Interim Response Construction Summary Report for the
Coal Dock Burn Area
Site ID: 31000098
Houghton County, Michigan

1.0 INTRODUCTION

The Mannik & Smith Group, Inc. (MSG) has prepared this *Interim Response Construction Summary Report (CSR) for the Coal Dock Burn Area* as part of the Abandoned Mining Wastes – Torch Lake non-Superfund Site (Project) EGLE Abandoned Mining Waste (Site ID: 31000098). This CSR summarizes the interim response (IR) completed at the Calumet & Hecla Lake Linden Operations Area (CHLL) Hubbell Processing Area Coal Dock Burn Area in Hubbell, Houghton County, Michigan. The IR entailed the removal and disposal of asbestos containing building materials (ACBM) and residual process materials (RPM) containing polychlorinated biphenyls (PCBs) and asbestos, grading to promote and control drainage, capping PCB-contaminated soils, and armoring of drainage channels. The affected area had been contributing soils to runoff into Torch Lake coincident with where PCBs have been detected in lake sediments. This CSR was prepared in accordance with the *Indefinite Scope Indefinite Delivery (ISID) Discretionary Proposal for FS and Remedial Action Activities* (24 February 2016) prepared by MSG in response to a request from the Michigan Department of Environment, Great Lakes, and Energy (formerly the Department of Environmental Quality), Remediation and Redevelopment Division (RRD), Calumet Field Office under MSG's 2015 Environmental Services ISID Contract Number 00538 with the State of Michigan.

1.1 Project Location

The Project area is located along the shoreline and in Torch Lake, Houghton County, Michigan. Due to the complex nature and very large area RRD subdivided the Project into study areas based on past use and known issues. Depicted on ***Figure 1****, Project Location Map* are the CHLL and Calumet & Hecla Tamarack City (CHTC) Operations Areas and their respective former industrial operations.

Centralized around Calumet & Hecla's copper mining and processing operations near Lake Linden and Hubbell, Michigan, the CHLL consists of approximately 155 acres of land extending approximately two miles along the shoreline of Torch Lake and incorporates over 40 different parcels with multiple property owners.

The CHLL Hubbell Processing Area is located between Lake Linden and Hubbell along the southeast side of Highway M-26 and is comprised of three mining era industrial properties including the Hubbell Coal Dock and Mineral Building that are vacant, and the Hubbell Smelter that is the location of an operating industrial facility. The Hubbell Processing Area is bordered by residential (single-family residences and an apartment complex), commercial (restaurant and retail business), and industrial (sand and gravel pit, construction company, and manufacturing) land uses, and Torch Lake.

The Coal Dock Burn Area IR was limited to the southern portion of the Coal Dock property and northern portion of the Mineral Building property in the Hubbell Processing Area. ***Figure 2****, Drainage Improvements and Capped Area* depicts features and the limits of improvements to abate contaminated soil erosion into Torch Lake as part of this IR effort.

1.2 Project Background

Copper mining was extensive in the Keweenaw and formed the backbone of the regional economy and society. Copper ore milling and smelting operations conducted from the mid-1860s to the 1960s, included the importation, reprocessing, and smelting of various scrap metals in the later years of operation. Consistent with past industrial practices, Torch Lake served as dumping grounds for virtually all mining industry related waste products produced, including tailings, slag, and various chemicals. It is estimated that at least 20 percent of Torch Lake's volume was filled with tailings and other waste products.

The environmental legacy resulting from over 100 years of mining and reclamation led to Torch Lake and its western shoreline to be designated as a Superfund site by the United States Environmental Protection Agency (EPA) https://cumulis.epa.gov/supercpad/cursites/csitinfo.cfm?id=0503034 and a Great Lakes Area of Concern (AOC) under the U.S./Canada Great Lakes Water Quality Agreement https://www.epa.gov/torch-lake-aoc. The EPA undertook cleanup activities to address some of the

byproducts of the mining industry while others were not addressed or left to recover through natural processes.

Environmental impairments within Torch Lake and along the shoreline resulting from historical mining era industrial operations:

- Present potential exposure risk to human and ecological receptors;
- Limit the recovery of the Torch Lake ecosystem;
- Create uncertainty over safe and beneficial reuse of the land; and,
- Prevent delisting of Torch Lake as an AOC due to Beneficial Use Impairments (BUIs) related to restrictions on fish and wildlife consumption because of the on-going presence of PCBs in fish and degradation of benthos because of metals contaminated sediments.

PCBs are of particular concern in Torch Lake sediments, surface water, and submerged abandoned container contents, as well as in upland soil, waste, RPM, and abandoned container contents in former industrial areas along the shoreline as they serve as a continuing source of PCBs into the environment. Sediment samples collected from the CHLL contained multiple detections of PCBs that exceeded applicable regulatory criteria. Interpretation of these results clearly demonstrates that there are two distinct groupings of elevated PCB concentrations in sediment: The first located offshore in the Lake Linden Recreation Area and the second located offshore in the Hubbell Processing Area. These source areas, as confirmed by the results of the historical Semi-Permeable Membrane Device (SPMD) and fish tissue studies, are ongoing sources of PCBs that pose both ecological and potential human health risks and continued degradation of the benthos in Torch Lake. For additional detailed information on the condition of Torch Lake and upland areas specifically pertaining to PCBs, please refer to the May 2018 *Distribution of PCBs in the Torch Lake Environment Memorandum* available at https://www.michigan.gov/documents/deq/deq-rrd-amw-AMWPCBMemorandum5-15-18_625028_7.pdf.

The EGLE Project is addressing some of the remaining concerns in Houghton County not addressed by the EPA. The Project concerns involve groundwater, surface water, sediments, and "upland" media. Known or suspected problems which are being evaluated include: an unidentified, significant in-lake and/or terrestrial source of PCBs; uncharacterized waste deposits and >750 uncharacterized drums on the lake bottom; slag; landfills; industrial ruins; coal storage areas; underground storage tanks (USTs); RPM; asbestos containing materials (ACM); and any other waste materials identified during future investigations.

From 2014 through 2017, RRD conducted Site Investigation (SI) activities and confirmed the remaining concerns in the Project area involve groundwater, surface water, sediments, "upland" media, seeps, RPM, and abandoned containers. Priority concerns which were evaluated and deemed to require IRs include: significant terrestrial and in-lake sources of PCBs; ACM; RPM; abandoned mining era containers; seeps; limited areas of soil in which there are Direct Contact Criteria and Particulate Soil Inhalation Criteria exceedances; and, physical hazards.

In the case of the Hubbell Processing Area Coal Dock property, the identified risks posed potential threats to human and ecological receptors, including but not limited to human health risks in the event of direct contact with affected media and inhalation of particulates and asbestos; physical hazards; and, erosion and deposition of PCB-contaminated soils into Torch Lake. Blocked historic drainage pathways and uncontrolled runoff allowed for erosion of PCB-contaminated soils into Torch Lake. Just off shore of the Coal Dock property is an area of sediments that has been identified as an ongoing in-lake source of PCBs, contributing to the Michigan Department of Human Health Services (MDHHS) fish consumption guideline for total PCBs in Torch Lake fish.

Based on these conditions the Upper Peninsula RRD staff commissioned EGLE's Geological Services Unit (GSU) to conduct a topographic survey of the Hubbell Coal Dock and Mineral Building properties. EGLE also

commissioned MSG to prepare biddable specifications for drainage improvements and capping of the PCB-contaminated soils. After receiving competitive bids and securing a Trade Contractor (TC), RRD staff completed an IR that removed ACBM and PCB-containing RPM, improved drainage pathways, and capped PCB-contaminated soils to stop the erosion of PCBs into Torch Lake as part of the mitigation of risks to human health and the environment.

2.0 OBJECTIVE AND SCOPE OF WORK

The objective of the IR was to abate the erosion of PCB-contaminated soils into Torch Lake and mitigate risks to human health and the environment. The efforts focused on prevention of soil runoff and capping of soils affected by asbestos and/or PCB residuals which resulted from historic secondary copper recovery processes (i.e. burning of secondary waste materials, specifically the outer sheathings, insulation, and coatings on copper-rich materials, prior to treating the recovered copper in the smelter). This was accomplished by removing ACBM and PCB-containing RPM, improving and armoring drainage pathways, grading to promote positive drainage, and placing a soil cap over PCB-contaminated soils that met EPA capping standards. To meet this objective MSG developed a scope of work that was incorporated into a biddable specifications package to secure a TC. MSG then assisted EGLE with soliciting bids in accordance with EGLE and Michigan Department of Technology, Management and Budget procurement procedures. Refer to ***Appendix A****, Bidding and Contract Document*.

3.0 INTERIM RESPONSE ACTIVITIES

MSG supported the EGLE RRD in the procurement and oversight of a TC during implementation of the IR. The TC selected and retained by the State of Michigan was B&B Contracting, Calumet, Inc. (B&B) of Calumet, Michigan. Refer to ***Appendix B****, Award and Notice to Proceed.* B&B completed the work in accordance with the March 28, 2017 Bidding and Contract Document, as modified, as the work progressed. Refer to ***Appendix C****, Bulletins and Change Orders* for descriptions of changes made to the contract and the corresponding changes in contract value. Refer to ***Appendix D****, Provisional Allowance Change Authorization Request Forms* for changes made to the work that were addressed using the Provisional Allowance within the contract.

Due to the proximity of the work to Torch Lake, Part 91 Soil Erosion and Sedimentation Control (SESC) Permits were required for the earth change activities at the Coal Dock Burn Area and at the borrow pit where the sandy loam cap material was sourced. Refer to ***Appendix E****, Soil Erosion and Sedimentation Control Permits and Releases* for copies of the issued permits and correspondence verifying permit closures.

Permits were also required from the Michigan Department of Transportation (MDOT) to accommodate a new temporary driveway onto highway M-26, temporarily re-route a drainage ditch, and for traffic control during hauling operations. Copies of the issued permits are provided in ***Appendix F****, MDOT Permits*. ***Appendix G****, Access Agreements* contains copies of the access agreements between B&B and the property owners of the borrow pit and land where the temporary drainage ditch re-routing occurred. The *Notification of Intent to Renovate/Demolish* form submitted for the pick-up and removal of ACBM as part of the project is contained in ***Appendix H****, Notification of Intent to Renovate/Demolish Form*.

In accordance with the *Bidding and Contract Document*, B&B prepared and submitted a number of pre-work submittals along with additional submittals as the work progressed, including:

- Imported Cap Material Sampling Plan;
- Air Monitoring Plan;
- Project Schedule;
- Cap Material, Gravel, and Rip Rap Test Reports;
- Geotextiles Product Data;
- Submittal Register;
- Schedule of Values;

- Site-Specific Health and Safety Plan;
- Work Plan;
- Concrete Mix Design;
- Erosion Control Materials Product Data;
- Seed, Fertilizer, and Mulch Product Data;
- Imported Soil Lab Analytical Data;
- Culvert and End Section Product Data; and,
- Concrete Load Ticket.

Copies of the approved submittals as returned to B&B are provided in ***Appendix I****, Submittals*.

On-site work at the Coal Dock Burn Area commenced on July 6, 2017.

IR actions undertaken at the Hubbell Coal Dock property included:

- Improvement of existing internal roads to support truck traffic and limit dust generation;
- Construction and eventual removal of a temporary haul road entrance;
- Improvement and armoring of 750 feet of drainage ditch, including removal of trees and debris, grading, and placement of geotextile and rip rap;
- Plugging of a rectangular opening through the bulkhead with concrete to eliminate a migration pathway;
- Grading of the Coal Dock Burn Area to promote controlled positive drainage toward rip rap armored outlets to Torch Lake;
- Capping in accordance with EPA capping standards of 6.7-acres of PCB-contaminated soils in the Coal Dock Burn Area to stop water and wind erosion and inhibit direct contact;
- Replacement of approximately 170 feet of failing culverts;
- Removal and disposal of 320 pounds of ACBM and one drum of PCB-contaminated residual process materials (RPM) that were picked up as the work progressed;
- Removal and disposal of 117.9 tons of hazardous waste soil, identified as waste pile WP-11, contaminated with PCBs and lead. The PCB concentration in WP-11 was 100 parts per million (ppm), thus it required management as a Toxic Substances Control Act (TSCA) PCB remediation regulated waste. TSCA addresses the production, importation, use, and disposal of PCBs based on origin, date of generation, and concentration. In the case of WP-11, it was determined the PCBs were released prior to 1978 and were present at a concentration greater than 50 ppm, a regulatory trigger. Waste Pile WP-11 also required management as a Resource Conservation and Recovery Act (RCRA) hazardous waste due to the results of a Toxicity Characteristic Leaching Procedure (TCLP) test for lead. TCLP testing identifies wastes likely to leach concentrations of contaminants that may be harmful to human health or the environment. Thus WP-11 required disposal at a TSCA and RCRA hazardous waste regulated facility; and,
- Site restoration including application of seed, fertilizer, organic matter, and mulch atop the capped area.

Photographs of representative portions of the drainage improvements and capping activities are included in ***Appendix J****, Photographic Log.* Documentation for the disposal of ACBM, drum of PCB-contaminated RPM, and hazardous waste soils is included in ***Appendix K****, Waste Management Records*. The as-built survey, reduced to an 11x17 paper size for inclusion in this report, is provided in ***Appendix L****, As-Built Survey*.

Dust control was an important component of the completed activities and was primarily accomplished through the application of water to maintain a moist surface condition during earth-moving activities and while material was being transported on the haul road. In addition, vehicle speeds were managed. Air monitoring was conducted as the work progressed, including visual assessment for visible dust and monitoring using a Thermo DataRam pDR aerosol monitor. Any observances of visible dust were immediately reported to the TC for correction. Air sampling for asbestos fibers was also conducted, including personnel air sampling and sampling at upwind and downwind stations around the perimeter of the work area. Results are provided in ***Appendix M****, Air Monitoring Data*. The data indicates that dust

levels remained below the action level of 2.5 milligrams per cubic meter (mg/m^3). Similarly, the asbestos fiber count was below detection limits at the perimeter of the work area and the personnel monitoring results were below the action level of 0.05 fibers per cubic centimeter (f/cc), which was one-half of the Occupational Safety and Health Administration (OSHA) permissible exposure limit (PEL) of 0.1 f/cc as an 8-hour time weighted average.

The date of substantial completion for the work was November 14, 2017, which is when disposal documentation was received for the WP-11 materials. Refer to ***Appendix N,*** *Substantial and Final Completion* for a copy of the executed document. Work by the TC to complete the punch-list items identified at the time of Substantial Completion continued through 2018, with the following completed by October 2018:

- Silt fence removal along the drainage ditch;
- Adjustment of grades to improve water flow near the outlet of the drainage ditch;
- Placement of stone cover over most of the bare soil areas where standing water had previously been present near the outlet of the drainage ditch;
- Provision of documentation that the Houghton County Drain Commissioner accepted the borrow pit and site restoration; and,
- Filling and seeding of scattered bare spots within the capped area and re-seeding of one area outside of the capped area.

In 2019, the following was completed:

- Placement of additional soil and seed in scattered bare spots within the capped area;
- Ditch maintenance outside the capped area;
- Placement of crushed stone in areas that had eroded in the southern drainage swales; and,
- Final vegetation and project acceptance.

4.0 SUMMARY AND CONCLUSIONS

Completed IR operations at the CHLL Hubbell Processing Area Coal Dock Burn Area included removal of ACBM and PCB-containing RPM, improving and armoring drainage pathways, grading to promote positive drainage, placement of a soil cap meeting EPA capping standards for the Torch Lake Superfund site, and restoration to stabilize newly capped and disturbed areas.

The completed IR operations met the objective of safely abating ACBM and the erosion of PCB-contaminated soils and RPM into Torch Lake and mitigating potential risks to human health and the environment.

5.0 RECOMMENDATIONS

MSG has the following recommendations:

- Implementation of the Operation and Maintenance (O&M) Plan is recommended to assess soil cover and structure conditions, along with vegetation establishment, drainage ditches, and other features and conditions in a repeatable, objective manner on a routine inspection basis. Based on the findings and recommendations from the inspections, necessary repairs and/or amendments can be performed to support their continued functioning as designed.

TABLE OF CONTENTS

DIVISION 00

BIDDING REQUIREMENTS AND CONTRACT CONDITIONS

SECTION 00010 PRE-BID INFORMATION

1. I**nvitation to Bid (ITB)** – Your firm is invited to submit a Bid. The State of Michigan as the Owner will receive **bids electronically through the Buy4Michigan website at www.buy4michigan.com,** for the Hubbell Processing Area Project until 2:00 p.m., local time, on May 3, 2017. The State reserves the right to cancel this Invitation to Bid (ITB) or change the date and time for submitting Bids by announcing same at any time before the established date and time for Bid opening. Bids must remain open for acceptance by the Owner for no less than the Bid hold period. Contractor may agree to extend the Bid hold period. However, any such extension must be based upon no increase in the Bid Price and/or Contract Time.

2. **Work Description** – The Work, Interim Response Activities, Agency No. 761, Index No. 44251,

   DTMB File No. 761/16108.SAR includes, but is not necessarily limited to:

   - Planning, site preparation, site health and safety, clearing, and dewatering.
   - Grading and capping of soils containing polychlorinated biphenyls (PCBs), metals, and asbestos containing material (ACM) to eliminate impacted soil runoff into Torch Lake.
   - Drainage ditch improvement to restore channel capacity and prevent overflowing onto the newly placed cap.
   - Potential removal and disposal soils containing greater than 50 parts per million (ppm) PCBs.
   - Seeding, mulching, and site restoration.

   The site is located at 52634 Highway M-26 in Hubbell, Michigan, 49934 as shown on the Drawings.

3. **Bidding Documents** – Sets of Bidding Documents may be obtained at www.Buy4Michigan.com or from the Professional at JChrestensen@manniksmithgroup.com (906-487-7452).

4. **Bid Security** – Each Bid must enclose Bid Security, in the amount of five percent (5%) of the Bidder's Base Bid, paid to the "State of Michigan" in the form of a certified or cashier's check or money order drawn upon a bank insured by an agency of the Federal Government or a bid bond with an authorized surety company.

5. **Pre-Bid Conference** – A mandatory pre-bid conference will be held in Room 311 of the Jutila Center, 200 Michigan Street, Hancock, Michigan 49930 on April 19, 2017 at 10:00 am Local Time. A tour of the Hubbell Processing Area site will be held on the same day, starting at approximately 11:30 am local time (starting immediately after the pre-bid conference). All prospective Bidders are required to attend the tour. Other parties interested in the Work are encouraged to attend the tour. Addenda may be issued, in response to issues raised at the pre-bid conference and tour, or as the Owner and/or Professional may otherwise consider necessary.

   Attendees are encouraged to wear weather-appropriate garments and sturdy footwear appropriate for abandoned industrial sites. The project location is outside so attendees are encouraged to be prepared for inclement weather.

   The purpose of the pre-bid conference and inspection is to answer questions and provide an inspection tour of the Project site at the scheduled time on the day of the meeting. A representative will be available to assist the Contractors. Other inspection visits may be allowed if needed. Individuals needing special services to fully participate in the meeting due to a disability may contact Ms. Amy Keranen, MDEQ Project Manager at 906-337-0389.

   6. Equal Employment Opportunity – Covenants to not discriminate in employment by Contractors, Subcontractors and Suppliers required by Law are contained in Instructions to Bidders and General Conditions and are applicable to the Work and any Sub-agreement under the Contract.

7. **Contract Times** – The Contract Times and the associated liquidated damages are specified in the Contract.

8. **Contact Person** – All requests or inquiries concerning the Bidding Documents or the Work must be addressed to: Jed Chrestensen, P.E., The Mannik & Smith Group, Inc., email: JChrestensen@manniksmithgroup.com.. Questions will be accepted until April 26, 2017 at 2:00 pm Local Time.

9. **Award** – Subject to any agreed extension of the period for holding Bids, Bids must remain valid for acceptance by the Owner for 60 Calendar Days after the date of Bid opening. In addition, the Owner expressly reserves the right, within the Owner's sole discretion, to reject any or all Bids, to waive any irregularities, to issue post-Bid Addenda and re-bid the Work without re-advertising, to re-advertise for Bids, to withhold the award for any reason the Owner determines and/or to take any other appropriate action.

10. **Performance and Payment Bonds** – A performance bond and a payment bond are required for all contracts over $50,000.00.

END OF SECTION 00010

SECTION 00100 INSTRUCTIONS TO BIDDERS

1. **PREPARATION OF BID:** Execute Bid fully and properly. Bid Summary Form (DTMB -0401D) and Bid Form Attachments must be used and completely filled out for the Bid to be considered responsive and meeting the requirements of the contract solicitation. All Bid prices must be printed or typed in both words and figures.

2. **BID CHECKLIST:** Submit Bid Summary Form with original signatures plus Bid Form Attachments in accordance with the electronic bidding procedures on the Buy4Michigan website.

A complete Bid will consist of the following forms, which are included immediately following the Bid Summary Form:

Bids	**SUBMIT THESE Bid Forms and Bid Form Attachments**
All Bids	☐ **Signed** and completed Bid Summary Form (DTMB-0401D);
	☐ Bid Schedule;
	☐ Schedule of Alternates;
	☐ Qualified Disabled Veteran (QDV) Business Representation;
	☐ Bid Security in the amount of 5% of Base Bid Price;
	☐ Signature Authorization or copy of the partnership agreement if signed by all partners;
Over $50K	☐ Forms listed under All Bids;
	☐ Payment and Performance Bond (upon issuing the Notice of Award).
Over $100K	☐ Forms listed under All Bids;
	☐ Certification of a Michigan Based Business;
	☐ Payment and Performance Bond (upon issuing the Notice of Award).
Over $250K	☐ Forms listed under All Bids;
	☐ Certification of a Michigan Based Business;
	☐ Payment and Performance Bond (upon issuing the Notice of Award).

Apparent Low Bidders ONLY (upon request from the Professional)

- ☐ Experience Modification Rating (EMR), or a letter stating why the Bidder does not have one.
- ☐ Identification of the proposed project superintendent, with a resume or list of similar projects handled by that individual.
- ☐ A list of at least three (3) projects completed by the Bidder, within the last three (3) years of similar size and complexity, with contact information for references for each.
- ☐ Proposed Project Schedule.
- ☐ List of subcontractors.

3. **BID SUBMISSION**: **Bids must be submitted electronically through the Buy4Michigan website at www.buy4michigan.com**.

4. **BID GUARANTEE:** Each proposal must be accompanied by either a bank certified or cashier's check on an open, solvent bank or a bid bond with an authorized surety company (the surety must be listed on the current U.S. Department of the Treasury Circular 570) in the amount of five percent of the base bid payable to the State of Michigan, as a guarantee of go7od faith. If the successful Bidder fails to furnish satisfactory bonds and insurance within fifteen Calendar Days after Notice of Award, such guarantee must be forfeited to the State as liquidated damages. The bid security, exclusive of bid bonds, of all unsuccessful Bidders will be returned when an award is made or upon substitution of a bid bond. The bid security of the successful Bidder will be returned when the performance bond and labor and material bond are approved.

5. **CERTIFICATE OF AWARDABILITY:** Not required.

6. **MICHIGAN BASED BUSINESS CERTIFICATION**: All Bidders submitting Bids in excess of $100,000.00 must complete the Certification of Michigan Based Business. This information will determine if a Bidder qualifies as a "Michigan" business for purposes of application of reciprocity where applicable.

7. **POST-BID SUBMITTAL: For projects over $250,000, the Professional will request a Post-Bid Submittal from the** Apparent Low Bidders. The Apparent Low Bidders must submit to the Professional, within **two** Business Days after receipt of the Professional's request,

   - Experience Modification Rating (EMR), or a letter stating why the Bidder does not have one.
   - Identification of the proposed project superintendent with a resume or list of similar projects managed by that individual.
   - A list of at least three (3) projects completed by the Bidder, within the last three (3) years of similar size and complexity, with contact information for references for each.

   Failure to provide the submittals may disqualify the Bid.

8. **SIGNATURES:** All Bids, notifications, claims, and statements must be signed as follows:

   (a) **Corporations:** Signature of official must be accompanied by a certified copy of the Resolution of the Board of Directors authorizing the individual signing to bind the corporation.
   (b) **Partnerships:** Signature of one partner must be accompanied by a signed copy of the legal document (e.g. Power of Attorney or partnering agreement) authorizing the individual signing to bind all partners. If Bid is signed by all partners, no authorization is required.
   (c) **Individual:** No authorization is needed. Each signature must be witnessed.

9. **BID PRICES:** The Bidder's Base Bid and Alternate Bid prices must include, and payment for completed Work will compensate in full for: all services, obligations, responsibilities, management, supervision, labor, materials, devices, equipment, construction equipment, general conditions, permits, patent fees and royalties, testing, inspection and approval responsibilities, warranties, temporary facilities, small tools, supplies, Bonds, insurance, taxes, mobilization, close-out, overhead and profit and all connections, appurtenances and any other incidental items of any kind or nature, as are necessary to complete the Work, in a neat, first quality, workmanlike and satisfactory manner in accordance with the Drawings and Specifications and as otherwise required to fulfill the requirements of the Bidding Documents. For each Cash Allowance item, the Bidder must include, within the Bid, all labor costs, construction equipment costs, insurance and Bond premiums and other general conditions costs and Fees (Bidder's and Subcontractors') to complete Work associated with the material, equipment or other designated item to be furnished under the Cash Allowance. For each Provisionary Allowance, the Bidder must include, within the Bid, insurance, premiums (not recoverable as labor burden) and Bond premiums required to complete Work that may be ordered under a Provisionary Allowance.

10. **INSPECTION OF BIDDING DOCUMENTS AND SITE CONDITIONS:** The Bidder must carefully review and inspect all documents referenced and made part of this ITB, site conditions, all applicable statutes, regulations, ordinances and resolutions addressing or relating to the goods and services under this contract. Failure to do so or failure to acquire clarifications and answers to any discovered conflicts, ambiguities, errors or omissions in the Bidding Documents will be at the Bidder's sole risk.

11. **SAFETY REQUIREMENTS AND LAWS:** The Bidder awarded the Contract must comply with all applicable federal, state and local Laws including health and safety regulations, environmental protection, permits and licensing.

12. **INTERPRETATIONS AND ALTERATIONS TO THE BID AND BIDDING DOCUMENTS:** All requests for clarification or interpretation of the Bidding Documents, all proposals for any modifications to the Bidding Documents, all requests for information and all other questions or inquiries about the Bidding Documents and/or the Work shall be submitted in writing to the Contact Person identified in the Bid Documents. Requests or inquiries received less than seven Calendar Days before the date of Bid opening will be answered only if (a) the response can be given through an Addendum made available at least seventy-two hours before Bid opening (counting Business Days only), (b) the Bid opening is postponed by Addendum, or (c) the Work is rebid without readvertising following the issuance of post-Bid Addenda.

    Bidders must not rely upon any oral statements or conversations regarding interpretations, clarifications, corrections, additions, deletions or other revisions or information to the Bidding Documents. Any addition, limitation or provision made with or attached to the Bid may render it non-responsive and/or irregular and be a cause for rejection. The Owner reserves the right to issue a post-Bid Addendum after opening the Bids and set a new date for the receipt and opening of sealed Bids. The Bidder acknowledges that any quantities of Unit Price Work given in this ITB are approximate only and payments will be made only for actual quantities of Unit Price Work completed in accordance with the Contract Documents.

13. **MODIFICATION OF BID:** The entire bid must be resubmitted on the Buy4Michigan website.

14. BID WITHDRAWAL: Except for timely filed claims of mathematical or clerical errors granted by the State, no Bid may be withdrawn within sixty Calendar Days after the Bid Opening time and date or before the Bid expiration date without forfeiting Bid security. The request to withdraw a Bid due to error must be submitted in writing along with the supporting documents within two Business Days after the date of Bid Opening. The claim must describe in detail the error(s), include a signed affidavit stating the facts of the alleged error(s) and request that the Bidder be released from its Bid. The review of the claim and its supporting documents by the State is only for the purpose of evaluating the Bidder's request and must not create duty or liability on the State to discover any other Bid error or mistake. The sole liability of any Bid error or mistake rests with Bidder.

15. OBJECTION TO THE AWARD: A Bidder may file a written protest with the Director-SFA to object to the Apparent Low Bidder. This objection must be filed within seven Calendar Days after the date of Bid opening and must describe in detail the basis for the protest and request a determination. The Director-SFA will either dismiss or uphold the protest and notify the protestor within ten Calendar Days after receipt of the written protest.

16. BID IRREGULARITIES: The following irregularities on any Bid Form or Bid Form Attachment must be resolved as follows:

(a) between words and figures, the words must be used;
(b) between any sum, computed by the Bidder, and the correct sum, the sum computed by the Bidder must be used;
(c) between the product, computed by the Bidder, of any quantity and Bid Unit Price and the correct product of the Unit Price and the quantity of Unit Price Work, the product extended by the Bidder must be used;
(d) between a stipulated Allowance and the amount entered, the Allowance must be used;
(e) any mobilization pay item exceeding the maximum specified must be ignored and the Bid must remain unchanged;
(f) if any Bidder fails or neglects to bid a Unit Price for an item of Unit Price Work but shows an "Bid Price" for that item, the missing unit price must be computed from the respective quantity and the Item Bid Price shown;
(g) if any Bidder fails or neglects to show a "Bid Price" for an item of Unit Price Work but bids a unit price, the missing Bid Price must remain as "zero"; and
(h) if any Bidder fails or neglects to enter a Bid Price in both words and figures, the Bid Price printed or typed, whether in words or figures, must be used.

17. CERTIFICATION: The bidder certifies to the best of its knowledge and belief that, within the past three (3) years, the bidder, an officer of the bidder, or an owner of a 25% or greater interest in the bidder:

(a) Has not been convicted of a criminal offense incident to the application for or performance of a contract or subcontract with the State of Michigan or any of its agencies, authorities, boards, commissions, or departments.
(b) Has not had a felony conviction in any state (including the State of Michigan).
(c) Has not been convicted of a criminal offense which negatively reflects on the bidder's business integrity, including but not limited to, embezzlement, theft, forgery, bribery, falsification or destruction of records, receiving stolen property, negligent misrepresentation, price-fixing, bid-rigging, or a violation of state or federal anti-trust statutes.
(d) Has not had a loss or suspension of a license or the right to do business or practice a profession, the loss or suspension of which indicates dishonesty, a lack of integrity, or a failure or refusal to perform in accordance with the ethical standards of the business or profession in question.
(e) Has not been terminated for cause by the Owner.
(f) Has not failed to pay any federal, state, or local taxes.
(g) Has not failed to comply with all requirements for foreign corporations.
(h) Has not been debarred from participation in the bid process pursuant to Section 264 of 1984 PA 431, as amended, MCL 18.1264, or debarred or suspended from consideration for award of contracts by any other State or any federal Agency.
(i) Has not been convicted of a criminal offense or other violation of other state or federal law, as determined by a court of competent jurisdiction or an administrative proceeding, that in the opinion of DTMB indicates that the bidder is unable to perform responsibly or which reflects a lack of integrity that could negatively impact or reflect upon the State of Michigan, including but not limited to, any of the following offenses under or violations of:
    1. The Natural Resources and Environmental Protection Act, 1994 PA 451, MCL 324.101 to 324.90106.
    2. A persistent and knowing violation of the Michigan Consumer Protection Act, 1976 PA 331, MCL 445.901 to 445.922.
    3. 1965 PA 166, MCL 408.551 to 408.558 (law relating to prevailing wages on state projects) and a finding that the bidder failed to pay the wages and/or fringe benefits due within the time period required.
    4. Repeated or flagrant violations of 1978 PA 390 MCL 408.471 to 408.490 (law relating to payment of wages and fringe benefits).
    5. A willful or persistent violation of the Michigan Occupational Health and Safety Act, 1974, PA 154, MCL 408.10001 to 408.1094, including: a criminal conviction, repeated willful violations that are final orders, repeated violations that are final orders, and failure to abate notices that are final orders.
    6. A violation of federal or state civil rights, equal rights, or non-discrimination laws, rules, or regulations.
    7. Been found in contempt of court by a Federal Court of Appeals for failure to correct an unfair labor practice as prohibited by Section 8 of Chapter 372 of the National Labor Relations Act, 29 U. s. C. 158 (1980 PA 278, as amended, MCL 423.321 et seq).
(j) Is not an Iran-Linked Business as defined in MCL 129.312.

A false statement, misrepresentation or concealment of material facts on this certification may be grounds for rejection of this proposal or termination of the award and may be grounds for debarment.

18. REJECTION OF BID: The Bidder acknowledges the right of the Owner to reject any Bids and to waive any informality, defects or irregularity in any Bid received. In addition, the Bidder recognizes the right of the Owner to reject a Bid if:

(a) the Bid is in any way incomplete or irregular;
(b) the Bidder, Subcontractor or Supplier is not responsible as determined by the Owner;
(c) the Bidder's performance as a Contractor was unsatisfactory under a prior Contract with the Owner for the construction, repair, modification or demolition of a facility with the Owner, or under any other Contract, which was funded, directly or indirectly, by the Owner;
(d) there are reasonable grounds for believing that collusion or unlawful agreements exists between any Bidders, that a Bidder is interested in more than one Bid, or that the Bid is not genuine;
(e) the Bid exceeds the funds available.

19. MATERIALS AND EQUIPMENT SUBSTITUTION: Any Bidder wishing to use manufacturers or materials other than those specified must submit a written request to the Professional not later than seven days before due date for Bids. Request must be accompanied by product data to permit evaluation and comparison with specified products or materials. The Person submitting the request will be responsible for its prompt delivery. The Professional and the Owner will examine and evaluate the product data and if found acceptable, an Addendum will be issued and mailed or delivered to each Person who has received a set of Drawings and Specifications. All Addenda issued must be made a part of the Contract requirements. Contractor will be responsible for any extra work and expense incurred to satisfactorily and completely incorporating each substitute product into the Project.

20. MICHIGAN PRODUCTS AND RECYCLED PRODUCTS: All Contractors and Suppliers are encouraged to provide Michigan-made products and/or recycled products and/or green products and/or environmentally-friendly products whenever possible where price, quality, and performance are equal to, or superior to, non-Michigan products and the requirements of the Contract Documents. A list of Michigan-made products is available at: www.michigan.gov/dcd. The Contractor will be required to use alternatives to landfills for waste disposal such as reuse or recycle of asphalt, bricks, concrete, masonry, plastics, paint, glass, carpet, metals, wood, drywall, insulation and any other waste materials to the extent practical.

21. PRE-AWARD PRODUCT SUBMITTALS: If requested, the Apparent Low Bidders must submit a summary of preliminary technical data on each product listed in NA. The Apparent Low Bidders will furnish this summary data to the Professional within forty-eight hours of the Bid Opening. These submittals will be used to evaluate the Bid before the award. Failure to provide the submittals may disqualify the Bid.

22. CONTRACT AND CONTRACT AWARD: The Owner intends to award a Contract to the responsive and responsible best value bidder, except as provided below relative to veteran's preference.

22.1 Determination of the lowest three Bidders shall be on the basis of the sum of the Base Bid and any additive and deductive Alternates the Owner accepts, in the order in which they are listed only. The Owner will accept an Alternate only if all other previously listed Alternates are also accepted, unless acceptance by the Owner of Alternates in a different order does not affect determination of the lowest three bidders in any way.

22.2 The bids will be evaluated for best value based on price and qualitative components by comparing the qualitative components of the three lowest responsive and responsible Bidders. The comparison may also include other Bidders whose bids are within 10% of the lowest responsive and responsible Bidder.

22.3 If a Qualified Disabled Veteran meets the requirements of the contract solicitation and with the veteran's preference is the lowest Bidder, the Owner will award the contract to the Qualified Disabled Veteran bidder. A determination as to whether the requirements of the bid solicitation have been met will be based solely on the Owner's and Professional's evaluation of the Bid Summary, Bid Attachments, Bidder-provided documents, and interview.

22.4 For the purpose of evaluating and determining the low responsive bid, 10% of the lowest responsive bid (the bid that would otherwise receive the contract award if the preference were not being considered) will be deducted from all QDV bids. If the low responsive QDV bid, less the 10% preference, is less than the lowest responsive bid, then the QDV bid will be declared the official low responsive bid. The original QDV bid amount will be the basis of the contract award.

Example:

Lowest Responsive Bid	$100,000
Lowest Responsive QDV Bid	$109,000
Preference (10% of the Lowest Responsive Bid)	$ 10,000
Lowest Responsive QDV Bid Less Preference	$ 99,000 ($109,000 - $10,000)
Official Low Responsive Bid	**$109,000**

22.5 The Apparent Low Bidders will be evaluated for responsiveness and responsibility based on the following:

- Compliance with the bid specifications and requirements.
- The Bidder's financial resources.
- The Bidder's technical capabilities.
- The Bidder's technical experience.
- The Bidder's past performance.
- The Bidder's insurance and bonding capacity.
- The Bidder's business integrity.

Some qualitative components that may be evaluated are:

- Technical approach.
- Quality of proposed personnel.
- Management plans.
- Schedule for commencing and completing the work.
- Proposed project team.

22.6 For contracts under $250,000, best value will primarily be based on the lowest responsive and responsible bid.

23. **CONTRACT TIME; LIQUIDATED DAMAGES:** Work of all trades as specified in the Contract Documents must be completed in 50 calendar days from the date of Notice-to-Proceed except for minor replacement, correction, or adjustment items which do not interfere with the complete operation and utilization of all parts of the Contract Work. This Contract Time is of the essence and liquidated damages for each Calendar Day that expires after this Substantial Completion of the entire Work must be in the amount of $ 1,000.00. Liquidated damages are not a penalty, are cumulative and represent a reasonable estimate of the Owner's extra costs and damages, which are difficult to estimate with accuracy in advance.

24. MOBILIZATION: If used in the Specifications/Bid schedule, all the up-front costs incurred by the Contractor must be covered by the mobilization. The costs to establish temporary site offices, to obtain required permits for commencing the Work and for bonds and insurance premiums are examples of costs to the Contractor that are covered by mobilization pay item. This cost must not exceed four percent (4%) of the Base Bid, unless otherwise expressly provided in the Bidding Documents.

25. SOIL EROSION AND SEDIMENTATION CONTROL: All Work under this Contract must meet the storm water management requirements of the Project and comply with the applicable Soil Erosion and Sedimentation Control (SESC) rules and regulations and specific provisions for same within the Contract Documents. SESC measures will be monitored and enforced by the State Facilities Administration, or another authorized enforcing agency if so delegated, through the review of the Contractor's implementation plans and site inspections. State Facilities Administration or the Professional will notify the Contractor in writing of any violation(s) of the applicable SESC statutes and/or the corrective action(s) undertaken by the Owner and may issue stop work orders. State Facilities Administration has the right to assess a fine to the Contractor for noncompliance with the provisions of the Contract Documents and/or SESC regulations applicable to this Work and fines must be in addition to any other remediation costs or liquidated damages applicable to the Project and may exceed the value of the Contract.

END OF SECTION 00100

SECTION 00120 SUPPLEMENTARY INSTRUCTIONS

The provisions of this Section amend or supplement Section 00100 Instructions to Bidders and those other provisions of the Bidding Requirements that are indicated below. All other Bidding Requirements that are not so amended or supplemented remain in full force and effect.

SI - 1. Delete the fourth sentence of Article 19 in its entirety and replace with the following: "The Professional and the Owner will examine and evaluate the product data and if found acceptable, an Addendum will be issued and posted to the Buy4Michigan website at www.buy4michigan.com."

SI - 2. Add the following language at the end of Paragraph 22.5 of Article 22 in Section 00100 Instructions to Bidders: "'Lack of adequate experience or demonstrated qualifications or capability to perform the trades or classifications of the Work specified shall be defined as any bidder who has not successfully completed at least two previous projects in similar size and scope as the Work specified in which they were the prime Contractor."

SI - 3. Add the following language in a Paragraph 22.7 of Article 22 of Section 00100 Instructions to Bidders: "The Apparent Low Bidder will be required to attend a Pre-Award conference(s)."

SI - 4. Revise Article 25 of Section 00100 Instructions to Bidders as follows: Replace all references to the "State Facilities Administration" with the "Houghton County Drain Commissioner".

END OF SECTION 00120

SECTION 00200 INFORMATION FOR BIDDERS

1. UNDERGROUND UTILITIES

Information or data about physical conditions of existing Underground Utilities, which have been used by the Professional in preparing the Bidding Documents, is shown or indicated in the Drawings and technical Specifications and those Underground Utility drawings itemized immediately below.

- None

2. PERMITS, APPROVALS, LICENSES AND FEES

2.1 If the Owner has secured or will secure any permits, approvals and licenses and has paid or will pay any associated charges and fees, any such permits, approvals and licenses are itemized in this paragraph: None

2.2 If any permits, approvals and licenses itemized above have been obtained by the Owner and the fees have been paid, copies of those permits, approvals, licenses and corresponding fee receipts, are attached to this Section 00200 Information for Bidders.

Except for any permits, approvals, licenses and fees identified above, the Contractor shall be responsible for all permits, approvals, licenses and fees applicable to Work.

3. SEQUENCING REQUIREMENTS

Refer to the technical Specifications, including, but not limited to the General Requirements, for information, data and criteria on sequences of Work restraints, construction and maintenance of service to existing facilities, which, if provided, must govern the selection of Work sequences. Each Bidder must be responsible for any conclusions or interpretations the Bidder makes related to the selection of sequences and Means and Methods, based on the technical data made available, and/or those additional investigations or studies made or obtained by that Bidder.

4. SUBSURFACE CONDITIONS

In preparing the bidding documents, the PSC used the reports of explorations and tests of subsurface conditions itemized immediately below. If those reports are listed and not attached to this Section, they are available at http://www.michigan.gov/deq/0,4561,7-135-3311_4109_9846_76560---,00.html.

- Site Inspection Report for C&H Lake Linden Operations, June 2014.
- Site Investigation Report for Abandoned Mining Waste Torch Lake Non-Superfund Site, Calumet and Hecla – Lake Linden Operations, Houghton County, Michigan, March 2016.

4.1 Information or data contained in those reports that may be properly considered Authorized Technical Data concerning subsurface conditions include (NOTE: All other information or data excluded from the list below represent Non-Technical Information or Data, interpretations or opinions):

- Laboratory analytical results.
- Boring logs.

4.2 In preparing the bidding documents, the PSC has not used the following reports of explorations and tests of subsurface conditions itemized immediately below. Those reports are available at the office of the Professional for review or purchase. Neither the Owner nor Professional warrants that this list identifies all existing relevant documents. NA

5. OTHER PHYSICAL CONDITIONS

5.1 The Drawings and technical Specifications and those drawings itemized immediately below contain information or data that have been used in the preparation of the Bidding Documents, and that may be properly considered Authorized Technical Data concerning physical conditions of existing surface and subsurface facilities. If those drawings and specifications are listed and not attached to this Section, they are available for purchase ($__50.00__ per copy) from the Professional. NA

5.2 The reference documents itemized immediately below have not been used in the preparation of the Bidding Documents, and are available for review or purchase. Information and data contained in those reference documents, including, but not limited to dimensions, locations and conditions of existing surface and subsurface structures, roadways, piping, raceways, equipment, etc. may not accurately or reliably reflect actual conditions. Neither the Owner nor Professional warrants that this list identifies all existing relevant documents. NA

END OF SECTION 00200

SECTION 00700 GENERAL CONDITIONS

1. Interpretations: Any requests for clarifications or interpretations of the Contract Documents must be in writing to the Professional, who will issue written clarifications or interpretations as appropriate. If the Contractor believes that such clarification or interpretation justifies an adjustment to the Contract Price/Time, the Contractor must promptly notify the Professional in writing before proceeding with the Work Involved.

1.1 **Standards**: The Contract Documents describe the entire Work. The provisions of the Contract Documents must govern over any standard specifications, manual or code of any technical society, organization or association but, if lower than the standards set by any Law applicable to the Work or the Project, the higher standards must govern. The Contractor's responsibilities extend to cover Subcontractors and Suppliers if liable as a result of their actions or obligations.

1.2 **Contract Time Computation**: The time to complete the Work must be made in Calendar Days and must include both the first and last day. The first day is established by the Notice-to-Proceed.

1.3 **Technical Specifications and Priority:** The following applies whenever priority is called for in Contract Documents: specifications must govern Drawings; figured dimensions must govern scaled dimensions; detail drawings must govern general drawings; Drawings must govern Submittals.

1.4 **Indemnification:** The Contractor is required to defend, indemnify and hold harmless the Owner and the Professional, their employees, agents, servants, and representatives from and against all claims, suits, demands, actions of whatever type and nature and all judgments, costs, losses and damages, whether direct, indirect or consequential including, but not limited to, charges of architects, engineers, attorneys and others and all court, hearing and any other dispute resolution costs arising from:

(a) any patent or copyright infringement by the Contractor;
(b) any damage to the premises or adjacent lands, areas, properties, facilities, rights-of-way and easements, including loss of use to the business and property of others as a result of Contractor's operations;
(c) any bodily injury, sickness, disease or death, or injury to or destruction of property, including loss of use due to or related to the Work and caused in whole or in part by the Contractor or Subcontractor or Supplier's negligence, omissions or failure to maintain the required insurance and coverage and;
(d) a failure by the Contractor to appropriately handle Hazardous Materials for the Work or the Contractor's operations in compliance with the Owner requirements and/or applicable Laws and regulations.

The indemnification obligations are not affected by the limitation on the amount and types of damages, compensation or benefits payable by or for the Contractor or Subcontractor or Supplier under worker's or workman's compensation acts, disability benefit acts or other employee benefit acts.

1.5 **Contract Documents Ownership:** The State is the owner of the Contract Documents. The Contractor, Subcontractor or Supplier must not reuse any of the documents on any other Project without prior consent of the State and Professional. The Professional will furnish on behalf of the Owner at no cost to the Contractor, up to ten copies of Drawings and Project Specifications.

2. GENERAL PROVISIONS

2.1 **Owner:** the Project Director and/or Owner Field Representative will represent the Owner. Neither the Project Director nor the Owner Field Representative has the authority to interpret the requirements of the Contract Documents or to authorize any changes in the Work or any adjustment in Contract Price/Time. The State will provide the necessary easements for permanent structure and permanent changes in existing lands, areas, properties and facilities. However, the Contractor must obtain, at no increase in Contract Price/Time, permits for any other lands, areas, properties, facilities, rights-of-way and easements required by the Contractor for temporary facilities, storage, disposal of soil or waste material or any other purpose. The Contractor must submit copies of the permits and written agreements to the Owner. The Contractor must engage a registered land surveyor to

establish the necessary reference points and/or base lines for construction and must be responsible for protecting them including benchmarks and Project elevations.

2.2 **Professional:** Acting as the Owner's representative during the Contract Time period, the Professional will endeavor to guard the Owner from Defective work and to keep the Owner informed of the progress of the Work. Unless delegated by specific written notice from the Owner, the Professional and the Professional's representatives do not have the authority to authorize any changes in the Work or any adjustment in Contract Price/Time. The On-site Inspections by the Owner Field Representative and/or the Professional do not relieve the Contractor from its obligation to provide the Work in accordance with the Contract Documents or represent acceptance of Defective Work.

2.3 **Contractor:** The Contractor must manage, supervise, and direct the Work competently, applying the management, supervision, skills, expertise, scheduling, coordination and attention necessary to provide the Work in accordance with the Contract Documents with a minimum disturbance to or interference to the business operations on site or adjacent properties. The Contractor must assign and maintain a competent full-time **superintendent** on the Work, as its representative, at all times while Work is being done on site and must not be replaced without the Owner's consent. The Contractor shall enforce good order among its employees and shall not employ on the work any disorderly, intemperate, or unfit persons, or not skilled in the work assigned to them. The Contractor is solely responsible for his Means and Methods, safety precautions and programs related to safety, the Contractor's failure to execute the Work in accordance with the Contract Documents and any act of omissions by the Contractor, Subcontractor or Supplier. The Contractor must **compare Contract Documents for conflicts**, unworkable or unsafe specified Means and Methods and verify against manufacturer's recommendations for installations and handling and must notify the Professional in writing of the discovery of any such conflicts or errors. The Contractor is required to furnish certifications that lines and grades for all concrete work were checked before and after placing concrete, and that final grades are as required by the Contractor Documents. Wherever required, the Contractor must be responsible for all cutting, fitting, drilling, fixing-up, and patching of concrete, masonry, gypsum board, piping and other materials that may be necessary to make in-place Work and dependent Work fit together properly. The Contractor must restore to pre-existing conditions all walks, roadways, paved or landscaped areas and other real and personal property not designated for alteration by the Contract Documents. The Contractor must maintain at the site one copy of material safety data sheets (MSDS) and one copy of all **as-built/Record Documents** in good order and annotated in a neat and legible manner to show:

(a) all revisions made,
(b) dimensions noted during the furnishing and performance of the Work, and
(c) all deviations between the as-built installation and the Contract Documents, all approved Submittals and all clarifications and interpretations.

The Contractor must maintain and furnish promptly to the Owner and the Professional upon their request **daily field reports** recording the on-site labor force and equipment (Contractor and Subcontractors); materials/equipment received; visits by Suppliers; significant in-progress and completed trade Work within major areas; and other pertinent information. The Contractor is obligated to act to prevent threatened damage, death, injury or loss without any special instruction in **emergencies** and must give the Owner prompt written notice of any changes in Work resulting from the action taken for review and approval.

2.4 **Subcontractors and Suppliers:** The Owner assumes no contractual obligations to anyone other than the Contractor. All trade construction Drawings must be field coordinated before fabrication and/or installation. The Owner reserves the right to reject or revoke, for its convenience, any approved Subcontractor/Supplier. Work performed by any Subcontractor or Supplier must be through an appropriate written agreement that:
(a) expressly binds the Subcontractor/Supplier to the requirements of the Contract Documents,
(b) requires such Subcontractor or Supplier to assume toward the Contractor all the obligations that the Contractor assumes toward the Owner and the Professional, and
(c) contains the waiver of rights and dispute resolution provisions.

2.5 **Access to Payroll Records:** The Contractor and its Subcontractors must comply with the Prevailing Wage Rates for the county where the Project is located, and must maintain and keep, in accordance with generally accepted accounting principles, records pertaining to the bidding, award and performance of the Work, including, but not limited to certified payroll, employment records and all data used in estimating the Contractor's prices for the Bid, Change Order, proposal or claim. The Owner or its representative must have access to those records, must have the right to interview the Contractor's employees and must be provided with appropriate facilities for the purpose of inspection, audit/review and copying for five years after final payment, termination or date of final resolution of any dispute, litigation, audit exception or appeal. The payroll and other employment records of workers assigned to the site must contain the name and address of each worker, correct wage classification, rate of pay, daily and weekly number of hours worked, deduction made and actual wages paid. The Contractor must maintain records that show: (a) the anticipated costs or actual costs incurred in providing such benefits, (b) that commitment to provide such benefits is enforceable, and (c) that the plan or program is financially responsible and has been communicated in writing to the workers affected.

3. Bonds and Insurance:

3.1 Both the Performance Bond and Payment Bond must remain in effect from the date of Contract Award until final completion of the Work or the end of Correction Period, whichever comes later. The surety bonds required for a Construction Contract will

not be accepted by SFA unless the surety bonding company is listed in the current United States Government, Department of Treasury's, Listing of approved sureties (bonding/insurance companies), Department Circular 570. Copies of the current Circular listing may be obtained through the internet web site at http://www.fms.treas.gov/c570/c570.html.

Insurers must have an "A-" A.M. Best Company Rating and a Class VII or better financial size category as shown in the most current A.M. Best Company ratings. Insurance must be provided by insurers authorized by the Department of Insurance and Financial Services (DIFS) to do business as an insurer in Michigan. The insurance company and must attach evidence of the authorization. These certificates must specify the Project File No., Index No., Project Title, and a description of the Project. The Contractor agrees that insurance coverage afforded under the policies as such coverage relate to the State under this Contract as determined by the Contractor will not be modified or canceled without at least thirty calendar days prior written notice to the State. The latest A.M. Best's Key Ratings Guide and the A.M. Best's Company Reports (which include the A.M. Best's Ratings) are found at: http://www.ambest.com. The Contractor must not perform any part of the Work unless the Contractor has all the required insurance in full force and effect.

3.2 The Contractor is required to provide proof of the minimum levels of insurance coverage as indicated below. The purpose of this coverage must be to protect the State from claims which may arise out of or result from the Contractor's performance of services under the terms of this Contract, whether such services are performed by the Contractor, or by any subcontractor, or by anyone directly or indirectly employed by any of them, or by anyone for whose acts they may be liable.

The Contractor waives all rights against the State for recovery of damages to the extent these damages are covered by the insurance policies the Contractor is required to maintain pursuant to this Contract. The Contractor also agrees to provide evidence that all applicable insurance policies contain a waiver of subrogation by the insurance company.

All insurance coverages provided relative to this Contract/Purchase Order is PRIMARY and NON-CONTRIBUTING to any comparable liability insurance (including self-insurances) carried by the State.

The Insurance must be written for not less than any minimum coverage herein specified or required by law, whichever is greater. All deductible amounts for any of the required policies are subject to approval by the State.

The State reserves the right to reject insurance written by an insurer the State deems unacceptable.

BEFORE THE CONTRACT IS SIGNED BY BOTH PARTIES OR BEFORE THE PURCHASE ORDER IS ISSUED BY THE STATE, THE CONTRACTOR MUST FURNISH TO THE DIRECTOR-SFA CERTIFICATE(S) OF INSURANCE VERIFYING INSURANCE COVERAGE. THE CERTIFICATE MUST BE ON THE STANDARD "ACCORD" FORM. THE CONTRACT OR PURCHASE ORDER NUMBER MUST BE SHOWN ON THE CERTIFICATE OF INSURANCE TO ASSURE CORRECT FILING. All such Certificate(s) are to be prepared by the Insurance Provider and not by the Contractor. All such Certificate(s) must contain a provision indicating that coverages afforded under the policies WILL NOT BE CANCELLED, MATERIALLY CHANGED, OR NOT RENEWED without THIRTY days prior written notice, except for 10 days for non-payment of premium, having been given to the Director-SFA Such NOTICE must include the CONTRACT NUMBER affected and be mailed to the Project Director.

The Contractor is required to provide the type and amount of insurance below:

(a) Commercial General Liability Insurance with a limit of not less than $1,000,000 each occurrence. If such CGL insurance contains a general aggregate limit, it must apply separately to this project.

The Contractor must list the State, its departments, divisions, agencies, offices, commissions, officers, employees and agents as ADDITIONAL INSUREDS on the Commercial General Liability policy.

(b) Vehicle Liability Insurance for bodily injury and property damage as required by law on any auto including owned, hired and non-owed vehicles used in the Contractor's business.

The Contractor must list the State, its departments, divisions, agencies, offices, commissions, officers, employers and agents as ADDITIONAL INSUREDS on the vehicle liability policy.

(c) Worker's disability compensation, disability benefit or other similar employee benefit act with minimum statutory limits.

NOTE:

(i) If coverage is provided by a State fund or if Contractor has qualified as a self-insurer, separate certification must be furnished that coverage is in the state fund or that Contractor has approval to be a self-insurer;
(ii) Any citing of a policy of insurance must include a listing of the States where that policy's coverage is applicable; and
(iii) This provision must not be applicable where prohibited or limited by Michigan law.

(d) Employer's Liability Insurance with the following minimum limits:

$1,000,000 each accident

$1,000,000 each employee by disease
$1,000,000 aggregate disease

(e) Pollution Liability Insurance in the amounts of not less than $1,000,000 per occurrence is required.

3.3 **Liability Insurance:** Liability insurance must be endorsed to list as additional insureds the Professional's consultants and agents. Worker's Compensation, Employer's Liability Insurance and all other liability insurance policies must be endorsed to include a waiver of rights to recover from the Owner, Professional and the other additional insureds. The Contractor's liability insurance must remain in effect through the Correction Period and through any special correction periods. For any employee of the Contractor who is resident of and hired in Michigan, the Contractor must have insurance for benefits payable under Michigan's Worker's Compensation Law. For any other employee protected by Worker's Compensation Laws of any other state, the Contractor must have insurance or participate in a mandatory state fund, where applicable, to cover the benefits payable to any such employee. These requirements must not be construed to limit the liability of the Contractor or its insurers. The Owner does not represent that the specified coverage or limits of insurance are sufficient to protect the Contractor's interests or liabilities.

3.4 **Builder's Risk Insurance:** Unless indicated otherwise in the bid document, the Contractor will purchase and maintain property insurance for 100% of actual cash replacement value of the insurable Work while in the course of construction, including foundations, additions, attachments, and all fixtures, machinery and equipment belonging to and constituting a permanent part of the building structures. The property insurance also will cover temporary structures, materials and supplies to be used in completing the Work, only while on the building site premises or within five hundred feet of the site. The property insurance insures the interests of the Owner, Contractor and all Subcontractors and Suppliers at any tier as their interest may appear. The property insurance insures against "all risk" of physical loss or damage to the extent usually provided in policy forms of insurers authorized to transact this insurance in Michigan. A copy of the master insurance policy will be available for review by the State, upon request.

3.5 The Owner and Contractor intend that the required policies of property insurance must protect all the parties insured and provide primary coverage for all losses and damages caused by the perils covered. Accordingly, to the extent that the insurance company pays claims, the Owner and the Contractor and its Subcontractors/Suppliers waive all rights against each other for any such losses and damages and also waive all such rights against the Professional and all other persons named as insureds or additional insureds.

4. Prosecutions; Substantial Completion:

4.1 The Contractor must not start the Work at the site before the first day established by the Notice to Proceed and/or before all insurance is in effect. A pre-construction conference will be held with the Contractor to review its Progress Schedule, qualifications of its key personnel, its proposed access to the site, traffic and parking, procedures for submittal, change orders, etc., and to exchange emergency contact information. The Contractor must use its accepted Progress Schedule when making proposals or claims for adjustment in Contract Time/Price.

4.2 Except in an Emergency, all Work at the site must take place during normal working hours; 6:00 AM to 6:00 PM, during Business Days and in accordance with the special working conditions for the Agency. If the Contract Documents allow work outside the normal hours, the Contractor must provide a written notice to the Owner twenty-four hours before performing such Work and must reimburse the Owner any related increase in the costs incurred by the Owner such as overtime charges of the Professional and payments for custodial and security personnel.

4.3 If, upon inspection and completing all pre-requisite testing of the Work, the Contractor considers that a portion of the work or all of the Work is substantially completed, it must provide a list of items to be corrected or completed to the Owner and the Professional for joint inspection. Within ten Calendar Days of this joint inspection, the Professional will deliver to the Owner and Contractor a list of incomplete/Defective work or a Certificate of Substantial Completion with a Punch List. The certificate must:

(a) fix a reasonable date of Substantial Completion,
(b) fix a date for completion of the Punch List, and
(c) recommend the division of responsibilities between the Owner and Contractor for utilities, security, safety, insurance, maintenance, etc.

Upon issuing the Certificate of Substantial Completion, the Owner will pay for the completed Work subject to (a) withholding of two hundred percent of the value of any uncompleted Work, as determined by the Professional, and (b) any other deductions as the Professional may recommend or may withhold to cover Defective work, liquidated damages and the fair value of any other items entitling the Owner to a withholding. Prerequisites for Substantial Completion, over and above the extent of Work completion required, include (a) receipt by the **Owner** of operating and maintenance documentation, (b) all systems have been successfully tested and demonstrated by the **Contractor** for their intended use, and (c) the **Owner** having received all required certifications and/or occupancy approvals from the State and those Political Subdivisions having jurisdiction over the Work. Receipt of all certifications and/or occupancy approvals from those Political Subdivisions with jurisdiction in and of itself does not necessarily connote Substantial Completion. The Contractor must provide all related operating and maintenance (O&M) documentation to the Owner before training if training is required and not later than Substantial Completion otherwise. The

Contractor must give the Owner the final O&M documentation (with revisions made after Substantial Completion) before the request for final payment.

4.4 The Owner may decide to use, at its sole option, any functioning portion of the Work and will inform the Contractor in writing of the decision. The portion of Work to be used must be jointly inspected to determine the extent of completion if it has not undergone the inspection for Substantial Completion. The Professional must prepare a list of items to be corrected/completed and the Owner will allow the Contractor reasonable access to correct/complete the listed items and finish other work.

5. Warranty; Tests, Inspections and Approvals; Corrections of Work:

5.1 **Warranty:** The Contractor must furnish the State with a written guarantee to remedy any defects due to faulty materials or labor which appear in the Work within one year from the date of final acceptance by the State. This warranty excludes defect or damage caused by (a) abuse, modification by others, insufficient or improper operation or maintenance, or (b) normal wear and tear under normal usage. Manufacturer warranties for materials and equipment received by the Contractor must be assigned and promptly delivered to the Owner at Substantial Completion. The warranties period starts from the date of the substantial completion and must be in full force and effect for the entire duration of the Correction Period.

Roof Warranty: For roofing systems, the following warranties are required as minimum:

(a) A two-year contractors warranty against any defects due to faulty materials or labor;
(b) A fifteen-year manufacturer's total system warranty; and
(c) A twenty-year membrane/shingles/tiles warranty.

5.2 **Tests, Inspections and Approvals:** The Owner will perform or retain a professional/agency to perform inspections, tests or approvals for those materials required to meet quality control standards specified in the Contract Documents. However, the Contractor must assume full responsibility for any testing, inspection or approval
(a) required to meet code requirements, as promulgated by code inspecting authorities;
(b) required by Law;
(c) indicated or required by the Contract Documents;
(d) required for the Professional's acceptance of a Supplier, materials or equipment or mix designs submitted for prior approval by the Contractor; or
(e) Defective work, including an appropriate portion of the Delay and costs occasioned by discovery of Defective work. The Contractor must (a) pay all related costs; (b) schedule related activities; and (c) secure and furnish to the Professional the required certificates of inspection, testing or approval. The Contractor must provide proper and safe access to the site for inspection, testing or approval. The Contractor must provide the Professional a timely notice whenever any Work is ready for inspection, testing or approval. If the Contractor covers any Work without proper approval by the Professional as required by the Contract Documents, the Contractor must, at its own expense, uncover, expose or otherwise make available, when requested by the Professional or Owner, for testing, inspection or approval of the covered Work.

5.3 **Correction of Work:** If any testing, inspection or approval reveals Defective Work and the Work is rejected by the Professional, the Contractor, at its sole expense, must promptly, as directed, correct or remove the Defective Work from the site and replace it with non-Defective Work within the Correction Period. The Contractor must bear responsibility for its proportionate share of the Delay and costs resulting from the correction and/or removal and replacement of Defective Work. If the Contractor, within reasonable and agreed upon time after receipt of written notice, (a) fails to correct Defective Work or remove and replace rejected Work, or (b) fails to correct or complete items on any Punch List, or (c) fails to perform Work in accordance with the Contract Documents, or (d) fails to comply with any other provision of the Contract Documents, the Owner, directly or through others, after seven Calendar Days from the date of the written notice to the Contractor, may correct and remedy the Defective Work. To the extent necessary to correct and remedy such Defective Work, the Owner must be allowed to exclude the Contractor from all or part of the site; take possession of all or part of the Work and stop related operations of the Contractor; take possession of the Contractor's tools, plant and office and construction equipment at the site; and incorporate into the Work materials and equipment for which the Owner has paid the Contractor. The Contractor must allow the Owner and the Professional easy access to the site to correct such Defective Work. The Owner must be entitled to an appropriate decrease in Contract Price for all claims, costs, losses, damages and Delay incurred or sustained by the Owner which are attributable to the Contractor. Such costs may include, but not limited to, costs of correction or removal and replacement of Defective Work, costs of repair and replacement of other work destroyed or damaged by the action and related charges of the Professional. If the discovery of the Defective Work takes place after final payment and the Contractor fails to correct and pay the Owner any of these costs, the Owner must demand due performance under the Performance Bond. Until the period of limitation provided by Michigan Law, the Contractor must promptly, and upon receipt of written notice from the Owner, correct Defective Work. In the event of an Emergency or unacceptable risk of loss or damage or if appropriate under the circumstances, the Owner, directly or through others under contract with the Owner, may correct or remove and replace the Defective Work. The specified correction of Work requirements have no limitation on the rights of the Owner to have Defective Work corrected or removed and replaced, if rejected, except as otherwise provided by the Michigan Law.

5.4 **Special Correction Period Requirements:** Whenever the Owner undertakes any portion of the Work because the Contractor's act or omission Delays completion of the Work or it is eligible for Partial Use, the warranties for all materials and equipment incorporated into that portion of the Work must remain in full force and effect between the start of such Partial Use and the date when the Correction Period starts. The Correction Period for any Defective Work that is corrected or rejected and

replaced within the last three months of the Correction Period must be extended by an additional six months, starting on the date such Work was made non-Defective.

5.5 **Special Maintenance Requirements:** If the Contract Documents specify that the entire Work, or a portion of the Work, upon reaching Substantial Completion, must not be placed in use by the Owner, the Contractor must maintain the Work, or specified part of the Work, in good order and proper working condition and must take all other actions necessary for its protection between the certified date of Substantial Completion and the date when the Work, or designated part of the Work, is placed in use. If no separate price for such special maintenance period was requested and made part of the Contract Documents, the Owner will amend the Contract Documents to appropriately increase the Contract Price.

