

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY  
WATER BUREAU  
NOVEMBER 2008

STAFF REPORT

MICHIGAN BEACH MONITORING  
YEAR 2007 ANNUAL REPORT

## INTRODUCTION

The Michigan Department of Environmental Quality (MDEQ), Surface Water Quality Monitoring Program, is summarized in the January 1997 report entitled, "A Strategic Environmental Quality Monitoring Program for Michigan's Surface Waters" (Strategy) (MDEQ, 1997). The objectives of the beach monitoring component of the Strategy are listed below:

1. Assist local health departments to implement and strengthen beach monitoring programs.
2. Determine whether waters of the state are safe for total body contact recreation.
3. Create and maintain a statewide database.
4. Compile data to determine overall water quality.
5. Evaluate the effectiveness of MDEQ programs in attaining water quality standards (WQS) for pathogen indicators.

### 1. ASSIST LOCAL HEALTH DEPARTMENTS TO IMPLEMENT AND STRENGTHEN BEACH MONITORING PROGRAMS

#### Beach Monitoring

The monitoring of beaches in Michigan is voluntary and is conducted by the local health departments. Health departments are required to comply with Michigan's WQS according to R 333.12544 of the Public Health Code, 1978 PA 368 (Act 368), as amended. According to R 333.12541 of Act 368, a local health officer or an authorized representative of a local health department that conducts tests at bathing beaches is required to notify the MDEQ and other entities of the test results within 36 hours of conducting a test or evaluation. This rule also states that the local health department may petition the circuit court for an injunction ordering the owners of a beach to close the beach. Owners of public bathing beaches must post a sign that states whether or not the bathing beach has been tested, and if so, the location of the test results.

The MDEQ awards grants to local health departments to monitor and report levels of *E. coli* in the swimming areas of public beaches. In selecting recipients for grant awards, the MDEQ considers all of the following:

- Location and frequency of beach use.
- History of beach monitoring and bacterial contamination.
- Ability to communicate results to the public in an efficient manner.
- Ability to respond and take appropriate action in the event of beach contamination.
- Proximity of beach to a known bacterial contamination source.
- Innovativeness and feasibility of proposed project.
- Ability to reduce time delay between sampling and results.

Since 2000, the number of counties with a beach monitoring program has more than doubled with the assistance of state and federal grants. A history of Michigan's beach monitoring program growth is shown below in Table 1.

Table 1. The number of counties where at least one beach was monitored and the total number of beaches that were monitored each year.

Year	2007	2006	2005	2004	2003	2002	2001	2000
Number of Counties that Monitored	57	58	52	53	38	26	36	24
Number of Beaches Monitored	474	440	406	494	392	210	250	<50

### Funding for Beach Monitoring

Prior to 2000, health departments relied on local funding to conduct beach monitoring programs. Local funding was often not sufficient to execute a comprehensive monitoring program. Beginning in 2000, funding became available from the Clean Michigan Initiative-Clean Water Fund (CMI-CWF). In 2003, the United States Environmental Protection Agency (USEPA) also began awarding funds from the Beaches Environmental Assessment and Coastal Health Act (BEACH Act) for monitoring Great Lakes beaches.

#### *CMI-CWF Grants*

The MDEQ currently distributes CMI-CWF funds to aid in the development and implementation of inland lake beach monitoring programs throughout the state. In 2000 and 2001, CMI-CWF funds were distributed for inland lakes and Great Lakes beach monitoring programs. In 2002, no CMI-CWF funds were distributed, but future funding was designated for inland beaches only due to the availability of BEACH Act funding for Great Lakes beaches.

The CMI-CWF grant funds are awarded by the MDEQ to local health departments and nonprofit entities, which include county, city, township, and village agencies, watershed and environmental action councils, universities, regional planning agencies, and incorporated nonprofit organizations. The majority of grants are awarded to local health departments. If a group other than a local health department is awarded a grant, the MDEQ requires the group to work closely with their local health department.

The CMI-CWF offers reliable funding for the monitoring of surface water over a period of approximately 15 years. Since 2000, the MDEQ has awarded \$823,344, including 13 awards totaling \$100,000 in 2007. A complete award history is shown in Appendix A.

