1999 TOXIC CHEMICAL RELEASE INVENTORY STATE OF MICHIGAN SUMMARY REPORT

Since 1988, facilities throughout the country that manufacture, process or otherwise use certain toxic chemicals have been required to report their environmental releases and waste management activities of these chemicals annually to the United States Environmental Protection Agency (EPA) and the states. Such reporting is required under Section 313 of the federal Emergency Planning and Community Right-to-Know Act (EPCRA) of 1986, also known as Title III of the Superfund Amendments and Reauthorization Act (SARA), and the Pollution Prevention Act of 1990.

Covered facilities report information on more than 650 chemicals and chemical categories currently on the registry of reportable toxic chemicals. From year to year, the toxic chemical registry has been revised as specific chemicals have been removed or added by EPA.

This summary report presents data on the toxic chemicals released and transferred to off-site locations by covered facilities in Michigan. The data are based on chemical reports submitted to the State of Michigan for Report Year (RY) 1999 and are frozen as of March 1, 2001. For RY 1999, 929 Michigan facilities reported under the Toxic Chemical Release Inventory (TRI). Statewide totals are shown in Table 1 below. For more detailed information on Michigan TRI releases and waste management activities, refer to the Michigan "1998-1999 Toxic Chemical Release Inventory Staff Analysis."

Table 1. Michigan TRI Chemical Releases and Transfers (lbs./year) – RY 1999

TOTAL ON- AND OFF-SITE RELEASES	142,751,403
Total On-site Releases	97,574,813
Air Releases	76,822,855
Water Discharges	1,124,228
Underground Injection	2,571,942
Land On-site	17,055,788
Off-site Releases (Transfer Off-site to Disposal)	45,176,590
 TOTAL TRANSFERS FOR FURTHER WASTE MANAGEMENT	 317,757,663
POTW	16,350,412
Off-site Transfers for Further Waste Management	301,407,251

Facility data in this report are arranged alphabetically by county and city. For each chemical reported by a facility, the amount released or transferred is shown. Media releases are shown as air emissions, water discharges, underground injection (to on-site wells), land on-site (on-site land releases or disposal), and off-site disposal (transfers off-site for disposal). Transfers for further waste management include discharges to publicly owned treatment works (POTWs) and off-site waste managed (energy recovery, recycling, or treatment).

Who must report under TRI?

All facilities in the U.S. are required to report under Section 313 of SARA Title III if they:

- Are in one of the covered industrial sectors based on Standard Industrial Classification (SIC) codes. Covered industrial sectors include manufacturing—SIC groups 20-39, and non-manufacturing industrial sectors of metal mining—SIC group 10 (except 1011, 1081 and 1094); coal mining—SIC group 12 (except 1241); electrical utilities—SIC 4911, 4931 and 4939; treatment, storage, and disposal facilities—SIC 4953; solvent recovery services—SIC 7389; chemical distributors—SIC 5169, and petroleum bulk terminals—SIC 5171; and
- Employ the equivalent of ten or more full-time employees; and
- Manufacture (including import) 25,000 pounds or more of a listed toxic chemical, or process 25,000 pounds or more of a listed toxic chemical, or otherwise use in any other manner 10,000 pounds or more of a listed toxic chemical during the calendar year.

* Federal facilities also must comply with SARA Title III Section 313 reporting requirements by Executive Order 12856.

What is reported?

Facility information reported under TRI includes:

- Business contacts and affiliation;
- Information on releases of TRI chemicals to the environment;
- Information on transport of TRI chemicals in wastes to off-site locations, including waste treatment;
- Information on pollution prevention activities undertaken by the facility for each reported TRI chemical.

What constitutes a TRI release on- and off-site?

An *on-site* release is a release of a listed toxic chemical directly to air, water, underground injection or land on-site within the facility. An *off-site* release is a transfer off-site for disposal. Beginning with Report Year 1996, EPA considered both on-site releases and off-site disposal as releases of TRI chemicals when aggregating data.

What constitutes a TRI transfer off-site for further waste management?

Chemicals in wastes transported to facilities for treatment, recycling, or to be used for energy recovery are considered off-site transfers for further waste management. This includes waste materials discharged to publicly owned treatment works (POTWs).

How are releases and transfers reported?

Facilities must submit a Form R for each TRI chemical they manufacture, process or otherwise use. Form R information includes facility identification, chemical-specific information about releases, transfers, treatments, reuse/recycling efforts and source reduction activities, and off-site locations to which TRI chemicals are transferred. A covered facility that meets the reporting criteria is required to submit a Form R report even if no release or transfer occurred. Some facilities may qualify to submit a Form A report, which is an abbreviated version of the Form R report.

Availability of Information

Copies of individual Form R reports as well as the staff reports on the Michigan TRI data may be requested from the Michigan Department of Environmental Quality, Environmental Assistance Division, Technical Support Unit (SARA Title III Program), P.O. Box 30457, Lansing, Michigan 48909, or by calling (517) 373-8481. Michigan TRI data is also available on the internet at www.deq.state.mi.us/ead/sara.
