayne County Department of Environment and the Wayne County Solid Waste Planning Committee Chair have reviewed your July 8, 2002 letter. The following proposed editorial responses to your comments do not substantively change the Plan and do not require formal committee approval. We request that the Michigan Department of Environmental Quality approve the Wayne County Solid Waste Management Plan with the following modifications:

- On page 21 after "... may not be reflected within the facility description sheets in Appendix A." and on page A 2 after "... may not be reflected within the following pages." add the following sentence "If information included on the Facility Description Sheets conflicts with the Host Community Agreements, information in the Host Community Agreement supersedes information on the Facility Descriptions."
- On page A 32 the Facility Description for the S&J Transfer and Processing Facility indicates under total area permitted "7 (pending)". This should be clarified to indicate that the operating license has not been issued for this facility, however if it is issued, it will be for 7 acres.
- The Wayne County Solid Waste Ordinance (Ordinance) found in Appendix G is enforceable per MCL 324.11538(8) with Wayne County's Solid Waste Management Plan as follows. Technical standards found within the Ordinance are enforceable if standards are equivalent to the technical standards in Part 115 and the Part 115 administrative rules. No standard within the Ordinance is enforceable if less restrictive than Part 115 or the Part 115 administrative rules. Wayne County's Ordinance was developed to provide reporting and operational

Ms. Dumroese

standards for solid waste facilities located within Wayne County and to reference State standards for technical criteria. Wayne County understands MDEQ's delegated authority under Subtitle D requires consistent technical standards for landfills. Decisions made by the MDEQ regarding the enforceability of technical standards shall be final.

We believe the preceding modifications clarify the intent of the Wayne County Solid Waste Management Plan.

Regarding your comments about Page A 44 which lists facilities removed from the Wayne County Solid Waste Management Plan as part of this update. This list explains why the facilities are being removed. In all cases, the last known contact for each facility was notified of the intent to remove that facility from the Plan. Facilities that were previously licensed and that responded remain in the Plan. Facilities removed were notified and either did not respond or are no longer in business. Documentation is included with this letter.

Thank you for your consideration and we look forward to your favorable response and approval of the Wayne County Solid Waste Management Plan.

Sincerely,

James Murray
Director
Department of Environment

RE: Removal of K&K Rail Transfer Station from Wayne County Solid Waste Management Plan

Dear Mr. Russo,

The Wayne County Department of Environment is in the process of updating the Wayne County Solid Waste Management Plan. As part of this process we have identified K&K Rail located at 4058 Elizabeth, Wayne as being previously approved; however, either it hasn't been constructed or is no longer licensed and operating. With this update, a decision will be made to remove K&K Rail from the Plan unless you request and receive approval for continued inclusion from the Wayne County Siting Committee.

If you wish an opportunity to present your case so that K&K Rail remains in the Solid Waste Management Plan, you must contact this office in writing identifying why it should not be removed. This information will be provided to the Siting Committee and a meeting will be scheduled to provide the Committee a chance to review your request and allow you an opportunity to present your position. The Committee will then decide to keep or remove K&K Rail from the Plan.

If we do not hear from you in writing within 20 days from receipt of this letter, K&K Rail will be removed from the Plan. If you have any questions or need additional information please contact me at (734) 326-4494.

Sincerely,

RE: Removal of Nave Transfer Station from Wayne County Solid Waste Management Plan

Dear Mr. Madias,

The Wayne County Department of Environment is in the process of updating the Wayne County Solid Waste Management Plan. As part of this process we have identified Nave located at 4440 Wyoming, Dearborn as being previously approved; however, either it hasn't been constructed or is no longer licensed and operating. With this update, a decision will be made to remove Nave from the Plan unless you request and receive approval for continued inclusion from the Wayne County Siting Committee.

If you wish an opportunity to present your case so that Nave remains in the Solid Waste Management Plan, you must contact this office in writing identifying why it should not be removed. This information will be provided to the Siting Committee and a meeting will be scheduled to provide the Committee a chance to review your request and allow you an opportunity to present your position. The Committee will then decide to keep or remove Nave from the Plan.

If we do not hear from you in writing within 20 days from receipt of this letter, Nave will be removed from the Plan. If you have any questions or need additional information please contact me at (734) 326-4494.

Sincerely,

Re: Request for Approval of the Wayne County Solid Waste Management Plan 2000 Update

Dear Ms. Dumroese,

Enclosed please find Wayne County's 2000 Update to our Solid Waste Management Plan, which is being submitted for final approval by the MDEQ. This Plan has been approved by the County Executive, Mr. McNamara, the County Commission and most recently by 67% of the municipalities within Wayne County. We are therefore forwarding it on for final approval as required under Act 451 P.A. 1994 Part 115. Attached to the Plan are the approval letters from the communities and the resolution of support from the County Commission. This Plan is the culmination of many hours of hard work by the Planning Committee and Wayne County Staff and we believe it to be a very good plan that meets the criteria established by Part 115.

This plan has not changed significantly from the version sent to you in August of 2001. However if you have any comments or questions regarding this document please contact me at (734) 326-4494. We are anxious to begin implementing the new provisions of this plan and would appreciate your review and approval as soon as practicable.

Sincerely,

Robert N. Ratz, P.E.

City of Riverview, Asst. Director of Solid Waste
Huron Township Ordinance Officer
CWCSA, Plant Engineer

Agenda Item I – Call to Order

Mr. Brinker called the meeting to order at 9:10 a.m.

Agenda Item II – Roll Call

Mr. Ratz took roll call. There was a quorum, as identified.

Mr. Brinker offered the minutes of the April 25, 2001 meeting, to either approve or propose changes. Mr. Kelly made a motion to accept the meeting minutes, and Ms. Foster supported the motion. **Approved Unanimously.**

Agenda Item III – Draft Plan

A. Discuss final changes

Mr. Ratz informed the committee that he would identify and discuss the final editorial changes and corrections to the Plan document.

Mr. Ratz reported that the Facility Inclusion Process, page 56, should have included the breakdown of the committee and its responsibilities; it was unintentionally omitted. An update has been made to include pages 54, 55, and 56, with page 56 identifying the full committee. The type size will be condensed to include the committee identification; nothing else has changed in that section.

Mr. Ratz discussed the unresolved issue regarding solid waste management alternatives and the State Department of Environmental Quality's comments on that particular section of the document. The State commented that a ranking of solid waste management alternatives was not provided. There was discussion at the last meeting and the matter was referred to the TAC. The 1990 and 1985 plans were reviewed. The decision was made to revise the last paragraph on page 34 and talk about the ranking and priorities of the County plan. "Wayne County's priorities emphasize waste reduction as a primary and continuing objective . . ." Mr. Brinker stated that the added paragraph was a fair attempt to address the issues brought forward by the State.

Mr. Matakas asked if the priorities in 1985 were stated and similarly ranked. Mr. Ratz answered yes. Mr. Matakas suggested a statement be made to say that in the previous 1985 and 1990 plan, priorities were in place, have been reviewed and are now being continued. Mr. Starbuck commented that it shows consistency over time. Mr. Windeler stated the addition would address the comment that he had at the previous meeting. He suggested adding the word "approved" before the 1985 and 1990 plan for emphasis.

Mr. Ratz concluded the discussion of the changes made as a result of the last meeting.

Ms. Foster acknowledged the committee members that participated throughout the process and expressed her appreciation of the collective effort. First and foremost, she wanted to express her admiration for the members of the committee and the County for the perseverance in dealing with the State of Michigan's "must site" provision. She commented that the plan is full of common sense and that she has a great deal of respect for staff for securing agreement from the State of Michigan regarding Wayne County's siting procedure. Secondly, she would like people to understand that "local control" received a good deal of attention from the Committee. The plan

recognizes self-determination with respect to local ordinances and emphasizes both the ordinances and the host community agreements. Staff sent the draft plan to the State of Michigan and comments were favorable. Lastly, the plan has her strong support because, even though there is a lot of landfill space available, the plan continues to emphasize reduce, reuse, recycle. She commented that is an excellent approach and takes advantage of all of the options available in the County and is one that the Commission should appreciate as well.

B. Vote on the acceptance Draft changes

Mr. Ratz reviewed the approval process of the plan document accepted by the SWIC. Following Committee approval, the document will go to the Executive's office for review and approval. From there it will go to the County Commission for approval. It will go to Commission sub-committee and probably to the full Commission, with public comment opportunity at those meetings. Once through that process, it goes out to all the communities within Wayne County for their adoption. Once two-thirds of the communities have approved it, the Wayne County Plan will be forwarded to the State MDEQ for final approval.

Ms. Foster made a motion that with the clarifications regarding the previously approved '85 and '90's plans that the SWIC forward the draft solid waste management plan to the County Executive and the County Commission. Ms. Schonenberg supported.

Mr. Matakas requested that both the solid waste alternatives and the facility inclusion edits be adopted individually before a vote on the draft. Ms. Foster indicated that a motion could be made regarding those two matters. Then a vote for Mr. Matakas' motion and another vote for the original motion.

Mr. Matakas made a motion that the solid waste management alternative proposal be accepted as amended to read "previously approved 1985 and 1990 plans". Mr. Windeler seconded the motion.

Approved unanimously.

Mr. Matakas made a motion that the facility inclusion process proposal be accepted as presented by staff regarding pages 54, 55, and 56. Mr. Starbuck supported the motion.

Approved unanimously.

Ms. Foster restated her motion to approve, by roll call vote, and forward the plan to the Wayne County Executive and the Wayne County Commission for their approval. Mr. Kelly supported the motion. Mr. Ratz called each committee members present for their vote.

Approved unanimously.

Agenda Item IV – Public Comment

Mr. Logsdon, as an industry representative made comments about the plan and how it relates to the solid waste industry. He stated that he served on the committee many years. He works for Waste Management which is a large supplier of the services for solid waste collection and disposal. Working in the industry under a plan like this is easy for industry because it's user friendly, it lays down the guidelines for a level playing field. The planning process is tied to the MDEQ rules and regulations that all in the industry have to follow. There are significant rules

and regulations to follow. This plan and other plans like it throughout the State of Michigan do allow industry to manage their business in an environmentally safe fashion.

Ms. Schonenberg commented that Mr. Logsdon's main point is that both sides need to work to set the rules and then know what they are. Environmentalists or anyone else can go after the industry, the industry can stand up for its rights and the process is spelled out. As an environmentalist, Ms. Schonenberg stated that she is concerned about the alternatives, but realizes that in real life there is going to be trash and that these issues will be negotiated in the future.

Mr. Starbuck, represents municipalities across the region and sits on three planning committees. He thanked staff for their efforts and commented that it is a good, clear plan that is easy to follow. The rules are laid out and it recognizes local government decision making process for activities that take place in their communities.

Mr. Brinker said that the next effort, aside from the CEO's approval, is going to be the public forum with the Commissioners. Mr. Brinker stated to Commissioner Boike that he volunteers to support the effort before the Commission sub-committee to support the presentation/marketing of the Plan. Mr. Boike stated that the opportunity to do so would be available as soon as the plan clears the Executive's office. After that, it will go to the subcommittee on Environment, Drain, and Sewers. If it could be worked out, he would like it to go to the Committee of the Whole, before it goes to the Board, to explain it to everyone and to report the changes. Mr. Boike commented that he has learned so much just by sitting and listening to everyone in the industry and that the Department has been great.

Mr. Windeler stated that Rouge Steel is a generator and a consumer of this service. The disposition and the proper handling of the waste they generate is very important. Rouge Steel spends over three million dollars per year on the disposal of solid waste. They are concerned about liabilities. They want to make sure that that liability does not become a greater liability because of improper disposal. They are very pleased that there is a plan that deals with and requires community input and encourages competition in that industry and cost reduction in that industry. He offered to Commissioner Boike that if he needed anyone to attend the Commission meetings from a generator's perspective, he would be available.

Agenda Item V – Adjournment

Mr. Brinker requested a motion to adjourn. Ms. Schonenberg and Mr. Starbuck made and supported the motion.

Approved Unanimously.

Meeting adjourned at 9:40 a.m.

RESOLUTION

No. 2001-482

By Commissioner Boike

RESOLVED, by the Wayne County Commission on this 19th day of July, 2001 that approval be, and is hereby, granted authorizing the Wayne County Solid Waste Management Plan that the update has been developed and approved by Wayne County Solid Waste Implementation Committee in accordance with the requirements of Part 115 of Act 451 P.A. 1994 as amended, as recommended by the Chief Executive Officer; and be it further

RESOLVED, that the Chief Executive Officer be, and is hereby, duly authorized to execute the aforementioned plan update on behalf of the County of Wayne.

