INSTRUCTIONS FOR RELOCATING OR MODIFYING
A NONMETALLIC MINERAL CRUSHING PLANT

Relocations
To relocate a nonmetallic mineral crushing plant that is covered by a general permit to install:

- Complete a Relocation Notice form (EQP5757) to request authority to relocate a nonmetallic mineral crushing plant under the terms and conditions of a general permit to install pursuant to Rule 201a.

- Attach a copy of the original general permit forms (EQP5727, EQP5729, and EQP5756) and any additional Process Information forms previously submitted for modifications to the plant.

- Attach a detailed site map for the new location, which shows all site characteristics including the location of any residential and/or commercial establishments and places of public assembly which are located within 1,000 feet of the proposed site.

- Certify and submit the Relocation Notice form along with the attachments listed above to both the Permit Section and the appropriate District Supervisor for the new location. A state map identifying all district office locations and addresses is available on the General Permit to Install website.

Modifications
A source may replace or modify equipment at the nonmetallic mineral crushing plant, or any portion of the process, including control equipment, as long as compliance with the terms and conditions of the general permit continues. To modify an existing General Permit:

- Complete a new Process Information Form (EQP5756). Clearly describe and identify all existing and new or additional equipment on the form. Certify and submit it to both the Permit Section and the District Supervisor a minimum of 10 days before the equipment is replaced or modified.

- Notify the AQD District Supervisor of the actual date of initial startup, within 15 days after startup of any new or additional equipment.

- Comply with the testing requirements of the NSPS. Schedule and test all new or additional equipment that is subject to the federal New Source Performance Standards (NSPS) Subpart OOO which has not been previously tested.

- Continue to meet all general permit to install applicability criteria after the replacement or modification is complete.

- Keep records of the dates of all equipment replacements or modifications, including a description of the activity.