6. Changes:

6.1 **Changes in the Work:** The Owner may, at any time, without notice to sureties, make any changes bilaterally or unilaterally, by a written Change Order, in the Work within the general scope of the Contract, including but not limited to changes in the Specifications, materials, or Contract Time. In a bilateral change order, the Owner may direct the Professional to prepare a Bulletin describing the change being considered. Upon receiving the Bulletin, the Contractor establishes the cost and returns it to the Professional for review within 15 calendar days. The Contractor's proposal must be irrevocable for 60 Calendar Days after it is submitted to the Professional. If the Professional recommends acceptance of the Bulletin and the Owner agrees with the changes, the Owner issues a written bilateral Contract Change Order to amend the Contract Documents. However, the Owner may issue a unilateral Change Order if the Owner and Contractor are unable to agree on the adjustment in Contract Price or Time. If the Contractor disagrees with such unilateral Contract Change Order, the Contractor must complete the Work and may deliver notice of a claim in accordance with the claim submittal process.

6.2 Differing Site Condition: The Owner does not warrant that any technical data, including the Project reference points, provided by the Owner is necessarily sufficient and complete for the purpose of selecting Means and Methods, initiating, maintaining and supervising safety precautions and programs or discharging any other obligation assumed by the Contractor under the Contract Documents. If different or unknown site conditions are discovered, the Contractor must notify the Owner in writing before the conditions are disturbed or before proceeding with the affected Work. Upon review, if the Owner decides to agree with the differing site conditions, with the Professional's advice, the Owner may issue a written Contract Change Order to amend the Contract Price or Time through the Bulletin authorization process. If the Owner decides to disagree with the Contractor and the Contractor disagrees with the Owner's decision, the Contractor must complete the Work and may deliver notice of a claim in accordance with the claim submittal process. No proposal or claim by the Contractor due to differing site conditions will be allowed (a) if the Contractor knew of their existence before submitting its Bid or if those conditions could have been discovered by any reasonable examinations for which the Contractor, as Bidder, was made responsible under the Bidding Requirements and/or (b) unless the Contractor's notice is provided on a timely basis and gives the Owner adequate opportunity to investigate the asserted differing site conditions.

6.3 Responsibilities for Underground Utilities: The Contractor must comply with the 1974 PA 53, as amended, MCL 460.701 et seq., and all other Laws concerning Underground Utilities. Before performing site Work, all Underground Utilities, lines and cables (public and private) must be located and marked. The Contractor must notify MISS DIG to locate and mark utilities on properties that are not State properties. In addition, the Contractor must be responsible for immediately notifying the Owner of any contact with or damage to Underground Utilities, and for the safety, protection of and repairing any damage done to any Work, surface and subsurface facilities. If the Contractor encounters Underground Utilities that inaccurately located by the Contract Documents or not previously located/marked, which could not be reasonably have been seen, the Owner may issue a written Contract Change Order to amend the Contract Price or Time through the Bulletin authorization process.

6.4 Hazardous Material Conditions: If the Contractor encounters material reasonably believed to be Hazardous Material, which was not described in the Drawings and/or Specifications and was not generated or brought to the site by the Contractor, the Contractor shall immediately stop all affected work, give written notice to the Owner of the conditions encountered, and take appropriate health and safety precautions in accordance with all federal, State and local laws. Upon receipt of the notice, the Owner will investigate the conditions and (a) may stop the Work and terminate the affected Work or the Contract for convenience; (b) may contract others to have the Hazardous Material removed or rendered harmless or; (c) issue a written Contract Change Order to amend the Contract Price/Time through the Bulletin authorization process. If the Hazardous Material is brought to site by the Contractor or as a result in whole or in part from any of its violation of any Law covering the use, handling, storage, disposal of, processing, transport and transfer or from any other act or omission within its control, the Contractor is responsible for the Delay and costs to clean up the site, remove and render harmless the Hazardous Material to the satisfaction of the Owner, State and all Political Subdivisions with jurisdiction.

6.5 Incidents with Archaeological Features: The Contractor must immediately notify the Owner in writing of any Archeological Feature deposits encountered at the site and must protect the deposits in a satisfactory manner. If the Contractor encounters such features, which result in an anticipated change to the Contract Price/Time, the Owner may issue a written Contract Change Order through the Bulletin authorization process.

6.6 Unit Price Work: Quantities as listed have been carefully estimated but are not guaranteed. The Owner reserves the right to increase or decrease the quantities of the Work to be performed at the Unit Price by amounts up to 20 percent of the listed estimated quantities. For Unit Price Work, the Contractor must promptly inform the Professional in writing if actual quantities differ from the estimated quantities for any item. For quantities over 120% or below 80% of the estimated quantity, the Owner

may negotiate a Unit Price with the Contractor, or direct a unilateral change, or bid that Work under separate contract. Any adjusted Unit Price agreed upon by the Owner will only apply to the actual quantities above 120% or below 80% of the estimated quantity. No adjustment due to quantity variations must be allowed (a) unless the Contractor met the notice requirements, or (b) if any Unit Price increase results in whole or in part from any act or omission within the control of the Contractor (errors in the Contractor's Bid, unbalanced Unit Prices, etc.). If a dispute arise between the Owner and the Contractor on the adjusted Unit Price, the Contractor must carry on the Work with due diligence during the disputes/disagreements.

6.7 Cash Allowances; Provisionary Allowances: The Contractor must obtain the Professional's and Project Director's written acceptance before providing materials, equipment, or other items covered by Cash Allowance. Work authorized under any Provisionary Allowance may consist of (a) changes required by actual conditions, as determined by the **Professional**, and (b) any other Work authorized and completed under the pertinent provisions of the Contract Documents.

6.8 Changes in Contract Price:

6.8.1 The Contractor's proposals or claims for Work Involved must detail all affected items of Work, whether increased, revised, added or deleted, and must be fully documented and itemized as to (a) individual adds and deducts in Work quantities and labor man-hours; (b) corresponding itemized cost of Work Involved; (c) materials and equipment cost including transportation, storage and suppliers' field services; and (d) Fee.

6.8.2 For Contractor's proposals or claims for adjustments in Contract Price arising from Delays, the Contractor's estimates must be as comprehensive and detailed as may be appropriate to support the proposal or claim. Examples of related information include labor manpower levels, production data and Progress Schedule revision.

6.8.3 If the Contract Documents use lump sum or Unit Prices for the Work Involved, those prices must be used in estimating the price change. Otherwise, the Owner may direct the Contractor to proceed (a) on a negotiated lump sum; or (b) on an actual cost basis with or without a guaranteed maximum; or (c) through a unilateral Change Order on a lump sum basis or a not-to-exceed basis, based on the Professional's estimate of the anticipated Cost of the Work Involved and a fee. Items making-up the Cost of the Work Involved must be allowable to the extent (a) consistent with those prevailing in the Project locality, (b) necessary, reasonable and clearly allocable to the Work Involved, and (c) limited to labor costs, subcontract costs, material and equipment costs, construction equipment costs and general conditions costs.

6.8.4 In estimating any additional cost by the Contractor or its Subcontractor, the rates for the craft labor man-hour used in estimating changes in Contract Price must not exceed the rates in Means Cost Data (Means) or other cost guide acceptable to the Owner. If the rates exceed the acceptable cost guides, the Contractor must provide proper justifications acceptable to the Professional and the Owner. The payroll costs may be used to quote a Bulletin. However, the payroll costs must include wages, labor burdens and a factor for field supplies and purchase costs (less market values if not consumed) of tools not owned by the workers. Labor burdens must be certified by an authorized financial representative of the Contractor and may include social security, unemployment, taxes, workers' compensation, health and retirement benefits, vacation and holiday pay. The factor for field supplies and tools (individually valued at less than $1,000.00) must not exceed 4% of the wages without burdens, unless detailed data, which supports higher costs, is provided. Rates for owned, rented or leased construction equipment must be in accordance with the contract price rates. Otherwise, the appropriate hourly, daily, weekly or monthly rates listed in Means must be used. However, if the total rental or lease cost of an item to the Project exceeds the reasonable purchase price of the rented or leased item, the Owner reserves the right to pay only the purchase price of the item and take title to the item. Operating cost must not exceed the hourly operating rate in Means and for multiple shifts, rates must not exceed the shift work adjustments recommended in the cost guide.

6.8.5 The cost of any Work Involved may include necessary general conditions costs to the extent those costs increase or decrease on account of, or are directly attributable to, the performance of the furnishing and/or performance of the additional Work Involved, or are required due to an extension in Contract Times or Delays. Such costs may include payroll costs of personnel, temporary facilities at the site, liability insurance and bond premiums, Subcontractors, royalty payments and fees for permits and licenses and taxes on the Work Involved.

6.8.6 A contractor or subcontractor who performs the Work may charge a fee of up to 15% of the cost of Work involved for overhead and profit. Contractor may charge a mark-up fee of up to 5% of its Subcontractor's cost excluding fees if the Work is performed by the Subcontractor. If Work is to be performed by lower tier subcontractor(s), intermediate subcontractors must share a fee of up to 5% of the lowest tier subcontractor's cost excluding fees. The total mark-up fees for the Work must not exceed 25% of the lowest tier subcontractor's cost excluding fees. If the adjustment to the Contract Price incorporates a contractor reservation of rights to claim additional adjustments, the fees must be reduced by one-third. Contractor's administrative costs and home office overhead must be non-reimbursable expenses covered by the Fee for the Work.

6.9 Changes in Contract Time:

6.9.1 If a justified extension beyond the Contract Time is not reasonably anticipatable under the circumstances, the Owner may approve an extension to the Contract Time through the Bulletin authorization process at no additional cost to the Owner.

Examples of events that may justify an extension in the Contract Time include acts of God; acts of the public enemy; fires; floods; and strikes.

6.9.2 If, at any time during the life of this Contract, the Contractor finds that for reasons beyond its control, it will be impossible to complete the Work on or before the Contract completion date, a written request for a change to the Contract extending the time of completion must be submitted. Such a request must set forth in precise detail the reasons believed to justify an extension and must be in such format as the State may require.

6.9.3 When submitting a quotation for a Contract change authorization for extra work or change in plans, the Contractor must include as part of the quotation, a statement requesting any extra time necessary to complete the related Work. Lack of such a statement will serve as notification that the extra time will not be required to complete the Contract work and will waive the right to a later claim. The Owner will not pay additional compensation to the Contractor for performing Contract Work during any extension period granted.

6.9.4 If the Progress Schedule and the funding allow for an early completion date, the Contractor may submit to the Owner for approval, a request to shorten the Contract Time. If approved by the Owner, the new Contract Time applies to the Project and liquidated damages, if any, will be assessed for any delays after the new completion date.

6.10 Price Reduction for Defective Cost or Pricing Data: Whenever the Contractor signs a proposal for a change in the Contract or claim settlement, the Contractor will be deemed to have certified on behalf of itself, Subcontractors and Suppliers, to its best knowledge and belief that the proposal and its contents (a) were made in good faith and are consistent with the facts and the provisions of the Contract; and (b) are current, complete and accurate. If the Contract Price/Time is increased by any Change Order, claim or dispute settlement because the Contractor, Subcontractor or Supplier, at any tier, represented or furnished cost or pricing data of any kind that were false, contained math errors or were incomplete, the Contract Price must be correspondingly reduced by Change Order. If there is a good cause to doubt the Contractor's compliance with the Defective cost and pricing data requirements, the Owner must be entitled to make an appropriate withholding from any payment otherwise owed to the Contractor.

7. Payments

7.1 **Schedule of Values:** The Schedule of Values must be approved by the Professional and accepted by the Owner and must divide the Work into pay items for significant Sections and areas, facilities or structures, with subtotals for first tier Subcontractors. If required in Division 1, the accepted Schedule of Values must be supported by a more detailed breakdown allocating the pay items to the Progress Schedule Activities. It must tabulate labor costs, Subcontract costs and material and equipment costs. Labor costs must include appropriate sums for construction equipment costs, general conditions costs, administrative costs and profit, unless separate pay items are itemized for those costs. The Schedule of Values must include two percent of the Contract Price for each of the following close-out pay items: (a) fire safety inspection, certificate of occupancy and other code approvals, as specified in the Contract Documents, (b) manufacturer warranties, finalized operating and maintenance documentation, Owner training documentation, and test and balance reports, and (c) finalized as-built/Record Documents.

7.2 **Requests for Payment:** Not more than once every thirty Calendar Days, the Contractor may submit to the Professional a Request for Payment on the Owner's form signed by the Contractor certifying Work completed and enclosing all supporting documentation. A draft copy of the payment request may be submitted to the Owner Field Representative for review and comments. For projects under $50,000, the Contractor may not submit more than two requests in addition to the final payment request. Each Request for Payment must certify that all monies owed by the Contractor to Subcontractors and Suppliers for which payment previously has been sought has been paid from payments received. No Request for Payment must include amounts for a Subcontractor or Supplier if the Contractor does not intend to use the payments requested, when received, to reduce the Contractor's outstanding obligations on the Work. The Owner will pay the Contractor within thirty Calendar Days after the Owner receives and approves a certified Request for Payment from the Professional. The Contractor will provide a certification in writing that the payment request submittal is true and accurate. If payment is requested based on materials and equipment stored at the site or at another location agreed to in writing, the Request for Payment also must be accompanied by (a) consent of surety, (b) a bill of sale, invoice or other documentation warranting that the Owner has received the materials and equipment free and clear of all liens, and (c) evidence that the materials and equipment are covered by appropriate property insurance and other arrangements to protect them and the Owner's interests. The Contractor warrants and guarantees that title to all Work, materials and equipment covered by any Request for Payment, whether incorporated in the Work or not, will pass to the Owner free and clear of all liens no later than at the time of payment by the Owner to the Contractor.

7.3 **Review of Request for Payment; Intent of Review:** Within ten Calendar Days after receipt of a Request for Payment, the Professional must certify to the Owner the amount the Professional determines to be due, or must return the Request for Payment to the Contractor indicating the reasons for withholding certification. The Professional's certification of any Request for Payment constitutes a representation to the Owner that the Work has progressed to the point indicated; that to the best of the Professional's knowledge, information and belief, the quality of the Work is in accordance with the Contract Documents; and that the Contractor is entitled to payment in the amount certified. In the case of final payment, the Professional's certification of final payment and recommendation that the Work is acceptable must be a further representation that conditions governing final payment to the Contractor have been met.

7.4 **Refusal to Make or to Recommend Payment:** The Owner may withhold from any payment an amount based on the (a) Professional's refusal to recommend payment or (b) Owner's estimate of the fair value of items included in the payment request. The Owner will give the Contractor reasonably prompt written notice supporting such action. The Professional may refuse to recommend any part of any payment, or because of subsequently discovered evidence, inspections or tests or the value of the Punch List, nullify all or any portion of any payment previously recommended, as the Professional may consider necessary to protect the Owner from loss because:

(a) the Work is Defective or completed Work has been damaged requiring correction or replacement,
(b) the Contract Price has been reduced by Change Order,
(c) it has been necessary that the Owner correct Defective Work or complete Work,
(d) reasonable evidence exists that all or a part of the Work will not be completed within the corresponding Contract Time,
(e) the Contractor failed to comply with any material requirements of the Contract, including, but not limited to the failure to submit Progress Schedule Submittals or as-built/Record Documents when due,
(f) stored materials for which payment has been made or is sought has been determined by the Professional or the Owner Field Representative to be damaged or missing, or
(g) the Professional reasonably believes or knows of the occurrence of an event justifying termination for cause.

7.5 **Request for Final Inspection:** The Contractor must complete the Substantial Completion Punch List within the Contract Time and date. The Contractor must assemble all required documentation before requesting final inspection in writing. The Contractor may request final inspection of the entire Work, or the part of the Work for which final payment is specified in the Contract Documents. Upon this written notice, and if deemed appropriate by the professional, the Professional will make a final completion inspection with the Owner and Contractor and notify the Contractor of all incomplete or Defective Work revealed by the Final Inspection. The Contractor must immediately correct and complete the Work.

7.6 **Close-out Documents:** The Contractor must prepare and submit the following documentation before requesting final inspection or final payment: final operating and maintenance documentation (with revisions made after Substantial Completion), warranties, inspection certificates, as-built/Record Documents, release of payment claim forms, and all other required documents.

7.7 **Request for Final Payment:** The Contractor may request final payment after correcting or completing the Work to the satisfaction of the Professional and delivering close-out documentation (7.6). The Contractor's request for final payment must also enclose:

(a) evidence of completed operations insurance and an affidavit certifying that the insurance coverage will not be canceled, materially changed, or renewal refused,
(b) an affidavit certifying that the surety agrees that final payment does not relieve the surety of any of its obligations under the Performance Bond and Payment Bond,
(c) a completed DTMB-0460 Form close out checklist,
(d) a list of all pending insurance claims rising out of or resulting from the Work being handled by the Contractor and/or its insurer
(e) Contractor's 'Guarantee and Statement' (DTMB-0437) containing a statement of guaranteed indebtedness acceptable to the Owner in the full amount of the Contract Price, or a release of payment claims in the form of a release of liens, or a Bond or other security acceptable to the Owner to indemnify the Owner against any payment claim.

7.8 **Final Payment and Acceptance:** If the Professional is satisfied that the entire Work, or the part of the Work for which final payment is specified in the Contract Documents, is complete and the Contractor's other obligations under the Contract Documents has been fulfilled, the Professional will furnish to the Owner and Contractor the Professional's certification of final payment and acceptance within thirty Calendar Days after receipt of the final payment request. If the Professional is not satisfied, the Professional will return the request to the Contractor indicating in writing the reasons for not certifying final payment. If the final payment request is returned, the Contractor must correct the deficiencies and re-request final payment. If the Owner concurs with the Professional's certification of final payment the Owner will, within thirty Calendar Days after receipt of the Professional's certification of final payment, pay the balance of the Contract Price subject to those provisions governing final payment specified in the Contract Documents. If the Owner does not concur with the Professional's determination, the Owner will return the request for final payment to the Contractor with written reasons for refusing final payment and acceptance.

7.9 **Contractor's Continuing Obligation:** The following does not constitute acceptance of the Work in the event the Work or any Work is not in accordance with the Contract Documents, and therefore does not release the Contractor from its obligation to perform and furnish the Work in accordance with the Contract Documents:

(a) a certification by the Professional of any Request for Payment or final payment;
(b) the issuance of a Substantial Completion certificate;
(c) any payment by the Owner to the Contractor;
(d) any Partial Use;
(e) any act of acceptance by the Owner or any failure to do so;
(f) any review and approval of a Shop Drawing, sample, test procedure or other Submittal;

(g) any review of a Progress Schedule;
(h) any On-Site Inspection;
(i) any inspection, test or approval;
(j) any issuance of a notice of acceptability by the Professional; or
(k) any correction of Defective Work or any completion of Work by the Owner.

7.10 **Waiver of Claims:** The making of final payment does not constitute a waiver by the Owner of any rights as to the Contractor's continuing obligations under the Contract Documents, nor will it constitute a waiver of any claims by the Owner against the Contractor still unsettled, or arising from unsettled payment claims, Defective Work appearing after final inspection or failure by the Contractor to comply with the Contract Documents or the terms of any special warranties provided by the Contract Documents or by Law. The acceptance of final payment will constitute a waiver of all claims by the Contractor against the Owner, other than those claims previously made in writing, on a timely basis.

8. Other Work: During the Contract Time, the Owner may self perform or Contract for other work at the site. By doing so, the Owner or its representative will coordinate the operations of the Contractor and the other work. Whenever the other work interfaces with the Contractor's Work on site, the Contractor must coordinate its activities with the interfacing work, inspect the other work and promptly report to the Professional in writing if the other work is unavailable or unsuitable. The Contractor's failure to do so will constitute an acceptance of such other work as fit and proper for integration with the Work except for latent or non-apparent defects and deficiencies in the other work. The Contractor must provide proper and safe access to the site for handling, unloading and storage of their materials and equipment and for the execution of the other work. The Contractor must do all cutting, fitting, patching and interfacing of the Work that may be required to make any part of the Work come together properly and integrate with other work. If the Contractor becomes party to a dispute or claim due to damages caused to its Work/property or other work/their property, the Contractor must promptly attempt, without involving the Owner or the Professional or their agents, to settle with the other party by agreement or otherwise resolve the claim. If the Owner determines that the other work resulted in a delay to the Work to be performed by the Contractor and such delay justifies a Change Order, the Owner will authorize the necessary adjustment in Contract Price and/or Time.

9. Stop Work Orders and Suspension of Work: The Owner may order the Contractor in writing to defer, stop, suspend or interrupt all or part of the Work, in the event any of the following situations:

(a) any Work is Defective,
(b) any Work, when completed, will not conform to the Contract Documents,
(c) any materials or equipment are unsuitable,
(d) any workers are insufficiently skilled,
(e) failure of the Contractor to implement appropriate measures for the SESC, or
(f) as the Owner may determine appropriate for its convenience. The Contractor is responsible for the Delays and any additional costs if at fault. Any justified increase in Contract Price/Time due to suspension of Work must be submitted within thirty Calendar Days of knowing the extent of Delays and before submitting the final payment.

10. Termination:

10.1 **Termination for Breach**: The Owner may elect to terminate all or any part of the Work if:

(a) the Contractor fails to complete the Work, or a specified part of the Work, within the corresponding Contract Time; fails or refuses to supply sufficient management, supervision, workers, materials or equipment; or otherwise fails to prosecute the Work, or any specified part of the Work, with the diligence required to comply with the Contract Time(s);
(b) the Contractor persistently disregards the authority of the Professional or violates or disregards a provision of the Contract Documents or the Laws of any Political Subdivision with jurisdiction;
(c) the Contractor admits in writing, or the Owner otherwise establishes, the Contractor's inability or refusal to pay the Contractor's debts generally as they become due;
(d) in response to the Owner's demand, the Contractor fails to provide adequate, written assurance that the Contractor has the financial resources necessary to complete the Work within the Contract Time;
(e) the Contractor fails to comply with the Michigan Residency requirements (1984 PA 431, as amended, MCL 18.1241a); or is found to be in violation of Section 4 of 1980 PA 278 concerning unfair labor practices, or any nondiscrimination requirements imposed by Law;
(f) at any time, the Contractor, Subcontractor or Supplier is in violation of unfair labor practices prohibited by Section 8 of Chapter 327 of the National Labor Relations Act, 29 U.S.C. 158; or
(g) the Contractor violates or breaches any material provision of the Contract Documents, which provides contractually for cause termination or rescission of the Contract or of the Contractor's right to complete the Work.

Within seven Calendar Days after the Contractor receives a notice requiring assurance of due performance for any of the above occurring non-conformances, the Contractor must meet with the Owner and present the Contractor's plan to correct the problems. If the Owner determines that the Contractor's plan provides adequate assurance of correction, that determination does not waive the Owner's right to subsequently default the Contractor or affect any rights or remedies of the Owner against the Contractor and/or surety then existing or that may accrue in the future. The Owner, after giving the Contractor and surety seven Calendar Days' written notice of intent to default, may declare the Contractor in default and terminate the services of the Contractor for cause. Unless otherwise agreed between the Owner and Contractor, at the expiration of the Seven-

Calendar Day (intent to default) period, the Contractor must immediately stop all Work and proceed in accordance with the Owner's instructions. Following the expiration of the Seven-Calendar Day (intent to default) notice, the Contractor will be sent a default letter – notice of termination for cause. The Owner will issue a Contract Change Order to revise the name of the contract party to the name of the surety company. The surety company must undertake to perform and complete the Work, in accordance with the Contract Documents, in place of the Contractor, either through the surety's agents or by executing agreements with qualified contractors (excluding the Contractor and any of the Contractor's affiliates), or both.

The Owner may issue a fifteen-Calendar Day notice of intent to default the surety company if they fail to execute in a timely manner the completion of the Contract Work. Without an adequate plan of correction, the Owner may issue a notice of termination for cause letter to the surety. If a termination of the contract with the surety occurs, the Owner reserves the right to complete the Work.

If the Owner has terminated the Contractor, any such termination will not affect any rights or remedies of the Owner against the Contractor or surety, or both, then existing or that may accrue after termination. All provisions of the Contract Documents that, by their nature, survive final acceptance of the Work must remain in full force and effect after a termination for cause of the Contractor or default of the surety, or both. The Owner may, in its sole discretion, permit the Contractor to continue to perform Work when the Contractor is in default or has been defaulted. Such decision by the Owner in no way operates as a waiver of any of the Owner's rights under the Contract Documents or Performance Bond, nor in the event of a subsequent default, entitle the Contractor or surety to continue to perform or prosecute the Work to completion.

10.2 **Termination on Non-Bonded Project**: For non-bonded projects, the Owner will follow the termination protocol in Paragraph 10.1 without involving a surety.

10.3 **Termination for Convenience of the Owner**: Upon fifteen Calendar Days' written notice to the Contractor and surety, or sooner if reasonable under the circumstances, the Owner may, without cause and without prejudice to any other right or remedy it may have, elect to terminate any part of the Work, or the Contract in whole or in part, as the Owner may deem appropriate for its convenience. Upon receipt of any such termination notice, the Contractor must immediately proceed in accordance with any specific instructions, protect and maintain the Work, and make reasonable and diligent efforts to mitigate costs associated with the termination. In such termination, the Contractor must be paid in accordance with the terms of this Contract for only services rendered before the effective date of termination. Upon termination for convenience, the Contractor must be released from any obligation to provide further services and the Owner must have full power and authority to take possession of the Work, assume any agreements with Subcontractors and Suppliers that the Owner selects, and prosecute the Work to completion by Contract or as the Owner may deem expedient.

10.4 **Termination for Lack of Funding:** If expected or actual funding is withdrawn, reduced or limited in any way before the completion date set forth in this Contract or in any amendment, the State may, upon written notice to the Contractor, terminate this Contract in whole or in part in accordance with Paragraph 10.3.

11. Disputes: All claims, counterclaims, disputes and other matters in question between the Owner and Contractor arising out of or relating to the Contract Documents must be submitted in writing to the Professional and otherwise processed and resolved as provided in this Article. The Contractor must carry on the Work with due diligence during all disputes or disagreements. Work must not be delayed or postponed pending resolution of any disputes or disagreements. The Contractor must exercise reasonable precautions, efforts and measures to avoid situations that would cause delay.

11.1 **Notice of Claim**: Except for Owner claims for liquidated damages, no claim is valid unless it is based upon written notice delivered by the claimant to the other party promptly, but in no event later than thirty Calendar Days after the Professional's or Project Director's determination giving rise to the claim. The notice must state the nature of the dispute, the amount involved, if any, and the remedy sought. The claim submittal with all supporting data must be delivered within sixty Calendar Days after the determination giving rise to the claim (unless the Professional allows an extension). The responsibility to substantiate claims rests with the claimant. A claim by the Contractor must be submitted to the Professional and Project Director for a recommendation or decision from the Professional. A claim by the Owner must be submitted to the Contractor and the Professional for a written recommendation or decision by the Professional. The Owner reserves the right to audit any Contractor claim (or claim package) that the Contractor values at more than $50,000.00. Pending final resolution of any claim under this Article, the Contractor must proceed diligently with the Work and comply with any decision of the Owner and/or Professional. For all Contractor claims seeking an increase in Contract Price or Contract Time, the Contractor must submit an affidavit, certifying that the amount claimed accurately reflects any Delay and all costs that the Contractor is entitled from the occurrence of the claimed event and that supporting cost and pricing data are current, accurate, complete and represent the Contractor's best knowledge and belief. The affidavit must be signed in the same manner as required in Item 6 of Section 00100.

11.2 **Recommendations or Decisions from the Professional:** For claims under $100,000.00, if requested in writing by the Contractor, the Professional will render a recommendation or decision within thirty Calendar Days after the request and the Owner will issue, if necessary, a determination within thirty Calendar Days after the Professional's recommendation or decision. For claims exceeding $100,000.00, the Professional will issue its recommendation or decision and the Owner, if necessary, will issue its determination, within sixty Calendar Days.

If the Professional denies a Contractor claim or agrees with an Owner claim, that decision must be final and binding on the Contractor, without any determination by the Owner, unless the Contractor files a request for a presentation with the Director-SFA within thirty Calendar Days. To the extent that any recommendation from the Professional is partly or wholly adverse to a claim from the Owner, that determination must be final and binding on both the Owner and Contractor unless either party files a request for a presentation with the Director-SFA within thirty Calendar Days. If the Professional recommends payment of any Contractor claim which increases the Contract Price, that recommendation is subject to the Owner's written approval. In the event any such determination from the Owner is partly or wholly adverse to the preceding recommendation from the Professional, that determination must be final and binding on the Contractor unless the Contractor files suit in the Michigan Court of Claims within thirty Calendar Days after receipt of such determination. The claim is waived if not made in accordance with these requirements.

If either the Contractor or Owner is not satisfied with any decision of the Professional on a claim, that party must, within thirty Calendar Days of receiving that decision, file a written appeal with complete supporting documentation with the Director-SFA.. The Director-SFA has discretion concerning the allowability of evidence submitted, and is not bound to any rules of evidence. If the right to a presentation is waived or if a presentation is conducted and the dispute remains unresolved, the Director-SFA, at the Director-SFA's sole option, must specify in which forum the dispute must be conducted by issuing a written determination to the Contractor that the dispute if the Contractor so elects, be submitted in writing to the Michigan Court of Claims. The Director-SFA's determination on the dispute is final and binding on the Contractor unless the Contractor files a lawful action in the Michigan Court of Claims within thirty Calendar Days after receiving the Director-SFA's determination. After settlement or final adjudication of any claim, if payment by the Contractor is not made to the Owner, the Owner may offset the appropriate amounts against (a) payments due to the Contractor under any other Contract between the Owner and the Contractor, or (b) any amounts for which the Owner may be obligated to the Contractor in any capacity. The Director-SFA may designate someone to fulfill the Director-SFA's duties under these terms and conditions.

END OF SECTION 00700

SECTION 00750 SPECIAL WORKING CONDITIONS

1. The Work is for the Department of Environmental Quality and their special working conditions are included in **Appendix II**. The Contractor must comply with all security regulations. Access to and egress from the buildings and State Agency grounds must be via routes specifically designated by the State Agency. Whenever the Contractor has caused an operating security or fire system to go out of service, or left unsecured openings in existing facilities or security fences, the Contractor must furnish a security guard or fire watch acceptable to the Owner to maintain security of the facility outside of normal working hours and will be held responsible for any losses from the facility.

2. The Contractor must maintain at all times dust control measures to the satisfaction of the Owner.

3. The Contractor shall coordinate site work and scheduling with the Professional.

END OF SECTION 00750

SECTION 00800 SUPPLEMENTARY CONDITIONS

1. The following conditions must supplement the general conditions:

SC-1 SUPPLEMENTARY CONDITIONS TO ARTICLE 1.5 - CONTRACT DOCUMENTS OWNERSHIP
SC-1.5 Delete the last sentence of Article 1.5 of **Section 00700** in its entirety and replace with the following: The **Professional** will furnish on behalf of the **Owner** at no cost to the **Contractor** up to three (3) copies of the Drawings and Project Specifications. Additional copies will be furnished, upon request, at the cost of reproduction.

SC-2 SUPPLEMENTARY CONDITIONS TO ARTICLE 3.3 – BONDS AND INSURANCE
SC-3.3 Delete the first sentence of Article 3.3 of **Section 00700** in its entirety and replace with the following: Liability insurance must be endorsed to list as additional insureds the Professional, the Professional's consultants and agents, the Property Owner(s), and the Property Owners' consultants and agents.

SC-3 SUPPLEMENTARY CONDITION TO ARTICLE 4- PROSECUTIONS; SUBSTANTIAL COMPLETION
SC-4.2 Delete the first sentence of Article 4.2 of Section 00700 in its entirety and replace with the following: Except in an Emergency, all Work at the site must take place during normal working hours; 7:00 AM to 7:00 PM, during Business Days and in accordance with the special working conditions for the Agency.

SC-4 SUPPLEMENTARY CONDITION TO ARTICLE 4- PROSECUTIONS; SUBSTANTIAL COMPLETION
SC-4.3 Add the following to the prerequisites of *Substantial Completion* - (d) all materials requiring removal have been properly disposed offsite, (e) all site restoration (grading, capping, compaction, seeding, and mulching) have been completed (f) **Contractor**

has demobilized all equipment and personnel from Site and (g) **Owner** has received all waste manifests and disposal documentation.

SC-5 SUPPLEMENTARY CONDITIONS TO ARTICLE 5.2 -TESTS, INSPECTIONS AND APPROVALS

SC-5.2 Delete the first sentence of Article 5.2 of **Section 00700** and replace with the following: "The **Owner** has not retained any testing agency for the work."

SC-6 SUPPLEMENTARY CONDITIONS TO ARTICLE 6.6 – UNIT PRICE WORK

SC-6.6 Delete Article 6.6 in its entirety and replace with the following: "Quantities as listed have been carefully estimated but are not guaranteed. The Owner reserves the right to increase or decrease the quantities of the Work to be performed at the Unit Price by amounts up to 30 percent of the listed estimated quantities. For Unit Price Work, the Contractor must promptly inform the Professional in writing if actual quantities differ from the estimated quantities for any item. For quantities over 130% or below 70% of the estimated quantity, the Owner may negotiate a Unit Price with the Contractor, or direct a unilateral change, or bid that Work under separate contract. Any adjusted Unit Price agreed upon by the Owner will only apply to the actual quantities above 130% or below 70% of the estimated quantity. No adjustment due to quantity variations must be allowed (a) unless the Contractor met the notice requirements, or (b) if any Unit Price increase results in whole or in part from any act or omission within the control of the Contractor (errors in the Contractor's Bid, unbalanced Unit Prices, etc.). If a dispute arise between the Owner and the Contractor on the adjusted Unit Price, the Contractor must carry on the Work with due diligence during the disputes/disagreements."

SC-7 SUPPLEMENTARY CONDITIONS TO ARTICLE 7.2 –REQUESTS FOR PAYMENT

SC-7.2 Add the following after the first sentence of Article 7.2 of **Section 00700**: To request payment, the Owner requires use of State of Michigan form DMB-440 and American Institute of Architects (AIA) Document G702™-1992 and Document G703™-1992 or Document G732™-2009."

END OF SECTION 00800

SECTION 00850 WAGE DETERMINATION SCHEDULE

The Contractor and all Subcontractors must comply with all Laws pertaining to occupational classifications and to the following requirements:

1. The rates of wages and fringe benefits to be paid to each class of construction mechanics must not be less than the wage and fringe benefit rates issued by the Michigan Department of Licensing and Regulatory Affairs (DLARA), Wage and Hour Division in its schedule of occupational classification and wage and fringe benefit for the locality in which the Work is to be performed. These prevailing wage rates are included in **Appendix IV**.

2. The Contractor must keep posted on the construction site, in a conspicuous place, a copy of all prevailing wage and fringe benefit rates as prescribed in the Contract and the address and telephone number of the DLARA's, Wage and Hour Division office responsible for enforcing these provisions, and must keep an accurate record showing the name and classification of each Person performing Work on the site, the dates on which Work was performed, the hours each Person worked on the site and the actual hourly wage and benefits paid to each Person. This record must be notarized by a Notary Public and must be available to DTMB-SFA and DLARA for an audit or inspection, at any time, upon their request. In addition, as per section 6.10 of this Document, the Contractor must have available to DTMB and DLARA, certified payroll of those working on the project.

3. If any trade is omitted from the schedule of wages and fringe benefit rates included in **Appendix IV**, the trades omitted must also be paid not less than the wage and fringe benefit rates prevailing in the locality in which the Work is to be performed.

4. The Contractor must keep posted on the construction site, in a conspicuous place, notice that construction mechanics, as the intended beneficiaries of 1965 PA 166, as amended, who have not been paid in accordance with the Act may file a claim with the LARA.

A finding by the DLARA that the Contractor or any Subcontractor is in violation of these requirements is final.

Prevailing Wage Rates for Houghton County will be distributed via Addendum to the Project Manual.

END OF SECTION 00850

SECTION 00900 ADDENDA

1. Each Bid submittal must include acknowledgement of receipt and review of all Addenda issued during the Bidding period.

END OF SECTION 00900

DIVISION 01

GENERAL REQUIREMENTS

SECTION 01 11 00

SUMMARY OF WORK

PART I - GENERAL

1.1. SITE BACKGROUND

1.1.1 Copper mining was extensive in the Keweenaw and formed the backbone of the regional economy and society. Copper ore milling and smelting operations were conducted from the mid-1860s to the 1960s, including the importation and reprocessing and smelting of various scrap metals in the later years of operation. Consistent with past industrial practices, Torch Lake served as dumping grounds for virtually all mining industry related waste products produced, including tailings, slag, and various chemicals.

The environmental legacy resulting from over 100 years of mining led to Torch Lake and its western shoreline to be designated as a Superfund site by the United States Environmental Protection Agency (EPA) https://cumulis.epa.gov/supercpad/cursites/csitinfo.cfm?id=0503034 and a Great Lakes Area of Concern by the U.S./Canada Great Lakes Water Quality Agreement https://www.epa.gov/torch-lake-aoc The EPA undertook cleanup activities to address some of the byproducts of the mining industry while others were not addressed or left to recover through natural processes.

The MDEQ Project is addressing some of the remaining concerns in Houghton County not addressed by the EPA. The Project concerns involve groundwater, surface water, sediments, and "upland" media. Known or suspected problems which are being evaluated include: an unidentified, significant in-lake and/or terrestrial source of PCBs, uncharacterized waste deposits, and >750 uncharacterized drums on the lake bottom, slag, landfills, industrial ruins, coal storage areas, underground storage tanks (USTs), RPM, asbestos containing materials (ACM), and any other waste materials identified in future investigations.

During 2014 and 2015 RRD conducted Site Investigation (SI) activities and confirmed the remaining concerns in the Project area involve groundwater, surface water, sediments, and "upland" media. Priority concerns which were evaluated and deemed to require Interim Responses (IRs) included: significant terrestrial source of PCBs; ACM; RPM; abandoned mining era containers; seeps; limited areas of soil in which there are Direct Contact Criteria (DCC) and Particulate Soil Inhalation Criteria (PSIC) exceedances; and, physical hazards.

The vast distribution of the former mining operations throughout the region (spanning multiple townships, villages and cities in Houghton County along the Portage Canal, Lake Superior, Slaughterhouse Creek, and Torch Lake) required that operational areas of the mining companies be divided into geographic areas. Dividing the regional operations into smaller manageable geographic areas allowed for prioritization of the proposed investigative approach, while also establishing a phased process for assessing environmental concerns regionally.

The Calumet & Hecla Lake Linden Operations Area (CHLL) is centralized around C&H's copper mining and processing operations in the vicinity of Lake Linden and Hubbell, Michigan. The CHLL consists of approximately 155 acres of land extending approximately two miles along the shoreline of Torch Lake and incorporates over 40 different parcels with multiple property owners. The CHLL was divided into six smaller

study areas based on the historical industrial operations in each area, including the following:

- Torch Lake Backwater Area;
- Lake Linden Sands Area;
- Lake Linden Recreation Area;
- Lake Linden Processing Area;
- Hubbell Processing Area; and,
- Hubbell Slag Dump and Beach Area.

The CHLL Hubbell Processing Area is located between Lake Linden and Hubbell along the southeast side of Highway M-26 and is comprised of mining era industrial properties including the Hubbell Coal Dock and Mineral Building that are vacant, and the Hubbell Smelter property which is the location of an operating industrial facility. The Hubbell Processing Area is bordered by residential (single family residences and an apartment complex), commercial (restaurant and retail business), and industrial (sand and gravel pit, construction company, and storage facility) properties, and Torch Lake.

1.2. SITE DESCRIPTION

1.2.1 The IR for the Hubbell Processing Area is limited to two properties within the Hubbell Processing Area; the Hubbell Coal Dock property and the Mineral Building property. Risks identified by the SI activities include potential threats to human and ecological receptors, including but not limited to human health risks in the event of direct contact with affected media and inhalation of particulates and ACM, runoff of PCB contaminated media into Torch Lake, and physical hazards. The limited scope of this IR allows for a focused and time critical response that mitigates PCB contaminated debris and soils exceeding select MDEQ exposure criteria protective of human health, manages and caps debris and waste piles, and eliminates PCB-impacted soil runoff into Torch Lake.

1.2.2 The Hubbell Coal Dock is located along the shoreline of Torch Lake, between the stamp mill complex (Lake Linden Processing Area) and the C&H Hubbell smelter complex. “The C&H Coal Dock featured a large coal shed, reportedly measuring approximately 650 ft by 400 ft. C&H maintained a large storage shed to allow coal to be stored over the winter and to protect against uncertainties associated with the coal industry. The coal dock featured massive shovel, boom, and rail systems that allowed for the unloading and storage of the bituminous coal and anthracite being shipped from Pennsylvania and West Virginia” (Kahn, 1898). The coal dock operations featured an electrical substation in the northern portion of the property.”

The coal dock property is privately owned and includes roughly 2,000 ft of Torch Lake shoreline. The property is bound to the west by Highway M-26. A chain link fence has been established along the western and northern property boundaries. The property is generally vacant and runoff into the lake has been observed during investigative mobilizations. During the fall of 2016, 66 abandoned drums were removed from the property and disposed. Erosion channels have developed in the south-central portion of the property. A breach in the side of the drainage ditch just south of the southern property boundary was plugged during 2016 to stop the uncontrolled flow of water out of the ditch and across the southern portion of the property, where material was likely historically burned for metals recovery and PCBs have been detected (the Hubbell Coal Dock Burn Area).

1.2.3 The Mineral Building, located on a separate property, is south of and adjacent to the Hubbell Coal Dock property. The Mineral Building would have received the processed copper ore from the stamp mills located in the Lake Linden Processing Area. The copper

ore was sorted and stored in the Mineral Building prior to transfer to the smelter for additional processing. A chain link fence has been established along the western and southern property boundaries. During the fall of 2016, 16 abandoned drums were removed from the property and disposed.

1.2.4 Historical research conducted by Michigan Technological University (Michigan Tech) concluded that the smelter yard as well as the neighboring mineral building and coal dock facilities were likely used in C&H's secondary copper recovery processes. As excerpted from Michigan Tech's report, C&H launched its "Secondary Metal Department" in 1945 — an indication that reclamation of copper from scrap metal and similar copper-containing wastes had become an important part of the company's operations. The July 1945 issue of *C&H News and Views*, an employee periodical, includes photographs of burning of secondary waste materials, specifically the outer sheathings, insulation, and coatings on copper-rich materials, prior to treating the recovered copper in the smelter. Materials including co-axial telephone cable, armored "Navy cable", and motor parts were common sources of copper, known to contain hydrocarbon-based oils and greases as well as PCBs. In addition to periodical documentation, Michigan Tech interviewed former employees who corroborated these activities, noting that the smelter yard was used as a site for burning copper wire to remove the insulation prior to smelting.

1.2.5 At a mean elevation of approximately 602 ft Above Mean Sea Level (AMSL) at the shoreline of Torch Lake, the land rises vertically to the west/northwest from the shoreline to an approximate elevation of 630 ft AMSL along Highway M-26.

1.2.6 The soil and fill encountered at the properties are largely sand, gravel, coal, stamp sand, slag, and burnt debris covering the ground surface. Underlying these near surface soils are native soils described in the Site Inspection Report for C&H Lake Linden Operations, Lake Linden, Michigan, 49945 - June 2014 prepared by the MDEQ-Remediation and Redevelopment Division (RRD), Superfund Section, Pre-remedial Group, Site Evaluation Unit (Pre-remedial Group) as "ground moraine with coarse-textured, reddish brown, sandy loam, glacial till. The deposits vary in composition and thickness and do not appear to be laterally extensive over the CHLL. The deposits range in thickness from approximately 11 to 50 ft below the ground surface (bgs), but have been observed in thicker deposits with interbedded clay, silt, and gravel units. The bedrock geology underlying the glacial deposits in the area is comprised of Jacobsville Sandstone."

1.2.7 Groundwater was encountered at the properties at varying depths. In the lower plateau along Torch Lake groundwater was encountered between 2-ft and 4.5-ft bgs.

1.3. OBJECTIVE

1.3.1. The objective of this contract is to conduct the following:

1.3.1.1. Cap the Coal Dock Burn Area to prevent direct contact with affected soil and eliminate impacted soil runoff into Torch Lake.

1.3.1.2. Improve the southern drainage ditch to restore channel capacity and prevent overflowing onto the newly placed cap.

1.3.1.3. On the Mineral Building property, address PCB contaminated debris.

1.3.2. The requirement of this Contract is to completely and safely execute the following project components in support of the MDEQ's current remedial goals for the Site. **Sheet C-3** in the drawing set depicts the current conditions within the work area.

1.3.2.1. The **Contractor** will be required to install soil erosion and sedimentation controls (SESC) as depicted on **Sheet C-4** setoff the Drawings. Following installation of SESC measures, the **Contractor** shall prepare the Site for access to the pile management, grading, and capping areas depicted on **Sheet C-4** through **C-7** in the Drawings, including improvement of existing and placement of new permanent haul/access roads, loading/unloading and staging areas, and decontamination areas as needed to execute the work.

1.3.2.2. The **Contractor** will be required to address PCB contaminated soil from the waste pile WP-11 limits depicted on the drawing in **Appendix VII**.

1.3.2.3. The **Contractor** will be required to improve the drainage ditch between the two work areas, including cutting off the existing culverts, brush and tree removal, excavation/grading, and geotextile fabric and rip-rap placement.

1.3.2.4. The **Contractor** will be required to grade the work area to promote positive drainage, including tree and brush removal as required. Refer to **Sheet C-5** in the Drawings for grading plans.

1.3.2.5. The **Contractor** will be required to place 6-inches of sandy loam soil as a cap over the areas depicted on **Sheet C-7** of the Drawings.

1.3.2.6. The **Contractor** will be required to restore all disturbed areas (within and outside of the work limits) to pre-work conditions including grading, topsoil (if topsoil is currently present), seeding, and mulch. Restoration work will occur in the capping areas depicted on **Sheet C-7** of the drawing set, and any other areas disturbed by the **Contractor**. The Contractor will be responsible for monitoring and maintaining the permanent SESC measures for up to one year until fully established and the SESC permit is released.

1.3.2.7. The **Contractor** will be required to perform the parts of the Work designated by the Alternates identified in the Schedule of Alternates, if any, if they are awarded by the **Owner**.

1.3.2.8 The **Contractor** will be required to sequence all parts of the Work awarded as defined by the Base Bid.

1.3.3. The Work to be completed under this Contract includes, but is not limited to, the following activities:

1.3.3.1. Review Contract Documents and prepare all required submittals including Permits. Prepare all required plans including Work Plan with a Site Access and Traffic Control Plan, Health and Safety Plan, Borrow Area Restoration Plan, and Soil Erosion and Sedimentation Control Implementation Plan.

1.3.3.2. Plan and implement Mobilization, Site Access, Site Security, Site Preparation, Temporary Utilities, and Temporary Facilities. Coordinate with the **Owner**, the **Professional**, and Federal, state and local agencies, and utilities to begin Work.

1.3.3.3. Plan, schedule, and implement all required Project Meetings.

1.3.3.4. Construct and improve existing Site Access and on-site haul roads as shown in the plans. On-site road(s), private roadways, and public roadways shall be surfaced or protected, as appropriate and as required during the Work to maintain a serviceable travel way.

1.3.3.5. Perform Dust Control, including routine watering during all material movement activities to prevent visible dust. Dust control also includes sweeping of public roadways and thoroughfares used during the construction

activities.

1.3.3.6. Perform all clearing necessary to complete the required Work. Install, maintain and improve, as required, all soil erosion and sedimentation controls to prevent transport and migration of soil(s) from the Work area.

1.3.3.7. Perform ditch improvement, waste pile WP-11 management, grading, and capping in accordance with the Contract Documents and as defined in the **Contractor's** Work Plan. Material movement shall proceed in an organized and timely manner.

1.3.3.8. Construct all decontamination pads necessary to complete the Work.

1.3.3.9. Any disposal facilities shall be approved by the **Owner** prior to the initiation of Work.

1.3.3.10. Perform surveying as required herein. This shall include a post-construction survey and all interim surveying on an as needed basis.

1.3.3.11. Restore private properties affected by construction activities to pre-construction conditions.

1.3.3.12. Restore the Site to its pre-construction condition by regrading, as needed, all areas disturbed by the Work. Imported fill used for haul roads shall remain at the Site unless specified otherwise on the drawings. Restoration includes seeding and mulching of all disturbed areas. This includes replacement or repair of any damaged items including but not limited to retaining walls, fences, gates, and roadways.

1.3.3.13. Perform demobilization and project closeout activities including complete removal of all temporary facilities, temporary utilities, signs, and all other materials and equipment provided by the **Contractor**. Deliver all required Project Record Documentation as described herein. Monitor and maintain the permanent SESC measures for up to one year until fully established and the SESC permit is released by the governing agency.

The layout of existing facilities and the proposed Work are depicted on the Drawings provided herein.

1.3.4. Work shall be conducted during daylight hours, Monday through Friday. No Work is to be performed on Saturday, Sunday, or on state and federal holidays without prior written approval by the **Owner**.

1.4. SEQUENCING

1.4.1. The **Contractor** shall sequence the Work in an efficient manner in order to meet the project schedule.

1.4.2. Prior to grading and capping, the **Contractor** shall complete the southern drainage ditch improvements and install SESC measures to protect the ditch from sedimentation from adjoining work.

1.4.3. Dewatering of the area west of the historic crane rail to facilitate grading and capping shall be completed prior to final grading and capping of the area east of the crane rail where the discharge occurs so that the dewatering discharge is only applied to the ground surface prior to cap placement.

1.5. CONTRACTS

1.5.1. The Work shall be completed under a single prime contract with the State of Michigan.

1.6. CONTRACTOR'S USE OF PREMISES

1.6.1. The **Contractor** shall:

1.6.1.1. Assume full responsibility for protecting and safekeeping of products, materials, and equipment stored on or off any of the premises. The **Contractor** shall also be responsible to safeguard the Site from unauthorized entry.

1.6.1.2. The **Contractor** shall be required to move stored materials and equipment that interfere with the operations of the private property owners.

1.6.1.3. The **Contractor** shall be required to obtain and pay for all additional storage or Work areas required for the **Contractor's** operations.

1.7. STATE SALVAGE

No items have been identified for State salvage. The State reserves the right to salvage certain items and equipment and those salvageable items will be identified to the Bidder at the time of their inspection of the proposed Work. The State will remove salvageable items before commencement of the Work.

PART 2 – PRODUCTS

Not Used.

PART 3 – EXECUTION

Not Used.

END OF SECTION 01 11 00

SECTION 01 21 00
ALLOWANCES

PART I - GENERAL

1.1 CASH ALLOWANCES:

1.1.1 Cash allowances are not included as part of this Contract.

1.2 PROVISIONAL/CONTINGENCY ALLOWANCES:

1.2.1 Provisional/Contingency allowances have been included in this contract to address items that are outside the scope of work that are in the best interest of the State of Michigan during performance of the contract.

1.2.2 Monies will be used in the contingency allowance only if directed in writing from the **Owner**.

1.2.3 This allowance includes **Contractor's** markups.

1.2.4 Unused allowances will be deducted from the contract amount through contract change order.

PART 2 – PRODUCTS

Not Used.

PART 3 – EXECUTION

Not Used.

END OF SECTION 01 21 00

SECTION 01 22 00

MEASUREMENT AND PAYMENT

PART 1 – GENERAL

1.1. GENERAL

1.1.1. The items listed in **Paragraph 1.5** refer to and are the same pay items listed in the Bid Schedule. They constitute all of the pay items for the completion of the Work. The items listed in **Paragraph 1.6** refer to and are the same Alternate pay items listed in the Schedule of Alternates. Alternates may be added to the Work in the order listed at the time of award. The **Owner** will accept an Alternate only if all other previously listed Alternates are also accepted, unless acceptance by the **Owner** of Alternates in a different order does not affect determination of the lowest Bidder in any way. No direct or separate payment will be made for providing miscellaneous temporary or accessory works, permits, plant services, job signs, sanitary requirements, testing, safety devices, water supplies, power, maintaining traffic, watchmen, bonds, insurance, and all other requirements or Conditions of the Contract. Compensation for all such services and materials shall be included in the prices stipulated for the lump sum and unit price pay items listed herein.

1.1.2. Each lump sum and unit bid price will be deemed to include an amount considered by the **Contractor** to be adequate to cover the **Contractor's** overhead and profit for each separately identified item.

1.1.3. Payment shall be for the pay items listed on the Bid Form. All other undefined work related to the pay items shall be incidental to the pay item.

1.1.4. Payments to the **Contractor** will be made in accordance with the General Conditions and Modifications to General Conditions of the Contract Documents.

1.1.5. Schedule of Values: **Contractor** shall submit a Schedule of Values in accordance with **Section 01 29 73**.

1.1.6. For lump sum items, the **Contractor** will be paid on the basis of actual work completed and accepted. One hundred percent of the contract price for the Work completed and accepted may be paid, subject to the limitations of the General Conditions or Modifications to General Conditions of the Contract Documents.

1.1.7. For unit price items, the **Contractor** will be paid for the actual amount of work accepted. The amount will be in accordance with prices submitted on the Bid Forms.

1.1.8. All units of measurement shall be standard United States convention as applied to the specific items of work as interpreted by the **Professional**.

1.1.9. The estimated quantities for unit price pay items, as listed in the Bid Form, are approximations only and are included solely for the purpose of comparison of Bids. The **Owner** and the **Professional** do not expressly or by implication agree that the actual quantities of material encountered or required, will correspond therewith and reserves the right to increase or decrease any quantity as they may deem necessary.

1.1.10. The **Contractor** shall accept compensation, as full payment to furnish all materials, labor, tools, equipment, and incidentals necessary to complete the Work; for performing all work contemplated and embraced by the Contract; for all loss or damage arising from the nature of the Work, or from action of the elements, or from any unforeseen difficulties which may be encountered during the execution of the Work and until its final acceptance by the **Owner**; for all risks of every description connected with the execution of the Work except as provided herein.

1.1.11. No extra payment will be made to the **Contractor** for any expenses or delays caused by revision of inadequate submittals, lack of progress, defective workmanship, or rescheduling of work by other contractors, subcontractors, or equipment and material suppliers.

1.1.12. Additional costs caused by ill-timed or defective work, or work not conforming to Contract Documents, shall be incurred solely by the **Contractor**.

1.2. ELIMINATED ITEMS

1.2.1. If any item or work, equipment or material is eliminated under a lump sum item, a change order shall be issued as stipulated in the General Conditions.

1.3. INCIDENTAL WORK

1.3.1. Incidental work items for which separate payment is not measured include, but are not limited to, the following items:

1. General Site cleanup and maintenance.
2. Project signage.
3. Restoration of areas used for material and equipment storage.
4. Cooperation and coordination with other contractors, municipalities, utility providers, property owners, and others.
5. Utility crossings and relocations, unless otherwise paid for.
6. Project record documents.
7. Health and safety requirements.
8. Site security.
9. Air monitoring.
10. Dust control.
11. Haul roads.
12. Project Meetings and administration.
13. Movement of surface obstructions to facilitate the work.
14. Protection or removal, maintenance, and reinstallation of existing fencing, signs, light poles, utility poles, retaining walls, and other surface features.

1.4. DESCRIPTION OF PAY ITEMS

1.4.1. The following pay items describe the measurement of payment for the Work to be done under the respective items listed in the Bid.

1.4.2. The following work descriptions summarize the Work to be included in each pay item and may describe all Work, such as Incidental Work described in **Paragraph 1.3**, included in each pay item.

1.4.3. Each unit or lump sum price stated in the Bid shall constitute full compensation, as herein specified, for each item of the Work completed.

1.5. BASE BID PAY ITEMS

1.5.1. Item 1 – Mobilization and Job Site Administration

1. Description: Item 1 includes the preparation and submittal of the required Work Plan, Access and Traffic Control Plan, Health and Safety Plan, Project Schedule, Borrow Area Restoration Plan, and other submittals as specified in **Section 01 33 00**. Item 1 also includes Bonds and Insurance, permits (except permits specifically identified in other Line Items), mobilization to the Site, project coordination, utility locating and protection as necessary, establishment of field office facilities as necessary, Site security, temporary controls and utilities, and all other non-incidental work not specifically included for payment under other items. Mobilization shall include all required mobilizations to facilitate the completion of the Work.

2. Measurement and Payment: Lump sum payment for Item 1 shall be full compensation for all labor, equipment, materials and incidentals necessary for the mobilization and jobsite administration activities identified above**. Lump sum costs will be limited to a maximum of five percent (5%) of the total contract amount.**

1.5.2. Item 2 –Site Preparation – Soil Erosion and Sedimentation Controls, Permits, and Access Improvements

1. Description: Item 2 includes the installation and removal of silt fence and other soil erosion and sedimentation control (SESC) measures described in the Drawings and as may be necessary during execution of the project. Item 2 also includes costs associated with obtaining, maintaining, and successfully closing the Houghton County Drain Commission Part 91 SESC permit and Notice of Coverage for Construction Storm Water. Costs associated with asbestos NESHAP renovation advance notification requirements shall be included in this line item. Site improvements (entrance improvement and haul route loop as contained in the contract documents) needed to facilitate truck access and movement around the Site shall also be included in this Line Item. Item 2 also includes concrete patching of the bulkhead where noted on Drawing C-5.

2. Measurement and Payment: Lump sum payment for Item 2 will be full compensation for all labor, equipment, materials, and incidentals necessary to conduct the above described work.

1.5.3. Item 3 – Tree Removal, Dewatering, and Grading

1. Description: Item 3 includes tree and brush removal and staging of uncontaminated woody debris outside the grading and cap placement area. Item 3 also includes costs to bury contaminated woody debris such as stumps in the specified areas. Item 3 includes consolidation of non-vegetative solid waste outside the grading area but does not include characterization and off-site disposal which is included in Line Item 10. Dewatering necessary to conduct grading and cap placement is included in Item 3. Item 3 also includes removal of any other obstructions and grading of the Coal Dock Burn Area to the specified slopes and as necessary to complete the required Work. Item 3 also includes all dust suppression needed to prevent visible dust and comply with NESHAP requirements, and all personnel and perimeter air monitoring necessary for regulatory compliance and as required by the contract documents during this portion of the Work. Item 3 does not include collection and consolidation of solid waste that will be recycled or disposed under Item 10.

2. Measurement and Payment: Lump sum payment for Item 3 will be full compensation for all labor, equipment, materials, and incidentals necessary to conduct the work described above.

1.5.4 **Item 4 – Drainage Ditch Improvement**

1. Description: Item 4 includes brush removal and excavation of the existing drainage ditch to the profile and grades indicated in the contract documents. Item 4 includes provision and placement of geotextile fabric, rip-rap, and erosion control blankets along the length of the improved ditch. Item 4 also includes cutting off the existing culverts at the upstream end of the ditch and filling the existing scour hole with rip rap. Item 4 also includes all dust suppression needed to prevent visible dust and comply with NESHAP requirements, and all personnel and perimeter air monitoring necessary for regulatory compliance and as required by the contract documents during this portion of the Work.

2. Measurement and Payment: Payment for Item 4 will be lump sum and shall be full compensation for providing all labor, equipment, materials, and incidentals necessary to perform and complete the ditch improvement activities.

1.5.5 **Item 5 – PCB Contaminated Soil and Debris Transport and Disposal**

1. Description: Item 5 includes profiling, manifesting, loading, transport, and proper disposal of waste pile WP-11 using laboratory characterization data provided to the Contractor.

2. Measurement and Payment: Unit rate payment for Item 5 will be based on the number of tons of material disposed and shall be full compensation for all labor, equipment, tools, and incidentals necessary to complete the work described above. Fully executed manifests and disposal receipts, delivery receipts, and weight tickets from a certified scale will be required for payment.

1.5.6. **Item 6 – Cap Installation**

1. Description: Item 6 includes the sourcing, approvals, permitting, preparation, provision, transportation, placement, and compaction of clean sandy loam cap material in the areas identified in the specifications. Item 6 shall also include restoration of the borrow area(s) upon the completion of cap placement.

2. Measurement and Payment: Unit rate payment for Item 6 will be based on the number of acres of clean sandy loam cap material placed at a 6-inch compacted thickness and shall be full compensation for all labor, equipment, materials, and incidentals necessary to complete the work outlined above. The number of acres of cap placed shall be determined by the as-built survey and shall be to the nearest 0.1 acres.

1.5.7 **Item 7 – North Boundary Road Installation**

1. Description: Item 7 includes the provision and placement of 6-inches compacted thickness of one to three-inch diameter crushed stone 8-feet wide along the north edge of the cap placement area at the Hubbell Coal Dock Burn Area. Note that the stone placed for Item 7 does not count in the acreage of cap placement for payment of Item 6.

2. Measurement and Payment: Lump sum payment for Item 7 will be full compensation for all labor, equipment, materials, and incidentals necessary to prepare for and initiate performance of dewatering activities throughout the course of the project.

1.5.8 **Item 8 – Seeding, Fertilizing, and Mulching**

1. Description: Item 8 includes provision and incorporation of the specified seed, fertilizer, and mulch atop the capped area. Item 8 includes the straw mulch blankets as noted on Sheet C-7 along the centerline of the drainage swales depicted by the dotted lines on Sheet C-5 of the Drawings. Item 8 does not include the erosion control blankets along the ditch which are included in Item 4. Seeding and mulching of disturbed areas outside the cap limits are not included in this Line Item; they are incidental to Line Item 11.

2. Measurement and Payment: Unit rate payment for Item 8 will be based on the number of acres of cap material placed and vegetated as determined by the as-built survey to the nearest 0.1 acres and shall be full compensation for all labor, equipment, tools, and incidentals necessary to complete the work described above.

1.5.9 **Item 9 – Final As-Built Survey**

1. Description: Item 9 includes the performance of surveying activities necessary for performance of the Work and determination of final Site conditions, including, but not limited to final topography, centerlines of drainage swales and ditches, limits of rip rap and cap placement, and the limits of access routes and haul roads.

2. Measurement and Payment: Lump sum payment for Item 9 will be full compensation for all labor, equipment, materials, and incidentals necessary for surveying activities.

1.5.10 **Item 10 – Provisionary Allowance**

1. Description: Item 10 is a provisional allowance for materials, equipment, labor, and incidentals not otherwise covered in other pay items to characterize and recycle and/or dispose of non-vegetative solid waste removed from the Hubbell Coal Dock Burn Area as part of the Work. Item 10 is also a provisional allowance for addressing other items that are in the best interest of the State of Michigan as they may be encountered during execution of the Work.

2. Measurement and Payment: Payment for Item 10 will be based on agreed upon costs as they are calculated in accordance with **Section 01 21 00**. As may be appropriate to the agreed upon work, fully executed manifests and disposal receipts, delivery receipts, and weight tickets from a certified scale will be required for payment. The **Contractor** shall be responsible for completion of the provisional allowance form (**Appendix VI**) prior to performing the work under the Provisional Allowance.

1.5.11 **Item 11 – Demobilization and Project Close Out**

1. Description: Item 11 includes the removal of all **Contractor** equipment and excess materials, incidental site restoration outside of the capped area, demobilization, and construction closeout activities as specified in **Section 01 70 00**.

2. Measurement and Payment: Payment for Item 11 will be lump sum and will be full compensation for all labor, materials, equipment, and incidentals necessary for construction demobilization and construction closeout activities. **A minimum of two percent (2%) of the subtotal contract amount shall be included for project closeout activities and will be due to the Contractor following acceptance of all work including vegetation establishment and release of**

the Soil Erosion and Sedimentation Control Permit(s) for the site and borrow area.

ALTERNATES

PART 1 – GENERAL

1.1. GENERAL

1.1.1 **Use of Alternates**: Determination of the lowest three Bidders shall be on the basis of the sum of the Base Bid and any additive and deductive Alternates the Owner accepts, in the order in which they are listed only. The Owner will accept an Alternate only if all other previously listed Alternates are also accepted, unless acceptance by the Owner of Alternates in a different order does not affect determination of the lowest three bidders in any way.

1.1.2 **Alternate Bid Item A1**: Alternate Bid Item A1 is a deductive alternate that would modify the scope of work contained in Base Bid Line Item 5 and includes the following modifications to the Base Bid scope of work:

1.1.2.1 Instead of loading, transporting, and disposing of waste pile WP-11, the material shall be transported to the Coal Dock Burn Area, spread, graded, and capped with the remainder of the area. No portion of the waste pile shall be left in-place on the Mineral Building property.

Part 2 – PRODUCTS

Not Used.

Part 3 – EXECUTION

3.1 GENERAL

3.1.1 Coordinate pertinent related Work and modify surrounding work as required to complete the Project for each alternate.

END OF SECTION 01 23 00

SECTION 01 29 73

SCHEDULE OF VALUES

PART 1 – GENERAL

1.1 REQUIREMENTS INCLUDED

1.1.1 The Schedule of Values is an itemized list that establishes the value or cost of each part of the Work. It shall be used as the basis for preparing progress payments and may be used as a basis for negotiations concerning additional work or credits, which may arise during the Work. Quantities and unit prices may be included in the schedule when approved by or required by the **Professional**.

1.2 PREPARATION

1.2.1 Schedule of Values shall be prepared on 8½-inch by 11-inch white paper. The schedule shall consist of columns titled Item Number, Description of Work, Quantity, Unit Cost and Scheduled Value.

Identify schedule with:

1. Title or Project and Location.
2. Index and File Number.
3. Name, Address, and Phone Number of **Contractor**.
4. Date of Submission.

The Schedule of Values shall show each task and the corresponding value of each task, including separate monies allocated for General Condition items.

