

tap into more savings

When it comes to water, less is more.

Using less water inside your home protects the environment in surprising ways. When you send water down household drains and toilets, it goes to the sewage treatment plant or your septic system for treatment. Lower water volumes allow for more efficient and effective treatment, which is important since the treated water is discharged into your local lake or river.

Use water wisely. You'll save money, too!

- Turn off the water when you brush your teeth or shave your face. You'll save 2-4 gallons each time.
- Use the proper load-size setting for washing machines and dishwashers.
- Recycle water. Use water from pet bowls, fresh-water fish tanks, and kiddie pools for your plants.
- Keep a pitcher of water in the fridge so you can get a cold drink without running the tap.
- Reduce the amount of time you spend in the shower. Use a timer. Try for 5 minutes.