[Wayne County Solid Waste Management Plan Update on File]

(2001-70-071)

PROPOSED

EQUALIZATION SESSION

NINTH DAY

Commission Chamber Room 400, 4th Floor, Wayne County Building, Detroit, Michigan

Thursday, July 19, 2001

10:00 a.m.

The Commission was called to order by the Chair of the Commission, Ricardo A. Solomon, at 10:18 a.m.

The roll of the Commission was requested by the Clerk of the Commission, Alfred N. Montgomery:

Banks	- present	Cushingberry	- e.d.s.	Sullivan	- present
Blackwell	- present	Hall	- excused	Varga	- present
Boike	- present	Hubbard	- e.d.s.	Ware	- present
C. Cavanagh	- excused	Palamara	- present	Beard	- present
P. Cavanagh	- present	Parker	- present	Solomon	- present

11 present, a quorum

e.d.s. = entered during session

PROPOSED

and/or place on file the foregoing communications as indicated, with the exception of Nos. 38, 39, 40, 41, 42 and 45 to be given immediate consideration.

The Commissioners voted as follows:

Yea -- Commissioners Bankes, Blackwell, Boike, Palamara, Parker, Sullivan, Varga, Vice-Chair Pro Tempore Ware, Vice-Chair Beard, Chairman Solomon -- 10
Nay -- None
Abstain -- None
Not Voting -- Commissioners P. Cavanagh, Cushingberry, Hubbard -- 3
Excused -- Commissioners C. Cavanagh, Hall -- 2

Vice-Chair Beard, supported by Vice-Chair Pro Tempore Ware and Commissioner Boike, moved approval of foregoing items 38, 39, 40, 41, 42 and 45, and adoption of the six resolutions.

Following discussion by the Commissioners with John Wiktor, Director, Administrative Services, Health Department, Department of Health and Community Services and Larry Fitch, Director of Parks Division, Department of Public Services, **Chairman Solomon requested a vote on adoption of the resolutions, which prevailed, a majority of Commissioners serving having voted therefor by the following Roll Call:**

Yea -- Commissioners Bankes, Blackwell, Boike, P. Cavanagh, Cushingberry, Hubbard, Palamara, Parker, Sullivan, Varga, Vice-Chair Pro Tempore Ware, Vice-Chair Beard, Chairman Solomon -- 13
Nay -- None
Abstain -- None
Not Voting -- None
Excused -- Commissioners C. Cavanagh, Hall -- 2

[Resolution Nos. 2001-476, 2001-477, 2001-478, 2001-479, 2001-480 and 2001-481]

REPORTS FROM COMMITTEES

A. Report from the COMMITTEE ON ENVIRONMENT, DRAINS AND SEWERS recommending the following:

1. Approval of the Wayne County Solid Waste Management Plan update; the CEO advises that once the Commission approves the Plan, it will be forwarded to the Wayne County municipalities for their approval. (2001-70-071)
2. Approval of a sole-source contract between the County of Wayne and Kennedy Industries (of Milford, MI) in the amount of \$7,830 to provide for the purchase of a de-watering pump for the Inkster CSO Basin; the CEO advises that Kennedy Industries is the sole source supplier for this equipment in the State of Michigan; the cost of the contract shall be charged to Account No. 596 54017 978000 (CSO Basins). (2001-37-299)

Firm: Kennedy Industries
Address: 4975 Technical Drive, P.O. Box 809, Milford, MI 48381-0809

PROPOSED

Contact: Keith Sikairis (248) 684-1200

3. Approval of a sole-source contract between the County of Wayne and Andritz-Ruthner, Inc. (of Arlington, TX) in the amount of \$9,675 to provide parts needed for the Andritz Belt Filter Presses; the CEO advises that Andritz-Ruthner is the sole source supplier for all replacement parts and accessories for their equipment; the cost of the contract shall be charged to Account No. 590 54003 745000 (Downriver). (2001-37-289)

Firm: Andritz-Ruthner, Inc.
Address: 1010 Commercial Blvd., South Arlington, TX 76001
Contact: Julie Larimer (800) 433-5161

PROPOSED

4. Approval of a sole-source two-year contract with a one-year renewal option between the County of Wayne and Robicon (of New Kensington, PA) in the amount of \$16,380 for maintenance/service of specialized equipment for the Department of Environment; the CEO advises that only manufacturer representatives are authorized to maintain Robicon machinery; the cost of the contract shall be charged to Account No. 590 54003 932000 (Downriver). (2001-37-287)

Firm: Robicon
Address: 500 Hunt Valley Rd., New Kensington PA 15068
Contact: Donald DiEmidio (724) 334-5697

5. Ratification of the Chairman's Emergency approval of a one-month extension to the contract between the County of Wayne and U.S. Liquids of Detroit, Inc. (of Detroit) until a new contract is approved by the Wayne County Commission for the disposal of biosolids; the current contract expires June 30, 2001 and the extension will be for the period of July 1, 2001 through July 31, 2001; the CEO advises that no additional funds are needed and a contract extension will save the County approximately \$47,400 in comparison with new contract rates. (96-37-111A)

Firm: U.S. Liquids of Detroit, Inc.
Address: 1923 Fredrick St., Detroit, MI 48211
Contact: James Kreger (313) 923-0080

6. Approval a contract between the County of Wayne and Yates Construction Company, Inc. (of Oxford, MI) in the amount of \$238,635 to provide professional services in connection with the Crawford and Stuart Drain Maintenance Projects; the CEO advises that two firms responded to advertisements; after review, Orchard, Hiltz & McClements, Inc., consulting engineers for the projects, recommend Yates, all in accordance with specifications; the cost of the contract shall be charged to Account Nos. 801 various (Drain Maintenance). (2001-70-073)

Firm: Yates Construction Company, Inc.
Address: 1630 Tu Van Trail, Oxford, MI 48371
Contact: James R. Yates (248) 628-2181

7. Approval of the authorization of the Wayne County Executive, or his designee, to execute agreements, contracts, and grant documents pertaining to the Rouge River National Wet Weather Demonstration Grant projects with selected agencies for storm water general permit activities (Round IIB). (2001-70-074)

Commissioner Boike, supported by Vice-Chair Pro Tempore Ware, moved approval of foregoing Report A items 1, 2, 3, 4, 5, 6 and 7, and adoption of the seven resolutions.

RESOLUTION 2001- 21
TOWNSHIP OF SUMPTER
WAYNE COUNTY
SOLID WASTE MANAGEMENT PLAN
2000 UPDATE

Minutes of a regular meeting of the Township Board of Trustees of the Township of Sumpter, County of Wayne, State of Michigan, (the "Township") held on the 23rd day of October, 2001 in the Township Hall at 7:00 p.m., Eastern Daylight Savings Time.

PRESENT: Supervisor Elmer Parraghi, Clerk Clarence Hoffman, Treasurer John Morgan, and Trustees Clifford Hill, Helen Teall, Karen Armatis
ABSENT: Linton Macklin

The following preamble and resolution were offered by Hoffman and supported by Armatis,

WHEREAS, the 2000 Update to the Wayne County Solid Waste Plan has been submitted by Wayne County to the Sumpter Township Board of Trustees for review and approval as required by Public Act 451 of 1994, Part 115; and

WHEREAS, the 2000 Update has been approved by the Wayne County Solid Waste Planning/Implementation Committee and Wayne County Executive Edward H. McNamara and adopted by the Wayne County Commission following extensive opportunity for public review and comment; and

WHEREAS, the 2000 Update recognizes Carleton Farms Landfill and the host community of Sumpter Township, as an integral component of the Wayne County Solid Waste Plan;

NOW THEREFORE BE IT RESOLVED, that the Board of Trustees hereby approves the 2000 Update to the Wayne County Solid Waste Plan.

CHARTER TOWNSHIP OF REDFORD

REGULAR MEETING REDFORD TOWNSHIP BOARD DECEMBER 17, 2001

A Regular Meeting of the Redford Township Board was held on Monday, December 17, 2001 in the Board Room of the Redford Township Hall, 15145 Beech Daly. Supervisor Kelley called the meeting to order at 7:00 p.m.

After the Pledge of Allegiance, Trustee Dowdy gave the invocation.

PRESENT:	Kevin F. Kelley	Tom Dowdy
	Garth J. Christie	Gerald Gajewski
	Robert F. Brang, Jr.	R. Miles Handy, II
		Kelly D. Watson

ABSENT: None

CITIZEN'S COMMENTS: Jim Donahue, 18500 Olympia spoke about cost to copy public document. He feels the township should make documents available (proposed 2002/03 budget) to the public at a nominal fee. Clerk Christie responded that his office is happy to provide any citizen with any information that he is entitled to. The rate that we charge for copying is prescribed by the State of Michigan. It is very costly to copy a budget, so in the past we have always made it available for public viewing in the Clerk's Office

01:260 CONSENT AGENDA ITEMS:

1. That we remove Consent Agenda item 3 (identification card system). Mr. Brang said it is not in compliance with the bidding regulations.
2. That we approve the minutes of the Regular Meeting of December 3, 2001.
3. That we set a Public Hearing for 7:00 p.m. on January 28, 2002 for Rite-On Industries regarding Brownfield Redevelopment.

Motioned by Brang, supported by Handy that we approve the Consent Agenda Items as presented. Motion carried unanimously.

01:261 BY HANDY, SUPPORTED BY GAJEWSKI

That we approve the Wayne County Solid Waste Ordinance that will update the County's Solid Waste Mater Plan.

Motion carried unanimously.

01:262 BY BRANG, SUPPORTED BY HANDY

That we approve the 2002 specialized service contract for the Redford

RESOLUTION

02-2-102. RESOLVED by Councilman M. Hendricks, seconded by Councilwoman James, that

WHEREAS, Wayne County has adopted an updated Solid Waste Management Plan which needs enforcement from two-thirds of the communities within the County for validation with the Michigan Department of Environmental Quality (MDEQ); and

WHEREAS, the City of Inkster has reviewed and discussed the updated Wayne County Solid Waste Management Plan.

NOW, THEREFORE, BE IT RESOLVED, that the Council of the City of Inkster hereby approves the Wayne County Solid Waste Management Plan 2000 Update dated April 25, 2001, as required by Act 451 of 1994 Part 115.

YEAS: Councilpersons Harris-Foster, E. Hendricks, Bostedor, Coleman-Richardson, M. Hendricks, James and Mayor Hampton.

NAYS: None.

ABSENT: None.

I hereby certify that the foregoing is a true and correct copy of a Resolution adopted by the Council of the City of Inkster, Wayne County, Michigan, at a Regular Council Meeting held February 18, 2002.

Kimberly Turner
City Clerk
Inkster, Michigan

RESOLUTION

RES. #2002-22

WHEREAS, the City of Plymouth collects and disposes of solid waste in order to protect the public health, safety and welfare; and

WHEREAS, the City's solid waste is regulated by the Wayne County Solid Waste Plan and this plan is currently being updated; and

WHEREAS, the City Administration has reviewed the new revised plan and finds that the plan will continue to allow the City to collect solid waste, recycling, compost and hazardous waste.

NOW, THEREFORE, BE IT RESOLVED, that the City Commission of the City of Plymouth does hereby adopted the Wayne County Solid Waste Plan in accordance with Act 451, Part 115 of the State of Michigan. Further, that a copy of this resolution shall be submitted to the County for their submission to the State with a copy of the approved plan.

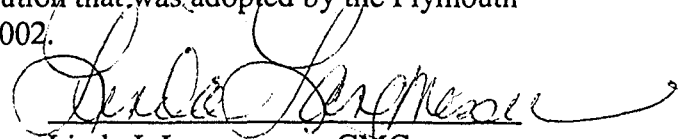

Motion was made by Commissioner Phil Pursell and seconded by Commissioner Stella Greene for approval of the resolution. Motion was carried unanimously.

AYES: Mayor William Graham, Commissioners Michele Potter, Dan Dwyer, Ron Loiselle, Phil Pursell, Stella Greene

NAYS: None

ABSENT: Mayor Pro-tem Colleen Pobur

I, Linda Langmesser, City Clerk of the City of Plymouth, Michigan, do hereby certify the foregoing to be a true and correct copy of a resolution that was adopted by the Plymouth City Commissioners on Tuesday, February 19, 2002.