1.2.1.1 Submit Schedule of Values to the **Professional** for review and approval within 14 days of Notice to Proceed or at the Pre-Construction Meeting, whichever occurs first. The Schedule of Values is not a re-submittal of the successful bidder's proposal. The Schedule of Values should be detailed enough to indicate how the unit price was derived. For each line item in the Bid Schedule list sub-values, including but not limited to major products, fees, equipment costs, transportation costs, disposal and recycling costs, labor costs, subcontractor costs for each tier 1 subcontractor, and material costs. The sum of the sub-value shall equal the cost for the line item. After review by the **Professional**, revise and resubmit as required until accepted. No partial payment requests will be entertained until the Schedule of Values has been accepted.

1.2.1.2 The Schedule of Values shall show a breakdown of costs for each pay item used in preparation of the Bid.

1.2.1.3 Breakdown shall be in sufficient detail to serve as a basis for computing values for progress payments during construction and shall indicate separate amounts for each section of the specifications.

1.2.1.4 Breakdown shall include a summary for each item including, but not limited to the anticipated type and number of equipment, machinery, and personnel specific to each line item.

1.2.1.5 For each line item, include a directly proportional amount of the **Contractor's** overhead and profit.

1.2.1.6 Upon request of the **Professional**, support the values with data that will substantiate their correctness.

1.2.1.7 Supporting data may include, but not be limited to, personnel and equipment summaries or delivery schedules for each task to corroborate requests for time extensions related to the Work.

1.2.1.8 The aggregate total for all of the individual values shown on the Schedule of Values must equal the Contract Price.

1.2.1.9 Schedule shall be prepared as specified and in accordance with Paragraph 7.1 of **Section 00700**.

SECTION 01 31 19

PROJECT MEETINGS

PART 1 – GENERAL

1.1 PRE-CONSTRUCTION MEETING

1.1.1 The **Contractor** shall schedule an on-Site pre-construction meeting to be attended by the **Owner**, the **Professional**, and other personnel deemed necessary by the **Owner**. The **Contractor** shall be responsible for being available for a meeting within two weeks of Notification of Award. The pre-construction meeting is established to review, for all responsible parties, the following:

1.1.1.1 Partial payment request cutoff date that **Contractor** can submit to the **Owner** to receive monthly payment.

1.1.1.2 Discussion of Change Orders and Change Order Procedures.

1.1.1.3 Discussion of the **Professional** and **Contractor** responsibilities.

1.1.1.4 The **Contractor** shall distribute required Pre-Work submittals, if not already provided.

1.1.1.5 Discussion on prevailing wages, equal employment opportunity, and other human relations requirements.

1.1.1.6 Project Schedule

1.1.1.7 Specific items related to the staging and progression of Work at the Site, including access control, traffic management, and Work restrictions.

1.1.1.8 Other specific items relative to the project.

1.1.2 The **Professional** will be responsible for preparing a meeting agenda and recording meeting minutes for distribution to meeting attendees.

1.2 WEEKLY PROGRESS MEETINGS

1.2.1 Weekly job meetings shall be conducted with the **Professional** and **Contractor** to evaluate progress on the project to date. Weekly progress meetings will be held on-site.

1.2.1.1 The **Professional** will be responsible for preparing weekly progress meeting agenda.

1.2.1.2 The **Professional** will be responsible for preparing weekly progress meeting minutes for distribution to meeting attendees.

1.2.2 It may periodically become necessary to have special meetings to resolve project conflicts in which all parties shall be required to attend.

1.2.3 Items to be reviewed during weekly job meetings are:

1.2.3.1 Project schedule.

1.2.3.2 Project change orders, if any.

1.2.3.3 Coordinate construction activities with the **Professional**.

1.2.3.4 Coordinate projected progress with other contractors.

1.2.3.5 Review submittal schedules, expedite as required to maintain schedule.

1.2.3.6 Maintaining of quality and work standards.

1.2.3.7 Review changes proposed by the **Owner** for:

1.2.3.7.1 Effect on Construction Schedule.

1.2.3.7.2 Effect on Completion Date.

1.2.3.8 Complete other current business

1.2.3.9 Review next week's Work items.

PART 2 – PRODUCTS

Not Used.

PART 3 – EXECUTION

3.1 NON-COMPLIANCE

3.1.1 If the **Contractor** fails or refuses to attend or otherwise comply with the project meetings requirements, the **Owner** may issue an order to stop all or part of the Work until satisfactory progress has been make to correct such deficiencies. No part of the time lost due to any such stop orders shall be made the subject of claim for extension of time or for excess costs or damages by the **Contractor**.

END OF SECTION 01 31 19

SECTION 01 33 00

SUBMITTALS

PART 1 – GENERAL

1.1 APPLICABILITY

1.1.1 This section applies to all administrative and technical submittals described herein.

1.2 GENERAL PROCEDURES

1.2.1 Submittals may be provided to the **Professional** and **Owner** electronically in Adobe® portable document format (pdf) via electronic mail.

1.2.2 A letter of transmittal shall accompany each submittal. The letter shall be addressed to the following:

Jed Chrestensen, P.E.
The Mannik & Smith Group, Inc.
200 Michigan Street, Suite 705
Hancock, MI 49930

1.2.3 At the beginning of each letter of transmittal provide a reference heading indicating the following:

a. **Owner's** Name Michigan Department of Environmental Quality
b. Project Name Hubbell Processing Area
c. Contract No. _____
d. Transmittal No. _____
e. Description _____

1.2.4 If a submitted plan or schedule deviates from the requirements of the Contract Documents, the **Contractor** shall specifically note each variation in the letter of transmittal.

1.2.5 A number shall be assigned to each submittal by the **Contractor** starting with No. 001 and thence numbered consecutively. Resubmittals shall be identified by the original submittal number followed by the suffix "A" for the first resubmittal, the suffix "B" for the second resubmittal, etc.

1.2.6 The **Contractor** shall submit two copies of all submittals to the **Professional**. With prior approval from the **Professional**, submittals may be provided via electronic mail.

1.3 SUBMITTAL PROCESSING

1.3.1 After the **Professional** completes the concurrent review, each submittal will be marked with one of the following notations:

a. Approved
b. Approved as Corrected
c. Revise and Resubmit
d. Not Approved

1.3.2 If a submittal is acceptable, it will be marked "Approved" or "Approved as Corrected". One copy of the submittal will be returned to the **Contractor**.

1.3.3 Upon return of a submittal marked "Approved" or "Approved as Corrected", the **Contractor** may conduct work in accordance with the submitted plan, schedule, or form.

1.3.4 If a submittal marked "Approved as Corrected" has extensive corrections or corrections affecting other plans or work, the **Professional** may require that the **Contractor** make the corrections indicated thereon and resubmit the plans or schedules for record

purposes. Such submittals will have the notation, “Approved as Corrected - Resubmit.”

1.3.5 If a submittal is unacceptable, two copies will be returned to the **Contractor** with one of the following notations:

1. “Revise and Resubmit”
2. “Not Approved”

1.3.6 Upon return of a submittal marked “Revise and Resubmit”, the **Contractor** shall make the corrections indicated and repeat the initial approval procedure. The “Not Approved” notation is used to indicate a plan or schedule that is not acceptable. Upon return of a submittal so marked, the **Contractor** shall repeat the initial approval procedure to resubmit the appropriately revised schedule or plan.

1.3.7 Any work performed without the “Approved” or “Approved as Corrected” plans, schedules, and forms will be at the sole responsibility of the **Contractor**.

1.3.8 Submittals shall be provided to the **Professional** well in advance of the need to begin the Site work.

1.3.9 The **Professional** will review and process all submittals within 10 business days.

1.4 INCOMPLETE or INADEQUATE SUBMITTALS

1.4.1 It is the **Contractor’s** responsibility to review submittals made by his suppliers and Subcontractors before transmitting them to the **Professional** to assure proper coordination of the Work and to determine that each submittal is in accordance with the **Contractor’s** desires and that there is sufficient information for the **Professional** to determine compliance with the Contract Documents. Incomplete or inadequate submittals will be returned for revision without review.

1.4.2 The **Contractor** shall furnish required submittals with complete information and accuracy in order to achieve required approval of an item within three submittals. All costs to the **Professional** involved with subsequent submittals requiring approval, will be back charged to the **Contractor**, at the rate of 3.5 times direct technical labor cost, by deducting such costs from payments due to the **Contractor** for Work completed.

1.5 PRE-WORK SUBMITTALS

1.5.1 Within 10 working days following the Notice to Proceed, the **Contractor** shall submit two copies of the following administrative submittals. The **Contractor** shall not initiate field activities until all of these submittals have been reviewed and accepted by the **Owner**:

1.5.1.1 Work Plan (WP).

1.5.1.2 Soil Erosion and Sedimentation Control (SESC) Implementation Plan.

1.5.1.3 Health and Safety Plan (HASP).

1.5.1.4 Access and Traffic Control Plan.

1.5.1.5 Borrow Area Restoration Plan.

1.5.1.6 Project Schedule.

1.5.1.7 Submittal Register.

1.5.1.8 Sample Daily Progress and Daily Site Safety Forms.

1.5.2 A WP shall be completed by the **Contractor** to meet the following requirements:

1.5.2.1 The **Contractor** shall submit a WP, which will identify personnel, procedures, instructions, records, and forms to be used in carrying out the requirements of this project. The WP is the means by which the **Contractor** and the **Owner**

are assured that the Work complies with the requirements of the Contract drawings and specifications.

1.5.2.2 The plan shall be adequate to cover all Work operations and should consider each stage of the project, including but not limited to sections addressing access control, access improvements and haul roads, temporary facilities, dust control, perimeter air monitoring, site preparation, ditch improvement, waste removal and disposal, waste pile management, grading, capping, and restoration of the project areas.

1.5.2.2.1 The **Contractor's** project organization structure including the **Contractor's** staffing table with names, titles, and responsibilities of personnel assigned to the Project. The **Contractor**, prior to conducting Work, must submit necessary substitutions due to change of employment status and other unforeseen circumstances in writing for acceptance.

1.5.2.2.2 The WP shall identify the **Contractor's** Certified Construction Storm Water Operator that will be assigned to the project.

1.5.2.2.3 A list of the **Contractor's** permits required to successfully complete this Contract.

1.5.2.2.4 The WP shall include a detailed description of the methods, procedures, and equipment proposed for each of the major tasks covered under this contract, including but not limited to the tasks listed in paragraph 1.5.2.2 above.

1.5.2.2.5 The **Contractor** shall identify sources of off-site borrow and provide evidence of written access from each property owner for each borrow source if commercial sources are not used. The **Contractor** shall also provide a location map for the proposed borrow source.

1.5.2.2.6 The WP shall include locations and description of management practices that will be utilized as part of the soil erosion and sedimentation control program, both temporary and permanent measures.

1.5.2.2.7 The **Contractor** shall include emergency contacts and after hours phone numbers in the WP as well as provisions for a contingency plan to be implemented in the case of an emergency.

1.5.2.2.8 The WP shall include provisions for spill control, including locations and type of spill control equipment to be utilized.

1.5.2.2.9 The WP shall include provisions for the handling of contaminated soil, contaminated water generated from dewatering and decontamination, or other activities.

1.5.2.2.10 The names of the disposal facilities to be used as a result of these specifications shall be included in the WP. The **Contractor** shall provide all appropriate permits and licenses for review by the **Owner** and the **Professional**. If necessary, Site inspections may be requested to verify adequacy and compliance status.

1.5.2.2.11 **Contractor's** proof of waste acceptance from the **Owner** approved disposal facility.

1.5.2.2.12 The WP shall contain provisions to control surface water runoff and run on, regardless of whether or not a permit is required for the Site.

1.5.2.2.13 The WP shall include a Site Plan indicating the proposed location, dimensions, and specifications of any area to be used for employee and/or vehicle/equipment parking/storage, visitor parking, material storage/lay-down, temporary facilities, the avenues of ingress/egress to the construction area, vehicle and personnel decontamination units, equipment decontamination pads, storage pads, and primary roadways within the Site. In addition, the **Contractor** shall identify the location, size, and type of vehicle and personnel decontamination units. Access roadways for fire control shall remain open at all times.

1.5.2.2.14 The WP shall include provisions for air monitoring and dust control during the performance of the Work.

1.5.3 After acceptance of the WP, the **Contractor** shall notify the **Owner** in writing of any proposed change. Proposed changes are subject to **Owner** approval.

1.5.4 Project Organization

1.5.4.1 The **Contractor** shall designate a Site Manager, who shall be responsible for overall management of the Work and have authority to act for the **Contractor**.

1.5.4.2 The **Contractor** shall also provide a Certified Construction Storm Water Operator for the project. The Certified Operator shall be identified in the WP.

1.5.4.3 The Site Manager for this Contract shall be an individual experienced in remedial excavation, dewatering, backfilling, and compaction and whose responsibility is to insure compliance with the Contract plans and specifications.

1.5.4.4 The Site Manager shall be on-site whenever Work is in progress.

1.5.4.5 All on-site **Contractor** and subcontractor staff shall be under the direction of the Site Manager at all times.

1.5.4.6 The **Contractor's** personnel performing the Work shall be fully qualified by experience and technical training to perform their assigned responsibilities and shall be hired directly by and Work for the **Contractor**.

1.5.5 Air Monitoring Plan

1.5.5.1 The WP shall include as a separate appendix a project specific Air Monitoring Plan. The **Contractor's** air monitoring plan shall be submitted to the Professional and must be found acceptable.

1.5.5.2 The air-monitoring plan at a minimum shall include perimeter air monitoring including real-time particulate monitoring and dedicated portable air sampling pumps with cassettes for asbestos fiber sampling. A minimum of six locations shall be monitored daily when work activities are disturbing soil, debris, and waste piles, and when vehicles or equipment are driving across uncapped ground.

1.5.5.3 The air-monitoring plan shall include personnel monitoring for asbestos fibers as required for asbestos workers conducting renovation work.

1.5.5.4 Placement of air monitoring devices shall be along the property perimeter. Two permanent stations shall be established, with one being along the south fence

line adjacent to the neighboring business and one along the south portion of the west fence line closest to the nearby residence. The remaining four locations will be determined daily by the **Contractor** based on the prevailing wind direction and as approved by the **Professional**. At least one location shall be upwind of the daily work area.

1.5.5.5 Air monitoring for asbestos fibers shall include field blanks.

1.5.5.6 The real time particulate monitoring shall be completed on an as needed basis but not less than in one (1) hour intervals during the aforementioned activities. The real time monitoring shall include at a minimum, perimeter dust monitors with data logging capability. The air monitors shall be placed at representative upwind and downwind locations at the limits of Work. The real time monitoring data shall be used by the **Contractor's** Site Safety Manager to assist with evaluating on-site conditions as they relate to health and safety issues during construction efforts and to determine if migration of airborne contaminants is occurring.

1.5.5.7 The air monitoring data shall be submitted to the **Professional** on a daily basis and in accordance with the approved plan for review and comment. If the hourly data suggest dust is reaching the perimeter fence line the **Professional** shall be immediately notified and appropriate action shall be taken by the **Contractor** to mitigate dust commensurate with the readings obtained. Dust concentrations meeting or exceeding one-half of the OSHA permissible exposure limits or the action levels identified in the **Contractor's** HASP, whichever are lower, shall be grounds for a temporary work stoppage until the source of the dust is mitigated.

1.5.6 SESC Implementation Plan

1.5.6.1 The **Contractor** shall utilize the proposed Site Preparation and Restoration plans from the Drawing sets to prepare and submit a SESC Implementation Plan to the permit issuing agency in order to obtain a SESC permit for the project. The SESC Implementation Plan shall outline the **Contractor's** means and methods for implementing the SESC provisions prescribed in these specifications and as required by Part 91 of NREPA.

1.5.7 HASP

1.5.7.1 The **Contractor's** Site-specific HASP is provided for information only to the reviewers and for implementation by the **Contractor**. The **Owner** and the **Professional** may review for completeness. Comments will be provided to the **Contractor**, but no approval of the HASP will be granted. Following inclusion of the comments, the **Owner** will accept the HASP.

1.5.7.2 The Site-specific HASP shall meet the requirements, at a minimum, of the following:

1.5.7.2.1 29 CFR 1910: Safety and Health Regulations for General Industry, United States Occupational Safety and Health Administration (OSHA), as amended.

1.5.7.2.2 Standard Operating Safety Guides, U.S. EPA, November 1984.

1.5.7.2.3 Occupational Safety and Health Guidance Manual for Hazardous Waste Site Activities, NIOSH Publication No. 85-115, October 1985.

1.5.7.2.4 29 CFR 1926: Safety and Health Regulations for Construction, OSHA, as amended.

1.5.7.3 The HASP is an enforceable document that shall guide the activities of the **Contractor's** personnel and all subcontractors' personnel. The HASP shall define Site-specific safety provisions necessitated by all project activities of the **Contractor** and subcontractors.

1.5.7.4 Hazard Communication Program: A hazard communication program shall be utilized in accordance with 29 CFR Part 1926.59.

1.5.7.5 The **Contractor** and **Contractor's** safety officer shall be solely responsible for the implementation and monitoring of the HASP. The HASP shall address, but not be limited to, the following items:

1.5.7.5.1 *Site Characterization*: Provide a description of past activities at the Site and planned construction activities, including specific tasks required to complete the Work.

1.5.7.5.2 *Hazards*: Provide a list and description of potential chemical, biological, and physical hazards associated with the Site, Site contaminants including asbestos, and construction activities to be conducted.

The groundwater and soil/debris encountered during the Work contains organic and inorganic contaminants that exceed select MDEQ Part 201 Criteria. Analytical results from samples collected from the Site are summarized and included **Attachment III**. These and other potential chemical, biological, and physical hazards associated with the Site shall be addressed in the **Contractor's** HASP.

1.5.7.5.3 *Planning*: Describe the proposed health and safety organization and procedures for continuous updating of the HASP based on actual Site conditions. The **Owner** shall be notified in writing of any proposed changes. This Section shall also identify Site operating procedures.

1.5.7.5.4 *Training*: Identify the types and level of training provided to all Site workers and other on-site personnel prior to their assignment to this project. Include a list of all personnel that meet the training and medical surveillance requirements of 29 CFR 1910.120, Hazardous Waste Operations and Emergency Response (HAZWOPER). HAZWOPER training is required for all workers that may encounter hazardous substances at the site during remediation efforts. Provide the name, qualifications, and responsibilities of the Site Safety Officer and all health and safety staff. Provide copies of appropriate certifications for all individuals who will be involved in the Work. No **Contractor** personnel shall participate in activities that could potentially expose them to contaminants at the Site until proper and up-to-date training certification has been submitted to the **Owner**.

1.5.7.5.5 *Medical Monitoring*: All on-site personnel involved in waste removal work, handling and disposal of waste and contaminated materials, and any workers that may contact contaminated media shall be enrolled in an ongoing medical monitoring program as identified in 29 CFR 1910, as amended, and shall be appropriately certified for the Work. The HASP shall describe the details of the **Contractor's** medical monitoring program. Provide documentation of program participation by all appropriate personnel to the **Owner**.

This documentation shall include a copy of the physician's statement for each appropriate employee regarding any restrictions that the employee may have relative to the nature of the Work to be conducted at the Site.

1.5.7.5.6 *Personal Protective Equipment*: Identify the means of personnel protection, including use of engineering controls, to be utilized for each Site activity as defined in U.S. EPA Standard Operating Safety Guides. Identify conditions that would require increasing the level of protection during each activity. Procedures for protecting personnel from other physical hazards (i.e., heat stress, hypothermia, excessive noise, etc.) shall also be identified in this Section of these specifications.

1.5.7.5.7 *Site Emergencies*: Provide a Contingency Plan that sets forth policy and procedures for responding to emergency situations, such as fire, physical injury, release of toxic materials, etc.

1.5.7.5.8 *Waste Handling Procedures*: Identify procedures that will be used to ensure safe waste handling during the removal, transfer, dewatering, loading, transportation, grading, consolidation, and capping activities.

1.5.7.5.9 *Personnel Decontamination*: The **Contractor** shall provide an uncontaminated changing area for personnel. No person shall leave a contaminated Work area unless he or she has removed or decontaminated all protective clothing. No protective equipment (including boots) or tools shall be worn or carried out of the project area unless properly decontaminated. All personnel entering or leaving the contamination reduction zone shall pass through the decontamination area to don or remove protective equipment.

1.5.7.5.10 *Equipment Decontamination*: Any item taken into the exclusion zone shall be assumed to be contaminated and shall be decontaminated before the item leaves the contamination reduction zone. The **Contractor** shall set up controls to assure that contaminated items do not leave the contamination reduction zone. Personnel performing decontamination shall be dressed at the appropriate level of protection to avoid personal contamination.

1.5.7.5.11 *Hot Work – Welding and Cutting*: The **Contractor** shall establish procedures for performing hot work, including but not limited to riveting, welding, cutting, burning, and heating, or any other activity capable of providing a source of ignition. Additional requirements related to hot work are defined in 29 CFR 1926 Subpart J.

1.5.7.5.12 No vehicle shall leave the Work area with contaminated waste material clinging to the wheels or any part of the vehicle so that it has the potential for being deposited at any location other than a disposal facility. Decontamination of vehicles and equipment used in contaminated Work areas shall include, but not be limited to, the following procedures: physical removal of solid materials and a completed liquid wash. The decontamination area shall include a contaminated water collection system. Water generated as a result of decontamination activities that does not contain any additives will be allowed to be applied to the ground surface within the area of contamination. Decontamination water containing any additives or water that cannot be applied to the ground surface within the

area of contamination shall be contained, characterized, and properly disposed. Materials generated during decontamination shall be placed under the clean soil cap prior to placement or properly disposed. The disposal shall be manifested in accordance with these specifications. Disposal of water generated by decontamination activities shall be disposed of by the **Contractor** at no additional cost to the **Owner**.

1.5.7.5.13 The HASP shall specifically address the regulatory requirements for workers and activities at sites containing asbestos.

1.5.7.5.14 The **Professional** and **Owner** may require revisions to the HASP, however extensions to the time period of this Contract will not be granted if caused by delays in developing an acceptable HASP.

1.5.7.5.15 The **Contractor** shall conduct all operations in accordance with the HASP. Disregard for the provisions of the HASP shall be deemed just and sufficient cause for suspension of the Work and/or removal of **Contractor's** personnel without compromise or prejudice to the rights of the **Owner** or the **Professional**.

1.5.8 Access and Traffic Control Plan

1.5.8.1 The Access and Traffic Control plan shall outline details summarizing and provide drawings depicting the **Contractor's** plan for managing on and off-site traffic in addition to the requirements outlined in **Section 01 50 00**, Paragraph 1.5. The Traffic Control Plan shall incorporate text and drawings that detail the **Contractor's** means and methods for maintaining and protecting traffic on all affected roads during the construction period, including from the borrow source to the Site. The Traffic Control Plan shall describe the measures for the protection and diversion of traffic and identification of specific personnel to be used as watchman or flaggers. The Access and Traffic Control Plan may be included as a separate appendix to the project WP.

1.5.9 Borrow Area Restoration Plan

1.5.9.1 The **Contractor** shall provide a Borrow Area Restoration Plan that details the soil erosion and sedimentation control (SESC) measures and restoration plan for the clean sandy loam borrow area. The plan shall address at a minimum, in addition to the above items, clearing and grubbing, disposition of cleared and grubbed material, topsoil stripping and staging, final grading plans, re-spreading salvaged topsoil, and seeding and mulching or other permanent SESC measures. The plan shall include a copy of the SESC permit issued for the borrow source, if applicable. Incorporation of edits required by the **Professional** and/or the **Owner** to the plan does not relieve the **Contractor** of the responsibility for completing the specified work. The Borrow Area Restoration Plan may be included as a separate appendix to the project WP.

1.5.10 Project Schedule

1.5.10.1 The Project Schedule is intended to show: (a) the priority and sequencing by which the **Contractor** intends to execute the Work (or Work remaining) to comply with Contract Times, those sequences of Work indicated in or required by the Contract Documents; (b) how the **Contractor** anticipates foreseeable events, Site conditions and all other general, local and prevailing conditions that may in any manner affect cost, progress, schedule, performance and furnishing of the Work; and (c) how the Means and Methods chosen by the

Contractor translate into activities and sequencing; and (d) the actual timing and sequencing of completed Work.

Contractor must resolve the issues arising from the review by the **Professional** and/or the **Owner** and submit Project Schedule Revisions. The review of the Project Schedule by the **Professional** or the **Owner** does not create or impose on the **Owner** or the **Professional** any responsibility for the timing, planning, scheduling or execution of the Work or the correctness of any such Project Schedule detail. The **Contractor** must update the schedule a minimum of every two weeks. The correctness of Project Schedule remains the sole responsibility of the **Contractor**.

1.5.10.2 Provide a Project Schedule that conforms to the requirements below, unless otherwise approved by the **Owner**.

1.5.10.3 The schedule shall be formatted as a Gantt Chart and shall contain:

1.5.10.3.1 Administrative and technical submittal dates and required approval dates.

1.5.10.3.2 After starting Work, the **Contractor** shall continue the Work to completion unless delays are approved by the **Owner**.

1.5.10.3.3 Work activities and durations with expected start and finish dates for each phase of the Work on each property (at a minimum Submittals, Permitting, Site Preparation, Ditch Improvement, Waste Pile Management, Waste Characterization and Disposal, Grading, Capping, Seeding and Mulching, Site Restoration, Final As-Built Survey, Demobilization, SESC Maintenance, and Project Closeout Activities). If Alternate Work is accepted the **Contractor** shall update the Project Schedule.

1.5.10.3.4 Procedures for updating schedules include:

1.5.10.3.4.1 Update schedules a minimum of every two weeks unless otherwise specified or directed by the **Owner**.

1.5.10.3.4.2 Submit updated schedules at alternating progress meetings. If a schedule remains unchanged, submit a written notice to that effect.

1.5.11 Submittal Register

1.5.11.1 The **Contractor** shall submit a list of the submittals (Submittal Register) required in these specifications. The list shall include all submittals through project closeout. The frequency of the submittal or due date shall also be included.

1.5.12 Sample Daily Progress and Daily Site Safety Forms

1.5.12.1 The Daily Progress Forms shall outline the Work accomplished during the reporting period and Work to be accomplished during the subsequent reporting period; problems, real or anticipated, which should be brought to the attention of the **Professional**; and notification of any significant deviation from previously agreed upon WP.

1.6 OTHER SUBMITTALS

1.6.1 Reports/Forms

1.6.1.1 Daily Work Log: The **Contractor** shall maintain a daily log of Work activities, including the Work of suppliers and subcontractors. This log shall be in an acceptable form and indicate a description of trades working on the project, the number of personnel working, equipment, the weather conditions encountered, and any delays encountered, and acknowledgment of deficiencies noted along with the corrective actions taken on current and previous deficiencies. In addition, the log shall include factual evidence that required activities have been performed, including but not limited to the following:

1.6.1.1.1 Type and number of activities.

1.6.1.1.2 Nature of defects, causes for rejection, etc.

1.6.1.1.3 Corrective actions taken.

1.6.1.1.4 Proposed remedial action.

1.6.1.1.5 Any spills that occurred.

The log shall cover both conforming and defective or deficient features and shall include a statement that supplies and materials incorporated in the Work comply with the Contract. Legible copies of the log shall be furnished to the **Owner** or the **Professional** upon request. The **Contractor** shall keep records of the Pre-final and Final Inspections, including a "punch list" of items that do not conform to the approved plans and specifications. For each item on the list, the **Contractor** shall document corrective actions taken.

1.6.1.2 Waste Transportation/Disposal Manifests: Waste transportation and disposal will be fully manifested as outlined in **Section 02 61 00** of these specifications. The **Owner** or the **Professional** will verify and sign all waste profiles and manifests prior to transportation. The **Contractor** shall not sign waste profiles or manifests. No waste materials shall leave the Site unless they have been characterized, properly labeled and placarded, and are transported under manifest procedures en route to a proper disposal facility. All completed original manifests shall be returned to the **Professional** within five (5) working days of disposal of the individual loads at the licensed disposal facility. A Waste Manifest Log shall be maintained on-site, and shall include the following information for each load:

1.6.1.2.1 Date and time.

1.6.1.2.2 Material being transported off-site.

1.6.1.2.3 Appropriate cubic yards, tonnage, or gallons.

1.6.1.2.4 Destination.

1.6.1.2.5 Vehicle Number.

1.6.1.2.6 Driver.

1.6.1.2.7 Manifest Number.

1.6.1.2.8 Copy of delivery ticket from disposal facility.

At the conclusion of the project or at the request of the **Owner**, the waste manifest log shall be submitted to the **Owner** as part of the Project Record Documents.

1.6.2 The **Contractor** shall prepare and submit Technical Submittals as required by the Specifications.

1.6.2.1 **Shop Drawings, Sample and Technical: Contractor** must submit to the **Professional** (a) an electronic file(s) of the drawing(s) and mylar or sepia together with the blue line drawings of all Shop Drawings; (b) all required samples; and (c) all other technical submittals (test, results, test and safety procedures, etc.) that are required by the Contract Documents. Each submittal must be stamped/certified to indicate that the **Contractor** has satisfied the requirement of the Contract Documents and all trade construction Submittals must be coordinated, reviewed and stamped/approved by the **Contractor** before submission to the **Professional**.

1.6.2.2 Before each submission, the **Contractor** must (a) determine and verify all field measurements, quantities, dimensions, instructions for installation and handling of equipment and systems, installation requirements (including location, dimensions, access, fit, completeness, etc.), materials, color, catalog numbers and other similar data as to correctness and completeness, and (b) have reviewed and coordinated that technical Submittal with other technical submittals and the requirements of the Contract Documents.

1.6.2.3 The **Contractor** must give the **Professional** specific written notice of any variation from the requirements of the Contract Documents. Neither the **Owner**'s authority to review any of the Submittals by the **Contractor**, nor the **Owner**'s decision to raise or not to raise any objections about the Submittals, creates or imposes any duty or responsibility on the **Owner** to exercise any such authority or decision for the benefit of the **Contractor**/Subcontractor/Supplier, any surety to any of them or any other third party. The **Contractor** is not relieved of responsibility for errors or omissions in shop drawings, product data, samples, or similar submittals just because the **Professional** approved them.

1.7 AS-BUILT DOCUMENTS

1.7.1 The finalized As-Built/Record Documents and approved Submittals are required for processing final payment to the **Contractor**.

1.7.2 The **Contractor** shall maintain one current record copy of all specifications, drawings, addenda, change orders, and shop drawings at the Site. The documents shall be kept current, in good order, and annotated to show all changes made during the construction process. These As-Built Documents shall be available for review by the **Professional** during all normal working hours.

1.7.3 The **Contractor** shall submit to the **Owner** one set of prints of the drawings and specifications and one electronic copy of the drawings and specifications. Final surveying requirements are as indicated in **Section 02 21 00**. Drawings shall be in AutoCAD 2009 format or newer, which have been marked "As-Built Documents" and shall contain all changes, additions or deviations from the original set of Documents that have been incorporated into the Work. These changes shall be clearly marked on the "As-Built Documents." The **Contractor** is responsible for the accuracy of these As-Built Documents.

1.7.4 The **Contractor** shall include As-Built Documents in the submitted Schedule of Values.

1.7.5 The **Professional** will provide the **Contractor** with electronic versions of the existing Site layout at the start of project.

PART 2 – PRODUCTS

Not Used.

PART 3 – EXECUTION

3.1 NON-COMPLIANCE

3.1.1 If the **Contractor** fails or refuses to comply with the submittal procedures promptly, the **Owner** may issue an order to stop all or part of the Work until satisfactory progress has been make to correct such deficiencies. No part of the time lost due to any such stop orders shall be made the subject of claim for extension of time or for excess costs or damages by the **Contractor**.

END OF SECTION 01 33 00

SECTION 01 35 00

SPECIAL PROJECT PROCEDURES

PART 1 – GENERAL

1.1 SIGNAGE

1.1.1 The **Contractor** must post appropriate construction signs to advise the occupants and visitors of the limits of construction work areas, hardhat areas, excavations, construction parking and staging areas, one-lane traffic, etc. The **Contractor** must maintain safe and adequate pedestrian and vehicular access to fire hydrants, road shoulders, and neighboring residences and establishments.

1.2 BARRIERS AND ENCLOSURES

1.2.1 The **Contractor** must furnish, install and maintain as long as necessary and remove when no longer required adequate barriers, warning signs or lights at all dangerous points throughout the Work for protection of property, workers and the public. The **Contractor** must hold the State of Michigan harmless from damage or claims arising out of any injury or damage that may be sustained by any person or persons as a result of the Work under the Contract.

1.2.2 **Street Barricades**: The **Contractor** must erect and maintain all street barricades, signal lights and lane change markers during the periods that a traffic lane is closed or the road shoulder is closed for their operations. There must be full compliance with rules and ordinances respecting such street barricading and devices must be removed when hazard is no longer present.

1.3 CONSTRUCTION AID

1.3.1 **Utilities**: The **Contractor** is responsible for identifying and protecting utilities. The **Contractor** must provide adequate bracing and support for any excavated or under-mined utilities.

1.4 HAZARDOUS MATERIAL PROJECT PROCEDURES

1.4.1 The **Contractor** must use, handle, store, dispose of, process, transport and transfer any material considered a Hazardous Material in accordance with all Federal, State and local Laws. If the **Contractor** encounters material not previously identified in the contract documents that is reasonably believed to be a Hazardous Material and which may present a substantial danger, the **Contractor** must immediately stop all affected work, give written notice to the **Owner** of the conditions encountered, and take appropriate health and safety precautions.

1.4.2 This project has been identified as having a possibility of containing Hazardous Waste materials to be legally removed from the Project job site in order to complete the Work. Friable asbestos and non-friable asbestos that may become friable by the earth work operations may be encountered. The **Contractor** must contact the Air Quality Division, Department of Environmental Quality, for a permit as necessary and furnish all training, labor, materials, services, insurance, and equipment necessary to carry out the removal and/or renovation operations of all Hazardous Materials at the Project job site, as identified

by the Scope of Work, or encountered on the Project job site, in accordance with State and Federal Hazardous Waste Codes.

1.4.3 Environmental Hazards (air, water, land and liquid industrial) are handled by the Waste and Hazardous Materials Division, MDEQ in carrying out the requirements of the Federal Environmental Protection Agency (EPA). For general information and/or a copy of the latest regulations and publications call (517) 335-2690.

1.4.4 The Michigan Occupational Safety and Health Administration (MIOSHA) provides protection and regulations for the safety and health of workers. The Department of Energy, Labor and Economic Growth provides for the safety of workers. The Department of Community Health provides for the health of workers (517/373-3740) (TDD 517/373-3573)

1.4.4.1 The **Contractor** must post any applicable State and/or Federal government regulations at the job site in a prominent location.

1.4.4.2 The **Contractor** must be responsible for training their workers in safe work practices and in proper removal methods when coming in contact with hazardous materials and chemicals.

1.4.5 Applicable Regulations

1.4.5.1 Natural Resources and Environmental Protection Act – PA 451 of 1994, as amended, including Part 111 – Hazardous Waste Management, Part 121 – Liquid Industrial Waste and Part 147 – PCB compounds.

1.4.5.2 RCRA, 1976 - Resource Conservation and Recovery Act: This federal statute regulates generation, transportation, treatment, storage or disposal of hazardous wastes nationally.

1.4.5.3 TSCA, 1979 – Toxic Substances Control Act: This statute regulates the generation, transportation, storage and disposal of industrial chemicals such as PCBs.

1.4.6 Definitions: Hazardous substances are ignitable, corrosive, reactive, and/or toxic, based on their chemical characteristics.

1.4.6.1 Under Federal and Michigan Law, a Small Quantity Generator of hazardous waste provides from 220 to less than 2,000 lbs./month or never accumulates 2,200 lbs. or more.

1.4.6.2 A Large Quantity Generator of hazardous waste provides 2,200 lbs. or more/month or accumulates above 2,200 lbs.

1.4.7 Disposals: To use an off-site hazardous waste disposal facility, the **Contractor** must use the Uniform Hazardous Waste Manifest (shipping paper).

1.4.8 Small quantities of hazardous waste may not be disposed of in sanitary landfills used for solid waste.

1.4.9 Federal, State and local Laws and regulations may apply to the storage, handling and disposal of Hazardous Materials and wastes at each State Agency. Contact the **Environmental Assistance Center** of the MDEQ at **1-800-662-9278**, Fax to: 517-335-4729 or e-mail from the webpage http://www.deq.state.mi.us/eforms/deq-emailinquiry.html for general MDEQ information including direct and referral assistance on air, water and wetlands permits; contaminated site clean-ups; underground storage tank removals and remediation; hazardous and solid waste disposal; pollution prevention and recycling; and compliance-related assistance. The Center provides businesses, municipalities, and the general public with a single point of access to MDEQ's environmental programs.

Topic	Agency and Telephone Number
Small quantity hazardous waste	Waste Management and Radiological Protection Division, MDEQ Management (517) 335-2690 in Lansing, or District or Certified County Health Departments
Liquid industrial waste disposal	Waste Management and Radiological Protection Division, MDEQ (hazardous and non-hazardous) (517) 335-2690 in Lansing, or District Office
Disposal of wastewater into sewer	Contact the superintendent of your wastewater municipal sanitary sewers treatment plant for permission
Discharges to surface water such as through a drain pipe or wastewater discharge	Water Bureau, MDEQ (517) 241-1300 in Lansing, or District Office
Discharges to groundwater, including septic systems	Water Bureau, MDEQ (517) 241-1300 in Lansing, or District Office, or County Health Departments (if less than 10,000 gallons/day)
Material storage permits	Waste Management and Radiological Protection Division, MDEQ (517) 335-2690 in Lansing, or District Office
Pollution Incident Prevention Plans (PIPP Plans)	Water Bureau, MDEQ (517) 241-1300 in Lansing, or District Office County Health Departments assisting w/groundwater program administration
Hazard Communication Standards	Occupational Health Division, (for chemicals in the work place) Michigan Department of Community Health (517) 332-1608
Burning of waste oil and other discharges to the air	Air Quality Division, MDEQ (517) 335-6290 in Lansing, or District Office
Registration of underground fuel storage tanks	Dept. of Licensing & Regulatory Affairs (517) 335-7210
Installation, inventory, testing & other requirements for above ground and underground storage	Dept. of Licensing & Regulatory Affairs (517) 335-7210

Local fire prevention regulations and codes (including chemical storage requirements)	Local fire chief or fire marshal
Building and outdoor storage requirements (including setbacks)	Local government building or zoning official

END OF SECTION 01 35 00

SECTION 01 41 00

REGULATORY REQUIREMENTS

PART 1 – GENERAL

1.1 REGULATIONS:

1.1.1 **Laws:** The **Contractor** and its Subcontractors/Suppliers must comply with all Federal, State, and local Laws applicable to the Work and Site.

1.1.2 **Codes:** All Works must be provided in accordance with the State Construction Code Act, 1972 PA 230, as amended, MCL 125.1501 et seq,, International Building and Residential Codes and all applicable Michigan construction codes and fire safety including but not limited to: Michigan Building Code, Michigan Residential Code, Michigan Uniform Energy Code, Michigan Electrical Code, Michigan Rehabilitation Code for Existing Buildings, Michigan Mechanical Code, Michigan Elevator Code and Michigan Plumbing Code. If the **Contractor** observes that any Contract Document conflicts with any Laws or the State Construction Code or any permits in any respect, the **Contractor** must promptly notify the **Professional** in writing. If the **Contractor** provides any Work knowing or having to reason to know of such conflict, the **Contractor** must be responsible for that performance.

1.1.3 **Permits:** All required construction permits must be secured and their fees including inspection costs must be paid by the **Contractor**. The time incurred by the **Contractor** in obtaining construction permits must constitute time required to complete the Work and does not justify any increases to the Contract Time or Price, except when revisions to the Drawings and/or Specifications required by the permitting authority cause the Delays. The **Contractor** must pay all charges of Public Utilities.

1.1.4 **Taxes:** The **Contractor** must pay all Michigan sales and use taxes and any other similar taxes covering the Work that are currently imposed by legislative enactment and as administered by the Michigan Department of Treasury, Revenue Division. If the **Contractor** is not required to pay or bear the burden or obtains a refund of any taxes deemed to have been included in the Bid and Contract Price, the Contract Price must be reduced by a like amount and that amount, whether as a refund or otherwise, must ensure solely to the benefit of the State of Michigan.

1.1.5 **Safety and Protection:** The **Contractor** and its Subcontractors/Suppliers must comply with all applicable Federal, State and local Laws governing the safety and protection of persons or property, including, but not limited to the Michigan Occupational Safety and Health Act (MIOSHA), 1974 PA 154, as amended, MCL 408.1001 et seg., and all rules promulgated under the Act. The **Contractor** is responsible for all damages, injury or loss to the Work, materials, equipment, fines, penalties as a result of any violation of such Laws, except when it's due to the fault of the Drawings or Specifications or to the Act, error or omission of the **Owner** or **Professional**. The **Contractor** is solely responsible for initiating, maintaining, and supervising all safety precautions and programs and such responsibility must continue until such time as the **Professional** is satisfied that the Work, or Work inspected, is completed and ready for final payment. In doing the Work, the **Contractor** must take all necessary precautions for the safety of, and must erect and maintain all necessary safeguards and provide the necessary protection to prevent damage, injury or loss to: (a) all employees on the Work and other persons who may be affected by the Work, (b) all the Work and materials and equipment to be incorporated into the Work, whether stored on or off the Site, and (c) other property at or adjacent to the Site, including trees, shrubs, lawns, walks, pavements, roadways, structures, utilities,

and Underground Utilities not designated for removal, relocation, or replacement. In the event of severe weather, the **Contractor** must inspect the Work and the Site and take all reasonably necessary actions and precautions to protect the Work and ensure that public access and safety are maintained.

1.1.6 **Fire Hazard Conditions:**

1.1.6.1 The fire hazard classification of finish materials where used in the specification must be listed in the following table:

CLASS	FLAME SPREAD	FUEL CONTRIBUTION	SMOKE DEVELOPED
A	0-25	0-35	0-50
B	26-75	36-75	51-125
C	76-200	76-200	126-200

1.1.6.2 Classification must be determined by tunnel test in accordance with National Fire Protection Association NFPA-255), American Society for Testing Materials (ASTM-84) or Underwriters' Laboratories, Inc. (UL-723).

1.1.7 **Michigan Right-To-Know Law:** The **Contractor** and its Subcontractors/Suppliers must comply with MIOSHA, Michigan Right-to-Know Law, Public Act 80 of 1986 (Act) and the rules promulgated under it. The Act places certain requirements on employers to develop a communication program designed to safeguard the handling of hazardous chemicals through labeling of chemical containers and development and availability of Material Safety Data Sheets (MSDS), and to provide training for employees who work with these chemicals and develop a written hazard communications program. The Act also provides for specific employee rights, including the right to be notified of the location of MSDS and to be notified at the Site of new or revised MSDS within five Business Days after receipt and to request MSDS copies from their employers. The **Contractor**, employer or Subcontractor must post and update these notices at the Site.

1.1.8 **Environmental Requirements:** The **Contractor** and its Subcontractors/Suppliers must comply with all applicable Federal, State, and local environmental Laws, standards, orders or requirements including but not limited to the National Environmental Policy Act of 1969, as amended, Michigan Natural Resources and Environmental Protection Act, P.A. 451 of 1994, as amended, the Clean Air Act, as amended, the Clean Water Act, as amended, the Safe Drinking Water Act, as amended, Pollution Prevention Act, as amended, Resource Conservation and Recovery Act, as amended, Toxic Substances Control Act as amended, National Historic Preservation Act, as amended and Energy Policy and Conservation Act and Energy Standards for Buildings Except Low-Rise Residential Buildings, ANSI/ASHRAE/IESNA Standard 90.1-1999.

1.1.9 **Nondiscrimination:** For all State Contracts for goods or services in amount of $5,000 or more, or for Contracts entered into with parties employing three or more employees; in connection with the performance of Work under this Contract, the **Contractor** and its Subcontractors and Suppliers must comply with the following requirements:

1.1.9.1 Not to discriminate against any employee or applicant for employment because of race, color, religion, national origin, age, sex, height, weight or marital status and take affirmative action to ensure that applicants are employed and the employees are not subject to such discrimination. Such action must include, but is not be limited to, the following: employment, upgrading, demotion or transfer; recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training.

1.1.9.2 To state in all solicitations or advertisements for employees that all qualified applicants will receive consideration for employment without regard to race, color, religion, national origin, age, sex, height, weight or marital status.

1.1.9.3 To send, or have its collective bargaining representative send, each labor union or representative of workers with which there is a collective bargaining agreement or other contract or understanding, a notice advising the labor unions or workers' representative of the commitments under this provision.

1.1.9.4 To comply with the Elliot-Larsen Civil Rights Act, 1976 PA 453, as amended, MCL 37.2201 et seq.; the Michigan Persons With Disability Civil Rights Act, 1976 PA 220, as amended, MCL 37.1101 et Seq.; and all published rules, regulations, directives, and orders of the Michigan Civil Rights Commission (MCRC) which may be in effect on or before the date of Bid opening.

1.1.9.5 The **Contractor** must furnish and file compliance reports within the times, and using the forms prescribed by the MCRC. Compliance report forms may also elicit information as to the practices, policies, programs, and employment statistics of the **Contractor** and Subcontractors. The **Contractor** must permit access to Records by the MCRC and its agent for purposes of ascertaining compliance with the Contract and with rules, regulations, and orders of the MCRC.

1.1.9.6 If, after a hearing held under its rules, the MCRC finds that the **Contractor** has not complied with the nondiscrimination requirements of the Contract Documents, MCRC may, as part of its order, certify its findings to the Administrative Board of the State of Michigan, which may order the cancellation of the Contract and/or declare the **Contractor** ineligible for future contracts with the State until the **Contractor** complies with the MCRC's order.

1.1.10 **Michigan Residency for Employees:** Fifty percent of the persons employed on the Work by the **Contractor** must have been residents of the State of Michigan for not less than one year before beginning employment on the Work. This residency requirement may be reduced or waived to the extent that Michigan residents are not available or to the extent necessary to comply with the federal funds (if any) used for the Project. This requirement does not apply to employers who are signatories to collective bargaining agreements that allow for the portability of employees on an interstate basis.

REFERENCES

PART 1 – GENERAL

1.1 REFERENCES

1.1.1 References may be made in an abbreviated alpha numeric form to specific standard specifications, reference publications and building codes of federal or state agencies, manufacturers, associations or trade organizations. Such references will be identified by the alphabetic abbreviation which identifies the government agency, the association or organization followed by the rule, section or detail number that are to form a part of these specifications, the same as if fully set forth herein, and must be of latest issued date in effect three months before the Bid opening date shown on the Proposal and Contract. The abbreviations used are referred to as follows:

Abbreviation	Agency, Association or Organization
ACI	American Concrete Institute
AISC	American Institute of Steel Construction, Inc.
AMCA	Air Moving and Conditioning Association
ANSI	American National Standards Institute, Inc.
ASHRAE	American Society of Heating, Refrigerating and Air Conditioning Engineers
ASME	American Society of Mechanical Engineers
ASSE	American Society of Sanitary Engineering
ASTM	ASTM International
AWS	American Welding Society
AWWA	American Water Works Association
BOCA	Building Officials and Code
CLFMI	Chain Link Fence Manufacturer's Institute
CISPI	Cast Iron Soil Pipe Institute
CRSI	Concrete Reinforcing Steel Institute
CS	Commercial Standard
F/M	Factory Mutual Research Corporation
FS	Federal Specifications
HEW	United States Department of Health Education and Welfare
MDOT	Michigan Department of Transportation
NFPA	National Fire Protection Association
NSF	National Sanitation Foundation Testing Laboratory, Inc
NSWMA	National Solid Waste Management Association
PCA	Portland Cement Association
PDI	Plumbing and Drainage Institute
SMACNA	Sheet Metal & Air Conditioning Contractors
UL	Underwriters Laboratories, Inc
USDC	United States Department of Commerce

SECTION 01 45 00

QUALITY CONTROL

PART 1 – GENERAL

1.1 MATERIALS CERTIFICATION

1.1.1 For certain products, assemblies, and materials, in lieu of on-site sampling and testing procedures, the **Owner** will accept from the **Contractor** the manufacturer's certification, with respect to the product(s) involved, upon the conditions set forth in the following paragraphs:

1.1.1.1 Certification shall state that the named product conforms to the specifications and that representative samples have been sampled and tested as specified.

1.1.1.2 Certification shall be accompanied with a certified copy of the test results.

1.1.1.3 The certification shall give name and address of the manufacturer and the testing agency, the date of test, and shall set forth the means of identification which will permit field determination of the products delivered to the project as being one product covered by the certification.

1.1.1.4 The certification shall be duplicated with one (1) copy sent with shipment of the covered product to the **Contractor** and one (1) copy sent to the **Professional**.

1.1.1.5 The **Owner** will not be responsible for any additional costs for certification or for any costs of sampling and testing.

1.2 SUBMITTALS

1.2.1 The **Professional** and **Owner** shall be provided copies of all laboratory analytical and geotechnical analysis reports for review and rejection or approval in advance of when material is needed at the site. The **Contractor** shall plan accordingly, so as not to delay the project schedule.

1.3 TESTING LABORATORY AND FIELD SERVICES

1.3.1 All tests required by the **Owner** must fulfill ASTM, ANSI, Commercial and other Standards for testing. The **Contractor** must submit a minimum of two copies of each test report to the **Professional** for evaluation and subsequent distribution. The following general classifications of Work require submission of test reports and/or certificates of inspection. Additional submissions may be requested by the **Professional** at any time.

Item of Work	Test Type	Section Number
Imported Cap Material	Gradation	01 45 00 and 31 22 23
Imported Cap Material	Laboratory Analytical Testing	01 45 00 and 31 22 23
Haul Road Gravel	Gradation	01 45 00 and 31 22 23
1 to 3-Inch Crushed Stone	Gradation	01 45 00 and 31 22 23
Rip-Rap	Gradation	01 45 00 and 31 22 23

1.3.2 Costs for all required testing are the responsibility of the **Contractor**.

1.3.3 **Imported Fill – Laboratory Analytical Testing**: Before placement of any fill, certification that each off-site material to be used (cap material and roadway gravel) is uncontaminated and does not exceed MDEQ Part 201 Generic Residential Cleanup Criteria Requirements for Response Activity (December 30, 2013) or updated criteria in effect at the time the work occurs shall be provided. The following analytical tests will be required. Detection limits must meet MDEQ requirements for comparison to Part 201 Generic Residential Cleanup Criteria and Screening Levels and be in compliance with the most recent revision of MDEQ's Target Detection Limits and Designated Analytical Methods.

1.3.3.1 Michigan 10 metals via United States Environmental Protection Agency (USEPA) SW-846 6000 and 7000 Series Methods.

1.3.3.2 Target Compound List (TCL) parameters for volatile organic compounds (VOCs) via USEPA SW-846 Method 8260, semi-volatile organic compounds (SVOCs) via USEPA SW-846 Method 8270, pesticides, and polychlorinated biphenyls via USEPA SW-846 Method 8082.

1.3.3.3 Provide testing results and the source of the proposed fill material to the **Professional** and allow a minimum of 48-hours for review of the data.

1.3.3.4 If the proposed fill material exceeds the MDEQ Part 201 Generic Residential Cleanup Criteria Requirements for Response Activity the material will not be acceptable for backfill. The **Contractor** shall then propose a new source with appropriate testing data. The **Owner** will not accept additional costs for rejection of the proposed backfill or for the **Contractor** to locate a new source of backfill. The work shall not be allowed to remain unfilled/uncovered in order for the **Contractor** to obtain acceptable fill material. The **Contractor** shall plan accordingly, so as not to delay the project schedule.

1.3.4 **Imported Fill – Geotechnical Testing**: Test reports shall be submitted prior to and during construction.

1.3.4.1 One sample of all cap, haul road gravel, and coarse aggregate/crushed stone material types shall be collected and analyzed by a qualified, **Owner** approved, geotechnical laboratory for the following:

1.3.4.1.1 ASTM D421/422: Particle Size Analysis of Soils.

1.3.4.1.2 If a commercial supplier is used, the **Contractor** may supply a certification of gradation for haul road gravel and/or coarse aggregate/crushed stone in lieu of laboratory testing.

1.3.4.1.3 If the proposed fill material does not meet the gradation requirements the material will not be acceptable for use. The **Contractor** shall then propose a new source with appropriate testing data. The **Owner** will not accept additional costs for rejection of the proposed backfill or for the **Contractor** to locate a new source of backfill. The work shall not be allowed to remain unfilled/uncovered in order for the **Contractor** to obtain acceptable fill material. The **Contractor** shall plan accordingly, so as not to delay the project schedule.

1.3.4.2 Rip-rap: Appropriate NRCS Method or ASTM D5519-15: Standard Test Methods for Particle Size Analysis of Natural and Man-Made Riprap Materials. Per NRCS specifications:

1.3.4.2.1 “The Contractor shall furnish the personnel, scales and equipment necessary to extract a sample of riprap from the stockpile or supply operations, and determine the weight of each piece of stone that is sized larger than the smallest” size “listed in the gradation. Stone pieces smaller than the smallest size may be weighed together and their total weight determined. The minimum personnel, scales, and equipment are:

1.3.4.2.1.1 Personnel – Three or more workers to operate the scales and equipment, and to move and handle the stone to and from the scale.

1.3.4.2.1.2 Scales – At least two scales and test weights for checking the accuracy of the scales. Each scale shall be a direct registering type (not a balance beam type).

1.3.4.2.1.3 Equipment – At least one front end loader (or other Engineer approved machine) with a qualified operator."

1.3.4.2.2 "The samples to be tested shall be selected at random by the Engineer from the first 75 tons of riprap delivered to the site or from a stockpile at some other mutually agreeable location. The sample shall consist of at least 2 tons of riprap".

1.3.4.2.3 The Contractor shall set up the riprap gradation testing scales at a convenient location on the construction site or at another location that is acceptable to the Engineer. The Contractor shall extract the test samples of riprap from the stockpile or supply operation in a manner that does not lose any portion of the sample. The Contractor shall handle and weigh the stone pieces and compile a list of the weights of each stone piece and of the weight of material in pieces" 5 "inches and larger. Pieces smaller than" 5 "inches may be grouped by size and composite weighed. A copy of this list shall be given to the Engineer at the completion of the weighing operation. All weighing work shall be performed in the presence of the Engineer."

1.3.4.2.4 "Each test sample of riprap meeting the requirements of this specification shall be placed as a unit in a location that is roughly square in shape and where it can be used as a check section for visual comparison. The limits of this section shall be marked."

1.3.4.2.5 "If the first sample of riprap tested meets the required gradation, the Engineer may require that one additional sample of the same type – either from riprap in-place or from riprap in a stockpile – be tested as previously described. If any sample of riprap fails to meet the required gradation, sufficient – as determined by the Engineer – additional samples of riprap shall be tested to demonstrate that the riprap does or does not meet the required gradation."

1.3.4.2.6 If the proposed fill material does not meet the gradation requirements the material will not be acceptable for use. The **Contractor** shall then propose a new source with appropriate testing data. The **Owner** will not accept additional costs for rejection of the proposed backfill or for the **Contractor** to locate a new source of backfill. The work shall not be allowed to remain unfilled/uncovered in order for the **Contractor** to obtain acceptable fill material. The **Contractor** shall plan accordingly, so as not to delay the project schedule.

1.3.4.2.7 As previously identified by NRCS, acceptable sources for riprap, assuming gradation requirements are met, include the waste rock pile at the Baltic Mine, Baltic, Michigan, the waste rock pile at Dodgeville, Michigan, or the waste rock pile at Allouez, Michigan.

PART 2 – PRODUCTS

Not Used.

PART 3 – EXECUTION

3.1 Testing Frequency – Fill material brought to the site shall be tested at the frequencies specified below.

3.1.1 Cap Material – Gradation tests for the sandy loam cap material shall be completed at the rate of one test per 1,000 cubic yards of material brought to the site or when changes in texture occur or borrow pits change. The first set of acceptable test results shall be provided to and accepted by the **Owner** and **Professional** before any cap material is brought to the site. In addition, a ten-pound sample of the tested material shall be provided to the **Professional** to accompany each test result.

3.1.2 Cap Material – Laboratory Analytical tests shall be performed at the rate of one test per borrow pit.

3.1.3 Gravel – Gradation tests shall be completed once for each source of gravel. If a commercial supplier is used, the **Contractor** may supply a certification of gradation in lieu of laboratory testing.

3.1.4 1-3 Inch Crushed Stone – Gradation tests shall be completed once for each source of crushed stone.

3.1.5 Rip-Rap – An acceptable set of gradation tests shall be completed once for each source of rip-rap.

END OF SECTION 01 45 00

SECTION 01 50 00

CONSTRUCTION FACILITIES AND TEMPORARY CONTROLS

PART 1 – GENERAL

1.1 WATER SUPPLY

1.1.1 The **Contractor** as part of the Work, shall provide at the points of use all water necessary for the **Contractor's** operations, including but not limited to dust control and fire protection. The **Contractor** shall make all arrangements necessary to obtain water. Any water brought on-site to complete Work must have the prior approval of the **Professional**.

1.1.2 Torch Lake Township has advised that using their municipal water system as a water system, including use of the hydrants adjacent to the site, is not desirable. The **Contractor** should not plan to use the Torch Lake Township water supply.

1.1.3 A previous nearby demolition project reportedly used the Village of Laurium water system as a source of water for dust suppression. The **Contractor** shall be responsible for all arrangements that may be needed to use a municipal water source, including payment of fees.

1.1.4 The **Contractor** can use surface water from Torch Lake for dust suppression under the following conditions:

1.1.4.1 Under absolutely no circumstances shall the surface water withdrawal operations disturb lake bottom sediments. Any observation of sediments in the water stream or visible discoloration of the water stream due to sediments shall be grounds for immediate termination of the use of surface water until the sediments are eliminated from the intake. Sediments are known to be contaminated with PCBs and any equipment contacting lake bottom sediments shall be deemed PCB-contaminated until proven otherwise.

1.1.4.2 The withdrawal infrastructure shall not interfere with or impede fishing which occurs along the outside edge of the pilings.

1.1.4.3 The intake shall be suspended several feet above the bottom of the lake through the use of a secured float or direct attachment to pilings.

1.1.4.4 The withdrawal shall be discrete and shall not draw attention from lake users. In this regard, the withdrawal shall be placed in a location that minimizes its visibility, such as where the concrete bulkhead has already been breached.

1.2 ELECTRICAL ENERGY

1.2.1 The **Contractor** as part of the Work, shall provide suitable electrical power necessary to perform the Work. The use of each source must be approved by the **Owner** in advance.

1.2.2 The **Contractor** shall make arrangements with utility and property owners as needed, to obtain electrical power for performance of the work.

1.2.3 Electrical generators are not acceptable for use as an electrical power source without prior written approval from the **Owner** and/or the **Professional**.

1.2.4 The **Contractor** shall make all necessary applications, arrangements, and inspections and pay all fees and charges for electrical energy for power and light necessary for the proper completion of the Work during its entire progress. The **Contractor** shall provide and pay for all temporary wiring, switches, connections, and meters.

1.2.5 **Section 01 11 00**, Paragraph 1.3.4 requires that Work be performed during daylight hours. In the event that daily preparatory or completion activities are conducted during hours of

insufficient daylight, the **Contractor** shall provide sufficient electric lighting so that all Work may be properly and safely conducted in the Work area.

1.2.6 The **Contractor** shall assume all risks of loss or damage of any kind to any vehicles, machinery, equipment, materials or supplies, which it shall provide in doing the Work.

1.3 SANITARY FACILITIES

1.3.1 The **Contractor** shall provide adequate sanitary conveniences for the use of those performing Work on-site. Such conveniences shall be made available when the first employees arrive on-site and shall be properly secluded from public observation, and shall be constructed and maintained in suitable numbers and at such points and in such manner as may be required or approved.

1.3.2 The **Contractor** shall maintain the sanitary facilities in a satisfactory and sanitary condition at all times and shall enforce their use. The **Contractor** shall rigorously prohibit the committing of nuisances on the Site of the Work, on the lands of the **Owner** or Property Owner, or on adjacent property.

1.4 PROJECT SIGNAGE

1.4.1 General Awareness

The **Contractor** must post appropriate construction signs to advise the occupants and visitors of occupied facilities of the limits of construction work areas, hardhat areas, excavations, construction parking and staging areas, etc. Refer to **Section 01 35 00**.

1.4.2 Bulletin Board

Immediately upon the beginning of Work, the **Contractor** shall provide a weatherproof Plexiglas® covered bulletin board not less than 915 by 1220 mm (36 x 48 inches) in size for displaying the Equal Employment opportunity poster, and other information approved by the **Owner**. The bulletin board shall be located at the project Site in a conspicuous place easily accessible to all employees as approved by the **Owner**. Legible copies of the aforementioned data shall be displayed until Work is completed. Upon completion of Work the bulletin board shall be removed by and remain the property of the **Contractor**.

1.5 PROTECTION AND MAINTENANCE OF TRAFFIC

1.5.1 During construction, the **Contractor** shall maintain and protect traffic on all affected roads during the construction period. Measures for the protection and diversion of traffic, including the provision of watchman and flagman, erection of barricades, placing of lights around and in front of equipment and the Work, and the erection and maintenance of adequate warning, danger, and direction signs, shall be as required by the State and local authorities having jurisdiction. The traveling public shall be protected from damage to person and property. The **Contractor's** traffic on roads selected for hauling material to and from the Site shall interfere as little as possible with public and private traffic. The **Contractor** shall investigate the adequacy of existing roads and the allowable load limits on these roads. The **Contractor** shall be responsible for the repair of any damage to roads caused by construction operations.

1.5.2 Vehicle Contamination

The **Contractor** shall provide the means to decontaminate all construction equipment prior to removal from the Site. The decontamination process shall serve to remove soil and materials from vehicles before they exit the Site. All equipment that comes in contact with contaminated media on-site or as specified by the **Owner** and/or the **Professional** shall be decontaminated. Soils or contaminants shall be removed and properly handled by the **Contractor**. At a minimum, the **Contractor** shall provide high pressure water for decontamination.

1.5.3 Haul Roads

The **Contractor** shall construct access and haul roads/routes necessary for proper execution of the Work. Haul roads shall be constructed with suitable grades and widths; sharp curves, blind corners, and dangerous cross traffic shall be avoided.

1.5.4 Barricades

The **Contractor** shall erect and maintain temporary barricades to limit public access to the construction areas. Such barricades shall be required whenever safe public access to paved areas such as roads, parking areas, shoulders, or sidewalks is prevented by construction activities or as otherwise necessary to ensure the safety of both pedestrian and vehicular traffic. Barricades shall be securely placed, and clearly visible with adequate illumination to provide sufficient visual warning of the hazard during both day and night.

1.5.5 Fence

The **Contractor** shall erect and maintain temporary fencing around the perimeter of the exclusion zone of the Work area to inhibit pedestrian access to the exclusion zone and asbestos working areas, if not already protected by permanent fencing. Fencing shall be 4-foot high plastic snow fencing or similar that provides adequate visual and physical warning, presents a neat appearance, and prevents errant entry into the exclusion zone or asbestos work areas until such time the hazards are mitigated.

1.6 PROTECTION OF EXISTING WELLS

1.6.1 There are no known water wells within the work area. If a well is encountered, the **Professional** shall be immediately notified and the **Contractor** shall avoid damaging the well. The **Owner** or **Professional** will evaluate the situation and then direct the **Contractor** to avoid the well or properly abandon the well under the Provisional Allowance.

1.7 CONTRACTOR'S TEMPORARY FACILITIES

1.7.1 The **Contractor** must furnish, install, and maintain as long as necessary and remove when no longer required adequate barriers, warning signs or lights at all dangerous points throughout the Work for protection of property, workers and the public. The **Contractor** must hold the State of Michigan harmless from damage or claims arising out of any injury or damage that may be sustained by any person or persons as a result of the Work under the Contract.

1.7.2 The **Contractor** shall provide such temporary enclosures and facilities as the Work may warrant. These facilities may include, but not be limited to, a **Contractor's** office and storage facility, a decontamination trailer or shelter for crews including sanitary facilities conforming to local codes and OSHA requirements, yard lighting, fire protection, safety equipment, construction warning, protection, and control devices for maintenance and safety of vehicular and pedestrian traffic, decontamination facilities, and trash receptacles.

1.7.3 The **Contractor** shall completely remove all temporary equipment and materials upon completion of the Work and repair all damage caused by the installation of any temporary facilities.

1.7.4 The **Contractor** shall make any necessary applications and arrangements for electric power, light, telephone, toilets, water, showers, and other utilities. The **Contractor** is to provide all facilities and utilities required for completion of Work.

1.7.5 The **Contractor** shall obtain permits as required by local governmental authorities, obtain any easements necessary for temporary power service, comply with the latest National Electrical Code, and comply with all local, State and Federal codes, laws, and regulations.

1.7.6 Appearance of Trailers

Trailers utilized by the **Contractor** for administrative or material storage purposes shall have a clean and neat exterior appearance and shall be in a state of good repair.

1.7.7 Maintenance of Construction Area

Should the **Contractor** elect to traverse with construction equipment or other vehicles on grassed or unpaved areas which are not established roadways, such areas shall be protected to prevent rutting and the tracking of mud onto paved or established roadways and restored to their original conditions upon completion of the Work.