#### *BEACH Act Grants*

The MDEQ distributes BEACH Act funds to aid in the development and implementation of Great Lakes beach monitoring programs. State, local, and tribal governments having coastal waters are eligible to apply for the BEACH Act grants. The USEPA (2002) has published performance criteria that must be met by grant recipients. Since the BEACH Act was initiated in 2003, the MDEQ has allocated \$1,217,765, including 23 awards totaling \$212,766 in 2007. A complete award history is shown in Appendix B.

## 2. DETERMINE WHETHER WATERS OF THE STATE ARE SAFE FOR TOTAL BODY CONTACT RECREATION

### Pathogens

Pathogens are microorganisms (bacteria, protozoans, or viruses) that cause disease. Most waterborne pathogens are readily found in the feces of humans and other warm-blooded animals. Gastroenteritis is the most common illness associated with swimming in contaminated water although other illnesses can occur. The severity of the disease or illness depends on the amount of exposure and the type of pathogen [(Appendix C) USEPA, 2001]. The USEPA (1986 and 2002) has determined that *E. coli* and *Enterococci* are appropriate indicators for the presence of waterborne pathogens in fresh water.

### Sources of Bacterial Contamination

Combined Sewer Overflows are discharges of raw or inadequately treated sewage from sewer systems that are designed to carry both domestic sewage and storm water to Wastewater Treatment Plants (WWTPs). When a storm event occurs and the volume of the wastewater is larger than the WWTP can process, the excess untreated sewage and storm water are discharged into local waterways.

Sanitary Sewer Overflows are discharges of raw or inadequately treated sewage from municipal sanitary sewer systems, which are designed to carry domestic sanitary sewage but not storm water. Systems that contain cracks, obstructions, storm water connections, or that are undersized with sewers and pumps too small to carry all the sewage may leak or overflow raw sewage from manholes, bypass pump stations, and WWTPs into the surrounding waters, particularly during extreme hydrologic events.

Failing septic systems can cause leaching and/or runoff into the waterways, causing bacterial contamination. Urban storm water runoff from roads, roofs, construction sites, parking lots, etc., may contain fecal matter from pets and wildlife. Excessive waterfowl near the beaches and animal waste runoff from farms and fields can contribute to elevated bacterial levels. Illicit connections of pipes containing sewage to storm sewers or surface waters are also a potential source of bacterial contamination.

### *E. coli* Standard

The MDEQ requires beaches to be monitored according to the Part 4 rules, WQS, promulgated under Part 31, Water Resources Protection, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, as follows:

#### R 323.1062 Microorganisms

Rule 62(1): All waters of the state protected for total body contact recreation shall not contain more than 130 *E. coli* per 100 milliliters (ml), as a 30-day geometric mean. Compliance shall be based on the geometric mean of all individual samples taken during five or more sampling events representatively spread over a 30-day period. Each sampling event shall consist of three or more samples taken at representative locations within a defined sampling area. At no time shall the waters of the state protected for total body contact recreation contain more than a maximum of 300 *E. coli* per 100 ml. Compliance shall be based on the geometric mean of three or more samples taken during the same sampling event at representative locations within a defined sampling area.

All surface waters of the state are protected for total body contact according to the Part 4 rules, as follows:

#### R 323.1100 Designated Uses

Rule 100(2): All surface waters of the state are designated for, and shall be protected for, total body contact recreation from May 1 to October 31 in accordance with the provisions of R 323.1062. Total body contact recreation immediately downstream of wastewater discharges, areas of significant urban runoff, combined sewer overflows, and areas influenced by certain agricultural practices is contrary to prudent public health and safety practices, even though water quality standards may be met.

#### Beach Closures

Beach advisories or closures in Michigan are most commonly issued because of elevated counts of *E. coli* in water samples collected from the shoreline of a water body. Health departments use the daily and the 30-day geometric mean to determine if a beach closure or an advisory should be issued. The health department notifies the owner of the beach when a beach should be closed. If necessary, the health department can petition the court for an injunction to force the owner to close the beach. The beach closure or advisory remains in effect until additional tests meet the WQS.

