MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY 

The Michigan Department of Environmental Quality (MDEQ) will not discriminate against any individual or group on the basis of race, sex, religion, age, national origin, color, marital status, disability, or political beliefs. Questions or concerns should be directed to the MDEQ Office of Personnel Services, PO Box 30473, Lansing, MI 48909.

1997 TOXIC CHEMICAL RELEASE INVENTORY STATE OF MICHIGAN SUMMARY REPORT

Since 1988, facilities throughout the country that manufacture, process or otherwise use certain toxic chemicals have been required to report their environmental releases and transfers of these chemicals annually to the United States Environmental Protection Agency (EPA) and the states. Such reporting is required under Section 313 of the Emergency Planning and Community Right-to-Know Act (EPCRA) of 1986, also known as Title III of the Superfund Amendments and Reauthorization Act (SARA).

Covered facilities report information on how the waste is managed on- and off-site for more than 650 chemicals and chemical categories currently on the registry of reportable toxic chemicals. From year to year, the toxic chemical registry has been revised as specific chemicals have been removed or added by EPA.

This summary report presents data on the toxic chemicals released and transferred by covered facilities in Michigan. The data are based on chemical reports submitted to the State of Michigan for Report Year (RY) 1997 and are frozen as of March 1, 1999. For RY 1997, 905 Michigan facilities reported under the Toxic Chemical Release Inventory (TRI). Statewide totals are shown in Table 1 below. For more detailed information on Michigan TRI releases and transfers, refer to the Michigan "1997 Toxic Chemical Release Inventory Staff Analysis."

Table 1. Michigan TRI Chemical Releases and Transfers (lbs/year) – RY 1997

TOTAL ON- AND OFF-SITE RELEASES	84,344,038
Total On-site Releases	53,829,265
Air	45,183,168
Water	717,376
Underground Injection	5,596,855
Land On-site	2,331,866
Off-site Releases (Transfers Off-site to Disposal)	30,514,773
TOTAL TRANSFERS	223,788,110
POTW	14,434,604
Off-site Transfers for Further Waste Management	209,353,506

Facility data in this report are arranged alphabetically by county and city. For each chemical reported by a facility, the amount released or transferred to each media is shown. This year's summary report presents the data differently from previous years. As in past years, media breakouts for on-site releases to air, water, underground injection wells and land on-site, and discharges to publicly owned treatment works are shown. This year, the amount of waste disposed in landfills, etc. off-site is added under off-site disposal. In previous years, the amount sent off-site for disposal was included in the off-site transfer total. The amount shown for off-site transfers now represents only off-site transfers for further waste management, which are energy recovery, recycling and waste treatment.

Who must report under TRI?

All facilities in the U.S. are required to report under Section 313 of SARA Title III if they:

- Are a covered facility (SIC codes 20-39*); and
- Manufacture (including import) 25,000 pounds or more of a listed toxic chemical, or process 25,000 pounds or more of a listed toxic chemical, or otherwise use in any other manner 10,000 pounds or more of a listed toxic chemical during the calendar year; and
- Employ the equivalent of ten or more full-time employees.

* Federal facilities also must comply with SARA Title III Section 313 reporting requirements by Executive Order 12856.

What constitutes a TRI release on- and off-site?

An *on-site* release is a release of a listed toxic chemical directly to air, water, underground injection or land on-site within the facility. An *off-site* release is a transfer off-site for disposal. Beginning with Report Year 1996, EPA considered both on-site releases and off-site disposal as releases of TRI chemicals when aggregating data.

What constitutes a TRI transfer off-site for further waste management?

Chemicals in wastes transported to facilities for treatment, recycling, or to be used for energy recovery are considered off-site transfers for further waste management. This includes waste materials discharged to publicly owned treatment works (POTWs).

What is reported?

Both controlled releases and accidental spills or leaks must be reported as well as how the chemical(s) is managed.

How are releases and transfers reported?

Facilities must submit a Form R for each TRI chemical they manufacture, process or otherwise use. Form R information includes facility identification, chemical-specific information about releases, transfers, treatments, reuse/recycling efforts and source reduction activities, and off-site locations to which TRI chemicals are transferred. A covered facility that meets the reporting criteria is required to submit a Form R report even if no release or transfer occurred. Some facilities may qualify to submit a Form A report, which is an abbreviated version of the Form R report.

Availability of Information

Copies of individual Form R reports as well as the staff reports on the Michigan TRI data may be requested from the Michigan Department of Environmental Quality, Environmental Assistance Division, Technical Support Unit (SARA Title III Program), P.O. Box 30457, Lansing, Michigan 48909, or by calling (517) 373-8481. Michigan TRI data is also available on the internet at [//www.deq.state.mi.us/ead/sara](http://www.deq.state.mi.us/ead/sara).