1.7.8 Security Provisions

The **Contractor** shall be responsible for the security of its own equipment. Other security items, such as exterior lighting, shall be the responsibility of the **Contractor** including all fees.

1.7.9 Storage Facilities

The **Contractor** shall be responsible for providing and maintaining storage facilities for construction and storm water that comes into contact with contaminated materials, if necessary, and other project related items.

PART 2 – PRODUCTS

Not Used.

PART 3 – EXECUTION

Not Used.

END OF SECTION 01 50 00

SECTION 01 60 00

MATERIAL AND EQUIPMENT

PART 1 – GENERAL

1.1 The **Contractor** must furnish and be responsible for all materials, equipment, facilities, tools, supplies, and utilities necessary for completing the Work. All materials and equipment must be provided as described in the Contract Documents and of good quality, free of defect, and new and must be applied, installed, connected, erected, used, cleaned, and conditioned following the manufacturer's and suppliers' instructions.

1.2 **Delivery, Storage, and Handling**: All materials and equipment delivered to and used in the Work must be suitably stored and protected from the elements. The areas used for storage must only be those approved by the State Agency. The **Owner** and **Professional** assume no responsibility for stored material. The Ownership and title to materials will not be vested in the **Owner** before materials are incorporated in the Work, unless payment is made by the **Owner** for stored materials and equipment. After delivery, before and after installation, the **Contractor** must protect materials and equipment against theft, injury, or damage from all causes. For all materials and equipment, the **Contractor** must provide complete information on installation, operation, and preventive maintenance.

1.2.1 The **Contractor** must cover and protect bulk materials while in storage which are subject to deterioration because of dampness, the weather, or contamination. The **Contractor** must keep materials in their original sealed containers, unopened, with labels plainly indicating manufacturer's name, brand, type, and grade of material and must immediately remove from the Work site containers which are broken, opened, watermarked, and/or contain caked, lumpy, or otherwise damaged materials.

1.2.2 The **Contractor** must keep equipment stored outdoors from contact with the ground, away from areas subject to flooding, and covered with weatherproof plastic sheeting or tarpaulins.

1.2.3 The **Contractor** must certify that any materials stored off-site are:

a) Stored on property owned or leased by the **Contractor** or owned by the State agency.

b) Insured against loss by fire, theft, flood, or other hazards.

c) Properly stored and protected against loss or damage.

d) In compliance with the plans and specifications.

e) Specifically allotted, identified, and reserved for the project.

f) Itemized for tracking and payment.

g) Subject to these conditions until the items are delivered to the project site.

1.3 DOCUMENTATION

1.3.1 The **Contractor** shall furnish equipment and materials lists including manufacturer(s) specifications, installation requirements, operational instructions, maintenance procedures and warranties as part of the pre-construction submittals.

1.3.2 Post-construction submittals will include verification of materials, quantities, bills of lading, certifications, maintenance requirements, and warranties associated with the materials and equipment installed.

1.3.3 Documentation provided in submittals shall be in adequate detail regarding dimensions, materials, connections, and interface to confirm whether the work represented complies with the Contract Documents.

1.3.4 Documentation shall be organized to facilitate review and use. Reports and manuals shall have a table of contents in suitable detail for locating required topics and attachments.

1.3.5 Documentation shall be in proper form and format. For example, signed Certificates of Compliance shall be provided under the **Contractor's** or subcontractor's letterhead with the information requested.

END OF SECTION 01 60 00

SECTION 01 70 00

CONTRACT CLOSE-OUT

PART 1 – GENERAL

1.1 SUBSTANTIAL COMPLETION

1.1.1 The **Contractor** shall submit written notification that:

1.1.1.1 Following inspection and any required testing, the Work has progressed to the point that construction and the Work is substantially complete in accordance with Contract Documents.

1.1.2 Within a reasonable time after receiving the **Contractor's** list of items to be completed or corrected, the **Owner**, **Professional,** and **Contractor** shall jointly conduct a Substantial Completion inspection. The **Contractor** must be represented at the time this inspection is made and thereafter must complete all Work by the date set for final acceptance by the **Owner**.

1.1.2.1 If the Work is deemed by the **Professional** to not be substantially complete:

1.1.2.1.1 The **Professional**, within three (3) Calendar Days after the inspection, will deliver to the **Owner** and **Contractor** a list of incomplete or Defective Work sufficient to demonstrate the basis for that determination.

1.1.2.1.2 The **Contractor** shall take immediate steps to remedy the stated deficiencies, and send second written notice to the **Owner** certifying that work is complete.

1.1.2.2 If the **Owner** and the **Professional** agree that the Work is substantially complete:

1.1.2.2.1 The **Professional** will deliver to the **Owner** and **Contractor** a certificate of Interim Substantial Completion with a Punch List.

1.1.2.2.2 Upon Substantial Completion of the Work, or designated part of the Work on which separate Substantial Completion and Contract Price are specified, payment may be made in full subject to (a) a withholding of two hundred percent (200%) of the value of any uncompleted Work, as determined by the **Professional**, and (b) any other deductions as the **Professional** may recommend or the **Owner** may withhold to cover Defective Work.

1.1.3 Neither the Work, nor any portion of the Work inspected, shall be substantially complete, unless the **Owner** can use the Work, or designated portion of the Work inspected, for the use intended.

1.2 CLEANING

1.2.1 **Regular Cleaning**: The **Contractor** must remove all scrap or removed material, debris or rubbish from the Project work site at the end of each working day and more frequently whenever the **Owner** Field Representative deems such material to be a hazard. The **Contractor** cannot discard materials on the grounds of the State Agency or property owners without the express permission of the Project Director or actions are part of the written scope of work. No salvage or surplus material may be sold on the premises of the State Agency or Site property owner. No burning of debris or rubbish is allowed. Any recyclable materials must be recycled.

1.2.2 **Final Cleaning**: Before final acceptance by the State, the **Contractor** must clean all of the Work and existing surfaces, building elements, and contents that were soiled by their operations and make repairs for any damage or blemish that was caused by the Work.

1.3 FINAL COMPLETION

1.3.1 The **Contractor** shall complete the Substantial Completion Punch List within the Contract Time and date fixed by the **Professional**. Following completion of the Punch List Items the **Contractor** shall submit written notification that the Work is ready for final completion inspection.

1.3.2 Upon written notice from the **Contractor** that the **Contractor** considers the entire Work, or a part of the Work for which final payment is specified in the Contract Documents, to be complete and ready for final payment, the **Professional** will make a final completion inspection with the **Owner** and **Contractor**

1.3.3 Should the **Owner** and the **Professional** agree that the Work is finally complete in accordance with the requirements of Contract Documents; the **Contractor** will be instructed to submit Project Closeout documents.

1.3.4 Should the **Owner** and **Contractor** agree that the Work is not finally complete in accordance with the requirements of Contract Documents; the **Contractor** will be notified in writing of all instances of incomplete or Defective Work revealed by the final completion inspection. The **Contractor** shall immediately undertake all necessary measures to complete Work in the final completion inspection.

1.4 FINAL REQUEST FOR PAYMENT

1.4.1 The **Contractor** may request final payment after completing the incomplete or Defective Work to the satisfaction of the **Professional** and delivering final operating and maintenance documentation (with revisions made after Substantial Completion), warranties, inspection certificates, Record Documents (with revisions made after Substantial Completion), release of payment claim forms, and all other required documents.

1.4.2 In addition to Application and Certification for payment, the **Contractor** shall submit the following documents to the **Owner** with the final Request for Payment:

1.4.2.1 Evidence of an affidavit certifying that the surety agrees that final payment shall not relieve the surety of any of its obligations under the Performance Bond and Payment Bond.

1.4.2.2 A **Contractor's** "Guarantee and Statement" (available from the **Owner**, form DMB-437) containing a statement of guaranteed indebtedness acceptable to the **Owner** in the full amount of the Contract Price, or a release of payment claims in the form of a release of liens, or a Bond or other security acceptable to the **Owner** to indemnify the **Owner** against any payment claim.

1.4.2.3 A disclosure of all pending insurance claims rising out of or resulting from the Work being handled by the **Contractor** and/or its insurer.

1.4.2.4 A Certificate of Substantial Completion form. This form must be dated to reflect the actual date of Substantial Completion and signed by an authorized representative of the **Contractor**.

1.4.2.5 A Final Bulletin/Change Order Request to adjust the Contract to coincide with actual Work performed.

EXISTING CONDITIONS

SECTION 02 21 00

SURVEYS

PART 1– GENERAL

1.1 DESCRIPTION OF WORK

1.1.1 The work to be performed under this section shall include:

1.1.1.1 Project as-built survey after the completion of the Work.

1.1.1.1.1 The survey work shall be performed under the direction of a Land Surveyor registered in the State of Michigan who shall be subcontracted by the **Contractor** to perform the survey work to be performed under this item.

1.1.1.1.2 Post-construction as-built survey of:

1.1.1.1.2.1 Edges and elevations of haul and access roadways.

1.1.1.1.2.2 Limits of decontamination pad(s)/area(s).

1.1.1.1.2.3 Southern drainage ditch floor and bank edges and elevations, final grades, and rip-rap limits.

1.1.1.1.2.4 Topography and limits of uncapped graded areas, if any.

1.1.1.1.2.5 Topography and limits of the capped areas including cap limits and elevations at a minimum of every 50 feet and at all grade breaks and changes in direction.

1.1.1.1.2.6 Drainage swale centerlines, bank tops, and final grades.

1.1.1.1.2.7 Limits of restoration (seeding and mulching) if not the same as the limits of cap placement.

1.1.1.1.2.8 Limits of restoration of disturbed areas outside of the cap limits.

1.1.1.1.2.9 Encountered utilities or utility locations not previously identified (if any).

1.1.1.1.2.10 Limits of vegetative debris burial.

1.1.1.1.2.11 Sufficient existing Site features to accurately locate the above features on the existing Site Plan, such as the established site benchmarks.

1.2 SUBMITTALS

Prior to commencement of Work under this item, the **Contractor** shall submit for approval the name, address, registration number, and telephone number of the Surveyor that will perform this work on the project.

PART 2 – PRODUCTS

Not Used.

PART 3 – EXECUTION

3.1 SURVEYING

3.1.1 Both horizontal and vertical control shall be provided and annotated on the final map as an individual layer. Unless qualified otherwise, vertical control for the survey is to be provided in North American Vertical Datum of 1988 (NAVD 88) and horizontal control shall be tied to the state plane coordinate system North American Datum of 1983 (NAD 83).

3.1.2 Tolerance on construction shall be ±0.10 foot horizontal and ±0.01 foot vertical every 100 feet with no compounding of tolerances.

3.1.3 Topographic survey shall be referenced to primary control on established benchmarks, unless otherwise noted.

3.1.3.1 All surface features described in Paragraph 1.1.1.1.2 of this Section to be surveyed shall be shown and identified on the 1 inch = 50 feet map. The surface features shall be overlain on the existing AutoCAD® map, which the **Professional** will provide to the **Contractor**. The **Contractor** shall contour the cap, swale, and ditch limits and provide the surface for use in AutoCAD®.

3.1.4 The **Contractor** shall maintain complete and accurate field notes for all control points and survey points as Work progresses

3.1.5 All point elevations shall be accurate to a tenth of a foot. Tie-ins to the benchmarks shall be accurate to a hundredth of a foot.

3.2 DELIVERABLES

3.2.1 All deliverables under this item shall be signed and sealed by the Surveyor.

3.2.2 All topographic survey plans shall be prepared at a scale of 1 inch = 50 feet, unless otherwise directed by the **Professional**.

3.2.3 For all work under this item, the **Contractor** shall submit CD copies of the topographic survey plans in Land Development Desktop/Autocad® 2009 format or newer with executable files along with two (2) prints for each survey plan required.

3.2.4 The **Professional** reserves the right to require the submittal of copies of any or all survey field notes from the **Contractor**.

3.2.5 Electronic files shall be provided on the following media:

3.2.5.1 CD-RW. Files may be compressed using WINZIP.

3.2.5.2 AutoCAD files shall contain topographic information in the following formats, in separate files:

3.2.5.2.1 Discrete 3-D data points.

3.2.5.2.2 Raw survey data shall be supplied electronically for use with Land Development Desktop/Autocad® 2009 or newer.

3.2.5.3 Layers for physical features shall be as follows:

3.2.5.3.1 Separate layers for:

3.2.5.3.1.1 Topography

3.2.5.3.1.2 Limits of swales, ditches, cap placement, and grading

3.2.5.3.1.3 Access and haul roads

3.2.5.3.1.4 Limits of restoration

3.2.5.3.1.5 Encountered or not previously identified utilities

END OF SECTION 02 21 00

SECTION 02 61 00

OFF-SITE TRANSPORTATION AND DISPOSAL

PART 1 – GENERAL

1.1 SUMMARY

1.1.1 The **Contractor** shall furnish all labor, materials, equipment, and related items required for the proper handling, transportation, and disposal of waste materials.

1.1.2 The **Contractor** is to determine the proper waste characterization and recycling or disposal methods to ensure that waste materials are disposed of according to procedures that are consistent with applicable regulations.

1.1.3 Payment shall be as specified by the **Contractor** on the Bid Form of these specifications.

1.1.4 Waste manifests and profiles shall be prepared by the **Contractor**. The **Owner** or the **Professional** only shall sign manifests or waste profiles on behalf of the State of Michigan (the generator). The **Contractor** and subcontractor shall not sign manifests as generator for any waste materials. The **Contractor** is responsible for providing 48 hours notice prior to the initiation of disposal activities. This notice will allow the **Professional** to ensure the appropriate parties are at the Site to sign the manifests.

1.1.5 No waste materials shall leave the Site unless they have been characterized, properly labeled and placarded, and are transported under manifest procedures en route to a proper disposal facility.

1.1.6 Waste materials to be removed and disposed off-site include the following:

1.1.6.1 Non-vegetative solid waste from the Hubbell Coal Dock Burn Area.

1.1.6.2 Culverts piled at the Hubbell Coal Dock Burn Area (for recycling).

1.1.6.3 Waste pile WP-11 from the Mineral Building property (if a representative sample contains PCBs at a concentration greater than 50 parts per million).

1.2 REGULATORY REQUIREMENTS

1.2.1 The **Contractor** shall comply with all Federal, State, and local regulations applicable to waste management, including MDEQ, MIOSHA, RCRA, and TSCA regulations.

1.2.2 The **Contractor** shall comply with 29 CFR 1910 and 1926.

1.3 SUBMITTAL AND PROJECT RECORD DOCUMENTS

1.3.1 The **Contractor** shall provide all required submittals as identified in **Section 01 33 00** including:

1.3.1.1 Waste profiles and characterization data.

1.3.1.2 Waste shipping papers and bills-of-lading.

1.3.1.3 Disposal receipts.

1.3.1.4 Manifests.

1.3.2 The **Professional** will provide available characterization data for WP-11 to the **Contractor**. The **Contractor** shall provide all additional waste characterization analytical data required for disposal acceptance. Analytical data shall be provided directly to the **Professional** from the Analytical Laboratory.

1.3.3 **Contractor** shall provide the intended disposal locations for **Owner** approval.

1.3.4 **Contractor** shall maintain a Waste Manifest Log in accordance with **Section 01 33 00.**

1.4 QUALIFICATIONS

1.4.1 The **Contractor** and subcontractors must have demonstrated experience with and certifications and licenses for transportation of waste materials.

1.5 SCHEDULING

1.5.1 The **Professional** shall be provided not less than three business days for review, editing, and approval of waste profiles.

1.5.2 The **Professional** shall be notified not less than 48 hours prior to the proposed time for transportation of inventoried materials/generated waste to the selected disposal facility. A properly completed manifest or bill-of-lading with the **Owner** or the **Professional** signature shall accompany each shipment to the selected disposal facility.

PART 2 – PRODUCTS

2.1 EQUIPMENT

2.1.1 The **Contractor** shall provide materials, equipment, personnel, and facilities necessary to load materials for transport and complete transportation to the appropriate disposal facility.

PART 3 – EXECUTION

3.1 SELECTION OF WASTE DISPOSAL METHOD(S)

3.1.1 All disposal and sampling arrangements shall be performed and/or coordinated by the **Contractor**. This will include waste characterization and approval as well as any permits required.

3.1.2 The **Contractor** may dispose of non-hazardous and non-recyclable solid waste at a Type II solid waste management facility subject to review by the **Owner**. The solid waste must comply with the facility operator's waste discharge requirements. The method of disposal must be approved by the **Owner**.

3.1.3 Contaminated material not classified as hazardous shall be disposed of in accordance with RCRA Subtitle D and Michigan Public Act No. 451, Parts 115 and 121.

3.1.4 PCB-contaminated soil and debris containing greater than 50 parts per million (ppm) PCBs shall be disposed as PCB remediation waste at an appropriate TSCA disposal facility.

3.1.5 Disposal of Wastewater – Decontamination water that does not contain any additives can be discharged to the ground surface in accordance with Rule 2210(u)(iii) of the Part 22 rules of Part 31 of NREPA. The discharge must be to the plume of groundwater contamination, including an area 100 ft hydraulically upgradient of the edge of the plume, and any additive used in the treatment process that is not part of the contamination plume meets the standards of Rule 2222. Any water from the decontamination of vehicles, equipment, and debris that does not meet the above requirement shall be collected in a contaminated water collection system. The decontamination operation and decontamination pad construction shall be sufficient to allow for the collection of the water and allow for transfer to a storage tank provided by the **Contractor** to await characterization and proper disposal. Any spillage of this water onto previously uncontaminated areas shall be cleaned up and decontaminated to the satisfaction of the **Owner** and the **Professional** at the **Contractor's** expense. The **Contractor** shall submit his/her proposed method for accomplishing this task in his/her Work Plan. Decontamination water supply and collection is the **Contractor's** responsibility and included as part of the Health and Safety activities.

3.1.6 No additives will be allowed to be mixed or added to the decontamination water. Materials generated during decontamination shall be placed beneath the capped area or properly disposed. The disposal shall be manifested in accordance with these specifications.

3.1.7 Dewatering Water – The **Contractor** shall pump dewatering water and discharge it outside of the immediate work area within the PCB-contaminated portion of the Hubbell Coal Dock Burn Area. The dewatering discharge shall be in accordance with Rule 2210(e) of the Part 22 rules of Part 31 of NREPA which allows an exemption from groundwater discharge permitting for "water from a well used temporarily for dewatering at a construction site if the water pumped does not create a site of environmental contamination under part 201."

3.2 SELECTION OF TRANSPORTER(S)

3.2.1 For all off-site disposal activities, **Contractor** is to utilize a licensed transporter or transporters, subject to the review of the **Owner**, and will be responsible for meeting the packaging and loading requirements stipulated by Federal, State, and local regulations. If a transporter is disapproved by the **Owner**, the **Contractor** shall select a new transporter at no additional cost to the Contract.

3.3 WEIGH TICKETS/MANIFESTS/DISPOSAL RECEIPTS

3.3.1 **Contractor** is required to provide, prepare, and track manifests, weigh tickets, and/or receipts for any waste removed from the Site. The **Contractor** is required to provide completed copies of manifests (with disposal facility signature) to the **Professional** within five (5) working days. If this is not possible, the **Contractor** shall submit verification in writing to the **Professional** and provide reasonable dates for submittal. Failure by the **Contractor** to submit completed manifests or an acceptable verification statement will result in nonpayment for any progress payment or final payment requests submitted by the **Contractor** until the submittals are in compliance.

3.3.2 The **Owner** or the **Professional** will sign manifests on behalf of the State of Michigan. The **Contractor** and subcontractor are not authorized to sign manifests as the generator.

3.4 LOADING AND HAULING

3.4.1 The **Contractor** shall inspect haul vehicles for soil adhesion to all parts of the trucks. These soils shall be removed and properly handled by the **Contractor** before leaving the Site. The decontamination procedures shall be carried out at the decontamination zone. The **Professional** shall approve all the vehicles before leaving the Site.

3.4.2 No transport vehicles shall be allowed to leave the Site that are leaking or spilling materials.

3.4.3 No materials shall leave the Site for disposal unless they are properly manifested, labeled, placarded, and en route to a licensed disposal facility.

3.4.4 The **Contractor** shall ensure tarpaulin covers are provided for open transport vehicles, which shall cover all contaminated materials during transport. Do not overfill vehicles.

3.4.5 All transport vehicles shall be in strict conformance with all the applicable Federal, State, and local laws.

3.4.6 The **Contractor** is responsible for any and all actions and costs necessary to remedy solid or liquid waste spilled in loading or transit at no additional cost to the **Owner**.

3.4.7 The **Contractor** shall keep accurate records for the type and quantity of materials and liquids removed from the Site and analytical testing results. The **Professional** approval is required before any liquid or material leaves the Site.

3.4.8 The **Contractor** shall provide the **Professional** with copies of the above records, all permits required, manifests, waste hauling permits, and necessary affidavit regarding the waste materials, including liquid disposal within five working days of removal from the Site.

3.5 DISPOSAL FACILITY

3.5.1 Contaminated materials shall be disposed of at an **Owner**-approved and licensed disposal facility.

3.5.2 Final arrangements for disposal shall be performed by the **Contractor** and approved by the **Owner**.

END OF SECTION 02 61 00

DIVISION 03

CONCRETE

SECTION 03 30 00

CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 SCOPE

1.1.1 Provide cast-in-place concrete where shown on the drawings or otherwise necessitated by the execution of the work (bulkhead patching).

1.2 REFERENCES, ACI-301, 1.6

1.2.1 The **Contractor** shall be familiar with ACI-301, 1.6 and the references listed therein.

1.3 SUBMITTALS

1.3.1 Concrete mix design.

1.3.2 The **Contractor** must furnish to the **Professional** load tickets or sack-mix specifications showing mix formulation for each load or batch of concrete delivered and installed.

1.4 TESTING

1.4.1 The following testing shall be performed:

1.4.1.1 None required.

1.4.2 The **Professional** may require the **Contractor** to core drill questionable cast-in-place concrete for laboratory testing. Should the laboratory analysis indicate the concrete fails to meet specification requirements, the **Contractor** must pay all costs for core drilling and testing in the laboratory and replace the concrete found to fail specification requirements. Should the laboratory analysis confirm that the concrete meets specification requirements, the **Owner** will pay the **Contractor** for their costs for core drilling, concrete patching and the laboratory fee for testing of the concrete core samples.

PART 2 - PRODUCTS

2.1 CEMENT

2.1.1 ASTM C 150, meeting the requirements of Section 901 of MDOT 2012.

2.1.2 Use one brand and type of cement throughout the project.

2.2 CONCRETE ADMIXTURES

2.2.1 All admixtures shall comply with Section 903 of MDOT 2012.

2.2.2 Air entraining admixtures conforming to ASTM C260.

2.2.3 Low range water reducer conforming to ASTM C494 Type A.

2.2.4 Water reducing retarder conforming to ASTM C494 Type D.

2.2.5 High-range water reducer conforming to ASTM C494 Type F or G.

2.2.6 Non-chloride non-corrosive accelerator conforming to ASTM C494 Type C.

2.2.7 Prohibited admixtures include calcium chloride, thiocyanates and all admixtures that contribute free chloride ion in excess of 0.1% by weight of cement.

2.3 CONCRETE AGGREGATES

2.3.1 Aggregates for lightweight concrete shall only be used when lightweight concrete is specified on the project drawings.

2.3.2 Aggregates shall comply with Section 701 and Section 902 of MDOT 2012.

2.4 CONCRETE MIX PROPORTIONING

2.4.1 Strength requirements shall be based on 28-day compressive strength except for high early strength concrete which shall be based on a 21-day compressive strength.

2.4.2 Concrete Mix for Bulkhead Patching

2.4.2.1 Concrete grade shall be a minimum 3,500 psi air-entrained mix. High early strength concrete is also acceptable. The entrained air content shall be 5.0 to 8.0 percent.

2.5 REINFORCEMENT

2.5.1 Drill adjacent concrete on opposing sides of the rectangular opening and install reinforcing bars (two each side) such that they extend into the opening at least three inches.

2.5.2 Reinforcing bars shall be grade 60, number 4, unless otherwise specified on the project drawings.

PART 3 - EXECUTION

3.1 BASE PREPARATION

3.1.1 Remove debris from the rectangular opening prior to preparation and concrete placement.

3.1.2 Moisten adjacent concrete before placing concrete.

3.2 FORMWORK

3.2.1 Obtain the **Professional's** approval for forms and form placement before placing concrete.

3.2.2 Forms shall not be removed until the concrete has reached 75 percent of its average strength or 48 hours, whichever is longer.

3.3 PLACING CONCRETE

3.3.1 Notification of concrete placement 24 hours in advance after formwork and reinforcement are approved for placement of concrete.

3.3.2 Free drop of concrete more than five feet is not permitted.

3.3.3 Concrete shall not be placed in water unless approved.

3.3.4 When concrete temperatures exceed 80 degrees F, a set retarding admixture shall be used.

3.3.5 When ambient temperatures are less than 50 degrees F, all concrete shall contain an accelerating admixture.

3.3.6 Place concrete full depth of the bulkhead and spade or vibrate to ensure consolidation.

3.3.7 Finish exposed surfaces smooth and even.

3.3.8 Do not add water to the concrete surface to aid finishing.

3.4 CURING AND PROTECTION

3.4.1 Protect vertical edge with formwork until concrete has set.

END OF SECTION 03 30 00

DIVISION 31

EARTHWORK

SECTION 31 11 00

CLEARING AND GRUBBING

PART I - GENERAL

1.1 DESCRIPTION

1.1.1 The Work of this Section includes, but is not limited to:

1.1.1.1. Clearing

1.1.1.2. Grubbing

1.1.1.3. Vegetative debris disposal

1.1.2 Definitions:

1.1.2.1 Clearing is defined as the removal of trees, brush, shrubs, down timber, rotten wood, rubbish, any other vegetation and objectionable material at or above original ground elevation not designated to be saved. Clearing also includes removal of fences, walls, guard posts, guide rails, signs, debris, and other obstructions that obtrude, encroach upon, or otherwise interfere with the proposed Work.

1.1.2.2 Grubbing is defined as the removal from below the surface of the natural ground of stumps, roots and stubs, brush, organic materials and debris.

1.1.3 Job Conditions

1.1.3.1 As necessitated for execution and completion of the Work, the **Contractor** shall clear all obstructions within the limits of Work and as shown on the Drawings except for those trees at the Mineral Building identified to be saved. Non-contaminated cleared material shall be piled on-site at a mutually agreeable location determined during site preparation. Contaminated cleared material shall be buried as indicated in the drawings.

1.1.3.2 Grubbing shall only occur to the extent necessary for grading. Stumps shall remain in-place to the extent possible. Grubbed material shall be buried as indicated in the drawings.

1.1.3.3 Trees, cleared brush, stumps, and vegetative debris shall remain on the properties. The **Contractor**, with prior written approval from the **Professional** may not remove or sell cleared and grubbed material from the Site.

1.2 SUBMITTALS

1.2.1 Contractor shall submit the following in accordance with **Section 01 33 00**:

1.2.1.1 Proposed grubbed and cleared material burial limits in accordance with the burial locations identified in the drawings.

PART 2 – PRODUCTS

Not Used.

PART 3 – EXECUTION

3.1 PREPARATION

3.1.1 Notify the **Professional** at least 72 hours prior to beginning any clearing or grubbing work.

3.1.2 Protect permanent/temporary benchmarks, monitoring wells, signs, and utilities, and other structures with temporary fencing or barricades satisfactory to the **Professional**.

3.1.3 Before removing any of the above named articles, the **Contractor** shall notify the **Professional**, at least 72 hours in advance of the clearing/grubbing operations, so that a record can be made of the type or kind of such articles and their condition.

3.1.4 Where it is necessary to cut the branches of trees that are not to be removed, the cut shall be made flush with the tree trunk or larger branch, care being used to prevent tearing the bark beyond the cut. Cuts shall be painted with acceptable commercial tree wound dressing. The **Professional** must approve all tree trimming prior to it being conducted.

3.2 UTILITY RELOCATIONS

3.2.1 Inform all companies, individuals, and others owning or controlling facilities or structures within the limits of the Work which have to be relocated, adjusted, or reconstructed in sufficient time for the utility to organize and perform such Work in conjunction with or in advance of the **Contractor's** operations.

3.2.2 Comply with the provisions of Michigan Public Act (PA) 53 of 1974 “Protection of Underground Facilities.”

3.3 CLEARING

3.3.1 Solid waste including tires, metal, furniture, wood, culverts, and plastic debris within the grading and capping limits shall be collected and staged for recycling, if possible, or characterization and landfill disposal.

3.3.2 Clearing shall be performed as necessary to facilitate the completion of the Work and as otherwise directed by the **Professional**.

3.3.3 Fell trees in a manner that will avoid damage to trees, shrubs, and other installations which are to be retained. The **Contractor** shall replace trees and shrubs intended to remain that are damaged beyond repair or removed.

3.3.4 Remove guard posts, guide rails, signs, fences, and other interferences as necessary for performance of the Work. Protect and store the materials in secure locations approved by the **Owner** or the **Professional**.

3.3.5 All natural woody cleared material such as tree limbs and brush that are not in contact with the Site soils shall be piled at their respective properties at areas to be determined during Site preparation. Woody material that has not been contaminated by Site soils will be allowed to leave the Site for beneficial reuse, if available.

3.3.6 Woody material that is dragged through Site soils or ponded water areas, stumps, or brush containing site soils that may be contaminated shall be required to remain on-Site and shall be buried beneath the caps at locations that are adjacent to access roadways to facilitate cap mending if settlement occurs atop the burial areas.

3.4 GRUBBING

3.4.1 Grubbing shall only occur to the extent necessary for grading. Stumps shall remain in-place to the extent possible. Grubbed material shall be buried as indicated in the drawings.

3.5 DEBRIS DISPOSAL

3.5.1 No cleared or grubbed material shall leave the respective properties. Grubbed material and contaminated cleared material shall be buried as indicated in the drawings.

3.5.2 Non-contaminated cleared material shall be piled on-site at a mutually agreeable location determined during site preparation.

3.5.3 Burning of trees, logs, branches, brush, stumps, and debris is prohibited.

3.6 RESTORATION

3.6.1 The **Contractor** shall restore guard posts, guide rails, fences, signs, sidewalks, and other interferences removed or damaged by construction activities to the condition equal to that which existed before the construction operations or replace item in-kind.

3.6.2 The **Contractor** shall carefully replace pavement that was damaged during the construction. The replacement and or repair work shall be done without delay, as soon as the work immediately adjacent is completed.

END OF SECTION 31 11 00

SECTION 31 22 16

HAUL ROADS

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

1.1.1 The construction of on-site haul roads and improvement of site access as depicted on the Drawings. The construction and/or improvement of off-site haul roads/routes for supplying cap material is considered incidental to providing and placing cap material.

1.2 EXISTING CONDITIONS

1.2.1 Prior to construction, the **Contractor** shall consider haul routes on- and off-site, and shall assess conditions of adjacent construction, recording existing settlement or cracking of structures or roadways, and set benchmarks. The **Contractor** shall prepare a list of such damages, verified by dated photograph or video on CD and DVD, and submit for **Owner's** records.

1.3 SUBMITTALS

1.3.1 Layout drawings depicting the location of as-built on-site haul/access routes for the Work.

1.3.2 Project plan drawing depicting the off-site haul/access road route(s).

1.3.3 Work Plan with Traffic Control Plan as specified in **Section 01 33 00**.

PART 2 – MATERIALS

2.1 HAUL ROAD AND ACCESS ROUTES

2.1.1 MDOT 22A Gravel or equal as specified in the Drawings and specifications.

2.1.2 1 to 3-inch diameter crushed mine rock as specified in the Drawings and specifications.

2.1.3 1 to 3-inch diameter coarse aggregate as specified in the Drawings and specifications (for construction entrance improvement to limit sediment tracking).

PART 3 – EXECUTION

3.1 HAUL ROADS AND ACCESS ROUTES

3.1.1 The **Contractor** shall be responsible for protecting the existing roadways and structures and shall maintain all temporary haul/access roads in a condition acceptable to the **Professional** throughout the project. Should haul/access roads become defective and create an emergency, the **Contractor** shall commence repair to rectify the situation within 1 hour after notification by the **Professional**, or the **Professional** may arrange to have the Work performed by others and deduct the costs thereof from monies owed the **Contractor**.

3.1.2 At the completion of construction, the on-site haul roads/access routes can be left in-place with the exception of any haul roads on the Mineral Building property, which shall be removed and the area restored by grading, seeding, and mulching. All off-site haul roads/access routes shall be removed and restored to pre-existing conditions unless otherwise indicated in the **Contractor's** Borrow Area Restoration Plan.

3.1.3 The **Contractor** shall water and sweep roads traveled by construction traffic as necessitated by the Work to prevent dust generation, prevent material tracking on paved roads, and maintain safe transportation routes.

END OF SECTION 31 22 16

SECTION 31 22 23

EXCAVATION, GRADING, AND CAPPING

PART 1 – GENERAL

1.1 DESCRIPTION

1.1.1 The Work in this Section includes but is not limited to:

1.1.1.1 Haul roads and access improvements.

1.1.1.2 Ditch improvement excavation.

1.1.1.3 Grading of existing site soils and debris.

1.1.1.4 Management of waste piles.

1.1.1.5 Placement, grading, and compaction of cap material.

1.2 EXISTING CONDITIONS

1.2.1 Refer to the Drawings for existing conditions and the planned limits of excavation and grading.

1.3 FIELD MEASUREMENTS

1.3.1 Verify that specified grades shown on the Drawings are met to promote controlled, positive drainage, unless otherwise specified by the **Professional**.

1.3.2 Specified material thicknesses are compacted thicknesses unless otherwise specifically noted.

1.4 SUBMITTALS

1.4.1 **Contractor** shall submit to the **Owner** for approval a Work Plan defining the areas to be graded. The Work Plan shall define all locations in which activities will be performed for each phase of the Work. The Work Plan shall define specific procedures for implementing the clearing, ditch improvement, grading, and cap placement.

1.4.2 Delivery tickets shall be submitted for imported fill delivered to the Site. The delivery tickets shall, at a minimum, include the following:

1.4.2.1 Name and location of supplier.

1.4.2.2 Delivery date and time.

1.4.2.3 Fill type and tons or cubic yards delivered (note that payment for most fill materials is not based on delivered tonnage or cubic yards but on area of in-place compacted thickness).

1.4.3 Certification and laboratory analysis reports that each off-site material to be used as backfill or fill meets gradation requirements and is uncontaminated; refer to **Section 01 45 00 Quality Control**.

1.5 REFERENCES

1.5.1 MDOT 2012 Standard Specifications for Construction.

1.5.2 ASTM D421/422: Particle Size Analysis of Soils.

1.5.3 ASTM D2487: Test Methods for Classification of Soils for Engineering Purposes.

1.6 QUALITY ASSURANCE

1.6.1 Codes and Standards: The **Contractor** shall perform grading, excavation, and fill work in compliance with applicable requirements of governing authorities having jurisdiction.

1.6.2 Geotechnical Testing and Inspection Service: The **Contractor** shall employ a geotechnical consultant and testing laboratory acceptable to **Professional** to perform soil testing and inspection service for quality control testing during earthwork operations.

1.6.3 Environmental Testing Service: The **Contractor** shall employ an environmental testing laboratory acceptable to **Professional** to perform soil testing services for quality control testing during earthwork operations.

1.6.4 Density testing: Density testing is not required but compaction shall consist of routing the track or wheel of construction equipment over the fill material so that every point on the surface of each fill material is traversed by at least one tread track or wheel of the equipment.

1.6.5 Compacted Thickness: The **Contractor** shall ensure that all areas of placed fill material meet the required minimum compacted thicknesses identified in the Drawings. It is recommended that the **Contractor** employ a person to check compacted thicknesses as the work progresses to avoid re-work. The **Owner** and/or **Professional** will provide independent compacted thickness checks but this does not relieve the **Contractor** of the responsibility of meeting the contract requirements.

1.6.6 Test Reports: Submit copies of the following reports directly to the **Professional** from the testing services, with copy to the **Contractor**:

1.6.6.1 Gradation reports on borrow material (ASTM D422).

1.7 TRAFFIC CONTROL

1.7.1 The **Contractor** shall furnish and install traffic control signs and devices and provide flagmen when deemed necessary by the **Owner**. Traffic control devices shall conform to MDOT requirements.

1.7.2 Transport shall be by approved vehicles. All spills, drips, etc. from the vehicles shall be immediately cleaned by the **Contractor** at no cost to **Owner**.

1.7.3 The **Contractor** shall follow the procedures and operations defined in the Traffic Control Plan prepared for the Site.

1.7.4 When working within the Right-of-Way of a State highway, County road, or village street, the **Contractor** shall be bound by the conditions, restrictions, and regulations made by the appropriate body. All such regulations shall be in addition to those set down in the Specifications.

PART 2 – PRODUCTS

2.1 HAUL ROADS AND ACCESS ROUTES

2.1.1 Off-site Borrow Sources

2.1.1.1 Gravel base shall be MDOT 22A road gravel or other suitable material as approved by the **Professional**, and shall be placed and compacted to the thickness specified in the Drawings and as necessary to safely support truck and vehicular traffic and be maintained in a state of good repair without significant ruts or erosion.

2.1.1.2 1 to 3-inch diameter crushed mine rock similar to MDOT Class 4AA or other suitable locally available material as approved by the **Professional**, and shall be placed and compacted to the thickness specified in the Drawings. Acceptable material shall be evenly graded and have a minimum of fines.

2.1.1.3 1 to 3-inch diameter coarse aggregate such as MDOT Class 4AA or other suitable locally available material as approved by the **Professional**, and shall be placed and compacted to the thickness specified in the Drawings. Acceptable material shall be evenly graded and have a minimum of fines.

2.1.1.4 Acceptable soils shall be environmentally-clean, free of debris, snow, ice, free water, and not frozen to the extent practical; slag and ash will not be allowed for use.

2.1.1.5 Acceptable soil shall be substantially free of organic materials, loam, wood, trash, or other objectionable materials that may be decomposable, compressible, or that cannot be properly compacted.

2.2 RIP-RAP

2.2.1 Off-Site Borrow Source

2.2.1.1 Riprap shall have an average size (D50) of 10-inches and be angular to subrounded. It shall be free of dirt, clay, fines, slag, and vegetation. The least dimension of a rock shall not be less than one-third the largest dimension. Individual rocks shall be dense, sound, and free from cracks, seams, and other defects that could result in accelerated weathering.

2.2.1.2 The riprap shall have a gradation that falls within the following percentages:

Size	Percent of Total Weight Smaller than Given Size
15 – 20 inches	100
13 – 18 inches	85
10 – 15 inches	50
3 – 5 inches	15

(The size of rock pieces are based on 50% cubical and 50% spherical, with a specific gravity of 2.65.)

2.3 CAP MATERIAL

2.3.1 Off-Site Borrow Source

2.3.1.1 As determined by NRCS for other capped areas in the region, the cap material shall be USDA textural classification of sandy loam. The cap material shall be reasonably free of grass, roots, weeds, sticks, stones, or other foreign or objectionable material. The maximum allowed rock size shall be four inches. Hand picking of rocks prior to final grading may be required.

2.3.1.2 Acceptable soils shall be environmentally-clean, free of debris, snow, ice, or water, and not frozen to the extent practical; slag or ash will not be allowed for use.

2.3.1.3 The sandy loam criteria is:

2.3.1.3.1 Option 1

- Contains 20% or less clay;
- Combination of silt (%) plus twice the clay (%) is greater than 30;
- Contains 52% or more sand; and,
- Contains less than 15% gravel.

2.3.1.3.2 Option 2

- Contains less than 7% clay;
- Contains less than 50% silt;
- Contains 43% to 52% sand; and,
- Contains less than 15% gravel.

2.3.1.4 Cap material meeting these criteria may be obtained by the following methods as identified by NRCS:

2.3.1.4.1 Using a “pit-run” source that naturally meets these criteria.

2.3.1.4.2 Using mechanical or manual separation processes such as screening, hand or machine picking, removing undesirable soil layers to avoid mixing.

2.3.1.4.3 Using mechanical mixing processes to combine differing soil layers into an acceptable product. Mixing shall be sufficient such that when cover material is placed, patches and streaks of cap material that are sandier or more clayey than allowed by the USDA sandy loam classification shall comprise no more than 5% of the capped area.

PART 3 – EXECUTION

3.1 PREPARATION

3.1.1 Identify required lines, levels, contours, and datum locations.

3.1.2 Locate, identify, and protect utilities and historical features from damage.

3.1.3 Protect benchmarks, survey control points, property corners, fences, monitoring wells, sidewalks, signs, paving, utilities, curbs, and existing capped areas from excavating equipment and vehicular traffic.

3.1.4 Protect adjacent roads, utilities, structures, trees that must be preserved, and other permanent items against any undercutting resulting from sidewall slumping.

3.1.5 No construction equipment or vehicle traffic shall be allowed within the drip line of trees that are marked for preservation.

3.1.6 The **Contractor** shall identify a borrow source for the cap material that is approved by the **Owner** and **Professional** prior to bringing any cap material to the site.

3.2 GRADING

3.2.1. The **Contractor** shall not initiate any grading activities prior to submittal approval(s) by the **Professional**.

3.2.2. All grading shall be approved by the **Professional** prior to placement of cap material.

3.2.3. The **Contractor** shall take the necessary precautions to protect trees, retaining walls, historic structures, and such other landscaping and objects from damage, unless their removal is required by the Work.

3.2.4. Grade soils as necessary to accommodate temporary access roads, staging areas, dewatering areas, and decontamination pad(s).

3.2.5. Where lines and grades are not specified on the Drawings, the final topography shall be stable, smooth, and uniform and shall not contain gullies, rills, and shoulders prior to placement of cap material. Unless otherwise approved by the **Professional** or shown in the Drawings, slopes shall not exceed 4 horizontal to 1 vertical. Make gradual grade changes. Blend slopes into level areas.

3.2.6. The site shall be graded to promote positive drainage.

3.2.7. Grading shall proceed to the elevations specified in the Drawings or as directed by the **Professional**. The **Contractor** shall provide regular leveling checks utilizing established benchmarks to confirm that lines and grades are maintained at the specified elevation.

3.2.8. The elevations depicted on the Drawings shall be inferred to have gradual transitions in line and grade between each identified point.

3.2.9. Graded areas shall be compacted by routing wheeled or tracked construction equipment over the material such that every point on the surface of each layer not exceeding 12-inches in loose thickness is traversed not less than once.

3.2.10. All earthwork shall be completed in accordance with OSHA 29 CFR Part 1926.

3.2.11. Work specified under this section shall be satisfactorily executed, regardless of subsurface materials encountered at locations shown on the Drawings and/or as directed by the **Professional**.

3.2.12. Notify **Owner/Professional** of unexpected subsurface conditions and cease Work in area until notified to resume Work.

3.2.13. **Contractor** shall maintain specified grades during the performance of excavation operations. The **Contractor** will not be compensated for material moved from beyond the lateral or vertical limits specified.

3.2.14. **The Contractor shall assume the risks regarding the presence or proximity of overhead or underground utility and private lines, pipes, conduits and support work for same, existing structures, and property of whatever nature.** Responsibilities for damages and expenses for direct or indirect injury to such structures or to any person or property by reason of them or by reason of injury to them, whether such structures are or are not shown on the Drawings, by work of this contract, rest solely with the **Contractor**. The **Contractor** is encouraged to use a private utility locating service.

3.2.15. Dust control is a critical component of the grading operations and water sprays shall be used to pre-wet the material. The **Contractor** shall provide a water truck for wetting haul routes and grading areas and shall also provide a consistent flow of water of sufficient capacity for continuous wetting operations with mobile hoses.

3.3 DITCH IMPROVEMENT EXCAVATION

3.3.1 The **Contractor** shall excavate the drainage ditch to the lines, grades, and profile specified in the Drawings.

3.3.2 Where the ditch requires widening to meet the specifications, it shall be widened to the north.

3.3.3 Spoils from ditch excavation upstream of the Coal Dock Burn Area may be spread adjacent to the ditch. All spoils excavated adjacent to the Burn Area shall be spread and graded so that they are beneath the cap atop the Coal Dock Burn Area.

3.4 WASTE PILE MANAGEMENT

3.4.1 The **Contractor** shall not initiate any waste pile management activities prior to submittal approval(s) by the **Professional**.

3.4.2 Refer to **Section 31 22 28** for WP-11.

3.4.3 The Drawings depict and contain summary tables of the waste piles that are present at the Site. Each waste pile is labeled and approximate volumes and intended management methods are identified in tabular format.

3.4.4 In Plan Set A, all of the waste piles within the work area will be graded out and capped with the exception of WP-42 (rusted corrugated pipe) which shall be recycled and WP-43 (structural wood) which shall be moved to the north end of the Coal Dock property and combined with a large pile of wood beams and timbers.

3.4.5 Dust control is a critical component of the waste pile management operations and water sprays shall be used to pre-wet the material. Drop heights shall be minimized to the extent reasonably possible. The **Contractor** shall provide a water truck for wetting haul routes and grading areas and shall also provide a consistent flow of water of sufficient capacity for continuous wetting operations with mobile hoses.

3.5 CAP PLACEMENT

3.5.1 The **Contractor** shall not initiate any capping activities prior to submittal approval(s) by the **Professional**.

3.5.2 Prior to capping an area, the **Contractor** shall obtain the **Professional's** approval of the final grading for the area. This could include requiring the **Contractor** to demonstrate that the plan grades have been achieved.

3.5.3 The **Contractor** shall provide and place 6-inches compacted thickness of sandy loam soil over all graded areas and to the limits depicted in the Drawings.

3.5.4 Cap material shall be compacted. Compaction shall consist of routing the track or wheel of construction equipment over the fill material so that every point on the surface of the cap material is traversed by at least one tread track or wheel of the equipment.

3.5.5 For cap material placed on embankment slopes where the use of grain drill type equipment is not feasible for seeding, the Contractor shall use a bulldozer to drive up and down the slopes during final fine grading and shaping to orient tracks parallel to the slope to aid in seed catch.

3.5.6 If the existing capped area on the Mineral Building property is compromised by the work, the disturbed area shall similarly receive additional sandy loam soil such that the compacted cap thickness remains six-inches.

3.6 PROTECTION

3.6.1 Maintain and place additional silt fences and other engineering controls to minimize erosion as the work progresses.

3.6.2 Protect and maintain visibility of the historic crane rail and any other features noted for protection or visibility in the Drawings.

3.5 FIELD QUALITY CONTROL

3.5.2 Field inspection and testing to be performed by the **Contractor**.

3.5.3 Refer to **Section 01 45 00**.

END OF SECTION 31 22 23

SECTION 31 22 28

SOLIDS AND WATER MANAGEMENT

PART 1-GENERAL

1.1 DESCRIPTION

1.1.1 The work of this section includes, but is not limited to:

1.1.1.1 Collection, handling, and disposal of solid waste from the grading limits.

1.1.1.2 Excavation, handling, and staging of PCB contaminated soil and debris associated with waste pile WP-11.

1.1.1.3 Dewatering fluids.

1.1.1.4 Decontamination fluids

1.1.1.5 Storm water management.

1.2 JOB CONDITIONS

1.2.1 Contaminated Media:

1.2.1.1 Contaminated and Non-Contaminated Soil

1.2.1.1.2 Historical soil sampling results are contained in **Appendix III**. Site soils are affected by metals. Soils within the Hubbell Coal Dock Burn Area contain PCBs. Asbestos containing materials (ACM) are likely to be present in site soils within the Mineral Building property and Coal Dock Burn Area. ACM may also be present in the waste piles.

1.2.1.2 Waste Piles

1.2.1.1.1 Refer to **Appendix III** for available analysis results for the waste piles. ACM may also be present in the waste piles.

1.2.1.2 Groundwater:

1.2.1.2.1 Available groundwater sampling results are included in **Appendix III**. The depth to groundwater at the site varies from approximately one to four feet below the existing ground surface in the area of the coal Dock Burn Area.

1.2.1.3 Storm Water

1.2.1.3.1 Storm water currently flows across the site in the form of sheet flow and shallow channel flow. Some of these runoff pathways are within the work area and are the subject of remedial construction efforts to abate erosion and the transport of contaminated media directly into Torch Lake.

1.2 CONTRACTOR QUALIFICATIONS

1.2.2 **Contractor** shall have a Health and Safety Program in place that conforms to the requirements of 29 CFR 1910.120.

PART 2-PRODUCTS

Not Used.

PART 3-EXECUTION

3.1 SOLID WASTE

3.1.1 Solid waste including tires, metal, furniture, wood, culverts, and plastic debris within the grading and capping limits shall be collected and staged for recycling, if possible, or characterization and landfill disposal.

3.1.2 The **Contractor** shall conduct any required characterization and prepare all required profiles and manifests for **Owner** review, approval, and signatures. Refer to **Section 02 61 00** for additional details.

3.2 WASTE PILE WP-11

3.2.1 PCBs were detected in one of the samples (CHLL-WP01), from waste pile WP-11, at a concentration exceeding 50 parts per million (ppm). Unless directed otherwise by the **Owner** based on new characterization data (through the use of Alternate A1), the **Contractor** shall prepare a profile and manifest for proper transport and disposal of the WP-11 soil and debris as PCB remediation waste for **Owner** review, approval, and signatures. Refer to **Section 02 61 00** for additional details.

3.3 DEWATERING FLUIDS

3.3.1 Water generated from dewatering to facilitate grading and cap placement west of the historic crane rail shall be pumped and discharged to the ground surface to infiltrate east of the historic crane rail within the Coal Dock Burn Area in a manner that avoids spreading of contamination to other parts of the Site and erosion of soils into Torch Lake. The discharge shall be in accordance with the discharge exemption allowed under Rule 2210(e) of the Part 22 Rules. Refer to **Section 31 23 19**.

3.3.2 The discharge of dewatering water east of the historic crane rail will require that the dewatering, grading, and capping west of the historic crane rail occur prior to completing the capping of the remainder of the Coal Dock Burn Area.

3.4 DECONTAMINATION FLUIDS

3.4.1 Decontamination water without any additives shall be allowed to infiltrate into the ground. Any solids generated shall be placed beneath the proposed cap.

3.4.2 The discharge shall be in accordance with the discharge exemption allowed under Rule 2210(u)(iii) of the Part 22 Rules.

3.5 STORM WATER MANAGEMENT

3.5.1 The **Contractor** shall minimize, if applicable, the amount of water in the area of soil grading and capping by deploying pumps, diversion berms, and other applicable techniques. **Contractor** must ensure that minimal disturbance is caused by diversions and proper controls are employed to minimize erosion and sediment transport. Surface runoff, seepage, or groundwater shall be managed according to the reviewed and approved WP.

3.5.2 During improvement of the southern drainage ditch, the **Contactor** shall provide provisions to route storm water from the two 18-inch diameter culverts around the work area until such time that geotextile fabric, rip-rap, and erosion control materials are placed so that storm water does not erode ditch soils.

3.5.3 A Part 91, SESC permit from the Houghton County Drain Commissioner will be required prior to any earth change. A Part 91 SESC Permit is required for an earth change that is greater than or equal to one acre or within 500 feet of a lake or stream.

3.5.4 A Notice of Coverage for Construction Storm Water from MDEQ will also be required prior to earth disturbance since the earth change is planned to be greater than or equal to five acres in size. The **Contractor** must provide a Certified Construction Storm Water Operator for the project.

3.6 SPILL CONTROL

3.6.1 The **Contractor** shall be responsible for cleaning up all spills with no additional cost to the **Owner**. If a spill occurs, the **Contractor**, as necessary, shall take the following actions at a minimum:

3.6.1.1 Notify the **Professional**, **Owner**, and any other appropriate agencies immediately.

3.6.1.2 Take immediate measures to control and contain the spill within the Site boundaries. This shall include as a minimum the following actions (if these can be safely conducted):

3.6.1.2.1 Keep unnecessary personnel away, isolate hazardous areas, and deny entry.

3.6.1.2.2 Do not allow anyone to contact spilled material.

3.6.1.2.3 Stay upwind; keep out of low areas.

3.6.1.2.4 Keep combustibles away from the spilled material.

3.6.1.2.5 Use water spray to reduce vapors, as needed.

3.6.1.2.6 Isolate catch basins from spilled materials.

3.6.1.2.7 Other actions, as needed.

3.6.1.3 The **Contractor** shall implement general spill control actions as follows:

3.6.1.3.1 Solid Spills: Remove and place contaminated materials into appropriate staging areas and properly dispose of the material as soon as possible.

3.6.1.3.2 Liquid and Sludge Spills: Absorb with sand, clean fill, or other non-combustible absorbent material. Dispose of the absorbent/spill mixture in accordance with applicable regulations.

3.6.2 Decontamination procedures shall be required after cleanup to eliminate detectable concentrations of the substance spilled, or reduce it to an acceptable level as determined by the **Professional**. Decontamination associated with spills shall be completed at no additional cost to the **Owner**. Complete cleanup may require removal of contaminated soils. All contaminated materials including solvents, cloth, soil and wood that cannot be decontaminated must be properly containerized, labeled, and disposed of as soon as possible.

3.6.3 All spills shall be noted in the daily log. A spill report shall also be prepared by the **Contractor**, which includes final disposal location. A copy of the spill report shall be submitted to the **Professional** within five days of the spill event, unless the **Contractor** is otherwise directed. If this is not possible, the **Contractor** shall submit a written statement to this effect with an estimated date for completion of the spill report.

END OF SECTION 31 22 28

SECTION 31 23 19

DEWATERING

PART 1 – GENERAL

1.1 SCOPE

1.1.1 The **Contractor** shall furnish all tools, labor, equipment, and materials to remove and dispose of all liquids necessary to be removed from the ground throughout the course of the Work. The **Contractor** will be required to dewater contaminated soil and capture storm water to best facilitate grading and cap placement, ditch improvement, and maintain safe working conditions while minimizing the potential for erosion of soils into Torch Lake.

1.1.2 The **Contractor** shall maintain dewatering equipment and materials at the site until such time that their use is no longer necessitated by the Work.

1.2 GENERAL

1.2.1 **Contractor** shall submit for approval a detailed plan for the proposed dewatering operations as part of the WP. A detailed description of procedures to be followed (including manpower availability, equipment, and response times) shall be included in the WP.

1.2.2 The **Contractor** shall obtain all necessary permits required for dewatering activities.

1.3 UTILITIES

1.3.1 The **Contractor** shall be responsible for providing all electrical wire, hook-ups, temporary generation, and ancillary materials necessary to perform dewatering.

1.4 DITCH IMPROVEMENT

1.4.1 During improvement of the southern drainage ditch, the **Contactor** shall provide provisions to route storm water from the two 18-inch diameter culverts around the work area until such time that geotextile fabric, rip-rap, and erosion control materials are placed so that storm water does not erode ditch soils.

1.4.2 **Contractor** shall provide all necessary equipment and pumps to remove and dewater the ditch improvement work area. All equipment shall be steam cleaned prior to being moved to the Site. No soil or other residue from previous operations shall be visible.

1.4.3 **Under no circumstances shall work occur below the ordinary high water mark indicated on the Drawings adjacent to Torch Lake.**

1.5 GRADING AND CAPPING

1.5.1 Water generated from dewatering to facilitate grading and cap placement west of the historic crane rail shall be pumped and discharged to the ground surface to infiltrate east of the historic crane rail within the Coal Dock Burn Area. The discharge shall be located and operated in a manner that avoids spreading of contamination to other parts of the Site, avoids erosion of soils into Torch Lake, and does not allow water to flow directly into Torch Lake. The discharge shall be in accordance with the discharge exemption allowed under Rule 2210(e) of the Part 22 Rules. Refer to **Section 31 23 19**.

1.5.2 The discharge of dewatering water east of the historic crane rail will require that the dewatering, grading, and capping west of the historic crane rail occur prior to completing the capping of the remainder of the Coal Dock Burn Area.

1.5.3 The **Contractor** shall minimize the amount of time the excavation is left open and shall dewater the excavation using sumps and pumps, well points, or other approved methods to yield a suitable surface capable of supporting grading, cap placement, and compaction efforts.

1.5.4 **Contractor** shall provide all necessary equipment and pumps to dewater the required area prior to grading and cap placement. All equipment shall be steam cleaned prior to being moved to the Site. No soil or other residue from previous operations shall be visible.

1.6 CLEANUP

1.6.1 Upon completion of the Work, the **Contractor** shall remove all materials, tools, debris, and equipment, and restore the Site in a manner satisfactory to the **Owner**. Dewatering or treatment pads shall be deconstructed and the ground surface shall be restored to its original conditions.

1.6.2 Daily Site cleanup of dewatering operation areas shall be performed by the **Contractor**. The **Contractor** shall ensure that no contaminated soil or other materials are spilled on Site roads/parking areas, the designated haul routes, or other area roads. If an accidental liquid, semi-solid, or solid spill occurs, the **Contractor** shall be responsible for all costs associated with completing cleanup, characterization, and disposal as required by the **Professional** at no additional cost to the **Owner**.

1.6.3 All equipment shall be cleaned or disposed prior to leaving the site so that no site contaminants leave with the dewatering equipment.

1.6.4 All solid or semi-solid material resulting from cleaning operations to remove site media shall be disposed of beneath the cap or at an approved disposal facility. Manifests and certification of disposal shall be provided. Manifests and disposal certificates shall be to the satisfaction of the **Owner**. All materials stated above shall be collected and removed from the Site as required to maintain a clean, safe workplace. Under no circumstances will the **Contractor** be allowed to accumulate debris, etc. on the Site beyond the Contract time.

PART 2 – PRODUCTS

Not Used

PART 3 – EXECUTION

3.1 GENERAL

3.1.1 The **Contractor** shall dewater the ditch improvement and grading and capping areas, as necessary, with temporary sumps and pumps or by any accepted standard practice within all safety requirements in 29 CFR 1926.

END OF SECTION 31 23 19

DIVISION 32

EXTERIOR IMPROVEMENTS

SECTION 32 29 30

EROSION AND SEDIMENT CONTROL

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

1.1.1 The Work to be performed under this section includes but is not limited to furnishing all labor, materials, tools, and equipment needed to install, operate, and maintain erosion and sedimentation controls as required by the Soil Erosion and Sedimentation Control (SESC) permit and as shown on the Drawings and specified herein.

1.2 STORM WATER POLLUTION PREVENTION

1.2.1 Prior to initiating earth-moving activities, the **Contractor** shall prepare a SESC Implementation Plan, obtain a permit from the appropriate issuing agency, obtain a Notice of Coverage from MDEQ, and establish all required SESC controls.

1.2.1.1 All work under the Contract must meet the storm water management requirements of the Project and comply with the applicable SESC rules and regulations (Soil Erosion and Sedimentation Control – 1994 PA 451, Part 91, as amended, MCL 324.9101 et seq.) and specific provisions and regulations for same within the Contract Documents. The Department of Management and Budget, Facilities Administration, an Authorized Public Agency (APA), has promulgated standard procedures and specifications for erosion control that shall be considered a part of the Contract Documents. SESC measures will be monitored and enforced by the permit issuing agency through the review of the **Contractor's** implementation plans and Site inspections. The permit issuing agency or the **Professional** will notify the **Contractor** in writing of any violations of the SESC statutes and/or the corrective action(s) undertaken by the **Owner** and may issue stop work orders. The permit issuing agency has the right to assess a fine to the **Contractor** for noncompliance with the provisions of the Contract Documents and/or SESC regulations applicable to this work and fines shall be in addition to any other remediation costs or liquidated damages applicable to the project and may exceed the value of the Contract.

1.2.2 The **Contractor** shall implement the soil erosion and sedimentation controls as shown on the Drawings, specified in the Contract Documents, and as directed by the permit issuing authority.

1.2.3 Fines and related costs resulting from failure to provide adequate protection against soil erosion and sedimentation are the obligation of the **Contractor**.

1.2.3.1 Silt, sediment, sand, mud, coal, or other similar materials leaving the properties on which Work is being performed will be construed as damage to neighboring properties and evidence of negligence on the part of the **Contractor**.

1.2.3.2 Damages to neighboring properties shall be rectified and/or restitution shall be paid by the **Contractor**.

1.2.4 Soil erosion and sedimentation control measures employed will be subject to approval and inspection by governing agencies having jurisdiction over such work.

The temporary control provisions proposed shall be coordinated with the project schedule, sequence of construction, and temporary and permanent Site facilities to assure economical, effective, and continuous erosion control throughout the construction and post construction period with no violation of the Federal, State, and local regulations.

1.2.5 The **Owner** may limit the active area of earthwork and embankment operations in progress commensurate with the **Contractor's** capability in controlling erosion and sediment-laden run-off.

1.3 SUBMITTALS

1.3.1 Samples: Submit samples of materials being used when requested by the **Owner** including names, sources, and descriptions.

1.3.2 The **Contractor** shall prepare and submit a SESC Implementation Plan. The SESC Implementation Plan shall be developed utilizing the Site preparation and restoration plans herein.

1.3.3 The **Contractor** shall submit copies of the issued SESC Permit and Notice of Coverage.

1.3.4 The **Contractor** shall provide the name and certification number of the Certified Construction Storm Water Operator for the project.

1.4 QUALITY CONTROL

1.4.1 All erosion and sediment control work shall comply with applicable requirements of governing authorities having jurisdiction.

1.4.2 SESC measures shall be installed prior to any earth disturbance. Temporary controls must be regularly inspected and properly maintained until permanent controls are established. On-site areas that are subject to severe erosion and off-site areas that are especially vulnerable to damage from erosion and/or sedimentation are to be identified and receive special attention. Permanent controls are to be installed within five days of final grade. This is a requirement of Part 91 of PA 451 of 1994, the Soil Erosion and Sedimentation Control Act (R 323.1709 (5)).

1.4.3 All land-disturbing activities are to be planned and conducted to minimize the size of the area to be exposed at any one time and the length of the time of exposure.

1.4.4 Surface water run-off originating upgradient of exposed areas should be controlled to reduce erosion and sediment loss during the period of exposure.

1.4.5 All land disturbing activities are to be planned and conducted so as to prevent off-site sedimentation damage.

1.5 REFERENCES

1.5.1 The Department of Management and Budget's Soil Erosion and Sedimentation Control Guidebook (February 2005).

PART 2 – MATERIALS

2.1 SILT FENCE

2.1.1 Silt fence shall meet the following requirements:

2.1.1.1 Silt fences shall be prefabricated.

2.1.1.2 The geotextile for the fencing shall meet the following requirements:

Property	Test Value(1)	Test Method
Grab Tensile Strength	100 lbs	ASTM D4632
Burst Strength	190 psi	ASTM D3786
Puncture Resistance	40 lbs	ASTM D4833
Permittivity	>0.1 sec-1	ASTM D4491
AOS	>30 US sieve	ASTM D4751
UV Resistance (500 hr.)	70%	ASTM D4355

[1]Minimum average roll values

2.1.1.3 Posts shall be wood, galvanized or aluminum, 48 inches tall minimum, spaced at no further than 10 foot intervals.

2.1.2 The geotextile height shall be a minimum of 3 feet and shall be provided with a tensioning cord**.**

PART 3 – EXECUTION.

3.1 SILT FENCE

3.1.1 A narrow 6-inch deep trench shall be excavated along the alignment of the silt fence. Excavated material shall be stockpiled adjacent to the trench.

3.1.2 Fence posts shall be positioned on the downstream side of the fence and driven into the ground. Fence posts shall be spaced no more than ten (10) feet apart.

3.1.3 The fabric flap shall be laid in the trench and backfilled with material stockpiled from trench excavation. The backfill shall be tamped into place.

3.1.4 Fabric fence and support posts shall be connected.

3.1.5 The **Contractor** shall join fence sections together by overlapping adjoining fence with a minimum of two wraps or as recommended by the manufacturer and as approved by the **Owner** to prevent silt from escaping through the adjoining sections.

3.1.6 The **Contractor** shall maintain silt fences (removing and disposing of silt, repairing fence which falls down, and replacing damaged fence, etc.) throughout the duration of the Contract at no additional cost to the **Owner**.

3.2 TEMPORARY VEGETATIVE COVER

3.2.1 If used, spread the temporary seed mix and mulch uniformly at the specified rate in accordance with the manufacturer's specifications.

3.2.2 Anchor mulch during application or immediately after placement to avoid loss by wind and water.

3.3 PERMANENT VEGETATIVE COVER

3.3.1 Refer to **Section 32 92 00**.

3.3.2 Anchor mulch during application or immediately after placement to avoid loss by wind and water.

3.4 DUST CONTROL

3.4.1 The **Contractor** shall be aware that dust generated from the excavation, grading, handling, storage, transport, and treatment may contain asbestos and particulates that have ingestion and inhalation limit(s). Therefore, dust from all operations shall be avoided.

3.4.2 Dust generated from the **Contractor's** performance of the Work, either inside or outside the limit of work shall be controlled by the **Contractor** by applying water or other materials with the approval of the **Owner**.

3.4.3 The **Owner** has the right to stop construction activity if the excavation, grading, handling, backfilling, or restoration work is generating excessive amounts of dust as determined from observation.

3.4.4 Water shall be provided in plentiful amounts and sufficient locations to water all materials prior to and during movement. This includes prior to and during excavation, grading, and waste pile management, and as needed at all times and locations to prevent dust from vehicle and equipment traffic on and off haul roads.

3.4.5 Visible dust during the construction activities is prohibited.

3.5 MAINTENANCE

3.5.1 Inspection

3.5.1.1 Erosion and sediment control will be inspected weekly by the **Contractor** and after significant precipitation events resulting in runoff from the Site.