### 3. CREATE AND MAINTAIN A STATEWIDE DATABASE

The MDEQ developed a centralized statewide database to track bathing beach monitoring *E. coli* test results. These results are available electronically to the public via the MDEQ's Web site. The Web site includes information about individual beaches (by county or lake name), frequency of testing, monitoring history, beach closures, and monitoring efforts. The Web site also provides information for beach monitoring procedures and methods, additional links to beach monitoring resources, and contact information for federal, state, and local beach monitoring staff.

#### Reporting Beach Monitoring Data

According to R 333.12541(2), all local health departments are required to report their beach monitoring test results to the MDEQ within 36 hours of conducting the test or evaluation. Health departments receiving beach monitoring grants are required to enter their data on the MDEQ's Web site, while other health departments are encouraged to report their data on the Web site.

As a requirement of the BEACH Act, the MDEQ submits beach monitoring data to the USEPA. The USEPA has created several Web pages for beach information that can be found at <http://www.epa.gov/beaches/>, along with an online directory of information regarding the water quality at our nation's beaches entitled, "Beach Advisory Closing Online Notification," that can be found at <http://www.epa.gov/waterdata/beacon-20-beach-advisory-and-closing-online-notification>.

### 4. COMPILE DATA TO DETERMINE OVERALL WATER QUALITY

#### List of Beaches

Michigan beaches identified by local health departments and the MDEQ are listed in Appendices D.1 (inland lakes-monitored) and D.2 (inland lakes-not monitored) and Appendices E.1 (Great Lakes-monitored) and E.2 (Great Lakes-not monitored). They are also listed on the MDEQ's beach Web site. The beaches are arranged alphabetically by county,

then water body, then location (site name). There are 550 identified public beaches on inland lakes and rivers and 594 identified public beaches on the Great Lakes.

Synopsis of Data

In 2007, monitoring was conducted at 474 (269 inland and 205 Great Lake) public beaches in 57 counties in Michigan. Out of 5,475 daily samples collected, 145 (2.6 percent) exceeded Michigan’s WQS (Appendix F). The exceedances were reported from 77 beaches (16.2 percent of all monitored beaches), 61 (12.9 percent) of which reported beach closures or advisories (89 incidents lasting a total of 1,568 days). The number of beaches with exceedances differed from the number of beaches with closures or advisories due to any of the following: (1) multiple exceedances were reported for a single closure; (2) water samples were tested before or after the swimming season; (3) delays in receiving test results; or (4) a second test (follow-up sample) was used to confirm an exceedance. A summary of exceedances of the *E. coli* WQS for inland and Great Lakes beaches from 2000 to 2007 is provided in Table 2.

Table 2. Beach closures or advisories, total number of days closed, percent of monitored beaches with a closure, and percent of samples exceeding WQS for all public beaches in Michigan.

Year	2007	2006	2005	2004	2003	2002	2001	2000
Closures or Advisories	89	110	80	92	140	117	119	276
Total Days Closed	1,568	886	474	578	>140	211	122	*
Percent of Monitored Beaches with Closure	12.9	18.4	19.0	13.5	10.2	*	*	*
Percent of Samples Exceeding WQS	2.6	3.6	2.8	3.1	3.0	4.2	3.9	9.2

\*data not available

Synopsis of Data from Great Lakes Beaches

In 2007, monitoring was conducted at 205 Great Lakes public beaches in 38 counties in Michigan. Out of 2,518 daily samples collected, 77 (3.1 percent) exceeded Michigan’s WQS (Appendix F). The exceedances were reported from 43 beaches (21 percent of monitored Great Lakes beaches), 30 of which reported beach closures or advisories (46 incidents lasting a total of 443 days). A summary of the exceedances of the *E. coli* WQS for Great Lakes beaches is provided in Table 3.

Table 3. Number of exceedances and closures/advisories for Great Lakes beaches monitored in 2007.

a. Number of Exceedances Reported per Beach	b. Number of Beaches with Exceedance(s)	Total Number of Exceedances (a x b)	c. Number of Closures or Advisories per Beach	d. Number of Beaches with Closures or Advisories	Total Number of Closures or Advisories (c x d)
1	31	31	1	20	20
2	6	12	2	7	14
4	3	12	3	1	3
7	2	14	4	1	4

<b>TOTAL</b>	<b>43</b>	<b>77</b>		<b>30</b>	<b>46</b>

A summary of the 2007 beach monitoring and beach closure/advisory data for each of the Great Lakes, Lake St. Clair, and connecting channels is provided in Table 4.