~ RESOLUTION ~

A Resolution Endorsing the Wayne County Solid Waste Management Plan

Whereas, The City of Northville must be covered by a county solid waste management plan; and

Whereas, The City of Northville is located in both Oakland and Wayne Counties, and has in the past elected to be covered under Wayne County's solid waste regulations; and

Whereas, Wayne County has adopted an updated solid waste management plan which needs endorsement from 2/3 of the communities within the County for validation with the Michigan Department of Environmental Quality (MDEQ); and

Whereas, the Northville City Council has reviewed and discussed the updated Wayne County solid waste management plan.

Now Therefore Be It Resolved, that the City Council of the City of Northville hereby supports and endorses the Wayne County Solid Waste Management Plan 2000 Update.

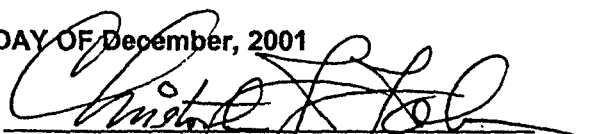

Moved By: Ayers **Supported By:** Mittman

RESOLUTION DECLARED ADOPTED ON THIS 17th DAY OF December, 2001

 Christopher J. Johnson, Mayor

I hereby certify that the foregoing is a true and complete copy of a resolution adopted by the City Council of the City of Northville, Michigan, at a Regular meeting held on December 17, 2001, and that said meeting was conducted and public notices of said meeting was given pursuant to and in full compliance with the Open Meetings Act, being Act 267, Public Acts of Michigan, 1976, and that the minutes of said meeting were kept and will be or have been made available as required by said Act.

 Dianne Massa, City Clerk

Resolution 2001-30

**Charter Township of Van Buren
County of Wayne, Michigan
Approval of the Wayne County Solid Waste Management Plan 2000 Update**

Motion By: Budd

Support By: Herman

WHEREAS, Van Buren Township is located within Wayne County and,

WHEREAS, Van Buren Township supported the previous Solid Waste Management Plans and this Plan has maintained the basic waste handling system that has functioned successfully for the last 15 years and,

WHEREAS, The updated Solid Waste Management Plan has been developed as required by Act 451 of 1994 Part 115 administered by the Michigan Department of Environmental Quality and,

WHEREAS, Van Buren Township played an active role in the Wayne County Solid Waste Implementation/Planning Committee and,

WHEREAS, Van Buren Township currently has a Host Community Agreement with Woodland Meadows and supports the local control provided by Wayne County's Host Community Approval siting procedure included in the updated plan and,

WHEREAS, Van Buren Township has begun an education campaign to promote residential and commercial reduce, reuse, recycle, and composting programs and will benefit from County assistance and,

WHEREAS, Van Buren Township supports the proactive goal of reducing the amount of solid waste generated that must be landfilled and,

WHEREAS, Van Buren Township's solid waste facilities are currently monitored and regulated by the Wayne County Solid Waste Ordinance and will benefit from the updated Ordinance.

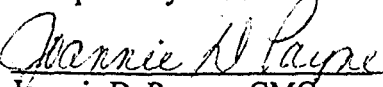

NOW, THEREFORE, be it resolved that by acceptance of this resolution, Van Buren Township approves the updates to the Wayne County Solid Waste Management Plan and supports its implementation.

YEAS: King, Payne, Budd, Hart, Herman and Jahr.

NAYS: None.

ABSENT: Rochowiak.

I hereby certify that the foregoing is a true and correct copy of a resolution adopted by the Board of Trustees of the Charter Township of Van Buren, County of Wayne, State of Michigan, at a meeting held on November 20, 2001 and that the said meeting was conducted and public notice of said meeting was given pursuant to and in full compliance with the Open Meeting Act, being Act 267, Public Acts of Michigan, 1976, and that the minutes of said meeting were kept and will be or have been made available as required by said Act.

No. 20-02

RESOLUTION

At a regular meeting of the Southgate City Council called to order by
President Farrah on January 30, 2002 at 8:00 P.M. the following
resolution was offered:

Moved Refugio Torres Supported John Graziani

WHEREAS, Wayne County has adopted an updated Solid Waste Management
Plan which needs enforcement from two-thirds of the communities within the County for
validation with the Michigan Department of Environmental Quality (MDEQ); and,

WHEREAS, the City of Southgate has reviewed and discussed the updated
Wayne County Solid Waste Management Plan.

NOW, THEREFORE, BE IT RESOLVED, that the Council of the City of
Southgate hereby approves the Wayne County Solid Waste Management Plan 2000
Update dated April 25, 2001, as required by Act 451 of 1994 Part 115.

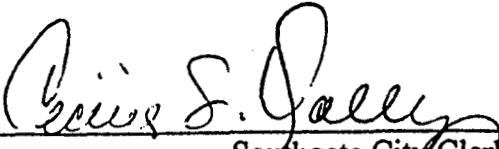

Yeas: 6

Absent: 1

Nays: 0

Motion: Carried unanimously

I, CECILIA S. DALLY, Clerk of the City of Southgate do hereby certify that the foregoing is a true, correct and complete copy of
a resolution passed by the Southgate City Council at a regular meeting held
January 30, 2002.

Southgate City Clerk

cc: Exec, Atty, Wayne County, Fin, DPS, files

By Hubbard supported by Sareini.

2-106-02 RESOLVED: That this City Council hereby confirms the Mayor's appointment of Nancy Siwik, to the City Plan Commission for a term ending June 30, 2004; be it further

RESOLVED: That this resolution be given immediate effect.

The resolution unanimously adopted.

By Polidori supported by Hubbard.

2-107-02. WHEREAS: The State of Michigan Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA), Part 115, Solid Waste Management, and its Administrative Rules, requires that each County have a Solid Waste Management Plan Update approved by the Michigan Department of Environmental Quality (MDEQ). This Update has been approved by the Wayne County Commission and now requires approval of at least two-thirds of the 43 municipalities in Wayne County for the MDEQ to consider final approval, and

WHEREAS: The Department of Public Works has reviewed the County's Update and recommends approval. Most notably, the Update strengthens the authority of local authorities related to approval of waste disposal facilities within their jurisdiction. In addition, the updated Plan correctly indicates that there is approximately 20 years of landfill capacity remaining with existing facilities in Wayne County; be it

RESOLVED: That City Council does hereby approve the year 2000 Update to the Wayne County Solid Waste Management Plan; be it further

RESOLVED: That this resolution be given immediate effect.

The resolution unanimously adopted.

DEPUTY CITY CLERK**

DATED:

September 27, 2001

Wayne County Solid Waste Management Plan 2000 Update

April 25, 2001

Edward H. McNamara
County Executive

PLAN UPDATE COVER PAGE

The Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA), Part 115, Solid Waste Management, and its Administrative Rules, requires that each County have a Solid Waste Management Plan Update (Plan) approved by the Michigan Department of Environmental Quality (DEQ). Section 11539a requires the DEQ to prepare and make available, a standardized format for the preparation of these Plan updates. This document has been written and put together in that format.

DATE SUBMITTED TO DEQ: February 27, 2002

This Plan Update covers all Act 451, Part 115 solid wastes which are generated within Wayne County as well as the solid waste generated within the entire city of Northville. Northville is located within both Wayne and Oakland Counties but has elected to be included in the Wayne County Plan as allowed under section 11536 of Part 115 of the NREPA. Resolutions from both involved County Boards of Commissioners approving the inclusion are included in Appendix N.

DESIGNATED PLANNING AGENCY PREPARING THIS PLAN UPDATE:
Office of the Wayne County Executive through the Department of Environment

CONTACT PERSON: Mr. James Murray, Director
Department of Environment

ADDRESS: 415 Clifford, 7th Floor
Detroit, MI 48226

PHONE: (313) 224-3620 FAX: (313) 224-0045

E-MAIL: jmurray@co.wayne.mi.us

CENTRAL REPOSITORY LOCATION: Wayne County D.O.E.
Land Resource Management Division
3600 Commerce Court, Bldg. E
Wayne, MI 48184
(734) 326-3936

WAYNE COUNTY SOLID WASTE MANAGEMENT PLAN UPDATE

The Wayne County Solid Waste Management Plan was developed and is consistent with the requirements of Michigan's Natural Resources and Environmental Protection Act, P.A. 451, Part 115 and with the MDEQ's required Plan Format. The Plan was developed by the Wayne County Solid Waste Implementation Committee, which was appointed by:

WAYNE COUNTY EXECUTIVE
Edward H. McNamara

With the approval of the:

WAYNE COUNTY BOARD OF COMMISSIONERS
Ricardo A. Solomon, Chair (7th)

Christopher Cavanagh (1st)
Bernard J. Parker (2nd)
Robert B. Blackwell (3rd)
Jewel C. Ware (4th)
Ilona Varga (5th)
George Cushingberry (6th)
Willie Hall (8th)

Philip Cavanagh (9th)
Lyn Bankes (10th)
John Sullivan (11th)
Kay Beard (12th)
Susan L Hubbard (13th)
Joseph Palamara (14th)
Edward A. Boike (15th)

The Wayne County SOLID WASTE IMPLEMENTATION COMMITTEE members are:

Edward A. Boike
Michael Brinker, Chair
Ron Caramagno
Helen Foster, Vice-Chair
John Hamilton
Christopher Jackson
Kevin Kelley
Laurie Kendall
James Logsdon
William Matakas
Trenessa Mitchell
Frances Schonenberg
Ted Starbuck
Donald Windeler

GLOSSARY OF TERMS

I

Executive Summary

County Overview

Wayne County is the most populated county in Michigan with over two million residents and a commercial and industrial population of almost one million. It is easy to see how Wayne County generates over ten million cubic yards of waste per year. This volume of waste could pose a major problem for most counties to handle without significant exporting. However, Wayne County has been able to handle its waste internally operating under its Solid Waste Management Plan. Wayne County's siting process, which provides significant local community control through a Host Community Agreement, has been very successful in siting disposal facilities. In fact, Wayne County's process has been the most successful siting process in Michigan. As a result, Wayne County currently has capacity to handle all of its solid waste for more than twenty years based on existing waste flows and facility capacities.

With the disposal capacity currently available in Wayne County, some may question the need to emphasize recycling and suggest we continue to utilize landfills without concern for airspace. In reality, landfill capacity should be a concern particularly when you look at the amount of land available in Wayne County for future development. According to SEMCOG, of the over 390,000 acres of land in Wayne County, 138,000 acres were undeveloped in 1995. Some of the undeveloped land contains wetlands or other physical restrictions. This constitutes approximately 35% of the total area of the County. An estimated 20,000 acres have been developed within the last 5 years in Wayne County. If this trend continues there will be very little undeveloped land suitable for landfill development when the current airspace is consumed. Therefore, waste reduction, recycling, and incineration must remain a high priority throughout Wayne County.

Thirty-four (34) of Wayne County's forty-three (43) communities participate in curbside collection programs for recyclables and forty-one (41) communities participate in yard waste collection programs. This participation is a result of the original Solid Waste Management Plan's directive that communities recycle, incinerate, or become the host to a landfill. Wayne County understands that even with current excess disposal capacity, conditions may change and therefore recycling must remain a major component of the waste hierarchy in the County. With the active recycling and yard waste collection programs currently in place, the communities of the County are diverting over fifteen percent (15%) of the municipal solid waste stream from landfills. When including the municipal waste that is incinerated in Wayne County, the diversion rates exceed fifty-seven percent (57%).

Selected Alternative

The selected system for handling Wayne County's waste is an existing system that has been functioning successfully for over 15 years. This system incorporates all aspects of waste handling from waste reduction, recycling, composting and incineration, to landfilling and is managed by both public and private enterprises.

The existing network of disposal facilities within Wayne County consists of two (2) waste to energy incinerators, four (4) municipal waste landfills, six (6) industrial waste landfills, and six (6) operating waste processing facilities. The hauling is being handled successfully through

private and municipal contractors, with a network of thirteen (13) operating Type A transfer stations and fourteen (14) operating Type B transfer stations.

Recycling is an important part of waste management practices within Wayne County. Continued curbside recycling along with increased recycling education will be the key components that will help us achieve our recycling goal of twenty-five percent (25%) of the total waste stream collected.

Yard waste collection is currently diverting nine percent (9%) of the municipal waste stream from landfills; however, most of this material is not being handled in Wayne County. As such, Wayne County will promote grass-cycling and backyard (small scale) composting in an effort to reduce our dependency on neighboring community composting facilities.

