

ERRATA

December 30, 2013 Part 201 Criteria Tables

A few minor errors were identified in the December, 2013 promulgated criteria tables. The corrections are presented below. The errors cannot be corrected until new criteria rules are promulgated.

Chemical/criterion	Location	As promulgated	Correction
Asbestos	Table 1 Residential Drinking Water Criteria column	7.0E MFL (A)	7.0 MFL (A)
Arsenic	Table 2 and 3 Hazardous Substance column	Arsenic	Arsenic (B)
Cobalt	Table 2 and 3 Hazardous Substance column	Cobalt	Cobalt (B)
Ethanol	Table 3 Direct Contact Criteria column	1.0E+9 (C,D, DDD)	1.0E+9 (C,D, DD)
Selenium	Table 1 Groundwater Surface Water Interface Criteria column	5	5.0
Sodium	Table 1 Residential Drinking Water Criteria column	2.3E+S (HH)	2.3E+5 (HH)

Please note: In the preparation of the MS Excel versions of the Part 201 cleanup criteria tables, the software changed the default number of significant figures in some scientifically formatted criteria from their respective format presented in the promulgated rules. For example, a value of 1.2E+7 in the rules was reformatted to 1.20E+07 in the Excel version posted to the Remediation and Redevelopment Division homepage. The software retained the correct scientific formatting for those criteria followed by a footnote. Because this formatting issue does not affect the numeric criteria requirement established in the rules and in an effort to expedite delivery of the Excel versions of these tables being requested by interested parties, this minor formatting issue has not been corrected in the Excel tables.