Table 4. Number of public beaches and closures/advisories for the Great Lakes, Lake St. Clair, and connecting channels.

Water Body	Number of Public Beaches	Number of Beaches that were Monitored	Number of Beach Closures or Advisories	Total Number of Days Closed
Lake Erie	2	2	0	0
Lake Huron	159	63	14	89
Lake Michigan	299	109	16	126
Lake Superior	115	21	1	2
Lake St. Clair	5	5	12	64
Great Lakes Connecting Channels	14	5	3	162
<b>TOTAL</b>	<b>594</b>	<b>205</b>	<b>46</b>	<b>443</b>

#### Synopsis of Data from Inland Beaches

In 2007, monitoring was conducted at 269 inland lake public beaches in 37 counties in Michigan. Out of 2,957 daily samples collected, 68 (2.3 percent) exceeded Michigan's WQS (Appendix F). The exceedances were reported from 34 beaches (21 percent of monitored inland beaches), 31 of which reported beach closures or advisories (43 incidents lasting a total of 1,125 days). A summary of the exceedances of the *E. coli* WQS for inland lakes beaches is provided in Table 5.

Table 5. Number of exceedances and closures/advisories for inland beaches monitored in 2007.

a. Number of Exceedances Reported per Beach	b. Number of Beaches with Exceedance(s)	<b>Total Number of Exceedances (a x b)</b>	c. Number of Closures or Advisories per Beach	d. Number of Beaches with Closures or Advisories	<b>Total Number of Closures or Advisories (c x d)</b>
1	19	<b>19</b>	3	2	<b>6</b>

5	1	<b>5</b>			
8	1	<b>8</b>			
<b>TOTAL</b>	<b>34</b>	<b>68</b>		<b>31</b>	<b>43</b>

#### Synopsis of the Beach Sanitary Surveys

In 2007, additional monitoring occurred at 26 Great Lakes beaches (Figure 1; Appendix G) to identify the sources of high levels of *E. coli* through the use of beach sanitary surveys. The USEPA awarded Michigan a \$108,330 grant to perform these surveys throughout the summer during routine beach monitoring. The beach sanitary survey project was initiated in response to a need identified by the Great Lakes Regional Collaboration to assist beach managers with identifying pollution sources, sharing information, and planning source remediation.