Incineration will continue to play a large role in waste reduction efforts within the County. The two existing Waste-to-Energy incinerators handle approximately forty percent (40%) of the residential waste stream. The volume reduction provided by these facilities, which averages around ninety percent (90%), greatly reduces our dependency on landfills while generating over 68 megawatts of energy annually. The use of these facilities reduces landfill airspace consumption by over twenty percent (20%) per year.

Landfilling is still an important part of the waste management hierarchy, as identified in the "Selected Management System". Since the last approved SWMP in 1990, Wayne County has sited four (4) new or expanded municipal solid waste landfills with our Host Community approval process. This process has successfully sited enough capacity to handle all of Wayne County's solid waste disposal needs until the year 2020. This life expectancy is based on current generation and recycling rates; but with improved performance in recycling, life expectancy may actually increase.

Conclusion

Wayne County, with the assistance of the Solid Waste Implementation Committee (SWIC), has determined that the existing solid waste management system will handle Wayne County's solid waste disposal needs well beyond this plan update period. That is not to say it can't be improved, and so with this update, the SWIC has fine-tuned the system in an effort to better meet our goals.

As a result, Wayne County will provide more attention to municipal waste composting education, while promoting industrial and commercial reduce, reuse, recycle programs. Wayne County will continue working with the solid waste landfills within the County to support efforts to maximize use of available airspace, thereby prolonging the existing life. They will also be working to achieve the goals by fostering partnerships with local communities to gather strong commitment and support from the people most affected.

The final piece of the updated SWMP is the Wayne County Solid Waste Ordinance (Ordinance). The Ordinance has been beneficial in providing the reports necessary to monitor the performance of the County with regard to its goals. In addition, it has provided the necessary tools to assure Wayne County has oversight of the solid waste facilities within its jurisdiction. As part of this

SWMP update, the Ordinance has been rewritten to reflect recent changes in State solid waste regulations and has been streamlined to eliminate duplication.

WAYNE COUNTY SOLID WASTE PLANNING GOALS

1. REDUCE THE AMOUNT OF SOLID WASTE GENERATED THAT MUST BE LANDFILLED.

- Encourage curbside recycling with target recycling goal of 25% of total waste stream collected, to reduce dependency on landfills.
- Encourage yard waste composting and grass cycling with goal of diverting 15% of the total waste stream collected.
- Encourage the continued use of existing waste to energy incinerators as a method of waste volume reduction and energy reuse.
- Promote industrial and commercial reduce, reuse, and recycle programs.

2. OPTIMIZE THE USE AND LIFE OF EXISTING SOLID WASTE DISPOSAL AREAS.

- Encourage and support maximum utilization of available airspace at landfills through the use of Alternate Daily Cover.
- Encourage and support operational changes at landfills that promote improved compaction rates.

3. ENSURE LOCAL AND PUBLIC PARTICIPATION IN THE DEVELOPMENT AND IMPLEMENTATION OF THE SOLID WASTE MANAGEMENT PLAN.

- Form partnerships with local communities through outreach and education on recycling; waste minimization and landfilling to more effectively advance the goals of the Solid Waste Management Plan at the local level.
- Recognize the importance of local community involvement with the success of waste minimization and recycling efforts, and actively seek local community input regarding Best Management Practices.
- Assist local communities in compiling accurate data for evaluating the effectiveness of their reduce, reuse, recycle programs.

4. SUSTAIN AND ENHANCE COMPLIANCE AND ENFORCEMENT PROGRAMS.

- Continue enforcement and updating of the Wayne County Solid Waste Ordinance.
- Enhance and maintain the level of service provided by Wayne County Department of Environment Land Resource Management Division's Solid Waste Program.

II

SOLID WASTE GENERATION and DISPOSAL DATA BASE

Overview

This section reports a five-year history of solid waste generation rate for each Wayne County community, and also reports the source, type and quantity of solid waste disposed at Wayne County landfill facilities. Included in this section is an inventory of authorized solid waste disposal areas located in Wayne County.

Summary

The following tables and charts summarize the information provided in the database section of this plan. This summary includes the break down of how the residential waste generated within the County has been disposed of. It also includes the makeup of the waste disposed of in the landfills within Wayne County by waste category and by geographic region in which the waste was generated.

The 5-year residential waste disposal profile (*reported in tons*) for Wayne County is:

	TOTAL	RECYCLED	COMPOSTED	INCINERATED	LANDFILLED
1995	1,093,593	37,649	109,939	562,378	419,442
1996	1,156,416	71,514	105,394	582,931	431,681
1997	1,284,342	75,903	129,733	569,458	564,116
1998	1,257,459	75,575	144,584	515,063	561,152
1999	1,295,048	82,723	114,376	545,396	546,657
Total	6,086,858	343,364	604,026	2,775,226	2,523,048
Average	1,217,000	69,000	121,000	555,000	505,000

Wayne County's population is 2,107,016 based on 1999 community reports. The typical Wayne County resident generates approximately 3.2 pounds of waste per day based on waste generation reports prepared by each community. These community reports are the basis for the waste disposal quantities reported above. TABLE 1 through TABLE 5 on pages 13-17 shows the percentage of residential waste diverted from landfill disposal for the years 1995 - 1999. Wayne County diversion techniques include recycling, composting and incineration (with energy recovery). Over the past 5 years approximately 60% of Wayne County's residential waste has been diverted from direct landfilling. Wayne County and its communities have successfully decreased the dependency on landfills as a primary solid waste management technique.

Residential Waste Disposal Profile 5 Year Average

The waste disposal profile based on waste category for the last 5-years (*reported in gate cubic yards*) for Wayne County landfills is:

	TOTAL	RESIDENTIAL	COMMERCIAL	INDUSTRIAL	ASH/SPECIAL
1995	10,195,194	2,621,882	3,452,768	3,941,118	179,427
1996	11,476,833	2,665,934	4,826,180	3,839,632	145,087
1997	10,422,370	2,457,772	3,711,149	4,074,960	178,489
1998	10,242,456	2,901,952	3,305,691	3,879,907	154,906
1999	12,129,564	5,046,324	2,680,384	4,224,749	178,107
Total	54,466,417	15,693,864	17,976,172	19,960,366	836,016
Average	10,893,283	3,138,773	3,595,234	1,990,000	167,203

Waste Disposal By Category 5 Year Average

Wayne County landfills are accepting waste from a variety of communities within Michigan as well as waste from Canada and surrounding States. Historically the waste volumes imported into Wayne County have nearly equaled the volume of Wayne County waste exported. The following graph depicts the percentage of waste disposed of at Wayne County landfills in 1999 based on geographical location.

Wayne County currently has 10 active landfills, which accepted over 12 million cubic yards of waste for disposal in 1999. The table below identifies these facilities, their annual disposal volume in 1999 and their remaining capacity based on approved design.

Site	1999 Data		
	Current Airspace (bcy)	Remaining Life (years)	Disposal vol (gcy).
Allen Park	1,823,870	4	408,191
Carleton Farms-MSW	63,390,000	67	1,899,955
Countywide	3,800,000	15	250,000*
Huron Quarry	578,840	11	54,750*
Levy	2,721,500	9	318,671
Livonia	178,207	17	10,761
Riverview	13,380,000	19	1,374,648
Sauk Trails	23,637,817	12	4,088,532
Sibley Quarry	15,000,000	60	250,000
Woodland Meadows	22,544,000	12	3,806,322

The total remaining life of Wayne County's landfills is **approximately 20 years**** based on the disposal capacities and utilization rates identified in 1999 Annual Waste Stream Reports provided by each facility. These numbers represent actual capacities and yearly disposal volumes as of Dec. 31, 1999.

* These values have been estimated for purposes of calculating a remaining life since neither facility was accepting waste in 1999.

** To determine this value, the current airspace available was totaled for all landfills, which is in bank cubic yards, and was divided by the total disposal volume (converted into bcy). Since two different waste types were combined, two different conversion factors to convert gate cubic yards (gcy) into bank cubic yards (bcy) were utilized. For simplicity a consistent conversion for type II waste at $2 \text{ gcy} = 1 \text{ bcy}$ and for type III landfills at $1 \text{ gcy} = 1 \text{ bcy}$ was assumed. This provides a conservative estimate since at most facilities, the conversion will generally be greater. The availability of this airspace to be used if other facilities were to close, was also evaluated. In developing the available life for Wayne County's solid waste landfills, the volume available at Sibley Quarry was not included since this is a very specialized landfill that generally would not be acceptable for waste other than coal ash and would have artificially inflated the remaining life.

Facility Descriptions

The following table lists all solid waste disposal areas within Wayne County or to be used by Wayne County to meet its disposal needs for the planning period. The facility description sheets for these facilities, information on the closed landfills that will remain included in the Plan (pp. A 44 – A 46), and information regarding the facilities removed from the Plan as part of this update, can be found in Appendix A.

The information within the facility description sheets in Appendix A may conflict in some respects with the information in the body of this Plan. The information on the facility description sheets has been provided by the facilities and has not been verified by Wayne County. Volumes used within this plan for calculation of capacities and existing life have been verified by Wayne County and may not be reflected within the facility description sheets in Appendix A.

Compost Facilities

Following is a list of operating compost facilities where yard clippings generated in Wayne County are delivered.

Wayne County

Facility: Taylor Compost
Owner/Operator: City of Taylor
Address: 16300 Racho Road, Taylor

Facility: Carleton Farms
Owner/Operator: Republic Waste Services
Address: 28800 Clark Road, Sumpter

Facility: Northville Compost Yard
Owner/Operator: City of Northville
Address: 650 Doheny, Northville

Monroe County

Facility: Jack's Lawn Service, Inc.
Owner/Operator: Jack Sturn
Address: 5550 W. Dunbar, Monroe

Facility: Regulated Resource Recovery
Owner/Operator: Contact Nick Straub
Address: 200 Matlin Rd., Carleton (Ash Twp.)

Macomb County

Facility: King of the Winds
Owner/Operator: Dolores Michaels
Address: 21600 Quinn Road, Clinton Township

Facility: Pine Tree Acres
Owner/Operator: WMI
Address: 36600 29 Mile, Lenox Twp.

Oakland County

Facility: Eagle Valley Transfer
Owner/Operator: WMI
Address: Silverbell Road, Orion Twp.

Facility: Wright Way Clean-Up
Owner/Operator:
Address: 1586 Valley Dr., Highland

St. Clair County

Facility: Indian Summer Recycling
Owner/Operator: Bob Brooks & Fred Thompson
Address: 5877 Bethuy Rd., Casco

Washtenaw County

Facility: Arbor Hills
Owner/Operator: Onyx Waste Services, Inc.
Address: 10599 W. Five Mile Rd., Northville

Solid Waste Collection Services And Transportation Infrastructure

The tables and maps on the following pages represent the current status of the solid waste collection services for each municipality, and the infrastructure and locations of the Type II and Type III Landfills, and Waste-to-Energy Incinerators/Incinerators that are utilized for solid waste disposal in Wayne County. Existing Transfer Stations, and Processing Facilities are also shown.

Table 7 specifically shows the waste hauler and disposal facility used by each Wayne County municipality. Table 8 shows information regarding household hazardous waste collection and yard waste collection. Table 9 lists the Transfer Stations and Processing Facilities and their current status.

EVALUATION OF DEFICIENCIES AND PROBLEMS

With current adequate landfill capacity in Wayne County for all solid waste streams, residential, commercial, and industrial, the deficiencies and problems with the existing solid waste management system are centered on compostable materials, and recyclables.

1.) Yard Clippings:

Beginning on March 28, 1995, Michigan's Natural Resources and Environmental Protection Act, P.A. 451, Part 115, prohibited the disposal of yard clippings, as defined in the Act, in landfills and incinerators. Without the benefit of approved state guidelines outlining alternative methods of handling, the disposal of yard clippings has become a problem. A number of sites have attempted to operate compost facilities but have failed due to odor problems associated with plastic bags, and unmanageable volumes. Suitable sized land parcels, required for optimal composting, are difficult to obtain. As a result, there are few options within Wayne County for disposal of yard clippings. Illegal dumping of yard clippings has thus increased resulting in further nuisance conditions.

In order to solve these problems, Wayne County is prepared to support changes to current state regulations that prohibit land disposal of yard waste. Wayne County believes that a heightened awareness of the yard waste disposal problem could lead to supporting regulations that would allow yard waste to be disposed of at waste-to-energy incinerators and landfills that have an approved gas collection/energy recovery system.

Additionally, Wayne County is committed to further educating the public about the benefits of grass-cycling and backyard composting in order to prevent as much yard waste as possible from requiring disposal.