3.5.1.2 At a minimum the **Contractor** will perform weekly inspections of the soil erosion and sedimentation control system to assure the integrity of the system.

3.5.2 Repair

3.5.2.1 All erosion swales and gullies in excess of two inches deep shall be filled and compacted to their original condition and reseeded as required.

3.5.2.2 Erosion and sediment control structures (i.e., silt fencing) shall be replaced as required to assure the integrity of the system.

3.5.2.3 The **Contractor** shall complete SESC corrective actions within 48 hours of discovery of routine maintenance items, and within 24 hours if there is potential to impact Waters of the State.

3.5.3 Preventive Actions

3.5.3.1 The **Contractor** shall perform sweeping of applicable roadways and other preventive actions as required to minimize tracking and run off of soils.

3.5.3.2 The **Owner** will assume responsibility for permanent controls after project closeout.

3.5.4 Guarantee Period

3.5.4.1 The **Contractor** is responsible for repairing and maintaining the permanent SESC measures (vegetative cover) until such time that the governing agency releases the SESC permit. This includes supplying additional cap material, seed, mulch, or other erosion control measures where necessary to control erosion. A guarantee period of up to one year from the time of seed and mulch placement is included in the Contract.

3.6 SURPLUS MATERIALS

3.6.1 The **Contractor** shall provide a surplus inventory of erosion control materials for the duration of the project.

END OF SECTION 32 29 30

SECTION 32 92 00

SEEDING, FERTILIZING, AND MULCHING

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

1.1.1 The **Contractor** shall furnish all labor, materials, equipment, tools, and appurtenances required to seed, fertilize, and mulch all areas receiving a cover during the course of construction.

1.1.2 Spoils excavated from the southern drainage ditch upstream of the Coal Dock Burn Area shall be seeded, fertilized, and mulched if not placed beneath the cap similar to spoils from adjacent to the Burn Area.

1.1.3 The **Contractor** is required to apply seed and mulch to those areas disturbed by performance of the Work outside of the graded and capped areas that previously had vegetation present. These areas include, but may not be limited to, the uncovered edges of on-site access roads, material and equipment staging areas, and cleared areas required for the installation of temporary facilities and/or utility connections.

1.1.4 The **Contractor** shall comply with all applicable codes, ordinances, rules, regulations and laws of local, municipal, State, or Federal authorities having jurisdiction.

1.2 SUBMITTALS

1.2.1 A manufacturer's Certificate of Compliance for the components of the seed mixture shall be submitted by the manufacturer with each shipment of each type of seed. These certificates shall include the guaranteed percentages of purity, weed content and germination of the seed, net weight, and the date of shipment. No seed may be sown until the **Contractor** has submitted these certificates.

1.2.2 The **Contractor** shall submit to the **Professional** the seed certificates for approval at least seven (7) days prior to placement.

1.3 QUALITY ASSURANCE

1.3.1 A satisfactory stand of vegetation within the capped areas, as determined by the **Owner** and **Professional**, shall be required. To be acceptable, bare spots shall be scattered, there shall be no bare spots larger than one square foot, and the stand of vegetation shall consist of a uniform stand of at least 90 percent established permanent species by the time of the next seeding timeframe after the initial seeding. Refer to **Subsection 2.2** for seeding timeframes.

1.3.2 Maintain erosion and sedimentation controls in accordance with these Specifications throughout project and until permanent vegetation is established.

1.4 DEFINITIONS

1.4.1 Weeds include, but are not limited to, Dandelion, Jimsonweed, Quackgrass, Horsetail, Morning Glory, Rush Grass, Mustard, Lambsquarter, Chickweed, Cress, Crabgrass, Canadian Thistle, Nutgrass, Poison Oak, Blackberry, Tansy Ragwort, Bermuda Grass, Johnson Grass, Poison Ivy, Nut Sedge, Nimble Will, Bindweed, Bent Grass, Wild Garlic, Perennial Sorrel, and Broome Grass.

PART 2 - PRODUCTS

2.1 SEED MIXTURE FOR PERMANENT COVER

2.1.1 The following seed mixture shall be used for permanent cover, which was developed by NRCS for other similar capped areas along the Torch Lake shoreline. The minimum seed purity and germination percentages are also listed.

Seed	Pounds/Acre	Purity (%)	Germination (%)
Red Clover	10	98	80
Creeping Red Fescue	25	97	85
Vernal Alfalfa	5	99	85
White Dutch Clover	5	98	80
Perennial Rye Grass	10	97	85
Sweet Clover	5	98	80
Orchard Grass	15	98	90

2.1.2 Legume seed (alfalfa and clovers) shall be inoculated according to the specific requirements of each seed.

2.1.3 Seed shall be placed using a grain drill to improve soil contact and reduce seed consumption by birds.

2.1.4 The **Owner**, through the **Professional**, reserves the right to change the seed mixture and recommended seeding dates based upon the time of year in which the construction is performed (i.e., winter rye).

2.1.5 The **Owner** or **Professional** may also approve the use of dormant seed, if work is executed after the recommended seeding dates.

2.2 FERTILIZER

2.2.1 Following NRCS recommendations applied to other regional capping efforts, fertilizer shall be applied at the rate of 60 pounds of nitrogen, 60 pounds of phosphorous, and 300 pounds of potassium per acre.

2.2.2 Lime shall be applied at the rate of five tons per acre.

2.2.3 Manufactured fertilizer shall be a standard commercial fertilizer containing the specified percentages by weight of nitrogen, phosphoric acid, and potash. The fertilizer shall be furnished in standard containers with the name, weight, and guaranteed analysis of the contents clearly marked. The containers shall insure proper protection in handling and transporting the fertilizer. All commercial fertilizer shall comply with local, state and federal fertilizer laws.

2.3 MULCH

2.3.1 All seeded areas shall be mulched with three tons of straw per acre.

2.3.2 In the shallow drainage swales and on embankment slopes, 100% biodegradable straw blankets shall be used to help prevent erosion instead of loose mulch.

2.3.3 Mulch applied using hydroseeding techniques may be substituted for loose mulch and tackifier application but may not replace straw blankets or seed placement using a grain drill.

2.4 WATER

2.4.1 Water shall be clean, fresh, potable, and free of substances or matter that could inhibit vigorous growth of vegetation.

PART 3 - EXECUTION

3.1 INSPECTION

3.1.1 The **Contractor** shall verify that the prepared vegetative layer is ready to receive the Work of this Section.

3.1.2 Seed shall not be sown until the final condition of the cap in the area(s) to be seeded has been approved by the **Professional**.

3.2 DELIVERY, STORAGE, AND HANDLING

3.2.1 The **Contractor** shall deliver seed mixture in sealed containers showing weight, seed mix, year of production, date of packaging, and location of packaging. Seed in damaged packaging shall not be acceptable.

3.2.2 The **Contractor** shall deliver fertilizer in waterproof bags showing weight, chemical analysis, and name of manufacturer. Fertilizer in damaged packaging is not acceptable.

3.2.3 Lime may be delivered in bulk so long as it is protected from the weather prior to application.

3.2 SEEDBED PREPARATION

3.2.1 Areas to be seeded shall be fine graded, free of deleterious objects and stones greater than 3-inches in diameter. Where mechanized planting can occur, the seedbed shall be adequately loosened four to six inches deep and then smoothed, which may require disking and/or cultipacking to prepare the seedbed depending on soil and moisture conditions. Where mechanical planting is not feasible, hand preparation methods shall be used to roughen the soil surface so that broadcast seed will remain in-place. Soil preparation shall be suspended when moisture conditions are not amenable to satisfactory seedbed preparation.

3.3 FERTILIZING

3.3.1 Fertilizer and lime shall be incorporated into the soil either before or during final seedbed preparation.

3.3.2 The **Contractor** shall apply fertilizer in accordance with manufacturer's instructions.

3.3.3 The **Contractor** shall mix fertilizer thoroughly into upper 3 inches of the vegetative layer with a disc, spring-tooth harrow, or other suitable equipment.

3.3.4 The **Contractor** shall lightly water ground surface to aid the dissipation of fertilizer.

3.4 SEEDING

3.4.1 The **Contractor** shall apply seed at the rates shown in **PART 2** of this Section.

3.4.2 Do not seed area in excess of that which can be mulched on same day.

3.4.3 Planting season shall be as indicated in **PART 2** herein or as recommended by the local regulatory agency.

3.4.4 Water surfaces to ensure uniform seed germination and to keep surface of soil damp. Apply water slowly and in a fine spray to limit pooling.

3.4.5 The **Contractor** shall not sow immediately following rain, when ground is too dry, frozen, or during windy periods.

3.5 MULCHING

3.5.1 All seeded areas shall be mulched with three tons of straw per acre and anchored by knifing or the use of non-asphaltic tackifier.

3.5.2 This rate may be varied by the **Professional**, depending on the texture and condition of the mulch material and the characteristics of the area seeded.

3.5.3 Straw mulch shall be properly anchored to prevent removal by wind.

3.5.4 If non-asphaltic tackifier is used, the **Contractor** shall cover structures, sidewalks, slabs, retaining walls, signs and appurtenances, if the mulch binder is applied in such a way that it would come in contact with or discolor the structures.

3.5.5 Straw mulch blankets in drainage swales and along the berm edges, and coconut mulch

blankets along the top portion of the drainage ditch profile, shall be staked in-place using wood stakes. Metal stakes are not allowed.

3.6 RESEEDING

3.6.1 Where vegetative coverage is less than 90% by the time of the next seeding timeframe after initial seeding, the **Contractor** shall place additional seed.

3.7 MAINTENANCE

3.7.1 Begin maintenance activities after each area of Work has been reseeded.

3.7.2 Maintain seeded surfaces by supplying additional cap material, seed, mulch, or other erosion control measures where necessary to control erosion.

3.7.3 Water surfaces to ensure uniform seed germination and to keep surface of soil damp. Apply water slowly and in a fine spray to limit pooling.

3.7.4 Replant damaged areas showing root growth failure, deterioration, bare or thin spots, and eroded areas.

3.8 INSPECTION FOR ACCEPTANCE AND GUARANTEE PERIOD

3.8.1 Seeded areas shall be accepted by the **Professional** when a full uniform stand of vegetation has become established. A satisfactory stand of vegetation shall be defined as an area of 1,000 square feet or larger that has:

3.8.1.1 No bare spots larger than 1 square foot.

3.8.1.2 Not more than 10 percent of area with bare spots larger than 3-inches by 3-inches.

3.8.2 The **Contractor** is responsible for repairing and maintaining the permanent SESC measures (vegetative cover) until such time that the governing agency releases the SESC permit. This includes supplying additional cap material, seed, mulch, or other erosion control measures where necessary to control erosion. A guarantee period of up to one year from the time of seed and mulch placement is included in the Contract.

END OF SECTION 32 92 00

APPENDIX I

GLOSSARY

GLOSSARY

Activity–An element in the Progress Schedule establishing a requisite step, or the time and resources required, for completing the part of the Work associated with that Activity.

Addenda–Written instruments that are used by the Owner and/or Professional to incorporate interpretations or clarifications, modifications and other information into the Bidding Documents. An Addendum issued after Bid opening to those Bidders who actually submitted a Bid, for the purpose of re-bidding the Work without re-advertising, is referred to as a **post-Bid** Addendum.

Agency- Any unit, section, division, department or other instrumentality of the State that benefits from the Work.

Alternate–Refers to work specified in the Bidding Documents for which the Bidder must bid a Bid Price.

Apparent Low Bidders: Those Bidders whose Base Bid, when added to those specific Alternates the Owner intends to accept, yields the three lowest sums of Bid and Alternates. Additional Bidders may be considered Apparent Low Bidders if their Bid, when added to those specific Alternates the Owner intends to accept, yields a sum within 10% of the lowest of the Apparent Low Bidder's sum. If a qualified disabled veteran meets the requirements of the contract solicitation and with the veteran's preference is the lowest Bidder it is considered the Apparent Low Bidder.

Archaeological Feature–Any prehistoric or historic deposit of archaeological value, as determined by a representative of a State agency that is duly authorized to evaluate such findings and render such judgments. An Archaeological Feature deposit may include, but is not limited to Indian habitations, ceremonial sites, abandoned settlements, treasure trove, artifacts or other objects with intrinsic archaeological value and that relate to the history and culture of the State of Michigan. The Archaeological Features are listed under Section 00800 Supplementary Conditions.

Authorized Technical Data–Information and data contained in a report of exploration and tests of subsurface conditions. Also, any physical data (dimension, location, conditions, etc.) contained in those Drawings of physical conditions of existing surface and subsurface facilities.

Best Value-The bids will be evaluated for best value based on price and qualitative components that may include but are not limited to technical design, technical approach, quality of proposed personnel, and management plans, per PA 430 of 2012.

Bid–Written offer by a Bidder for the Work, as specified, which designates the Bidder's Base Bid and Bid Prices for all Alternates. The term *Bid* includes a *re-bid*.

Bidder–The Person acting directly, or through an authorized representative, who submits a Bid directly to the **Owner**.

Bidding Documents–The proposed Contract Documents as advertised, and all Addenda issued before execution of the Contract.

Bid Price– The Bidder's price for a lump sum item of work, or the product of the Bidder's unit price for an item of Unit Price Work times the quantity given on the Bid Form for that item.

Bid Security–Security serving as a guarantee that the Bidder will conform to all conditions.

Bidding Requirements–The Advertisement, Instructions to Bidders, Supplementary Instructions, Information for Bidders, Bid Form, Bid Form Attachments and qualification submittals, as advertised and as modified by Addenda, and any other Section included within Division 0 of the Bidding Documents for the purpose of governing bidding and award of the Contract.

Board–The Administrative Board of the State of Michigan.

Bond– Security furnished by the **Contractor**, as required by the Contract Documents.

Business Day–Any Day except Saturdays, Sundays and holidays observed by the **Owner.**

Bulletin–A request used by the **Owner** to describe a change in the Work under consideration by the **Owner** and to request the **Contractor** to submit a proposal for the corresponding adjustment in Contract Price and/or Contract Time, if any.

Calendar Day–Every day shown on the calendar, Saturdays, Sundays and holidays included.

Cash Allowance–An **Owner**-specified sum included within the Contract Price to reimburse the **Contractor** for the actual purchase/furnished cost of materials and/or equipment or other designated items, as specifically provided in the Contract Documents. Although the scope (e.g., the required quantity) of any Work covered by a Cash Allowance is sufficiently detailed in the

Contract Documents for the purposes of bidding the required labor costs, Subcontract costs, construction equipment costs and general conditions costs and Fee, it is understood that the required materials, equipment or other designated items are of uncertain purchase cost at the time of Bid or are yet to be specified in more detail by the **Professional** as to quality, appearance, durability, finish and such other necessary features affecting purchase price.

Change Order–A written order issued and signed by the **Owner**, which amends the Contract Documents for changes in the Work or an adjustment in Contract Price and/or Contract Time, or both.

Contract Award–The official action of the **Board** or the **Director-SFA** awarding the Contract to the **Contractor**.

Contract Documents–Written and graphic documents that form the legal agreement between the **Owner** and the **Contractor**, consisting of this document, completed Bid and Contract forms, terms and conditions of the contract, specifications, drawings, addenda, Notice of Award, Notice-to-Proceed and contract change orders.

Contract Price–The total compensation, including authorized adjustments, payable by the **Owner** to the **Contractor** (subject to provisions for Unit Price Work).

Contract Times–The Contract Times for the entire Work are the periods allowed, including authorized adjustments, for Substantial Completion and final completion of the Work. The Contract Times for a designated portion of the Work are the periods allowed for Substantial Completion and final completion of any such portion of the Work, as specified in the Contract Documents.

Contractor–Business enterprise with which the **Owner** has entered into the Contract.

Correction Period–Period during which the **Contractor** must, in accordance with the Contract Documents, (a) correct or, if rejected, remove and replace Defective Work, and (b) maintain warranties for materials and equipment in full force and effect.

Cost of the Work Involved–The sum of all costs that would be, or actually were, necessarily incurred by the **Contractor** in providing any Work Involved with the related change, less the costs that would be, or would have been, incurred by the **Contractor** to provide such Work without the related **change**.

Defective–As determined by the Professional, an adjective which when referring to or when applied to the term "Work" refers to (a) Work not conforming to the Contract Documents or not meeting the requirements of an inspection, test or approval, or (b) Work itemized in a Punch List which the **Contractor** fails to complete or correct within a reasonable time after issuance of the Punch List by the **Professional**.

Delay–Any act or omission or other event that in any manner adversely affects or alters the schedule, progress or completion of all or any part of the Work. Delay is a generic term intended to include deferral, stoppage, slow down, interruption and extended performance, and all related hindrance, rescheduling, disruption, interference, inefficiency and productivity and production losses.

Department (DTMB)–Department of Technology, Management and Budget of the State of Michigan.

Director is the Director of the **Department.**

Director-SFA is the Director of **DTMB** State Facilities Administration.

Division–Each of the numbered, distinct parts (starting with Division 0) into which the Specifications are divided.

Drawings–Part of the Contract Documents showing the Work. Drawings must neither serve nor be used as Shop Drawings.

Emergency–A condition affecting the safety or protection of persons, or the Work, or property at or adjacent to the site.

State Facilities Administration (SFA)-Entity in the **Department** responsible for design, construction, and operations and maintenance of facilities.

Fee for the Work Involved (Fee)–An established, percentage mark-up on the Cost of the Work Involved which is allowed to the **Contractor** for (a) reasonable administrative costs, and (b) negotiated, reasonable profit on the Cost of the Work Involved.

Hazardous Material–Asbestos containing materials (ACMs), Polychlorinated biphenyls (PCBs), petroleum products, such construction materials as paint thinners, solvents, gasoline, oil, etc., and any other like material the manufacture, use, treatment, storage, transportation or disposal of which is regulated by federal, State or local Laws governing the protection of public health, natural resources or the environment.

Invitation To Bid (ITB) -The solicitation document presenting the terms and conditions that will become part of the Contract when the Bid is accepted.

Law(s)–Means federal, State and local statutes, ordinances, orders, rules and/or regulations.

MCL–The Michigan Compiled Laws of the State of Michigan.

Means and Methods–Includes means, methods, techniques, sequences and/or procedures applicable to the Work.

Notice of Award–Written notice accepting the Bid to the lowest responsive, responsible Bidder and designating the Contract Price (and establishing the Alternates accepted by the **Owner**).

Notice-to-Proceed–Written notice issued by the Project Director directing the Contractor to commence the construction activities and establishing the start date of the Contract Time.

On-Site Inspection–The **Professional's** on-site examination of the **Contractor's** completed or in progress Work to determine and verify to the Project Director that the quantity and quality of all Work complies with the requirements of the Contract Documents.

Owner–The State of Michigan, with whom the **Contractor** has entered into the Contract and for whom the Work is to be provided.

Owner Field Representative–A State employee or consultant, acting under the direction of the Project Director, providing on-site, periodic observation and documentation of the Work for compliance with the Contract Documents.

Partial Use–Use by the **Owner** of a designated portion of the Work before accomplishing Substantial Completion of the entire Work. Partial Use does not mean Substantial Completion of the portion of the Work placed in use by the **Owner**.

Person–Individuals, partnerships, corporations, receivers, trustees, joint ventures or any other legal entity and any combinations of any of them.

Political Subdivision–Any county, city, village or other local unit of the State, including any agency, department or instrumentality of any such county, city, village or other local unit.

Post–Bid Submittal–A Qualification Submittal required of the Bidder selected under Section 00100 - 22 before Contract Award, and which is used by the Owner in the evaluation of the Bid of the selected Bidder.

Professional Services Contractor *(PSC or* ***Professional****)*–The individual or business entity who has the authority to practice the design disciplines required by the Contract Documents. An Agency with appropriate licensing may replace the PSC in their role if a consultant is not used.

Project–The total construction, which includes the Work and possibly other work completed by others, as indicated in the Contract Documents.

Project Director*-D*esignated State employee(s) (a) Responsible for directing and supervising the **Professional's** services during the period allowed for completion of the Work; and/or (b) Acting as representative for the **Owner** and for the enforcement of the Contract Documents, approving payment to the **Contractor** and coordinating the activities of the State, **Owner, Professional** and **Contractor.**

Project Schedule–Work Schedule that shows the **Contractor's** approach to planning, scheduling and execution of the Work and that accurately portrays completed Work as to sequencing and timing, as provided in the Contract Documents.

Project Specifications–The Contract Documents organized into Divisions. "Technical Specifications" means Divisions of the Specifications consisting of technical descriptions of materials, equipment, construction systems, standards and workmanship.

Provisionary Allowance–An amount included within the Contract Price to reimburse the **Contractor** for the cost to furnish and perform Work that is uncertain because, for example, it is indeterminate in scope and may not be shown or detailed in the Contract Documents.

Punch List–A list of minor items to be completed or corrected by the **Contractor,** any one of which do not materially impair the use of the Work for its intended purpose.

Qualified Disabled Veteran (QDV)-*QDV as defined by* Public Act 22 of 2010, MCL 18.1241.3 and supported by a DD214 Proof of Service and Discharge, a Veterans Administration rating decision letter, proof of disability (if the disability is not indicated on the DD214), and appropriate legal documents setting forth the 51% natural persons QDV ownership.

Record Documents–Drawings, Specifications, Addenda, Change Orders, Change Authorizations, Bulletins, inspection, test and approval reports, photographs, written clarifications and interpretations and all other documents recording, or annotated to show, all revisions and deviations between the as-built installation and the Contract Documents, all approved Submittals and all clarifications and interpretations.

Records–Books, reports, documents, electronic data, and other evidence relating to the bidding, award and furnishing and performance of the Work.

Recycled Material–Recycled paper products, structural materials made from recycled plastics, re-refined lubricating oils, reclaimed solvents, recycled asphalt and concrete, recycled glass products, re-treaded tires, ferrous metals containing recycled scrap metals and all other materials that contain (a) waste materials generated by a business or consumer, (b) materials that have served their intended purpose, and/or (c) materials that have been separated from solid waste for collection, recycling and disposition in the percentage determined by the State as provided by Law.

Request for Payment–The form provided by the **Owner** (Payment Request DTMB-0440) to be used by the **Contractor** in requesting payment for Work completed, which must enclose all supporting information required by the Contract Documents.

Schedule of Values–A schedule of pay items, which subdivides the Work into its various parts and which details, for each itemized part, cost and pricing information required for making payments for Work performed. The sum of all pay item costs in the Schedule of Values must equal the Contract Price for the Work.

Shop Drawings–Includes drawings, diagrams, illustrations, standard schedules, performance charts, instructions and other data prepared by or for the **Contractor** to illustrate some part of the Work, or by a Supplier and submitted by the **Contractor** to illustrate items of material or equipment.

Soil Erosion and Sedimentation Control–The planning, design and installation of appropriate Best Management Practices designed and engineered specifically to reduce or eliminate the off-site migration of soils via water runoff, wind, vehicle tracking, etc. Soil erosion and sedimentation control in the State of Michigan is regulated under The Natural Resources Environmental Protection Act; Soil Erosion and Sedimentation Control, 1994 PA 451, Part 91, as amended, MCL 324.9101 et seq. Soil erosion and sedimentation control associated with this Contract is monitored and enforced by the DTMB-SFA.

State–The State of Michigan in its governmental capacity, including its departments, divisions, agencies, boards, offices, commissions, officers, employees and agents. Non-capitalized references to a state refer to a state other than the State of Michigan.

State Construction Code–The Michigan State Construction Code Act, 1972 PA 230, as amended, MCL 125.1501 et seq.

Subcontractor–A Person having an agreement with the Contractor to provide labor at the site and furnishing materials and/or equipment for incorporation into the Work.

Submittals–Includes technical Submittals, Progress Schedules and those other documents required for submission by the Contract Documents. The term "technical Submittal" includes Shop Drawings, brochures, samples, Operation and Maintenance (O&M) Manuals, test procedures and any other Submittal the Contract Documents require the **Contractor** to submit to demonstrate how the items covered, after installation or incorporation into the Work, will conform to the information given in the Contract Documents and be compatible with the design of the completed Work as a functioning whole as indicated in the Contract Documents.

Substantial Completion–The Work, or a portion of the Work designated in the Contract Documents as eligible for separate Substantial Completion, has been completed in accordance with the Contract Documents as determined by the PSC, to the extent that the **Owner** can use or occupy the entire Work, or the designated portion of the Work, for the use intended without any outstanding, concurrent Work at the site, except as may be required to complete or correct Punch List items.

Supplier–A manufacturer or fabricator, or a distributor, material man or vendor representing a manufacturer or fabricator, who has an agreement with the Contractor to furnish materials and/or equipment.

Underground Utilities–Pipelines, piping, conduit, duct, cables, wells, tanks, tunnels and appurtenances, or other similar facilities, installed underground to convey or support conveyance of potable water, sprinkler or irrigation water, fire protection systems, electricity, gases, steam, petroleum products, sewerage and drainage removal, telephone, communications, cable TV, traffic or control systems.

Unit Price Work–Work involving specified quantities (i.e., related Work quantities) which when performed is measured by the **Professional** and paid using the measured quantities and unit prices contained in the Contract Documents. Performance of Unit Price Work for undefined quantities is contingent upon conditions encountered at the site, as determined and authorized by the **Professional**.

Unit Price Work, Specified–Work of specified and defined quantities (i.e., quantities are detailed in, and can be taken-off from, the Contract Documents) that when performed is measured by the **Professional** and paid based on the measured quantities and unit prices contained in the Contract Documents.

Work (as in *"the Work,"* "*the entire Work"*)–The entire *completed Construction* required by the Contract Documents. The Work results from furnishing and performing all services, obligations, responsibilities, management, supervision, labor, materials, equipment, construction equipment, general conditions, permits, taxes, patent fees and royalties, testing, inspection and approval responsibilities, warranties, temporary facilities, small tools, field supplies, Bonds, insurance, mobilization, close-out, overhead and all connections, devices and incidental items of any kind or nature required and/or made necessary by the Contract Documents.

Work Involved, any Work Involved–Existing or prospective Work (a) reflected in any notice, proposal or claim, or (b) reflected in changes ordered or in process, or (c) affected by Delay.

APPENDIX II

SPECIAL WORKING CONDITIONS AND SPECIAL PROJECT PROCEDURES

DEPARTMENT OF ENVIRONMENTAL QUALITY

The Work comprising this Project will be performed at a site of the Department of Environmental Quality. The **Contractor** must comply with all rules and regulations pertaining to such sites and must conform to the following rules:

1. The **Contractor** must provide a competent Superintendent satisfactory to the Department of Environmental Quality on the work site at all times during working hours with full authority to act for him or her. It must be the **Contractor**'s responsibility to furnish the Department of Environmental Quality with the name, address and telephone number of the responsible person to contact for Emergency during after hour, weekend and holiday periods.

2. Access to and egress from the site must be via routes specifically designated by the Department of Environmental Quality authorized representative.

3. No Work must be performed at the site on Saturdays, Sundays, holidays or during night hours without the written permission from the Department of Environmental Quality; and

4. Areas on the site for employee parking, tool boxes, material lay down, etc., must be assigned by the Department of Environmental Quality. All firearms, weapons, alcoholic beverages, or explosives must be removed from vehicles before entering the site.

5. Heavy equipment such as bulldozers and power shovels must be locked or immobilized in an acceptable manner when not in use. No tools, small pipe, copper or wire must remain on the site overnight, unless acceptably locked inside shanties or tool chests. There will be no exchange, loaning or borrowing of tools, equipment or manpower between the Department of Environmental Quality and the **Contractor**.

ASBESTOS ABATEMENT PROJECT PROCEDURES

This Work requires the movement of soil and debris that are known and/or may contain friable and/or non-friable asbestos, which is considered asbestos renovation work. The Contractor must plan his or her work to minimize disturbance of any known or assumed asbestos containing materials (ACM). The Contractor's On-Site Superintendent and all Subcontractor On-Site Superintendents for trades that could potentially disturb known or assumed ACM, must, as a minimum, have and provide documentation of current Asbestos Awareness Training.

Movement of ACM is required, and must be completed by a contractor currently licensed to remove asbestos by the State of Michigan, Department of Licensing and Regulatory Affairs (DLARA) Asbestos Program and abatement must be performed in accordance with all Federal, State and local Laws and Regulations. Prior to commencing any asbestos abatement activities, the licensed abatement contractor must submit, as required by Federal, State and Local Laws and Regulations, a "Notification of Intent to Renovate/Demolish" to both the State of Michigan, Department of Environmental Quality (DEQ), Air Quality Division and to the DLARA, Asbestos Program, to comply with National Emission Standards for Hazardous Air Pollutants (NESHAP), and the Clean Air Act (CAA). If ACM is to be removed from the site, all regulated ACM must be disposed of at an approved Type II (general refuse) landfill and must be in leak-tight wrapping or containers. ACM that is non friable and is not in poor condition or will not become regulated ACM at any time can be disposed of in a Type III (construction debris) landfill. Note as part of the proposed project no off-site disposal of ACM is planned.

At the completion of each abatement activity, the Contractor must perform clearance testing in accordance with National Institute for Occupational Safety and Health (NIOSH) 582 "Sampling and Evaluating Airborne Asbestos Dust". All air samples shall indicate concentrations of less than 0.01 fibers/cc for clearance to be met. Clearance testing shall be performed by a third party Asbestos Consultant. The Asbestos Consultant selected by the Contractor shall be experienced and knowledgeable about the methods for asbestos air sampling and be able to select representative numbers and locations of samples. It is mandatory that the Asbestos Consultant's on-site hygienist performing sampling and analysis have certification that he/she has passed a NIOSH 582 or equivalent course.

The NESHAP asbestos regulations, notification form, guidelines and fact sheets are available on DEQ's web site www.michigan.gov/deq under heading Air; then click on Asbestos NESHAP Program. For guidelines on submitting notifications pursuant to the Asbestos Contractors Licensing Act, contact the DLARA, Occupational Health Division, Asbestos Program at (517) 322-1320 or visit DLARA's web site www.michigan.gov/asbestos.

DTMB-0401D (R 9/16)

BID SUMMARY

DEPARTMENT OF TECHNOLOGY, MANAGEMENT AND BUDGET

STATE FACILITIES ADMINISTRATION
DESIGN AND CONSTRUCTION DIVISION
3111 W. St. Joseph Street
Lansing, Michigan 48917

Bids must be submitted electronically through the Buy4Michigan website at www.buy4michigan.com

FILE NUMBER	INDEX NUMBER	DEPARTMENT/AGENCY
761/16108.SAR	44251	Department of Environmental Quality Remediation and Redevelopment Division

CONTRACT TIME(S)	PROJECT NAME	LOCATION
Refer to Article 23 of Section 00100	Torch Lake Non-Superfund Site, Hubbell Processing Area	Hubbell, Michigan

BID OPENING DATE	FOR AN EXAMINATION OF THE SITE CONTACT:
May 3, 2017 at 2:00 pm Local Time	Jed Chrestensen, The Mannik & Smith Group, Inc. 200 Michigan St., Ste 705, Hancock, MI 49930, 906-487-7452

SEE SECTION 00100 INSTRUCTIONS TO BIDDERS AND SECTION 00700 GENERAL CONDITIONS PROVIDED WITH THE BIDDING DOCUMENTS.
BID: WE PROPOSE TO FURNISH, PERFORM AND COMPLETE THE ENTIRE WORK IN ACCORDANCE WITH THE CONTRACT DOCUMENTS IN CONSIDERATION OF THE BID PRICE (S) STATED BELOW.

FIRM NAME AND COMPLETE ADDRESS	TELEPHONE NUMBER and E-MAIL ADDRESS
	FEDERAL I.D. NUMBER
☐ Qualified Disabled Veteran	(protected information required for processing payments)
BIDDER'S SIGNATURE AND TITLE DATE	WITNESS' SIGNATURE DATE

By signing this bid above, bidder certifies their enclosed Qualified Disabled Veteran and Michigan-Based Business Certifications.

BASE BID FROM BID SCHEDULE (Include specified Allowances):

_____ Dollars $_____
(use words) (in figures)

Alternate1: (Add/Subtract) _____ Dollars $ _____
(use words) (in figures)

A PERFORMANCE BOND AND A PAYMENT BOND ARE REQUIRED FOR ALL BIDS OVER $50,000.00. EACH BID MUST BE ACCOMPANIED BY A FIVE (5) PERCENT BID GUARANTEE.

BIDDERS ARE ALSO CAUTIONED TO FAMILIARIZE THEMSELVES WITH ALL OF THE OTHER CONDITIONS OF THE CONTRACT.

Project Scope of Work:

The Work, Interim Response Activities, includes, but is not necessarily limited to:

- Planning, site preparation, site health and safety, clearing, and dewatering.
- Grading and capping of soils containing polychlorinated biphenyls (PCBs), metals, and asbestos containing material (ACM) to eliminate impacted soil runoff into Torch Lake.
- Drainage ditch improvement to restore channel capacity and prevent overflowing onto the newly placed cap.
- Potential removal and disposal soils containing greater than 50 parts per million (ppm) PCBs.
- Seeding, mulching, and site restoration.

The Bidder must figure its Base Bid on the specified, or Addendum-approved, materials and equipment **only**. No “or equal” or substitution proposals will be permitted after Bid opening, except as provided in the General Conditions.

Addenda: Bidder acknowledges receipt of Addenda: No. ___ dated: _____, No. ___ dated: _____ No. ___ dated: _____

FIRM NAME	TELEPHONE NUMBER and E-MAIL ADDRESS

BID SCHEDULE

Base Bid Schedule - The Bidder will complete the Work and accept as full payment, for the Work items listed, the following Unit Prices and/or Item Bid Prices, as applicable:

Base Bid Item No.	Bid Quantity	Description (Bidder to write price in words)	Unit Price	Item Bid Price
1	1 LS	Mobilization and Job Site Administration		
2	1 LS	Site Preparation - Soil Erosion and Sedimentation Controls, Permits, and Access Improvements		
3	1 LS	Tree Removal, Dewatering, and Grading		
4	1 LS	Drainage Ditch Improvement		
5	140 Tons	PCB-Contaminated Soil and Debris Transport and Disposal		
6	6.5 Acres	Cap Installation		
7	1 LS	North Boundary Road Installation		
8	6.5 Acres	Seeding, Fertilizing, and Mulching		
9	1 LS	Final As-Built Survey		
10	NA	Provisionary Allowance Fifty Thousand Dollars and No Cents.	NA	$50,000.00
11	1 LS	Demobilization and Project Close Out		

Base Bid (Sum of Item Bid Prices for all Base Bid Items):

_____ Dollars $_____
(use words) (in figures)

Schedule of Alternates - The Bidder will complete (or deduct from the Contract) the parts of the Work designated by the Alternates that follow and accept in full payment (or allow in full credit) for those parts of the Work the following Item Bid Prices:

Alternate Item No.	Bid Quantity	Description (Bidder to write price in words)	Unit Price	Item Bid Price
A1	1 LS	WP-11 Grading and Capping	_____	_____

The Bidder further acknowledges and agrees that the separate prices bid on this "Schedule of Alternates," where they are applicable and deemed acceptable by the **Owner**, will be used if incorporated into the Contract when the **Owner** issues the Notice of Award.

Qualified Disabled Veteran (QDV) Business Representation

'Qualified Disabled Veteran,' means a business entity that is 51% or more owned by one or more veterans with a service-connected disability.

'Qualified Disabled,' means a business entity that is 51% or more owned by one or more with a service-connected disability.

The vendor represents that it IS _____, a qualified disabled veteran.

The contractor represents and warrants that the company meets the above (when checked) and has attached supporting documentation per the following:

Each bid requesting the Qualified Disabled Veterans (QDV) preference, in accordance with Public Act 22 of 2010, MCL 18.1241.3 shall include a DD214 Proof of Service and Discharge, a Veterans Administration rating decision letter, proof of disability (if the disability is not indicated on the DD214), and appropriate legal documents setting forth the 51% natural persons QDV ownership.

Fraudulent Certification as a Qualified Disabled Veteran may result in debarment under MCL 18.264.

Certification of a Michigan Based Business

(Information Required Prior to Contract Award for Application of State Reciprocity Provisions)

To qualify as a Michigan Based Business:

Vendor must have, during the 12 months immediately preceding this bid deadline:
or
If the business is newly established, for the period the business has been in existence, it has:

(check all that apply):

- ☐ Filed a Michigan single business tax return showing a portion or all of the income tax base allocated or apportioned to the State of Michigan pursuant to the Michigan Single Business Tax Act, 1975 PA 228, MCL 208.1 – 208.145; or
- ☐ Filed a Michigan income tax return showing income generated in or attributed to the State of Michigan; or
- ☐ Withheld Michigan income tax from compensation paid to the bidder's owners and remitted the tax to the Department of Treasury; or

I certify that **I have personal knowledge** of such filing or withholding, that it was more than a nominal filing for the purpose of gaining the status of a Michigan business, and that it indicates a significant business presence in the state, considering the size of the business and the nature of its activities.

I authorize the Michigan Department of Treasury to verify that the business has or has not met the criteria for a Michigan business indicated above and to disclose the verifying information to the procuring agency.

Bidder shall also indicate one of the following:

- ☐ Bidder qualifies as a Michigan business (provide zip code: _____)
- ☐ Bidder does not qualify as a Michigan business (provide name of State: _____).
- ☐ Principal place of business is outside the State of Michigan, however service/commodity provided by a location within the State of Michigan (provide zip code: (_____).

Fraudulent Certification as a Michigan business is prohibited by MCL 18.1268 § 268. A BUSINESS THAT PURPOSELY OR WILLFULLY SUBMITS A FALSE CERTIFICATION THAT IT IS A MICHIGAN BUSINESS OR FALSELY INDICATES THE STATE IN WHICH IT HAS ITS PRINCIPAL PLACE OF BUSINESS IS GUILTY OF A FELONY, PUNISHABLE BY A FINE OF NOT LESS THAN $25,000 and subject to debarment under MCL 18.264.

POST-BID SUBMITTALS (CONTINUED)

The PSC will request this submittal after bid opening. Complete and submit these items within two business days after the request.

LIST OF SUBCONTRACTORS

1. To enable the **Owner** and **Professional** to evaluate the Bidder's qualifications to perform the Work, for each Division of the Specifications, Section of the Specifications and/or trade itemized in this List of Subcontractors, the Bidder shall nominate the Subcontractor(s) to be awarded a Subagreement(s). To the extent a contractors' licensing is required for any such classification of Work, the Bidder shall provide the nominated Subcontractor's license number(s). If the Bidder intends to self-perform any of the listed classifications of Work, the Bidder shall nominate itself in the spaces provided for that purpose, and shall furnish the corresponding Bidder's license number(s). For each nominated Subcontractor, the Bidder shall enter, if applicable, whether the Subcontractor is a minority, woman or handicapped owned business in the spaces provided for that purpose. The Bidder also shall furnish the amount of the Subagreement that the Bidder, directly or through another higher tier Subcontractor, anticipates awarding to each nominated Subcontractor.

2. Should the Bidder fail to nominate Subcontractors, as required, or provide duplicate nominees for any Division, Specification or trade, or fail to enter the required licensing information, the Bidder shall clarify the omission or ambiguity within two (2) Business Days of the **Owner** or **Professional's** request. Failure by the Bidder to comply with this Subcontractor nominating requirement may render the Bid as not conforming in all material respects with the requirements of the Bidding Documents.

3. Pursuant to the Bidding Documents, the Bidder shall not remove, replace or add a nominated Subcontractor except for good cause. Before Contract Award, any removal, replacement or addition of a nominated Subcontractor shall be responsive to the requirements of the Bidding Documents only to the extent it permits the timely evaluation of the newly nominated Subcontractor. Since the requirement to nominate Subcontractors for the *listed* Divisions, Specification Sections and/or trades survives the award of the Contract, any Subcontractor nominated for any *listed* Division, Specification Section and/or trade *for the first time* after Contract Award and who is objected to by the **Owner**, for good cause, shall be replaced at no increase in Contract Price and/or Contract Time.

4. The requirement to make a definite nomination of Subcontractors or to state that the Bidder intends to self-perform that classification, and to clarify any omissions or ambiguities in this List of Subcontractors, applies to any Bidder remaining or wishing to remain in contention for the award.

5. This listing requirement is not intended to create any express or implied duty or obligation to the Bidder or the nominated Subcontractors by the **Owner** or **Professional**.

PERFORMANCE BOND

SURETY COMPANY REFERENCE No. _____

That "the **Contractor**," _____, a corporation ___, individual ___, partnership ___, joint venture ___ of the State of _____, qualified to do business in the State of Michigan, as Principal, and "the Surety," _____, of the State of _____, as surety, are held and bound unto the State of Michigan, "the **Owner**," as Obligee, in the amount of _____ Dollars ($_____), for the payment of which the **Contractor** and Surety bind themselves, their respective heirs, successors, legal representatives and assigns, jointly and severally, in compliance with 1963 PA 213, as amended, MCL 129.201 et seq.

The **Contractor** has entered into "the Contract" with the **Owner** for interim response grading, capping, and site restoration, "the Work," covered by the Contract Documents, which are incorporated into this Performance Bond by this reference;

If the **Contractor** faithfully performs and fulfills all the undertakings, covenants, terms, conditions, warranties, indemnifications and agreements of the Contract Documents within the Contract Time (including any authorized changes, with or without notice to the Surety) and during the Correction Period, and if the **Contractor** also performs and fulfills all the undertakings, covenants, terms, conditions, warranties, indemnifications and agreements of any and all duly authorized modifications of the Contract Documents, then THIS OBLIGATION IS VOID, OTHERWISE TO REMAIN IN FULL FORCE AND EFFECT.

A. No change in Contract Price or Contract Time, "or equal" or substitution or modification of the Contract Documents (including addition, deletion or other revision) releases the Surety of its obligations under this Section 00610 Performance Bond. The Surety expressly waives notice of any such change in Contract Price or Contract Time, "or equal" or substitution or modification of the Contract Documents (including addition, deletion or other revision).

B. This Performance Bond must be solely for the protection of the **Owner** and its successors, legal representatives or assigns.

C. It is the intention of the **Contractor** and Surety that they must be bound by all terms and conditions of the Contract Documents (including, but not limited to General Conditions and this Performance Bond). However, this Performance Bond is executed pursuant to 1963 PA 213, as amended, MCL 129.201 et seq., and if any provision(s) of this Performance Bond is/are illegal, invalid or unenforceable, all other provisions of this Performance Bond must nevertheless remain in full force and effect, and the **Owner** must be protected to the full extent provided by 1963 PA 213, as amended, MCL 129.201 et seq.

IMPORTANT: The Surety must be authorized to do business in the State of Michigan by the Department of Licensing and Regulatory Affairs – Insurance Bureau, must be listed on the current U.S. Department of the Treasury Circular 570, and, unless otherwise authorized by the **Owner** in writing, must have at least an A– Best's rating and a Class VII or better financial size category per current A. M. Best Company ratings.

Name, Address and Telephone of the Surety:

PAYMENT BOND

SURETY COMPANY REFERENCE No._____

"the **Contractor**," _____, a corporation ___, individual ___, partnership ___, joint venture ___ of the State of _____, qualified to do business in the State of Michigan, as Principal, and "the Surety," _____, of the State of _____, as surety, are held and bound unto the State of Michigan, "the **Owner**," as Obligee, in the amount of _____ Dollars ($_____), for the payment of which the **Contractor** and Surety bind themselves, their respective heirs, successors, legal representatives and assigns, jointly and severally, in compliance with 1963 PA 213, as amended, MCL 129.201 et seq.

The **Contractor** has entered into "the Contract" with the **Owner** for _interim response grading, capping, and site restoration _____, "the Work," covered by the Contract Documents, which are incorporated into this Payment Bond by this reference;

If the **Contractor** promptly pays all claimants supplying labor or materials to the **Contractor** or to the **Contractor's** Subcontractors in the prosecution of the Work, then THIS OBLIGATION IS VOID, OTHERWISE TO REMAIN IN FULL FORCE AND EFFECT.

A. All rights and remedies on this Payment Bond are solely for the protection of all claimants supplying labor and materials to the **Contractor** or the **Contractor's** Subcontractors in the prosecution of the Work, and must be determined in accordance with Michigan Law.

B. No change in Contract Price or Contract Time, "or equal" or substitution or modification of the Contract Documents (including addition, deletion or other revision) must release the Surety of its obligations under this Payment Bond. The Surety hereby expressly waives notice of any such change in Contract Price or Contract Time, "or equal" or substitution or modification of the Contract Documents (including addition, deletion or other revision).

C. It is the intention of the **Contractor** and Surety that they must be bound by all terms and conditions of the Contract Documents (including, but not limited to this Payment Bond). However, this Payment Bond is executed pursuant to 1963 PA 213, as amended, MCL 129.201 et seq., and if any provision(s) of this Payment Bond is/are illegal, invalid or unenforceable, all other provisions of this Payment Bond must nevertheless remain in full force and effect, and the **Owner** must be protected to the full extent provided by 1963 PA 213, as amended, MCL 129.201 et seq.

IMPORTANT: The Surety must be authorized to do business in the State of Michigan by the Department of Licensing and Regulatory Affairs – Insurance Bureau, must be listed on the current U.S. Department of the Treasury Circular 570, and, unless otherwise authorized by the **Owner** in writing, must have at least an A– Best's rating and a Class VII or better financial size category per current A. M. Best Company ratings.

NOTES:

1. ALL EROSION AND SEDIMENTATION CONTROL WORK SHALL CONFORM TO THE CURRENT STANDARDS AND SPECIFICATIONS OF THE COUNTY DRAIN COMMISSIONER AND MDEQ. INSTALL TEMPORARY SOIL EROSION CONTROL MEASURES PRIOR TO ANY EARTHWORK OPERATIONS.
2. DAILY INSPECTIONS SHALL BE MADE BY THE CONTRACTOR FOR EFFECTIVENESS OF EROSION AND SEDIMENTATION CONTROL MEASURES. ANY NECESSARY REPAIRS SHALL BE PERFORMED WITHOUT DELAY. THE SOIL EROSION CONTROLS WILL BE MAINTAINED WEEKLY AND AFTER EVERY STORM EVENT.
3. EROSION AND ANY SEDIMENTATION FROM WORK ON THIS SITE SHALL BE CONTAINED WITHIN THE WORK AREA AND NOT ALLOWED TO COLLECT ON ANY OFF-SITE AREAS OR IN WATERWAYS. WATERWAYS INCLUDE BOTH NATURAL AND MAN-MADE OPEN DITCHES, STREAMS, STORM DRAINS, LAKES, PONDS AND WETLANDS.
4. THE CONTRACTOR SHALL APPLY TEMPORARY EROSION AND SEDIMENTATION CONTROL MEASURES AS DIRECTED ON THESE PLANS AND WHERE OTHERWISE REQUIRED BY THE WORK. THE CONTRACTOR SHALL REMOVE TEMPORARY MEASURES AS SOON AS PERMANENT STABILIZATION OF SLOPES, DITCHES, AND OTHER CHANGES HAVE BEEN COMPLETED.
5. SOIL EROSION CONTROL PRACTICES WILL BE ESTABLISHED IN EARLY STAGES OF CONSTRUCTION BY THE CONTRACTOR. SEDIMENT CONTROL PRACTICES WILL BE APPLIED AS A PERIMETER DEFENSE AGAINST ANY TRANSPORTING OF DIRT OFF THE WORK AREA.
6. THE CONTRACTOR SHALL PRESERVE OFF-SITE NATURAL VEGETATION AS MUCH AS POSSIBLE.
7. PROTECT ALL EXISTING TREES ALONG THE MINERAL BUILDING ACCESS DRIVE, INCLUDING THEIR BRANCHES AND ROOTS FROM DAMAGE DUE TO THIS WORK.
8. REMOVE ALL TREES FROM THE GRADED AND CAPPED AREA. LEAVE STUMPS IN-PLACE IF POSSIBLE. PILE IN CONTAMINATED WOODY DEBRIS OUTSIDE THE GRADING AREA AT A LOCATION DETERMINED DURING SITE PREP. CONTAMINATED BRUSH AND STUMPS SHALL BE BURIED BENEATH THE CAP NORTHWEST CORNER.
9. STABILIZATION OF ALL DISTURBED AREAS SHALL BE ESTABLISHED USING THE APPROPRIATE VEGETATION WITHIN 5 DAYS OF COMPLETION OF FINAL GRADING.
10. THE CONTRACTOR SHALL SWEEP THE EXISTING STREETS SURROUNDING THE PROJECT SITE AS NEEDED.
11. THE CONTRACTOR SHALL BE RESPONSIBLE FOR DUST CONTROL AND SHALL PROVIDE ALL EQUIPMENT AND MATERIAL TO KEEP DUST IN CHECK AT ALL TIMES. THE CONTRACTOR SHALL ADHERE TO NESHAP CONTROL MEASURES FOR ASBESTOS TO CONTROL DUST. THE CONTRACTOR SHALL RESPOND IMMEDIATELY TO ANY AND ALL COMPLAINTS.
12. THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING THE NPDES PERMIT AND ENSURING COMPLIANCE WITH ALL APPLICABLE PERMIT REGULATIONS, INCLUDING BUT NOT LIMITED TO, INSPECTION, RESTORATION AND RECORD KEEPING REQUIREMENTS. REPORTS FROM THE CERTIFIED STORM WATER OPERATOR SHALL BE MADE AVAILABLE TO MDEQ.

STATE OF MICHIGAN

RICK SNYDER
GOVERNOR

DEPARTMENT OF TECHNOLOGY, MANAGEMENT & BUDGET

LANSING

DAVID B. BEHEN
DIRECTOR

Approved/Mailed: 5/22/17

May 19, 2017

B & B Contracting, Calumet, Inc.
55670 Hwy. M-26
Calumet, MI 49913

Dear Sir/Madam:

SUBJECT: File No. 761/16108.SAR - Index No. 44251
Department of Environmental Quality
Torch Lake Non-Superfund Site
Hubbell Processing Area Remediation
Hubbell, Michigan

This is your official notice that the Director, Department of Technology, Management and Budget, on May 19, 2017, approved the acceptance of your bid summary for the subject work opened on May 3, 2017, in the amount of $430,170.00.

Before the state can formally execute the contract you must, within the next **15 calendar days** from the date the letter was mailed, submit the following to Ms. Linda Feldpausch, Department of Technology, Management and Budget, Design and Construction Division, P.O. Box 30026, Lansing, Michigan 48909, or overnight mail to 3111 W. St. Joseph Street, Lansing, Michigan 48917. **FAILURE TO SUBMIT THE REQUIRED INFORMATION WITHIN THE 15 CALENDAR DAYS MAY RESULT IN DISQUALIFICATION OF YOUR BID AND FORFEITURE OF YOUR BID BOND.**

1. A certified copy of a resolution adopted by your Board of Directors or a certified copy of the articles of your By-Laws authorizing signature of the contract on behalf of the corporation. If a partnership, it is necessary to submit a copy of the power of attorney which authorizes signature on behalf of the partnership. A power of attorney is not required if each of the partners sign the contract individually.

2. Completed, signed Certification Forms (blank forms attached). (Please disregard if you have already submitted the forms for this project.)

3. Three original, signed Contract pages (attached).

4. A Certificate of Insurance covering Public Liability, Property Damage, and Workers' Compensation. NOTE: ALL INSURANCE CERTIFICATES MUST SPECIFY THE ABOVE SUBJECT PROJECT IDENTIFICATION AND THE STATE OF MICHIGAN AS AN ADDITIONAL INSURED. THE INSURANCE MUST HAVE A RATING OF A- OR BETTER AS LISTED BY A.M. BEST COMPANY.

5. Performance and Labor and Material Bonds must be made in favor of the State of Michigan and bear the date of May 19, 2017. NOTE: BONDS WILL NOT BE ACCEPTED UNLESS THEY ARE ON THE STATE OF MICHIGAN FORM AND THE BONDING COMPANY IS LISTED IN THE DEPARTMENT OF TREASURY'S CIRCULAR #570.

FAXES OF THE REQUIRED ITEMS LISTED IN NOS. 4 AND 5 WILL NOT BE ACCEPTED, ONLY THE ORIGINAL DOCUMENTS ARE ACCEPTABLE. IF YOU HAVE QUESTIONS CALL STATE FACILITIES ADMINISTRATION, DESIGN AND CONSTRUCTION DIVISION, AT (517) 284-7902.

Please note that you are not to proceed with any work or on-site activities until the contract has been executed by both parties. At that time a pre-construction meeting will be arranged.

Sincerely,

Linda Feldpausch, Contract Specialist
Design and Construction Division

This is not a change order. This is a request to the Contractor for price breakdown of changes in the work.

CHANGES IN CONTRACT TIME:

anges to the Contract time are currently proposed as a result of the proposed changes in the work.

CHANGES IN THE WORK:

1: Modify Pay Item 5 – PCB Contaminated Soil and Debris Transport and Disposal

npling of waste pile WP-11 subsequent to issuance of the March 28, 2017 Bidding and Contract nent has revealed different waste characterization results than previously provided in the Contract. Tore, it will be necessary to use a different disposal facility than originally planned. To accommodate ange, additional funding must be added to the Contract. In addition, to screen out material that does quire off-site disposal, WP-11 will be screened to remove material larger than 6-inches in diameter.

Tore, delete the existing description for Pay Item 5 listed in Paragraph 1.5.5 of Section 01 22 00 and e with the following:

Item 5 – PCB Contaminated Soil and Debris Screening, Transport, and Disposal

1. Description: Item 5 includes profiling, manifesting, loading, transport, and disposal of the waste pile WP-11 material at an appropriate disposal facility agreed to by the Owner using laboratory characterization data provided to the Contractor. Item 5 also includes screening the WP-11 material to remove all items larger than 6-inches in diameter. Screened-out material shall be left in a pile outside the capped area adjacent to the current WP-11 location.

2. Measurement and Payment: Lump sum payment for Item 5 will be based on a maximum of up to 150 tons of material disposed per pricing schedule received by the Contractor from Waste Management and shall be full compensation for all labor, equipment, tools, incidentals and contracted services necessary to complete the work described above. Fully executed manifests, disposal receipts, and weight tickets from a certified scale will be required for payment.

This is not a change order. This is a request to the Contractor for price breakdown of changes in the work.

HANGES IN CONTRACT TIME:

tract Times for substantial completion and final completion shall be modified to extend the Time by an additional 81 days to November 14, 2017. This is the date on which a complete of waste disposal documentation was received and the requirements were met for substantial on as defined in Article 4.3 of Section 00700 and Supplementary Condition SC-4 of Section 00800 ecifications. Accordingly, the following changes shall be made to Article 23 of Section 00100 on 5.

rticle 23 in its entirety and replace with the following:

ONTRACT TIME; LIQUIDATED DAMAGES: Work of all trades as specified in the Contract ments must be completed in 131 calendar days from the date of Notice-to-Proceed except for replacement, correction, or adjustment items which do not interfere with the complete operation tilization of all parts of the Contract Work. This Contract Time is of the essence and liquidated ges for each Calendar Day that expires after this Substantial Completion of the entire Work must the amount of $ 1,000.00. Liquidated damages are not a penalty, are cumulative and represent a nable estimate of the Owner's extra costs and damages, which are difficult to estimate with acy in advance.

R MODIFICATION OF CONTRACT TIME:

al Contract Time was needed to complete the transportation and disposal of waste pile WP-11 as by Change Order #1 and receive all disposal documentation.

HANGES IN THE WORK:

Modify Pay Item 5 – PCB Contaminated Soil and Debris Transport and Disposal

delays and inconveniences caused by Waste Management during the waste pile WP-11 ation and disposal (T&D) process, Waste Management has adjusted their previously provided chedule to waive the 150-ton minimum fixed fee and instead invoice on a per-ton basis for T&D r fees. Since 117.9 tons of material were actually disposed, this has resulted in a reduction from an

ng Area
Y17347

11 December 2017

ed charge of $74,700.00 to an actual Waste Management charge of $61,317.20, which is a 80 reduction.

ent value of Pay Item 5 after Change Order #1 is $84,215.00. Of this, $74,700.00 was expected to e Management charges, the Contract allowed the Trade Contractor a 5% markup of $3,735.00, and ace of $5,780.00 was budgeted for non-T&D efforts such as profiling, manifesting, loading, etc. 780.00 was a decrease from the value of the Trade Contractor's originally budgeted (pre-Change 1) non-T&D effort since they expected to receive a $1,500.00 per container credit from Waste nent for all shipping containers not used out of the 10 that were included in the fixed fee. This om Waste Management to the Trade Contractor was expected to total $6,000.00 and would have the Trade Contractor compensation for the balance of non-T&D effort and the additional effort of g WP-11 to remove objects larger than 6-inches in diameter per Change Order #1. Waste nent's revision in pricing structure changed the basis upon which the values in Change Order #1 pared.

e, to fairly compensate the Trade Contractor while providing a credit back to the taxpayers of the Michigan reflective of Waste Management's revised pricing, the following description shall replace ng description for Measurement and Payment for Pay Item 5 in Paragraph 1.5.5 of Section 01 22 ended by Change Order #1:

Measurement and Payment: Lump sum payment for Item 5 will be based on the following price breakdown and shall be full compensation for all labor, equipment, tools, incidentals and contracted services necessary to complete the proper disposal of waste pile WP-11. Fully executed manifests, disposal receipts, and weight tickets from a certified scale will be required for payment.

Price breakdown:

$61,317.20 Actual charges from Waste Management.
$3,065.86 Contract allowed 5% markup on Waste Management's invoice.
$5,780.00 Trade Contractor cost for non-T&D effort from Change Order #1.
$6,000.00 Trade Contractor cost for the balance of non-T&D effort and pile screening.
$1,525.00 Trade Contractor additional costs due to Waste Management delays.

$77,688.06 Total Payment to the Trade Contactor for Item 5.

THE CONTRACT AMOUNT TO REFLECT PROPOSED CHANGES IN WORK:

BULLETIN NO. 3
(FINAL ADJUSTING BULLETIN)

TO: Mr. Brian Bonen, B&B Contracting, Calumet, Inc. Date: 5 September 2019

FROM: Mr. Jed Chrestensen, P.E., The Mannik & Smith Group, Inc.

SUBJECT:
Project Name: Abandoned Mining Wastes Torch Lake Non-Superfund Site
Hubbell Processing Area
File Number: 761/16108.SAR
Index Number: 44251
Contract Number: Y17347
Department/Agency: EGLE/RRD

INTENT: This is not a change order. This is a request to the Contractor for a price breakdown of changes in the work to match final quantities.

REASONS FOR CHANGES:

Changes in the original scope of work and quantities were required to complete the project.

PROPOSED CHANGES IN FINAL QUANTITIES:

Item 1: Line Item No. 10 – Provisionary Allowance

The full value of the Provisionary Allowance was not needed to complete the Contract. A total of seven Provisionary Allowance Change Authorization Request Forms were executed to complete the Contract, with invoiced amounts totaling $45,307.00. Therefore, the final adjusted contract amount for Line Item No. 10 is as follows:

$50,000.00 – $45,307.00 = ($ 4,693.00) Credit

CHANGES IN THE CONTRACT AMOUNT TO REFLECT CHANGES IN WORK:

Total Change for Bulletin No. 3 = $ 4,693.00 ☐ ADD ☒ DEDUCT ☐ NONE

Please return this signed bulletin within three (3) working days from the date shown herein.

Soil Erosion and Sedimentation Control Permits and Releases

Jed Chrestensen

From: Hans Haapala <hanshaapala@gmail.com>
Sent: Monday, December 11, 2017 10:20 AM
To: Jed Chrestensen; Jeff Binkley; Amy Keranen
Subject: Fwd: Hubbell Coal Dock Borrow Pit

---------- Forwarded message ----------
From: "John Pekkala" <jpekkala@houghtoncounty.net>
Date: Sep 11, 2017 10:44 AM
Subject: Hubbell Coal Dock Borrow Pit
To: <babonen@hotmail.com>
Cc: "hanshaapala" <hanshaapala@gmail.com>

Hi Brian,

On September 8, 2017, I performed a SESC inspection of the borrow pit used for the 2017 Hubbell Coal Dock Project. No off-site sedimentation was observed. The majority of the exposed surface within the site drains internally to the center of the pit. A culvert has been installed below the crest of the pit to release water to a wooded upland area.

B&B Contracting has restored the borrow pit to an acceptable condition and should be released from any further SESC responsibilities.

Please contact me with any questions.
John

RE: Soil Erosion and Sedimentation Control Permit No. 16-933-SE

Dear Mr. Ziemnick:

Enclosed, please find a Soil Erosion and Sedimentation Control (SESC) Permit and approved SESC Site Plan for the proposed earth change at the location specified on the permit. Please notify the Houghton County Drain Commissioner's Office 48 hours prior to commencing the earth change.

If you have any questions, please feel free to contact my office.

Sincerely,

John Pekkala

Subject: Hubbell Processing Area

Good morning Hans,

I inspected the grading and capping of the Hubbell Processing Area on June 6th. The site has been adequately stabilized and all temporary SESC measures may be removed. I am closing out the SESC permit for the site. The permit number is 17-963-SE.

If you have any questions, please contact me.

Thanks,
John

RE: Soil Erosion and Sedimentation Control Permit No. 17-963-SE

Dear Mr. Bonen:

Enclosed is a Soil Erosion and Sedimentation Control (SESC) Permit for the proposed earth change at the location specified on the permit. The SESC Site Plan that was submitted has been approved and is on file at the Houghton County Drain Commissioner's Office. Please notify my office 48 hours prior to commencing the earth change.

If you have any questions, feel free to contact me.

Sincerely,

John Pekkala

John Pekkala, Drain Commissioner
County Enforcing Agent for
Soil Erosion and Sedimentation Control

COUNTY OF HOUGHTON
SOIL EROSION AND SEDIMENTATION CONTROL PERMIT

(issued under the authority of part 91, Soil Erosion and Sedimentation Control, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended)

Permitee: Houghton Forest Products

Address: Attn. Mr. Ken Buchanan
1174 Dawson Road
Thunder Bay, Ontario, Canada, P7G1H6

Permit No.:	17-963-SE
Issued:	06-15-17
Expires:	06-15-18
Extended:	

On-Site Responsible Person: Name: Brian Bonen

Company: B&B Contracting, Calumet, Inc. Telephone Number: (906) 337-0017 or 281-2587

Permitted Activity:

Cap Coal Dock burn area, improve southern drainage ditch, remove PCB contaminated soils, construct associated haul roads

Project Location: Town: 55N ; Range: 32W ; Section: 7

City or Township: Torch Lake Township
Address: 52634 Hwy M26

Permit Conditions:

1. The permitted activity shall be completed in accordance with the approved plans and specifications and the attached general and specific conditions.
2. This permit does not waive the necessity for obtaining all other required federal, state, or local permits.
3. Permitee shall notify the permitting agency within one week after completing the permitted activity or one week prior to the permit expiration date, whichever comes first.

John Pekkala
Permitting Agent

(906) 482-4491
Telephone Number

THIS PERMIT MUST BE POSTED AT THE PROJECT SITE.

Permit Number: 17-963-SE

General Conditions:

In accordance with rule 1709 promulgated under the authority of part 91, Soil Erosion and Sedimentation Control, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, and in addition to the information on the attached plan(s) and special conditions, the following general conditions apply to the earth change authorized by this permit:

- Design, construct, and complete the earth change in a manner that limits the exposed area of disturbed land for the shortest period of time.
- Remove sediment caused by accelerated soil erosion from runoff water before it leaves the site of the earth change.
- Temporary or permanent control measures shall be designed and installed to convey water around, through, or from the earth change at a non-erosive velocity.
- Install temporary soil erosion and sedimentation control measures before or upon commencement of the earth change activity and maintain the measures on a daily basis. Remove temporary soil erosion and sedimentation control measures after permanent soil erosion measures are in place and the area is stabilized. (Stabilized means the establishment of vegetation or the proper placement, grading; or covering of soil to ensure its resistance to soil erosion, sliding, or other earth movement.)
- Complete permanent soil erosion control measures for the earth change within five calendar days after final grading or upon completion of the final earth change. If it is not possible to permanently stabilize the earth changes, then maintain temporary soil erosion and sedimentation control measures until permanent soil erosion control measures are in place and the area is stabilized.

SPECIFIC CONDITIONS

48 hours notice prior to earth change

1 The Department of Transportation does not, by issuance of this permit, assume any liability claims or maintenance costs resulting from the Temporary Access Road and Diversion Ditch facility placed by this permit. The Department reserves the right to require removal of all or any portion of this facility as needed for highway maintenance or construction purposes without replacement or reimbursement of any costs incurred by the permitted or other party. The permitted will defend, indemnify and hold harmless the Department for any claims whatsoever resulting from the construction or the removal of the authorized by this permit.
2 All disturbed areas within the right of way shall be top-soiled, seeded and mulched to match existing areas per current MDOT standards and specifications.
3 Diversion dam shall only restrict 50% of depth of driveway cross culvert and will be removed prior to rain events.
4 Approval must be obtained by the DEQ, Torch Lake Township and adjacent property owners.