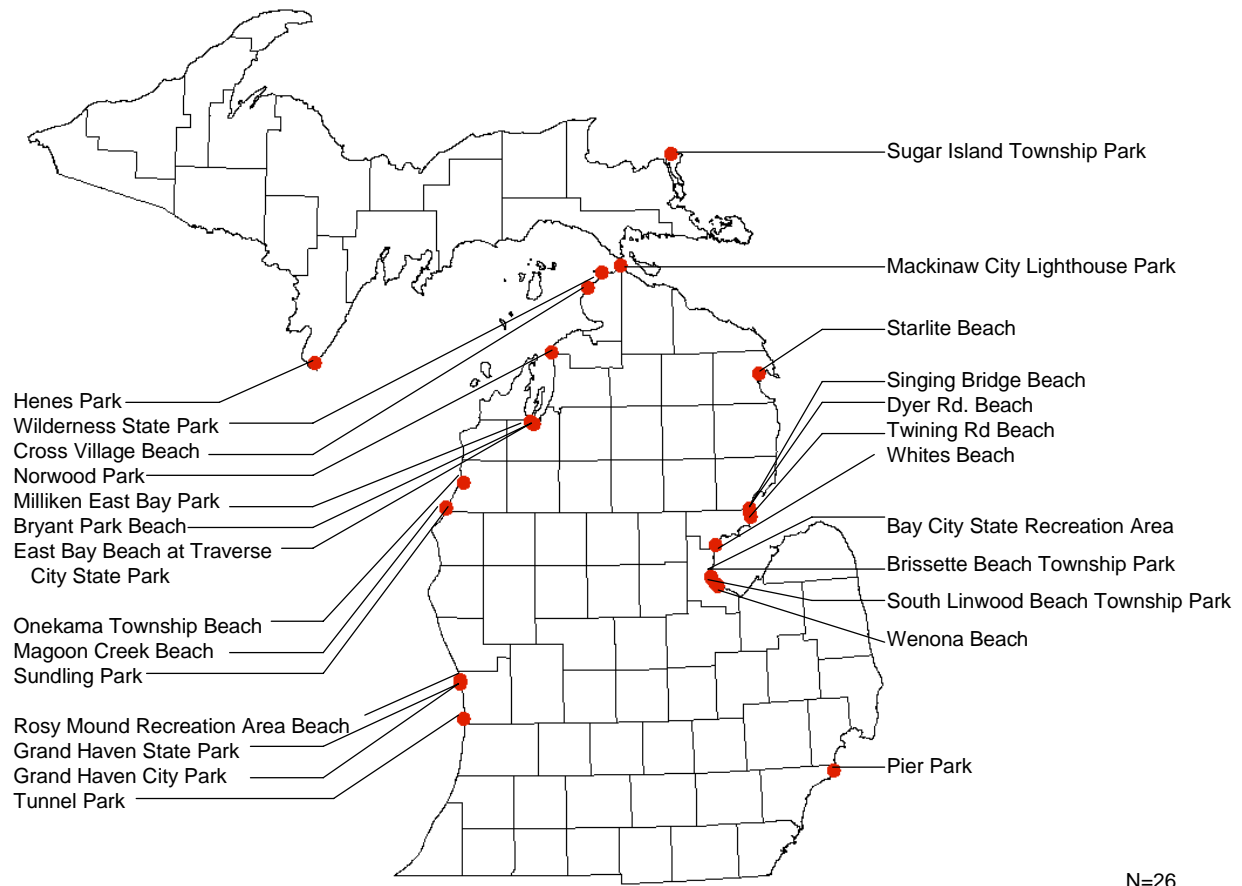

Figure 1. Twenty-six beaches selected to participate in the beach sanitary survey project.

As a result of this project, many sources having a direct effect or impact on WQS were identified, which included rainfall and wind, point sources, physical structures (e.g., piers and bays), algal mats, waterfowl, and failing septic systems. Storm water was identified as an important source of contamination at many of the beaches.

The beach sanitary survey project was valuable because it resulted in a greater awareness and understanding of the factors that impact beach water quality. This effort also led to the initial development of predictive models. The predictive models will eventually provide local beach managers with more meaningful and timely information to determine if beach water quality meets WQS for full body contact. These efforts also improved the effectiveness of local beach monitoring and notification programs, not only at the selected beaches, but at beaches throughout Michigan.

The beach sanitary survey will be used by local health departments to provide information that can be used to facilitate Total Maximum Daily Load (TMDL) development. More detailed results of the sanitary survey project are available in the individual reports submitted by the local health departments.

### Synopsis of *E. coli* Database

The MDEQ awarded a grant to Michigan State University (MSU) to complete a number of tasks associated with the MDEQ's beach monitoring *E. coli* database. The tasks that were undertaken by MSU included evaluating *E. coli* data for trends, performing statistical tests such

as the 95<sup>th</sup> percentile test, and coordinating with the beach sanitary survey project and TMDL program.

MSU was able to identify several trends in the *E. coli* data. For instance, MSU found an increase in *E. coli* levels in individual samples over time, but a decrease in daily geometric means of samples were identified, which was attributed to the reporting of different data from different sites and the ability of the geometric mean to average individual samples. A Hazen 95<sup>th</sup> percentile calculation was used while investigating the *E. coli* database. This analysis identified bays, Great Lakes, and inland lakes as having the lowest *E. coli* values. Statistical analysis were performed on 15 individual sites and it was determined that 6 of these sites had a weak correlation between *E. coli* levels and 48-hour precipitation. All of the results from this study can be found in the report titled, "Surface Water Summary of *E. coli* and Pathogens in Michigan."