2.) Recycling:

Markets for recyclable materials need to be improved. A strong emphasis on procurement of goods manufactured from post-consumer recycled materials is essential in encouraging further market development. Further education is also needed among the county citizens, community leaders, business, and industry regarding the true costs of waste disposal as well as the cost-savings often realized through a sound program involving reduction, reuse, and recycling.

Relatively low disposal costs in the Southeast Michigan region create little or no economic incentive for waste reduction and recycling, and few communities are willing to place an economic disincentive on waste disposal at this time. Additionally, recycling activities are not as common within the multi-family residential, commercial, and industrial sectors as they are within the single-family residential sector. Effective programs in these three sectors could have a measurable impact on the County's overall waste stream disposal.

DEMOGRAPHICS

The following Table 10 presents the current and projected population densities for five and ten year periods, identification of current and projected solid waste generation including commercial and industrial solid waste for five and ten year periods. Population densities have been obtained by taking current population totals from municipal reports and using SEMCOG's predicted rate of change to project 5 and 10 year populations. Solid waste generation data is expressed in cubic yards and is based on current reported figures of pounds per person per day and assumes no change in generation for 5 and 10 year periods.

TABLE 10
CURRENT/PROJECTED WAYNE COUNTY POPULATION
AND SOLID WASTE GENERATION (CUBIC YARDS)*

YEAR	RESIDENTIAL POPULATION	RESIDENTIAL WASTE	COMMERCIAL POPULATION	COMMERCIAL WASTE	INDUSTRIAL POPULATION	INDUSTRIAL WASTE	TOTAL WASTE
1999	2,107,016	5,224,431	736,478	2,680,384	260,726	4,224,749	12,129,564
2000	2,100,830	5,198,924	742,245	2,682,102	260,493	4,220,123	12,101,149

* Totals from Annual Waste Stream reports were used to compute data.

Land Development

Wayne County presently has more than 20 years left of landfill space. While the need for land for development of new facilities is not an immediate concern, growth trends indicate that suitable land may not be available in the future when new facilities need to be sited. The information presented pertains only to the 25 of 43 communities in which the Wayne County Soil Erosion/Sedimentation Control (SESC) program has jurisdiction. The other 18 communities act as their own Local Enforcement Agency (LEA). Information from the SESC permitting process is one of the best methods to gauge and possibly predict growth trends in land development. The program mandates that if any development disturbs more than one acre of land or is within 500 feet of a lake or stream, an owner, contractor, or developer must obtain a local earth change permit. Any proposed landfill would most likely go through this permitting process.

Wayne County is comprised of 622.85 square miles or 398,624 acres. Wayne County Department of Environment's Land Resource Management Division (LRMD) acts as the SESC authority in 25 of the 43 communities consisting of 422.81 square miles or 270,598.4 acres. LRMD regulates 67.88% of possible permitted area. Permits are issued for residential, commercial or industrial building. Based on a 1998 SEMCOG Community Profile report, in 1995 land use was divided into 4 categories and given a percent value based on acreage: residential (43.3); commercial (10.9); industrial (11.6); and undeveloped (34.2.) The cities and townships permitted are both built up and rural in nature. All four corners of the County are included in these totals.

In 1995, 1,465 acres were permitted and in 1998, 2,159.2 acres; this is a 10.7 percent average growth increase per year between 1995 through 1998. 3,416.3 acres were permitted in 1999, which is a 36% increase over 1998. Currently, 6,151 acres are under permit. It is evident that the percentage of development in all areas of land use has increased, leaving a small amount of land left undeveloped.

Because of this expansive growth, available land is scarce for landfill development. Most of western Wayne County has been and continues to be built out. There are large parcels of land being used for residential development in the northwestern and downriver communities. Other communities have a lot of industrial construction; some of this may be redevelopment of existing or vacant properties.

The pace of demand and construction has been fierce in the last two years. While most economic forecasters do not expect the U.S. economy to slip into a severe recession, most believe the world economic problems will slow down the construction demand. *If this pace continues, locating land for new waste disposal facilities will become very difficult in the future.* Based on constitutionally guaranteed private property rights and these noted development trends, fewer contiguous tracts of land will be available for landfill development in the future.

SOLID WASTE MANAGEMENT ALTERNATIVES

Wayne County's 1990 Solid Waste Management Plan identified, considered, and evaluated an array of solid waste management techniques and alternatives based on existing and proposed facilities including both private and municipal operations.

Alternative methods for managing solid waste were grouped into four categories: waste minimization; resource conservation; volume reduction; and landfilling. All the alternatives are available and employed in Wayne County.

Waste minimization focuses on reducing the volume of material before it becomes waste. The other methods deal with materials as a waste product. Volume reduction and resource recovery technologies are complete systems that require disposal of some residual waste materials.

Waste minimization reduces the quantity of material that ultimately must be disposed of as solid waste. The principal methods are:

Less material per unit involves changes in product design and packaging. Examples of product changes are thin-wall container and elimination of individual wrapped portions.

Increased product life through the development and use of materials in products that would increase use-life and reduce replacement needs and modular design of products that would permit replacement of a part and reuse of the product rather than complete replacement.

Reuse of a product without changing its form. The returnable beverage container is an example.

Decreased consumption focuses on the elimination of products that are deemed unnecessary and the reduction in use of others. Examples of things that could be minimized are junk mail and multiple bagging of merchandise.

All of these methods reduce the quantity of waste generated and the associated costs of collection, transporting, processing and disposal. Added benefits are the conservation of resources and energy used in manufacturing process. The generator of waste chooses to use less, to reuse items more than one time, or to discard less material.

Resource conservation is the recovery of materials through recycling, composting or as energy from solid waste. Resource conservation is generally an ancillary activity associated with one or more of the other disposal approaches.

The primary resource conservation techniques are:

Waste-to-energy incineration is a process where solid waste is burned for the purpose of producing steam for heat and/or the generation of electrical power. This process reduces the fossil fuel consumption for power generation and reduces volume of waste requiring landfill space.

Recycling or the reclamation of recoverable materials found in solid waste such as paper, glass, plastics, used oil, tires and metals specifically for reuse or for regeneration as new product material. Recycling results in the reduced use of raw materials and energy to refine raw materials.

Composting is a process to convert organic waste material to a humus material for reuse in soil building and fertilization. Composting reduces the need for landfill and reduces reliance on chemical fertilizers.

Resource recovery can be categorized into direct and indirect methods. Direct resource conservation of materials takes place at the point of generation referred to as "source separation" which means that the mixed materials are transported to a processing facility to be mechanically sorted according to material types.

Source separation is a waste management component that encourages the reclamation of recoverable materials in solid waste, while reducing the total volume to be landfilled. The term "source separation" means separating materials such as paper, glass and metals, at the point of generation. Conservation of materials that are produced from diminishing a supply of natural resources saves the non-renewable resource and saves energy used to produce replacement products and consumed in disposing of the product.

An indirect resource conservation alternative is waste-to-energy incineration. Waste-to-energy considerations include the volume reduction aspect and waste's value as energy production source. Waste-to-energy facilities significantly reduce the volume of material otherwise landfilled. Recycling is another complementary alternative.

Wayne County priorities emphasize waste reduction as a primary and continuing objective as noted in the Wayne County Solid Waste Planning Goals on page 8. Additionally, the Wayne County Solid Waste Management System developed and implemented during the 1990s provides a diverse program that includes the following priorities: a.) waste minimization; b.) resource conservation; and c.) landfilling. Significant progress has been made toward the goals set forth in the previously approved 1985 and 1990 Plans. Wayne County continues to move forward to implement sound solid waste management alternatives.

III

IMPORTING WASTE INTO WAYNE COUNTY

Wayne County continues to authorize importation of waste into Wayne County as a practical and cost effective method to manage solid waste disposal. Waste importation will be controlled to provide maximum utilization of landfills located within the County by the residents and businesses of the County while still allowing some movement where and when practicable. Communities utilizing Wayne County facilities must be in compliance with recycling and composting goals defined in the Wayne County Solid Waste Management Plan. Further, any county exporting over 100,000 gate cubic yards (gcy) per year of waste into Wayne County must specifically allow reciprocal quantities of Wayne County waste into landfills within their county and so declare in their solid waste management plan. If the exporting county does not have sufficient landfill capacity to support their reciprocal agreement they will be limited to exporting 100,000 gcy per year, to Wayne County unless it has been documented that greater volumes have historically been imported. If this is the case, they will be restricted to exporting no more than their historical quantities.

The volumes identified below are yearly import amounts in gate cubic yards for those counties that are authorized to import over 100,000 gate cubic yards per year. As a practical means of monitoring import volumes, these numbers will be averaged over a 5-year period; in any one year the volume may not exceed 125% of the Annual Quantity and at no time will they be allowed to exceed the 5-Year Total.

EXPORTING COUNTY	ANNUAL QUANTITY	5-YEAR TOTAL
LIVINGSTON	200,000*	1,000,000
MACOMB	300,000	1,500,000
MONROE	200,000	1,000,000
OAKLAND	1,000,000	5,000,000
WASHTENAW	2,000,000	10,000,000
OTHER MICHIGAN COUNTIES COMBINED	500,000	2,500,000
TOTALS	4,200,000	21,000,000

*Quantity is based on historical importation.
Quantities listed are in gate cubic yards.

Import volumes will be monitored and if any county exceeds its Annual Quantity, it will be notified of this exceedance. If volumes exceed 125% of the Annual Quantity for any one-year, the exporting county will be notified that its volumes will be tracked quarterly for the next year. If the totals for that next year approach the Annual Quantity, the landfills and the exporting county will be notified that acceptance of the county's waste may be prohibited. Once 125% of the Annual Quantity has been exceeded, the landfill(s) will be directed to no longer accept waste from that specific county.

In regards to importing from "other counties," Wayne County will accept waste from all other counties in Michigan as long as their combined total does not exceed an average of 500,000 gate cubic yards per year over a 5-year period. No single county may export more than 100,000 gcy per year to Wayne County unless they have been specifically authorized and provide a reciprocal agreement.

Before a landfill can accept household municipal waste from any community outside of Wayne County, the landfill must first receive certification (on a form provided by Wayne County) that the municipality is in compliance with the recycling goals of the Wayne County Solid Waste Management Plan and provide that certification to Wayne County.** Should Wayne County determine that a municipality no longer meets the recycling goals of the Plan, the municipality will be notified and allowed two weeks to provide explanation as to why it should be allowed to continue disposing waste in Wayne County. At the determination of the Director of the LRMD that the municipality has not provided adequate rationale to support their position, disposal of their waste in Wayne County landfills will not be allowed. Once the decision has been made, Wayne County landfills and the municipality will be notified that after two weeks, the landfills will no longer be allowed to accept that community's waste.

The volumes identified in the preceding table are exporting counties' waste quantities that are authorized for disposal directly at solid waste landfills located within Wayne County. Additional volumes are authorized for disposal at one of the licensed waste to energy incinerators located within Wayne County, provided these facilities have additional operating permit capacity. Prior to importation of any waste into one of the Wayne County waste to energy incinerators, Wayne County must be notified. In addition, all quantities imported must be reported annually.

** Wayne County encourages all municipalities to offer curbside recycling. However, communities will meet Wayne County's recycling goals if they provide reasonable access to a recycling drop-off center to all residents of the community. Reasonable access shall be considered as having a drop-off center within a 10 mile radius. The certification form can be found in Appendix I.

EXPORTATION OF WASTE FROM WAYNE COUNTY

Wayne County will continue to authorize exportation of waste to all counties in Michigan as long as the receiving County has authorized importation of waste from Wayne County. This exportation must comply with any applicable import restrictions imposed by the receiving County. The table below identifies those Counties that have provided specific authorization for importation of waste from Wayne County and the amount they have authorized.

IMPORTING COUNTY	DAILY QUANTITY	ANNUAL QUANTITY
MACOMB		900,000 gcy**
MONROE	5,000 gcy/day*	
OAKLAND		1,000,000 gcy
WASHTENAW		2,000,000 gcy

* Total volume of waste allowed to be imported from all Counties

** Total volume authorized for Pine Tree Acres landfill

This list only identifies those that historically have received waste from Wayne County and is not necessarily all inclusive of those Counties that may have authorized disposal of Wayne County waste. If exportation of Wayne County waste is anticipated to a county not listed above, the receiving county should be contacted to verify the acceptability and for determination of any limitations or restrictions.