Michigan Department
Of Transportation
2205C (03/10)

SPECIAL CONDITIONS FOR UNDERGROUND CONSTRUCTION

The following special permit specifications shall apply when the permittee is excavating or performing any underground activity within trunkline right of way and discovers existing contaminated soil and/or an abandoned underground storage tank:

1. In the event the permittee encounters environmental contamination and/or an underground storage tank in the right of way, the Michigan Department of Transportation (MDOT) shall be immediately notified. All Michigan Department of Natural Resources and Environment (MDNRE) and Federal Environmental Protection Agency (EPA) environmental requirements shall be complied with by the permittee. Unless the Department agrees in writing the following steps are to be taken:

    a. The contaminated material that has been removed shall be temporarily stockpiled per MDNRE requirements. If stockpiled on the right of way, the site shall not interfere with MDOT operations or create a traffic safety problem. Also, the contaminated material shall be placed on plastic sheeting or tarp having a minimum thickness of 6 mils or in trucks, roll off boxes, or other containers, such that no liquid may escape from the containment. At the end of each work day, the contaminated material shall be covered securely with plastic sheeting of 6 mil thickness or greater.

    b. Upon completion of any testing deemed necessary by the Department or the MDNRE, the material shall be disposed of in an approved waste disposal site unless otherwise directed by the MDNRE.

    c. In no case shall the contaminated material be stockpiled for longer than 45 days prior to disposal.

2. The permittee shall cooperate with MDOT personnel and pertinent regulatory agencies in resolving the contamination problem as required by law.

    a. The manner in which the permittee manages and secures the site shall not interfere with the MDOT's interests.

    b. The permittee shall not excavate as part of any site management operation within the one-on-one slope from the edge of shoulder without the permission of MDOT.

3. MDOT shall not indemnify or compensate the permittee for any costs or damages of any kind that the permittee incurs as the result of contamination encountered within the right of way. It is understood that the possibility of encountering contamination and the damages which might be incurred by the permittee because of the contamination are business risks the permittee assumes in choosing to locate and maintain facilities within the Right-of-Way.

    The permittee is responsible for any costs that it incurs to secure the contaminated site in such a manner as to meet the requirements of the MDNRE and/or EPA and the requirements of MDOT.

4. The permittee, upon approval of MDOT, may continue to place its facility through the contaminated area providing remedial actions that meet the approval of MDOT and other enforcement agencies involved are followed.

    a. All additional costs the permittee incurs, as a result of continuing to place its facilities within the contaminated area, are the responsibility of the permittee.

    b. All contaminated material must be removed and properly disposed of as directed by MDOT and/or the MDNRE. All backfill material must be clean material, unless otherwise directed by the MDNRE. Excavation must be backfilled in a manner to prevent the creation of a pathway for migration of contamination off site.

5. The permittee is solely responsible to develop an alternate route for its facility in the event approval cannot be given to continue to place the facility within the contaminated area of the Right-of-Way. The permittee shall restore the original site as directed by MDOT.

Michigan Department
of Transportation
2486 (03/14)

ENVIRONMENTAL REQUIREMENTS FOR ACTIVITIES WITHIN MDOT RIGHT-OF-WAY

Issuance of a permit by MDOT does not relieve the permit applicant from meeting any and all requirements of law, or of other public bodies or agencies, including but not limited to the following:

1. Goemare-Anderson Wetland Protection Act, Part 303, P.A. 451 of 1994

   Any activity that involves excavation or fill, located within a regulated wetland, requires a Michigan Department of Environmental Quality (MDEQ) permit. Regulated wetlands are those systems that are contiguous to a lake or stream (within 500 feet) or greater than five (5) acres in size.

2. Inland Lakes and Streams Act, Part 301, P.A. 451 of 1994

   Any activity located within the ordinary high-water mark of a regulated body of water, i.e., lake, stream, drain, pond. etc., shall require a permit. There are no exemptions to this requirement. Permit applications and questions can be submitted to the MDEQ's Land and Water Management Division.

3. Soil Erosion and Sedimentation Control Act, Part 91, P.A. 451 1994

   Any land disturbance of one (1) acre or greater, or that is located within 500 feet of a lake or stream, requires a soil erosion permit. Municipalities who are classified as an Authorized Public Agency (APA) are exempt from permits, but must follow proper soil erosion practices as identified in their standard plan. Any construction activity located within MDOT Right-of-Way that is authorized by a MDOT permit is the responsibility of the permit applicant and is not covered under MDOT's APA authority.

   Soil erosion and sedimentation controls are required on all projects, even if a soil erosion permit is not required. Individuals performing work shall prevent sediment from entering any body of water or leaving the Right-of-Way. Permits can be obtained from the county/municipal agencies. Minor earth changes are exempted in this Act and are classified as normal maintenance and emergency repairs.

4. Clean Water Act: National Pollutant Discharge Elimination System (NPDES) Storm Water Discharge Requirements for Construction Activities

   Any land disturbance of five (5) acres or greater requires an NPDES Storm Water Discharge Permit. This can include any filling, excavating, grading, clearing, etc. Municipally-owned utilities who service a population of less than 100,000 are exempt from permit provisions, but not from environmental protection requirements. Permit applications require the Part 31, P.A. 451 permit number, or a declaration of APA status and the effective date. Permit applications and questions can be submitted to the MDEQ's Surface Water Quality Division.

5. Environmental Site Closures

   A procedure was developed by the MDEQ and MDOT which may allow a property owner, who is responsible for of these sites, to close an environmentally impacted site. Questions regarding this activity shall be addressed by contacting MDOT's Environmental Specialist at 517-335-2271.

6. The Land and Water Management Division of the MDEQ also administers the following environmental laws which may require review prior to construction:
   - Sand Dune Protection Act, Part 353, P.A. 451 of 1994.
   - Shore-lands Protection and Management, Part 323, P.A. 451 of 1994.
   - Great Lakes Submerged Lands Act, Part 325, and P.A. 451 of 1994.

7. The Wildlife Division of the MDNR also administers the following environmental laws which may require review prior to construction:
   - Endangered Species Act, Part 365, and P.A. 451 of 1994.

Questions regarding these permits may be addressed by contacting the nearest MDEQ district field office, or the MDEQ Land and Water Management Division at 517-373-1170.

Additional information is available in MDOT's Environmental Procedures Manual.

GENERAL CONDITIONS

This permit is issued subject to the following conditions:

1. This permit grants to the permittee only those rights specifically stated and no other. Maintenance work within the trunkline right of way may require a separate permit unless authorized within the scope of the annual permit.

2. Issuance of this permit does not relieve permittee from meeting any and all requirements of law, or of other public bodies or agencies. The permittee shall be responsible for securing including but not limited to any other permissions including or required by law including but not limited to cities, villages, townships, corporations, or individuals for the activities hereby permitted.

3. The permittee agrees as a condition of this permit to:

   a. Have in the permittee's or the permittee's representative's possession on the job site at all times the approved permit, advanced notice and any necessary plans or sketches.

   b. Submit Advance Notice through the online Construction Permit System (CPS) at least five (5) working days prior to commencement of any operations covered by this permit. No work shall start until an approved Advance Notice is e-mailed to the permittee.

   c. Perform no work except emergency work, unless authorized by the Department, on Saturdays, Sundays, or from 3:00 p.m. on the day proceeding until the normal starting time the day after the following holidays: New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

   d. Provide and maintain all necessary precautions to prevent injury or damage to persons and property from operations covered by this permit.

   e. Furnish, install and maintain all necessary traffic controls and protection during permittee's operations in accordance with the Michigan Manual of Uniform Traffic Control Devices and any supplemental specifications set forth herein.

   f. Notify the Department of completion of work authorized by this permit through CPS, so that final inspection may be made and surety deposit released (where applicable). Surety deposit will not be released until the work authorized by the permit has been completed and inspected, and all inspection charges billable to the permittee are paid.

4. Nothing in this permit shall be construed to grant any rights what so ever to any public utilities, except as to the consent herein specifically given, nor to impair any existing rights granted in accordance with the constitution or laws of this state.

5. Any operations in the trunkline right of way not covered by permit and the appropriate Department specifications are in violation of the jurisdictional authority of the Department, with respect to the control of the trunkline right of way, unless approved by the Department. Any change or alteration in the permit activities requires prior approval of the Department and may require a new permit.

6. Performance of the requirements of this permit is the responsibility of the permittee. The permittee shall complete all operations for which this permit is issued in accordance with the conditions of this permit, by the specified completion date. The permittee shall meet all requirements of the current Department Standard Specifications for Construction, and the Supplemental Specifications set forth on/or incorporated as a part of this permit.

7. The construction, operation and maintenance of the facility covered by this permit shall be performed without cost to the Department unless specified herein. The permittee shall be responsible for the cost of restoration of the state trunkline and right of way determined by the Department to be damaged as a result of the activities of the permittee.

8. Facilities allowed on state trunkline right of way shall be placed and maintained in a manner which will not impair the state trunkline or interfere with the reasonable safe and free flow of traffic. Failure of the permittee to maintain the facilities located within the State trunkline right of way so as not to interfere with the operation, maintenance or use of the state trunkline by the traveling public may result in revocation of the permit.

9. The permittee is solely and fully responsible for all activities undertaken pursuant to the permit. Any and all actions by the Department and those governmental bodies performing permit activities for the Department pursuant to a maintenance contract, including but not limited to any approved reviews and inspections of any nature, permit issuing, and final acceptance or rejection of the work or activity authorized by the permit shall not be construed as a warranty or assumption of liability on the part of the Department or those governmental bodies. It is expressly understood and agreed that any such actions are for the sole and exclusive purposes of the Department and the governmental bodies acting in a governmental capacity. Any such actions by the Department and governmental bodies will not relieve the permittee of its obligations hereunder, nor are such actions by the Department and the governmental bodies to be construed as a warranty as to the propriety of the permittee's performance. The permittee shall indemnify and save harmless the State of Michigan, Michigan Transportation Commission, the Department and all officers, agents and employees thereof, and those governmental bodies performing permit activities for the Department and all officers, agents and employees thereof, pursuant to a maintenance contract, against any and all claims for damages arising from operations covered by this permit except claims resulting from the sole negligence or willful acts or omissions of said indemnities, its agent, or employees. In addition, permittee upon request shall furnish proof of insurance coverage for the term of this permit in an amount pre-specified.

10. This permit is not assignable and not transferable unless specifically agreed to by the Department.

11. The permittee, upon request of the Department, shall immediately remove, cease operations, and surrender this permit, or alter or relocate, at the permittee's own expense, the facility for which this permit is granted. Upon failure to do so, the Department may take any necessary action to protect the trunkline interest and the permittee shall reimburse the Department for its costs in doing same. The permittee expressly waives any right to claim damages or compensation in the event this permit is revoked.

12. The permittee shall, upon request by the Department, furnish a performance surety deposit in the form of a bond, cash, certified check, or (when authorized by the Department) an irrevocable letter of credit in such amount as deemed necessary by the Department to guarantee restoration of the trunkline highway or performance under the conditions of the permit.

13. The permittee hereby acknowledges and agrees that the Department has the right to demand completion by the permittee, or the performance surety, or to complete any uncompleted activity authorized by this permit which adversely affects the operation and/or maintenance of the state trunkline highway, or which is not completed by the expiration date of the permit, including:

    a. Completion of construction of driveway and/or approach (not authorized by annual permit).
    b. Removal of materials.
    c. Restoration of the trunkline facilities and right of way as necessary for the reasonably safe and efficient operations of the trunkline highway.

    The permittee further agrees to immediately reimburse the Department in full for all such costs incurred by the Department upon receipt of billing, and that upon failure to pay, the Department may effect payment with the performance surety deposit. Should the surety deposit be insufficient to cover expenses incurred by the Department, the permittee shall pay such deficiency upon billing by the Department. If the surety deposit exceeds the expense incurred by the Department, any excess will be returned or released to the depositor upon completion of the work to the satisfaction of the Department.

14. The Department reserves the right during the time any or all of the work is being performed to assign an inspector to protect the trunkline interest, and to charge the permittee all such costs incurred. In addition, the permittee may be billed any engineering and review fees incurred by the Department or its agent in connection with the work covered by this permit.

15. Emergency Operations: In time of disaster or emergency, or when utility lines or facilities are so damaged as to constitute a danger to life and/or property of the public, access to the same may be had by the most expeditious route. Work is to be completed in a manner which will provide the traveling public with maximum possible safety and minimize traffic distribution. Notice of such situations shall be given to the nearest police authority and the department as soon as can reasonably be done under the circumstances. During normal Department work hours, the facility owner shall advise the Department of any operations within right of way which affect traffic operations or the highway structure or facilities prior to performance of the work. After normal Department work hours, the permittee, at the beginning of the first working day after the emergency operation, shall advise the Department of any operations which affect traffic operations or the highway structures and facilities. If determined necessary by the Department, the permittee shall secure an individual permit for such work after notification.

16. Upon the Department's request, as built drawings of work performed will be furnished to the Department within 30 days after completion of the work.

17. The permittee shall give notice to public utilities in accordance with Act 174 of 2013, as amended, and comply with all applicable requirements of this act. The permittee shall also comply with requirements of Act 451, P.A. of 1994, as amended.

18. The permittee acknowledges that the Department is without liability for the presence of the permittee's facility which is located within the trunkline right of way. Acceptance by the Department of work performed, and/or notice of termination of performance obligations for the surety and/or the permittee do not relieve the permittee of full responsibility for the permittee's work or for the presence of the permittee's facility in the trunkline right of way.

19. Where the Department has accepted an Indemnification Commitment in lieu of bond and/or insurance policies, such commitment is incorporated into this permit by reference.

20. It is illegal to discharge substances other than storm water into the Department's storm sewer system unless permission has been obtained in writing for other discharges.

21. The permittee shall be responsible for obtaining information on permitted environmental site closures within MDOT right of way. MDOT has implemented a program that allows environmental contamination to remain within the right of way by use of a permit. Issued permit information can be obtained from the Region/TSC in which the permit is issued. If the permittee will encounter a site area identified as a site closure permit area, the permittee shall follow instructions and conditions set forth in Supplemental Specifications #3 and specifications found in form 2205-C, "Special Conditions for Underground Construction".

SUPPLEMENTAL SPECIFICATIONS

1. Construction and Maintenance of Facilities – To construct and maintain utility crossings of limited access highways, access for the utility's service vehicles may be from county roads, service roads, and openings authorized in limited access right of way fences. The construction of utilities across limited access highways should be for the purpose of serving a general area rather than providing individual services, unless extenuating circumstances necessitate such crossings.

   Equipment, vehicles or personnel will not operate within a distance of 30 feet from the edge of the pavement of roadways or ramps on limited access highways. At locations where utilities have been constructed in medians having a width greater than 80 feet or have otherwise been allowed to remain or to be constructed in limited access right of way, ingress and egress shall be by such routes as specified by the Department, which may also specify additional safety provisions.

2. Restoration- Restoration of the trunkline highway and right of way will be such that it will provide a condition equal to or better than the original condition, in accordance with Michigan Department of Transportation Standard Specifications.

3. Excavation and Disposal of Excavated Material – The permittee shall provide and place the necessary sheeting, shoring and bracing required to prevent caving, loss or settlement of foundation material supporting the pavement, or any other highway installation such as sewers, culverts, etc. The permittee shall assume the full responsibility for this protection and shall not proceed in these areas before approval of the methods by the Department.

   Construction equipment and excavating material shall not be stocked in such locations that it creates a traffic hazard or interferes with the flow of traffic; and on limited access highways, shall be a minimum of 30 feet from the traveled way. Sod and topsoil shall be stacked separately from other excavated material. The permittee shall dispose of all surplus and unsuitable material outside of the limits of the highway, unless the permit provides for disposal at approved locations within right of way. In the latter case, the material shall be leveled and trimmed in an approved manner.

   When the permittee is excavating within trunkline right of way and discovers existing contaminated soil and/or an abandoned underground storage tank, special permit specifications entitled "Special Conditions for Underground Construction" (Form 2205-C) shall apply.

4. Utility Cuts, Trenches and Pavement Replacement – Utility crossing by pavement cutting and removal are generally prohibited. If extenuating circumstances make tunneling, boring and jacking impractical pavement cutting may be used with approval of the Department. All utility cuts, trenching and pavement replacement shall comply with the requirements of the Standard Specifications and the Standard Plan "Utility Cuts, Trenches and Pavement Replacement". Unless otherwise specified, cuts in concrete residential and commercial drives shall be as above; except that the patch width shall be a minimum of 3 feet and the remaining slab from patch to existing joint shall be a minimum of 3 feet. Backfill shall be made with sand-gravel as specified in the Standard Specifications, unless otherwise directed. After the backfill has been placed and compacted by controlled density method, the pavement shall be replaced with new pavement of the original type and quality, unless at the season of the year when it is not feasible to replace pavement in kind. In this case, a temporary surface of bituminous material shall be placed with Department approval and later replaced with pavement of the original type at the applicant's expense. Other pavement types may be allowed with prior approval of the Department.

5. Crossing Roadbed by Tunneling or Boring and Jacking – All crossing of roadbed operations involving tunneling, boring and jacking shall comply with the Department's special provisions for such work.

6. Backfilling and Compacting Backfill – Unless otherwise specified, all trenches, holes and pits shall be filled with sound earth or with sand-gravel if so provided, placed in successive layers not more than 9 inches in depth, loose measure, and each layer shall be thoroughly compacted by tamping. All backfill compaction will be subject to check by the controlled density method.

7. Depth of Cover Method- Unless otherwise authorized, pipes shall be placed to a depth that will provide not less than 4 feet of cover between the top of the roadway surface and the pipe, 3 feet cover below the ditch line and the pipe.

8. Trees:

   a. The permittee is responsible for obtaining permission from abutting owners when trimming or removing trees on easement right of way.
   b. Tree removal or trimming may be undertaken only after submission of an "Advance Notice" through CPS, a field review by the Region Resource Specialist and an approved copy of the advanced notice is e-mailed to the permittee.
   c. Limbs, logs, stumps and litter shall be disposed of in a manner acceptable to the Department.
   d. Tree roots shall be bored a distance of one foot for each one inch of trunk diameter for underground utility installations

9. Aerial Wire Crossings – Vertical clearance of wires, conductors and cables over state trunkline shall not be less than required by Section 232 of the National Electrical Safety Code, except in no case shall the under-clearance below any wire, conductor, or cable, under any temperature or loading condition, be less than eighteen feet (18').

CHECKED BY: BMM:CRB	PLAN DATE:		

FILE: PW RD/TS/Typicals/Signs/MT NON FWY/M0170a.dgn REV. 10/06/2011

NOTES

1A. SEE **M0020a** FOR "D" VALUES.

2. ALL NON-APPLICABLE SIGNING WITHIN THE CIA SHALL BE MODIFIED TO FIT CONDITIONS, COVERED OR REMOVED.

3. DISTANCES BETWEEN SIGNS, THE VALUES FOR WHICH ARE SHOWN IN TABLE D, ARE APPROXIMATE AND MAY NEED ADJUSTING AS DIRECTED BY THE ENGINEER.

3A. THE "WORK ZONE BEGINS" (R5-18c) SIGN SHALL BE USED ONLY IN THE INITIAL SIGNING SEQUENCE IN THE WORK ZONE. SUBSEQUENT SEQUENCES IN THE SAME WORK ZONE SHALL OMIT THIS SIGN AND THE QUANTITIES SHALL BE ADJUSTED APPROPRIATELY.

6. WHEN CALLED FOR IN THE FHWA ACCEPTANCE LETTER FOR THE SIGN SYSTEM SELECTED, THE TYPE A WARNING FLASHER, SHOWN ON THE WARNING SIGNS, SHALL BE POSITIONED ON THE SIDE OF THE SIGN NEAREST THE ROADWAY.

7. ALL TEMPORARY SIGNS, TYPE III BARRICADES, THEIR SUPPORT SYSTEMS AND LIGHTING REQUIREMENTS SHALL MEET NCHRP 350 CRASHWORTHLY REQUIREMENTS STIPULATED IN THE CURRENT EDITION OF THE MICHIGAN MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES, THE CURRENT EDITION OF THE STANDARD SPECIFICATIONS FOR CONSTRUCTION, THE STANDARD PLANS AND APPLICABLE SPECIAL PROVISIONS. ONLY DESIGNS AND MATERIALS APPROVED BY MDOT WILL BE ALLOWED.

9. ALL TRAFFIC REGULATORS SHALL BE PROPERLY TRAINED AND SUPERVISED.

9A. IN ANY OPERATION INVOLVING MORE THAN ONE TRAFFIC REGULATOR, ONE PERSON SHOULD BE DESIGNATED AS HEAD TRAFFIC REGULATOR.

10. ALL TRAFFIC REGULATORS' CONDUCT, THEIR EQUIPMENT, AND TRAFFIC REGULATING PROCEDURES SHALL CONFORM TO THE CURRENT EDITION OF THE MICHIGAN MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES (MMUTCD) AND THE CURRENT EDITION OF THE MDOT HANDBOOK ENTITLED "TRAFFIC REGULATORS INSTRUCTION MANUAL."

11. WHEN TRAFFIC REGULATING IS ALLOWED DURING THE HOURS OF DARKNESS, APPROPRIATE LIGHTING SHALL BE PROVIDED TO SUFFICIENTLY ILLUMINATE THE TRAFFIC REGULATOR'S STATIONS.

14. ADDITIONAL SIGNING AND/OR ELONGATED SIGNING SEQUENCES SHOULD BE USED WHEN TRAFFIC VOLUMES ARE SIGNIFICANT ENOUGH TO CREATE BACKUPS BEYOND THE W3-4 SIGNS.

15. THE HAND HELD (PADDLE) SIGNS REQUIRED BY THE MMUTCD TO CONTROL TRAFFIC WILL BE PAID FOR AS PART OF FLAG CONTROL.

17. THE HAND HELD (PADDLE) SIGNS USED FOR THIS SEQUENCE SHALL DISPLAY "STOP" ON BOTH SIDES. WHEN THE TRAFFIC REGULATOR IS RELEASING TRAFFIC, THE "STOP" PADDLE SHALL BE TURNED 1/4 TURN AWAY FROM TRAFFIC.

18. CARE SHOULD BE TAKEN IN THE SELECTION OF THE LOCATION FOR THE HAUL ROAD TO ASSURE GOOD SIGHT DISTANCE FOR THE MOTORIST. HORIZONTAL AND VERTICAL CURVES AND INTERSECTING ROADWAYS IN CLOSE PROXIMITY TO THE HAUL ROAD LOCATION SHOULD BE AVOIDED AS MUCH AS POSSIBLE. THE LOCATION AND WIDTH OF THE HAUL ROAD REQUIRES PRIOR APPROVAL OF THE ENGINEER.

19. ALL EQUIPMENT OPERATORS WHO USE THE HAUL ROAD SHALL STOP AND VERIFY THAT THE TRAFFIC REGULATORS HAVE TRAFFIC STOPPED AND UNDER CONTROL BEFORE ENTERING ONTO THE HIGHWAY.

20. WHEN THE HAUL ROAD IS NOT IN USE, LIGHT TYPE III BARRICADES WITH "ROAD CLOSED" SIGNS SHALL BE IN PLACE, AND SHALL EXTEND COMPLETELY ACROSS THE HAUL ROAD.

SIGN SIZES

DIAMOND WARNING	- 48" x 48"

Construction Advisory

CA 2013-03
May 1, 2013

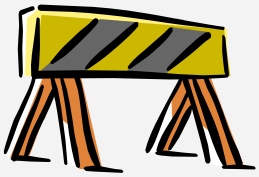
From Brenda O'Brien, Engineer of Construction Field Services

MDOT-Construction Field Services Division
P.O. Box 30049
Lansing, Michigan 48909
Phone/517-322-1087
Fax/517-322-5664
www.michigan.gov/mdot/

Index: Environment

Questions regarding this Construction Advisory should be directed to:

Jason Gutting, Engineer of Construction Operations at 517-636-6334 or guttingj@michigan.gov



BJO:JG

Historical and Archaeological Discoveries During Construction Operations

This construction advisory applies to all construction, maintenance, permits, and utility projects on MDOT right-of-way.

In the event that any staff (MDOT, consultant, local agency, contractor, etc.) encounter bones, artifacts, or buried features of possible historical or archaeological significance during construction operations on MDOT right-of-way, they must immediately cease operations in that location and notify the MDOT TSC construction engineer.

The MDOT TSC construction engineer must, immediately upon stopping work in the affected area, contact the MDOT archaeologist for consultation and direction. Communications are to be directed to the following individuals.

Primary Contact:
James A. Robertson, Ph.D.
MDOT Archaeologist
517-335-2637 (office)
Robertsonj3@michigan.gov

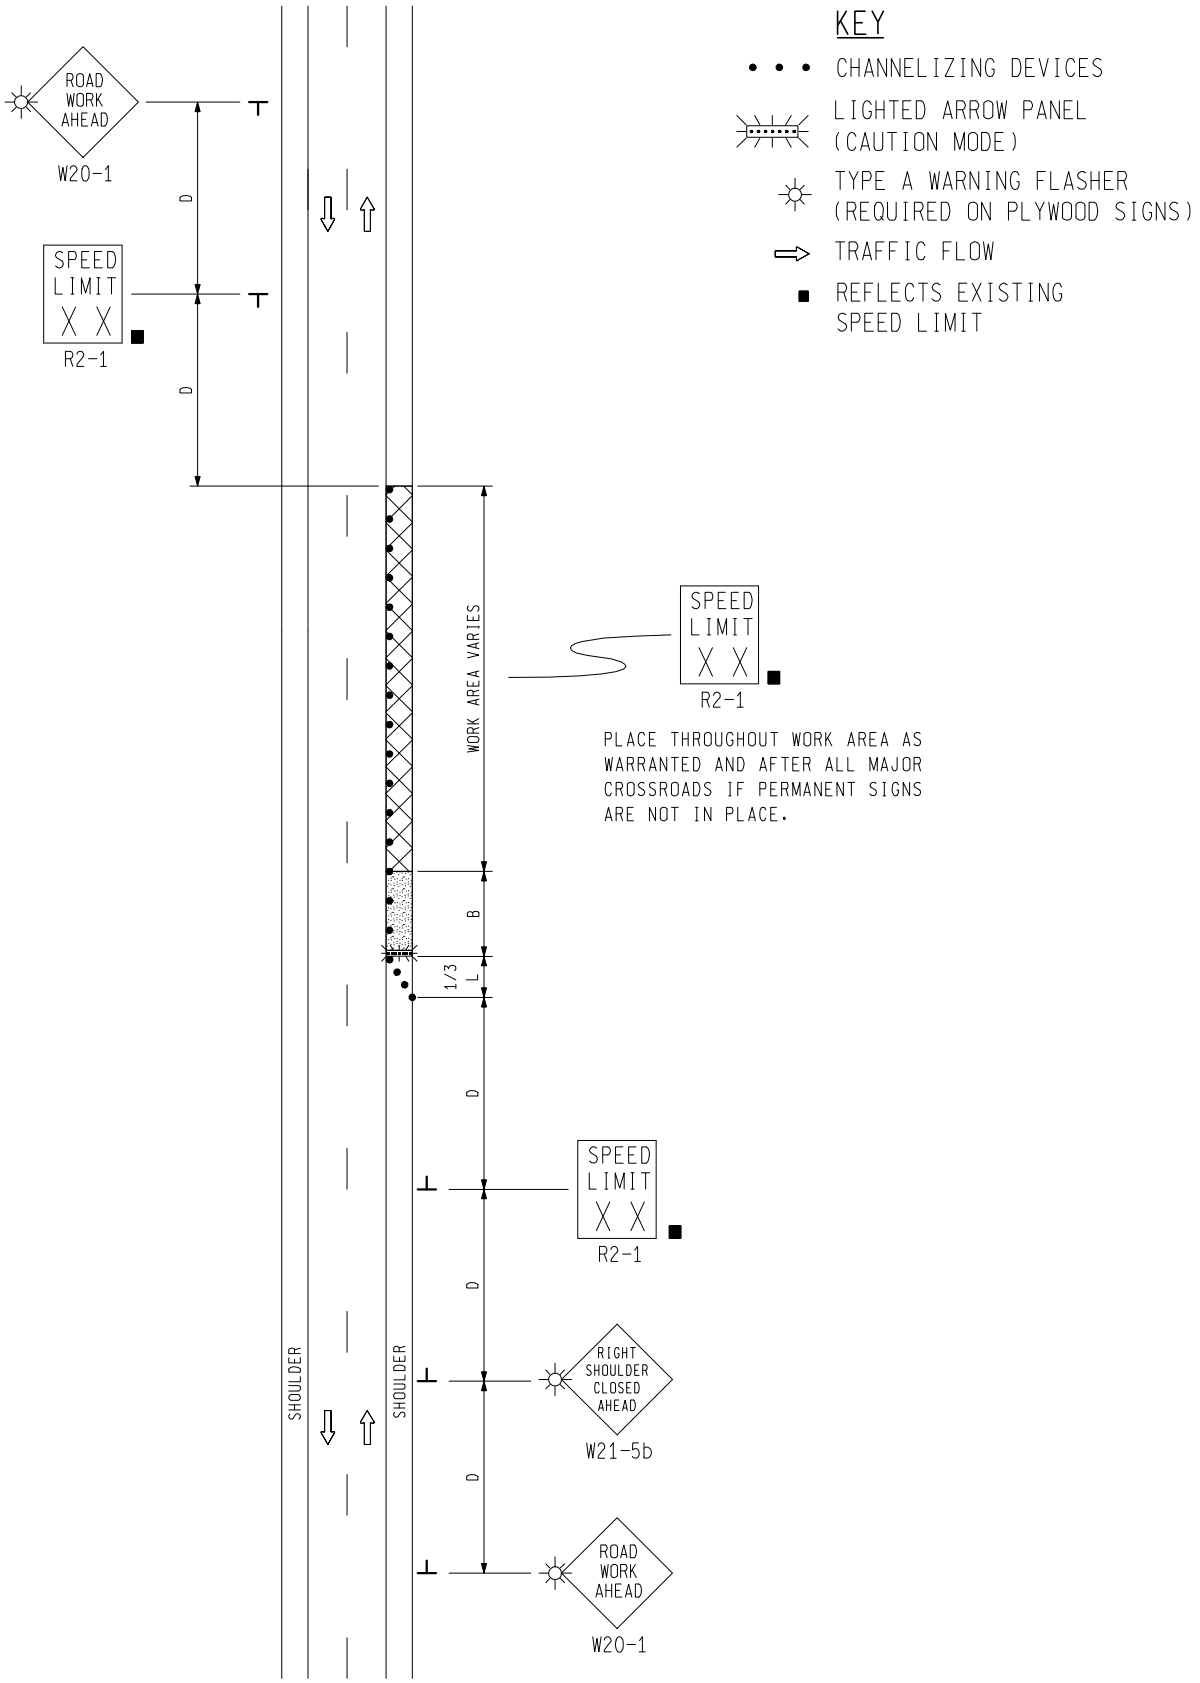
Secondary Contact (if primary is not available):
Christine N. Stephenson, M.A.
Staff Archaeologist
517-243-2818 (cell)
Stephensonc@michigan.gov

If bones are discovered and there is no reasonable doubt that they are human bones, the MDOT TSC construction engineer must immediately also contact the local law enforcement agency.

It should be noted that per Michigan law, any person who willfully digs up, disinters, or moves human remains from their place of burial, or who aids in such activities without being lawfully authorized to do so can be found guilty of a felony punishable by up to 10 years in prison and a fine of up to $5,000.

Construction Field Services is working with the Environmental Services Section to develop a Bureau of Highway Instructional Memorandum with additional details.

Please share this construction advisory with consultants, local agencies, maintenance supervisors/coordinators, and permit/utility staff in your area as well as TSC staff.



NOT TO SCALE

MDOT Michigan Department of Transportation OPERATIONS	SHOULDER CLOSURE ON A TWO-LANE, TWO-WAY ROADWAY NO SPEED REDUCTION	DURATION: SHORT-TERM STATIONARY	
		01/01/07 REV. DATE:	MD - 11a
			PAGE A3

MDOT STANDARD CONDITIONS FOR DRIVEWAY CONSTRUCTION

REVISIONS: 8/10/10

GRADING AND SLOPES:

1. The driveway including the radii shall be located entirely within the area between the permittee's property lines as extended to the centerline of the highway.

2. The surfacing within the highway shoulder area must be sloped in such a manner that it corresponds to the slope of the existing shoulder (MDOT recommends a shoulder slope away from the traveled lane at a rate of ½" to ¾" per foot unless the driveway location is within the limits of a curve). The new surfacing shall match into the existing highway surfacing such that a snowplow removing snow along the shoulder does not encounter an obstruction as a result of this work.

3. Surface run-off water from this property shall **not** be drained directly into the highway right-of-way, unless approved by MDOT and field conditions warrant.

4. The trunkline foreslope (the area from the highway shoulder to the bottom of the ditchline) shall be graded to a slope of 1' vertical to 4' horizontal, unless permit conditions state otherwise.

5. Applicants may need to contact the Michigan Department of Natural Resources and Environment for additional permit requirements.

6. Side slopes from the edge of the new driveway to the existing ground shall be graded to 1' vertical to 6' horizontal slope. These side slopes shall be "blended" into the trunkline foreslope by constructing a suitable radius as determined by field conditions.

REGARDING CULVERTS

7. Headwalls are **not** allowed for culvert ends, nor shall any large rocks or decorative landscaping work be constructed that **may constitute a vertical obstruction**.

8. Culvert must be new, either corrugated metal or plastic, and a minimum of 18" diameter, unless field conditions warrant a smaller culvert (MDOT will determine the culvert size needed).

9. Corrugated metal and plastic culverts shall have standard metal flared end sections, unless location requires a special sloped end section (MDOT personnel will determine).

10. Plastic culverts shall conform to requirements of AASHTO M294 (verify through supplier).

11. Recommend backfill over the culvert pipe shall be granular material, Class III (clean sand), except that no stones larger than 1" in diameter shall be placed within 6" of the pipe. The backfill must be placed in layers of no more than ½ of the pipe diameter thickness, and compacted such that settlement does not occur within the highway right-of-way.

12. The entire length of pipe shall be covered with backfill (from end section to end section).

13. A sloped culvert end section may be required on the drive culvert if the proposed location is within MDOT's safety clear zone distance (30 feet out from white fog line). Please indicate the distance from the highway centerline to the proposed driveway culvert on Form PA-09 where requested. You will be notified in the contents of your approved permit if this item is required. (A detail of this requirement will also be included with the approved copy of your permit).

REGARDING CONSTRUCTION OPERATION

14. Highway pavement and shoulder areas are to be kept clear from excavated or imported material. The applicant is held responsible for any corrective action needed within this area.

15. Traffic control for permit work within the right-of-way is the responsibility of permittee and must be in accordance with the Michigan Manual of Uniform Traffic Control Devices (Work Zone Typical signing will be provided with your permit). Safety signing must be in place when work is being performed, and barricades placed around the work area. Flag control will be required if the operation uses any part of the trunkline thoroughfare. (Two flaggers are required, and they must have the proper clothing, protective equipment, and slow/stop paddle signs). There must be no work performed near the highway shoulder area following the sunset hour.

REGARDING RESTORATION

16. **All new slopes and disturbances within the highway right-of-way shall be restored using 3" of topsoil, seed, fertilizer, and mulch.** Turf re-establishment is required prior to release from the performance obligations. **MDOT requires that driveway side sloped be constructed to the required 1 on 6 slope, and that vegetation (not rock or timbers) be established on these slopes.**

17. Any disturbance caused to the existing ditch bottom shall be restored with mulch blanket or other MDOT approved restoration methods; this shall also apply to any steep slope which doesn't produce vegetation due to erosion. **The applicant is responsible for installing proper erosion control items within the construction influence area until such time that restoration has been established.** MDOT typically recommends silt fence or hay/straw bales to satisfy this requirement.

18. The applicant shall contact MDOT Permit Division (phone 906-485-4270) upon completion of all the work; a final inspection will be scheduled to verify compliance of permit conditions.

MISCELLANEOUS

19. All other items as specified by the attached General Conditions (form 2205-1) apply to these permit requirements as applicable.

20. If this driveway develops into service for some type of future business, you will be required to contact MDOT and upgrade this driveway in accordance with our current commercial driveway regulations.

21. The permit applicant is to ensure that all respective conditions that apply to this construction work be completed in accordance with the attached provisions.

22. Tree removal/brushing work done within the highway right-of-way is generally allowed **only as necessary to effectively construct the new driveway.** All logs, limbs, debris, (etc.) must be removed from within the highway right-of-way as part of the cleanup and restoration efforts.

23. The applicant is responsible for contacting "MISS DIG" (800-482-7171) prior to starting excavation work. **If any existing utilities are damaged during construction, the respective utility company must be contacted for repair.** If any known or unknown drainage piping is encountered and damaged, repair shall be made using manufacturer-type connectors of similar size and type, and the MDOT Permit Agent notified

NOTES

NO SIGNS ARE REQUIRED IF DURATION IS SHORT-DURATION OR MOBILE.

IF THE OPERATION HAS A VEHICLE(S) PARKED ON THE SHOULDER, OR VEHICLES ACCESSING THE WORK SITE VIA THE HIGHWAY OR CROSSING THE HIGHWAY TO PERFORM OPERATIONS, A "ROAD WORK AHEAD" SIGN OR AN ARROW BOARD IN BAR MODE SHALL BE USED.

This permit is incomplete without "General Conditions and Supplemental Specifications"

I certify that I accept the following:

1. I am the legal owner of this property or facility, the owner's authorized representative, or have statutory authority to work within state highway Right-of-Way.
2. Commencement of work set forth in the permit application constitutes acceptance of the permit as issued.
3. Failure to object, ***within ten (10) days*** to the permit as issued constitutes acceptance of the permit as issued.
4. If this permit is accepted by either of the above methods, I will comply with the provisions of the permit.
5. I agree that Advance Notice for Permitted Activities for shall be submitted **5 days prior** to the commencement of the proposed work.

   I agree that Advance Notice for Permitted Utility Tree Trimming and Tree Removal Activities shall be submitted **15 days prior** to the commencement of the proposed work for an annual permit.

CAUTION

Work shall NOT begin until the Advance Notice has been approved.

Failure to submit the advance notice may result in a Stop Work Order.

ENVIRONMENTAL REQUIREMENTS FOR ACTIVITIES WITHIN MDOT RIGHT-OF-WAY

Issuance of a permit by MDOT does not relieve the permit applicant from meeting any and all requirements of law, or of other public bodies or agencies, including but not limited to the following:

1. Goemare-Anderson Wetland Protection Act, Part 303, P.A. 451 of 1994

   Any activity that involves excavation or fill, located within a regulated wetland, requires a Michigan Department of Environmental Quality (MDEQ) permit. Regulated wetlands are those systems that are contiguous to a lake or stream (within 500 feet) or greater than five (5) acres in size.

2. Inland Lakes and Streams Act, Part 301, P.A. 451 of 1994

   Any activity located within the ordinary high-water mark of a regulated body of water, i.e., lake, stream, drain, pond. etc., shall require a permit. There are no exemptions to this requirement. Permit applications and questions can be submitted to the MDEQ's Land and Water Management Division.

3. Soil Erosion and Sedimentation Control Act, Part 91, P.A. 451 1994

   Any land disturbance of one (1) acre or greater, or that is located within 500 feet of a lake or stream, requires a soil erosion permit. Municipalities who are classified as an Authorized Public Agency (APA) are exempt from permits, but must follow proper soil erosion practices as identified in their standard plan. Any construction activity located within MDOT Right-of-Way that is authorized by a MDOT permit is the responsibility of the permit applicant and is not covered under MDOT's APA authority.

   Soil erosion and sedimentation controls are required on all projects, even if a soil erosion permit is not required. Individuals performing work shall prevent sediment from entering any body of water or leaving the Right-of-Way. Permits can be obtained from the county/municipal agencies. Minor earth changes are exempted in this Act and are classified as normal maintenance and emergency repairs.

4. Clean Water Act: National Pollutant Discharge Elimination System (NPDES) Storm Water Discharge Requirements for Construction Activities

   Any land disturbance of five (5) acres or greater requires an NPDES Storm Water Discharge Permit. This can include any filling, excavating, grading, clearing, etc. Municipally-owned utilities who service a population of less than 100,000 are exempt from permit provisions, but not from environmental protection requirements. Permit applications require the Part 31, P.A. 451 permit number, or a declaration of APA status and the effective date. Permit applications and questions can be submitted to the MDEQ's Surface Water Quality Division.

5. Environmental Site Closures

   A procedure was developed by the MDEQ and MDOT which may allow a property owner, who is responsible for of these sites, to close an environmentally impacted site. Questions regarding this activity shall be addressed by contacting MDOT's Environmental Specialist at 517-335-2271.

6. The Land and Water Management Division of the MDEQ also administers the following environmental laws which may require review prior to construction:
   - Sand Dune Protection Act, Part 353, P.A. 451 of 1994.
   - Shore-lands Protection and Management, Part 323, P.A. 451 of 1994.
   - Great Lakes Submerged Lands Act, Part 325, and P.A. 451 of 1994.

7. The Wildlife Division of the MDNR also administers the following environmental laws which may require review prior to construction:
   - Endangered Species Act, Part 365, and P.A. 451 of 1994.

Questions regarding these permits may be addressed by contacting the nearest MDEQ district field office, or the MDEQ Land and Water Management Division at 517-373-1170.

Additional information is available in MDOT's Environmental Procedures Manual.

CHECKED BY: BMM:CRB	PLAN DATE:		

FILE: PW RD/TS/Typicals/Signs/MT NON FWY/M0170a.dgn REV. 10/06/2011

NOTES

1A. SEE **M0020a** FOR "D" VALUES.

2. ALL NON-APPLICABLE SIGNING WITHIN THE CIA SHALL BE MODIFIED TO FIT CONDITIONS, COVERED OR REMOVED.

3. DISTANCES BETWEEN SIGNS, THE VALUES FOR WHICH ARE SHOWN IN TABLE D, ARE APPROXIMATE AND MAY NEED ADJUSTING AS DIRECTED BY THE ENGINEER.

3A. THE "WORK ZONE BEGINS" (R5-18c) SIGN SHALL BE USED ONLY IN THE INITIAL SIGNING SEQUENCE IN THE WORK ZONE. SUBSEQUENT SEQUENCES IN THE SAME WORK ZONE SHALL OMIT THIS SIGN AND THE QUANTITIES SHALL BE ADJUSTED APPROPRIATELY.

6. WHEN CALLED FOR IN THE FHWA ACCEPTANCE LETTER FOR THE SIGN SYSTEM SELECTED, THE TYPE A WARNING FLASHER, SHOWN ON THE WARNING SIGNS, SHALL BE POSITIONED ON THE SIDE OF THE SIGN NEAREST THE ROADWAY.

7. ALL TEMPORARY SIGNS, TYPE III BARRICADES, THEIR SUPPORT SYSTEMS AND LIGHTING REQUIREMENTS SHALL MEET NCHRP 350 CRASHWORTHLY REQUIREMENTS STIPULATED IN THE CURRENT EDITION OF THE MICHIGAN MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES, THE CURRENT EDITION OF THE STANDARD SPECIFICATIONS FOR CONSTRUCTION, THE STANDARD PLANS AND APPLICABLE SPECIAL PROVISIONS. ONLY DESIGNS AND MATERIALS APPROVED BY MDOT WILL BE ALLOWED.

9. ALL TRAFFIC REGULATORS SHALL BE PROPERLY TRAINED AND SUPERVISED.

9A. IN ANY OPERATION INVOLVING MORE THAN ONE TRAFFIC REGULATOR, ONE PERSON SHOULD BE DESIGNATED AS HEAD TRAFFIC REGULATOR.

10. ALL TRAFFIC REGULATORS' CONDUCT, THEIR EQUIPMENT, AND TRAFFIC REGULATING PROCEDURES SHALL CONFORM TO THE CURRENT EDITION OF THE MICHIGAN MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES (MMUTCD) AND THE CURRENT EDITION OF THE MDOT HANDBOOK ENTITLED "TRAFFIC REGULATORS INSTRUCTION MANUAL."

11. WHEN TRAFFIC REGULATING IS ALLOWED DURING THE HOURS OF DARKNESS, APPROPRIATE LIGHTING SHALL BE PROVIDED TO SUFFICIENTLY ILLUMINATE THE TRAFFIC REGULATOR'S STATIONS.

14. ADDITIONAL SIGNING AND/OR ELONGATED SIGNING SEQUENCES SHOULD BE USED WHEN TRAFFIC VOLUMES ARE SIGNIFICANT ENOUGH TO CREATE BACKUPS BEYOND THE W3-4 SIGNS.

15. THE HAND HELD (PADDLE) SIGNS REQUIRED BY THE MMUTCD TO CONTROL TRAFFIC WILL BE PAID FOR AS PART OF FLAG CONTROL.

17. THE HAND HELD (PADDLE) SIGNS USED FOR THIS SEQUENCE SHALL DISPLAY "STOP" ON BOTH SIDES. WHEN THE TRAFFIC REGULATOR IS RELEASING TRAFFIC, THE "STOP" PADDLE SHALL BE TURNED 1/4 TURN AWAY FROM TRAFFIC.

18. CARE SHOULD BE TAKEN IN THE SELECTION OF THE LOCATION FOR THE HAUL ROAD TO ASSURE GOOD SIGHT DISTANCE FOR THE MOTORIST. HORIZONTAL AND VERTICAL CURVES AND INTERSECTING ROADWAYS IN CLOSE PROXIMITY TO THE HAUL ROAD LOCATION SHOULD BE AVOIDED AS MUCH AS POSSIBLE. THE LOCATION AND WIDTH OF THE HAUL ROAD REQUIRES PRIOR APPROVAL OF THE ENGINEER.

19. ALL EQUIPMENT OPERATORS WHO USE THE HAUL ROAD SHALL STOP AND VERIFY THAT THE TRAFFIC REGULATORS HAVE TRAFFIC STOPPED AND UNDER CONTROL BEFORE ENTERING ONTO THE HIGHWAY.

20. WHEN THE HAUL ROAD IS NOT IN USE, LIGHT TYPE III BARRICADES WITH "ROAD CLOSED" SIGNS SHALL BE IN PLACE, AND SHALL EXTEND COMPLETELY ACROSS THE HAUL ROAD.

SIGN SIZES

TABLES FOR "L", "D" AND "B" VALUES

DRAWN BY: CON:AE:djf	JUNE 2006	M0020a	SHEET 2 OF 2
CHECKED BY: BMM	PLAN DATE:		
FILE: K:/DGN/TSR/STDS/ENGLISH/MNTTRF/M0020a.dgn	REV. 08/21/2006		

GENERAL CONDITIONS

This permit is issued subject to the following conditions:

1. This permit grants to the permittee only those rights specifically stated and no other. Maintenance work within the trunkline right of way may require a separate permit unless authorized within the scope of the annual permit.

2. Issuance of this permit does not relieve permittee from meeting any and all requirements of law, or of other public bodies or agencies. The permittee shall be responsible for securing including but not limited to any other permissions including or required by law including but not limited to cities, villages, townships, corporations, or individuals for the activities hereby permitted.

3. The permittee agrees as a condition of this permit to:

   a. Have in the permittee's or the permittee's representative's possession on the job site at all times the approved permit, advanced notice and any necessary plans or sketches.

   b. Submit Advance Notice through the online Construction Permit System (CPS) at least five (5) working days prior to commencement of any operations covered by this permit. No work shall start until an approved Advance Notice is e-mailed to the permittee.

   c. Perform no work except emergency work, unless authorized by the Department, on Saturdays, Sundays, or from 3:00 p.m. on the day proceeding until the normal starting time the day after the following holidays: New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

   d. Provide and maintain all necessary precautions to prevent injury or damage to persons and property from operations covered by this permit.

   e. Furnish, install and maintain all necessary traffic controls and protection during permittee's operations in accordance with the Michigan Manual of Uniform Traffic Control Devices and any supplemental specifications set forth herein.

   f. Notify the Department of completion of work authorized by this permit through CPS, so that final inspection may be made and surety deposit released (where applicable). Surety deposit will not be released until the work authorized by the permit has been completed and inspected, and all inspection charges billable to the permittee are paid.

4. Nothing in this permit shall be construed to grant any rights what so ever to any public utilities, except as to the consent herein specifically given, nor to impair any existing rights granted in accordance with the constitution or laws of this state.

5. Any operations in the trunkline right of way not covered by permit and the appropriate Department specifications are in violation of the jurisdictional authority of the Department, with respect to the control of the trunkline right of way, unless approved by the Department. Any change or alteration in the permit activities requires prior approval of the Department and may require a new permit.

6. Performance of the requirements of this permit is the responsibility of the permittee. The permittee shall complete all operations for which this permit is issued in accordance with the conditions of this permit, by the specified completion date. The permittee shall meet all requirements of the current Department Standard Specifications for Construction, and the Supplemental Specifications set forth on/or incorporated as a part of this permit.

7. The construction, operation and maintenance of the facility covered by this permit shall be performed without cost to the Department unless specified herein. The permittee shall be responsible for the cost of restoration of the state trunkline and right of way determined by the Department to be damaged as a result of the activities of the permittee.

8. Facilities allowed on state trunkline right of way shall be placed and maintained in a manner which will not impair the state trunkline or interfere with the reasonable safe and free flow of traffic. Failure of the permittee to maintain the facilities located within the State trunkline right of way so as not to interfere with the operation, maintenance or use of the state trunkline by the traveling public may result in revocation of the permit.

9. The permittee is solely and fully responsible for all activities undertaken pursuant to the permit. Any and all actions by the Department and those governmental bodies performing permit activities for the Department pursuant to a maintenance contract, including but not limited to any approved reviews and inspections of any nature, permit issuing, and final acceptance or rejection of the work or activity authorized by the permit shall not be construed as a warranty or assumption of liability on the part of the Department or those governmental bodies. It is expressly understood and agreed that any such actions are for the sole and exclusive purposes of the Department and the governmental bodies acting in a governmental capacity. Any such actions by the Department and governmental bodies will not relieve the permittee of its obligations hereunder, nor are such actions by the Department and the governmental bodies to be construed as a warranty as to the propriety of the permittee's performance. The permittee shall indemnify and save harmless the State of Michigan, Michigan Transportation Commission, the Department and all officers, agents and employees thereof, and those governmental bodies performing permit activities for the Department and all officers, agents and employees thereof, pursuant to a maintenance contract, against any and all claims for damages arising from operations covered by this permit except claims resulting from the sole negligence or willful acts or omissions of said indemnities, its agent, or employees. In addition, permittee upon request shall furnish proof of insurance coverage for the term of this permit in an amount pre-specified.

10. This permit is not assignable and not transferable unless specifically agreed to by the Department.

11. The permittee, upon request of the Department, shall immediately remove, cease operations, and surrender this permit, or alter or relocate, at the permittee's own expense, the facility for which this permit is granted. Upon failure to do so, the Department may take any necessary action to protect the trunkline interest and the permittee shall reimburse the Department for its costs in doing same. The permittee expressly waives any right to claim damages or compensation in the event this permit is revoked.

12. The permittee shall, upon request by the Department, furnish a performance surety deposit in the form of a bond, cash, certified check, or (when authorized by the Department) an irrevocable letter of credit in such amount as deemed necessary by the Department to guarantee restoration of the trunkline highway or performance under the conditions of the permit.

13. The permittee hereby acknowledges and agrees that the Department has the right to demand completion by the permittee, or the performance surety, or to complete any uncompleted activity authorized by this permit which adversely affects the operation and/or maintenance of the state trunkline highway, or which is not completed by the expiration date of the permit, including:

    a. Completion of construction of driveway and/or approach (not authorized by annual permit).
    b. Removal of materials.
    c. Restoration of the trunkline facilities and right of way as necessary for the reasonably safe and efficient operations of the trunkline highway.

    The permittee further agrees to immediately reimburse the Department in full for all such costs incurred by the Department upon receipt of billing, and that upon failure to pay, the Department may effect payment with the performance surety deposit. Should the surety deposit be insufficient to cover expenses incurred by the Department, the permittee shall pay such deficiency upon billing by the Department. If the surety deposit exceeds the expense incurred by the Department, any excess will be returned or released to the depositor upon completion of the work to the satisfaction of the Department.

14. The Department reserves the right during the time any or all of the work is being performed to assign an inspector to protect the trunkline interest, and to charge the permittee all such costs incurred. In addition, the permittee may be billed any engineering and review fees incurred by the Department or its agent in connection with the work covered by this permit.

15. Emergency Operations: In time of disaster or emergency, or when utility lines or facilities are so damaged as to constitute a danger to life and/or property of the public, access to the same may be had by the most expeditious route. Work is to be completed in a manner which will provide the traveling public with maximum possible safety and minimize traffic distribution. Notice of such situations shall be given to the nearest police authority and the department as soon as can reasonably be done under the circumstances. During normal Department work hours, the facility owner shall advise the Department of any operations within right of way which affect traffic operations or the highway structure or facilities prior to performance of the work. After normal Department work hours, the permittee, at the beginning of the first working day after the emergency operation, shall advise the Department of any operations which affect traffic operations or the highway structures and facilities. If determined necessary by the Department, the permittee shall secure an individual permit for such work after notification.

16. Upon the Department's request, as built drawings of work performed will be furnished to the Department within 30 days after completion of the work.

17. The permittee shall give notice to public utilities in accordance with Act 174 of 2013, as amended, and comply with all applicable requirements of this act. The permittee shall also comply with requirements of Act 451, P.A. of 1994, as amended.

18. The permittee acknowledges that the Department is without liability for the presence of the permittee's facility which is located within the trunkline right of way. Acceptance by the Department of work performed, and/or notice of termination of performance obligations for the surety and/or the permittee do not relieve the permittee of full responsibility for the permittee's work or for the presence of the permittee's facility in the trunkline right of way.

19. Where the Department has accepted an Indemnification Commitment in lieu of bond and/or insurance policies, such commitment is incorporated into this permit by reference.

20. It is illegal to discharge substances other than storm water into the Department's storm sewer system unless permission has been obtained in writing for other discharges.

21. The permittee shall be responsible for obtaining information on permitted environmental site closures within MDOT right of way. MDOT has implemented a program that allows environmental contamination to remain within the right of way by use of a permit. Issued permit information can be obtained from the Region/TSC in which the permit is issued. If the permittee will encounter a site area identified as a site closure permit area, the permittee shall follow instructions and conditions set forth in Supplemental Specifications #3 and specifications found in form 2205-C, "Special Conditions for Underground Construction".

SUPPLEMENTAL SPECIFICATIONS

1. Construction and Maintenance of Facilities – To construct and maintain utility crossings of limited access highways, access for the utility's service vehicles may be from county roads, service roads, and openings authorized in limited access right of way fences. The construction of utilities across limited access highways should be for the purpose of serving a general area rather than providing individual services, unless extenuating circumstances necessitate such crossings.

   Equipment, vehicles or personnel will not operate within a distance of 30 feet from the edge of the pavement of roadways or ramps on limited access highways. At locations where utilities have been constructed in medians having a width greater than 80 feet or have otherwise been allowed to remain or to be constructed in limited access right of way, ingress and egress shall be by such routes as specified by the Department, which may also specify additional safety provisions.

2. Restoration- Restoration of the trunkline highway and right of way will be such that it will provide a condition equal to or better than the original condition, in accordance with Michigan Department of Transportation Standard Specifications.

3. Excavation and Disposal of Excavated Material – The permittee shall provide and place the necessary sheeting, shoring and bracing required to prevent caving, loss or settlement of foundation material supporting the pavement, or any other highway installation such as sewers, culverts, etc. The permittee shall assume the full responsibility for this protection and shall not proceed in these areas before approval of the methods by the Department.

   Construction equipment and excavating material shall not be stocked in such locations that it creates a traffic hazard or interferes with the flow of traffic; and on limited access highways, shall be a minimum of 30 feet from the traveled way. Sod and topsoil shall be stacked separately from other excavated material. The permittee shall dispose of all surplus and unsuitable material outside of the limits of the highway, unless the permit provides for disposal at approved locations within right of way. In the latter case, the material shall be leveled and trimmed in an approved manner.

   When the permittee is excavating within trunkline right of way and discovers existing contaminated soil and/or an abandoned underground storage tank, special permit specifications entitled "Special Conditions for Underground Construction" (Form 2205-C) shall apply.

4. Utility Cuts, Trenches and Pavement Replacement – Utility crossing by pavement cutting and removal are generally prohibited. If extenuating circumstances make tunneling, boring and jacking impractical pavement cutting may be used with approval of the Department. All utility cuts, trenching and pavement replacement shall comply with the requirements of the Standard Specifications and the Standard Plan "Utility Cuts, Trenches and Pavement Replacement". Unless otherwise specified, cuts in concrete residential and commercial drives shall be as above; except that the patch width shall be a minimum of 3 feet and the remaining slab from patch to existing joint shall be a minimum of 3 feet. Backfill shall be made with sand-gravel as specified in the Standard Specifications, unless otherwise directed. After the backfill has been placed and compacted by controlled density method, the pavement shall be replaced with new pavement of the original type and quality, unless at the season of the year when it is not feasible to replace pavement in kind. In this case, a temporary surface of bituminous material shall be placed with Department approval and later replaced with pavement of the original type at the applicant's expense. Other pavement types may be allowed with prior approval of the Department.

5. Crossing Roadbed by Tunneling or Boring and Jacking – All crossing of roadbed operations involving tunneling, boring and jacking shall comply with the Department's special provisions for such work.

6. Backfilling and Compacting Backfill – Unless otherwise specified, all trenches, holes and pits shall be filled with sound earth or with sand-gravel if so provided, placed in successive layers not more than 9 inches in depth, loose measure, and each layer shall be thoroughly compacted by tamping. All backfill compaction will be subject to check by the controlled density method.

7. Depth of Cover Method- Unless otherwise authorized, pipes shall be placed to a depth that will provide not less than 4 feet of cover between the top of the roadway surface and the pipe, 3 feet cover below the ditch line and the pipe.

8. Trees:

   a. The permittee is responsible for obtaining permission from abutting owners when trimming or removing trees on easement right of way.
   b. Tree removal or trimming may be undertaken only after submission of an "Advance Notice" through CPS, a field review by the Region Resource Specialist and an approved copy of the advanced notice is e-mailed to the permittee.
   c. Limbs, logs, stumps and litter shall be disposed of in a manner acceptable to the Department.
   d. Tree roots shall be bored a distance of one foot for each one inch of trunk diameter for underground utility installations

9. Aerial Wire Crossings – Vertical clearance of wires, conductors and cables over state trunkline shall not be less than required by Section 232 of the National Electrical Safety Code, except in no case shall the under-clearance below any wire, conductor, or cable, under any temperature or loading condition, be less than eighteen feet (18').

Construction Advisory

CA 2013-03
May 1, 2013

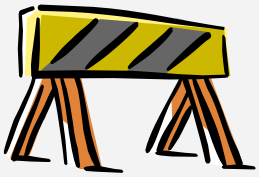
From Brenda O'Brien, Engineer of Construction Field Services

MDOT-Construction Field Services Division
P.O. Box 30049
Lansing, Michigan 48909
Phone/517-322-1087
Fax/517-322-5664
www.michigan.gov/mdot/

Index: Environment

Questions regarding this Construction Advisory should be directed to:

Jason Gutting, Engineer of Construction Operations at 517-636-6334 or guttingj@michigan.gov



BJO:JG

Historical and Archaeological Discoveries During Construction Operations

This construction advisory applies to all construction, maintenance, permits, and utility projects on MDOT right-of-way.

In the event that any staff (MDOT, consultant, local agency, contractor, etc.) encounter bones, artifacts, or buried features of possible historical or archaeological significance during construction operations on MDOT right-of-way, they must immediately cease operations in that location and notify the MDOT TSC construction engineer.

The MDOT TSC construction engineer must, immediately upon stopping work in the affected area, contact the MDOT archaeologist for consultation and direction. Communications are to be directed to the following individuals.

Primary Contact:
James A. Robertson, Ph.D.
MDOT Archaeologist
517-335-2637 (office)
Robertsonj3@michigan.gov

Secondary Contact (if primary is not available):
Christine N. Stephenson, M.A.
Staff Archaeologist
517-243-2818 (cell)
Stephensonc@michigan.gov

If bones are discovered and there is no reasonable doubt that they are human bones, the MDOT TSC construction engineer must immediately also contact the local law enforcement agency.

It should be noted that per Michigan law, any person who willfully digs up, disinters, or moves human remains from their place of burial, or who aids in such activities without being lawfully authorized to do so can be found guilty of a felony punishable by up to 10 years in prison and a fine of up to $5,000.

Construction Field Services is working with the Environmental Services Section to develop a Bureau of Highway Instructional Memorandum with additional details.

Please share this construction advisory with consultants, local agencies, maintenance supervisors/coordinators, and permit/utility staff in your area as well as TSC staff.

SOIL SUPPLY AGREEMENT

Submitted to Owner:

Date: May 11, 2017

Charlie Kiilunen
52705 State Hwy M-26
Lake Linden, MI 49945

B&B Contracting, Calumet, Inc. agrees to pay [redacted] per cubic yard (CYD) of clay or sand taken from borrow pit located at 52705 State Hwy M-26 for use at MDEQ-Hubbell Processing Area for Capping. This project is anticipated to need approximately 6000 CYD.

B&B Contracting will supply all necessary equipment for loading.

B&B will provide plan for and obtain soil erosion-sedimentation control (SESC) permit on behalf of owner with signed agreement.

Due to safety concerns, B&B will have exclusive access to pit and material during project.

B&B will install and maintain all necessary SESC measures until SESC permit is released.

B&B will provide borrow pit restoration, seed and mulch at completion of project.

Payment to be made as follows: B&B Contracting will keep track of totals by the truck load. The price above is inclusive of any applicable sales tax. Material will be paid for when B&B Contracting receives payment from project owner. This will be approximately 45 days from the material being loaded.

Owner to carry fire, tornado or other necessary property insurance. Our workers and equipment are fully covered by General Liability and Workmen's Compensation Insurance. Proof will be provided upon request.

This agreement is contingent on soil passing necessary testing.

Authorized signature_____ Date 5-12-17
Brian Bonen, President

Acceptance of Agreement

The above prices, specifications and conditions are satisfactory and are hereby accepted.

Signed_____ Date of acceptance 5/12/17

An Equal Opportunity Employer
B&B Contracting, Calumet, Inc.

ACCESS AGREEMENT

Land Owner:

Date: June 29, 2017

Pat Ziemnick
52569 State Hwy M-26
Lake Linden, MI 49945

The **Land Owner agrees** to allow **B&B Contracting, Calumet, Inc. to access the property at the above address** to install a diversion ditch between the current drainage ditch above the culvert crossing the Land Owner's private drive and the MDOT ditch along Hwy M-26. This is in conjunction with our work for the project: MDEQ-Hubbell Processing Area.

The diversion ditch is planned to be in place from July 10, 2017 to July 21, 2017.

B&B Contracting will supply all necessary equipment and labor to install the diversion ditch.

B&B will provide plan for and obtain MDOT Right of Way Construction permit as part of their work.

B&B will install and maintain all necessary SESC measures for project.

B&B will provide restoration, seed and mulch at completion of project.

There will be no payments by either party as part of this agreement.

Our workers and equipment are fully covered by General Liability and Workmen's Compensation Insurance. Proof will be provided upon request.

Authorized signature _____ Date 6-29-17
Brian Bonen, President

Acceptance of Agreement

The above specifications and conditions are satisfactory and are hereby accepted.

9. ORDERED DEMOLITIONS: (See NESHAP regulations for definition of "Ordered Demolition.") A copy of the official Order must accompany this notification.
Gov't Agency Ordering Demo:
Name/Title of Person Signing Order:
Date of Order: Date Ordered to Begin:

10. ASBESTOS INFORMATION

Is asbestos present? *(i.e. Assumed or identified in asbestos inspection report)* ☑ Yes ☐ No Will asbestos be removed prior to demolition? ☐ Yes ☐ No

Estimate the amount of asbestos: *Include RACM (Regulated Asbestos Containing Material) to be removed, encapsulated, etc. Also include the amount and type (floor tile, roofing, etc.) of non-friable Category I and/or Category II ACM that **will not** be removed prior to demolition. (**NOTE:** In a demolition, cementatious ACM **cannot** remain in a structure, as it is likely to become regulated in the demolition/handling process. It **must** be removed prior to demolition. Also, all asbestos must be removed prior to an intentional burn.)*

RACM/ACM to be removed	RACM to be Encapsulated	Non-friable ACM **not** removed prior to demo. Category I	Non-friable ACM **not** removed prior to demo. Category II	Units of Measure
				☐ Ln. Ft. ☐ Ln. M.
500				☑ Sq. Ft. ☐ Sq. M.
				☐ Cu. Ft.* ☐ Cu. M.*

*Volume (cubic ft./meters) should be used only if unable to measure by linear/square measure (example: asbestos has fallen off of surface).

