- **Catered lunch**
- **Lab tour on U of M campus**

Register today at:
www.michigan.gov/deqworkshops

For more information contact Chris Affeldt, Michigan Department of Environmental Quality at affeldtc@michigan.gov.

The **Michigan Green Labs Initiative (MGLI)** is a project of the Michigan Department of Environmental Quality in partnership with the University of Michigan and supported by a U.S. EPA grant.

Green Labs Project description

The MGLI seeks to deliver resources to and partner with institutions in Michigan to implement green laboratory practices. The University of Michigan Office of Campus Sustainability is partnering to provide resources and expertise after implementing their own sustainable labs program.

We will distribute materials that will serve as the basis of the program by compiling best practices, methods, and resources for implementation at your institution. This workshop will launch MGLI materials, share case studies and best practices, and begin building a network of green lab professional partners in Michigan. We hope you will join the discussion.

Ultimately, we hope your institution will become a partner and start a pilot green labs project or program.

Opportunities for Michigan Green Labs partner institutions:

- Join as partner for your organization, department, or individual labs.
- Contribute to a network of green labs practitioners via the Michigan Green Chemistry Clearinghouse.
- Provide input on materials to help institutions find green and sustainable practices and solutions.
- Pilot methods at your institution. Report results to the green labs community.
- Apply for a competitive pool of funding through the grant project for implementation at your institution.