SOLID WASTE DISPOSAL AREAS

The following charts and Table 11 identify the names of existing disposal areas that will be utilized to provide the required capacity and management needs for the solid waste generated within Wayne County for the next five to ten years. Pages A3 through A57 in Appendix A contain facility descriptions of the solid waste disposal facilities that are located within Wayne County and the disposal facilities located outside Wayne County that will be used by Wayne County for the planning period. Additional facilities within Wayne County with applicable permits and licenses may be used as they are sited by this Plan, or amended into this Plan, and become available for disposal. If this Plan update is amended to identify additional facilities for disposal in other counties outside Wayne County, those facilities may only be used if the receiving county authorizes such import. Facilities outside of Michigan may also be used if legally available for such use.

SOLID WASTE COLLECTION SERVICES AND TRANSPORTATION

Although both public and private enterprises provide solid waste collection and transportation, the majority of the communities within Wayne County contract with private haulers. Table 7 on page 24 shows each community and their current waste collection service provider. This collection and transportation system has proved to be very capable of handling the volumes generated in Wayne County, and in fact private disposal companies are always eager to privatize the hauling in communities that currently haul their own waste.

Commercial and industrial wastes are handled by the generators either directly or through contracted services with one of the many waste hauling companies within Wayne County or adjacent Counties.

RESOURCE CONSERVATION EFFORTS

In Wayne County's original Solid Waste Management Plan, resource conservation strategies were investigated. The results of those previous investigations still hold true today. For any meaningful and effective resource conservation to take place there must be mandated and funded programs from the State and Federal Governments. Wayne County is not structured to deal effectively in this regard, and therefore is not assigning a value to the amount of waste diverted from landfills.

The following section, however, describes specific resource recovery programs in place that will continue to aid Wayne County in diverting waste from the landfills.

Waste Reduction, Recycling, and Composting Programs

A. Volume Reduction Techniques

1. Efforts proposed to reduce physical volume of waste being landfilled.

The techniques available to physically reduce the volume of landfilled waste are already successfully employed at Wayne County disposal areas. The combustion of waste at waste-to-energy incinerators reduces the physical volume of waste greater than 75%. The disposal of waste in landfills involves innovative operating techniques, such as compaction, to mechanically reduce its volume. These methods of volume reduction benefit the facilities for both practical and financial reasons.

Since volume reduction is practiced voluntarily and because technologies change and equipment may need replacing, it is not this plan update's intention to limit the techniques to only what is listed. Persons within Wayne County are encouraged to use the technique that provides the most efficient and practical volume reduction for their needs.

2. Estimated amount of space saved by each technique used.

Waste-to-energy facilities' volume reduction data for the three year period of 1995 – 1998 shows that greater than 12,000,000 bank cubic yards of landfill space was saved during this period. Assuming this annual volume reduction benefit continues to be achieved in the future, greater than 30,000,000 bank cubic yards of landfill space will be saved over the next 10 years.

Local landfill operators report that innovative techniques, such as leachate recirculation, could achieve accelerated decomposition and/or increased densities approaching a 10% space savings; projected landfill space savings could exceed 4,500,000 bank cubic yards over a ten-year period.

Collectively these available volume reduction techniques could potentially defer or save greater than 35,000,000 bank cubic yards of landfill space thus greatly extending the lives of existing landfills.

B. Overview of Resource Recovery Programs

1. Opportunities available for recycling and composting in Wayne County.

Recycling and collection of yard clippings are feasible in Wayne County. 41 of the 43 municipalities within Wayne County currently offer single family residences the service of curbside collections and/or drop-off centers for recyclables and yard clippings.

Thirty municipalities offer weekly, 2 municipalities offer biweekly, and 1 municipality offers bimonthly curbside pickup of recyclables. 27 municipalities offer drop-off recycling centers. Yard clippings are collected curbside by 37 municipalities weekly, 2 municipalities biweekly, and 1 municipality monthly. One municipality offers curbside pickup of recyclables and yard clippings if the residents call and request it, but they do offer a drop-off center.

2. Types and volumes of materials available in the waste stream.

The types and volume of residential waste generated in Wayne County that is being recycled is detailed in Tables 12 and 5 respectively. Based on the data in these tables which has been collected from the local municipalities, the average single family household recycles approximately 6 percent of its generated waste through curbside and/or drop-off programs. According to the U.S. EPA, approximately 60 percent of the residential waste generated could be recycled.* This suggests that Wayne County residents are recycling 10 percent of the material that is available for recycling. Because of Michigan's "Bottle Bill", however, the recycling rate may actually be as high as 20 percent.

These same tables show that within local communities, the average family household composts approximately 9 percent of its annual waste generated. Again, the EPA suggests that 13 percent of the residential waste stream is available to be composted. Wayne County, then, is doing very well by composting approximately 70 percent of the available compostable material.

3. Impediments to recycling or composting and recommendations for minimizing the impediments.

The high cost of recycling relative to the cost of municipal waste disposal coupled with fluctuating market demands has deterred more aggressive efforts. Increased participation in recycling programs could help to lower the cost. However, to achieve this, additional funding and education is needed. Multi-family dwellings and commercial and industrial establishments lack incentives to take a more proactive role in recycling.

A number of commercial sites that have attempted to operate compost facilities within Wayne County have failed due to unmanageable volumes and odor problems. Suitable sized land areas, required for optimal composting, are difficult to obtain for this specific use. As a result, there are few options in Wayne County for commercial composting. Increased educational efforts can be implemented to focus on minimizing the volume of yard waste requiring handling.

* USEPA'S 1998 national average waste generation and characterization profile suggests that 60 percent of residential waste material (i.e. paper, paperboard, glass, metal and plastics) is potentially recyclable and 13 percent (yard waste and trimmings) is potentially compostable.

As discussed on page 29, Wayne County recognizes the problems associated with commercial composting. For long-term solutions, Wayne County supports changes to the current state regulations that prohibit land disposal of yard clippings. Wayne County believes that a heightened awareness of the inefficiencies of yard clippings disposal could lead to supporting regulations that will allow yard clippings to be disposed of at waste-to-energy incinerators and landfills that have an approved gas collection and energy recovery program.

4. Potential benefits of recycling and composting programs.

The benefits of recycling and composting include saved landfill space, as well as the natural resources and energy saved from reduced production of new materials. Recycling and backyard composting are also easy, effective ways for the citizens to practice environmental responsibility.

5. Feasibility of source separation of potentially hazardous components.

Separation of potentially hazardous components is somewhat feasible. Although the county does not currently have a program for household hazardous waste collection, several of the communities offer their residents annual household hazardous waste collection days.

C. Recycling, Composting, and Source Separation of Hazardous Materials

The following Tables 12, 13, and 14 detail the existing programs for municipal recycling, municipal composting, and municipal household hazardous waste collection services respectively. The Wayne County Department of Environment is developing an on-line materials exchange program that, if successful, will help to reduce the amount of hazardous material entering the waste stream. In addition, the Wayne County Department of Environment's various Divisions have a mercury reduction program in place with the goal of reducing the release of mercury into the environment.

The Land Resource Management Division (LRMD) has identified a list of mercury recyclers in the area and the mercury containing products that they recycle. LRMD is also encouraging all communities hosting household hazardous waste collections to include the acceptance of mercury-containing products for recycling. Efforts are also being made to develop countywide specifications for purchasing mercury-free fluorescent bulbs for all Wayne County buildings. Finally, LRMD hopes to work with local businesses to arrange area-wide drop-off stations for the collection of mercury-containing thermostats and thermometers.

The Air Quality Management Division (AQMD) has developed a work plan with two goals. The first goal involves developing an educational outreach program aimed at contractors licensed to do business in Wayne County. This program will identify the contractors, as well as the trade associations, and develop an informational package

intended to educate this specific group as to the environmental problems with mercury, available substitutes for mercury components currently used, (thermostats, mercury switches, relays, etc.), proper disposal methods, and approved recyclers or disposal sites. The second goal involves developing an educational outreach program aimed at automobile salvage yards in Wayne County. This program will identify the sources within the county, as well as the trade associations, and develop an informational package intended to educate this specific group as to the environmental problems with mercury, the necessity of removing and recycling mercury components from junk autos, identifying the components that contain mercury, proper recycling and/or disposal methods, and approved recyclers or disposal sites.

The Compliance and Public Affairs Division (CPA) has created a library of public education materials for public distribution and has developed a strategy to outreach identified stakeholder groups in educational institutions and coordinate pollution prevention efforts to recycle and replace use of mercury. CPA is also designing a public relations and media campaign to promote pollution prevention messages to encourage recycling and reduction of use of mercury-laden products.

The Division of Public Works (DPW) is also involved and has developed two goals. The first goal is to promote the MDEQ approved Mercury Reduction Plan (MRP) for point discharges. The DPW will review mercury-monitoring data quarterly for the Downriver system and sample potential sources. Their second goal is to outreach to facilities to increase awareness of the mercury problem in Michigan and promote mercury pollution prevention.

Wayne County encourages all waste generators to explore additional means to increase resource recovery.

Identification of Resource Recovery Management Entities

Wayne County encourages a multi-faceted approach to resource recovery throughout the County. Public, private, and non-profit agencies all play a role in resource recovery programs.

The Wayne County Department of Environment's Land Resource Management Division (LRMD) manages the public outreach and education for recycling, composting and other resource recovery programs such as the mercury reduction program discussed on pages 51-52 of this Plan. The LRMD also manages the office paper recycling program for the Wayne County government offices.

The cities and/or townships within Wayne County manage their respective recycling and composting programs. Recycling programs, either curbside pickup or recycling drop-off centers, are available in 41 of the 43 communities. Additionally, yard clippings are picked up at curbside in 37 communities.

PROJECTED DIVERSION RATES

The following Table 15 estimates the annual amount of solid waste which is expected to be diverted from landfills and incinerators as a result of the current resource recovery programs and in five and ten years. Data for 1998 and 1999 were obtained from the annual Municipality Waste Stream reports submitted to the Land Resource Management Division. Projected rates for 2000, 2005, and 2010 were formulated using a SEMCOG population study, and calculating pounds per person per day, with an increase above 1999 rates of 2%, 7%, and 12% respectively. Specific populations from the SEMCOG study can be found in Table 10 on page 30. While the Table 15 recycling rates may not appear to be increasing at the rates stated, this is a result of a projected decrease in population for Wayne County.

TABLE 15
PROJECTED DIVERSION TOTALS THROUGH RECYCLING RESIDENTIAL WASTE

Collected Material	Annual Tons Diverted*			
	1999	2000	2005	2010
TOTAL PLASTICS:	33,421	33,640	34,761	35,984
NEWSPAPER:	46,227	46,166	47,724	49,224
CORRUGATED CONTAINERS:	1002	787	824	864
TOTAL OTHER PAPER:	969	786	822	860
TOTAL GLASS:	44,997	44,991	46,505	48,154
TOTAL METAL:	41,839	41,871	43,268	44,801
Total Material:	168,455	168,241	173,904	179,887

*2000, 2005, 2010 are increased 1999 rates by 2%, 7%, and 12% respectively, and is based on current/projected populations in Wayne County.

Educational and Informational Programs

Wayne County provides a variety of educational and informational programs regarding the various components of the solid waste management system. These programs are offered to provide communication that results in the proper handling of solid waste and to provide assistance with the various entities who participate in such programs as waste reduction and waste recovery. These programs are of fundamental importance to the success of the Plan.

Recycling: The Wayne County D.O.E. Land Resource Management Division (LRMD) provides educational and informational material to the general public, school groups, and businesses and industry within Wayne County. This is accomplished through exhibits at pertinent community events, presentations to local schools, and with informational packets such as flyers and brochures. In addition, LRMD provides information and support to local business and industry intending to start recycling programs. LRMD is involved in promoting recycling through the Wayne County (www.waynecounty.com) and D.O.E. (www.wcdoe.org) web sites and through traditional delivery mediums. LRMD also participates in state and/or national recycling events such as the annual America Recycles Day campaign.

LRMD is also planning to introduce a program that provides awards and public recognition for Wayne County businesses and industry that achieve measurable recycling goals.

An office paper-recycling program for all Wayne County Government buildings is in place and will be expanded by the LRMD to continue and encourage further recycling efforts.

Composting: The Wayne County D.O.E. LRMD provides an educational program for backyard composting by offering the Master Composting Course twice per year, in spring and fall. The course is an opportunity for Wayne County citizens to take a six-week, one evening per week class with a final exam. Upon completion of the final exam and a minimum of eight hours of volunteer work related to composting, each participant receives a certificate as a Master Composter.

Other informational material that encourages backyard composting and grass-cycling is available through the LRMD. In addition, LRMD takes part in local community events via exhibits and demonstrations outlining the benefits of composting.

Household Hazardous Waste: The Wayne County D.O.E. LRMD provides information to all Wayne County residents who request methods and locations for proper disposal of household hazardous waste. This is done via phone and through informational materials such as flyers and brochures. In addition, the LRMD promotes awareness and participation in local community household hazardous waste collection events. For information regarding the proper disposal of household hazardous waste, contact the LRMD at 734-326-3936. Additionally, the D.O.E. maintains a 24-Hour Hotline number for emergencies and for directing inquiries to the proper D.O.E. Division. The Hotline number is 1-888-223-2363.

Most of the 43 municipalities within Wayne County inform their citizens of upcoming Household Hazardous Waste events via a community newsletter, local newspaper notice, or local cable.

Resource Conservation: The Wayne County D.O.E. co-sponsors and participates in the annual Great Lakes Region Waste Reduction and Energy Efficiency Workshop. Additionally, the LRMD conducts public outreach throughout Wayne County to promote waste reduction and pollution prevention.

Wayne County D.O.E. LRMD is developing an on-line materials exchange program for the businesses and citizens of Wayne County. The materials will include both commercial and household items that might otherwise be discarded and landfilled.

Mercury Reduction: The LRMD, in coordination with the D.O.E.'s overall mercury reduction effort, is working to prevent improper disposal of mercury-containing waste. This program will encourage the communities that offer HHW programs to include mercury-containing items in their collections (ie. thermometers, thermostats, batteries, etc.); identify locations of mercury recycling facilities; provide to communities, in the form of pamphlets, information about mercury such as what to do in the case of a spill, and the location of mercury drop-off sites. LRMD will also work with local merchants to coordinate thermometer and thermostat drop-off points and/or exchanges and will provide additional information to citizens and businesses on the selection of non-mercury containing items.

The communities within Wayne County provide recycling and information to their citizens in the form of newsletters and cable television announcements. Most communities also hold annual household hazardous waste collections for their residents.

Timetable for Selected System Implementation

This timetable is a guideline to implement new components of the Selected System. The Timeline gives a range of time in which the component will be implemented such as "2000-2002" or "On-going." The timeline may be adjusted at a later date, if necessary.

TABLE 16

Management Components	Timeline
Implement Import Authorization	2001
Implement Export Authorization	2001
Data tracking to assess solid waste program performance including flow, collection, and transportation.	Quarterly/Annually/On-going
Initiate Education and Information Programs	2000-2002
Perform Public Education and Information Outreach	On-going
Resource Conservation Tracking (ie. waste reduction, recycling, & composting)	On-going

Facility Inclusion Process

All solid waste facilities located in Wayne County and regulated under Act 451 PA, 1994 Part 115 must be included within Wayne County's Solid Waste Management Plan. The following process is to be utilized for including facilities into the Plan.

Authorized Disposal Area Types

By the authorization of this plan, solid waste facilities may only be included in the plan if they meet the requirements set forth in the following Facility Inclusion Process. This process will be used for all solid waste facilities regulated under P.A. 451, Part 115 including license-exempt facilities.

Siting Criteria and Process

Wayne County has, in this plan, demonstrated well in excess of 10 years of currently sited disposal capacity. As a result, a formal State mandated siting criteria is not required and therefore will not be included in this plan.

In the event Wayne County drops below the 10 year disposal capacity, a siting mechanism in compliance with the requirements of Part 115 will be developed and included in the plan through the plan amendment process. This will occur before mandatory siting is required (having less than 66 months disposal capacity).

Wayne County has successfully sited more landfills than any other County in the State of Michigan through its Host Community Agreement siting process. This process has provided all of the disposal capacity available in Wayne County today. The continued use of this process has been authorized by the MDEQ until Wayne County's disposal capacity is reduced and a mandatory siting process is required. This plan amendment will therefore continue to allow new or expanded facilities to be included in the plan based on this process.

Solid Waste Disposal Facility Inclusion Process – (Host Community Approval)

During the term of this plan, or until a mandatory siting process is required by law, new or expanded solid waste disposal facilities must be included into the Plan through the Facility Inclusion Process. This process will operate under the direction of the nine member Facility Inclusion Committee (FIC). If formal action is taken at any FIC meeting, two thirds of the (9) committee members must be present. Approval of a proposal for inclusion into the Plan will require an affirmative vote by five committee members. The process for including facilities into the Plan will require the following conditions to be met:

1. The applicant requests an advisory analysis for the site from the Land Resource Management Division (LRMD) of Wayne County's Department of Environment. Once the advisory analysis is completed, copies will be sent to the applicant, the Host Community, and to potentially affected parties (a potentially affected party for these purposes will be any municipality (ies), residences, and businesses within ½ mile of the proposed facility).
2. Upon receipt of the advisory analysis, the applicant shall complete negotiations with the Host Community.
3. The applicant shall submit a request to Wayne County LRMD requesting inclusion in the SWMP including a detailed description of the facility and provide a draft of the Host Community Agreement.

Facility Inclusion Process

4. After receipt of the request for inclusion, staff of the LRMD will notify the Host Community and potentially affected parties to inform them of the request for inclusion. The municipality (ies) will be provided a copy of the application. Residences and businesses will be notified of a location that the application can be reviewed. The potentially affected parties will then have 30 days in which to provide written notification to the Facility Inclusion Committee (FIC) detailing any concerns they have regarding the proposed facility. They will also be informed of their right to attend the FIC meeting.
5. Two weeks after the FIC has received the potentially affected parties' concerns, a meeting will be held with the applicant, host community and potentially affected parties. The purpose of this meeting will be to allow the FIC to hear and ask questions about the proposal and to hear comments from the potentially affected party (ies). If, prior to the close of the meeting, the FIC determines that they need more time to fully understand the issues of the proposal, they may schedule a subsequent meeting and may request additional information from the applicant or from staff of Wayne County. This meeting, if needed, must be held within two weeks from the date of the original meeting. At the conclusion of the FIC meeting (either the initial or subsequent meeting if needed) the FIC will recommend inclusion of the facility into the Plan, or will provide a list of issues to the applicant that must be addressed to assure the concerns of Wayne County and/or the potentially affected parties are reasonably addressed.
6. The applicant and the host community will be responsible for addressing the issues identified by the FIC and modifying the proposal and/or Host Community Agreement as necessary.
7. When the applicant believes they have adequately addressed the concerns identified by the FIC, they will request a new meeting and will submit a revised proposal and Host Community Agreement to Wayne County LRMD. If this step is not completed within 9 months, the application will be considered new and the process will revert to step number 3.
8. After receipt of the revised proposal, staff of the LRMD will notify the Host Community and potentially affected parties of the revisions. Copies of this information will be forwarded to the affected municipalities. The previously notified residences and businesses will be notified and provided with a location that the revised application can be reviewed. The potentially affected parties will then have 30 days in which to provide written notification to the FIC detailing any concerns regarding the revised proposal.
9. A meeting of the FIC will be scheduled within two weeks after receipt of the comments from the potentially affected parties to allow a review of the new information and to consider any remaining comments. The applicant, the Host Community, and the potentially affected parties will be notified of the hearing date. At the end of the meeting the FIC will either determine that their concerns have been reasonably addressed and recommend inclusion of the facility, or will reject the application. If the application is rejected, the applicant may restart the process at step number 3 when appropriate changes have been made.

FACILITY INCLUSION COMMITTEE

It will be the responsibility of the Facility Inclusion Committee (FIC) to make decisions regarding the location of facilities within the County. The nine (9) FIC members are from the following organizations.

Two, non-solid waste industry members of the Solid Waste Planning/Implementation Committee;

Downriver Community Conference;

Conference of Western Wayne;

Greater Detroit Resource Recovery Authority;

Central Wayne County Sanitation Authority;

Director, Wayne County Department of Environment, or designee;

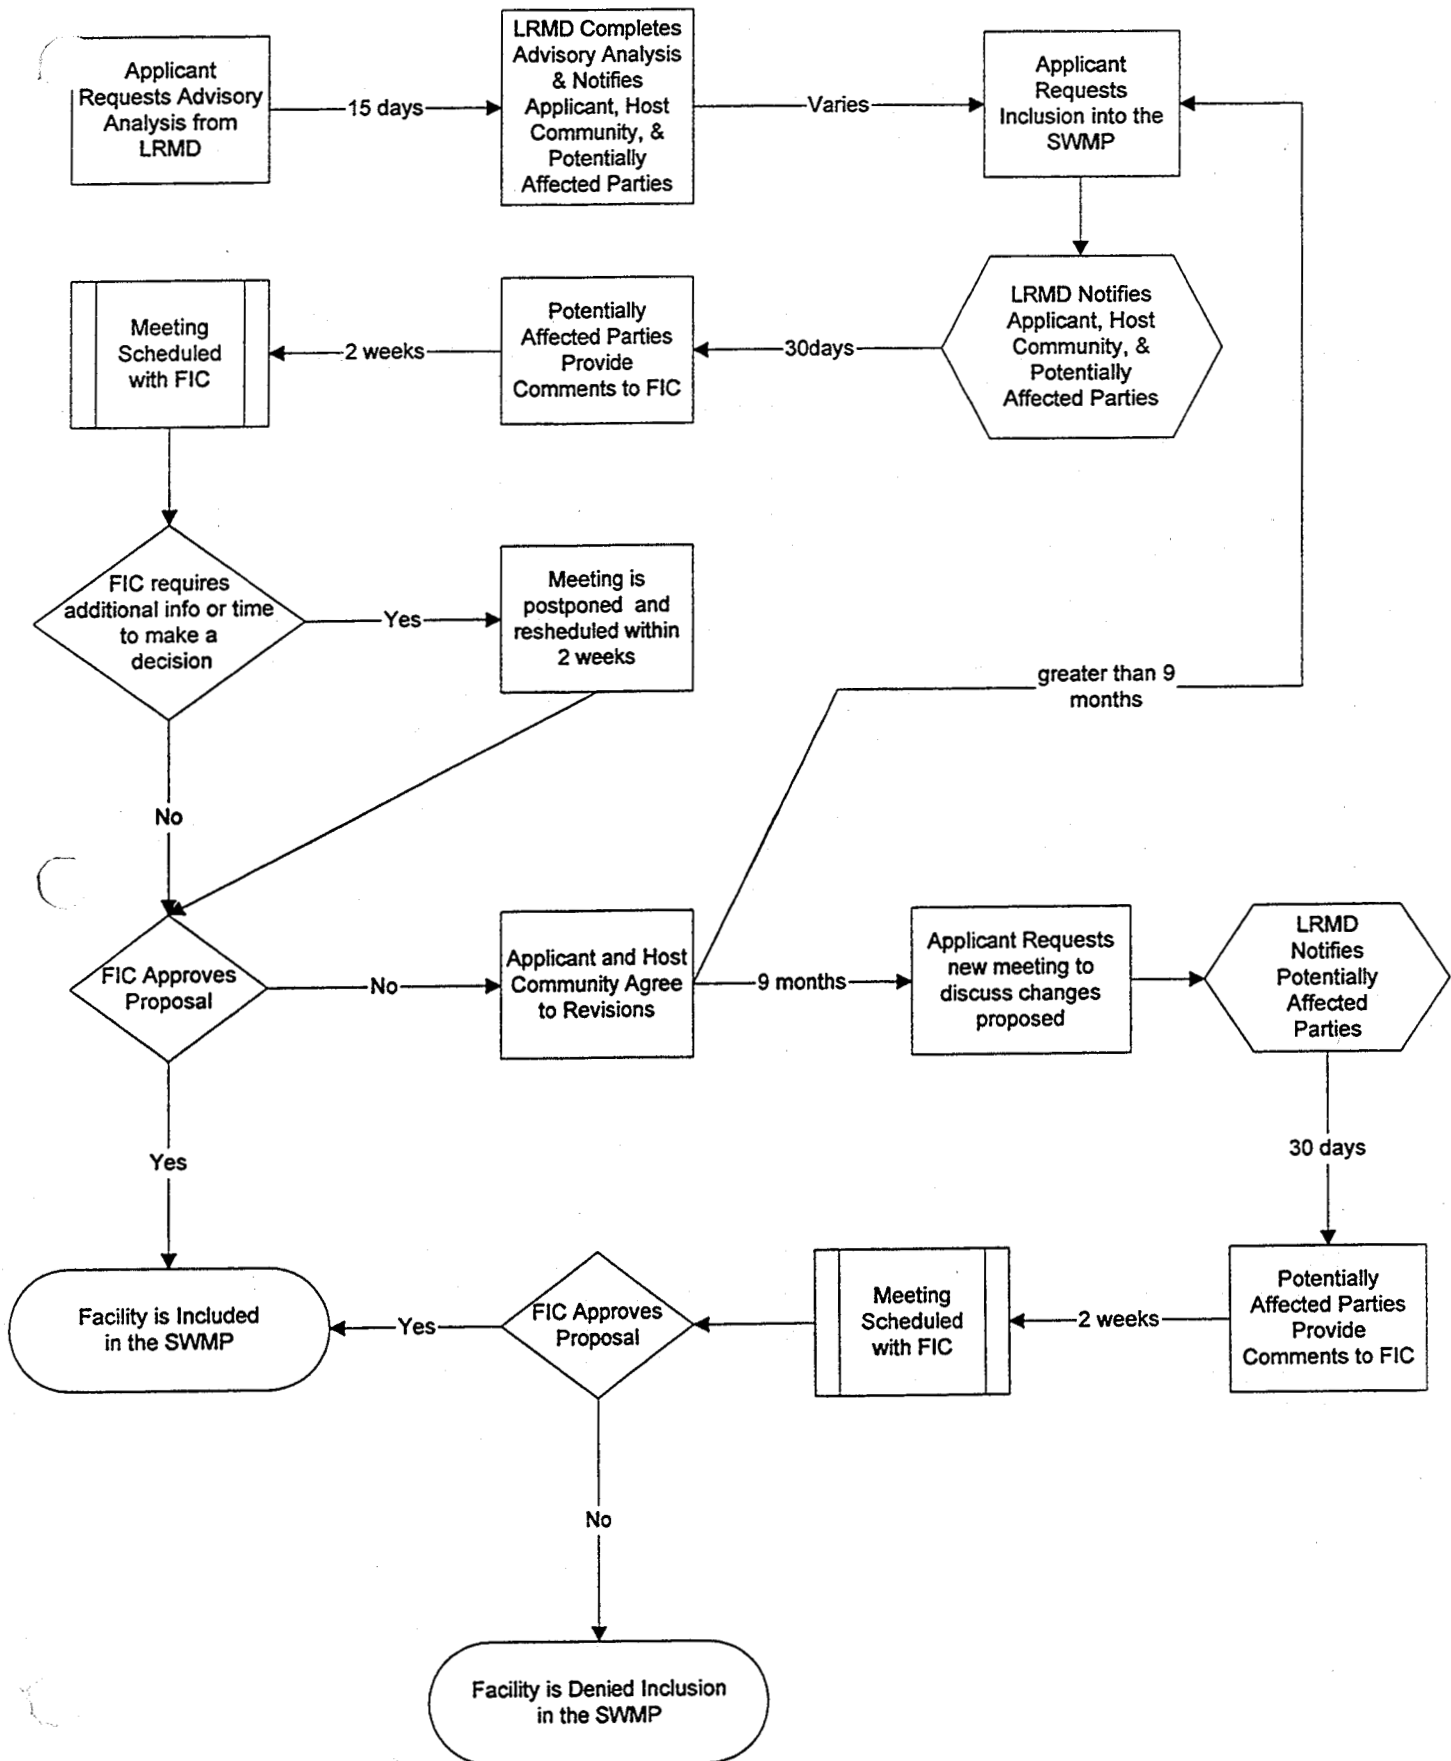

Director, Wayne County Department of Public Services, or designee; and

Director, Wayne County Department of Jobs and Economic Development, or designee.

The responsibilities of the FIC members will be to evaluate all proposals brought before them utilizing the following guidelines:

- All proposals shall have a Host Community Agreement that has been formally adopted by the local community;
- The applicant shall have submitted a complete application, which addresses all the items identified in the FIC committee submittal requirement document;
- Concerns of potentially affected parties will be evaluated by the FIC and if determined to be reasonable must be addressed by the applicant before approval is granted;
- The proposal shall be evaluated to determine if it addresses an identified need in regards to one of the components of the "Selected Management System" identified in Section III of the Solid Waste Management Plan (i.e. additional airspace, better waste transferring capabilities, new waste processing or recycling capabilities).

Facility Inclusion Process Flow Chart

Solid Waste Management Components

The Wayne County Executive and the Wayne County Commission have the ultimate responsibility for solid waste planning, implementation, and enforcement. These responsibilities are executed through the Wayne County Department of Environment, Land Resource Management Division.

Wayne County receives support for solid waste planning and management activities through the collection of tipping fees from the Type II landfills which is described in the Comprehensive User Fees Ordinance No. 95-456 (see Appendix F). The Land Resource Management Division, in conjunction with the Michigan Department of Environmental Quality, assumes responsibility for enforcing the environmental laws of the county and state. Specifically, Wayne County enforces the Wayne County Solid Waste Ordinance No 2000-654 (found in Appendix G) and Part 115 of Michigan's Natural Resources and Environmental Protection Act, P.A. 451 as amended.

The Land Resource Management Division employs solid waste inspectors, solid waste planners, an engineer, and a geologist whose technical capabilities are vital to solid waste management practices. The solid waste inspectors are responsible for inspecting the solid waste facilities for operational compliance. The program engineer reviews facility design documents and criteria and makes recommendations to the MDEQ regarding licensure of the sites. The program geologist monitors various geological aspects including ground water quality. Finally, the solid waste planning staff are responsible for enforcing aspects of the Plan relating to waste stream reporting and public outreach involving the preferred solid waste hierarchy.

The existing management system has proven to be effective for Wayne County and is expected to continue to be effective in the long term for implementation of the Plan.

A representative of the Southeast Michigan Council of Government (SEMCOG) is a member on the Wayne County Solid Waste Implementation Committee (SWIC) and has taken part in the approval of this Plan and will continue to take part in its implementation. As the Designated Solid Waste Planning Agency, the Wayne County Department of Environment will be continually involved with the monitoring and enforcement of the Plan. The Department's Land Resource Management Division will continue to work, as necessary, with the D.O.E. Air Quality Management Division, the Wayne County Department of Jobs and Economic Development, and SEMCOG to coordinate efforts to that end.

Identification of Responsible Parties

Wayne County Executive and Commission: The Wayne County Executive and Commission, by adoption of this solid waste plan and by the authority to adopt a countywide solid waste ordinance, have ultimate responsibility for its implementation. The Executive and Commission subsequently authorize the Wayne County Department of Environment to implement and enforce the Plan.

Wayne County Department of Environment (D.O.E.): The Land Resource Management Division (LRMD) of the Wayne County D.O.E. is responsible for the administrative coordination and enforcement of the County Solid Waste Program. The LRMD collects and analyzes solid waste disposal data and provides educational outreach programs and information to citizens and businesses. In addition, the LRMD conducts regulatory inspections of solid waste facilities and conducts complaint investigations.

Municipal Governments: The Plan promotes collaboration and partnerships with municipal governments. Wayne County and local governments share the plan objectives and work together to achieve success. The cities and townships, either individually or working together, may assume a financing, procurement, regulatory, and administrative role in arranging solid waste management services for their jurisdictions to comply with the Plan.

Waste Generators: All waste generators (residential, commercial, and industrial) will be encouraged to practice any or all of the following: separation of recyclables and compostables from mixed waste; arranging for transportation of recyclable/compostable materials to processing facilities for marketing; purchasing of goods made from environmentally preferable products; reduction in the amounts and toxicity of waste generated. In addition, all waste generators will be required to eliminate illegal dumping of wastes; and provide safe landfill or waste-to-energy disposal of remaining waste.

Solid Waste Management Industry: Public and private haulers and disposal facilities will be used throughout the County for materials collection, transportation, processing, and disposal. Annual and quarterly reports detailing service areas, quantities and types of materials collected are required to be submitted to the LRMD.

State of Michigan: The State of Michigan, through the Solid Waste Management Unit of the Department of Environmental Quality (MDEQ), is involved in the planning, implementation, and enforcement of the Wayne County Solid Waste Management Plan.

Resource Conservation:

Source or Waste Reduction
Product Reuse
Reduced Material Volume
Increased Product Lifetime
Decreased Consumption

Documentation of acceptance of responsibilities is contained in Appendix M.

Local Ordinances and Regulations Affecting Solid Waste Disposal

This Plan update's relationship to local ordinances and regulations within Wayne County is described in the option(s) marked below:

- X 1. *Section 11538 (8) and rule 710 (3) of Part 115 prohibits enforcement of all County and local ordinances and regulations pertaining to solid waste disposal areas unless consistent with an approved Solid Waste Management Plan. Local regulations and ordinances intended to be part of this Plan must be specified below and the manner in which they will be applied described.*
- 2. *This plan recognizes and incorporates as enforceable the following specific provisions based on zoning ordinances:*
- 3. *This plan authorizes adoption and implementation of local regulations governing the following subjects by the indicated units of government without further authorization from or amendment to the Plan.*

Wayne County explicitly includes the following ordinance within its Solid Waste Management Plan:

Wayne County Solid Waste Ordinance: enables the County to protect the public health and land, air, water, and other natural resources; to supplement provisions of Part 115 of the Michigan Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, and its Administrative Rules; to regulate specified solid waste management practices; to control the operations of solid waste facilities and prevent any adverse off-site effects of operation; to provide an enforceable mechanism for implementation of the Wayne County Solid Waste Plan; to prescribe the powers and duties of agencies; to provide for appeals; and to provide for penalties and remedies. (A copy of the ordinance can be found in Appendix G).

This Plan specifically requires that solid waste disposal facilities enter into a Host Community Agreement prior to seeking inclusion. The negotiation of these types of agreements allows host communities the opportunity to resolve all local ordinance issues. Wayne County authorizes all local municipal solid waste ordinances and regulations as enforceable provided that they are not in conflict with the goals of this Plan or Part 115 of PA 451 of 1994 and the requirements have been incorporated into the Host Community Agreement.

LETTER

IV

CAPACITY CERTIFICATIONS

Every county with less than ten years of capacity identified in their Solid Waste Management Plan is required to annually prepare and submit to the MDEQ an analysis and certification of solid waste disposal capacity validly available to the County. This certification is required to be prepared and approved by the County Board of Commissioners.

Wayne County currently has 10 active landfills, which accepted over 12 million cubic yards of waste for disposal in 1999. The table below identifies these facilities, their annual disposal volume in 1999 and their remaining capacity based on approved design.

Site	1999 Data			
	Current Airspace (bcy)	Remaining Life (years)	Disposal vol (gcy).	Volume converted to (bcy)
Allen Park Clay Mine	1,823,870	4	408,191	408,191
Carleton Farms-MSW	63,390,000	67	1,899,955	949,978
Countywide	3,800,000	15	250,000*	250,000
Huron Quarry	578,840	11	54,750*	54,750
Levy	2,721,500	9	318,671	318,671
Livonia	178,207	17	10,761	10,761
Riverview	13,380,000	19	1,374,648	687,324
Sauk Trails	23,637,817	12	4,088,532	2,044,266
Sibley Quarry	15,000,000	60	250,000	
Woodland Meadows	22,544,000	12	3,806,322	1,903,161
Totals used for calculations	131,876,027			6,627,102

$$131,876,027 \text{ bcy} \div 6,627,102 \text{ bcy/yr} = 19.9 \text{ years}$$

The total remaining life of Wayne County's landfills is **approximately 20 years**** based on the disposal capacities and utilization rates identified in 1999.

* These values have been estimated for purposes of calculating a remaining life since neither facility was accepting waste in 1999.

** To determine this value, the current airspace available was totaled for all landfills, which is in bank cubic yards, and was divided by the total disposal volume converted into bank cubic yards. Since two different waste types were combined, two different conversion factors to convert gate cubic yards (gcy) into bank cubic yards (bcy) were utilized. For simplicity a consistent conversion for type II waste at 2 gcy = 1 bcy and for type III landfills at 1 gcy = 1 bcy was assumed. This provides a conservative estimate since at most facilities, the conversion will generally be greater. The availability of this airspace to be used if other facilities were to close, was also evaluated. In developing the available life for Wayne County's solid waste landfills, the volume available at Sibley Quarry was not included since this is a very specialized landfill that generally would not be acceptable for waste other than coal ash and would have artificially inflated the remaining life.