NOTIFICATION OF INTENT TO RENOVATE/DEMOLISH (continued)

11. PROJECT DESCRIPTION: Complete **A) for Renovation** (asbestos removal/encapsulation) or **B) for Demolition:**

A) RENOVATION: Mark all surfaces/types of RACM to be removed:

☐ Piping ☐ Fittings ☐ Boiler(s) ☐ Tanks(s)
☐ Beam(s) ☐ Duct(s) ☐ Tunnel(s) ☐ Ceiling Tile(s)
☐ Mag Block ☑ Other (describe):
Off the ground

Encapsulation (for LARA): Mark surfaces/types to be encapsulated:

☐ Piping ☐ Fittings ☐ Boiler(s) ☐ Tanks(s)
☐ Beam(s) ☐ Duct(s) ☐ Tunnel(s) ☐ Ceiling Tile(s)
☐ Other (describe):

Method of removal: Describe how the asbestos will be removed:

☐ Glove Bag ☐ Neg. Pressure Cont. ☐ Cut into sections and remove ☐ Hand Scraping
☐ Dry Removal (please provide attachment with a description and explanation ☑ Other (describe):
Hand picking

B) DEMOLITION: Indicate if complete or partial demolition:

☐ **Complete** or ☐ **Partial** (describe part of facility to be demolished):

Method of Demolition: Describe the method of demolition of facility, bridge, etc.:

☐ Excavator or other heavy equipment ☐ Disassembly by hand ☐ Explosives ☐ Other (describe):

12. ENGINEERING CONTROLS: Describe work practices and engineering controls used to prevent visible emissions before, during, and after removal, and until proper disposal:

☑ Water spray to control dust ☐ Place in leak tight containers ☑ Adequately wet material ☐ Other (describe):

13. UNEXPECTED ASBESTOS: Describe the steps you intend to follow in the event that unexpected RACM is found or previously non-friable asbestos becomes friable (crumbled, pulverized, reduced to powder, etc.) and therefore regulated:

☐ Stop Work ☑ Wet material ☐ Contact DEQ and abatement contractor ☐ Revise notification ☐ Other (describe):

14. PROCEDURE(S) USED TO DETECT THE PRESENCE OF ASBESTOS:

A) Indicate how you determined whether or not asbestos is in the facility. If analytical sampling was used, describe method of analysis. (The determination of the presence or absence of asbestos must be made prior to submitting a renovation/demolition notification):

☑ All suspect materials sampled and analyzed using Polarized Light Microscopy (PLM) ☐ Other (describe):

B) Name, address, and phone number of company performing asbestos survey: Weston Solutions, Inc., 224-864-7200, 300 Plaza Circle Suite 202, Mundelein, IL 60060, MI,

C) Name, accreditation number of inspector, and date of inspection: Michael Castillo, A46183, 10/15/2014

15. EMERGENCY RENOVATIONS: Date/time of emergency:

Describe the sudden, unexpected event:

Explain how the event caused unsafe conditions, and/or would cause equipment damage and/or an unreasonable financial burden:

16. I certify that an individual trained in the provisions of 40 CFR Part 61, Subpart M, will be on-site during the renovation and during demolition involving RACM above the threshold and/or during an ordered demolition. Evidence that this person has completed the required training will be available for inspection at the renovation or demolition site.

Dale F. Carrier	06/27/2017
Signature of Owner or Abatement/Demolition Contractor	*Date*

17. Signature Requirements for Projects with Negative Pressure Enclosures: (required by LARA)

Per Section 221(1)(2) of P.A. 135 of 1986, as amended, clearance air monitoring is required for any asbestos abatement project involving 10 linear feet/15 square feet or more of friable material which is performed within a negative pressure enclosure. I (the building owner or lessee) have been advised by the contractor of my responsibility under Act 135 to have clearance air monitoring performed on this project.

Signature of Building Owner or Lessee	*Date*	*Signature of Asbestos Abatement Contractor Representative*	*Date*

NOTE: It is not mandatory that a signed copy be sent to LARA unless requested.

For affected projects, this section of the notification form must be completed, signed, and made part of **your** records before the project begins.

18. I certify that the above information is correct:

THE MANNIK & SMITH GROUP, INC.

BY:

B&B CONTRACTING, CALUMET, INC.

AIR MONITORING FIRM:

U.P. ENGINEERS & ARCHITECTS, INC.

DATED:

JUNE 13, 2017

This plan was prepared using the project Contract Documents owned by the State and prepared by the Professional.

Table of Contents

1.0 INTRODUCTION

This Air Monitoring Plan is developed to provide site-specific procedures for monitoring and reporting of possible airborne contaminants before, during and following the completion of the Hubbell Processing Area Remediation. This remediation includes ditching and grading of asbestos contaminated soil.

The purpose of this air monitoring is to document airborne exposures to on site personnel and the surrounding public community. This monitoring will also provide early warning of potential exposures in order to implement additional engineering control for exposures.

2.0 POSSIBLE AIRBORNE CONTAMINANTS

Contaminants that are of the main concern to become airborne during ditching and grading are respirable particulate matter(PM10) and asbestos. The following table shows the compounds and their sources, action levels and engineering controls.

Target Compounds	**Source**	**Measurement Method**	**Action Level (1/2 OSHA PEL)**	**Engineering Controls**
Dust (PM10)	Disturbance of site soils	Visual monitoring	Visible dust	Water truck
		Thermo DataRam pDR-1200 aerosol monitor (or equivalent)	2.5 mg/m^3 Downwind value minus upwind value	
Asbestos	Disturbance of site soils	Air sampling (OSHA ID-160 Method)	TWA 0.05 fiber/cc Excursion Level (30 min) 0.5 fiber/cc	Water truck

3.0 METHODS OF AIR MONITORING

Air monitoring will be conducted at the personnel task locations and at six locations along the perimeter fence line. Two permanent monitoring locations will be established, with one being along the south fence line adjacent to the neighboring business (Koppers) and one along the south portion of the west fence line closest to the nearby residence. Four locations will be selected on a daily basis based on wind direction, work location, and nearby receptor(residence) locations. Regardless of the wind direction at least one monitoring location will be placed upwind of the daily work area.

DUST

Visual observation will be used to continuously monitor the active work area for visible emissions of dust. Observations will be logged on an hourly basis.

A Thermo DataRam pDR-1200 (or equivalent) aerosol monitor will be used at each of the two permanent monitoring locations. The monitors will be positioned approximately 5 feet above ground level. The monitors will continuously record dust concentrations and calculate a time weighted average concentration. The concentrations will be visually observed hourly and each day's recorded data will be downloaded, posted and submitted to the Professional daily. Monitoring at the two permanent locations will be collected for at least 3 days prior to active

work beginning on site.

Thermo DataRam pDR-1200 portable aerosol monitor will be used by the monitoring technician at the four daily chosen perimeter locations. While work is active in the exclusion zone, this monitor will be moved every 15 minutes to another location such that each location is sampled at least once per hour while the work area is active.

The monitoring technician shall immediately notify the Site Superintendent and Professional if the action level of 2.5 mg/m^3 is observed.

ASBESTOS

Air samples to measure asbestos fiber concentrations will be collected daily at all six perimeter locations while work is active in the exclusion zone. Air samples will be collected at the two permanent perimeter locations for at least 3 days prior to active work beginning on site.

Air samples will be collected daily by a personal air sampler on one worker involved in each work task. Two work tasks have been identified on this site, the first being an operator of heavy machinery; excavator, dozer or haul truck, the second being a laborer continuously in contact with site soils; picking ACM/RPM, placing silt fence, placing filter fabric, etc. Sampling shall occur for total concentration on a daily basis.

The airflow rate will be verified using a rotameter before and after sampling. The air samples will be analyzed by an accredited technician using Phase Contrast Microscopy. Sampling and analysis will be completed according to OSHA Method ID-160.

Air samples will be analyzed by a certified lab on a 96-hour basis and the results will be posted in the office trailer and submitted to the Professional as received.

4.0 ACTION LEVELS AND CONTROLS

DUST

If visible emissions are present, water spray or mist shall be used for dust suppression.

If the difference in the real-time readings on the aerosol monitors between the upwind and downwind monitors exceed the action level of 2.5 mg/m^3 then all work shall stop until emissions are controlled.

ASBESTOS

If visible emissions are present, water spray or mist shall be used for dust suppression.

If air sampling results show concentrations in excess of the action level of 0.05 fibers/cc then all work shall cease until additional engineering controls can be put in place. *(UPEA does not have this capability)*

5.0 REPORTING

Visual observations for dust and odors will be logged hourly or as observed, along with any responses taken. Daily logs will be posted in the office trailer and submitted to the Professional.

Data logs from the aerosol monitors will be downloaded at the conclusion of each work day and posted in the office trailer the next day and submitted to the Professional.

Re: Submittal #004 – Cap Material, Gravel, and Rip Rap
MDEQ Torch Lake Non-Superfund Site
Hubbell Processing Area

Enclosed are the following:

No. of Copies	Description
1	Approved As Corrected Submittal #004

The above items are transmitted as checked below:

☐ For review and approval ☐ For review and comment ☐ Returned for corrections
☒ For your use ☐ Approved as submitted ☒ Approved as noted
☐ As requested ☐ Other:

Remarks:

Please note that NRCS/USDA uses a sand/gravel cutoff at the #10 sieve unlike USCS which is at the #4 sieve. The specifications for the cap material are based on the NRCS specifications. This adjustment changes the gravel and sand percentages (increases the gravel and lowers the sand percentage) but the samples still meet the specifications for Option 1 in subsection 2.3.1.3 of Section 31 22 23 and therefore are approved. The MDOT 23A gravel meets specifications and is approved. As previously communicated regarding the rip rap, the results are acceptable but if B&B can work some larger stone into the mix that would be good but not to exceed 18-inch stones.

THE HYDROMETER ANALYSIS WAS PERFORMED IN GENERAL ACCORDANCE WITH ASTM D422.

HYDROMETER ANALYSIS - ASTM D422

HYDROMETER TYPE : ASTM 152 H

JOB # : 17-27
Sample ID : 10
DEPTH : 2.0-10.'

SPECIFIC GRAVITY OF SOIL, Gs = 2.65
Air DRY WEIGHT OF SOIL grams, Ws = 106.6
Hygroscopic Moisture Correction Factor= 0.9916
Weight of Oven Dried Soil Sample, WOD= 105.7

MENISCUS CORRECTION, Fm = 0
ZERO CORRECTION, Fz = 6
Weight of total Hydrometer sample, W= 113.7

SOIL DESCRIPTION : Reddish poorly graded silty/clayey fine sand with trace of rounded gravel
Rounded durable to friarable gravel
SM

Ft = - 4.85 + .25T

Rcl = R + Fm

% Finer = [(a x Rcp)/ Ws] x 100
where a = Specific Gravity correction
(because hydrometer is calibrated to Gs= 2.65)
(see Fig 5-5, p30 Soils Lab Book)

(Table 1, ASTM D422, p14)

a = 1 / = 1 + (2.65 - Gs)/ 5

L = see Fig 5-2
p25 Soil Lab Book
(Table 2, ASTM D422, p 15)
= .164 x (60 - R)+ 0.66+ 5.8

k = see Fige 5-3
p26 Soil Lab Book

(Table 3, ASTM D422, p16)

Procedure Notes:

- Soak in 125 mL of 4% solution for 16hrs minimum.
- Stir in mixer for 1 minute
- Agitate for 1 minute after transfer to 1000mL cylinder.
- Wash over #200 sieve when complete, dry & sieve.

COMBINED HYDROMETER AND SIEVE ANALYSIS

PROJECT: MDEQ-Hubble Processing Site PROJECT ID: **17-27** DATE: 06/16/17

Test Results: Material meets requirement of Option 1 of section 2.3.1.3.1 for the specification of Sandy Loam Criteria: Contains 20% less clay, combination of % silt plus twice % clay is great than 30; Contains 52% or more sand and less than 15% gravel.

IDENTIFICATION : Sample #10 Contractor : B&B Contracting

DATE SAMPLED : 6/9/2017 Engineer: Mannik Smith Group

DATE TESTED : 6/15/2017 Pit: Charles Kiilunen-Hubble, MI

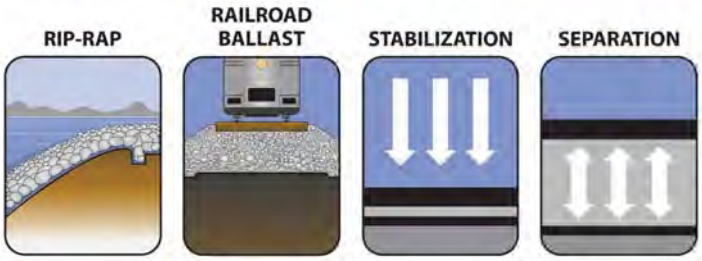
Construction Geosynthetics



US 250NW

NTPEP APPROVED - GTX-2016-01-101. US 250NW is a nonwoven needlepunched geotextile made of 100% polypropylene staple filaments. US 250NW resists ultraviolet and biological deterioration, rotting, naturally encountered basics and acids. Polypropylene is stable within a pH range of 2 to 13. US 250NW meets the following M.A.R.V. values except where noted:

Property	Test Method	English	Metric
Weight - Typical	ASTM D-5261	10 oz/sy	339 g/sm
Tensile Strength	ASTM D-4632	250 lbs	1,112 N
Elongation @ Break	ASTM D-4632	50%	50%
Mullen Burst*	ASTM D-3786*	500 psi	3,447 kPa
Puncture Strength*	ASTM D-4833*	155 lbs	690 N
CBR Puncture	ASTM D-6241	700 lbs	3,115 N
Trapezoidal Tear	ASTM D-4533	100 lbs	444 N
Apparent Opening Size	ASTM D-4751	100 US Sieve	0.150 mm
Permittivity	ASTM D-4491	1.20 Sec-1	1.20 Sec-1
Water Flow Rate	ASTM D-4491	80 g/min/sf	3,251 l/min/sm
UV Resistance @ 500 Hours	ASTM D-4355	70%	70%

Roll Size	Roll Diameter	Area	Weight
~~12.5' x 360'~~	~~21.0 in~~	~~500 sys~~	~~340 lbs~~
15' x 300'	21.0 in	500 sys	340 lbs

* Historical averages (current values not available): Mullen Burst Strength ASTM D3786 is no longer recognized by ASTM D-35 on Geosynthetics as an acceptable test method. Puncture Strength ASTM D4833 is not recognized by AASHTO M288 and has been replaced with CBR Puncture ASTM D6241.

2.0 TRAINING

All B&B Contracting personnel who enter the site must have received a minimum of 40-hour HAZWOPER training meeting the requirements of 29 CFR 1910.120(e)(3)(ii). 8-hour annual refreshers must have been completed. 40 Hour Asbestos Worker/Supervisor training must also be completed for employees working within the Exclusion Zone.

Prior to entering the site, each employee shall review this site safety and health plan and document on the attached log that they have received the initial 40-hour training, have a current refresher, have reviewed and understand this site-specific HASP and agree to follow it. The following B&B personnel have been adequately trained and certified. Certifications are included in Attachment 2.

NAME	TITLE	Certifications
Brian Bonen (906)281-2587	Site Superintendent	40-Hour Asbestos Abatement Contractor/Supervisor 48-Hour HAZWOPER Supervisor w/refresher OSHA 29 CFR 1926.2 Lead Exposure OSHA 29 CFR 1910.1200 Hazard Communication

Mitchel Large	Laborer	40-Hour Asbestos Abatement Contractor/Supervisor 40-Hour HAZWOPER w/refresher OSHA 29 CFR 1926.2 Lead Exposure OSHA 29 CFR 1910.1200 Hazard Communication

3.0 MEDICAL SURVEILLANCE

The following are minimum medical surveillance requirements for on-site personnel

3.1. Baseline Monitoring

Prior to beginning hazardous or potentially hazardous work activities involving exposure to toxic materials, employees will receive a baseline physical. Each subcontractor will be responsible for medical evaluation of their employees.

3.2. Periodic Monitoring

Following initial baseline monitoring all employees will require an annual physical exam, unless the advising physician believes a shorter interval in necessary. The employer's physician should prescribe an adequate medical exam that fulfills the requirements of OSHA 29 CFR 1910.120.

3.3. Exit Physical

At the termination of employment or reassignment that does not involve hazardous activities an employee will undergo an exit physical exam, unless deemed unnecessary by the advising physician.

3.4. Current Medical Monitoring

Documentation of participation in the medical surveillance program for each employee is included as the physician statement in Attachment 3.

4.0 INTRODUCTION AND BACKGROUND INFORMATION

B&B Contracting, Calumet, Inc.(B&B) has contracted with the Michigan Department of Environmental Quality, Remediation and Redevelopment Division(DEQ) to perform Interim Environmental Response Activities at the Hubbell Processing Area(Site) in Hubbell, MI. The Mannik & Smith Group, Inc.(MSG) has prepared the Contract Documents which detail the objective of B&B's work onsite. The history and background information for this Site are included in the Contract Documents and B&B's Work Plan.

As the site contains both known and unknown contamination risks from abandoned mining waste, B&B Contracting, Calumet, Inc. has prepared this site-specific Health and Safety Plan(HASP) for completion of the work. All of the information regarding the Site and the known health hazards have been provided to B&B by the DEQ and MSG.

The Site is located at 52634 Hwy M26, Hubbell, MI.

The Location Map Sheet C-1 and Site Plan C-4 are included as Attachment 1.

4.1. Applicability

This HASP applies to all personnel working onsite who are or may be exposed to the hazards listed in this plan. Visitors to the site are also required to review this HASP. Prior to entering the Site, all B&B personnel, subcontractors and visitors shall sign the attached Plan Acceptance Form (Attachment 8) documenting that they have reviewed and understand the provisions of this HASP.

5.0 SITE ACCESS PROCEDURE

5.1. Access Points

In Attachment 1, Plan Sheet C-4 has been edited to show the access points. The entire site is bounded by chain link fence. An Exclusion Zone will be established to include the areas within contaminated soil will be disturbed. The boundaries of this zone are shown in Attachment 1 sheet C-4. Access to the Exclusion Zone shall only be through the Decontamination Areas.

5.2. Access

MSG is not in charge of security.

The property's security is managed by The Mannik & Smith Group, Inc. Authorized access can only be obtained by contacting the below-listed individual.

The Mannik & Smith Group, Inc.
Jed Chrestensen, Field Engineer
906-281-4726

Upon completion of each work day, the Site Superintendent will inspect and assure that the site is secure before leaving.

6.0 SITE CHARACTERIZATION INFORMATION:

The DEQ and MSG have identified the presence of hazardous substances and health hazards including heavy metals, PCBs and asbestos. The analytical results are displayed on Figures 3a, 3b, 4a and 4b in Attachment 4. These hazards have been identified in multiple areas within the work area and are listed in Table 1.

Table 1 – Chemical Hazard Evaluation

This table covers all of the Abandoned Mining Waste project. It should be adjusted to just the Hubbell Processing Area or caveat the above text to say something like "known and/or possible chemical hazards".

Compound	OSHA PEL*	NIOSH REL*	Ionization Potential (eV)	Route of Entry	Symptoms of Overexposure
Benzene	1 ppm	0.1 ppm	9.24	Inhalation, Ingestion, Skin absorption, Contact	Irritated eyes, nose, respiratory system; dizziness, headaches, nausea; fatigue, anorexia, dermatitis, lassitude, bone marrow depression (Carcinogen)
Carbon disulfide	20 ppm	1 ppm	10.08	Inhalation, skin absorption, ingestion, skin and/or eye contact	Dizziness, headache, poor sleep, lassitude (weakness, exhaustion), anxiety, anorexia, weight loss; psychosis; polyneuropathy; Parkinson-like syndrome; ocular changes; coronary heart disease; gastritis; kidney, liver injury; eye, skin burns; dermatitis; reproductive effects

Compound	OSHA PEL*	NIOSH REL*	Ionization Potential (eV)	Route of Entry	Symptoms of Overexposure
Chlorobenzene	75 ppm	***	9.07	Inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, nose; drowsiness, incoordination; central nervous system depression; in animals: liver, lung, kidney in-
Chloroethene	1000 ppm	***	10.97	Inhalation, skin absorption (liquid), ingestion (liquid), skin and/or eye contact	Incoordination, inebriation; abdominal cramps; cardiac arrhythmias, cardiac arrest; liver, kidney damage
Chloromethane	100 ppm	***	11.28	Inhalation, skin and/or eye contact (liquid)	Dizziness, nausea, vomiting; visual disturbance, stagger, slurred speech, convulsions, coma; liver, kidney damage; liquid: frostbite; reproductive, teratogenic effects; [potential occupational carcinogen]
Cyclohexane	300 ppm	300 ppm	9.88	Inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, respiratory system; drowsiness; dermatitis; narcosis, coma
1,4-Dichlorobenzene	75 ppm	***	8.98	Inhalation, skin absorption, ingestion, skin and/or eye contact	Eye irritation, swelling periorbital (situated around the eye); profuse rhinitis; headache, anorexia, nausea, vomiting; weight loss, jaundice, cirrhosis; in animals: liver, kidney injury; [potential occupational carcinogen]
Dichlorodifluoromethane (CFC-12)	1000 ppm	1000 ppm	11.75	Inhalation, skin and/or eye contact (liquid)	Dizziness, tremor, asphyxia, unconsciousness, cardiac arrhythmias, cardiac arrest; liquid: frostbite
1,1-Dichloroethylene	***	***	10.00	Inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin, throat; dizziness, headache, nausea, dyspnea (breathing difficulty); liver, kidney disturbance; pneumonitis; [potential occupational carcinogen]
Isopropyl benzene	50 ppm	50 ppm	8.75	Inhalation, Skin absorption, Ingestion, Skin and/oreye contact	Irritated eyes, skin, mucous membrane; dermatitis; headache, narcosis, coma
Toluene	200 ppm	100 ppm	8.82	Inhalation, Ingestion, Skin absorption, Contact	Irritated eyes, nose; fatigue, weakness, confusion, euphoria, dizziness, headaches; dilated pupils, tearing; nervousness, muscle fatigue, insomnia; paresthesia; dermatitis; liver, kidney damage
Ethylbenzene	100 ppm	100 ppm	8.76	Inhalation, Ingestion, Contact	Irritated eyes, skin, mucous membranes; headaches; dermatitis; narcosis, coma
Xylenes	100 ppm	100 ppm	8.56	Inhalation, Ingestion, Skin absorption, Contact	Irritated eyes, skin, nose, throat; dizziness, excitement, drowsiness, incoherence, staggering gait; corneal vacuolization; anorexia, nausea, vomiting, abdominal pain; dermatitis
Naphthalene	10 ppm	10 ppm	8.12	Inhalation, Ingestion, Skin absorption, Contact	Irritated eyes; headache, confusion, excitement, malaise; nausea, vomiting, abdominal pain; irritated bladder; profuse sweating; jaundice; hematuria, renal shutdown; dermatitis, optical neuritis, corneal damage

** Indicates the chemical was not listed in the NIOSH Pocket Guide

*** Indicates parameter was not listed in the NIOSH Pocket Guide

containing material

The Material Data Sheets or Safety Data Sheets (MSDS/SDS) for the materials/chemicals that will be used on site will be maintained on site by the Site Health and Safety Officer.

Based on this evaluation the major routes of entry for site chemicals include inhalation due to volatilization or disturbance and direct contact/ingestion. Asbestos is present within the site soils and as such PPE will be needed as described in 29 CFR 1926.1101 (Asbestos Construction Standard).

Due to the fact all work will occur outdoors and the relatively low concentrations it is not anticipated that the organic chemicals will volatize in large enough concentrations to pose a hazard. If site conditions indicate a need, a photoionization detector(PID) will be used to monitor the conditions.

Since VOC monitoring is mentioned here, should also mention dust and asbestos monitoring.

7.0 WORK TASKS

Following is a brief description of tasks which may be performed on the site by B & B Contracting personnel. These tasks are more fully detailed in the Work Plan.

- Excavation of sediments and soils from the southern drainage ditch both with heavy equipment and by hand.
- Cutting and mulching trees and brush that are growing in contaminated soil.
- Grading and capping contaminated soils.
- Picking, containing and disposing of visible Regulated Asbestos Containing Materials(RACM) and suspect RACM.
- Picking, containing and disposing of residual process material(RPM) such as wire wrap materials that could contain asbestos as well as poly-chlorinated biphenyls (PCBs).
- Loading and disposal of PCB and lead contaminated soil.

The complete scope of work is detailed in the Work Plan developed for this project.

8.0 HEALTH AND SAFETY RISK ANALYSIS

and inhalation

Due to the nature of the tasks being performed by B & B Contracting, the following hazards have been identified:

- Inhalation of asbestos fibers
- Direct contact and ingestion of hazardous chemicals
- Loud noise from heavy machinery
- Slips, trips and falls due to debris and uneven ground
- Moving and operating heavy equipment
- Working in excavations

9.0 PERSONAL PROTECTIVE EQUIPMENT

The PPE program is designed to protect site workers from chemical exposures. The Site Health and Safety Officer is responsible for the proper selection of PPE for the known chemical hazards and planned work activities. The SHSO will be responsible for having the correct PPE available on site and being worn properly by the workers involved in each task. Personnel performing tasks which could involve contact with the asbestos contaminated soil within the Exclusion Zone shall utilize Level C PPE including:

- Half or full-face respirator
- Full body Tyvek suit
- Steel-toed safety boots
- Rubber over-boots
- Chemically resistant nitrile inner gloves
- Leather or cloth outer gloves
- Safety glasses
- Hard hat
- Hearing Protection as necessary

- Chainsaw chaps will be worn by any personnel operating a chain saw

Respirators will be utilized according to the B&B Contracting Respiratory Protection Program in Attachment 3.

In work areas outside of the Exclusion Zone, Level D PPE will be worn including the following:

- Steel-toed safety boots
- Rubber over-boots
- Leather or cloth outer gloves
- Safety glasses
- Hard hat
- High visibility safety vest
- Hearing Protection as necessary
- Chainsaw chaps will be worn by any personnel operating a chain saw

As warranted by site conditions?

10.0 AIR MONITORING

Perimeter and personal air monitoring will be performed according to the Air Monitoring Plan included in Attachment 6.

11.0 SITE CONTROL MEASURES AND WORK PRACTICES

11.1. General Requirements

Eating, drinking, chewing tobacco, smoking and carrying lighters or matches will be allowed only in area designated. No drugs or alcohol are allowed on site. Workers must try to avoid contact with potentially contaminated surfaces. When possible, workers should not walk or travel through puddles, pools, mud or standing water. Care must be taken to avoid placing equipment on or in contaminated surfaces. All workers should make use of their senses and remain alert for changing work conditions. If strong or irritating odors, dust clouds, etc. are present, immediately stop work and move away from the area. Notify the Site Superintendent and reassess the conditions.
Avoid unnecessary disturbance of site soils. Immediately wet any soils that appear dry enough to create dust. The water truck will be used to apply water to soils that are being disturbed. Use either the spray bar or the hose as needed.

11.2. Buddy System

The buddy system will be used when workers are in Level C PPE. Buddies are to provide each other with assistance perform work tasks, observe each other for signs of chemical or heat exposure, check each other's PPE and to notify the Site Superintendent if an emergency arises.

11.3. Heat Related Stress

All employees shall be trained in the recognition of the symptoms and effects of heat cramps, heat exhaustion and heat stroke. Drinking adequate water and maintaining electrolyte levels is also important.

HEAT EXHAUSTION – Core body temperature is 100-102 °F

Symptoms: Fatigue; weakness; profuse sweating; normal temperature; pale, clammy, moist skin; headache; cramps; vomiting; fainting.
Treatment:

- Alert Site Superintendent
- Remove worker from regulated area, lay down and remove their clothing
- Allow small sips of water or Gatorade if victim is not vomiting

Prevention

- Frequent breaks/fluids
- Acclimate workers to heat
- Use ice vest

Causes

- High temperature/humidity/hard work/ unacclimated
- Not enough breaks from the heat
- Insufficient fluid intake
- Full body clothing (Tyvek suits)

HEAT STROKE – Core body temperature is 105 -106 °F

Symptoms: Dizziness, nausea, severe headache, hot dry skin, confusion, collapse, delirious, coma and death

Treatment:

- MEDICAL EMERGENCY
- Remove the worker from the regulated area/lay down/remove clothing
- Begin immediate cooling, do not immerse, use shower or wet cloths

Causes:

- High temperature/humidity/hard work/ unacclimated
- Not enough breaks from the heat, ignoring heat exhaustion symptoms
- Insufficient fluid intake
- Full body clothing (Tyvek suits)

11.4. Exclusion Zone

The Exclusion Zone will be demarcated along the lines shown on the Site Plan. The demarcation will include orange snow fencing on posts, orange cones with warning tape and appropriate signage. Entry and exit from the Exclusion Zone will only occur through the Decontamination Zone.

11.5. Decontamination Zone

Entrance and exit from the Exclusion Zone is through the Decontamination Zone. There will be separate Personnel and Equipment Decontamination Zones.

The Equipment Decontamination Zone will be located as noted on the Site Plan and detailed in the Work Plan. A pressure washer with water tank on a trailer will be present here.

The Personnel Decontamination Zone will be located outdoors and as such will include the following "rooms" proceed from outside to inside of Exclusion Zone:

- Clean Room – Area with storage box for cleaned personal PPE(respirators and safety glasses, new Tyvek suits, tape, booties, hearing protection. This area will have benches or chairs for sitting to don PPE.
- "Shower" Room – Area for removing disposable PPE. Includes proper disposal bags and drum.
- Equipment Room- Area for donning or removing with for reused PPE, rubber booties, outer gloves, hard hats, etc. A storage box will be provided for storage of these items.

11.6. Support Zone

The Support Zone will be located near the main entrance of the Site as shown on the Site Plan. Within the Support Zone will be the office trailer, electric power, potable water, temporary toilets and a cellular phone for emergency contact and off-site communications.

12.0 DECONTAMINATION PROCEDURES

Equipment and PPE used by site workers must be decontaminated or disposed of to prevent the movement of contaminants within or off of the site.

Excavation and hauling equipment will be decontaminated by pressure washing within the Equipment Decontamination Zone. Decontamination water without any soap or cleaners will be absorbed by on site soils. All equipment will also be pressure washed before entry to site.

Worker decontamination will occur within the Personnel Decontamination Zone. Personal decontamination will be accomplished by the following steps:

- Brush off any visible soils or dust from Tyvek suit directly before entering Decontamination Area
- Remove outer gloves and rubber boots to be reused and place in storage container.
- Remove removing booties and pants, if used, and placing them in a trash bag for proper disposal. Turn the booties/pants inside out while removing them. Personal PPE (respirators) will be rinsed with water if to be reused, then wiped with decon rinse can be absorbed by onsite soils.

13.0 EMERGENCY RESPONSE PLAN

An emergency alarm is to be sounded by three short blasts of a car horn or air horn.

An emergency exists if one of the following conditions develops:

- A worker experiences any adverse symptoms of exposure
- A discovery is made of a condition that is more hazardous than expected
- Any accident

If an incident/emergency occurs, evacuate the excavation area and gather in a safe area upwind of the work. Once all workers are accounted for proceed through the Decontamination Area and gather within the Support Zone. Any unusual exposure incidents will be evaluated/handled by the Site Superintendent.

NOTES:

1. ALL EROSION AND SEDIMENTATION CONTROL WORK SHALL CONFORM TO THE CURRENT STANDARDS AND SPECIFICATIONS OF THE COUNTY DRAIN COMMISSIONER AND MDEQ. INSTALL TEMPORARY SOIL EROSION CONTROL MEASURES PRIOR TO ANY EARTHWORK OPERATIONS.
2. DAILY INSPECTIONS SHALL BE MADE BY THE CONTRACTOR FOR EFFECTIVENESS OF EROSION AND SEDIMENTATION CONTROL MEASURES. ANY NECESSARY REPAIRS SHALL BE PERFORMED WITHOUT DELAY. THE SOIL EROSION CONTROLS WILL BE MAINTAINED WEEKLY AND AFTER EVERY STORM EVENT.
3. EROSION AND ANY SEDIMENTATION FROM WORK ON THIS SITE SHALL BE CONTAINED WITHIN THE WORK AREA AND NOT ALLOWED TO COLLECT ON ANY OFF-SITE AREAS OR IN WATERWAYS. WATERWAYS INCLUDE BOTH NATURAL AND MAN-MADE OPEN DITCHES, STREAMS, STORM DRAINS, LAKES, PONDS AND WETLANDS.
4. THE CONTRACTOR SHALL APPLY TEMPORARY EROSION AND SEDIMENTATION CONTROL MEASURES AS DIRECTED ON THESE PLANS AND WHERE OTHERWISE REQUIRED BY THE WORK. THE CONTRACTOR SHALL REMOVE TEMPORARY MEASURES AS SOON AS PERMANENT STABILIZATION OF SLOPES, DITCHES, AND OTHER CHANGES HAVE BEEN COMPLETED.
5. SOIL EROSION CONTROL PRACTICES WILL BE ESTABLISHED IN EARLY STAGES OF CONSTRUCTION BY THE CONTRACTOR. SEDIMENT CONTROL PRACTICES WILL BE APPLIED AS A PERIMETER DEFENSE AGAINST ANY TRANSPORTING OF DIRT OFF THE WORK AREA.
6. THE CONTRACTOR SHALL PRESERVE OFF-SITE NATURAL VEGETATION AS MUCH AS POSSIBLE.
7. PROTECT ALL EXISTING TREES ALONG THE MINERAL BUILDING ACCESS DRIVE, INCLUDING THEIR BRANCHES AND ROOTS FROM DAMAGE DUE TO THIS WORK.
8. REMOVE ALL TREES FROM THE GRADED AND CAPPED AREA. LEAVE STUMPS IN-PLACE IF POSSIBLE. PILE IN CONTAMINATED WOODY DEBRIS OUTSIDE THE GRADING AREA AT A LOCATION DETERMINED DURING SITE PREP. CONTAMINATED BRUSH AND STUMPS SHALL BE BURIED BENEATH THE CAP NORTHWEST CORNER.
9. STABILIZATION OF ALL DISTURBED AREAS SHALL BE ESTABLISHED USING THE APPROPRIATE VEGETATION WITHIN 5 DAYS OF COMPLETION OF FINAL GRADING.
10. THE CONTRACTOR SHALL SWEEP THE EXISTING STREETS SURROUNDING THE PROJECT SITE AS NEEDED.
11. THE CONTRACTOR SHALL BE RESPONSIBLE FOR DUST CONTROL AND SHALL PROVIDE ALL EQUIPMENT AND MATERIAL TO KEEP DUST IN CHECK AT ALL TIMES. THE CONTRACTOR SHALL ADHERE TO NESHAP CONTROL MEASURES FOR ASBESTOS TO CONTROL DUST. THE CONTRACTOR SHALL RESPOND IMMEDIATELY TO ANY AND ALL COMPLAINTS.
12. THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING THE NPDES PERMIT AND ENSURING COMPLIANCE WITH ALL APPLICABLE PERMIT REGULATIONS, INCLUDING BUT NOT LIMITED TO, INSPECTION, RESTORATION AND RECORD KEEPING REQUIREMENTS. REPORTS FROM THE CERTIFIED STORM WATER OPERATOR SHALL BE MADE AVAILABLE TO MDEQ.

B&B Contracting Respiratory Protection Program

B & B EXCAVATING

RESPIRATORY PROTECTION PROGRAM

MEETING OSHA 1910.134 REQUIREMENTS

Prepared by: Michael R. Tillotson, CIH, CHMM

Table of Contents **Page**

INTRODUCTION

The Occupational Safety and Health Administration (OSHA) requires that air contamination levels be reduced to the lowest feasible level by engineering control and process design. When this is not possible or while such controls are being implemented, appropriate respirators shall be used to protect employees. To comply with the OSHA Standard, B&B Excavating, Inc. will provide adequate respiratory protection, as required. B&B Excavating Inc. has established a written program to define and monitor the use of respiratory protection equipment.

This Respiratory Protection Program is written to ensure compliance with 29 CFR 1910.134 "Respiratory Protection"; 29 CFR 1910.120 Hazardous Waste Operations; 29 CFR 1926.1101 "Construction Industry Standards"; as well as other applicable OSHA Standards.

I. RESPONSIBILITIES

A. Respiratory Protection Program Coordinator/General Manager - Hans Haapala

1. The General Manager is designated as the administrator of and is responsible for coordinating the Respiratory Protection Program.

2. The Program Administration and Recordkeeping section outlines the administrator's recordkeeping responsibilities.

3. The General Manager will be responsible for conducting initial and annual training.

4. Responsibilities for training records are outlined in the Program Administration and Recordkeeping section.

5. The General Manager shall select the appropriate air sampling method for a contaminant of concern.

6. The General Manager will schedule initial and annual medical evaluations where job assignment requires/may require the use of respiratory protection.

7. Recordkeeping responsibilities are outlined in the Program Administration and Recordkeeping section.

8. The General Manager is responsible to conduct and document random inspections to determine proper respirator selection, use and condition.

9. He shall conduct the initial respirator qualitative fit-test for wearing a full-face respirator.

10. Recordkeeping requirements are outlined in the Program Administration and Recordkeeping Section.

11. The General Manager shall order and maintain an adequate supply of respirators, filters, cartridges and replacement parts.

12. The General Manager is responsible for repairs other than routine part replacement (e.g. valves, headstraps, etc.).

13. The General Manager shall return a respirator to the supplier for those repairs specified by the manufacturer.

14. Recordkeeping requirements are outlined in the Program Administration and Recordkeeping section.

B. Employee

1. Employees of B&B Excavating shall comply with all requirements of this program and support the General Manager.

II. RESPIRATOR SELECTION

A. Overview

1. Respirators will be selected on the basis of the hazard(s) (Appendix A).
2. The following selection considerations will help determine the correct respirator for the particular hazard(s).
3. The NIOSH decision logic document can be utilized to select the appropriate respirator.

B. Respirator Selection Decision Logic

1. Is the contaminant a gas, vapor, mist, dust or fume?
2. What is the permissible exposure limit (PEL), threshold limit value (TLV) and short-term exposure limit (STEL)?
3. What is the estimated contaminant concentration where the respirator will be used, as determined by representative air sampling?
4. Can the contaminant concentration(s) be determined immediately dangerous to life and health (IDLH)?
5. If the contaminant is flammable, is the estimated concentration near the lower explosive limit (LEL) or if the contaminant is a dust, will the concentration create an explosion hazard?
6. Does the contaminant have adequate warning properties?
   a. Cartridges shall be changed when the wearer smells the contaminant or is irritated by it.
   b. Adequate warning properties mean that odor perception or irritation occurs at less than 3 times the PEL without causing serious or irreversible health effects.
   c. If there is evidence that vapor breakthrough occurs in less than 3 minutes at or below IDLH concentrations, air purifying respirators shall not be allowed.
7. Does the contaminant cause eye irritation at the estimated concentration?
8. Can the contaminant be absorbed through the skin adding to employee exposure?
9. Has the operation and/or process characteristics been reviewed?
   a. Work area characteristics?
   b. Materials, including raw materials, end products and by-products?
   c. Worker activities?
   d. Existing controls adequacy?
10. How long will the respirator be worn?
11. What are the wearer's activities and locations in the hazardous area? (for example, is the wearer in the hazardous area continuously or intermittently during the work shift and is the work rate is light, medium or heavy?)
12. What are the physical characteristics, functional capabilities and performance limitations of the respirator. (for example, respirators for oxygen deficient atmospheres, IDLH atmospheres, non-IDLH atmospheres)
13. Are respirators available which will give the necessary protection?
14. Has the wearer been fit tested for the particular respirator selected?

C. Respirator Assignment

1. Respirators will be assigned on an individual basis, as needed..
2. The date of respirator issuance shall be recorded by the General Manager.

D. Selection of Respirators for Routine Use

1. When selecting a respirator which will have daily or frequent use, the following areas shall be considered:
   a. cost
   b. maintenance level
   c. level of wearer discomfort
   d. breathing resistance
   e. weight and compactness of construction.

E. Selection of Respirators for Emergency Use

1. B&B Excavating will not participate in emergency use situations. Evacuation of the work area shall occur.

F. Approved Equipment

1. The respiratory protection equipment supplied shall meet the standards set by NIOSH.
   a. North 76008 dual filter/cartridges, full-face, negative pressure respirator.
2. If the employee cannot be fit tested for the above respirator, an appropriate respirator will be provided.

III. RESPIRATOR MAINTENANCE

A. A program for respirator maintenance shall include the following:

1. cleaning
2. inspection
3. repair
4. storage

B. Respirator Cleaning

1. The following cleaning procedures shall be followed.
   a. The respirator shall be thoroughly cleaned with soap and water, rinsed after each use and air dried and inspected for defects.
   b. The respirator shall be thoroughly cleaned with soap and water, rinsed, air dried, and inspected at the end of the day.

C. Respirator Inspection

1. Respirators shall be inspected routinely before and after each use, and immediately prior to each use to ensure it is in proper working condition.
2. The respirator shall be inspected to determine if it needs part replacement or repair, or if it should be discarded.
3. Inspection Frequency
   a. Routinely used respirators - before and after each use.

D. Procedures for Inspection

1. Air Purifying Respirators
   a. Examine the facepiece for:
      (i) excessive dirt
      (ii) cracks, tears, holes, or physical distortion
      (iii) inflexibility of the facepiece sealing surface
      (iv) cracked or scratched lenses
      (v) incorrectly mounted and/or broken or missing clips
      (vi) cracked or broken element holders, worn threads, or missing gaskets

   b. Examine the exhalation valve after removing the cover for:
      (i) foreign material such as dust, dirt, hair
      (ii) cracks, tears, or distortion of the valve material
      (iii) improper seating of the valve body in the facepiece
      (iv) cracks, breaks, and/or chips in the valve body, particularly in the sealing surface
      (v) missing or defective valve covers
      (vi) improper installation of the valve in the valve body

   c. Examine the head straps or head harness for:
      (i) breaks and/or loss of elasticity
      (ii) broken or malfunctioning buckles and attachments
      (iii) excessive wear on the serrations of the head straps

   d. Examine the air-purifying element for:
      (i) incorrect filter for the hazard
      (ii) incorrect installation, loose connections, missing or worn gaskets or cross threading
      (iii) expired shelf life on the cartridge
      (iv) cracks or dents in the outside case of the filter
      (v) absence of sealing material over the inlet

E. Defects Found During Inspection Procedures

1. If minor, repair and/or adjustment may be made immediately.
2. If major, the device shall be removed from service until repair and reinspection is done by qualified personnel.
3. In either case, contact the supplier for parts and/or replacement respirators.

F. Respirator Repair

1. Routine part replacement or repair (e.g. valves, headstraps) of devices shall be done with parts designed for the device.
   a. Warning: Substitution of parts from a different brand or type of respirator invalidates the NIOSH approval of the device.
2. Other than routine part replacement/repair (e.g. motor problems, switch, etc) shall be done by the supplier.
3. An adequate supply of spare (replacement) parts shall be maintained.

G. Respirator Storage

1. Respirators shall be stored in a manner to protect from:
   a. dust
   b. sunlight
   c. temperature extremes (heat, extreme cold)
   d. excessive moisture
   e. damaging chemicals
   f. mechanical damage
2. Cleaned respirators shall be stored in a clean, reusable plastic bag.
3. Respirators shall be stored in a single layer with the facepiece and exhalation valve in an undistorted position.
4. Respirators shall not be stored in an area where high concentrations of contaminants could occur.

IV. WORK AREA SURVEILLANCE

Work area monitoring of the respiratory hazard shall be conducted periodically.

V. MEDICAL SURVEILLANCE

A. If a job assignment requires the use of a respirator, the person must be able to perform under such conditions.

B. A written opinion from the examining physician must be obtained before job assignment.

1. The General Manager shall document the date of the written opinion and ensure placement of the documentation in the file.

C. Once it has been determined that the person is physically able to wear a respirator and perform the job assignment, an annual physical will be scheduled.

D. Initial and annual physicals and related health monitoring shall be provided by licensed clinics or other health care facilities.

1. A physician with knowledge of pulmonary disease and respiratory protection practices shall make the evaluation as to whether or not the person is medically capable of wearing a respirator.

E. A copy of the physician's written opinion shall be given to the person within 30 days of receipt by B&B Excavating.

VI. PROGRAM SURVEILLANCE AND EVALUATION

A. An annual evaluation of respiratory protection program effectiveness will be conducted by the Respiratory Protection Program Administrator to ensure adequate protection is being provided. Written operating procedures shall be modified to reflect the results of the evaluation, if necessary.

B. The following areas shall be reviewed during the program evaluation:

1. Surveillance of work area conditions exposures.
2. Wearer acceptance of the provided respirators.
3. Initial and annual medical surveillance.
4. Respirator Program operation details;
   a. respirator selection
   b. training
   c. correct respirators issued and used
   d. respirators worn properly and in good operating condition
   e. respirators inspected, maintained and stored properly
5. Results of the evaluation will be detailed in a written report that list the deficiencies, the methods of correction and compliance times.

VII. PROGRAM ADMINISTRATION AND RECORDKEEPING

A. The Respirator Program Administrator is directly responsible for the following program elements:

1. Review records and follow-up if necessary.
2. Assuring the Respiratory Protection Program is in compliance with OSHA/MIDLARA standards
3. Obtaining appropriate records to conduct the annual review and revision (if necessary) of the Respiratory Protection Program
4. Maintaining medical surveillance data, written opinions, and resulting job placement.
5. Conducting initial and annual training
6. Maintenance of the following records:
   a. training
   b. respirator issuance
   c. emergency equipment inspection and maintenance data
   d. respirator fit-test records.
7. Surveillance of work area conditions and resulting air sampling data
8. Documenting respirator issuance
9. Coordinating equipment purchasing, maintenance, cleaning, storage
10. Administer the initial/annual fit test and record the results.

VIII. TRAINING

A. Proper use of respirators can be ensured by training in the selection, use and maintenance of respirators. Training shall include:

1. Opportunity to handle the respirator.
   a. instruction, training and actual use of respirators
2. Proper fit-test procedures:
   a. including demonstrations and practice in wearing, adjusting and determining the fit of the respirator
   b. testing the face to facepiece seal
   c. familiarization of the fit and feel in normal air
   d. wearing the respirator in a test atmosphere

3. Respirator selection procedures:

   a. for situations known to require respiratory protection, an explanation of why a particular type of respirator has been selected.
   b. selection and use procedures for protection against the hazard(s) of the work place which require respiratory protection.
   c. instruction about the nature and extent of the hazard(s) which might be encountered and the effects if the respirator is not used or is used improperly.
   d. explanation of why a particular respirator is used for a particular hazard.
   e. a discussion of protection factors and maximum use concentrations.

4. Discussion of the engineering and administrative controls in place and why respirators may be needed.

   a. Explanation of why engineering controls are not feasible in a given situation (if applicable).

5. Emergency procedures:

   a. discussion of how to recognize and handle emergencies.
   b. classroom training in recognizing and reacting to emergencies.

6. The structure and operation of the respiratory protection program, with understanding of individual participant responsibilities.

7. A discussion of the legal requirements pertinent to the use of respirators.

8. An explanation of the respirator limitations and capabilities.

9. Any other training required.

IX. LIMITATIONS OF RESPIRATORS

A. General Limitations

1. Respirators shall not be worn when facial hair in the form of beards, stubble, mustaches or sideburns if the hair comes between the sealing surface of the respirator and the face.
2. Eyeglass temple bars or straps interfere with the face to facepiece seal of a full facepiece respirator.
   a. Since an effective seal cannot be obtained under these conditions, a full facepiece respirator shall not be worn.
   b. Short temple bars taped to the person's head or permanently mounted corrective lenses shall be used and installed by a qualified person.
   c. If eyeglasses interfere with the proper use of a disposable or half-mask respirator, a full facepiece respirator with the above modifications shall be used.
3. Facial deformities may preclude the wearing of a respirator if an adequate face seal cannot be obtained.
4. Medical examinations determine if an individual is physically able to wear respiratory protective devices during on site work conditions.
5. Respirator use in temperature extremes may cause fogging of the full facepiece lens and mechanical problems may develop.
   a. These problems should be attended to and any potential problems should be addressed.
6. Voice communications may need to be installed in the respirator.
   a. If alteration is necessary, the manufacturer must be contacted to determine if the NIOSH approval will be voided.
7. All respirators must be approved by NIOSH.
8. Components of respirators shall not be interchanged with parts of another brand of respirator.

B. Limitations of Properly Fitted and Qualitatively Tested Full Facepiece Particulate Filter Respirators

1. Protection is provided against permissible exposure levels for organic vapors, asbestos containing dusts and nuisance dusts.
2. High efficiency filters must be used when exposed toasbestos containing dusts.
3. Shall not be used in IDLH or in oxygen deficient atmospheres.
4. If gases and/or vapors are also present, a combination particulate-gas/vapor cartridge shall be used.

X. RESPIRATOR USE

A. Persons who require/may require respiratory protection shall be trained in the respirator selection decision logic so they may choose the appropriate respirator for a particular situation.

B. Respirator Issue

1. Dispense the proper respirator and replacement parts documenting:
   a. the type of respirator issued
   b. replacement parts issued
   c. date of issuance
   d. the name and social security number.

2. Respirators shall be assigned to the individual for their exclusive use.

C. Supervision of Respirator Use

1. The Program Coordinator will conduct and document random inspections of respirator selection, use and maintenance records. Any problems discovered must be documented and corrected.
2. Inspection shall include:
   a. determine if proper respirators are being worn.
   b. determine if respirators are worn properly.
   c. consult with user regarding:
      (i) confidence in the respirator
      (ii) discomfort
      (iii) breathing resistance
      (iv) vision problems
      (v) fatigue
      (vi) communication problems
      (vii) movement restrictions
      (viii)job performance hindrances
3. Personal requirements:
   a. Use the respirator as instructed
   b. Prevent damage to the respirator
   c. If the respirator fails to provide protection, go immediately to the nearest area of respirable air.
   d. Report respirator malfunction to the General Manager.

D. Dangerous Atmospheres

1. B&B Excavating will not participate in any dangerous/IDLH atmospheric potential.

APPENDIX A

Types of Hazards - Potential Exposure

Gases or Vapors

Inert - Gases or vapors that do not react with other substances under most conditions; simple asphyxiants (methane).

Acidic - Gases or vapors that react with water to provide an acid. They taste sour and corrode tissue, especially mucous membranes. (hydrogen chloride, hydrogen cyanide)

Alkaline - Gases or vapors that react with water to produce an alkali. They taste bitter and corrode tissue, especially mucous membranes. (ammonia, chlorine)

Organic - Compounds of carbon. (aliphatic, aromatic chlorinated solvents, alcohols)

Particulate

Dust - Solid, mechanically produced particles varying in size from submicron to visible.

Mist - Suspended liquid droplets generated by condensation or splashing, atomizing or foaming of a liquid. Size ranges from submicron to visible.

Smoke - Products of incomplete combustion composed of liquid and solid particles. Size is usually less than one micron.

APPENDIX B

Types of Respirators

Air Purifying - Particulate Filter

Provides protection against airborne particulate matter, including dust, mist, fume, smoke or combinations of these. May be specific for a certain type of material.

- Disposable: Completely covers the mouth and nose. Disposed of after use, if resistance becomes excessive, or if unit is damaged.
- Half-Face Facepiece: Covers the face from the bridge of the nose to under the chin.
- Full Facepiece: Covers the face from hairline to under the chin. Provides the best seal and protection.

Air Purifying - Chemical Cartridge

Provides protection against gases or vapors. May be specific for a certain type of material.

- Disposable: Completely covers the mouth and nose. Disposed of after use; if resistance becomes excessive; or if unit is damaged.
- Half-Face Facepiece: Covers the face from the bridge of the nose to under the chin. Provides protection from gases and/or vapors depending on the cartridge/canister used. May also incorporate particulate filter for protection against particulate matter.
- Full-Face Facepiece: Covers the face from hairline to under the chin. Provides the best seal and protection from gases and or vapors depending on the cartridge/canister being used. May also incorporate particulate filter for protection against particulate matter.

RESPIRATOR(S) NAME AND MODEL NUMBER _____

_____

_____

1. Physician's Written Opinion Approval for respirator use? YES_____(No approval - no fit test!)
2. Have you had any respiratory problems in the last week? YES _____ NO _____

   If so, specify _____

   _____
3. Testing agent used _____
4. Testee sensitive? PRE: YES —— NO —— ~~POST:~~ YES —— NO ——
5. Positive - Negative fit check OK? YES —— NO ——
6. Qualitative fit test performed as per procedure and passed? YES ____ NO ——
7. Remarks of testor: _____

   _____

Testor: _____

Approved respirator(s) for above testee:

1. _____
2. _____
3. _____

(SEE REVERSE SIDE FOR TEST PROCEDURE TO BE USED FOR IRRITANT SMOKE)

IRRITANT FUME TEST FOR AIR PURIFYING NEGATIVE PRESSURE RESPIRATORS

(Summary of 29 CFR 1910.134 Appendix A - Part 1;B;5 - Irritant Smoke Protocol)

1. Test requires the use of an air purifying, HEPA filtered respirator or P100 series filter, as a minimum.

2. Person must be able to detect a weak concentration of irritant smoke. If they are not sensitive, irritant smoke cannot be used. Use minimum amount to determine sensitivity! Adequate ventilation in area must be provided.

3. No facial hair or other interferences with the facepiece to face seal are allowed.

4. Don the respirator without assistance, perform required user seal checks. If seal is not good, readjust and retest.

5. Only stannic chloride smoke tubes shall be used for this protocol.

6. Protect eyes to prevent eye irritation during test. DO NOT USE AN ENCLOSURE!!

7. Start the test at about 12" away from the respirator and work towards the respirator. Move to within 6" of the perimeter of the mask and smoke test all edges of the sealing edge. Test the exhalation valve and where the filters screw into the facepiece also.

8. If detection of the smoke occurs at any time during the test STOP THE TEST–ADJUST THE RESPIRATOR–RESUME TESTING. If detection continues to occur, respirator may not be suitable for the person--try another.

9. Activities to be done during the test(one minute each):

   A. Normal breathing;
   B. Deep breathing;
   C. Turning head side to side;
   D. Moving head up and down;
   E. Talking - have person repeat the following Rainbow Passage:

   " When sunlight strikes raindrops in the air, they act like a prism and form a rainbow. The rainbow is a division of white light into many beautiful colors. These take the shape of a long round arch, with its path high above, and its two ends apparently beyond the horizon. There is, according to a legend, a boiling pot of gold at one end. People look, but none ever find it. When a man looks for something beyond reach, his friends say he is looking for a pot of gold at the end of the rainbow."

   F. Bending over.(Jogging to be used if in a shroud test device)
   G. Normal breathing.

10. If testing is satisfactory - have person take respirator off and give second sensitivity check.

11. If satisfactory fit cannot be achieved - person must use a different respirator.

12. Person must be retested every year or must be retested when any change in employee's physical condition might affect respirator fit. Such conditions include, but are not limited to:

   A. An obvious change in body weight;
   B. Facial scarring or cosmetic surgery of the face occurs;
   C. Dental changes occur;
   D. Any condition that interferes with the facepiece to face seal of the respirator.

13. Document the test results on the front of this form.

APPENDIX D

RESPIRATOR INSPECTION, CLEANING, MAINTENANCE AND STORAGE CHECKLIST

Inspection

before	after	
___	___	facepiece/if applicable
___	___	exhalation valve(s)
___	___	head straps/harness
___	___	air purifying filter/cartridge
___	___	inhalation valve(s)
___	___	facepiece fit check

Cleaning/Disinfection

___ disassembly done
___ cleaning- 120°F-soap and water
___ rinsing - 120°F-water only
___ rinse and dry 120°F water only; air dry preferred

Reassembly

___ reassembled properly
___ reinspected-new filters/cartridges

Maintenance Done
Explain: _____

Storage

_____ Sealed in ziplock bag
_____ Isolated from environment and contamination
_____ clean, dry area

APPENDIX E

RESPIRATOR PROGRAM EVALUATION CHECKLIST

The Respirator Protection Program shall be evaluated by the Respiratory Protection Program Coordinator at least annually, with program adjustments ,as appropriate, made to reflect the evaluation results. Program function can be separated into administration and operation.

WRITTEN RESPIRATORY PROTECTION PROGRAM EVALUATION

The Respiratory Protection Program must be evaluated at least annually by the Program Administrator with program adjustments, as appropriate, made to reflect the evaluation results. Program function can be separated into administration and operation.

A. Program Administration

_____ 1. Is there a written policy which acknowledges employers' responsibility for providing a safe and healthful workplace and assigns program responsibility, accountability, and authority?

_____ 2. Is program responsibility vested in one individual who is knowledgeable and who can coordinate all aspects of the program at the job site?

_____ 3. Can feasible engineering controls or work practices eliminate need for respirators?

4. Are there written procedures/statements covering the various aspects of the respirator program, including:

_____ Designation of an program administrator;
_____ Respirator selection and use;
_____ Purchase of NIOSH only approved respirators;
_____ Medical evaluation program acceptable;
_____ Issuance of respirators to approved personnel;
_____ Fit testing program;
_____ Training program;
_____ Cleaning, disinfecting, maintenance, storing, inspection. discarding, and repair;
_____ Emergency situations;
_____ Worksite surveillance?

B. Program Operation

1. Respiratory protective equipment selection and assignment:

_____ Are worksite conditions and employee exposures properly surveyed?
_____ Are respirators selected on the basis of hazards to which the employee is exposed?
_____ Are selections made by individuals knowledgeable of proper selection procedures?
_____ Are only NIOSH approved respirators purchased and used? Do they provide adequate protection for the specific hazard and concentration of the contaminant?
_____ Has a medical evaluation of the prospective user been made to determine physical and psychological abilities to wear the selected respiratory protective equipment?
_____ Where practical, have respirators been issued to the users for their exclusive use, and are there records covering issuance?

2. Respirator fitting:

_____ Are the users given the opportunity to try on several respirators to determine whether the respirator they will subsequently be wearing is the best fitting one?
_____ Is the fit test done annually?
_____ Are those users who require corrective lenses properly fitted?
_____ Are contact lenses used?
_____ Is a user seal check and fit test done properly?
_____ Are workers prohibited from entering contaminated regulated areas when they have facial hair or other characteristics which prohibit the use of tight-fitting facepieces?

3. Respirator use:

____ Are respirators being worn correctly (i.e., head coverings over respirator straps)?
____ Are workers keeping respirators on all the time when necessary?

4. Maintenance of respiratory protective equipment:

A. Cleaning and Disinfecting:

____ If needed, are respirators cleaned and disinfected after each use?
____ Are proper methods of cleaning and disinfecting utilized?

B. Storage:

____ Are respirators stored in a manner so as to protect them from dust, sunlight, heat, excessive cold or moisture, or damaging chemicals?
____ Are respirators stored properly in a storage facility so as to prevent them from deforming?
____ Is storage in lockers and tool boxes permitted only if the respirator is in a carrying case or carton?

C. Inspection:

____ Are respirators inspected before and after each use and during cleaning?
____ Are qualified individuals/users instructed in inspection techniques?
____ Is respiratory protective equipment designated as "emergency use" inspected at least monthly (checked for proper function before and after each use)?
____ Is a record kept of the inspection of "emergency use"?

D. Repair:

____ Are replacement parts used in repair those of the manufacturer of the respirator?

5. Special use/Emergency conditions:

____ Is a procedure developed for respiratory protective equipment usage in atmospheres immediately dangerous to life or health?
____ Is a procedure developed for equipment usage for entry into confined spaces?
____ Atmosphere supplying respirators procedures, air quality acceptable?

6. Training:

____ Hazards during use and emergencies discussed?
____ Are limitations of respirators discussed?
____ Are users trained in proper respirator use, donning, doffing, cleaning, discard and inspection?
____ Are users trained in the selection of respirators?
____ Are users evaluated, using competency-based evaluation, before and after training?

AIR MONITORING PLAN

PREPARED FOR:

PROJECT:

HUBBELL PROCESSING AREA REMEDIATION
FILE NO. 761/16108.SAR INDEX NO. 44521
TORCH LAKE NON-SUPERFUND SITE

LOCATION:

52634 STATE HWY M-26
HUBBELL, MI

OWNER:

STATE OF MICHIGAN, DEPARTMENT OF TECHNOLOGY, MANAGEMENT & BUDGET
DEPARTMENT OF ENVIRONMENTAL QUALITY

PROFESSIONAL:

THE MANNIK & SMITH GROUP, INC.

BY:

B&B CONTRACTING, CALUMET, INC.

AIR MONITORING FIRM:

U.P. ENGINEERS & ARCHITECTS, INC.

DATED:

JUNE 13, 2017

This plan was prepared using the project Contract Documents owned by the State and prepared by the Professional.

Table of Contents

1.0 INTRODUCTION

This Air Monitoring Plan is developed to provide site-specific procedures for monitoring and reporting of possible airborne contaminants before, during and following the completion of the Hubbell Processing Area Remediation. This remediation includes ditching and grading of asbestos contaminated soil.

The purpose of this air monitoring is to document airborne exposures to on site personnel and the surrounding public community. This monitoring will also provide early warning of potential exposures in order to implement additional engineering control for exposures.

2.0 POSSIBLE AIRBORNE CONTAMINANTS

Contaminants that are of the main concern to become airborne during ditching and grading are respirable particulate matter(PM10) and asbestos. The following table shows the compounds and their sources, action levels and engineering controls.

Target Compounds	**Source**	**Measurement Method**	**Action Level (1/2 OSHA PEL)**	**Engineering Controls**
Dust (PM10)	Disturbance of site soils	Visual monitoring	Visible dust	Water truck
		Thermo DataRam pDR-1200 aerosol monitor (or equivalent)	2.5 mg/m^3 Downwind value minus upwind value	
Asbestos	Disturbance of site soils	Air sampling (OSHA ID-160 Method)	TWA 0.05 fiber/cc Excursion Level (30 min) 0.5 fiber/cc	Water truck

3.0 METHODS OF AIR MONITORING

Air monitoring will be conducted at the personnel task locations and at six locations along the perimeter fence line. Two permanent monitoring locations will be established, with one being along the south fence line adjacent to the neighboring business (Koppers) and one along the south portion of the west fence line closest to the nearby residence. Four locations will be selected on a daily basis based on wind direction, work location, and nearby receptor(residence) locations. Regardless of the wind direction at least one monitoring location will be placed upwind of the daily work area.

DUST

Visual observation will be used to continuously monitor the active work area for visible emissions of dust. Observations will be logged on an hourly basis.

A Thermo DataRam pDR-1200 (or equivalent) aerosol monitor will be used at each of the two permanent monitoring locations. The monitors will be positioned approximately 5 feet above ground level. The monitors will continuously record dust concentrations and calculate a time weighted average concentration. The concentrations will be visually observed hourly and each day's recorded data will be downloaded, posted and submitted to the Professional daily. Monitoring at the two permanent locations will be collected for at least 3 days prior to active

work beginning on site.

Thermo DataRam pDR-1200 portable aerosol monitor will be used by the monitoring technician at the four daily chosen perimeter locations. While work is active in the exclusion zone, this monitor will be moved every 15 minutes to another location such that each location is sampled at least once per hour while the work area is active.

The monitoring technician shall immediately notify the Site Superintendent and Professional if the action level of 2.5 mg/m^3 is observed.

ASBESTOS

Air samples to measure asbestos fiber concentrations will be collected daily at all six perimeter locations while work is active in the exclusion zone. Air samples will be collected at the two permanent perimeter locations for at least 3 days prior to active work beginning on site.

Air samples will be collected daily by a personal air sampler on one worker involved in each work task. Two work tasks have been identified on this site, the first being an operator of heavy machinery; excavator, dozer or haul truck, the second being a laborer continuously in contact with site soils; picking ACM/RPM, placing silt fence, placing filter fabric, etc. Sampling shall occur for total concentration on a daily basis.

The airflow rate will be verified using a rotameter before and after sampling. The air samples will be analyzed by an accredited technician using Phase Contrast Microscopy. Sampling and analysis will be completed according to OSHA Method ID-160.

Air samples will be analyzed by a certified lab on a 96-hour basis and the results will be posted in the office trailer and submitted to the Professional as received.

4.0 ACTION LEVELS AND CONTROLS

DUST

If visible emissions are present, water spray or mist shall be used for dust suppression.

If the difference in the real-time readings on the aerosol monitors between the upwind and downwind monitors exceed the action level of 2.5 mg/m^3 then all work shall stop until emissions are controlled.

ASBESTOS

If visible emissions are present, water spray or mist shall be used for dust suppression.

If air sampling results show concentrations in excess of the action level of 0.05 fibers/cc then all work shall cease until additional engineering controls can be put in place. *(UPEA does not have this capability)*

5.0 REPORTING

Visual observations for dust and odors will be logged hourly or as observed, along with any responses taken. Daily logs will be posted in the office trailer and submitted to the Professional.

Data logs from the aerosol monitors will be downloaded at the conclusion of each work day and posted in the office trailer the next day and submitted to the Professional.

Table of Contents

1.0SITE BACKGROUND

Copper mining was extensive in the Keweenaw and formed the backbone of the regional economy and society. Copper ore milling and smelting operations were conducted from the mid-1860s to the 1960s, including the importation and reprocessing and smelting of various scrap metals in the later years of operation. Consistent with past industrial practices, Torch Lake served as dumping grounds for virtually all mining industry related waste products produced, including tailings, slag, and various chemicals.

The environmental legacy resulting from over 100 years of mining led to Torch Lake and its western shoreline to be designated as a Superfund site by the United States Environmental Protection Agency (EPA)https://cumulis.epa.gov/supercpad/cursites/csitinfo.cfm?id=0503034 and a Great Lakes Area of Concern by the U.S./Canada Great Lakes Water Quality Agreement https://www.epa.gov/torch-lake-aoc The EPA undertook cleanup activities to address some of the byproducts of the mining industry while others were not addressed or left to recover through natural processes.

The MDEQ Project is addressing some of the remaining concerns in Houghton County not addressed by the EPA. The Project concerns involve groundwater, surface water, sediments, and "upland" media. Known or suspected problems which are being evaluated include: an unidentified, significant in-lake and/or terrestrial source of PCBs, uncharacterized waste deposits, and >750 uncharacterized drums on the lake bottom, slag, landfills, industrial ruins, coal storage areas, underground storage tanks (USTs), RPM, asbestos containing materials (ACM), and any other waste materials identified in future investigations.