## 5. EVALUATE THE EFFECTIVENESS OF MDEQ PROGRAMS IN ATTAINING WQS FOR PATHOGEN INDICATORS

### Beach Water Quality Data that do not Meet WQS

Water quality protection continues to be a great concern in Michigan and depends on the collective efforts of multiple pollution prevention programs. As part of the beach monitoring program, health departments and the MDEQ review beach water quality data including the number of beach closures or advisories. This information is used in federal, state, and local pollution prevention programs to determine which water bodies are not meeting WQS and to help identify sources of pollution that affect beach water quality.

Section 303(d) of the federal Clean Water Act and the USEPA's Water Quality Planning and Management Regulations (Title 40 of the Code of Federal Regulations, Part 130) require states to develop TMDLs for water bodies that are not meeting WQS. The TMDL process establishes the allowable loadings of pollutants to a water body based on the relationship between pollution sources and water quality conditions. TMDLs provide a basis for determining the pollutant reductions necessary from both point and nonpoint sources to restore and maintain the quality of the water resources.

Waters associated with public beaches are considered to not attain WQS when *E. coli* monitoring data collected by county health departments during the total body contact recreation season of May 1 to October 31 (as described by R 323.1100(2)) meet one or more of the following decision elements:

- *E. coli* concentrations exceed the geometric mean WQS of 130 *E. coli* per 100 ml based on weekly samples collected over a minimum of 16 weeks.
- Ten percent of the sample results exceed the daily maximum WQS of 300 *E. coli* per 100 ml based on weekly samples collected over a minimum of 16 weeks.
- Two or more sample results collected at any time during the total body contact recreation season of May 1 to October 31 exceed the partial body WQS of 1,000 *E. coli* per 100 ml.

The water bodies that exceed WQS and require a TMDL are placed on the Section 303(d) list and TMDL development schedule. A water body is not placed on the TMDL development schedule if a remedial action plan is already in place. Based on beach monitoring data,

41 beaches have been listed on the Section 303(d) list because they met at least one of the three criteria for placement of a beach on the TMDL list.

Appendix C. Waterborne Pathogens

Pathogen		Disease	Effects
Bacteria	Escherichia coli (enteropathogenic)	Gastroenteritis	Vomiting, diarrhea, death in susceptible populations
	Helicobacter pylori	Gastritis	Diarrhea. Peptic ulcers are a long-term sequela
	Legionella pneumophila	Legionellosis	Acute respiratory illness
	Leptospira	Leptospirosis	Jaundice, fever
	Pseudomonas	Infections in immunocompromised individuals	Urinary tract infections, respiratory system infections, dermatitis, soft tissue infections, bacteremia, and a variety of systemic infections
	Salmonella typhi	Typhoid fever	High fever, diarrhea, ulceration of the small intestine
	Salmonella	Salmonellosis	Diarrhea, dehydration
	Shigella		Bacterial dysentery
	Vibrio cholera	Cholera	Extremely heavy diarrhea, dehydration
	Yersinia enterocolitica	Yersinosis	Diarrhea
Protozoans	Balantidium coli	Balantidiasis	Diarrhea, dysentery
	Cryptosporidium	Cryptosporidiosis	Diarrhea
	Entamoeba histolytica	Ameobiasis (amoebic dysentery)	Prolonged diarrhea with bleeding, abscesses of the liver and small intestine
	Giardia lamblia	Giardiasis	Mild to severe diarrhea, nausea, indigestion
	Naegleria fowleri	Amoebic meningoencephalitis	Fatal disease; inflammation of the brain
Viruses	Adenovirus (31 types)	Respiratory disease	Eye infections, diarrhea
	Astroviruses	Gastroenteritis	Vomiting, diarrhea
	Enteroviruses (67 types, e.g., polio, echo, and Coxsackie viruses)	Gastroenteritis	Diarrhea. Heart anomalies and meningitis are long-term sequela and are very rare
	Hepatitis A and E	Infectious hepatitis	Jaundice, fever
	Caliciviruses (Norwalk- and Sapporo-like viruses)	Gastroenteritis	Vomiting, diarrhea
	Reovirus	Gastroenteritis	Vomiting, diarrhea
	Rotavirus	Gastroenteritis	Vomiting, diarrhea