During 2014 and 2015 RRD conducted Site Investigation (SI) activities and confirmed the remaining concerns in the Project area involve groundwater, surface water, sediments, and "upland" media. Priority concerns which were evaluated and deemed to require Interim Responses (IRs) included: significant terrestrial source of PCBs; ACM; RPM; abandoned mining era containers; seeps; limited areas of soil in which there are Direct Contact Criteria (DCC) and Particulate Soil Inhalation Criteria (PSIC) exceedances; and, physical hazards.

The vast distribution of the former mining operations throughout the region (spanning multiple townships, villages and cities in Houghton County along the Portage Canal, Lake Superior, Slaughterhouse Creek, and Torch Lake) required that operational areas of the mining companies be divided into geographic areas. Dividing the regional operations into smaller manageable geographic areas allowed for prioritization of the proposed investigative approach, while also establishing a phased process for assessing environmental concerns regionally.

The Calumet & Hecla Lake Linden Operations Area (CHLL) is centralized around C&H's copper mining and processing operations in the vicinity of Lake Linden and Hubbell, Michigan. The CHLL consists of approximately 155 acres of land extending approximately two miles along the shoreline of Torch Lake and incorporates over 40 different parcels

with multiple property owners. The CHLL was divided into six smaller study areas based on the historical industrial operations in each area, including the following:

- Torch Lake Backwater Area;
- Lake Linden Sands Area;
- Lake Linden Recreation Area;
- Lake Linden Processing Area;
- Hubbell Processing Area; and,
- Hubbell Slag Dump and Beach Area.

The CHLL Hubbell Processing Area is located between Lake Linden and Hubbell along the southeast side of Highway M-26 and is comprised of mining era industrial properties including the Hubbell Coal Dock and Mineral Building that are vacant, and the Hubbell Smelter property which is the location of an operating industrial facility. The Hubbell Processing Area is bordered by residential (single family residences and an apartment complex), commercial (restaurant and retail business), and industrial (sand and gravel pit, construction company, and storage facility) properties, and Torch Lake.

2.0 SITE DESCRIPTION

2.1 The IR for the Hubbell Processing Area is limited to two properties within the Hubbell Processing Area; the Hubbell Coal Dock property and the Mineral Building property. Risks identified by the SI activities include potential threats to human and ecological receptors, including but not limited to human health risks in the event of direct contact with affected media and inhalation of particulates and ACM, runoff of PCB contaminated media into Torch Lake, and physical hazards. The limited scope of this IR allows for a focused and time critical response that mitigates PCB contaminated debris and soils exceeding select MDEQ exposure criteria protective of human health, manages and caps debris and waste piles, and eliminates PCB-impacted soil runoff into Torch Lake.

2.2 The Hubbell Coal Dock is located along the shoreline of Torch Lake, between the stamp mill complex (Lake Linden Processing Area) and the C&H Hubbell smelter complex. "The C&H Coal Dock featured a large coal shed, reportedly measuring approximately 650 ft by 400 ft. C&H maintained a large storage shed to allow coal to be stored over the winter and to protect against uncertainties associated with the coal industry. The coal dock featured massive shovel, boom, and rail systems that allowed for the unloading and storage of the bituminous coal and anthracite being shipped from Pennsylvania and West Virginia" (Kahn, 1898). The coal dock operations featured an electrical substation in the northern portion of the property."

The coal dock property is privately owned and includes roughly 2,000 ft of Torch Lake shoreline. The property is bound to the west by Highway M-26. A chain link fence has been established along the western and northern property boundaries. The property is generally vacant and runoff into the lake has been observed during investigative mobilizations. During the fall of 2016, 66 abandoned drums were removed from the property and disposed. Erosion channels have developed in the south-central portion of the property. A breach in the side of the drainage ditch just south of the southern property boundary was plugged during 2016 to stop the uncontrolled flow of water out of the ditch and across the southern portion of the property, where material was likely historically burned for metals recovery and PCBs have been detected (the Hubbell Coal Dock Burn Area).

2.3 The Mineral Building, located on a separate property, is south of and adjacent to the Hubbell Coal Dock property. The Mineral Building would have received the processed copper ore from the stamp mills located in the Lake Linden Processing Area. The copper ore was sorted and stored in the Mineral Building prior to transfer to the smelter for additional processing. A chain link fence has been established along the western and southern property boundaries. During the fall of 2016, 16 abandoned drums were removed from the property and disposed.

2.4 Historical research conducted by Michigan Technological University (Michigan Tech) concluded that the smelter yard as well as the neighboring mineral building and coal dock facilities were likely used in C&H's secondary copper recovery processes. As excerpted from Michigan Tech's report, C&H launched its "Secondary Metal Department" in 1945 — an indication that reclamation of copper from scrap metal and similar copper-containing wastes had become an important part of the company's operations. The July 1945 issue of *C&H News and Views*, an employee periodical, includes photographs of burning of secondary waste materials, specifically the outer sheathings, insulation, and coatings on copper-rich materials, prior to treating the recovered copper in the smelter. Materials including co-axial telephone cable, armored "Navy cable", and motor parts were common sources of copper, known to contain hydrocarbon-based oils and greases as well as PCBs. In addition to periodical documentation, Michigan Tech interviewed former employees who corroborated these activities, noting that the smelter yard was used as a site for burning copper wire to remove the insulation prior to smelting.

2.5 At a mean elevation of approximately 602 ft Above Mean Sea Level (AMSL) at the shoreline of Torch Lake, the land rises vertically to the west/northwest from the shoreline to an approximate elevation of 630 ft AMSL along Highway M-26.

2.6 The soil and fill encountered at the properties are largely sand, gravel, coal, stamp sand, slag, and burnt debris covering the ground surface. Underlying these near surface soils are native soils described in the Site Inspection Report for C&H Lake Linden Operations, Lake Linden, Michigan, 49945 - June 2014 prepared by the MDEQ-Remediation and Redevelopment Division (RRD), Superfund Section, Pre-remedial Group, Site Evaluation Unit (Pre-remedial Group) as "ground moraine with coarse-textured, reddish brown, sandy loam, glacial till. The deposits vary in composition and thickness and do not appear to be laterally extensive over the CHLL. The deposits range in thickness from approximately 11 to 50 ft below the ground surface (bgs), but have been observed in thicker deposits with interbedded clay, silt, and gravel units. The bedrock geology underlying the glacial deposits in the area is comprised of Jacobsville Sandstone."

2.7 Groundwater was encountered at the properties at varying depths. In the lower plateau along Torch Lake groundwater was encountered between 2-ft and 4.5-ft bgs.

3.0 B&B CONTRACTING, CALUMET, INC. PROJECT ORGANIZATION

NAME	TITLE	RESPONSIBLITIES
Brian Bonen (906)281-2587	Project/Site Superintendent	All onsite direct supervision of safety and work tasks
Hans Haapala (906)281-6908	Project Manager, Site Health and Safety Officer, Certified Storm Water Operator	Development and supervision of safety and work tasks, complete SESC inspections
Wayne Bourdeau (906)231-3170	Operator/Driver	Operator of any onsite equipment, delivery of material
Greg Tchida (906)231-4752	Operator/Driver	Operator of any onsite equipment, delivery of materials
Danny Erkkila	Mechanic/Laborer	Equipment maintenance, labor
Bill Chevalier (906)370-4047	Driver/Laborer	Delivery of materials, labor
Joe Lampinen	Laborer	Labor
Bruce Kesti	Laborer	Labor
Mitchel Large	Laborer	Labor

4.0 PERSONNEL TRAINING

All workers on site shall be adequately training as described in the Site-Specific Health and Safety Program. This training may include the following:

- Hazardous Waste Operations and Emergency Response(HAZWOPER)
- Asbestos Abatement Worker
- Asbestos Awareness
- Lead Awareness

Certificates of completion of the necessary training for each worker will be submitted prior to working on site.

5.0 EMERGENCY CONTACTS

CALL 911

Emergency and after-hours contact:
BRIAN BONEN, MOBILE PHONE # (906)281-2587

6.0 SITE PLAN (Contract Drawings with edits and additions)

The eight (8) pages found in Appendix A visually describe the work to be completed on-site. The following edits have been made to describe B&B Contracting's Site Plan for:
-Support Zone
-Office trailer and temporary facilities
-Employee and visitor parking
-Equipment parking and material laydown area
-Haul roads, avenues of ingress and egress
-Exclusion area, personnel and equipment decontamination area

7.0 RESOURCES AND EQUIPMENT

The personnel listed in Section 3 are available for the completion of this project.
The following equipment is available for use as needed:

-Trucks
- 2016 Kenworth T-800 tractor with lowboy, lead and pup trailers
- 1996 Kenworth T-800 tractor with lead and pup trailers
- 1996 Peterbilt Quad Dump Truck

-Excavators
- Cat 345B
- Cat 330D
- Cat 315B
- Cat 308
- Cat 303
- John Deere 790DLC

-Wheel Loaders
- Komatsu WA480-5L
- John Deere 644G
- Michigan L70

-Bulldozers
- Komatsu D51PX
- Cat D3

-Off Road Dumps
- (2) 1997 Bell B25B

-Water truck
-Sweeper

8.0 WORK TASKS

8.1. SUBMITTALS

Administrative and material submittals are to be submitted according to the approved Schedule of Submittals. The Project Manager will develop and submit according to the Contract Documents. This task will be ongoing from Contract award to project closeout.

8.2. MOBILIZATION

8.2.1. AIR MONITORING

This task is to begin 3 days prior to active work tasks onsite to establish baseline levels. The approved Air Monitoring Plan is attached as Appendix B.

8.2.2. SITE SECURITY

The entire outer perimeter of the site is currently fenced and gated. Security of the work site will be established by closing the gates at the end of each work day. All equipment shall have attachments lowered to the ground, keys removed from the ignition and doors locked.

8.2.3. TEMPORARY FACILITIES

No temporary water or sewer facilities will be connected for this project. Drinking water and hand wash station will be provided at the office trailer. A portable toilet will be provided near the office trailer. Electricity will be provided by through a temporary service panel at the pole near the office trailer.

8.2.4. EQUIPMENT MOBILIZATION

Equipment will be mobilized to site and stored in Equipment Parking Area.

8.2.5. ACCESS AND TRAFFIC CONTROL

Site access will be through the existing driveway for employees, visitors and other project personnel. All personal vehicles must be parked near the office trailer.

When construction traffic deems it necessary, traffic control on the temporary haul road crossing will be instituted as shown in Appendix C: Access and Traffic Control Plan. All signage will be per MDOT permit. Traffic regulators (flag persons to trained per MDOT Traffic Regulators Instruction Manual.

8.3. ESTABLISH EXCLUSION ZONE AND DECONTAMINATION ZONE

The Exclusion Zone will be demarcated along boundaries as shown in the Site Plan Drawing C-4. The demarcation will consist of orange snow fencing along ~~west~~ east and northern boundaries. The southern boundary along the lake will be defined by the concrete break wall with sign placed along. The western boundary on the Mineral Building will be defined with red asbestos tape. Signage will be placed every 50ft along entire Exclusion Zone boundary.

The Personnel and Equipment Decontamination Areas will be established in the locations shown on the Drawings.

The Personnel Decontamination Area will consist of an orange fenced area with a 6mil plastic ground cover where PPE can be removed. A sitting bench with a 6mil cover will be provided. Asbestos disposal bags will be provided to place contaminated PPE in. All plastic will be gathered into disposal bags of at the end of each work day. A clean table

and wash area will be provided for handwashing and respirator maintenance. All washing will be done with clean water without soap or detergents and as such can be disposed of directly to the surface of the contaminated area.
The Equipment Decontamination Area will consist of an 8" thick 20'x30' level area of 4-6" crushed rock. All equipment will be pressure washed while on the crushed rock area and the wash water will be allowed to flow onto the contaminated soil before cap placement.

8.4. CONSTRUCT TEMPORARY ACCESS DRIVEWAY AND HAUL ROADS

The temporary access driveway and haul roads will be constructed as noted on the edited Drawings. This will require disassembly of the existing chain link fence, removal of brush and trees, installing sand fill as necessary, placing ¼" thick steel plates over the water main crossing and covering with 100 feet of 4-6" crushed stone 16' wide to minimize tracking onto M-26.

8.5. MULCH TREES AND BRUSH

All trees and brush within the grading and drainage ditch area will be cut down and chipped using an excavator with a brush hog mulching attachment. All mulch will be left on site and graded below the imported soil cap. Mulch may also be placed on the Mineral Building property between the ditch and the driveway. No persons are allowed within 300-foot radius of the machine while actively working. from upstream/northwest of the burn area
Care will be taken to protect the historic maple trees along the Mineral Building drive.

8.6. DEWATER DITCH

Prior to improving the southern drainage ditch, the constant flow of water will be redirected along the north side of M-26 to the south. This work will be in accordance to the MDOT Right of Way permit and access agreement with the affected land owner. Residual water near the culvert upwelling at the start of the ditch will be pumped using 2" electric trash pumps. This water will be allowed to infiltrate onto the contaminated soil area within the Exclusion Zone. Care will be taken to prevent this water from causing sediment and silt to leave the site.

8.7. IMPROVE DRAINAGE DITCH

Ditch grading and rip rap installation will be completed as shown on the Drawings. Excavated soils are assumed to be contaminated and as such must stay within the Exclusion Zone and be placed beneath the cap. Necessary resources include an excavator and off-road dump truck. 2 laborers will be required to lay fabric and hand set riprap.

8.8. GRADE CONTAMINATED SOILS

Pick up and consolidate any solid waste ~~near~~ from the ~~edge of the~~ Exclusion Zone for characterization and disposal.
Existing soils will be graded to lines and contours as shown on the Drawings. The grades may be adjusted to balance the cuts and fills and to provide positive drainage. All soils are assumed to be contaminated and as such must not be spread beyond the capped area. Necessary resources include an excavator, off road dump truck and dozer. The dozer will be equipped with GPS machine control.

8.9. HAUL OUT PCB CONTAMINATED SOILS

Waste Pile -11 will be loaded into US Ecology trucks for disposal. Necessary resources include a loader.

8.10. PICK ACM AND RPM

Visible Regulated Asbestos Containing material(RACM) and residual process material(RPM) will be picked up and contained of during ditching and grading activities. A final inspection of the graded area will be completed before placement of the cap.

The Professional and B&B Contracting must agree on the definition of "visible" ACM and RPM prior to pick up commencing. Laborers and operators within the Exclusion Zone will pick up ACM/RPM noticed during the completion of the drainage ditch improvements and grading of the contaminated soils.

Separate disposal drums for RACM and RPM will be placed within the Exclusion Zone and covered when there are no active work tasks.

The picked material will be disposed of at the appropriate facilities.

8.11. INSTALL CAP

Approximately 6.5 acres of graded contaminated soils will be capped with 6" of sandy loam soil. The sandy loam soil will be excavated and loaded by an excavator in the Charlie Kiilunen Borrow Pit located on the north side of M26. These soils will be hauled using off road dump trucks. The trucks will dump onto the contaminated soil area beginning at the Equipment Decontamination Area. The trucks will not track onto the contaminated soil. The imported soil piles will then be spread using the bulldozer equipped with GPS control.

A written access agreement between B&B and Charlie Kiilunen is included in Appendix C.

8.12. NORTH BOUNDARY ROAD

The North Boundary Road will be constructed as noted on the Drawings.

8.13. FERTILIZE, SEED AND MULCH

The capped area will be fertilized, seeded and mulched as required by the Contract Documents. G&J Site Solutions is responsible for completion.

8.14. AS-BUILT SURVEY

LeClaire Geoservices will complete the final as-built survey and provide all deliverables per the Contract Documents.

8.15. REMOVE TEMPORARY ACCESS DRIVEWAY

The temporary haul road between the project site and the Borrow Pit will be removed. All fill and gravel materials will be removed to return the affected area to its original grade. The area will then be seeded and mulched. The removed fence will be returned to its original position.

8.16. DEMOBILIZATION

Demobilization requires that all B&B Contracting equipment and supplies be removed from the site.

8.17. PROJECT CLOSEOUT

Project closeout requires that all as-built documents, manifests, haul slips will be submitted. SESC permit to be released and all silt fence will be removed following the establishment of vegetation and release of the SESC Permit.

9.0 PERMITS (APPENDIX E)

9.1. MDOT Right of Way

An MDOT Right of Way Construction permit will be obtained for the Hwy M-26 diversion ditch, the temporary access driveway and placing traffic control devices and flag persons on Hwy M-26 to control traffic. An access agreement with property owner Pat Ziemnick will be obtained to construct the portion of diversion ditch that is on his property. These items will be submitted when received.

9.2. Soil Erosion, Notice of Coverage

The Houghton County Soil Erosion and Sedimentation Control permit is attached. A Notice of Coverage will be filed and provided when received.

9.3. NESHAP

The NESHAP Notice of Intent to Renovate/Demolish was filed by Dale Carrier of U.P. Abatement Company and is included in Appendix E.

10.0 BORROW AREA

10.1. Borrow Area Haul Road Plan

Existing haul roads will be utilized in the borrow area as shown in the Borrow Area Plan as shown in Appendix D.

10.2. Borrow Area Restoration Plan

The borrow area will be graded for positive drainage to the northern ditch line. The area will then be fertilized, seeded and mulched.

10.3. Borrow Area SESC Permit

The borrow area SESC Permit is included in Appendix D.

11.0 SOIL EROSION AND SEDIMENTATION PLAN

Soil erosion and sedimentation controls will be installed according to the SESC plan approved with the permit. The SESC Plan is on Sheet C-4 of Appendix A.

12.0 SPILL CONTROL

Any spills or leaks occurring onsite will require the immediate notification of the Site Superintendent, Brian Bonen.

Spill control equipment will be stored in the job site equipment trailer. This equipment includes a 55-gallon plastic drum with a variety of oil and solvent absorbent pads, tarps, socks and booms. This spill kit will be sufficient to control and absorb any leak from equipment on site. All equipment will have absorbent pads in the cab for immediate deployment.

If a spill or leak occurs all work onsite will cease until the spill has been contained and cleaned up.

13.0 CONTAMINATED MATERIAL HANDLING

Contaminated materials will be contained and stored on site until properly characterized. Once characterized, proper disposal method will be chosen from those described in Sec 02 61 00 Part 3.1 of the Contract Specifications.

14.0 AIR MONITORING & DUST CONTROL

Air monitoring and dust control will be completed as described in the Air Monitoring Plan.

Dust control will be accomplished using a water truck during excavating and grading activities. The water spray bar on the rear of the truck will be used in most areas. In areas inaccessible by driving, a 200-ft hose will be used to deliver water.

Water for dust control will be obtained through a suction pipe from Torch Lake. This suction pipe will be temporarily secured to a piling near the eastern corner of the Exclusion Zone. Care will be taken to not disturb sediments at the bottom of lake or water users on the surface of the lake.

EDITED BY B & B CONTRACTING, CALUMET, INC
FOR USE IN WORK PLAN.

GENERAL NOTES:

1. ALL CONSTRUCTION TO BE IN ACCORDANCE WITH THE MICHIGAN DEPARTMENT OF TRANSPORTATION 2012 STANDARD SPECIFICATIONS FOR CONSTRUCTION .
2. ALL MATERIALS TO BE REMOVED SHALL BE PROPERLY DISPOSED OR RECYCLED AS APPROPRIATE BY THE CONTRACTOR.
3. ALL NON HAZARDOUS MATERIALS ENCOUNTERED ARE TO REMAIN ON SITE AND BE BURIED UNDER THE 6" CAP. MOVE MATERIALS TO FILL LOCATIONS AND PROVIDE POSITIVE DRAINAGE.
4. ALL DISTURBED AREAS NOT SCHEDULED TO REMAIN AS IS SHALL BE FINE GRADED, AND SHALL RECIEVE 6" SANDY LOAM CAP SPECIFIED SEED MIX, AND MULCH SECURED IN-PLACE WITH NON-ASPHALTIC TACKIFIER. STRAW BLANKETS SHALL BE USED IN DITCH, SWALES AND ON SLOPES AS NOTED.
5. CONTRACTOR SHALL PERFORM DUST CONTROL PER MDEQ NESHAP STANDARDS FOR ASBESTOS. DUST SHALL BE KEPT TO A MINIMUM AND SHALL NOT LEAVE THE SITE.
6. CONTRACTOR TO GRADE, SEED AND MULCH ALL AREAS OUTSIDE THE CAP AND RIP RAP LIMITS DISTURBED BY THE WORK.
7. CONTRACTOR SHALL ROUTINELY SWEEP THE PAVED ENTRANCE AND HIGHWAY M-26 AS NEEDED TO REMOVE TRACKED SOILS.
8. ALL PERSONNEL, MATERIALS, EQUIPMENT THAT CONTACT CONTAMINATED MEDIA SHALL BE DECONTAMINATED PRIOR TO LEAVING THE SITE
9. ALL IMPROVEMENTS SHOWN ARE BASE BID ITEMS.
10. AT THE COMPLETION OF THE WORK LEAVE THE SITE CLEAN AND FREE OF ALL DEBRIS CAUSED BY CONSTRUCTION. SWEEP CLEAN ALL AREAS SOILED BY CONSTRUCTION.
11. ALL EARTH MOVEMENT IS CONSIDERED ASBESTOS RENOVATION WORK DUE TO THE POTENTIAL PRESENCE OF ASBESTOS CONTAINING MATERIALS AND BREAKDOWN OF NON-FRIABLE ASBESTOS BY EARTHWORK ACTIVITIES. APPROPRIATE NOTICES OF ASBESTOS ACTIVITIES SHALL BE PROVIDED TO THE MDEQ AND MICHIGAN DEPARTMENT OF LICENSING AND REGULATORY AFFAIRS. ALL WORK PRACTICES, EMPLOYEE TRAINING, DUST CONTROL, AND AIR MONITORING SHALL COMPLY WITH THE ASBESTOS NESHAP, OSHA, AND MIOSHA.

CONSTRUCTION SCHEDULE

1. WORKS DAYS ALLOWED ARE MONDAY THROUGH FRIDAY ONLY.
2. WORK HOURS ARE 7:00AM TO 7:00PM.
3. THE CONTRACTOR IS REQUIRED TO SECURE THE SITE DURING NON-WORKING HOURS. THIS WILL BE ACCOMPLISHED BY CLOSING GATES, UTILIZING TEMPORARY FENCE, OR OTHER MEANS APPROVED BY OWNER. ANY OPEN EXCAVATIONS MUST BE COVERED DURING THE AFOREMENTIONED TIMES TO THE SATISFACTION OF THE OWNER.

NOTES:

1. ALL EROSION AND SEDIMENTATION CONTROL WORK SHALL CONFORM TO THE CURRENT STANDARDS AND SPECIFICATIONS OF THE COUNTY DRAIN COMMISSIONER AND MDEQ. INSTALL TEMPORARY SOIL EROSION CONTROL MEASURES PRIOR TO ANY EARTHWORK OPERATIONS.
2. DAILY INSPECTIONS SHALL BE MADE BY THE CONTRACTOR FOR EFFECTIVENESS OF EROSION AND SEDIMENTATION CONTROL MEASURES. ANY NECESSARY REPAIRS SHALL BE PERFORMED WITHOUT DELAY. THE SOIL EROSION CONTROLS WILL BE MAINTAINED WEEKLY AND AFTER EVERY STORM EVENT.
3. EROSION AND ANY SEDIMENTATION FROM WORK ON THIS SITE SHALL BE CONTAINED WITHIN THE WORK AREA AND NOT ALLOWED TO COLLECT ON ANY OFF-SITE AREAS OR IN WATERWAYS. WATERWAYS INCLUDE BOTH NATURAL AND MAN-MADE OPEN DITCHES, STREAMS, STORM DRAINS, LAKES, PONDS AND WETLANDS.
4. THE CONTRACTOR SHALL APPLY TEMPORARY EROSION AND SEDIMENTATION CONTROL MEASURES AS DIRECTED ON THESE PLANS AND WHERE OTHERWISE REQUIRED BY THE WORK. THE CONTRACTOR SHALL REMOVE TEMPORARY MEASURES AS SOON AS PERMANENT STABILIZATION OF SLOPES, DITCHES, AND OTHER CHANGES HAVE BEEN COMPLETED.
5. SOIL EROSION CONTROL PRACTICES WILL BE ESTABLISHED IN EARLY STAGES OF CONSTRUCTION BY THE CONTRACTOR. SEDIMENT CONTROL PRACTICES WILL BE APPLIED AS A PERIMETER DEFENSE AGAINST ANY TRANSPORTING OF DIRT OFF THE WORK AREA.
6. THE CONTRACTOR SHALL PRESERVE OFF-SITE NATURAL VEGETATION AS MUCH AS POSSIBLE.
7. PROTECT ALL EXISTING TREES ALONG THE MINERAL BUILDING ACCESS DRIVE, INCLUDING THEIR BRANCHES AND ROOTS FROM DAMAGE DUE TO THIS WORK.
8. REMOVE ALL TREES FROM THE GRADED AND CAPPED AREA. LEAVE STUMPS IN-PLACE IF POSSIBLE. PILE IN CONTAMINATED WOODY DEBRIS OUTSIDE THE GRADING AREA AT A LOCATION DETERMINED DURING SITE PREP. CONTAMINATED BRUSH AND STUMPS SHALL BE BURIED BENEATH THE CAP NORTHWEST CORNER.
9. STABILIZATION OF ALL DISTURBED AREAS SHALL BE ESTABLISHED USING THE APPROPRIATE VEGETATION WITHIN 5 DAYS OF COMPLETION OF FINAL GRADING.
10. THE CONTRACTOR SHALL SWEEP THE EXISTING STREETS SURROUNDING THE PROJECT SITE AS NEEDED.
11. THE CONTRACTOR SHALL BE RESPONSIBLE FOR DUST CONTROL AND SHALL PROVIDE ALL EQUIPMENT AND MATERIAL TO KEEP DUST IN CHECK AT ALL TIMES. THE CONTRACTOR SHALL ADHERE TO NESHAP CONTROL MEASURES FOR ASBESTOS TO CONTROL DUST. THE CONTRACTOR SHALL RESPOND IMMEDIATELY TO ANY AND ALL COMPLAINTS.
12. THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING THE NPDES PERMIT AND ENSURING COMPLIANCE WITH ALL APPLICABLE PERMIT REGULATIONS, INCLUDING BUT NOT LIMITED TO, INSPECTION, RESTORATION AND RECORD KEEPING REQUIREMENTS. REPORTS FROM THE CERTIFIED STORM WATER OPERATOR SHALL BE MADE AVAILABLE TO MDEQ.

DATED:

JUNE 13, 2017

This plan was prepared using the project Contract Documents owned by the State and prepared by the Professional.

Table of Contents

1.0 INTRODUCTION

This Air Monitoring Plan is developed to provide site-specific procedures for monitoring and reporting of possible airborne contaminants before, during and following the completion of the Hubbell Processing Area Remediation. This remediation includes ditching and grading of asbestos contaminated soil.

The purpose of this air monitoring is to document airborne exposures to on site personnel and the surrounding public community. This monitoring will also provide early warning of potential exposures in order to implement additional engineering control for exposures.

2.0 POSSIBLE AIRBORNE CONTAMINANTS

Contaminants that are of the main concern to become airborne during ditching and grading are respirable particulate matter(PM10) and asbestos. The following table shows the compounds and their sources, action levels and engineering controls.

Target Compounds	**Source**	**Measurement Method**	**Action Level (1/2 OSHA PEL)**	**Engineering Controls**
Dust (PM10)	Disturbance of site soils	Visual monitoring	Visible dust	Water truck
		Thermo DataRam pDR-1200 aerosol monitor (or equivalent)	2.5 mg/m^3 Downwind value minus upwind value	
Asbestos	Disturbance of site soils	Air sampling (OSHA ID-160 Method)	TWA 0.05 fiber/cc Excursion Level (30 min) 0.5 fiber/cc	Water truck

3.0 METHODS OF AIR MONITORING

Air monitoring will be conducted at the personnel task locations and at six locations along the perimeter fence line. Two permanent monitoring locations will be established, with one being along the south fence line adjacent to the neighboring business (Koppers) and one along the south portion of the west fence line closest to the nearby residence. Four locations will be selected on a daily basis based on wind direction, work location, and nearby receptor(residence) locations. Regardless of the wind direction at least one monitoring location will be placed upwind of the daily work area.

DUST

Visual observation will be used to continuously monitor the active work area for visible emissions of dust. Observations will be logged on an hourly basis.

A Thermo DataRam pDR-1200 (or equivalent) aerosol monitor will be used at each of the two permanent monitoring locations. The monitors will be positioned approximately 5 feet above ground level. The monitors will continuously record dust concentrations and calculate a time weighted average concentration. The concentrations will be visually observed hourly and each day's recorded data will be downloaded, posted and submitted to the Professional daily. Monitoring at the two permanent locations will be collected for at least 3 days prior to active

work beginning on site.

Thermo DataRam pDR-1200 portable aerosol monitor will be used by the monitoring technician at the four daily chosen perimeter locations. While work is active in the exclusion zone, this monitor will be moved every 15 minutes to another location such that each location is sampled at least once per hour while the work area is active.

The monitoring technician shall immediately notify the Site Superintendent and Professional if the action level of 2.5 mg/m^3 is observed.

ASBESTOS

Air samples to measure asbestos fiber concentrations will be collected daily at all six perimeter locations while work is active in the exclusion zone. Air samples will be collected at the two permanent perimeter locations for at least 3 days prior to active work beginning on site.

Air samples will be collected daily by a personal air sampler on one worker involved in each work task. Two work tasks have been identified on this site, the first being an operator of heavy machinery; excavator, dozer or haul truck, the second being a laborer continuously in contact with site soils; picking ACM/RPM, placing silt fence, placing filter fabric, etc. Sampling shall occur for total concentration on a daily basis.

The airflow rate will be verified using a rotameter before and after sampling. The air samples will be analyzed by an accredited technician using Phase Contrast Microscopy. Sampling and analysis will be completed according to OSHA Method ID-160.

Air samples will be analyzed by a certified lab on a 96-hour basis and the results will be posted in the office trailer and submitted to the Professional as received.

4.0 ACTION LEVELS AND CONTROLS

DUST

If visible emissions are present, water spray or mist shall be used for dust suppression.

If the difference in the real-time readings on the aerosol monitors between the upwind and downwind monitors exceed the action level of 2.5 mg/m^3 then all work shall stop until emissions are controlled.

ASBESTOS

If visible emissions are present, water spray or mist shall be used for dust suppression.

If air sampling results show concentrations in excess of the action level of 0.05 fibers/cc then all work shall cease until additional engineering controls can be put in place. *(UPEA does not have this capability)*

5.0 REPORTING

Visual observations for dust and odors will be logged hourly or as observed, along with any responses taken. Daily logs will be posted in the office trailer and submitted to the Professional.

Data logs from the aerosol monitors will be downloaded at the conclusion of each work day and posted in the office trailer the next day and submitted to the Professional.

FILE: PW RD/TS/Typicals/Signs/MT NON FWY/M0170a.dgn REV. 10/06/2011			

NOTES

1A. SEE M0020a FOR "D" VALUES.

2. ALL NON-APPLICABLE SIGNING WITHIN THE CIA SHALL BE MODIFIED TO FIT CONDITIONS, COVERED OR REMOVED.

3. DISTANCES BETWEEN SIGNS, THE VALUES FOR WHICH ARE SHOWN IN TABLE D, ARE APPROXIMATE AND MAY NEED ADJUSTING AS DIRECTED BY THE ENGINEER.

3A. THE "WORK ZONE BEGINS" (R5-18c) SIGN SHALL BE USED ONLY IN THE INITIAL SIGNING SEQUENCE IN THE WORK ZONE. SUBSEQUENT SEQUENCES IN THE SAME WORK ZONE SHALL OMIT THIS SIGN AND THE QUANTITIES SHALL BE ADJUSTED APPROPRIATELY.

6. WHEN CALLED FOR IN THE FHWA ACCEPTANCE LETTER FOR THE SIGN SYSTEM SELECTED, THE TYPE A WARNING FLASHER, SHOWN ON THE WARNING SIGNS, SHALL BE POSITIONED ON THE SIDE OF THE SIGN NEAREST THE ROADWAY.

7. ALL TEMPORARY SIGNS, TYPE III BARRICADES, THEIR SUPPORT SYSTEMS AND LIGHTING REQUIREMENTS SHALL MEET NCHRP 350 CRASHWORTHLY REQUIREMENTS STIPULATED IN THE CURRENT EDITION OF THE MICHIGAN MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES, THE CURRENT EDITION OF THE STANDARD SPECIFICATIONS FOR CONSTRUCTION, THE STANDARD PLANS AND APPLICABLE SPECIAL PROVISIONS. ONLY DESIGNS AND MATERIALS APPROVED BY MDOT WILL BE ALLOWED.

9. ALL TRAFFIC REGULATORS SHALL BE PROPERLY TRAINED AND SUPERVISED.

9A. IN ANY OPERATION INVOLVING MORE THAN ONE TRAFFIC REGULATOR, ONE PERSON SHOULD BE DESIGNATED AS HEAD TRAFFIC REGULATOR.

10. ALL TRAFFIC REGULATORS' CONDUCT, THEIR EQUIPMENT, AND TRAFFIC REGULATING PROCEDURES SHALL CONFORM TO THE CURRENT EDITION OF THE MICHIGAN MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES (MMUTCD) AND THE CURRENT EDITION OF THE MDOT HANDBOOK ENTITLED "TRAFFIC REGULATORS INSTRUCTION MANUAL."

11. WHEN TRAFFIC REGULATING IS ALLOWED DURING THE HOURS OF DARKNESS, APPROPRIATE LIGHTING SHALL BE PROVIDED TO SUFFICIENTLY ILLUMINATE THE TRAFFIC REGULATOR'S STATIONS.

14. ADDITIONAL SIGNING AND/OR ELONGATED SIGNING SEQUENCES SHOULD BE USED WHEN TRAFFIC VOLUMES ARE SIGNIFICANT ENOUGH TO CREATE BACKUPS BEYOND THE W3-4 SIGNS.

15. THE HAND HELD (PADDLE) SIGNS REQUIRED BY THE MMUTCD TO CONTROL TRAFFIC WILL BE PAID FOR AS PART OF FLAG CONTROL.

17. THE HAND HELD (PADDLE) SIGNS USED FOR THIS SEQUENCE SHALL DISPLAY "STOP" ON BOTH SIDES. WHEN THE TRAFFIC REGULATOR IS RELEASING TRAFFIC, THE "STOP" PADDLE SHALL BE TURNED 1/4 TURN AWAY FROM TRAFFIC.

18. CARE SHOULD BE TAKEN IN THE SELECTION OF THE LOCATION FOR THE HAUL ROAD TO ASSURE GOOD SIGHT DISTANCE FOR THE MOTORIST. HORIZONTAL AND VERTICAL CURVES AND INTERSECTING ROADWAYS IN CLOSE PROXIMITY TO THE HAUL ROAD LOCATION SHOULD BE AVOIDED AS MUCH AS POSSIBLE. THE LOCATION AND WIDTH OF THE HAUL ROAD REQUIRES PRIOR APPROVAL OF THE ENGINEER.

19. ALL EQUIPMENT OPERATORS WHO USE THE HAUL ROAD SHALL STOP AND VERIFY THAT THE TRAFFIC REGULATORS HAVE TRAFFIC STOPPED AND UNDER CONTROL BEFORE ENTERING ONTO THE HIGHWAY.

20. WHEN THE HAUL ROAD IS NOT IN USE, LIGHT TYPE III BARRICADES WITH "ROAD CLOSED" SIGNS SHALL BE IN PLACE, AND SHALL EXTEND COMPLETELY ACROSS THE HAUL ROAD.

SOIL SUPPLY AGREEMENT

Submitted to Owner: Date: May 11, 2017

Charlie Kiilunen
52705 State Hwy M-26
Lake Linden, MI 49945

B&B Contracting, Calumet, Inc. agrees to pay [redacted] per cubic yard (CYD) of clay or sand taken from borrow pit located at 52705 State Hwy M-26 for use at MDEQ-Hubbell Processing Area for Capping. This project is anticipated to need approximately 6000 CYD.

B&B Contracting will supply all necessary equipment for loading.

B&B will provide plan for and obtain soil erosion-sedimentation control (SESC) permit on behalf of owner with signed agreement.

Due to safety concerns, B&B will have exclusive access to pit and material during project.

B&B will install and maintain all necessary SESC measures until SESC permit is released.

B&B will provide borrow pit restoration, seed and mulch at completion of project.

Payment to be made as follows: B&B Contracting will keep track of totals by the truck load. The price above is inclusive of any applicable sales tax. Material will be paid for when B&B Contracting receives payment from project owner. This will be approximately 45 days from the material being loaded.

Owner to carry fire, tornado or other necessary property insurance. Our workers and equipment are fully covered by General Liability and Workmen's Compensation Insurance. Proof will be provided upon request.

This agreement is contingent on soil passing necessary testing.

Authorized signature _____ Date 5-12-17
Brian Bonen, President

Acceptance of Agreement

The above prices, specifications and conditions are satisfactory and are hereby accepted.

RE: Soil Erosion and Sedimentation Control Permit No. 16-933-SE

Dear Mr. Ziemnick:

Enclosed, please find a Soil Erosion and Sedimentation Control (SESC) Permit and approved SESC Site Plan for the proposed earth change at the location specified on the permit. Please notify the Houghton County Drain Commissioner's Office 48 hours prior to commencing the earth change.

If you have any questions, please feel free to contact my office.

Sincerely,

John Pekkala

RE: Soil Erosion and Sedimentation Control Permit No. 17-963-SE

Dear Mr. Bonen:

Enclosed is a Soil Erosion and Sedimentation Control (SESC) Permit for the proposed earth change at the location specified on the permit. The SESC Site Plan that was submitted has been approved and is on file at the Houghton County Drain Commissioner's Office. Please notify my office 48 hours prior to commencing the earth change.

If you have any questions, feel free to contact me.

Sincerely,

John Pekkala

John Pekkala, Drain Commissioner
County Enforcing Agent for
Soil Erosion and Sedimentation Control

COUNTY OF HOUGHTON
SOIL EROSION AND SEDIMENTATION CONTROL PERMIT

(issued under the authority of part 91, Soil Erosion and Sedimentation Control, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended)

Permitee: Houghton Forest Products

Address: Attn. Mr. Ken Buchanan
1174 Dawson Road
Thunder Bay, Ontario, Canada, P7G1H6

Permit No.:	17-963-SE
Issued:	06-15-17
Expires:	06-15-18
Extended:	

On-Site Responsible Person: Name: Brian Bonen

Company: B&B Contracting, Calumet, Inc. Telephone Number: (906) 337-0017 or 281-2587

Permitted Activity:

Cap Coal Dock burn area, improve southern drainage ditch, remove PCB contaminated soils, construct associated haul roads

Project Location: Town: 55N ; Range: 32W ; Section: 7

City or Township: Torch Lake Township
Address: 52634 Hwy M26

Permit Conditions:

1. The permitted activity shall be completed in accordance with the approved plans and specifications and the attached general and specific conditions.
2. This permit does not waive the necessity for obtaining all other required federal, state, or local permits.
3. Permitee shall notify the permitting agency within one week after completing the permitted activity or one week prior to the permit expiration date, whichever comes first.

John Pekkala
Permitting Agent

(906) 482-4491
Telephone Number

THIS PERMIT MUST BE POSTED AT THE PROJECT SITE.

Permit Number: 17-963-SE

General Conditions:

In accordance with rule 1709 promulgated under the authority of part 91, Soil Erosion and Sedimentation Control, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, and in addition to the information on the attached plan(s) and special conditions, the following general conditions apply to the earth change authorized by this permit:

- Design, construct, and complete the earth change in a manner that limits the exposed area of disturbed land for the shortest period of time.
- Remove sediment caused by accelerated soil erosion from runoff water before it leaves the site of the earth change.
- Temporary or permanent control measures shall be designed and installed to convey water around, through, or from the earth change at a non-erosive velocity.
- Install temporary soil erosion and sedimentation control measures before or upon commencement of the earth change activity and maintain the measures on a daily basis. Remove temporary soil erosion and sedimentation control measures after permanent soil erosion measures are in place and the area is stabilized. (Stabilized means the establishment of vegetation or the proper placement, grading; or covering of soil to ensure its resistance to soil erosion, sliding, or other earth movement.)
- Complete permanent soil erosion control measures for the earth change within five calendar days after final grading or upon completion of the final earth change. If it is not possible to permanently stabilize the earth changes, then maintain temporary soil erosion and sedimentation control measures until permanent soil erosion control measures are in place and the area is stabilized.

SPECIFIC CONDITIONS

48 hours notice prior to earth change

17. Signature Requirements for Projects with Negative Pressure Enclosures: (required by LARA)

Per Section 221(1)(2) of P.A. 135 of 1986, as amended, clearance air monitoring is required for any asbestos abatement project involving 10 linear feet/15 square feet or more of friable material which is performed within a negative pressure enclosure. I (the building owner or lessee) have been advised by the contractor of my responsibility under Act 135 to have clearance air monitoring performed on this project.

Geoturf® S1240 - 36" MDOT

Woven Silt Fence Geotextile

Geoturf S1240 is a polypropylene black woven silt fence fabric. It is non-biodegradable and resistant to most soil chemicals, acids, and alkali with PH range of 3 to 12 and is manufactured to meet or exceed the following values:

October 2014

Property	Test Method	Minimum Average Roll Value* ENGLISH	
Grab Tensile Strength	ASTM D-4632	124 x 110	lbs.
Grab Elongation	ASTM D-4632	15 x 15	%
Mullen Burst	ASTM D-3786	200	psi
Puncture	ASTM D-4833	60	lbs.

ROLLMAX™
ROLLED EROSION CONTROL

Specification Sheet – BioNet® S75BN™ Erosion Control Blanket

DESCRIPTION

The short-term single net erosion control blanket shall be a machine-produced mat of 100% agricultural straw with a functional longevity of up to 12 months. (NOTE: functional longevity may vary depending upon climatic conditions, soil, geographical location, and elevation). The blanket shall be of consistent thickness with the straw evenly distributed over the entire area of the mat. The blanket shall be covered on the top side with a 100% biodegradable woven natural organic fiber net. The netting shall consist of machine directional strands formed from two intertwined yarns with across directional strands interwoven through the twisted machine strands (commonly referred to as a Leno weave) to form approximate 0.50 x 1.0 in. (1.27 x 2.54 cm) mesh. The blanket shall be sewn together on 1.50 inch (3.81 cm) centers with degradable thread. The blanket shall be manufactured with a colored thread stitched along both outer edges (approximately 2-5 inches [5-12.5 cm] from the edge) as an overlap guide for adjacent mats.

The S75BN shall meet Type 2.C specification requirements established by the Erosion Control Technology Council (ECTC) and Federal Highway Administration's (FHWA) FP-03 Section 713.17

Material Content		
Matrix	100% straw fiber	0.5 lbs/sq yd (0.27 kg/sm)
Netting	Top side only: Leno woven 100% biodegradable natural organic fiber	9.3 lbs/1000 sq ft (4.5 kg/100 sm)
Thread	Biodegradable	

Standard Roll Size	
Width	6.67 ft (2.0 m)
Length	108 ft (32.92 m)
Weight ± 10%	46.4 lbs (21.05 kg)
Area	80 sq yd (66.9 sm)

Design Permissible Shear Stress	
Unvegetated Shear Stress	1.60 psf (76 Pa)
Unvegetated Velocity	5.00 fps (1.52 m/s)

Index Property	Test Method	Typical
Thickness	ASTM D6525	0.29 in. (7.37 mm)
Resiliency	ECTC Guidelines	81.4%
Water Absorbency	ASTM D1117	440%
Mass/Unit Area	ASTM D6475	9.12 oz/sy (310 g/sm)
Swell	ECTC Guidelines	15.7%
Smolder Resistance	ECTC Guidelines	Yes
Stiffness	ASTM D1388	6.92 oz-in
Light Penetration	ASTM D6567	9.1%
Tensile Strength - MD	ASTM D6818	146.4 lbs/ft (2.17 kN/m)
Elongation - MD	ASTM D6818	10.9%
Tensile Strength - TD	ASTM D6818	109.2 lbs/ft (1.62 kN/m)
Elongation - TD	ASTM D6818	14.3%
Biomass Improvement	ASTM D7322	398%

Slope Design Data: C Factors			
	Slope Gradients (S)		
Slope Length (L)	≤ 3:1	3:1 – 2:1	≥ 2:1
≤ 20 ft (6 m)	0.029	N/A	N/A
20-50 ft	0.11	N/A	N/A
≥ 50 ft (15.2 m)	0.19	N/A	N/A

Roughness Coefficients – Unveg.	
Flow Depth	Manning's n
≤ 0.50 ft (0.15 m)	0.055
0.50 – 2.0 ft	0.055-0.021
≥ 2.0 ft (0.60 m)	0.021

Erosion Control
BLANKET

C32

Specification Sheet

The ErosionControlBlanket C32 is a long-term double net 100% coconut fiber erosion control blanket designed for use on extreme slope and channel applications requiring erosion control for up to 36 months depending on moisture, light, and environmental conditions. The blanket is sewn together on 1.5 inch (38.1 mm) centers. The C32 meets all requirements established in the FHWA FP-03 as a Type 4 erosion control blanket for use on slopes with gradients not exceeding 1:1 (h:v) and has been tested by the National Transportation Product Evaluation Program (NTPEP). The C32 comes packaged in clear shrink-wrap and includes installation instructions.

Product Nomenclature & Properties

C = 100% coconut fiber matrix
3 = coconut fiber matrix applied at a rate of 0.5 lbs/yd^2 (270 g/m^2)
2 = top & bottom stabilized photodegradable black net with a mesh size of 0.626 x 0.626 in (1.59 x 1.59 cm)
= UV stabilized photodegradable thread to ensure consistent functional longevity

Index & Bench Scale Testing

Test Description	Test Method	Test Results
Mass per Unit Area	ASTM D6475	7.31 oz/yd^2
Tensile Strength	ASTM D6818	24.0 lbs/in @ 22.1% MD 17.3 lbs/in @ 35.3% TD
Thickness	ASTM D6525	0.268 in
Light Penetration / Ground Cover	ASTM D6567	15.9% / 84.1%
Water Absorption	ASTM D 1117 & ECTCTASC 00197	199%
Unvegetated Bench-Scale Rain Splash and Runoff (not to be used as a design value)	ASTM D7101	Soil Loss Ratio* = 13.54 Soil Loss Ratio*= 18.69 Soil Loss Ratio*= 25.80
Unvegetated Bench-Scale Shear Stress (not to be used as design value)	ASTM D7207	2.75 lbs/ft^2 @ ½ in. soil loss
Seed Germination and Plant Growth Under Bench-Scale Conditions	ASTM D7322	266% Improvement (increased biomass)
*Soil Loss Ratio = Soil Loss Bare Soil / Soil Loss with RECP = 1 / C-Factor (Note: Soil loss is based on regression analysis)		

Design Values

- "C" factor = 0.002
- Maximum Permissible Shear Stress = 2.25 lbs/ft^2 (108 Pa)
- Maximum Permissible Velocity = 10 ft/sec (3.05 m/s)
- Manning's "n" = 0.03

Standard Roll Details

Width	2.44m (8ft)	4.88m (16ft)
Standard Length	34.3m (112.5ft)	34.3m (112.5ft)
Area	83.61m^2 (100yd^2)	167.2m^2 (200yd^2)
Weight ±10%	26.3kg (58lb)	51.7kg (114lb)

"Big Daddy" Roll Details

Width	2.44m (8ft)	4.88m (16ft)
Standard Length	171.5m (562.5ft)	171.5m (562.5ft)
Area	418m^2 (500yd^2)	836.1m^2 (1000yd^2)
Weight ±10%	127kg (279lb)	254kg (558lb)

RE: Abandoned Mining Wastes – Torch Lake Non- Superfund Site Hubbell Processing Area

Brian,

Attached are the cut sheets for the following project materials.

~~1. Silt Fence S1240~~
- Supplier –CSI Geo Turf – Highland, MI

~~2. Straw Mulch Blanket S75BN~~
- Supplier – North American Green – Poseyville, IN

~~3. Coconut Mulch Blanket C32~~
- Supplier –Erosion Control Blanket – Riverton, MB, Canada

4. Seed Mixture
   - Red Clover 10 Lb./Acre
   - Creeping Red Fescue 25 Lb./ Acre
   - Vernal Alfalfa 5 Lb./ Acre
   - White Dutch Clover 5 Lb./ Acre
   - Perennial Rye Grass 10 Lb./ Acre
   - Sweet Clover 5 Lb./ Acre
   - Orchard Grass 15 Lb./ Acre
   - Seed tickets can be field verified during application of work
   - Supplier – Deer Creek Seed – Windsor, WI

5. Fertilizer
    - Starter fertilizer based on existing conditions per soil test
    - Supplier – CSI Geoturf – Highland MI

6. Straw Mulch
    - Supplier –Holmquist Feed Mill – Trenary, MI

Geoturf® 16-32-04

Fertilizer

October 2015

Guaranteed Analysis

Total Nitrogen (N)	16%
Available Phosphate (P2O5)	32%
Soluble Potash (K20)	04%

Comments (if any):

Key to Laboratory Flags:

*: RPD exceeds limits.
B: The analyte was found in the associated blank as well as in the sample.
J: The quantitation is an estimated value because the result is less than the sample quantitation limit but greater than the detection limit.
M: A matrix effect was present.
Q: Batch QC data associated with the analysis does not meet the stated objectives
H: Indicates analytical holding time exceedance.
U: The analyte was analyzed for, but not detected.
P: A manual peak selection or manual integration was performed to correct an erroneous software selection.

ND = Not Detected, MDL = Method Detection Limit, MQL = Method Quantitation Limit
ppm = mg/L (liquid) or mg/kg (solid), ppb = ug/L (liquid) or ug/kg (solid)
For coliform, Negative = No coliform bacteria detected, Positive = Coliform bacteria detected

Sample Types:
S = Solids, DW = Drinking water, D = Dissolved, T = Total, TC = TCLP extract, SP = SPLP extract

All samples were received intact and properly preserved unless otherwise noted. The results reported relate only to the samples tested. This report shall not be reproduced, except in full, without the written approval of this laboratory. The Chain of Custody is attached.

This report satisfies the requirements of your project but has not been prepared to comply with NELAP reporting requirements.

I certify that the data contained in this Final Report has been generated and reviewed in accordance with approved methods and White Water Associates Standard Operating Procedures. Exceptions, if any, are discussed in the accompanying sample narrative. Release of this Final Report is authorized by White Water Associates management, as is verified by the following signature.

Table of Contents

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Buffalo

Narrative

Job Narrative
480-119829-1

Receipt
The samples were received on 6/20/2017 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.7° C.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-363397 recovered above the upper control limit for 4-Nitrophenol and Atrazine. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: 70015 (480-119829-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8082A: The laboratory control sample (LCS) and Method Blank (MB) for preparation batch 480-363492 and analytical batch 480-363512 recovered outside control limits for the surrogate Tetrachloro-m-xylene. The analytes associated with this surrogate were not detected in associated client samples. Therefore, the data has been reported. The following samples are effected: 70015 (480-119829-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method(s) 3550C: The following samples required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: 70015 (480-119829-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	WHITE WATER
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

ADS N-12® WT IB PIPE (per AASHTO) SPECIFICATION

Scope
This specification describes 4- through 60-inch (100 to 1500 mm) ADS N-12 WT IB pipe (per AASHTO) for use in gravity-flow applications.

Pipe Requirements
N-12 WT IB pipe (per AASHTO) shall have a smooth interior and annular exterior corrugations.
- 4- through 10-inch (100 to 250 mm) shall meet AASHTO M252, Type S.
- 12- through 60-inch (300 to 1500 mm) shall meet AASHTO M294, Type S or ASTM F2306.
- Manning's "n" value for use in design shall be 0.012.

Joint Performance
Pipe shall be joined with the N-12 WT IB joint meeting the requirements of AASHTO M252, AASHTO M294, or ASTM F2306.

4- through 60-inch (100 to 1500 mm) shall be watertight according to the requirements of ASTM D3212. Gaskets shall meet the requirements of ASTM F477. Gaskets shall be installed by the pipe manufacturer and covered with a removable, protective wrap to ensure the gasket is free from debris. A joint lubricant available from the manufacturer shall be used on the gasket and bell during assembly.

12- through 60-inch (300 to 1500 mm) diameters shall have a reinforced bell with a polymer composite band. The bell tolerance device shall be installed by the manufacturer.

Fittings
Fittings shall conform to AASHTO M252, AASHTO M294, or ASTM F2306. Bell and spigot connections shall utilize a spun-on or welded bell and valley or saddle gasket meeting the watertight joint performance requirements of AASHTO M252, AASHTO M294 or ASTM F2306.

Field Pipe and Joint Performance
To assure watertightness, field performance verification may be accomplished by testing in accordance with ASTM F2487. Appropriate safety precautions must be used when field-testing any pipe material. Contact the manufacturer for recommended leakage rates.

Material Properties
Virgin material for pipe and fitting production shall be high-density polyethylene conforming with the minimum requirements of cell classification 424420C for 4- through 10-inch (100 to 250 mm) diameters, and 435400C for 12- through 60-inch (300 to 1500 mm) diameters, as defined and described in the latest version of ASTM D3350, except that carbon black content should not exceed 4%. The 12- through 60-inch (300 to 1500 mm) virgin pipe material shall comply with the notched constant ligament-stress (NCLS) test as specified in Sections 9.5 and 5.1 of AASHTO M294 and ASTM F2306 respectively.

Installation
Installation shall be in accordance with ASTM D2321 and ADS recommended installation guidelines, with the exception that minimum cover in trafficked areas for 4- through 48-inch (100 to 1200 mm) diameters shall be one foot. (0.3 m) and for 54- and 60-inch (1350 and 1500 mm) diameters, the minimum cover shall be 2 ft. (0.6 m) in single run applications. Backfill for minimum cover situations shall consist of Class 1, Class 2 (minimum 90% SPD) or Class 3 (minimum 90%) material. Maximum fill heights depend on embedment material and compaction level; please refer to Technical Note 2.01. Contact your local ADS representative or visit our website at www.ads-pipe.com for a copy of the latest installation guidelines.

Pipe Dimensions

	Nominal Diameter, in (mm)													
Pipe I.D. in (mm)	4 (100)	6 (150)	8 (200)	10 (250)	12 (300)	15 (375)	18 (450)	24 (600)	30 (750)	36 (900)	42 (1050)	48 (1200)	54* (1350)	60 (1500)

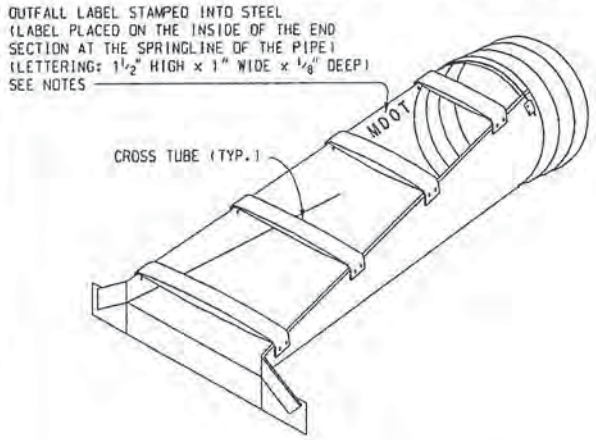
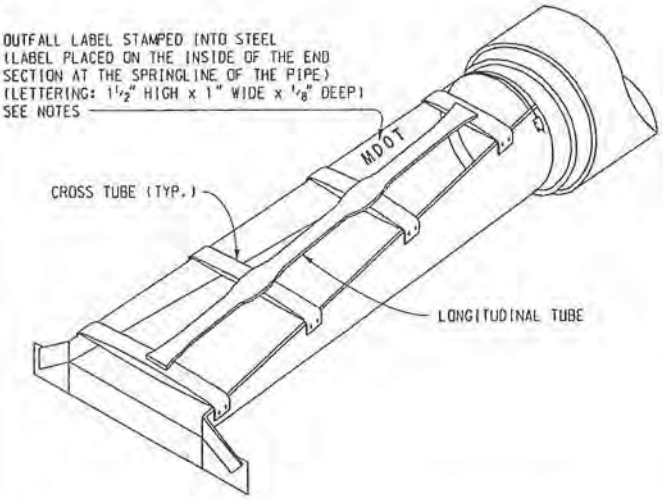
(LONGITUDINAL DRAINAGE INSTALLATION SHOWN)

METAL CULVERT SLOPED END SECTION FOR ARCH PIPE

NOTE:
IN LONGITUDINAL DRAINAGE SITUATIONS, CROSS TUBES ARE REQUIRED AT A 24" MAXIMUM SPACING. THE NUMBER OF CROSS TUBES REQUIRED WILL VARY DEPENDING ON THE LENGTH OF THE CULVERT SLOPED END SECTION.



METAL CULVERT SLOPED END SECTION SHOWING CROSS TUBES USED FOR LONGITUDINAL DRAINAGE INSTALLATIONS



NOTE:
IN TRANSVERSE DRAINAGE SITUATIONS, NO TUBES ARE REQUIRED WHEN THE "W" DIMENSION IS 30" OR LESS. CROSS TUBES ARE REQUIRED WHEN THE CLEAR SPAN DIMENSION IS LARGER THAN 30". THE NUMBER OF CROSS TUBES WILL VARY DEPENDING ON THE LENGTH OF THE LONGITUDINAL TUBE REQUIRED. WHEN THE "W" DIMENSION IS 36" TO 60", ONE LONGITUDINAL TUBE IS REQUIRED. WHEN THE "W" DIMENSION IS LARGER THAN 60", TWO LONGITUDINAL TUBES EQUALLY SPACED ARE REQUIRED. LONGITUDINAL TUBES SHALL BE WELDED TO CROSS TUBES TO ATTAIN A SINGLE PIECE STRUCTURE.

WARNING-FRESH (WET) CONCRETE IS IRRITATING TO THE SKIN AND EYES

Contains Portland Cement. Wear Rubber Boots and Gloves. PROLONGED CONTACT MAY CAUSE SEVERE BURNS. Avoid Contact With Eyes and Prolonged Contact With Skin. In Case of Contact With Skin or Eyes, Flush Thoroughly With Water. If Irritation Persists Get Medical Attention. KEEP CHILDREN AWAY FROM FRESH (WET) CONCRETE

CONCRETE IS A USER SHABLE COMMODITY and BECOMES the PROPERTY of the PURCHASER UPON LEAVING the PLANT. ANY CHANGES or CANCELLATION of ORIGINAL INSTRUCTIONS MUST be TELEPHONED to the OFFICE BEFORE LOADING STARTS.

The undersigned promises to pay all costs including reasonable attorneys fees, incurred in collecting amounts owed.

All accounts not paid within 30 days of delivery will bear interest at the rate of 18% per annum.

Not Responsible for Reactive Aggregate or Color Quality. No Claim Allowed unless Made at Time Material is Delivered.

A $15.00 Service Charge and Loss of the Cash Discount will be Collected on all Returned Checks.

Excess Delay Time Charged: $60.00/HR

PROPERTY DAMAGE RELEASE
TO BE SIGNED IF DELIVERY TO BE MADE INSIDE CURB LINE!

Dear Customer-The driver of this truck is presenting this RELEASE to you for your signature as of the opinion that the size and weight of his truck may possibly cause damage to the premises and/or adjacent property if he places the material on the load where you desire it. It is our wish to help you in every way that we can, but in order to do so the driver is requesting that you sign the RELEASE relieving him and this supplier from any responsibility from any damage that may occur to the premises and/or adjacent property, buildings, sidewalks, driveways, curbs, etc. by the delivery of this material, and that you also agree to help him remove mud from the wheels of his vehicle so that he will not litter the public street. Further, as additional consideration the undersigned agrees to indemnify and hold harmless the driver of this truck and this supplier for any and all damage to the premises and/or adjacent property which may be claimed by anyone to have arisen out of delivery of this order.

Field Report

TO ☐ Owner ☐ Architect ☐ Engineer
BY ☐ Field

Project: HUBBELL PROCESSING AREA PLAN A		**Field Report No.:** 3	
Owner: S.O.M.I.C.H DTMB DEQ		**UPEA Project No.:**	
Date: 7-8-2017	**Time:** 8:00 – 11:00	**Weather:** CLEAR BREEZY	**Temp Range:** 68 – 78
Est. % of Completion: BRUSHING STARTED		**Conformance with Schedule:** ____	
Work in Progress: HAUL ROAD DEVELOPMENT		**Present at Site:** BONNEN, GMA, BG IN PM	

PREPARATION OF MONITORING CIRCUIT. INITIATION OF BASE LINE MONITORING READINGS. CORRECTION OF NORTH LINES MONITOR STATIONS TO COMPLY W/ B&B Challenge of Perimeter Clearance. EVACUATION OF EAST LINE TO DETERMINE HOW TO COMPLY W/ RESTRICTED ACCESS REQUIRE.

Observations: B&B BRUSHHOGGING HAUL ROAD & ACCESS ROAD & FENCE PERIMETER EQUIPMENT DOWN ≈ 9:25 TO 10:25. DAMAGED HYDRAULIC HOSE - REPAIRED BACK TO BRUSHING @ 11:00.

PREVIOUSLY SET MONITORING STATIONS RELOCATED AS REQUIRED BY S. BONNEN

A) MOVED 100' NORTH - NOW 200' NORTH OF FENCE ON EDGE OF CENTER CANAL RAIL
B) MOVED 150' NORTH TO EDGE OF WOOD LINE
C) MOVED 200' NORTH TO POINT 10' OFF BREAK WATER @ "CAMP SITE"
D) MOVED NORTH TO SOUTH END OF "BULKHEAD LOADING DOCK" RIP RAP JETTY, DRIVEN ON LAKE SIDE OF BREAK WATER. TEMPORARY PARTICLE SITE ADDED FOR TODAY.
E) ORIGINAL PYLON NOW INSIDE SOUTH EXCLUSION FENCE. MOVED ≈ 60' S of FENCE

Items to Verify: BILL G TO SHUT DOWN MONITOR STATIONS AT 4:30

a) PERMANENT MONITORING STATIONS - ACCEPTABLE
b) AUTHORIZED ACCESS TO EAST (DOWN WIND) SIDE
c) BRIAN SAID EXCEPTION BEING PROCESSED TO ALLOW Chloride Add. TO DUST WATER
d) PLAN SHOWS: Perimeter Fence across "BULKHEAD LOADING DOCK" PLACEMENT OF PERIMETER BARRIER SURROUNDS "BLD". FOOT ACCESS ACROSS "BLD" ON BULKHEAD REFUSED. ONLY EAST SIDE ACCESS PERMITTED IS ONLY BULKHEAD BREAK WATER OR TORCH LAKE LOADING

Information or Action Required:

A) ESTABLISH SOME FORM OF "DOWN WIND" MONITORING ON EAST SIDE BREAKWATER. ACCESS HEAVILY RESTRICTED BY "BULK HEAD LOADING DOCK" AND VEGETATION BLOCKS.
B) MUST ESTABLISH MONITOR STATION "D" ON BULKHEAD W/ SAFE ACCESS
C) NO ACCESS BETWEEN "D" & "E". MUST ACCESS VIA "G" → "F" → "E".
D) COORDINATE W/ BILL G ON MONDAY TO FINALIZE DATA DEVELOPMENT

Personal and/or Excursion Samples. OSHA Asbestos PELs are 1.0 f/cc for 30 min excursion and 0.1 f/cc for 8 hour TWA. Est. limit of detection: 7 f/mm² or 0.055 f/field. (<) refers to less than limit of detection. Results are not blank-corrected unless noted by analyst. Exposure and TWA calculations are based on client-supplied air volumes and times, and assume zero exposure for time not sampled. Analyst relative standard deviation (Sr) calculated using historical data. Calculated values are reported to three significant figures. The test results reported relate only to the samples submitted. NY Samples fall under NY Certificate #11413

Area Samples. OSHA Asbestos PEL is 0.1 f/cc for 8 hour TWA. Est. limit of detection: 7 f/mm² or 0.055 f/field. (<) refers to less than limit of detection. Results are not blank-corrected unless noted by analyst. Exposure and TWA calculations are based on client-supplied air volumes and times, and assume zero exposure for time not sampled. Analyst relative standard deviation (Sr) calculated using historical data. Calculated values are reported to three significant figures. The test results reported relate only to the samples submitted. NY Samples fall under NY Certificate #11413

Area Samples. OSHA Asbestos PEL is 0.1 f/cc for 8 hour TWA. Est. limit of detection: 7 f/mm² or 0.055 f/field. (<) refers to less than limit of detection. Results are not blank-corrected unless noted by analyst. Exposure and TWA calculations are based on client-supplied air volumes and times, and assume zero exposure for time not sampled. Analyst relative standard deviation (Sr) calculated using historical data. Calculated values are reported to three significant figures. The test results reported relate only to the samples submitted. NY Samples fall under NY Certificate #11413

unit143116july26afternoon

pDR ID: 143116
Tag Number: 10
Number of logged points: 243
Start time and date: 14:26:46 26-Jul
Elapsed time: 04:03:00
Logging period (sec): 60
Calibration Factor (%): 100
Max Display Concentration: 0.519 mg/m3
Time at maximum: 16:42:03 Jul 26
Max STEL Concentration: 0.050 mg/m3
Time at max STEL: 16:56:17 Jul 26
Overall Avg Conc: 0.015 mg/m3
Logged Data:
