PANEL 5 OF 10

REFERENCE MARK	ELEVATION IN FT. (NGVD)[1]	DESCRIPTION OF LOCATION
RM 1	599.09	Railroad spike in north side of power pole located approximately 28 feet south of road opposite house No. 9505 Hall Road, approximately 2,500 feet east of Romeo Plank Road.
RM 2	597.84	Railroad spike in south side of telephone pole located approximately 1,300 feet south of Hall Road, approximately 24 feet east of Romeo Plank Road at house No. 44500.
RM 3	594.14	Chiseled square on northwest corner of top step of northwest wing wall of Romeo Plank Road bridge over Gloede Ditch.
RM 4	597.27	Macon County benchmark No. CL-35 located approximately 60 feet west of Romeo Plank Road, approximately 33 feet south of Nineteen Mile Road.
RM 5	598.16	Railroad spike in north side of power pole located approximately 100 feet east of house No. 18900 Cass Avenue, approximately 28 feet south of road approximately 1,300 feet southeast of Nineteen Mile Road.
RM 6	596.82	Railroad spike in northeast side of telephone pole located approximately 25 feet northeast of Cass Avenue at house No. 19585, approximately 1,800 feet northwest of Heydenreich Road.
RM 7	596.91	Railroad spike in east side of power pole on southeast corner of Cass Avenue and Clinton River Road intersection.
RM 8	596.78	Chiseled square centered on top of concrete headwall for crossing culvert under Heydenreich Road located approximately 52 feet south of Hall Road, approximately 18 feet west of Heydenreich Road.
RM 9	598.44	PK nail in east side of 12-inch ash located approximately 26 feet west of Heydenreich Road opposite house No. 44460, approximately 1,500 feet south of Hall Road.
RM 10	596.36	Chiseled cross on top of first stepdown on northwest corner in abutment of Dunham Road bridge over Miller Drain.
RM 11	597.49	Large nail in west side of power pole located approximately 18 feet east of Heydenrrich Road, approximately 25 feet south of house No. 42375, approximately 1,400 feet south of Dunham Road.
RM 12	586.05	Chiseled square on southeast corner of northeast concrete wing wall at Heydenreich Road bridge over Miller Drain.
RM 13	601.06	U.S. Army Corps of Engineers disk located at north end of east abutment of Hall Road bridge over Clinton River North Branch.
RM 14	598.45	Railroad spike in north side of power pole located approximately 60 feet south of Hall Road at house No. 21960, approximately 1,100 feet west of Elizabeth Road.
RM 15	598.96	PK nail in west side of power pole located approximately 1,500 feet south of Hall Road, approximately 18 feet east of road at house No. 44492 Elizabeth Road.
RM 16	597.44	Brass disk in concrete post stamped "Macomb County Road Commission SN 46" located approximately 55 feet east of Little Road at house No. 43700, approximately 350 feet north of Dunham Road.
RM 17	598.35	Railroad spike in south side of power pole located approximately 27 feet north of Dunham Road at house No. 21081, approximately 2,600 feet east of Heydenreich Road.
RM 18	598.48	Chiseled cross on west bolt of fire hydrant located approximately 100 feet north of house No. 43305 Little Road, approximately 700 feet south of Dunham Road.
RM 19	600.67	Chiseled cross on west bolt of fire hydrant located approximately 50 feet south of house No. 42142 Little Road, approximately 18 feet east of road, approximately 2,800 feet north of Cass Avenue.
RM 20	600.61	Chiseled cross on top of southwest bolt at northwest corner of concrete guardrail located at Cass Avenue bridge over Clinton River North Branch.
RM 21	600.56	U.S. Army Corps of Engineers tablet in southeast wing wall on Hayes Road bridge over Clinton River.
RM 22	606.67	Railroad spike in north side of power pole located approximately 200 feet east of Utica Road, approximately 50 feet west of house No. 15577 Millar Road, approximately 24 feet north of road.
RM 23	602.27	Bolt spike in southeast side of power pole located approximately 21 feet northwest of road at house No. 15879 Millar Road, approximately 1,300 feet east of Utica Road.

ELEVATION REFERENCE MARKS
PANEL 10 OF 10

REFERENCE MARK	ELEVATION IN FT. (NGVD)[1]	DESCRIPTION OF LOCATION
RM 46	604.58	Chiseled cross centered in middle of southwest concrete guardrail at Kelly Road bridge over Harrington Drain.
RM 47	605.08	Chiseled cross on east rim of gatewell casting on most easterly corner of Fairwood Drive and Ellery Drive.
RM 48	606.10	Chiseled cross on north rim of manhole casting on northwest corner of Contesti Drive and Young Drive.
RM 49	604.28	Railroad spike in south side of power pole on northwest corner of Contesti Drive and Tremlett Drive.

[1]National Geodetic Vertical Datum of 1929

LEGEND

SPECIAL FLOOD HAZARD AREAS INUNDATED BY 100-YEAR FLOOD

ZONE A	No base flood elevations determined.
ZONE AE	Base flood elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); base flood elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE A99	To be protected from 100-year flood by Federal flood protection system under construction; no base flood elevations determined.
ZONE V	Coastal flood with velocity hazard (wave action); no base flood elevations determined.
ZONE VE	Coastal flood with velocity hazard (wave action); base flood elevations determined.

FLOODWAY AREAS IN ZONE AE

OTHER FLOOD AREAS

ZONE X	Areas of 500-year flood; areas of 100-year flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 100-year flood.

OTHER AREAS

ZONE X	Areas determined to be outside 500-year floodplain.
ZONE D	Areas in which flood hazards are undetermined.

UNDEVELOPED COASTAL BARRIERS*

Identified 1983 — Identified 1990 or Later — Otherwise Protected Areas Identified 1991 or Later

*Coastal barrier areas are normally located within or adjacent to Special Flood Hazard Areas.

NOTES

This map is for use in administering the National Flood Insurance Program; it does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size, or all planimetric features outside Special Flood Hazard Areas. The community map repository should be consulted for possible updated flood hazard information prior to use of this map for property purchase or construction purposes

Coastal base flood elevations apply only landward of 0.0' National Geodetic Vertical Datum of 1929 (NGVD), and include the effects of wave action; these elevations may also differ significantly from those developed by the National Weather Service for hurricane evacuation planning.

Areas of special flood hazard (100-year flood) include Zones A, AE, AH, AO, A99, V, and VE.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures.

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the Federal Emergency Management Agency.

Floodway widths in some areas may be too narrow to show to scale. Floodway widths are provided in the Flood Insurance Study Report.

For adjoining map panels see separately printed Map Index.

NOTE: The coordinate system used for the production of this Flood Insurance Rate Map (FIRM) is Universal Transverse Mercator (UTM), North American Datum of 1927 (NAD27), Clarke 1866 spheroid. Differences in the datum and spheroid used in the production of FIRMs for adjacent communities may result in slight positional differences in map features at the community boundaries. These differences do not affect the accuracy of the information shown on the FIRM.

ATTENTION: Flood elevations on this map are referenced to the National Geodetic Vertical Datum of 1929. These flood elevations must be compared to structure and ground elevations referenced to the same datum. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, contact the National Geodetic Survey at the following address:

Vertical Network Branch, N/CG13
National Geodetic Survey, NOAA
Silver Spring Metro Center 3
1315 East-West Highway
Silver Spring, Maryland 20910
(301) 713-3191

BASE MAP SOURCE: Planimetric base map files were prepared by the Michigan Department of Natural Resources. These files were compiled at a scale of 1:24,000 from U.S. Geological Survey 7.5-Minute Series Topographic Maps. Additional information may have been derived from other sources. Users of this FIRM should be aware that minor adjustments may have been made to specific base map features.

ELEVATION REFERENCE MARKS

REFERENCE MARKS	ELEVATION FEET (NGVD)	DESCRIPTION OF LOCATION
RM 10	585.57	Railroad spike in northeast side of power pole located approximately 1000 feet southeast of Avery Street, 18 feet northeast of South River Road and 200 feet northwest of house No. 24625.
RM 11	599.91	Chiseled square on the northwest corner at the north end of east concrete walkway located at Groesbeck Highway bridge over the Clinton River.
RM 12	615.92	Railroad spike in north side of power pole located approximately 23 feet south of Harrington Boulevard, 12 feet east of Drake Road.
RM 13	593.74	Chiseled square centered in top concrete wall at northeast corner of Moravian Drive bridge over Clinton River.
RM 14	600.61	Chiseled cross on top of southwest bolt at northeast corner of concrete guard rail located at Cass Avenue bridge over North Branch Clinton River.
RM 15	596.91	Railroad spike in east side of power pole on southeast corner of Cass Avenue and Clinton River Road intersection.
RM 16	590.68	Chiseled square on northwest corner of the east concrete headwall at the canal on Clinton River Road located approximately 150 feet south of Canal Road.
RM 17	600.67	Chiseled cross on west bolt of fire hydrant located approximately 50 feet south of house No. 42142 Little Road, 18 feet east of road, 2800 feet north of Cass Avenue.
RM 18	598.48	Chiseled cross on west bolt of fire hydrant located approximately 100 feet north of house No. 43305 Little Road, 700 feet south of Dunham Road.
RM 19	598.35	Railroad spike in south side of power pole located 27 feet north of Dunham Road at house No. 21061, about 2600 feet east of Heydenreich Road.

ELEVATION REFERENCE MARKS

REFERENCE MARKS	ELEVATION FEET (NGVD)	DESCRIPTION OF LOCATION
RM 20	597.44	Brass disk in concrete post stamped "Macomb County Road Commission BM 46" located 55 feet east of Little Road at house No. [illegible], [illegible] feet north of Dunham Road.
RM 21	598.96	PK nail in west side of power pole located approximately 1500 feet south of Hall Road, 18 feet east of road at house No. 44492 Elizabeth Road.
RM 22	598.45	Railroad spike in north side of power pole located approximately [illegible] south of Hall Road at house No. 21[illegible], about 11[illegible] feet west of Elizabeth Road.
RM 23	601.06	U.S. Army Corps of Engineers disk located [illegible] Hall Road bridge over Clinton River North Branch.
RM 24	586.05	Chiseled square [illegible] southeast corner of the northeast concrete [illegible] at the Heydenreich Road bridge over Miller Drain.
RM 25	597.49	Large nail in west side of power pole [illegible] 18 feet east of Heydenreich Road [illegible] house No. 42[illegible], about 1400 feet south of Dunham Road.
RM 26	595.36	Chiseled cross on top of first stepdown on northwest corner [illegible] Dunham Road bridge over Miller Drain.
RM 27	598.44	PK nail in east side of 12-inch ash located 26 feet west of Heydenreich Road opposite house No. 44480, about 1500 feet south of Hall Road.
RM 28	596.79	Chiseled square centered on top of concrete headwall for crossing culvert under Heydenreich Road located approximately 52 feet south of Hall Road 18 feet west of Heydenreich Road.
RM 29	601.00	Chiseled square centered in the top of southwest wingwall at Harrington Boulevard bridge over Harrington Drain.

NOTES TO USER

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the Federal Insurance Administration.

This map was prepared to support minimum flood plain management regulations; it may not show all areas subject to flooding in the community or all planimetric features outside special flood hazard areas.

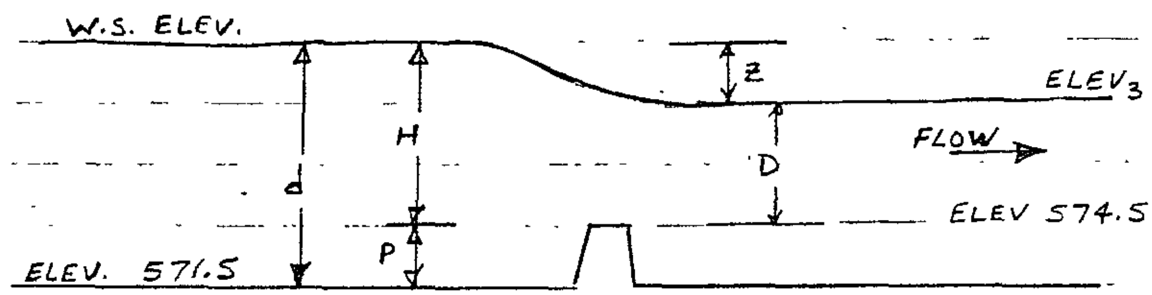
HARRISON TWP. FLOOD INSURANCE STUDY

Head loss computations for flows over Spillway weir



Loss computed by BAZIN'S FORMULA:

$$Q = L H^{3/2} \underbrace{\left(3.248 + \frac{.079}{H}\right)\left(1 + .55\frac{H^2}{d^2}\right)}_{\text{Bazin Coef}} \left(1.05 + .21\frac{D}{P}\right) \sqrt[3]{\frac{Z}{H}}$$

$$\left(\frac{Z}{H}\right)^{3/2}$$

L = width of weir = 216 ft

$P = 574.5 - 571.5 = 3.0$ ft

$D = ELEV_3 - 574.5$

$H = D + Z$

$d = H + P$

All elevations in U.S.G.S. Elevations **Exhibit B-3 (cont'd)**

11 May. 76
P.M.

D

Given

I $Q = 4300$ c.f.s.

$ELEV_3 = 575.94$ $D = 575.94 - 574.5 = 1.44$ ft. $P = 3.0$

(a) Assume $Z = 1.5$

Then $H = D + Z = 2.94$

$d = H + P = 2.94 + 3.0 = 5.94$

$$Q = (216)(2.94)^{3/2}\left(3.245 + \frac{.079}{2.94}\right)\left(1 + .55\frac{H^2}{d^2}\right)\left(1.05 + .21\frac{D}{P}\right)\sqrt[3]{\frac{Z}{H}}$$

$= (216)(5.044)(3.275)(1.135)(1.151)(.799) = 3724$ cfs

Too low

(b) Assume $Z = 1.6$

Then $H = 3.04$ $d = 6.04$

$Q = (216)(5.304)(3.274)(1.139)(1.151)(.807) = 3968$ cfs

Too low.

c) Assume $Z = 1.8$

Then $H = 3.24$ $d = 6.24$

$Q = (216)(5.832)(3.272)(1.148)(1.151)(0.822) = 4476$

too high

d) Assume $Z = 1.75$

Then $H = 3.19$ $d = 6.19$

$Q = (216)(5.697)(3.273)(1.146)(1.151)(0.818) = 4345$

OK

Upstream W.S. Elev. = 577.69

Exhibit B-3 (cont'd)

② 12. May 76
P.M.

Given

II $Q = 6300$ cfs.

$ELEV_3 = 577.21$, $D = 577.21 - 574.5 = 2.71$ $P = 3.0$

a) Assume $Z = 1.4$

Then $H = D + Z = 2.71 + 1.4 = 4.11$

$d = H + P = 4.11 + 3.0 = 7.11$

$$Q = L H^{3/2}\left(3.248 + \frac{.079}{H}\right)\left(1 + .55\frac{H^2}{d^2}\right)\left(1.05 + .21\frac{D}{P}\right)\sqrt[3]{\frac{Z}{H}}$$

$$Q = (216)(4.11)^{3/2}\left(3.248 + \frac{.079}{4.11}\right)\left(1 + .55\frac{4.11^2}{7.11^2}\right)\left(1.05 + .21\frac{2.71}{3.0}\right)\left(\frac{1.4}{4.11}\right)^{1/3}$$

$= 216 \times 8.332 \times 3.267 \times 1.184 \times 1.240 \times .699 = 6034$ cfs.

Too low

b) Assume $Z = 1.5$

Then $H = D + Z = 2.71 + 1.5 = 4.21$

$d = H + P = 4.21 + 3 = 7.21$

$$Q = 216\,(4.21)^{3/2}\left(3.248 + \frac{.079}{4.21}\right)\left(1 + .55\frac{4.21^2}{7.21^2}\right)\left(1.05 + .21\frac{2.71}{3.0}\right)\left(\frac{1.5}{4.21}\right)^{1/3}$$

$= 216 \times 8.640 \times 3.267 \times 1.188 \times 1.240 \times 0.709 = 6367$

too high

c) Assume $Z = 1.48$

Then $H = D + Z = 2.71 + 1.48 = 4.19$

$d = H + P = 4.19 + 3.0 = 7.19$

$$Q = 216\,(4.19)^{3/2}\left(3.248 + \frac{.079}{4.19}\right)\left(1 + .55\frac{4.19^2}{7.21^2}\right)\left(1.05 + .21\frac{2.71}{3.0}\right)\left(\frac{1.48}{4.19}\right)^{1/3}$$

$= 216 \times 8.577 \times 3.267 \times 1.186 \times 1.240 \times 0.707 = 6293$

OK

Upstream W.S. Elev. = 578.69

Exhibit B-3 (cont'd)

③

15 May 76
P.M.

Given:

EXHIBIT B-2 Cont

old DATA from CORPS

Discharge

The Discharges used by our office for the Harrison Flood Insurance Study were obtained from the Corps of Engineers Detroit District office. The Corps prepared the hydrology report for the Clinton River and Clinton River Spillway, and this report was sent to the Department of Natural Resources dated June 8, 1976. A letter from the DNR's Roger B. Wallace, P. E. Chief, Hydrologic Studies Unit was sent to the Corps dated July 6, 1976 concurring with the flows as presented in the hydrology report, a copy of this letter is enclosed.

change in our views

Report 1947

$\frac{1}{5600} = 1.7857 \times 10^{-4}$ not

Method of Starting Computations

why ?

The slope area method was used for establishing the starting water surface on the Clinton River.

The starting slope was obtained from the Sheet B-1 of the Clinton River Flood Plain Information report dated August 1964. This slope is between section 2 and section 4 of the profile (Q=7000 cfs.) The starting water surfaces as calculated by the Hec. II backwater for the Clinton River were then used for the starting water surfaces for the Clinton River Spillway. why

How can this be when the 08/June 76 Letter Report indicates that at the auxilary gage rating curve show stage 1.0 to 1.2 ft above the stages shown in the FPI Report?

"n" Values

Roughness coefficients (Manning's n) for the Clinton River and Spillway were estimated by field inspection at each cross section. These roughness coefficients were determined by using the SCS method, see enclosed copy entitled "Preface, Supplement B Hydraulics", August 1, 1956. A table of "n" values for each stream is also enclosed.

why not check or obtain "n" from past flood events.

Structures

A sketch of each structure is included. Necessary calculations for the SB cards are also presented. Each bridge loss that was calculated by the HEC II program was checked long hand by methods described in Hydraulics of Bridge Waterways, Hydraulic Design Series No. 1. A table showing these results if included.

Coefficients

Expansion (0. 3) and Contraction (0. 1) coefficients were used for both watercourses. There are no abrupt changes in the channels and they are generally uniform.

Water Surface Profiles

The water surface profiles for the Clinton River and the Spillway can be found in the F. I. S. Preliminary Report, Exhibit 1. These profiles show a composite of the flooding that will occur from Lake St. Clair and the watercourses. The backwater from the lake is plotted until it intersects the river profile.

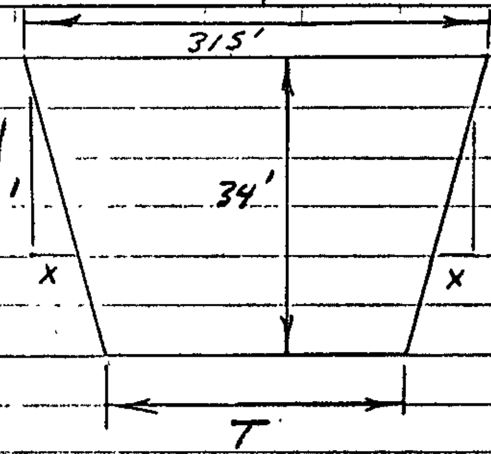
Total Loss Coefficient "k"

Intake	0.10 Lowest
Intermediate Piers	0.05
Friction	K_f
Exit Loss	1.0
	$1.15 + K_f$



Area ①

$= (.5)(17.33 + 23.8)(37.25) = 766.05$ Sq.Ft.

Area ②

$= (.5)(23.8 + 35.5)(45.20) = 1340.18$ Sq.Ft.

Area ③

$= (34.2)(44.80) = 1532.16$ Sq.Ft.

Area ④

$= (34.2)(60.60) = 2072.52$ Sq.Ft.

Area ⑤

$= (34)(45.30) = 1540.20$ Sq.Ft.

Area ⑥

$= (.5)(31.4 + 22.4)(44.50) = 1197.05$ Sq.Ft.

Area ⑦

$= (.5)(22.4 + 16.52)(37.50) = 729.75$ Sq.Ft.

∴ Total Area Of Bridge Opening − 9177.91 Sq.Ft.

Say 9178 Sq.Ft.

PIERS $(181')\left(\frac{3.5+5.2}{2}\right) = 787.35$ say 788 sf

$P_w = 315 + 17.33 + 16.52 + 38 + 47 + 45 + 60 + 45 + 59 + 38 + 181 = 861.85$ Lin.Ft.

$9178 - 788 = 8390$ sf = effective AREA

$A = \frac{1}{2}(b_1 + b_2)h \Rightarrow 8390 = \frac{1}{2}(315 + T)(34)$

$\therefore T = \left(8390 / (.5)(34)\right) - 315$

$= 178.5$

Say 179 Lin.Ft.

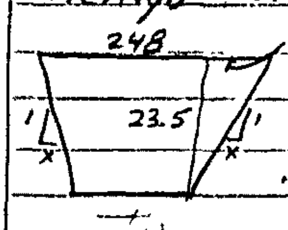
8	5.04
9	0.0
10	0.0

Total Area Of Opening = 3195 Sq. Ft.
Subtract Area Of Piers = 3195.0 − 151.21 = 3043.79
$P_w = 248 + 3.02 + 3.94 + 30 + 57 + 68 + 56 + 29 + 91.64 = 586.60$

$R = A/P_w = 3043.79 / 586.60 = 5.1889$
$R^{4/3} = 8.983$
n (concrete) − 91.64 (0.015) = 1.37
n (Concrete) − (254.96)(0.015) = 3.82
n (Channel) − (240) (0.025) = 6.00
) − 586.60 11.19

n (Avg.) = 11.19 / 586.60 = 0.0190 $\frac{1}{x} = \frac{27.5}{118.5}$ $\therefore x = 118.5/27.5 = 5.04$



$A = \tfrac{1}{2}(b_1 + b_2)h$

$\therefore b_2 = (A/\tfrac{h}{2}) - b_1 = (3043.79/\tfrac{23.5}{2}) - 248 = 11.0$

LETTER REPORT

Discharge - Frequency Analysis for the Clinton River and the Clinton River Cut-off Canal in Harrison Township, Michigan

1. Project Description -

This report contains criteria and guidelines used to determine the proposed Clinton River discharge-frequency relationship to be used in the preparation of the Harrison Township Type 15 Flood Insurance Report, Macomb County, Michigan. This study was divided into two parts: (1) the development of a discharge-frequency curve for the U.S.G.S. gage on the Clinton River at Moravian Road bridge and (2) the development of a flow distribution relationship for the Clinton River below its confluence with the cut-off canal and the cut-off canal itself. The study limits of the Clinton River and Clinton River Cut-off Canal in Harrison Township shown on Exhibit A-1, extend from a line above 1400 feet west of the Interstate 94 Expressway eastward to Lake St. Clair.

Part A

2. Basic Data -

Basic data used in the construction of the frequency curves consist of 39 years of stream gaging records for the U.S.G.S. gage at Mt. Clemens and data from stations within a radius of about 50 miles from the gaging station at Mt. Clemens, Michigan. The majority of the station records exceed 10 years. Thirteen stations out of seventy-nine have records exceeding 20 years. The maximum radius of 50 miles was selected due to the density of stations in this area and the availability of a reasonable number of stations with 20 or more years of continuous records.

Skew coefficients taken from the computer output (see Exhibit A-2) for these stations were used to calculate the average, weighted skew coefficient for the gage at Mt. Clemens in correlation with drainage area and record length. Other basic data consist of two dependent variables: M - mean of logarithms of annual flood peaks and S - standard deviation from the mean expressed as a logarithm, both computed for the gaging station at Mt. Clemens (gage number 04 165500). The gage is of the water-stage recorder type with a datum of 570.43 feet above mean sea level. The period of record used for these computations is thirty-nine years, from October 1934 thru September 1973. The location of all gaging stations used in this study is shown on the attached map, Exhibits A-3. The basic data used to obtain the regionalized skew coefficient are shown on Exhibits A-4 through A-9.

3. Methods and Reference -

The basic procedures and fundamental prinicples used in this study are based upon a January 1962 paper by Leo R. Beard, entitled "Statistical

Methods in Hydrology," and the U.S. Water Resources Council Bulletin, "A Uniform Technique for Determining Flood Flow Frequencies," 3 December 1974. A computer program was used to facilitate and systematize the computations required in connection with this analysis. In conjunction with the frequency analysis, the tables presented in "Statistical Methods in Hydrology" were used. The approach outlined in the above mentioned references is the accepted method used for the discharge-frequency analysis. By statistical methods the three principal components (mean, standard deviation, and skew coefficient), representing respectively the average height, shape, and the degree of curvature of the cumulative frequency curve, were measured. Much of this work was initiated before WRC Bulletin No. 17, "Guidelines for Determining Flood Flow Frequency," March 1976 was available. Therefore, all of the guidelines and criteria were not followed.

The average, weighted regionalized skew coefficient at Mt. Clemens was used for this frequency analysis. The adjustment for "expected probability" was also made at each discharge-frequency calculation.

The six following alternatives were taken under consideration for calculating average weighted skew coefficient:

a. The skew coefficient was calculated using stations within the radius of 25 miles in correlation with length of record (see Exhibit A-4). Eighteen gaging stations were used. In the study area, the majority of the station records exceed 10 years. Only one station has records which do not exceed 10 years. Skew coefficients taken from the computer output (see Exhibit 2) for these 18 stations were used to calculate the average regionalized skew coefficient at Mt. Clemens, giving a value of .011.

b. The skew coefficient was calculated using stations within the radius of 25 miles in correlation with the drainage area (see Exhibit A-5). The same 18 stations as mentioned in "a" with a total drainage area of 2348.9 square miles were used. Using skew coefficients for these stations, the calculated average skew coefficient is equal to 0.018.

c. The skew coefficient was calculated using stations within the radius of 50 miles in correlation with length of record. Twenty-nine gaging stations were used. In the study area, thirteen stations have records which exceed 20 years. Only three stations have records which do not exceed 10 years. Skew coefficients taken from the computer output for these 29 Stations were used to calculate the average regionalized skew coefficient, giving g= -.015. For calculations see Exhibit A-6.

d. The skew coefficient was calculated using stations within the radius of 50 miles in accordance with drainage area. The same twenty-nine gaging stations as mentioned in "c", with total drainage area of 3902.2 square miles were used. Skew coefficients taken from the computer output (see Exhibit A-2) for these 29 stations were used to calculate the average regionalized skew coefficient, giving g= -0.178 (see Exhibit A-7).

e. The skew coefficient was then calculated using gaging stations with the length of record of 20 or more years (see Exhibit A-8). Thirteen stations within the 50-mile radius of Mt. Clemens were selected and their skew coefficients taken from the computer output. The length of record for each station was used to calculate the average regionalized skew coefficient at Mt. Clemens. The result was g= -.021.

f. Finally the skew coefficient was calculated using gaging stations with the length of record of 10 or more years (see Exhibit A-9). Twenty-six stations within the 50-mile radius of Mt. Clemens were selected, and the same method as in "e" was used to calculate average weighted skew coefficient. Calculated skew coefficient g= -.011.

g. A test for low outliner was made for the peak flow of 1940 c.f.s. occurring in 1964. Results of this test is presented in Exhibit A-9a.

Using the mean and standard deviation, the frequency curves were computed using the six above mentioned regionalized skew coefficients weighted with the computed Station skew of 0.248 as follows:

(1) For selected values of P , values of K obtained from Appendix 3, WRC Bulletin No. 17, corresponding to the adopted skew coefficient, were tabulated.

(2) Discharge in cfs was calculated from the equation:

$$\text{Log } Q = M + KS$$

in which:

M = mean logarithm
S = standard deviation
K = magnitude in standard deviation from mean

(3) Values of P_N from Appendix 11, WRC Bulletin No. 17, corresponding to the selected P values were tabulated.

(4) Antilogarithms obtained in step 2 were plotted against the selected P_N values obtained in step 3. These computations are presented as Exhibit A-10. Typical resulting discharge frequency curves are shown on Exhibit A-11.

4. Conclusions -

This paragraph summarizes the results of the hydrologic analysis of the discharge-frequency relationship of the Clinton River at Mt. Clemens, Michigan. This flood frequency analysis was conducted to determine various frequency floods to be used in the preparation of the Type 15 Flood Insurance Report, Harrison Township, Macomb County, Michigan. The results of this analysis are summarized on the following page and presented on Exhibits A-11.

Using skew coefficients based on length of record, we are getting better correlation than using other factors such as size of drainage area for selected stations either within the radius of 25 or 50 miles.

5. <u>Recommendations</u> -

It is proposed that the discharge-frequency relationship described as alternate "e" above be adopted for use in the preparation of the Type 15 Flood Insurance Report for the Clinton River, Harrison Township, Michigan. This frequency curve, presented as Exhibit A-12 was based on the following data:

a. Mean and standard deviation derived from 39 years of continuous records of the Clinton River gage at Mt. Clemens.

b. An average, weighted, regionalized skew coefficient utilizing records of all stations with at least 20 years of record and is within a 50-mile radius of the Mt. Clemens gage. The average weighted value of 0.029 was established by weighting the computed station skew of 0.246 with the regionalized skew coefficient of -0.021.

c. The adjustment for "expected probability."

Part B

6. <u>Basic Data</u> -

The initial development of the flow distribution relationship was based on data presented in the Clinton River, Michigan Flood Plain Information Report for the Main Stem, dated August 1964 and the Southeast Michigan Water Resources Study, Interim Survey Report on Flood Control, Major Drainage and Allied Purposes, Red Run Drain and Lower Clinton River Michigan, dated April 1970. Exhibit B-1 is a copy of Figure 5 of Appendix A from the latter referenced study. This particular exhibit is based on year 2000 urbanized runoff conditions. The discharge-frequency distribution relationships developed in the preparation of the Flood Plain Information Study are plotted in red on this exhibit to verify the compatibility of both studies.

Subsequently, more detailed studies have been made to verify the above referenced data. This was done by establishing a stage discharge relationship for the U.S.G.S. auxiliary gage located just upstream of the cut-off canal (Exhibit B-2). Backwater computations were then made for the Clinton River below the cut-off canal and the cut-off canal, presented as Exhibit B-3. Stage discharge relationships (Exhibit B-4) developed from the backwater computations match very closely the rating curve for the auxiliary gaging stations.

However, when comparing the rating curve for the auxiliary gage with the highwater profile developed in 1964 flood plain information report and the Flood Control Survey Report of 1970, the results was not compatible. A curve plotted thru points of stage vs discharge from the FPI and survey reports was consistently 1.0 to 1.2 feet above the extrapolated portions of the U.S.G.S. rating curve, see Exhibit B-5.

7. Recommendations -

In view of the conclusions reached in the above paragraphs, it is proposed that the discharge frequency relationships presented on Exhibit B-6 and tabulated in the following table be adopted for use in the preparation of the Type 15 Flood Insurance Report for Harrison Township, Macomb County, Michigan.

Percent Chance of Occurrence	Frequency	Discharge C. F. S. Clinton River Upstream Cut-off Canal	Cut-off Canal	Clinton River Downstream Cut-off Canal
10	10	13,200	9,400	3,800
2	50	23,000	16,000	7,000

LETTER REPORT

Discharge - Frequency Analysis for the Clinton River and the Clinton River Cut-off Canal in Harrison Township, Michigan

1. Project Description -

This report contains criteria and guidelines used to determine the proposed Clinton River discharge-frequency relationship to be used in the preparation of the Harrison Township Type 15 Flood Insurance Report, Macomb County, Michigan. This study was divided into two parts: (1) the development of a discharge-frequency curve for the U.S.G.S. gage on the Clinton River at Moravian Road bridge and (2) the development of a flow distribution relationship for the Clinton River below its confluence with the cut-off canal and the cut-off canal itself. The study limits of the Clinton River and Clinton River Cut-off Canal in Harrison Township shown on Exhibit A-1, extend from a line above 1400 feet west of the Interstate 94 Expressway eastward to Lake St. Clair.

Part A

2. Basic Data -

Basic data used in the construction of the frequency curves consist of 39 years of stream gaging records for the U.S.G.S. gage at Mt. Clemens and data from stations within a radius of about 50 miles from the gaging station at Mt. Clemens, Michigan. The majority of the station records exceed 10 years. Thirteen stations out of seventy-nine have records exceeding 20 years. The maximum radius of 50 miles was selected due to the density of stations in this area and the availability of a reasonable number of stations with 20 or more years of continuous records.

Skew coefficients taken from the computer output (see Exhibit A-2) for these stations were used to calculate the average, weighted skew coefficient for the gage at Mt. Clemens in correlation with drainage area and record length. Other basic data consist of two dependent variables: M - mean of logarithms of annual flood peaks and S - standard deviation from the mean expressed as a logarithm, both computed for the gaging station at Mt. Clemens (gage number 04 165500). The gage is of the water-stage recorder type with a datum of 570.43 feet above mean sea level. The period of record used for these computations is thirty-nine years, from October 1934 thru September 1973. The location of all gaging stations used in this study is shown on the attached map, Exhibits A-3. The basic data used to obtain the regionalized skew coefficient are shown on Exhibits A-4 through A-9.

3. Methods and Reference -

The basic procedures and fundamental prinicples used in this study are based upon a January 1962 paper by Leo R. Beard, entitled "Statistical

Methods in Hydrology," and the U.S. Water Resources Council Bulletin, "A Uniform Technique for Determining Flood Flow Frequencies," 3 December 1974. A computer program was used to facilitate and systematize the computations required in connection with this analysis. In conjunction with the frequency analysis, the tables presented in "Statistical Methods in Hydrology" were used. The approach outlined in the above mentioned references is the accepted method used for the discharge-frequency analysis. By statistical methods the three principal components (mean, standard deviation, and skew coefficient), representing respectively the average height, shape, and the degree of curvature of the cumulative frequency curve, were measured. Much of this work was initiated before WRC Bulletin No. 17, "Guidelines for Determining Flood Flow Frequency," March 1976 was available. Therefore, all of the guidelines and criteria were not followed.

The average, weighted regionalized skew coefficient at Mt. Clemens was used for this frequency analysis. The adjustment for "expected probability" was also made at each discharge-frequency calculation.

The six following alternatives were taken under consideration for calculating average weighted skew coefficient:

a. The skew coefficient was calculated using stations within the radius of 25 miles in correlation with length of record (see Exhibit A-4). Eighteen gaging stations were used. In the study area, the majority of the station records exceed 10 years. Only one station has records which do not exceed 10 years. Skew coefficients taken from the computer output (see Exhibit 2) for these 18 stations were used to calculate the average regionalized skew coefficient at Mt. Clemens, giving a value of .011.

b. The skew coefficient was calculated using stations within the radius of 25 miles in correlation with the drainage area (see Exhibit A-5). The same 18 stations as mentioned in "a" with a total drainage area of 2348.9 square miles were used. Using skew coefficients for these stations, the calculated average skew coefficient is equal to 0.018.

c. The skew coefficient was calculated using stations within the radius of 50 miles in correlation with length of record. Twenty-nine gaging stations were used. In the study area, thirteen stations have records which exceed 20 years. Only three stations have records which do not exceed 10 years. Skew coefficients taken from the computer output for these 29 Stations were used to calculate the average regionalized skew coefficient, giving g= -.015. For calculations see Exhibit A-6.

d. The skew coefficient was calculated using stations within the radius of 50 miles in accordance with drainage area. The same twenty-nine gaging stations as mentioned in "c", with total drainage area of 3902.2 square miles were used. Skew coefficients taken from the computer output (see Exhibit A-2) for these 29 stations were used to calculate the average regionalized skew coefficient, giving g= -0.178 (see Exhibit A-7).

e. The skew coefficient was then calculated using gaging stations with the length of record of 20 or more years (see Exhibit A-8). Thirteen stations within the 50-mile radius of Mt. Clemens were selected and their skew coefficients taken from the computer output. The length of record for each station was used to calculate the average regionalized skew coefficient at Mt. Clemens. The result was g= -.021.

f. Finally the skew coefficient was calculated using gaging stations with the length of record of 10 or more years (see Exhibit A-9). Twenty-six stations within the 50-mile radius of Mt. Clemens were selected, and the same method as in "e" was used to calculate average weighted skew coefficient. Calculated skew coefficient g= -.011.

g. A test for low outliner was made for the peak flow of 1940 c.f.s. occurring in 1964. Results of this test is presented in Exhibit A-9a.

Using the mean and standard deviation, the frequency curves were computed using the six above mentioned regionalized skew coefficients weighted with the computed Station skew of 0.248 as follows:

(1) For selected values of P , values of K obtained from Appendix 3, WRC Bulletin No. 17, corresponding to the adopted skew coefficient, were tabulated.

(2) Discharge in cfs was calculated from the equation:

$$\text{Log } Q = M + KS$$

in which:

M = mean logarithm
S = standard deviation
K = magnitude in standard deviation from mean

(3) Values of P_N from Appendix 11, WRC Bulletin No. 17, corresponding to the selected P values were tabulated.

(4) Antilogarithms obtained in step 2 were plotted against the selected P_N values obtained in step 3. These computations are presented as Exhibit A-10. Typical resulting discharge frequency curves are shown on Exhibit A-11.

4. <u>Conclusions</u> -

This paragraph summarizes the results of the hydrologic analysis of the discharge-frequency relationship of the Clinton River at Mt. Clemens, Michigan. This flood frequency analysis was conducted to determine various frequency floods to be used in the preparation of the Type 15 Flood Insurance Report, Harrison Township, Macomb County, Michigan. The results of this analysis are summarized on the following page and presented on Exhibits A-11.

Using skew coefficients based on length of record, we are getting better correlation than using other factors such as size of drainage area for selected stations either within the radius of 25 or 50 miles.

5. Recommendations -

It is proposed that the discharge-frequency relationship described as alternate "e" above be adopted for use in the preparation of the Type 15 Flood Insurance Report for the Clinton River, Harrison Township, Michigan. This frequency curve, presented as Exhibit A-12 was based on the following data:

a. Mean and standard deviation derived from 39 years of continuous records of the Clinton River gage at Mt. Clemens.

b. An average, weighted, regionalized skew coefficient utilizing records of all stations with at least 20 years of record and is within a 50-mile radius of the Mt. Clemens gage. The average weighted value of 0.029 was established by weighting the computed station skew of 0.246 with the regionalized skew coefficient of -0.021.

c. The adjustment for "expected probability."

Part B

6. Basic Data -

The initial development of the flow distribution relationship was based on data presented in the Clinton River, Michigan Flood Plain Information Report for the Main Stem, dated August 1964 and the Southeast Michigan Water Resources Study, Interim Survey Report on Flood Control, Major Drainage and Allied Purposes, Red Run Drain and Lower Clinton River Michigan, dated April 1970. Exhibit B-1 is a copy of Figure 5 of Appendix A from the latter referenced study. This particular exhibit is based on year 2000 urbanized runoff conditions. The discharge-frequency distribution relationships developed in the preparation of the Flood Plain Information Study are plotted in red on this exhibit to verify the compatibility of both studies.

Subsequently, more detailed studies have been made to verify the above referenced data. This was done by establishing a stage discharge relationship for the U.S.G.S. auxiliary gage located just upstream of the cut-off canal (Exhibit B-2). Backwater computations were then made for the Clinton River below the cut-off canal and the cut-off canal, presented as Exhibit B-3. Stage discharge relationships (Exhibit B-4) developed from the backwater computations match very closely the rating curve for the auxiliary gaging stations.

[illegible] slope of the [illegible] how can [illegible] be done [illegible] they should go back to the [illegible] gage with their computations

However, when comparing the rating curve for the auxiliary gage with the highwater profile developed in 1964 flood plain information report and the Flood Control Survey Report of 1970, the results was not compatible. A curve plotted thru points of stage vs discharge from the FPI and survey reports was consistently 1.0 to 1.2 feet above the extrapolated portions of the U.S.G.S. rating curve, see Exhibit B-5.

7. Recommendations -

In view of the conclusions reached in the above paragraphs, it is proposed that the discharge frequency relationships presented on Exhibit B-6 and tabulated in the following table be adopted for use in the preparation of the Type 15 Flood Insurance Report for Harrison Township, Macomb County, Michigan.

500-Year Flood Boundary

Approximate 100-Year Flood Boundary

Cross Section Line

Elevation Reference Mark RM7×

River Mile •M1.5

NOTES TO USER

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the Federal Insurance Administration.

This map was prepared to facilitate flood plain management activities only; it may not show all special flood hazard areas in the community or all planimetric features outside of the flood plain. Refer to the latest official Flood Insurance Rate Map for any additional areas of special flood hazard.

For adjoining map panels, see separately printed Index to Map Panels.

ELEVATION REFERENCE MARKS

REFERENCE MARKS	ELEVATION FEET (NGVD)	DESCRIPTION OF LOCATION
RM 17	601.59	Top of the flange nut on the east side of fire hydrant located on the south side of Hall Road, about 100 feet east of Crittenden Drain.
RM 18	601.42	Spike in northwest side of power pole located southeast of the Twenty One Mile Road bridge over Crittenden Drain.
RM 19	603.86	Top of end vertical post at southeast end of guardrail located at the Valley Forge Drive bridge over Crittenden Drain.
RM 20	599.70	PK nail in west side of power pole located on the east side of Crittenden Drain, about 200 feet northwest of the north end of Lexington Drive.
RM 21	603.15	PK nail in south side of power pole located 39 feet west of Crittenden Drain, 24 feet south of Twenty Two Mile Road.
RM 22	601.67	Flange on north leg of Detroit Edison tower No. 8007 located about 435 feet west of Garfield Road, about 1050 feet north of Hall Road.
RM 23	604.27	Top of northwest corner of northeast wingwall of the Twenty One Mile Road bridge over Gloede Ditch.
RM 24	606.00	Boat spike in west side of 28–inch oak tree located on the east side of Garfield Road, about 1500 feet south of Twenty Two Mile Road.

ELEVATION REFERENCE MARKS

REFERENCE MARKS	ELEVATION FEET (NGVD)	DESCRIPTION OF LOCATION
RM 25	607.16	Chiseled square located in the southeast corner of the Twenty Two Mile Road bridge over Gloede Ditch.
RM 26	600.22	Railroad spike in utility pole located 20 feet east of Tilch Road, about 2300 feet south of Hall Road, south of Dunn Drain.
RM 27	600.92	Boat spike in north face of Detroit Edison pole located at the southeast corner of the inter–section of Twenty One Mile Road and Tilch Road.
RM 28	605.97	Boat spike in west face of Detroit Edison pole located 30 feet east of Hayes Road, about 2857 feet north of Twenty One Mile Road.
RM 29	593.85	Chiseled square located in east headwall of culvert crossing under Romeo Plank Road, about 700 feet north of Hall Road.
RM 30	597.95	Chiseled square located 1.5 feet northeast of southwest corner of southwest wingwall of the Twenty One Mile Road bridge over the Middle Branch Clinton River.
RM 31	603.53	Chiseled cross on nut just below lowest horizontal brace on south leg of high voltage tower No. 7997 located about 125 feet east of Romeo Plank Road, about 1900 feet north of Twenty One Mile Road.
RM 32	603.92	Macomb County Road Commission brass washer with white nail located flush with ground at the northeast corner of the intersection of Romeo Plank Road and Twenty Two Mile Road.

REFERENCE MARKS	ELEVATION FEET (NGVD)	DESCRIPTION OF LOCATION
RM 33	596.93	Railroad spike in east side of power pole located 41 feet east of Romeo Plank Road, about 1900 feet north of Twenty Two Mile Road, across road from house No. 49625.
RM 34	607.60	Railroad spike in southwest side of power pole located 30 feet east of Romeo Plank Road, 1700 feet south of Twenty Three Mile Road, 75 feet south of house No. 50470.
RM 35	609.19	Chiseled cross on east flange bolt of fire hydrant located at the northeast corner of the inter–section of Romeo Plank Road and Twenty Three Mile Road.
RM 36	611.68	Railroad spike in southeast side of power pole located 36 feet east of Romeo Plank Road, 2300 feet north of Twenty Three Mile Road, 75 feet north of house No. 51800.
RM 37	616.25	Chiseled cross located on the southeast bolt in the north concrete guardrail of the Twenty Four Mile Road bridge over the Middle Branch Clinton River.
RM 38	618.31	Railroad spike in east side of power pole located 33 feet east of Romeo Plank Road, 1800 feet north of Twenty Four Mile Road, 100 feet north of house No. 53663.
RM 39	620.12	Railroad spike in west side of power pole located 32 feet east of Romeo Plank Road, 1600 feet south of Twenty Five Mile Road, 75 feet north of house No. 54450.

100-Year Flood Boundary
500-Year Flood Boundary
Approximate 100-Year Flood Boundary
Cross Section Line (A)—(A)
Elevation Reference Mark RM7x
River Mile •M1.5

NOTES TO USER

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the Federal Insurance Administration.

This map was prepared to facilitate flood plain management activities only; it may not show all special flood hazard areas in the community or all planimetric features outside of the flood plain. Refer to the latest official Flood Insurance Rate Map for any additional areas of special flood hazard.

For adjoining map panels, see separately printed Index to Map Panels.

**Referenced to the National Geodetic Vertical Datum of 1929

*EXPLANATION OF ZONE DESIGNATIONS

ZONE	EXPLANATION
A	Areas of 100-year flood; base flood elevations and flood hazard factors not determined.
AO	Areas of 100-year shallow flooding where depths are between one (1) and three (3) feet; average depths of inundation are shown, but no flood hazard factors are determined.
AH	Areas of 100-year shallow flooding where depths are between one (1) and three (3) feet; base flood elevations are shown, but no flood hazard factors are determined.
A1-A30	Areas of 100-year flood; base flood elevations and flood hazard factors determined.
A99	Areas of 100-year flood to be protected by flood protection system under construction; base flood elevations and flood hazard factors not determined.
B	Areas between limits of the 100-year flood and 500-year flood; or certain areas subject to 100-year flooding with average depths less than one (1) foot or where the contributing drainage area is less than one square mile; or areas protected by levees from the base flood. (Medium shading)
C	Areas of minimal flooding. (No shading)
D	Areas of undetermined, but possible, flood hazards.
V	Areas of 100-year coastal flood with velocity (wave action); base flood elevations and flood hazard factors not determined.
V1-V30	Areas of 100-year coastal flood with velocity (wave action); base flood elevations and flood hazard factors determined.

NOTES TO USER

Certain areas not in the special flood hazard areas (zones A and V) may be protected by flood control structures.

This map is for flood insurance purposes only; it does not necessarily show all areas subject to flooding in the community or all planimetric features outside special flood hazard areas.

For adjoining map panels, see separately printed Index To Map Panels.

SUMMARY OF ERRORS

00BREAK00

1) COUNTY: Macomb

2) STUDY NAME: Macomb Twp

3) WATERCOURSE: Crittenden Drain

4) DOCUMENT TYPE: 100 year flood
Natural &
encroached

00BREAK00

Attention: Mr. Dave Bastian

Reference: CRITTENDEN DRAIN CLEAN-OUT
AEW PROJECT NO. 26028

Dear Mr. Bastian,

On February 3, 1988 our office submitted a permit application for the above referenced project in conjunction with a proposed plat for Cross Creek Subdivision. After further detailed engineering, specifically earthwork was completed, we have found the site is short of dirt. The scope of the work has not changed, however we find it necessary to take advantage of the revised water surface profile established by the proposed improvements.

We request that the enclosed backwater analysis be forwarded to the appropriate departments for inclusion in the current permit review still in process. We appreciate your cooperation, please call if you have any questions.

Sincerely,

ANDERSON, ECKSTEIN AND WESTRICK, INC.

PROJECT SUMMARY

This is a hydraulic study of the proposed drain improvements for the Crittenden Drain, Macomb Township, Macomb County, Michigan. The project site is located adjacent to the proposed Cross Creek Estates Subdivision south of 22 Mile Road between Garfield and Romeo Plank roads. The improvements planned, are in conjunction with the proposed subdivision and will be accomplished under contract with the Macomb County Public Works Office.

The intent of this report is to verify a balance of flood storage between the drain and the proposed subdivision and to lower the flood plain elevation in the improved reach. The excavation from the improvements will be spoiled adjacent to the drain in existing floodplain fringe.

The first portion of the study is a simple earthwork balance between the excavation from the drain below the 100 year floodplain elevation and the fill in the adjacent property. The proposed drain section was provided by the M.C.P.W.O.. Cross Sections are included on plan sheets 2-4 and the computational summary on page 6.

The foundation for this hydraulic analysis is the current Flood Insurance Study for the area. Input data for this reach as well as current flows were obtained from the Michigan Department of Natural Resources. The U.S. Army Corp of Engineers, HEC-2 program was used for our analysis. Actual F.I.S. data was run to establish the existing conditions, then modifications were made and sections were added to model the proposed improvements.

Our existing analysis includes all the F.I.S. imput sections within the limits of our study, plus an additional section along the south property line of the proposed subdivision. The starting water surface elevation of 598.81 (from the F.I.S.) was input and run. The resultant one hundred (100) year water surface profile was slightly lower (.03 ft.) due to the addition of the section on the south property line.

Proposed drain sections were added at various locations to most accurately describe the proposed improvements (see sheet 1). The 100 year flood elevation of 599.94 (sec. 104+08 ex. run) was input in the proposed run at the downstream end of the project. A Mannings roughness coefficient of 0.04 was used for the proposed run. The resulting backwater is a fairly uniform decrease in water surface adjacent to the majority of the site. At SEC. NO. 11+403 and SEC. NO. 12+907 decreases of .81 ft. and .57 ft. respectively were obtained. Refer to Plan Sheet 1 for the plot of both existing and proposed water surface profiles for comparison. We have included on the following pages pictures of the site for aid in your review.

VOLUME OF EXISTING FLOOD PLAIN:

THE SHADED AREAS OF SECTIONS A-A TO H-H WERE USED TO CALCULATE THE VOLUME OF THE EXISTING FLOOD PLAIN EFFECTING PROPOSED CROSS CREEK ESTATES. THE FLOOD PLAIN ELEVATIONS ARE BASED ON A 100 YEAR STORM

SECTION	AREA		DISTANCE	VOLUME (ft^3)
	0			
		18.54	170'	3152
A-A	37.08			
		39.81	106	4220
B-B	42.54			
		27.77	500	14,885
C-C	17.0			
		64.84	298	19,322
D-D	112.68			
		64.34	140	9008
E-E	16			
		239.43	460	110,136
F-F	462.85			
		269.70	405	109,229
G-G	76.55			
			400	30,096
H-H	50.08	23.85		
			160	4006
	0			
				$\boxed{304,054 \text{ ft}^3}$

VOLUME OF PROPOSED FLOOD PLAIN:

A TYPICAL SECTION OF THE PROPOSED DITCH IS SHOWN ON SECTION A-A. THE VOLUME OF THE PROPOSED FLOOD PLAIN WAS CALCULATED TO THE EAST PROPERTY LINE (CENTER LINE OF PROPOSED DITCH) AND TO THE 100 YR FLOOD PLAIN ELEVATIONS SHOWN.

AVERAGE X-SECTION AREA OF PROPOSED DITCH = 142.2 ft^2

VOLUME = 2146' x 142.2 = 305,161 ft^3

$\boxed{\text{Volume} = 305,161 \text{ ft}^3}$

HYDRAULIC ENGINEERING REPORT
FOR THE CRITTENDEN DRAIN
SECTIONS 20 AND 29, T.3 N., R.13 E.,
MACOMB TOWNSHIP, MACOMB COUNTY, MICHIGAN

APRIL - 1993

TABLE OF CONTENTS

INTRODUCTION

The Crittenden Drain is an established county drain with a drainage area of 1.3 square miles at Twenty Two Mile Road between Sections 20 and 29, T.3 N., R.13 E., Macomb Township, Macomb County, Michigan. The 10%, 2%, 1% and 0.2% chance peak flows are 130, 200, 220 and 320 cfs, respectively. A detailed analysis of flooding on the Crittenden Drain from Hall Road (M-59) to Twenty Two Mile Road was developed for the 1980 FIS. We have used information provided by the 1980 FIS to evaluate impact of channelization using the aforementioned peak flows under existing and proposed conditions. The HEC-2 computer model was first used to simulate the 1980 FIS and to compare results obtained from your agency. Next, the cross section locations and ground surface data were revised to model the results of the existing channelization project. Finally, the cross section locations and ground surface data were revised to model the results of future channelization and the installation of two box culverts.

1980 FIS

The HEC-2 output for the hydraulic simulation of the 1980 FIS is given in Appendix "A". This data models flooding on the Crittenden Drain from the cross-section downstream of Valley Forge Drive (Section Number 7883) to the cross-section downstream of Twenty Two Mile Road (Section Number 13078). The special bridge routine is used to model the 16'x7' box culvert at Valley Forge Drive and Farm Culverts No.1 & 2. The results for the calculated water surface elevation at each cross section varies from 0 to -0.09 ft., depending on flow and drain location, when compared to the original 1980 FIS. Variations of this magnitude may reflect updates on the PC version of HEC-2. Since the first eight cross-sections are in complete agreement and Section Number 13078 is -0.02 ft., no calibrations were attempted for the model.

MATCH EX

EXISTING CHANNELIZATION

Another simulation was performed to evaluate the impact of channelization on the Crittenden Drain. The channelization project included the removal of Farm Culverts No.1 & 2, deepening the channel and construction of the left over bank. Subsequently, cross section locations were revised to model transitions in the cross-sectional area of the drain and ground surface data modifications reflect a lower channel invert with a left over bank. Enclosed are plans for the Crittenden Drain clean-out and relocation which provide information on channel alignment and as-built drain cross-sections. The input data for this analysis models these drain improvements, while anticipating some sedimentation where the channel has been over-excavated. It was also necessary to model the 14'x7' box culvert at White Plains Drive using the Special Culvert routine.

The HEC-2 output for the hydraulic analysis of the existing channelization projected is presented in Appendix "B". The calculated water surface elevation will decrease the BFE of the 1980 FIS by 1.26 ft. at Section Number 13078.

EXISTING CHANNELIZATION CONTINUED

Channel improvements will also decrease the width of the regulatory floodway between Twenty-Two Mile Road and White Plains Drive. The floodway data from the 1980 FIS and the revised floodway data due to the existing channelization project are given in Appendix "C". The results indicate the floodway width will vary from 96 ft. at Section Number 10494 to 14 ft. at White Plains Drive. Encroachment upon the floodplain in the vicinity of the 14'x7' concrete box culvert at White Plains Drive will increase the BFE between .05 ft. to .09 ft.

A LOMR for the existing channelization project will lower the BFE from 602.01 at Twenty Two Mile Road to 599.73 at White Plains Drive and limit the width of the floodway between the channel banks. The revised floodplain boundary is included in Appendix "B". This drawing indicates the revised floodway, the revised 100 year floodplain contour and the revised 500 year floodplain contour.

FUTURE CHANNELIZATION AND BOX CULVERT INSTALLATION

The proposed construction of a right overbank and the installation of two 12'x6' reinforced concrete box culverts with headwalls and wingwalls is anticipated when the property west of the Crittenden drain is developed. Four additional cross-sections are selected for each road crossing to employ the Special Culvert method available in HEC-2. Supplemental ground surface data on the remaining cross-sections model the right overbank.

The HEC-2 input and output for the hydraulic simulation of future channelization and the installation of two box culverts is presented in Appendix "D". The calculated water surface elevation for this case will increase approximately 0.3 to 0.4 ft. from the interpolated values of the LOMR between the road crossings at Tower and Mark Drive. This difference in calculated water surface elevations between the existing channelization and future project conditions decreases to 0.10 ft. at Section Number 12212 and 0 ft. at Section Number 12612. Finally, the calculated water surface elevation will

FUTURE CHANNELIZATION AND BOX CULVERT INSTALLATION CONTINUED

decrease to 601.91 at the upstream limit of Section Number 13078.

A CLOMR for future channelization and box culvert installation will lower the BFE from 601.91 at Twenty Two Mile Road to 599.72 at White Plains Drive. The net effect of future channelization of the Crittenden Drain will decrease the BFE compared to the existing channelization, while the installation of two 12'x6' box culverts will increase the BFE within the vicinity of Mark and Tower Drive.

CONCLUSION

The results our hydraulic analysis for the Crittenden Drain indicate the need to lower the BFE and decrease the width of the floodway from the 1980 FIS. We must also acknowledge localized surcharge from the proposed installation of two box culverts. Therefore, a LOMR should be adopted based upon the existing channelization to revise the floodway and lower the BFE from 602.01 at Twenty Two Mile Road to 599.73 at White Plain Drive. In addition, a CLOMR should be granted to accommodate the estimated surcharge from the proposed box culvert installations at Mark and Tower Drive.

EXISTING CHANNELIZATION

Another simulation was performed to evaluate the impact of channelization on the Crittenden Drain. The channelization project included the removal of Farm Culverts No.1 & 2, deepening the channel and construction of the left over bank. Subsequently, cross section locations were revised to model transitions in the cross-sectional area of the drain and ground surface data modifications reflect a lower channel invert with a left over bank. Enclosed are plans for the Crittenden Drain clean-out and relocation which provide information on channel alignment and as-built drain cross-sections. The input data for this analysis models these drain improvements, while anticipating some sedimentation where the channel has been over-excavated. It was also necessary to model the 14′x7′ box culvert at White Plains Drive using the Special Culvert routine.

The HEC-2 output for the hydraulic analysis of the existing channelization projected is presented in Appendix "B". The calculated water surface elevation will decrease the BFE of the 1980 FIS by 1.26 ft. at Section Number 13078.

EXISTING CHANNELIZATION CONTINUED

Channel improvements will also decrease the width of the regulatory floodway between Twenty-Two Mile Road and White Plains Drive. The floodway data from the 1980 FIS and the revised floodway data due to the existing channelization project are given in Appendix "C". The results indicate the floodway width will vary from 96 ft. at Section Number 10494 to 14 ft. at White Plains Drive. Encroachment upon the floodplain in the vicinity of the 14'x7' concrete box culvert at White Plains Drive will increase the BFE between .05 ft. to .09 ft.

A LOMR for the existing channelization project will lower the BFE from 602.01 at Twenty Two Mile Road to 599.73 at White Plains Drive and limit the width of the floodway between the channel banks. The revised floodplain boundary is included in Appendix "B". This drawing indicates the revised floodway, the revised 100 year floodplain contour and the revised 500 year floodplain contour.

FUTURE CHANNELIZATION AND BOX CULVERT INSTALLATION

The proposed construction of a right overbank and the installation of two 12'x6' reinforced concrete box culverts with headwalls and wingwalls is anticipated when the property west of the Crittenden drain is developed. Four additional cross-sections are selected for each road crossing to employ the Special Culvert method available in HEC-2. Supplemental ground surface data on the remaining cross-sections model the right overbank.

The HEC-2 input and output for the hydraulic simulation of future channelization and the installation of two box culverts is presented in Appendix "D". The calculated water surface elevation for this case will increase approximately 0.3 to 0.4 ft. from the interpolated values of the LOMR between the road crossings at Tower and Mark Drive. This difference in calculated water surface elevations between the existing channelization and future project conditions decreases to 0.10 ft. at Section Number 12212 and 0 ft. at Section Number 12612. Finally, the calculated water surface elevation will decrease to 601.91 at the upstream limit of Section Number 13078.

A CLOMR for future channelization and box culvert installation will lower the BFE from 601.91 at Twenty Two Mile Road to 599.72 at White Plains Drive. The net effect of future channelization of the Crittenden Drain will decrease the BFE compared to the existing channelization, while the installation of two 12'x6' box culverts will increase the BFE within the vicinity of Mark and Tower Drive.

CONCLUSION

The results our hydraulic analysis for the Crittenden Drain indicate the need to lower the BFE and decrease the width of the floodway from the 1980 FIS. We must also acknowledge localized surcharge from the proposed installation of two box culverts. Therefore, a LOMR should be adopted based upon the existing channelization to revise the floodway and lower the BFE from 602.01 at Twenty Two Mile Road to 599.73 at White Plain Drive. In addition, a CLOMR should be granted to accommodate the estimated surcharge from the proposed box culvert installations at Mark and Tower Drive.

TO: Plat Coordinating Committee

RE: PCC Case No. 7-97-4
Strawberry Knolls Subdivision
Section 30, Macomb Township
Gloede Drain

Gentlemen:

The Office of the Macomb County Public Works Commissioner has reviewed the pre-preliminary plat for the subdivision referenced above. All drainage from the subdivision should be directed to the Gloede Drain which traverses the east half of the site.

Personnel from this office have met with the developer's engineer to discuss required improvements on the Gloede Drain. In that regard, this office has been petitioned for said improvements and a Hearing of Necessity has been scheduled for August 31, 1997. All work to the Gloede Drain will be accomplished under the authority of the Macomb County Public Works Commissioner through developer agreement and separate contract.

Prior to final plat approval, a copy of the subdivision deed restrictions must be on file with this office that state: "No fences, pools or structures will be allowed in the Gloede Drain easement."

Engineering plans should conform to the requirements as set forth in the enclosed letter dated May 23, 1995. Also, submit the enclosed form entitled Data for Subdivision Storm Water Outlet, April, 1996, which addresses items in said letter.

The above comments are not to be construed as approvals and are not necessarily conclusive.

Sincerely,

Keith Graboske

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

Mr. John Brennen
Macomb Township Supervisor
19925 Twenty-Three Mile Road
Macomb, Michigan 48042

IN REPLY REFER TO:
Case Number: 97-05-231P
(follow-up to CLOMR: 96-05-299R)
Community Name: Township of Macomb, Macomb County, Michigan
Community Number: 260445
Map Panel Number: 260445 0020
Effective Date of this Revision: JUN 16 1997

102-D-A

Dear Mr. Brennen:

The Flood Insurance Study (FIS), Flood Insurance Rate Map (FIRM), and Flood Boundary and Floodway Map (FBFM) for the Township of Macomb have been revised by this Letter of Map Revision (LOMR) to reflect channel modifications and more up-to-date and detailed hydraulic and topographic information for Gloede Ditch than that used to prepare the August 4, 1980, FIS. The subject area is located in the vicinity of the intersection of Twenty-Two Mile Road and Garfield Road. This revision was initiated by Ms. Jennifer L. Chehab, of Anderson, Eckstein and Westrick, Inc., in a letter of transmittal dated April 23, 1997. We issued a conditional LOMR for this project on January 28, 1997.

We received the following technical data, prepared by Anderson, Eckstein and Westrick, Inc., in support of this revision:

- a HEC-2 hydraulic model, dated March 25, 1997, of the 10% (10-year), 2% (50-year), 1% (100-year), and 0.2% (500-year) annual chance floods for Gloede Ditch, representing "as-built" conditions;

- a HEC-2 hydraulic model, dated May 13, 1997, of the 1% annual chance flood and floodway for Gloede Ditch, representing "as-built" conditions;

- certified "as-built" topographic plans, dated March 13, 1997, entitled Jefferson Meadows III, IV & V, at a scale of 1"=50', with a contour interval of 1 foot, showing the 1% and 0.2% annual chance floodplains and floodway for Gloede Ditch, representing "as-built" conditions;

- copies of the Township of Macomb FIRM number 260445, panel 0020 B, and FBFM number 260445, panel 0020, both dated February 4, 1981, annotated to reflect the 1% and 0.2% annual chance floodplains and floodway for Gloede Ditch, representing "as-built" conditions;

- a copy of the April 20, 1997, public notification of the proposed floodway revision;
- an April 24, 1997, letter from Mr. Keith Graboske, of the Office of the Macomb County Public Works Commissioner, stating that his office is responsible for channel maintenance; and
- completed application/certification forms, including community concurrence with the revision.

We received all data necessary to process this revision by May 19, 1997.

Based on our review of the submitted data, we are issuing this LOMR to reflect decreases in the 1% annual chance water-surface elevations and narrowing of the 1% annual chance floodplain and floodway for Gloede Ditch, from the downstream side of Twenty-Two Mile Road to a point approximately 0.55 mile upstream. The maximum decrease in the 1% annual chance water-surface elevations is 2.0 feet. This LOMR revises the Township of Macomb FIS report, Table 2 (Floodway Data), and Flood Profiles 09P and 10P, dated August 4, 1980; FIRM number 260445, panel 0020 B, dated February 4, 1981; and FBFM number 260445, panel 0020, dated February 4, 1981. This revision is shown on the enclosed annotated portions of the FIS, FIRM, and FBFM.

We have enclosed a copy of the public notification of the revised Base (1% annual chance) Flood Elevations (BFEs), which will be published in The Macomb Daily on or about June 25, 1997, and July 2, 1997. In addition, we will publish a notice of changes in the Federal Register. However, we will not print and distribute this LOMR to users, such as insurance agents or lenders. Your community will serve as a repository for the new data. Therefore, we encourage you to supplement the notification to appear in The Macomb Daily by preparing a news release for publication in your community newspaper that describes the revision and explains how your community will provide data and help interpret the National Flood Insurance Program (NFIP) maps. In that way, interested persons, such as property owners, insurance agents, and mortgage lenders, can benefit from the information.

Within 90 days of the second publication in The Macomb Daily, a citizen may request that we reconsider this determination. Any request for reconsideration must be based on scientific or technical data. This revision is effective as of the date of this letter. However, until the 90-day period elapses, the revised BFEs presented in this LOMR may be modified.

We based this determination on the 1% annual chance flood discharges computed in the August 4, 1980, FIS for your community without considering subsequent changes in watershed characteristics that could increase flood discharges. Future development of projects upstream could cause increased flood discharges, which could cause increased flood hazards. A comprehensive restudy of your community's flood hazards would consider the cumulative effects of development on flood discharges subsequent to the publication of the August 4, 1980, FIS for your community and could, therefore, establish greater flood hazards in this area.

Your community must approve all proposed floodplain development and ensure that permits required by Federal and/or State law have been obtained. State or community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction or may limit development in floodplain areas. If the State of Michigan or the Township of Macomb has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum NFIP requirements.

Because of funding constraints, we must limit the number of map republications. Consequently, we will not republish the FIS, FIRM, and FBFM for the Township of Macomb to reflect this determination. However, we will incorporate this determination when we next republish the FIS, FIRM panel 0020, and FBFM panel 0020.

We have enclosed an updated version of a document entitled "List of Current Flood Insurance Study Data," which now includes this letter, to help your community maintain all information for floodplain management and flood insurance. If any of the items in that document are not filed in your community's map repository, please contact our Regional Office at the number listed below for information on how to obtain those items.

We provide the floodway designation to your community as a tool to regulate floodplain development. Therefore, the floodway modifications we have described in this letter, while acceptable to us, must also be acceptable to your community and adopted by appropriate community action, as specified in Paragraph 60.3(d) of the NFIP regulations.

NFIP regulations Subparagraph 60.3(b)(7) requires communities to "assure that the flood carrying capacity within the altered or relocated portion of any watercourse is maintained." This provision is incorporated into your community's existing floodplain management regulations; therefore, responsibility for maintenance of the modified channel rests with your community. We may request that your community submit a description and schedule of channel maintenance activities.

Use the map panels listed above and revised by this letter for all flood insurance policies and renewals issued in your community.

We have made this determination pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 93-234) and in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448), 42 U.S.C. 4001-4128, and 44 CFR Part 65. Pursuant to Section 1361 of the National Flood Insurance Act of 1968, as amended, communities participating in the NFIP are required to adopt and enforce floodplain management regulations that meet or exceed NFIP criteria. These criteria, including adoption of the FIS, FIRM, and FBFM, and modifications made by this LOMR, are the minimum requirements for NFIP participation and do not supersede more stringent State or local requirements to which the regulations apply.

If you have any questions, please do not hesitate to contact the Director, Mitigation Division of the Federal Emergency Management Agency in Chicago, Illinois, at (312) 408-5548, or me at our Headquarters Office in Washington, D.C., at (202) 646-2903, or by facsimile at (202) 646-4596.

Sincerely,

Doug Bellomo

[1] The number is parentheses indicates the number of Letters of Map Correction issued on this date for this panel.

CHANGES ARE MADE IN DETERMINATIONS OF THE TOWNSHIP OF MACOMB, MACOMB COUNTY, MICHIGAN, BASE (1% ANNUAL CHANCE) FLOOD ELEVATIONS UNDER THE NATIONAL FLOOD INSURANCE PROGRAM

On February 4, 1981, the Federal Emergency Management Agency (FEMA) identified Special Flood Hazard Areas in the Township of Macomb, Michigan, through issuance of a Flood Insurance Rate Map.

The Executive Associate Director for Mitigation, has determined that modification of the elevations of the flood having a 1% chance of occurrence in any given year (base flood) for certain locations in the Township of Macomb, is appropriate. The modified base flood elevations amend the FEMA Flood Insurance Rate Map for the community.

This modification to the effective Flood Insurance Rate Map reflects channel modifications and more up-to-date and detailed hydraulic and topographic information for Gloede Ditch than that used to prepare the August 4, 1980, Flood Insurance Rate Map. As a result of the modifications, there are decreases in the base flood elevations and narrowing of the 1% (100-year) annual chance floodplain and floodway. The revised base flood elevations for Gloede Ditch are as follows:

	Base Flood Elevations (NGVD)*	
Location	Effective	Revised
Approximately 0.39 mile upstream of Private Drive	602	601
Downstream side of Twenty Two Mile Road	606	604

*Elevation in feet National Geodetic Vertical Datum

The changes are made pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 93-234), and are in accordance with the National Flood Insurance Act of 1968, as amended. (Title XIII of the Housing and Urban

Development Act of 1968, P.L. 90-448) 42 U.S.C. 4001-4128, and 44 CFR Part 65.

Under the above-mentioned Acts of 1968 and 1973, the Executive Associate Director for Mitigation, must develop criteria for floodplain management. In order for the community to participate in the National Flood Insurance Program, the community will be using the new base flood elevations to administer the floodplain management measures of the National Flood Insurance Program. These modified base flood elevations will also be used to calculate the appropriate flood insurance premium rates for new buildings and their contents.

Upon the second publication of notice of these changes in this paper, any person has 90 days in which he can request through the Chief Executive Officer of the community that the Executive Associate Director for Mitigation reconsider the determination. Any request for reconsideration must be based on knowledge of changed conditions or new scientific or technical data. All interested parties are on notice that until the 90-day period elapses, the Executive Associate Director's determination to modify the base flood elevations may itself be changed.

Any person having knowledge or wishing to comment on these changes should immediately notify:

HOLLISTER BUILDING PO BOX 30473 LANSING MI 48909-7973

RUSSELL J. HARDING Director

REPLY TO:

LAND & WATER MANAGEMENT DIVISION
PO BOX 30458
LANSING MI 48909-7958

May 31, 1996

Ms. Jennifer L. Chehab
Anderson, Eckstein and Westrick, Inc.
42800 Garfield Road
Mt. Clemens, Michigan 48043

Dear Ms. Chehab:

We have estimated the flood frequency discharges requested in your letter dated May 9, 1996, (Process No. H-96074), as follows.

1. Gloede Ditch at 21 Mile Road, Section 30, T3N, R13E, Macomb Township, Macomb County, has a drainage area of 7.3 square miles. The 10%, 2%, 1% and 0.2% chance peak flows are estimated to be 465 cfs, 690 cfs, 755 cfs and 1070 cfs, respectively.

2. Gloede Ditch at 22 Mile Road, Section 30, T3N, R13E, Macomb Township, Macomb County, has a drainage area of 6.6 square miles. The 10%, 2%, 1% and 0.2% chance peak flows are estimated to be 445 cfs, 655 cfs, 720 cfs and 1015 cfs, respectively.

Please include a copy of this letter with your application for permit. These estimates should be confirmed by our office if an application is not submitted within one year. If you have any questions concerning the discharge estimates, please do not hesitate to contact me. Any questions concerning the hydraulics or the proper procedure for filing for a permit should be directed to Mr. Ashok Punjabi at telephone number 313-953-0241.

Sincerely,

Gerald W. Fulcher, Jr., P.E., Chief
Hydrologic Studies Unit
Land and Water Management Division

REVISIONS TO NATIONAL FLOOD INSURANCE PROGRAM MAPS

Application/Certification Forms and Instructions

for

Conditional Letters of Map Revision, Letters of Map Revision, and Physical Map Revisions

MT-2 FEMA FORM 81-89 SERIES, OCT 94 (SUPERSEDES RSD-1, JUL 93)

INSTRUCTIONS FOR COMPLETING THE APPLICATION/CERTIFICATION FORMS FOR CONDITIONAL LETTERS OF MAP REVISION, LETTERS OF MAP REVISION, AND PHYSICAL MAP REVISIONS

GENERAL

In 1968, the U.S. Congress passed the National Flood Insurance Act, which created the Natic .l Flood Insurance Program (NFIP). The NFIP was designed to reduce future flood losses through lc .l floodplain management and to provide protection for property owners against potenti. osses through flood insurance.

As part of the agreement for making flood insurance available in a community, the NFIP requires the participating community to adopt floodplain management ordinances containing certain minimum requirements intended to reduce future flood losses. The community is also responsible for submitting data to the Federal Emergency Management Agency (FEMA) reflecting revised flood hazard information so that NFIP maps can be revised as appropriate. This will allow risk premium rates and floodplain management requirements to be based on current data.

Submissions to FEMA for revisions to effective Flood Insurance Studies (FISs) by individual and community requestors will require the signing of application/certification forms. These forms will provide FEMA with assurance that all pertinent data relating to the revision is included in the submittal. They will also assure that: (a) the data and methodology are based on current conditions; (b) qualified professionals have assembled data and performed all necessary computations; and (c) all individuals and organizations impacted by proposed changes are aware of the changes and will have an opportunity to comment on them. The circumstances for which this package is applicable are as follows:

Conditional Letter of Map Revision (CLOMR)	A letter from FEMA commenting on whether a proposed project, if built as proposed, would justify a map revision (LOMR or PMR), or proposed hydrology changes (see 44 CFR Ch. I, Parts 60, 65, and 72).
Letter of Map Revision (LOMR)	A letter from FEMA officially revising the current NFIP map to show changes to floodplains, floodways, or flood elevations. LOMRs typically depict decreased flood hazards. (See 44 CFR Ch. I, Parts 60 and 65.)
Physical Map Revision (PMR)	A reprinted NFIP map incorporating changes to floodplains, floodways, or flood elevations. Because of the time and cost involved to change, reprint, and redistribute an NFIP map, a PMR is usually processed when a revision reflects increased flood hazards or large-scope changes. (See 44 CFR Ch. I, Parts 60 and 65.)

It should be noted that FEMA may decide to defer a revision until a future date. Please note that for the following circumstances, this package is not applicable. Instead, the package entitled Amendments and Revisions to National Flood Insurance Program Maps, Application/Certification Forms and Instructions for Conditional Letters of Map Amendment, Letters of Map Amendment, Conditional Letters of Map Revision (Based on Fill), and Letters of Map Revision (Based on Fill) is appropriate.

Letter of Map Amendment (LOMA)	A letter from FEMA removing an existing structure or a legally defined parcel of land unaltered by fill from an SFHA (see 44 CFR Ch. I, Part 70).
Conditional Letter of Map Amendment (CLOMA)	A letter from FEMA conditionally removing a proposed structure or a legally defined parcel of land unaltered by fill from an SFHA (see 44 CFR Ch. I, Parts 70 and 72).
Letter of Map Revision Based on Fill (LOMR-BOF)	A letter from FEMA removing an existing structure or a legally defined parcel of land elevated by the placement of fill from an SFHA (see 44 CFR Ch. I, Section 65.5).
Conditional Letter of Map Revision Based on Fill (CLOMR-BOF)	A letter from FEMA conditionally removing a proposed structure or a legally defined parcel of land to be elevated by the placement of fill from an SFHA (see 44 CFR Ch. I, Section 65.5 and Part 72).

NFIP regulation, CFR Ch.I, specifies the requirements regarding the submittal of revision requests to FEMA. A document entitled Appeals, Revisions, and Amendments to Flood Insurance Maps, A Guide for Community Officials, dated January 1990, provides background on the NFIP and an expanded explanation of these requirements.

NFIP Regulation, 44 CFR Ch. I, Part 59, contain general provisions of the NFIP with which all requestors and community officials involved in revision requests should be familiar.

NFIP Regulation, 44 CFR Ch. I, Section 65.2, contain definitions relative to certification of data, analyses, and structural works. This information is important to all professionals certifying technical information contained with revision requests and should be carefully reviewed prior to signing the application/certification forms.

Part 72 of the NFIP regulations, published at 44 CFR 72, presents information regarding the reimbursement procedure that FEMA has initiated to allow for the recovery of costs associated with the review of requests for Conditional LOMRs, LOMRs, or Physical Map Revisions. The initial, minimum fees for FEMA's review and processing of CLOMRs, LOMRs, and Physical Map Revisions requests are as follows:

	CLOMR	LOMR	PMR
• Bridge or culvert only	$560	$785	$785
• Channel modification only	$640	$865	$865
• Channel modification and new bridge or culvert	$840	$1,065	$1,065
• Levees, berms, or other structural modifications	$1,080	$1,305	$1,305
• Structural measures on alluvial fan	$2,800	$3,025	$3,025
• Review of revised hydrology	$280	—	—
• "As-Built" request for previous CLOMR	—	$225	$225

For requests involving a combination of the above, the highest fee will apply. Before a determination is issued, the requestor will be billed for any actual costs incurred during the review that exceed the initial fee. If the total cost will exceed $3,500, FEMA will advise the requestor and obtain approval in writing before costs in excess of $3,500 are incurred, except for requests involving structural measures on alluvial fan. For those requests, the requestor will be notified if costs will exceed $6,500.

If the revision requests results in either a LOMR or a Physical Map Revision, the requestor will be charged a fee of $410 per revised panel to cover the costs of cartographic preparation. Please note that any initial fee already submitted will be applied to this request only if all of the require ata are received within 90 days of the receipt of the original request by FEMA.

Payment may be in the form of a check or money order made payable to the National Flood Insurance Program. Please forward payment to the followi address:

Federal Emergency Management Agency
Revisions Fee-Collection System Administrator
P.O. Box 3173
Merrifield, Virginia 22116
Fax: (703) 849-0282

If paying by credit card, see the Credit Card Information Form.

Exempt from these reimbursement procedures for either proposed or "as-built" conditions are requests for projects that are for public benefit and are intended to reduce the flood hazard to existing development in identified flood hazard areas as opposed to planned floodplain development. Also exempt are requests based solely on the submission of more detailed information and requests to correct NFIP map errors.

A request for a revision to the effective FIS information (FIRM, FBFM, and /or FIS report) is usually a request that FEMA replace the effective floodplain boundaries, flood profiles, floodway boundaries, etc., with those determined by the requestor. Before FEMA will replace the effective FIS information with the revised, the requestor must: (a) provide all of the data used in determining the revised floodplain boundaries, flood profiles, floodway boundaries, etc. (b) provide all data necessary to demonstrate that the physical modifications to the floodplain have been adequately designed to withstand the impacts of the 100-year flood event and will be adequately maintained (c) demonstrate that the revised information (e.g., hydrologic and hydraulic analyses and the resulting floodplain and floodway boundaries) are consistent with the effective FIS information.

Completed application/certification forms should be neatly packaged in order, with the appropriate enclosure following each form submitted. A notebook-style format is ideal. **The complete package should be submitted to the appropriate FEMA Regional Office. The addresses and telephone numbers of the ten Regional Offices, as well as information regarding which areas they support, are provided inside the back cover of this document. The address and telephone number of the Headquarters office in Washington, DC, are also provided.**

If the request is a follow-up to a CLOMR for a project built as proposed, only the Revision Requestor and Community Official Form and the Professional Certification Form need to be completed.

Additional information is contained on the forms. Wherever necessary, attach additional sheets required to provide the information requested on the forms.

Commonly Used Acronyms

FEMA	Federal Emergency Management Agency.
NFIP	National Flood Insurance Program.
BFE	Base Flood Elevation. It is the height of the base flood, usually in feet, in relation to the datum used, or the depth of the base flood usually in feet, above the ground surface. The base flood is the flood that has a 1 percent probability of being equaled or exceeded in any given year (also referred to as the 100-year flood).
FIS	Flood Insurance Study. An engineering study performed under contract to FEMA to identify flood-prone areas and to determine BFEs, flood insurance rate zones, and other flood risk data for a community.
FIRM	Flood Insurance Rate Map. An official map of a community, on which the Administrator has delineated both the special hazard areas and the risk premium zones applicable to the community.
FBFM	The Flood Boundary and Floodway Map. The floodplain management map issued by FEMA that depicts, on the basis of detailed analyses, the boundaries of the 100- and 500- year floodplain and the regulatory 100-year floodway.
SFHA	Special Flood Hazard Area. Areas inundated by a flood having a 1 percent probability of being equaled or exceeded in any given year (also referred to as the 100-year flood).
FHBM	The Flood Hazard Boundary Map. The initial flood insurance map issued by FEMA that identified on the basis of approximate analyses, the areas of 100-year flood hazard in a community.
CHHA	Coastal High Hazard Area. An area of special flood hazard extending from offshore to the inland limit of a primary frontal dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources.

INSTRUCTIONS FOR COMPLETING THE REVISION REQUESTOR AND COMMUNITY OFFICIAL FORM (FORM 1)

This form provides the basic information regarding revision requests and must be submitted with each request. It contains much of the material needed for FEMA to assess the nature and complexity of the proposed revision. It will identify: (a) those elements that will require supporting data and analyses; (b) items needing concurrence of others; and (c) the type of response expected from FEMA. This form will also assure that the community is aware of the impacts of the request and has notified impacted property owners, if required. All items must be completed accurately. If the revision request is being submitted by an individual, firm, or other non-community official, contact should be made with appropriate community officials. NFIP regulation 44CFR Ch. I, Section 65.4, requires that revisions based on new technical data be submitted by the Chief Executive Officer (CEO) of the community or a designated official. Should the CEO refuse to submit such a request on behalf of another party, FEMA will agree to review it only if written evidence is provided indicating the CEO or designee has been requested to do so.

Physical changes include watershed development, flood control structures, etc. Note that fees will be assessed for FEMA's review of proposed and "as-built" projects, as outlined in NFIP regulation 44 CFR Ch. I, Part 72. Improved methodology may be a different technique (model) or adjustments to models used in the effective FIS. Improved data include revised as well as new data. Floodway modifications involve any shift in the FEMA-designated floodway boundaries, regardless of whether the shift is mappable.

Flooding source refers to a specific lake, stream, ocean, etc. This should match the flooding source name shown on the FIRM, if it has been labeled. (Examples: Lake Michigan, Duck Pond, or Big Hollow Creek.) Project Name/Identifier can be the name of a flood control project or other pertinent structure having an impact on the effective FIS, the name of a subdivision or area, or some other identifying phrase.

The map number, panel number, community number and effective date can be obtained from the FIRM title block. The sample FIRM panels (Figures 1 and 2) provide a convenient source of information to fill in item 5.

NFIP Compliance

If the community or communities disagree with the proposed revision, a signed statement should be attached to the request explaining the reasons or bases for disagreement.

The community should refer to the document entitled Appeals, Revisions and Amendments to Flood Insurance Maps: A Guide for Community Officials, dated January 1990.

Requested Response from FEMA

In order to avoid confusion between FEMA and the revision requestor, the requestor should identify the desired response from FEMA. Brief descriptions of possible responses are provided in the introduction; more detail regarding these responses and the data required to obtain each response are provided in the NFIP regulations, 44 CFR Ch. I, and in the document entitled Appeals, Revisions and Amendments to Flood Insurance Maps: A Guide for Community Officials, dated January 1990.

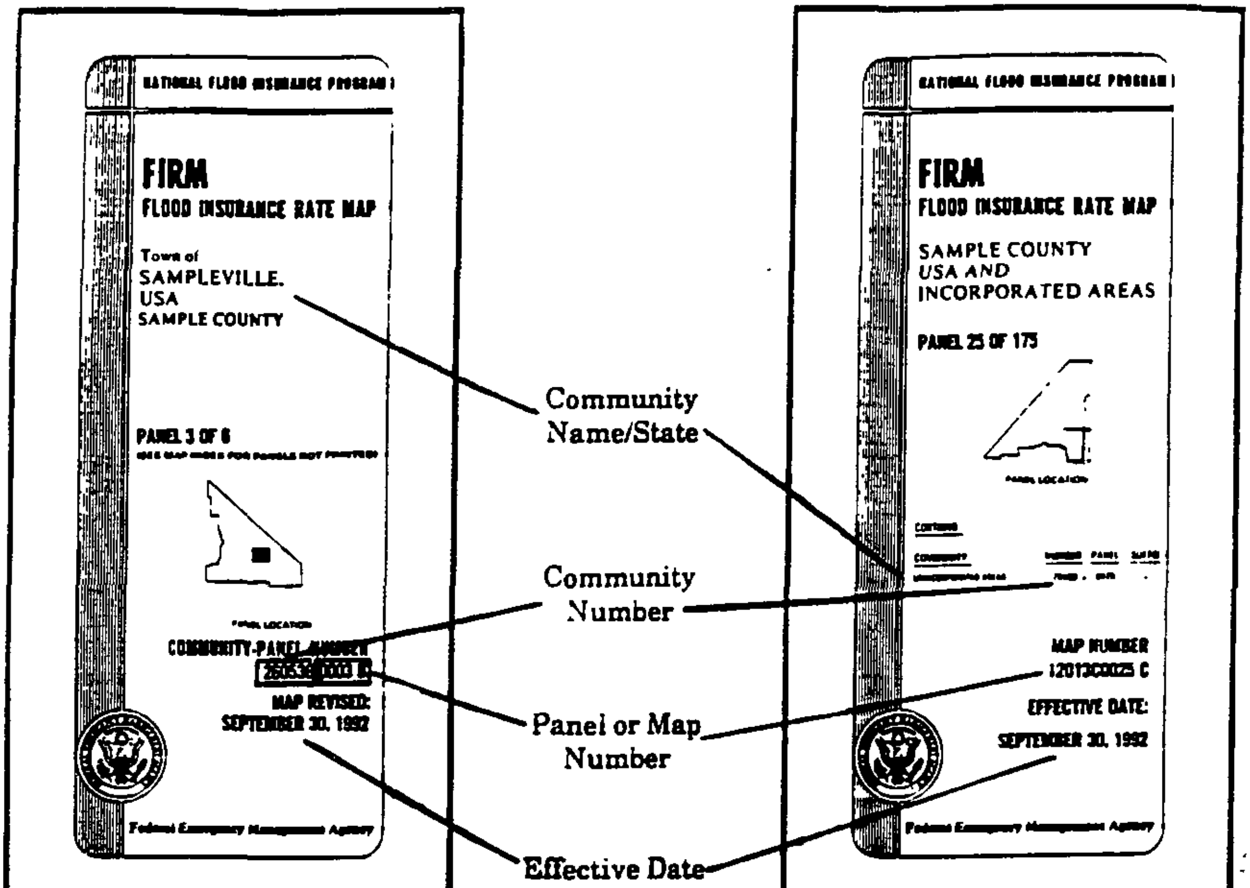

Figure 1. Sample FIRM Panel (Single Community)

Figure 2. Sample FIRM Panel (Countywide)

<u>Signature and Title of Revision Requestor</u>

The person signing this certification should own the property involved in the request or have legal authority to represent a group/firm/organization or other entity in legal actions pertaining to the NFIP.

<u>Signature and Title of Community Officials</u>

The person signing this certification should be the CEO for the community involved in this revision request or a legally designated official by the CEO. If more than one community is affected by the change, the community official from the community that is most affected should sign the form and letters from the other affected communities should be enclosed.

INSTRUCTIONS FOR COMPLETING THE PROFESSIONAL CERTIFICATION FORM (FORM 2)

The licensed professional engineer and/or land surveyor should have a current license in the State in which one of the impacted communities resides and should provide the number of years of experience in the specific area of expertise being certified, not the number of years as a licensed professional engineer and/or land surveyor. While the individual signing this form is not required to have obtained the supporting data or performed the analyses, he or she must have supervised and reviewed the work. This form must be submitted with each request.

Viewing the physical changes (Item 5) involves an on-site visit and observation of all features upon completion of the project. Examination of photographs is not a substitute for on-site visits.

If not familiar with all analyses conducted within the expertise cited on this form (Item 6) or with all construction procedures involved with the construction of the completed project (Item 7), the individual signing this form should attach a statement indicating the basis for concluding that all analyses and construction were performed in accordance with sound engineering practice. The individual signing this form should take care to identify other experts who may not be licensed engineers and their assistance regarding the assessment of analyses and construction practices.

Please note that more than one certification form may be required to include all disciplines involved in project completion.

A certification by a registered professional engineer or other party does not constitute a warranty or guarantee of performance, expressed or implied. Certification of data is a statement that the data is accurate to the best of the certifier's knowledge. Certification of analyses is a statement that the analyses have been performed correctly and in accordance with sound engineering practices. Certification of structural works is a statement that the works are designed in accordance with sound engineering practices to provide protection from the base flood. Certification of "as built" conditions is a statement that the structure(s) has been built according the the plans being certified, is in place, and is fully functioning.

If the requestor is a Federal agency who is responsible for the design and construction of flood control facilities, a letter stating that "the analyses submitted has been performed correctly and in accordance with sound engineering practices" may be submitted in lieu of this form. Regarding the certification of completion of flood control facilities, a letter from the Federal agency certifying its completion and the flood frequency event to which the project protects may be submitted in lieu of this form.

INSTRUCTIONS FOR COMPLETING THE HYDROLOGIC ANALYSIS FORM
(FORM 3)

This form is to be completed when discharges other than those used in the FIS are proposed. Information requested is used to compare revised data to FIS data, compare revised discharges to FIS discharges, and to determine the merit of using revised methods and data over those used in the FIS

For revisions based on alternative methodologies or improved data, an explanation as to why the alternative methodology or improved data provides better results over the FIS must be presented and supported throughout the form. Models submitted in support of a revision request must meet the requirements of Subparagraph 65.6(a)(6) of the NFIP regulations.

The data revision section should be completed as below:

Data Parameter	New	Revised	Data Source
Curve Number	☐	☒	Land Use Maps
	☐	☐	Published by SCS
	☐	☐	(Due to Extensive
	☐	☐	Development Since
	☐	☐	Effective FIS date)

Attachment A - Statistical Analysis of Gage Records (one per gage record):

Statistical analyses of gage data are based on the guidelines set out in Bulletin 17B by the Interagency Advisory Committee on Water Data.

Systematic data refer to peak discharge data observed and recorded regularly over a period of time by a government agency or private firm. Historical data refers to peak discharge data observed outside the systematic period and recording only isolated outstanding events. Historical data should be documented whenever possible.

For data to be homogeneous, the long-term trend of the data should remain constant. In other words, the probability distribution used to describe it is independent of time. An example of non-homogeneous data would be peak discharge data at the confluence of two streams following two different flow regimes.

Adjustments made to the statistical data/record, such as the use of a second gaging station to compensate for a short record or adjustments for zero flood years.

Bulletin 17B recommends the use of the log-Pearson Type III (LP3) distribution for the statistical analysis of flood data. However, there may be situations where the LP3 distribution is inappropriate and another probability distribution must be used. Other distributions include Extreme Value (Gumbel) and log-normal (Galton). The use of alternative distributions must be justified and fully documented.

Comparison with other analyses includes comparing the analysis with another station on a hydrologically similar stream or using an alternative analysis (e.g. regression equations) to verify the reasonableness and logic of the results.

Attachment B - Regression Analysis (one per stream)

The source of the regression equations must be given along with a proper bibliographical reference. The U.S. Geological Survey (USGS), in cooperation with State agencies in charge of monitoring water data, has developed regression equations on a state-by-state basis. As these are revised regularly, FEMA will accept only the most recently published regression equation report. Other agencies also put out regression analyses reports, or a regional analyses can be performed.

Stream stations are grouped in hydrologic regions in which certain basin parameters have been found to have roughly the same influence on the peak flows as evidenced by the multiple regression analysis. It can happen that a stream watershed may encompass more than one region, in which case some proportionality of the influence of each region upon the peak discharge must be considered.

Most regression equations are developed for rural or undeveloped conditions. These results can be modified to reflect urban or developed conditions. If urbanized conditions were considered, the methodology for developing the urban discharges must be described and/or referenced and the percentage of the watershed that is urbanized must be given.

Because regression equations are based on compilation of data from several gage stations, a certain amount of natural basin storage is inherent in the equations. However, regression equations are not designed to handle watersheds controlled by major storage features such as flood control structures. If such structures exist, a full account of how flood storage was considered must be given.

Attachment C - Precipitation/Runoff Model (One Per Model)

Baseflow is defined as the estimated flow occurring in the stream before the flood event occurs.

Because there are many different precipitation/runoff models, many with a different theoretical basis, it is very difficult, if not impossible, to prove that one model provides superior results over another. Therefore, it must be shown that the types of parameters, the theoretical basis, and source of data provide superior results.

If possible, a precipitation runoff model should be compared and calibrated to a known flood event in order to justify the values of the parameters and the assumptions made in the model. All calibration and verification runs should be described and the results discussed. Please attach hard copies of the calibration and verification model outputs.

Attachment D - Confidence Limits Evaluation

When revised discharges are not significantly different than the FIS discharges, FEMA may require a confidence limit analysis at a later date to complete the review.

INSTRUCTIONS FOR COMPLETING THE RIVERINE HYDRAULIC ANALYSIS FORM
(FORM 4)

This form is to be completed when the request involves a hydraulic analysis for riverine flooding that differs from that used to develop the FIRM.

To obtain copies of the effective FIS models, either the community or FEMA Regional offices should be contacted for direction. A list of FEMA Regional offices is located at the end of the instructions. If the effective models are not available, the requestor must generate models that duplicate the FIS profiles and the elevations shown in the Floodway Data Table in the FIS report to within 0.1 foot or contact FEMA Headquarters for guidance. FEMA Headquarters should be contacted if this model cannot be produced. If an alternative hydraulic model is used, it must be shown that the use of the original model is inappropriate and the new model must be calibrated to reproduce the FIS profiles within 0.1 foot.

Only the duplicate effective and the revised or post-project conditions models are required to be submitted. The corrected effective model may be submitted to provide a more detailed analysis than the duplicate effective model at the project site or fix any technical deficiencies. The existing or pre-project models may be required to support conclusions about the actual impacts of the project associated with the revised or post-project model or to establish more up-to-date models on which to base the revised or post-project conditions model. The revised or post-project conditions model must always include the existing and post-project conditions. Additional information about these models is contained on the form.

When the request is for a proposed project, the revised or post-project model should reflect proposed conditions. The information requested on the Hydraulic Analysis Form are intended to document the steps taken by the requestor in the process of preparing the revised or post-project conditions hydraulic models and the resulting revised FIS information. The following guidelines should be followed when completing the form:

(a) All changes to the duplicate and subsequent models must be supported by certified topographic information, bridge plans, constructions plans, survey notes, etc.

(b) Changes to the hydraulic models should be limited to the stream reach for which the revision is being requested. Cross-sections upstream and downstream of the revised reach should be identical to those in the effective model. If this is done, water surface elevations and topwidths computed by the revised models should match those in the effective models upstream and downstream of the revised reach as required.

(c) There must be consistency between the revised hydraulic models, the revised floodplain and floodway delineations, the revised flood profiles, topographic work map, annotated FIRMs and/or FBFMs, construction plans, bridge plans, etc.

For SFHAs designated as Zone A, the existing or pre-project model and the revised or post-project model,or other hydraulic analyses for existing and revised conditions are required to determine the 100-year flood profile. The existing model or analysis is required to support conclusions about the actual impacts of the project associated with the revised or post-project model or analysis.

INSTRUCTIONS FOR COMPLETING THE RIVERINE/COASTAL MAPPING FORM
(FORM 5)

This form is to be completed when mapping changes to either the FIRM or FBFM are proposed and to assure that the revised floodplain and floodway boundary information tie-into the effective information so that a consistent NFIP map is maintained. In addition, the questions asked a. information required are to determine the impacts of the revision, including increases in SF and shifts in floodway both on and off the requestor's property.

When fill is placed in the 100-year floodplain and the request is to alter 100-year flood bo· ıdary, in order to permanently remove the filled area from the floodplain, the fill must be compac.ed and protected against erosion from moving flood waters.

An insurable structure is defined as a walled and roofed building, other than a gas or liquid storage tank, that is principally above ground and affixed to a permanent site, as well as a manufactured home on a permanent foundation. For the latter purpose, the term includes a building while in the course of construction, alteration or repair, but does not include building materials or supplies intended for use in such construction, alteration or repair, unless such materials or supplies are within an enclosed building on the premises.

INSTRUCTIONS FOR COMPLETING THE CHANNELIZATION FORM
(FORM 6)

This form is to be completed when any portion of the stream channel is altered or relocated. When the Channelization Form is submitted, a Riverine Hydraulic Analysis Form must also be submitted.

The purpose of the Channelization Form is to assure that the channel will function properly as designed and pass the 100-year flood as determined by the hydraulic analysis. Typically, channelization increases the channel velocity above the natural channel velocity. Documentation must be provided that assures that the channel lining will withstand the velocities associated with the 100-year flood. Additional considerations are the stability of the flow regime and the affects of sediment transport.

INSTRUCTIONS FOR COMPLETING THE BRIDGE/CULVERT FORM (FORM 7)

This form is to be completed when the request involves a new bridge or culvert or a new or revised analysis of an existing bridge or culvert.

Typically a revision is not requested to reflect a new analysis of a previously studied existing structure. If this is the case, an explanation of why the new analysis was performed is required. Typically the structure is analyzed using the same method of analysis used for the flooding source. If a different method is used for the structure, justification why the hydraulic analysis utilized for the flooding source could not analyze the structure must be enclosed.

Culvert Length or Bridge Width:	The culvert length or bridge width in direction of flow must be entered.
Culvert/Bridge Area:	If a computer model is used to analyze the structure, the calculated culvert/bridge area may be different than the total culvert/bridge area in cases of low flow.
Elevations above which flow is effective for the entire cross section:	These elevations are needed to ensure that the flow is restricted to the effective cross section.
Top Widths:	Top widths are the horizontal distance between stations of the floodplain boundaries, floodway boundaries, and the limits of effective flow areas modelled in a cross section.

INSTRUCTIONS FOR COMPLETING THE LEVEE/FLOODWALL SYSTEM ANALYSES FORM
(FORM 8)

The purpose of this form is to assure that the levee or floodwall is designed and/or constructed to provide protection from the 100-year flood, in full compliance with 44 CFR Ch. I, Section 65.10 of t[illegible] National Flood Insurance Program (NFIP) regulations, before reflecting its effects on an NFIP map. [illegible] complete engineering analysis must be submitted in support of each section of this form. In add[illegible]n, a vicinity map along with a complete set of flood profile sheets, plan sheets, and layout detail sh[illegible]s must be submitted. These sheets must be numbered, and an index must be provided that clearly identifies those sheets specifically relating to the levee or floodwall in question.

INSTRUCTIONS FOR COMPLETING THE COASTAL ANALYSIS FORM
(FORM 9)

The information requested on the Coastal Analysis Form is intended to document the steps taken by the requestor in the process of preparing the revised models or analyses and the resulting revised FIS information. The following guidelines should be followed when completing the form:

a. All changes to effective models must be supported by certified topographic information, structure plans, survey notes, storm surge data, meteorological data, etc.

b. The reanalysis of the effective study must tie-in with areas not restudied.

c. All equations or models used must be referenced.

INSTRUCTIONS FOR COMPLETING THE COASTAL STRUCTURES FORM (FORM 10)

The Coastal Structures Form is to be completed when a revision to coastal flood hazard elevations and/or areas is requested based on coastal structures being credited as providing protection from the base flood. If the coastal structure is a levee/floodwall, complete the Levee/Floodwall System Analysis Form in lieu of this form. When the Coastal Structures Form is submitted, the Coastal Analysis Form should also be submitted.

The purpose of the Coastal Structures Form is to assure that the structure is designed and constructed to provide protection from the base flood without failing or causing an increase in flood hazards to adjacent areas. Documentation must be provided that assures a coastal structure is designed and constructed to withstand the wind and wave forces associated with the base flood. Additional concerns include the impact to areas directly landward of the structure that may be subjected to overtopping and erosion along with possible failure of the structure due to undermining from the backside and the possible increase in erosion at the ends of the structure to unprotected properties. The evaluation of protection provided by sand dunes must follow the criteria outlined in 44 CFR Ch. I, Section 65.11.

INSTRUCTIONS FOR COMPLETING THE DAM FORM
(FORM 11)

The Dam Form is to be filled out when there is an existing, proposed, or modified dam along a stream studied in detail. Any flood control storage to be considered in the hydrologic analysis for the dam should be totally dedicated to flood control. If the dam is not certified to safely pass the 100-year flood and the dam has a reasonable probability of failure during the 100-year flood, a dam break analysis should be submitted. The dam break analysis should provide consistent results, use empirical peak discharges from actual dam failures, require minimal input data, and perform river routing of the failure hydrograph by dynamic procedures, which includes attenuation and translation. The NFIP does not involve appraisal of dam safety adequacy; however, the FISs should include impacts of structures when subjected to 100-year flood hydrographs. Local, State, and/or Federal laws address dam safety features.

INSTRUCTIONS FOR COMPLETING THE ALLUVIAL FAN FLOODING FORM
(FORM 12)

The purpose of this form is to assure that a structural flood control measure in areas subj⸱ ⸱t to alluvial fan flooding is designed and/or constructed to provide protection from the 100-year floc , in compliance with 44 CFR Ch. I, Section 65.13 of the National Flood Insurance Program (NF regulations, before it is recognized on a NFIP map. Please be aware that elevation of a r cel of land or a structure by fill or other means only, will not serve as a basis for removing areas sub ct to alluvial fan flooding from an area of special flood hazards. See Section 65.13 of the NFIP regul ions. Complete engineering analyses must be submitted in support of each section of this f m. In addition, it may be necessary to complete other forms relating to specific flood contr measures, such as levees/floodwalls, channelization, or dams.

FEMA REGIONAL OFFICES

FEDERAL EMERGENCY MANAGEMENT AGENCY REVISION REQUESTOR AND COMMUNITY OFFICIAL FORM	O M B Burden No 3067-0148 Expires July 31, 1997	FEMA USE ONLY

PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 2.13 hours per response. The burden estimate includes th time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, an completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestion for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 (Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067 0148). Washington, DC 20503

1. OVERVIEW

1. The basis for this revision request is (are): *(check all that apply)*
   - ☒ Physical change
     - ☐ Existing
     - ☒ Proposed
   - ☐ Improved methodology
   - ☐ Improved data
   - ☐ Floodway revision
   - ☐ Other ____________

   Explain ____________

2. Flooding Source: Gloede Ditch

3. Project Name/Identifier: Merlini Property

4. FEMA zone designations affected: A2, B
   (example: A, AH, AO, A1-A30, A99, AE, V, V1-30, VE, B, C, D, X)

5. The NFIP map panel(s) affected for all impacted communities is (are):

Community No.	Community Name	County	State	Map No.	Panel No.	Effective Date
EX: 480301	Katy,City	Harris, Fort Bend	TX	480301	0005D	02/08/83
480287	Harris County	Harris	TX	48201C	0220G	09/28/90
260445	Macomb Twp	Macomb	MI	0020B	0020B	04/04/81

6. The area of revision encompasses the following types of flooding, structures, and associated disciplines: *(check all that apply)*

Types of Flooding
- ☒ Riverine
- ☐ Coastal
- ☐ Alluvial Fan
- ☐ Shallow Flooding *(e.g. Zones AO and AH)*
- ☐ Lakes

Affected by wind/wave action
- ☐ Yes
- ☐ No

Structures
- ☒ Channelization
- ☐ Levee/Floodwall
- ☐ Bridge/Culvert
- ☐ Dam
- ☐ Coastal
- ☐ Fill
- ☐ Pump Station
- ☐ None
- ☐ Channel Relocation
- ☐ Excavation
- ☐ Other *(describe)*

Disciplines*
- ☒ Water Resources
  - ☐ Hydrology
  - ☒ Hydraulics
  - ☐ Sediment Transport
  - ☐ Interior Drainage
- ☐ Structural
- ☐ Geotechnical
- ☐ Land Surveying
- ☐ Other *(describe)*

☐ Other(describe) ____________

* **Attach completed "Certification by Registered Professional Engineer and/or Land Surveyor" Form for each discipline checked. (Form 2)**

2. FLOODWAY INFORMATION

7. Does the affected flooding source have a floodway designated on the effective FIRM or FBFM? ☒ Yes ☐ No
8. Does the revised floodway delineation differ from that shown on the effective FIRM or FBFM ☒ Yes ☐ No
   If yes, give reason: The proposed project will improve the hydraulic characteristics of the channel and reduce the floodway width

Attach copy of either a public notice distributed by the community stating the community's intent to revise the floodway or a statement by the community that it has notified all affected property owners and affected adjacent jurisdictions.

9. Does the State have jurisdiction over the floodway or its adoption by communities participating in the NFIP?
☒ Yes ☐ No

If yes, attach a copy of a letter notifying the appropriate State agency of the floodway revision and documentation of the approval of the revised floodway by the appropriate State agency.

3. PROPOSED ENCROACHMENTS

10. With floodways:

1A. Does the revision request involve fill, new construction, substantial improvement, or other development in the floodway? ☐ Yes ☒ No

1B. If yes, does the development cause the 100-year water surface elevation to increase at any location by more than 0.000 feet? ☐ Yes ☐ No

11. Without floodways:

2A. Does the revision request involve fill, new construction, substantial improvement, or other development in the 100-year floodplain? ☐ Yes ☒ No

2B. If yes, does the cumulative effect of all development that has occurred since the effective SFHA was originally identified cause the 100-year water surface elevation to increase at any location by more than one foot (*or other surcharge limit if community or state has adopted more stringent criteria*)? ☐ Yes ☐ No

If the answer to either Items 1B or 2B is yes, please provide documentation that all requirements of Section 65.12 of the NFIP regulations have been met, regarding evaluation of alternatives, notice to individual legal property owners, concurrence of CEO, and certification that no insurable structures are impacted.

4. REVISION REQUESTOR ACKNOWLEDGMENT

12. Having read NFIP Regulations, 44 CFR Ch. I, parts 59, 60, 61, and 72, I believe that the proposed revision ☒ is ☐ is not in compliance with the requirements of the aforementioned NFIP Regulations.

5. COMMUNITY OFFICIAL ACKNOWLEDGMENT

13. Was this revision request reviewed by the community for compliance with the community's adopted floodplain management ordinances? ☒ Yes ☐ No

14. Does this revision request have the endorsement of the community? ☒ Yes ☐ No

If no to either of the above questions, please explain: ______________________________

Please note that community acknowledgment and /or notification is required for all requests as outlined in Section 65.4 (b) of the NFIP Regulations.

6. OPERATION AND MAINTENANCE

15. Does the physical change involve a flood control structure (e.g., levees, floodwalls, channelization, basins, dams)?
☐ Yes ☒ No

If yes, please provide the following information for each of the new flood control structures:

A. Inspection of the flood control project will be conducted periodically by ______________________________
entity
______________ with a maximum interval of ____________ months between inspections.

B. Based on the results of scheduled periodic inspections, appropriate maintenance of the flood control facilities will be conducted by ______________________________
(entity)
to ensure the integrity and degree of flood protection of the structure.

C. A formal plan of operation, including documentation of the flood warning system, specific actions and assignments of responsibility by individual name or title, and provisions for testing the plan at intervals not less than one year, ☐ has ☐ has not been prepared for the flood control structure.

D. The community is willing to assume responsibility for ☐ performing ☐ overseeing compliance with the maintenance and operation plans of the ______________________
(Name)

flood control structure. If not performed promptly by an owner other than the community, the community will provide the necessary services without cost to the Federal government.

Attach operation and maintenance plans

7. REQUESTED RESPONSE FROM FEMA

16. After examining the pertinent NFIP regulations and reviewing the document entitled "Appeals, Revisions, and Amendments to Flood Insurance Maps: A guide for Community Officials," dated January 1990, this request is for a:

_X_ a. CLOMR — A letter from FEMA commenting on whether a proposed project, if built as proposed, would justify a map revision *(LOMR or PMR)*, or proposed hydrology changes *(see 44 CFR Ch. I, Parts 60, 65, and 72)*

____ b. LOMR — A letter from FEMA officially revising the current NFIP map to show changes to floodplains, floodways, or flood elevations. LOMRs typically depict decreased flood hazards. *(See 44 CFR Ch. I Parts 60 and 65)*

____ c. PMR — A reprinted NFIP map incorporating changes to floodplains, floodways, or flood elevations. Because of the time and cost involved to change, reprint, and redistribute an NFIP map, a PMR is usually processed when a revision reflects increased flood hazards or large-scope changes. *(See 44 CFR Ch. I, Parts 60 and 65.)*

____ d. Other: Describe ______________________

8. FORMS INCLUDED

17. Form 2 entitled, "Certification By Registered Professional Engineer and/or Land Surveyor" must be submitted.

The following forms should be included with this request if (check the included forms):

• Hydrologic analysis for flooding source differs from that used to develop FIRM	☐ Hydrologic Analysis Form (Form 3)
• Hydraulic analysis for riverine flooding differs from that used to develop FIRM	☒ Riverine Hydraulic Analysis Form (Form 4)
• The request is based on updated topographic information or a revised floodplain or floodway delineation is requested	☒ Riverine /Coastal Mapping Form (Form 5)
• The request involves any type of channel modification	☒ Channelization Form (Form 6)
• The request involves new bridge or culvert or revised analysis of an existing bridge or culvert	☐ Bridge/Culvert Form (Form 7)
• The request involves a new revised levee/floodwall system	☐ Levee/Floodwall System Analysis Form (Form 8)
• The request involves analysis of coastal flooding	☐ Coastal Analysis Form (Form 9)
• The request involves coastal structures credited as providing protection from the 100-year flood	☐ Coastal Structures (Form 10)
• The request involves an existing, proposed, or modified dam	☐ Dam Form (Form 11)
• The request involves structures credited as providing protection from the 100-year flood on an alluvial fan	☐ Alluvial Fan Flooding Form (Form 12)

18. The minimum initial review fee for the appropriate request category has been included. ☒ Yes ☐ No

Initial fee amount: $ 3,100.00

Check or money order only. Make check or money order payable to : **National Flood Insurance Program.** If paying by Visa or Mastercard please refer to the credit card information form which follows this form.

or

19. This request is for a project that is for public benefit and is primarily intended for flood loss reduction to insurable structures in identified flood hazard areas which were in existence prior to the commencement of construction of the flood control project. ☐ Yes ☐ No

or

20. This request is to correct map errors, to include the effects of natural changes within the areas of special flood hazard, or solely to provide more detailed data. ☐ Yes ☒ No

Note: I understand that my signature indicates that all information submitted in support of this request is correct.

Signature of Revision Requester

Gordon B. Wilson, P.E.

Printed Name and Title of Revision Requester

Anderson, Eckstein and Westrick, Inc.

Company Name

(810) 726-1234

Telephone No Date

Note: Signature indicates that the community understands, from the revision requester, the impacts of the revision on flooding conditions in the community.

Signature of Community Official

Richard Young, Building Official

Printed Name and Title of Community Official

FEDERAL EMERGENCY MANAGEMENT AGENCY CERTIFICATION BY REGISTERED PROFESSIONAL ENGINEER AND/OR LAND SURVEYOR FORM	O M B Burden No. 3067-0148 Expires July 31, 1997	FEMA USE ONLY

PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average .23 hour per response. The burden estimate includes th time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, an completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and an suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Managemen Agency, 500 C Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwor Reduction Project (3067-0148), Washington, DC 20503.

1. This certification is in accordance with 44 CFR Ch. I, Section 65.2
2. I am licensed with an expertise in Hydraulics
   [example: water resources *(hydrology, hydraulics, sediment transport, interior drainage)** structural, geotechnical, land surveying.]
3. I have 11 years experience in the expertise listed above.
4. I have ☒ prepared ☐ reviewed the attached supporting data and analyses related to my expertise.
5. I ☒ have ☐ have not visited and physically viewed the project.
6. In my opinion, the following analyses and /or designs, is/are being certified:
   HEC-2 Hydraulic analysis of proposed Gloede Ditch cleanout
7. Base upon the following review, the modifications in place have been constructed in general accordance with plans and specifications.

   Basis for above statement: (check all that apply)

   a. ☐ Viewed all phases of actual construction.
   b. ☐ Compared plans and specifications with as-built survey information.
   c. ☐ Examined plans and specifications and compared with completed projects.
   d. ☒ Other Project has not yet been constructed. As-built will be submitted when constructed.
8. All information submitted in support of this request is correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

FEDERAL EMERGENCY MANAGEMENT AGENCY
RIVERINE HYDRAULIC ANALYSIS FORM

O M B Burden No 3067-0148
Expires July 31 1997

FEMA USE ONLY

PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 2.25 hours per response. The burden estimate includes t time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, a completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestio for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (306 0148), Washington, DC 20503.

Community Name: Macomb Township, Macomb County, Michigan

Flooding Source: Gloede Ditch
(One form for each flooding source)

Project Name/Identifier: Merlini Property

1. REACH TO BE REVISED

Downstream limit: 19011

Upstream limit: 20836 (Section R)

2. EFFECTIVE FIS

☐ Not studied

☐ Studied by approximate methods

Downstream limit of study

Upstream limit of study

☒ Studied by detailed methods

Downstream limit of study 19011

Upstream limit of study 20836 (Section R)

☒ Floodway delineated

Downstream limit of Floodway 19011

Upstream limit of Floodway 20836 (Section R)

3. HYDRAULIC ANALYSIS

Why is the hydraulic analysis different from that used to develop the FIRM. *(Check all that apply)*

☐ Not studied in FIS

☐ Improved hydrologic data/analysis. Explain.

☐ Improved hydraulic analysis. Explain:

☐ Flood control structure. Explain:

☒ Other. Explain: A Letter of Map Revision was issued for the Gloede Ditch downstream of this site, based on improved hydraulic conditions.

For areas which have detailed flooding:

Full input and output listings along with files on diskette (if available) for each of the models listed below (items 1, 2, 3, 4, and 5) and summary of the source of input parameters used in the models must be provided. The summ--y must include a complete description of any changes made from model to model (e.g. duplicate effective model t. orrected effective model) At a minimum, the Duplicate Effective (item 1) and the Revised or Post-Project Conditi (item 4) models must be submitted. See instructions for directions on when other models may be required.

For areas which do not have detailed flooding:

Only the 100-year flood profile is required. A hydraulic model is not required for areas which do not h. e detailed flooding; however, BFEs may not be added to the revised FIRM. If a hydraulic model is developed for :e area, items 3 and 4 described below must be submitted.

If hydraulic models are not developed, hydraulic analyses for existing or pre-project conditions and revised or post-project conditions must be submitted. All calculations must be submitted for these analyses. (See item 6 below)

1. Duplicate Effective Model — Natural ☒ Floodway ☒

Copies of the hydraulic analysis used in the effective FIS, referred to as the effective models *(10-, 50-, 100-, and 500-year multi-profile runs and the floodway run)* must be obtained and then reproduced on the requestor's equipment to produce the duplicate effective model. This is required to assure that the effective model input data has been transferred correctly to the requestor's equipment and to assure that the revised data will be integrated into the effective data to provide a continuous FIS model upstream and downstream of the revised reach.

2. Corrected Effective Model — Natural ☒ Floodway ☒

The corrected effective model is the model that corrects any errors that occur in the duplicate effective model, adds any additional cross sections to the duplicate effective model, or incorporates more detailed topographic information than that used in the currently effective model. The corrected effective model must not reflect any man-made physical changes since the date of the effective model. An error could be a technical error in the modeling procedures, or any construction in the floodplain that occurred prior to the date of the effective model but was not incorporated into the effective model.

3. Existing or Pre-Project Conditions Model — Natural ☒ Floodway ☒

The duplicate effective or corrected model is modified to produce the existing or pre-project conditions model to reflect any modifications that have occurred within the floodplain since the date of the effective model but prior to the construction of the project for which the revision is being requested. If no modification has occurred since the date of the effective model, then this model would be identical to the corrected effective or duplicate effective model.

4. Revised or Post-Project Conditions Model — Natural ☒ Floodway ☒

The existing or pre-project conditions model *(or duplicate effective or corrected effective model, as appropriate)* is revised to reflect revised or post-project conditions. This model must incorporate any physical changes to the floodplain since the effective model was produced as well as the effects of the project. When the request is for proposed project this model should reflect proposed conditions.

5. Other: Please attach a sheet describing all other models submitted. — Natural ☐ Floodway ☐

6. Hydraulic Analyses (Only if Hydraulic Models are not developed)

Please attach all calculations for the existing or pre-project conditions and the revised or post-project conditions. Proceed to Form 5, "Riverine/Coastal Mapping Form".

1. Discharges:

	Upstream Limit	Downstream Limit
10-year	465	465
50-year	690	690
100-year	755	755
500-year	1070	1070

Attach diagram showing changes in 100-year discharge

2. Explain how the starting water surface elevations were determined Taken from the effective model (based on the LOMR) at the downstream limit (Section 19011).

3. Give range of friction loss coefficients (*Manning's "N"*) Channel 0.040

Overbanks ...... 0.040 - 0.060

If friction loss coefficients are different anywhere along the revised reach from those used to develop the FIRM, give location, value used in the effective FIS, and revised values and an explanation as to how the revised values were determined.

Location	FIS	Revised

Explain:

4. Describe how the cross section geometry data were determined *(e.g., field survey, topographic map, taken from previous study)* and list cross sections that were added.

Field Survey

5. Were natural channel banks selected as the location of the left and right channel banks in the model?

☒ Yes ☐ No If no, explain why not:

6. Explain how reach lengths for channel and overbanks were determined.

Matched effective with three additional cross sections

5. RESULTS (from model used to revise 100-year water surface elevations)

1. Do the results indicate:

a. Water surface elevations higher than end points of cross sections? ☐ Yes ☒ No

b. Supercritical depth? ☐ Yes ☒ No

c. Critical depth? ☐ Yes ☒ No

d. Other unique situations ☐ Yes ☒ No

If yes to any of the above, attach an explanation that discusses the situation and how it is presented on the profiles, tables, and maps.

2. What is the maximum change in energy gradient between cross-sections? 0.82 feet

Specify location 20464-20726

3. What is the distance between the cross-sections in 2 above? 262 feet

4. What is the maximum distance between cross-sections? 415 feet

Specify location 19011-19426

5. Floodway determination

a. What is the maximum surcharge allowed by the community or State? 0 foot

b. What is the maximum surcharge for the revised conditions? 0 foot

Specify location ______

c. What is the maximum velocity? 5.45 fps

Specify location 20726

d. Are there any negative surcharge values at any cross-section? ☐ Yes ☒ No

If yes, the floodway may need to be widened. If it is not widened, please explain and indicate the maximum negative surcharge.

Explain: ______

6. Is the discharge value used to determine the floodway anywhere different from that used to determine the natural 100-year flood elevations? .... ☐ Yes ☒ No

If Yes, explain:

7. Do 100-year water surface elevations increase at any location? .... ☐ Yes ☒ No

If yes, please attach a list of the locations where the increases occur, state whether or not the increases are located on the requestor's property, and provide an explanation of the reason for the increases. *(For example: State if the increase is due to fill placed within the floodway fringe or placed within the currently adopted floodway limits)*

Please attach a completed comparison table entitled: Water Surface Elevation Check (See page 6)

6. REVISED FIRM/FBFM AND FLOOD PROFILES

A. The revised water surface elevations tie into those computed by the effective FIS Model *(10-, 50-, 100-, and 500-year)*, downstream of the project at cross-section 19011 within 0 feet *(vertical)* and upstream of the project at cross section 20726 (20836) within -0.90 feet *(vertical)*.

B. The revised floodway elevations tie into those computed by the effective FIS model, dowstream of the project at cross section 19011 within 0 feet *(vertical)* and upstream of the project at cross section 20726 (20836) within -0.90 feet *(vertical)*.

C. Attach profiles, at the same vertical and horizontal scale as the profiles in the effective FIS report, showing stream bed and profiles of all floods studied (without encroachment). Also, label all cross sections, road crossings (including low chord and top-of-road data), culverts, tributaries, corporate limits, and study limits. If channel distance has changed, the stationing should be revised for all profile sheets.

D. Attach a Floodway Data Table showing data for each cross section listed in the published Floodway Data Table in the FIS report.

Proceed to Riverine/Coastal Mapping Form

6. *Is the discharge value used to determine the floodway anywhere different from that used to determine the natural 100-year flood elevations?* .... ☐ Yes ☒ No

If Yes, explain:

____

____

____

7. Do 100-year water surface elevations increase at any location? .... ☐ Yes ☒ No

If yes, please attach a list of the locations where the increases occur, state whether or not the increases are located on the requestor's property, and provide an explanation of the reason for the increases. *(For example: State if the increase is due to fill placed within the floodway fringe or placed within the currently adopted floodway limits)*

____

____

____

Please attach a completed comparison table entitled: Water Surface Elevation Check (See page 6)

6. REVISED FIRM/FBFM AND FLOOD PROFILES

A. The revised water surface elevations tie into those computed by the effective FIS Model *(10-, 50-, 100-, and 500-year)*, downstream of the project at cross-section 19011 within 0 feet *(vertical)* and upstream of the project at cross section 20726 (20836) within -0.90 feet *(vertical)*.

B. The revised floodway elevations tie into those computed by the effective FIS model, dowstream of the project at cross section 19011 within 0 feet *(vertical)* and upstream of the project at cross section 20726 (20836) within -0.90 feet *(vertical)*.

C. Attach profiles, at the same vertical and horizontal scale as the profiles in the effective FIS report, showing stream bed and profiles of all floods studied (without encroachment). Also, label all cross sections, road crossings (including low chord and top-of-road data), culverts, tributaries, corporate limits, and study limits. If channel distance has changed, the stationing should be revised for all profile sheets.

D. Attach a Floodway Data Table showing data for each cross section listed in the published Floodway Data Table in the FIS report.

Proceed to Riverine/Coastal Mapping Form

L.	Vertical datum (example: NGVD, NAVD etc.) NGVD	☒ Yes	☐ No	☐ N/A
M.	Coastal zone designations tie into adjacent areas not being revised	☐ Yes	☐ No	☒ N/A
N.	Location and alignment of all coastal transects used to revise the coastal analyses	☐ Yes	☐ No	☒ N/A

If any of the items above are marked no or N/A, please explain: F. community boundaries are not within the project area M. & N. Coastal zone designations are not found in this area.

2. What is the source and date of the updated topographic information (*example: orthophoto maps, July 1985; field survey, May 1979, beach profiles, June 1987, etc.*)? ______

3. What is the scale and contour interval of the following workmaps?
   a. Effective FIS 1"=800' scale 1' Contour interval
   b. Revision Request 1"=40' scale 1' Contour interval

NOTE: Revised topographic information must be of equal or greater detail.

4. Attach an annotated FIRM and FBFM at the scale of the effective FIRM and FBFM showing the revised 100-year and 500-year floodplains and the 100-year floodway boundaries and how they tie into those shown on the effective FIRM and FBFM downstream and upstream of the revision or adjacent to the area of revision for coastal studies.

Attach additional pages if needed.

5. Flood Boundaries and 100-year water surface elevations:

Has the 100-year floodplain been shifted or increased or the 100-year water surface elevation increased at any location on property other than the requestor's or community's? ☐ Yes ☒ No

If yes, please give the location of shift or increase and an explanation for the increase.

a. Have the affected property owners been notified of this shift or increase and the effect it will have on their property? .... ☐ Yes ☐ No

If yes, please attach letters from these property owners stating they have no objections to the revised flood boundaries if a LOMR is being requested.

b. What is the number of insurable structures that will be impacted by this shift or increase? ______

6. Have the floodway boundaries shifted or increased at any location compared to those shown on the effective FBFM or FIRM? .... ☒ Yes ☐ No

If yes, explain:

At section 19726 the width increases from 49 feet to 81 feet because the improved drain section carries all the flow within the banks of a larger channel.

If a V-zone has been designated, has it been delineated to extend landward to the heel of the primary frontal dune? ☐ Yes ☐ No N/A

If no, explain:

8. Manual or digital map submission:

☒ Manual

☐ Digital

Digital map submissions may be used to update digital FIRMs (DFIRMs). For updating DFIRMs, these submissions must be coordinated with FEMA Headquarters as far in advance of submission as possible.

2. EARTH FILL PLACEMENT

1. The fill is: ☐ Existing ☐ Proposed N/A

2. Has fill been/will be placed in the regulatory floodway? .... ☐ Yes ☒ No
   If yes, please attach completed Riverine Hydraulic Analysis Form.

3. Has fill been/will be placed in floodway fringe *(area between the floodway and 100-year floodplain boundaries)*? .... ☐ Yes ☒ No

   If yes, then complete A, B, C, and D below.

   A. Are fill slopes for granular materials steeper than one vertical on one-and-one-half horizontal? .... ☐ Yes ☐ No

      If yes, justify steeper slopes ______________________________

      ____

   B. Is adequate erosion protection provided for fill slopes exposed to moving flood waters? *(Slopes exposed to flows with velocities of up to 5 feet per second (fps) during the 100-year flood must, at a minimum, be protected by a cover of grass, vines, weeds, or similar vegetation; slopes exposed to flows with velocities greater than 5 fps during the 100-year flood must, at a minimum, be protected by stone or rock riprap.)*
      .... ☐ Yes ☐ No

      If no, describe erosion protection provided ______________________________

      ____

   C. Has all fill placed in revised 100-year floodplain been compacted to 95 percent of the maximum density obtainable with the Standard Proctor Test Method or acceptable equivalent method? ☐ Yes ☐ No

   D. Can structures conceivably be constructed on the fill at any time in the future? ☐ Yes ☐ No

   If yes, provide certification of fill compaction (item C. above) by the community's NFIP permit official, a registered professional engineer, or an accredited soils engineer.

4. Has fill been/will be placed in a V-zone? ☐ Yes ☒ No

   If yes, is the fill protected from erosion by a flood control structure such as a revetment or seawall? ☐ Yes ☐ No

   If yes, attach the coastal structures form.

FEDERAL EMERGENCY MANAGEMENT AGENCY CHANNELIZATION FORM	O M B Burden No 3067-0148 Expires July 31, 1997	FEMA USE ONLY

PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 1.75 hours per response. The burden estimate includes th time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, an completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestion for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067 0148), Washington, DC 20503.

Community Name: Macomb Township, Macomb County, Michigan

Flooding Source: Gloede Ditch

Project Name/Identifier: Merlini Property

1. EXTENT OF CHANNELIZATION

Downstream limit: 19536

Upstream limit: 20414

2. CHANNEL DESCRIPTION

1. Describe the inlet to the channel Transition from existing channel to offset high flow channel. At upstream end, transition to existing channel.

2. Briefly describe the shape of the channel *(both cross sectional and planimetric configuration)* and its lining *(channel bottom and sides)* Section 19536-19726: transition from downstream cleanout to upstream cleanout; Section 19726-20414: 12' bottom with offset high flow channel; 20414: match existing channel; 20414-20726: existing conditions

3. Describe the outlet from the channel Section 19011 is the downstream limit of this study. At that section, it is the existing downstream channel.

4. The channelization includes:

   - ☐ Levees *(Attach Levee Form)*
   - ☐ Drop structures
   - ☐ Superelevated sections
   - ☒ Transitions in cross sectional geometry
   - ☐ Debris basin/detention basin
   - ☐ Energy dissipater
   - ☐ Other

5. Attach the following.

   a. Certified engineering drawings showing channel alignment and locations of inlet, outlet, and items checked in item 4

   b. Typical cross sections and profiles of channel banks and invert

1. What is the 100-year discharge? .... 755 cfs

2. Do the cross sections in the hydraulic model match the typical cross sections in the plans? ☒ Yes ☐ No

3. Are the channel banks higher than the 100- year flood elevations everywhere? ..... ☒ Yes ☐ No

4. Are the channel banks higher than the 100-year flood energy grade lines everywhere? . ☒ Yes ☐ No

5. Is the land on both sides of the channel above the adjacent 100-year flood elevation at all points along the channel? .... ☒ Yes ☐ No

6. What is the range of freeboard? .... — feet

7. What is the range of the 100-year flood velocities? .... — ft/sec

8. What is the lining type? (both bottom and sides) Vegetative cover proposed

Explain how the channel lining prevents erosion and maintains channel stability *(attach documentation)*

______

______

What is the design elevation in the channel based on?

☐ Subcritical flow
☐ Critical flow
☐ Supercritical flow
☒ Energy grade line

Is 100-year flood profile based on the above type of flow? .... ☒ Yes ☐ No

If no, explain: ______

______

10. Is there the potential for a hydraulic jump at the following locations?

Inlet to channel .... ☐ Yes ☒ No
Outlet of channel .... ☐ Yes ☒ No
At Drop Structures .... ☐ Yes ☒ No
At Transitions .... ☐ Yes ☒ No
Other locations. Explain: ______

If the answer to any of the above is yes, please explain how the hydraulic jump is controlled and the effects of the hydraulic jump on the stability of the channel.

Explain: ______

______

______

______

______

______

______

1. A. Is there any indication from historical records that sediment transport (including scour and deposition) can affect the 100-year water surface elevations and/or the capacity of the channel? ..... ☐ Yes ☒ No

   B. Based on the conditions of the watershed and stream bed, is there a potential for sediment transport (including scour and deposition) to affect the 100-year water surface elevations and /or the capacity of the channel? .... ☐ Yes ☒ No

2. If the answer to either 1A or 1B is yes:

   A. What is the estimated sediment (bed) load?
   ______________cfs (attach gradation curve)

   Explain method used to estimate load ____

   ____

   ____

   ____

   ____

   B. Is the 100-year flood velocity anywhere within the channel less than the 100-year flood velocity of the inlet? ☐ Yes ☐ No

   C. Will sediment accumulate anywhere within the channel? ☐ Yes ☐ No

   D. Will deposition or scour occur at or near the inlet? ☐ Yes ☐ No

   E. Will deposition or scour occur at or near the outlet? ☐ Yes ☐ No

Attach documentation showing affects on the Hydrologic and Hydraulic analyses

FEDERAL EMERGENCY MANAGEMENT AGENCY
REVISION REQUESTOR AND COMMUNITY OFFICIAL FORM

O M B Burden No 3067-0148
Expires July 31 1997

FEMA USE ONLY

PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 2 13 hours per response The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to Information Collections Management, Federal Emergency Management Agency, 500 C Street, S W., Washington, DC 20472, and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503

1 OVERVIEW

1 The basis for this revision request is (are) *(check all that apply)*

- [x] Physical change
  - [ ] Existing
  - [x] Proposed
- [ ] Improved methodology
- [ ] Improved data
- [ ] Floodway revision
- [ ] Other ______

Explain Gloede Ditch

2 Flooding Source: Gloede Drain Improvements

3 Project Name/Identifier: A-2

4 FEMA zone designations affected: ______
(example. A, AH, AO, A1-A30, A99, AE, V, V1-30, VE, B, C, D, X)

5 The NFIP map panel(s) affected for all impacted communities is (are):

Community No.	Community Name	County	State	Map No.	Panel No.	Effective Date
EX: 480301	Katy,City	Harris, Fort Bend	TX	480301	0005D	02/08/83
480287	Harris County	Harris	TX	48201C	0220G	09/28/90
260445	Macomb Twp	Macomb	MI		0020B	2/4/81

6. The area of revision encompasses the following types of flooding, structures, and associated disciplines: *(check all that apply)*

Types of Flooding

- [x] Riverine
- [ ] Coastal
- [ ] Alluvial Fan
- [ ] Shallow Flooding *(e g. Zones AO and AH)*
- [ ] Lakes

Affected by wind/wave action
- [ ] Yes
- [ ] No

Structures

- [x] Channelization
- [ ] Levee/Floodwall
- [x] Bridge/Culvert
- [ ] Dam
- [ ] Coastal
- [ ] Fill
- [ ] Pump Station
- [ ] None
- [x] Channel Relocation
- [x] Excavation
- [ ] Other *(describe)*

Disciplines*

- [x] Water Resources
  - [ ] Hydrology
  - [x] Hydraulics
  - [ ] Sediment Transport
  - [ ] Interior Drainage
- [ ] Structural
- [ ] Geotechnical
- [x] Land Surveying
- [ ] Other *(describe)*

- [ ] Other(describe) ______

* Attach completed "Certification by Registered Professional Engineer and/or Land Surveyor" Form for each discipline checked. (Form 2)

2 FLOODWAY INFORMATION

7 Does the affected flooding source have a floodway designated on the effective FIRM or FBFM? [x] Yes [ ] No

8. Does the revised floodway delineation differ from that shown on the effective FIRM or FBFM [x] Yes [ ] No

If yes, give reason Due to proposed channelization/drain improvements

D. The community is willing to assume responsibility for ☐ performing ☐ overseeing compliance with the maintenance and operation plans of the N/A
(Name)

flood control structure. If not performed promptly by an owner other than the community, the community will provide the necessary services without cost to the Federal government.

Attach operation and maintenance plans

7. REQUESTED RESPONSE FROM FEMA

16. After examining the pertinent NFIP regulations and reviewing the document entitled "Appeals, Revisions, and Amendments to Flood Insurance Maps: A guide for Community Officials," dated January 1990, this request is for a:

X	a.	CLOMR	A letter from FEMA commenting on whether a proposed project, if built as proposed, would justify a map revision *(LOMR or PMR)*, or proposed hydrology changes *(see 44 CFR Ch. I, Parts 60, 65, and 72)*
____	b.	LOMR	A letter from FEMA officially revising the current NFIP map to show changes to floodplains, floodways, or flood elevations. LOMRs typically depict decreased flood hazards. *(See 44 CFR Ch. I Parts 60 and 65.)*
____	c.	PMR	A reprinted NFIP map incorporating changes to floodplains, floodways, or flood elevations. Because of the time and cost involved to change, reprint, and redistribute an NFIP map, a PMR is usually processed when a revision reflects increased flood hazards or large-scope changes. *(See 44 CFR Ch. I, Parts 60 and 65.)*
____	d.	Other	Describe ____________________

8. FORMS INCLUDED

17. Form 2 entitled, "Certification By Registered Professional Engineer and/or Land Surveyor" must be submitted.

The following forms should be included with this request if (check the included forms):

• Hydrologic analysis for flooding source differs from that used to develop FIRM	☐ Hydrologic Analysis Form (Form 3)
• Hydraulic analysis for riverine flooding differs from that used to develop FIRM	☒ Riverine Hydraulic Analysis Form (Form 4)
• The request is based on updated topographic information or a revised floodplain or floodway delineation is requested	☒ Riverine/Coastal Mapping Form (Form 5)
• The request involves any type of channel modification	☒ Channelization Form (Form 6)
• The request involves new bridge or culvert or revised analysis of an existing bridge or culvert	☒ Bridge/Culvert Form (Form 7)
• The request involves a new revised levee/floodwall system	☐ Levee/Floodwall System Analysis Form (Form 8)
• The request involves analysis of coastal flooding	☐ Coastal Analysis Form (Form 9)
• The request involves coastal structures credited as providing protection from the 100-year flood	☐ Coastal Structures (Form 10)
• The request involves an existing, proposed, or modified dam	☐ Dam Form (Form 11)
• The request involves structures credited as providing protection from the 100-year flood on an alluvial fan	☐ Alluvial Fan Flooding Form (Form 12)

FEDERAL EMERGENCY MANAGEMENT AGENCY CERTIFICATION BY REGISTERED PROFESSIONAL ENGINEER AND/OR LAND SURVEYOR FORM	O M B Burden No 3067-0148 Expires July 31, 1997	FEMA USE ONLY

PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 23 hour per response The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, S W , Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067- 0148), Washington, DC 20503.

1 This certification is in accordance with 44 CFR Ch. I, Section 65.2

2 I am licensed with an expertise in hydraulics, land surveying, civil engineering
(example water resources *(hydrology, hydraulics, sediment transport, interior drainage)** structural, geotechnical, land surveying)

3 I have 30 years experience in the expertise listed above

4 I have ☒ prepared ☐ reviewed the attached supporting data and analyses related to my expertise

5 I ☒ have ☐ have not visited and physically viewed the project

6 In my opinion, the following analyses and /or designs, is/are being certified

HE C-2 Hydraulic analysis for proposed Gloede Ditch improvements

7 Base upon the following review, the modifications in place have been constructed in general accordance with plans and specifications.

Basis for above statement (check all that apply)

a. ☐ Viewed all phases of actual construction.

b ☐ Compared plans and specifications with as-built survey information

c ☐ Examined plans and specifications and compared with completed projects

d. ☒ Other This is conditional letter of map revision & as built will be submitted when project is completed

8 All information submitted in support of this request is correct to the best of my knowledge I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

Name Rajaram Khatri, P.E., & P.S.
(please print or type)

Title. Project Manager
(please print or type)

Registration No 18997 Expiration Date Oct. 31, 1998

State Michigan, Ohio, Colorado & Georgia

FEDERAL EMERGENCY MANAGEMENT AGENCY
RIVERINE HYDRAULIC ANALYSIS FORM

O M B Burden No 3067 0148
Expires July 31, 1997

FEMA USE ONLY

PUBLIC BURDEN DISCLOSURE NOTICE

Community Name. Macomb Township, Macomb County

Flooding Source: Gloede ditch
(One form for each flooding source)

Project Name/Identifier: Gloede Drain Improvements

1. REACH TO BE REVISED

Downstream limit: 21 MIle Road (Section #15055)

Upstream limit: Approx. 2770 feet north of 21 Mile Road (Section #17826)

2. EFFECTIVE FIS

☐ Not studied

☐ Studied by approximate methods

Downstream limit of study ______

Upstream limit of study ______

☒ Studied by detailed methods

Downstream limit of study Section #14886 (169'd/s of d/s property limits)

Upstream limit of study Section #17911

☐ Floodway delineated

Downstream limit of Floodway Section #14886 (169' d/s of property limits)

Upstream limit of Floodway Section #17911

3. HYDRAULIC ANALYSIS

Why is the hydraulic analysis different from that used to develop the FIRM *(Check all that apply)*

☐ Not studied in FIS

☐ Improved hydrologic data/analysis Explain: ______

☐ Improved hydraulic analysis Explain ______

☐ Flood control structure. Explain: ______

☐ Other Explain. Improvements to the channel of Gloede Ditch will improve it hydraulic capacity.

1. Discharges:

	Upstream Limit	Downstream Limit
10-year	465	475
50-year	690	700
100-year	755	765
500-year	1070	1085

Attach diagram showing changes in 100-year discharge

2. Explain how the starting water surface elevations were determined Obtained from effective FIS Model at x-section # 14886

3. Give range of friction loss coefficients (*Manning's "N"*) Channel 0.033 to 0.42

Overbanks 0.04 to 0.06

If friction loss coefficients are different anywhere along the revised reach from those used to develop the FIRM, give location, value used in the effective FIS, and revised values and an explanation as to how the revised values were determined

Location	FIS	Revised
15055 - 17826	Left overbank 0.04-0.06	0.04
	Right overbank 0.04-0.06	0.04-0.06
	Channel 0.033-0.037	0.035

Explain: The revised "n" values are based on improved x-section and channel to be sodded & as provided by Macomb County Drain Office (MCDC). MCDC will be maintaining the drain.

4. Describe how the cross section geometry data were determined *(e.g., field survey, topographic map, taken from previous study)* and list cross sections that were added

Existing x-section geometry taken from FIS & LOMR issued. (copy attached)
Proposed x-section geometry based on proposed drain improvements as provided by Macomb County Drain Commicioner's office. (MCDC)

5 Were natural channel banks selected as the location of the left and right channel banks in the model?

☒ Yes ☐ No If no, explain why not

6 Is the discharge value used to determine the floodway anywhere different from that used to determine the natural 100-year flood elevations? . . . . ☐ Yes ☒ No

If Yes, explain:

____

____

____

7. Do 100-year water surface elevations increase at any location? . . . . ☒ Yes ☐ No

If yes, please attach a list of the locations where the increases occur, state whether or not the increases are located on the requestor's property, and provide an explanation of the reason for the increases *(For example. State if the increase is due to fill placed within the floodway fringe or placed within the currently adopted floodway limits)*

At x-section 15097 through 15303 which is within the property on both sides of ditch. Prop. E.G is same or lower. This is due to removal of low concrete weir structure.

Please attach a completed comparison table entitled Water Surface Elevation Check (See page 6)

6 REVISED FIRM/FBFM AND FLOOD PROFILES

A. The revised water surface elevations tie into those computed by the effective FIS Model *(10-, 50-, 100-, and 500-year)*, downstream of the project at cross-section 14886 within 0.0 feet *(vertical)* and upstream of the project at cross section 17911 within -0.64 feet *(vertical)*.

B. The revised floodway elevations tie into those computed by the effective FIS model, dowstream of the project at cross section 14886 within 0.0 feet *(vertical)* and upstream of the project at cross section 17811 within - 0.64 feet *(vertical)*.

C. Attach profiles, at the same vertical and horizontal scale as the profiles in the effective FIS report, showing stream bed and profiles of all floods studied (without encroachment). Also, label all cross sections, road crossings (including low chord and top-of-road data), culverts, tributaries, corporate limits, and study limits. If channel distance has changed, the stationing should be revised for all profile sheets.

D. Attach a Floodway Data Table showing data for each cross section listed in the published Floodway Data Table in the FIS report. (Please see attached post project floodwayrun appendix)

Proceed to Riverine /Coastal Mapping Form

FEDERAL EMERGENCY MANAGEMENT AGENCY RIVERINE/COASTAL MAPPING FORM	O M B Burden No 3067-0148 Expires July 31, 1997	FEMA USE ONLY

PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 1 5 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to Information Collections Management, Federal Emergency Management Agency, 500 C Street, S W , Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503

Community Name: Macomb Township, Macomb County, Michigan

Flooding Source: Gloede Ditch

Project Name/Identifier: Gloede Drain Improvements

1. MAPPING CHANGES

1. A topographic work map of suitable scale, contour interval, and planimetric definition must be submitted showing *(indicate N/A when not applicable)*.

		Included		
A	Revised approximate 100-year floodplain boundaries (Zone A)	☐ Yes	☐ No	☒ N/A
B	Revised detailed 100- and 500-year floodplain boundaries	☒ Yes	☐ No	☐ N/A
C	Revised 100-year floodway boundaries	☒ Yes	☐ No	☐ N/A
D	Location and alignment of all cross sections used in the revised hydraulic model with stationing control indicated	☒ Yes	☐ No	☐ N/A
E	Stream alignments, road and dam alignments	☒ Yes	☐ No	☐ N/A
F	Current community boundaries	☐ Yes	☐ No	☒ N/A
G	Effective 100- and 500-year floodplain and 100-year floodway boundaries from the FIRM/FBFM reduced or enlarged to the scale of the topographic work map	☒ Yes	☐ No	☐ N/A
H	Tie-ins between the effective and revised 100- and 500-year floodplains and 100-year floodway boundaries	☒ Yes	☐ No	☐ N/A
I.	The requestor's property boundaries and community easements	☒ Yes	☐ No	☐ N/A
J.	The signed certification of a registered professional engineer	☒ Yes	☐ No	☐ N/A
K.	Location and description of reference marks	☒ Yes	☐ No	☐ N/A
L	Vertical datum (example: NGVD, NAVD etc.)	☒ Yes	☐ No	☐ N/A
M	Coastal zone designations tie into adjacent areas not being revised	☐ Yes	☐ No	☒ N/A
N	Location and alignment of all coastal transects used to revise the coastal analyses	☐ Yes	☐ No	☒ N/A

If any of the items above are marked no or N/A, please explain. Community boundaries are beyond project area. Coastal designation does not appy/found in area.

2. What is the source and date of the updated topographic information *(example: orthophoto maps, July 1985, field survey, May 1979, beach profiles, June 1987, etc.)*? Field survey dated Jun/Jul 96

3. What is the scale and contour interval of the following workmaps?
   a Effective FIS 1' = 800' scale 1' Contour interval
   b Revision Request 1" = 100' scale ______ Contour interval

NOTE: Revised topographic information must be of equal or greater detail.

4. Attach an annotated FIRM and FBFM at the scale of the effective FIRM and FBFM showing the revised 100-year and 500-year floodplains and the 100-year floodway boundaries and how they tie into those shown on the effective FIRM and FBFM downstream and upstream of the revision or adjacent to the area of revision for coastal studies

Attach additional pages if needed

2. EARTH FILL PLACEMENT

1. The fill is. ☐ Existing ☐ Proposed (No fill proposed except for proposed bridge approaches)

2. Has fill been/will be placed in the regulatory floodway? .... ☐ Yes ☒ No
If yes, please attach completed Riverine Hydraulic Analysis Form.

3. Has fill been/will be placed in floodway fringe *(area between the floodway and 100-year floodplain boundaries)?* . . . . ☐ Yes ☐ No

If yes, then complete A, B, C, and D below

A. Are fill slopes for granular materials steeper than one vertical on one-and-one-half horizontal? .... N/A .. .. ☐ Yes ☐ No

If yes, justify steeper slopes ____________________

B. Is adequate erosion protection provided for fill slopes exposed to moving flood waters? *(Slopes exposed to flows with velocities of up to 5 feet per second (fps) during the 100-year flood must, at a minimum, be protected by a cover of grass, vines, weeds, or similar vegetation, slopes exposed to flows with velocities greater than 5 fps during the 100-year flood must, at a minimum, be protected by stone or rock riprap)* .... N/A ... . ☐ Yes ☐ No

If no, describe erosion protection provided ____________________

C. Has all fill placed in revised 100-year floodplain been compacted to 95 percent of the maximum density obtainable with the Standard Proctor Test Method or acceptable equivalent method? ☐ Yes ☐ No N/A

D. Can structures conceivably be constructed on the fill at any time in the future? ☐ Yes ☐ No N/A

If yes, provide certification of fill compaction (item C. above) by the community's NFIP permit official, a registered professional engineer, or an accredited soils engineer

4. Has fill been/will be placed in a V-zone? ☐ Yes ☐ No N/A

If yes, is the fill protected from erosion by a flood control structure such as a revetment or seawall? ☐ Yes ☐ No

If yes, attach the coastal structures form

FEDERAL EMERGENCY MANAGEMENT AGENCY CHANNELIZATION FORM	O M B Burden No 3067 0148 Expires July 31, 1997	FEMA USE ONLY

PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 1 75 hours per response The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, S.W , Washington, DC 20472, and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503.

Community Name: Macomb Township, Macomb Co., Michigan

Flooding Source: Gloede Ditch

Project Name/Identifier: Gloede Drain Improvements

1. EXTENT OF CHANNELIZATION

Downstream limit: Section # 15097

Upstream limit: Section # 17826

2 CHANNEL DESCRIPTION

1. Describe the inlet to the channel Transitional x-section to be provided for smooth flow transition to improved channel.

2. Briefly describe the shape of the channel *(both cross sectional and planimetric configuration)* and its lining *(channel bottom and sides)* (Section 15097 - 17764: 15' bottom width side slopes); (15097 - 15055: Transitions x-section); (17764 - 177826: transitional x-section); all within property limits. See attached detailed plans.

3 Describe the outlet from the channel The improved channel to be smoothly merged into existing channel geometry at d/s property.

4. The channelization includes:

- ☐ Levees *(Attach Levee Form)*
- ☐ Drop structures
- ☐ Superelevated sections
- ☒ Transitions in cross sectional geometry
- ☐ Debris basin/detention basin
- ☐ Energy dissipater
- ☐ Other

5. Attach the following

   a Certified engineering drawings showing channel alignment and locations of inlet, outlet, and items checked in item 4

   b Typical cross sections and profiles of channel banks and invert

1. A. Is there any indication from historical records that sediment transport (including scour and deposition) can affect the 100-year water surface elevations and/or the capacity of the channel? . . ☐ Yes ☒ No

   B. Based on the conditions of the watershed and stream bed, is there a potential for sediment transport (including scour and deposition) to affect the 100-year water surface elevations and /or the capacity of the channel? . . . . ☐ Yes ☒ No

2. If the answer to either 1A or 1B is yes.

   A. What is the estimated sediment (bed) load?
   ______________ cfs (attach gradation curve)

   Explain method used to estimate load ______________________________

   ____
   ____
   ____
   ____

   B Is the 100-year flood velocity anywhere within the channel less than the 100-year flood velocity of the inlet? ☐ Yes ☐ No

   C. Will sediment accumulate anywhere within the channel? ☐ Yes ☐ No

   D Will deposition or scour occur at or near the inlet? ☐ Yes ☐ No

   E. Will deposition or scour occur at or near the outlet? ☐ Yes ☐ No

Attach documentation showing affects on the Hydrologic and Hydraulic analyses

FEDERAL EMERGENCY MANAGEMENT AGENCY
BRIDGE/CULVERT FORM

O M B Burden No 3067-0148
Expires July 31 1997

FEMA USE ONLY

PUBLIC BURDEN DISCLOSURE NOTICE

Community Name: Macomb Township, Macomb County, Michigan

Flooding Source: Gloede Ditch

Project Name/Identifier: Gloede Drain Improvements

1. IDENTIFIER

1. Name of roadway, railroad, etc.: Haverhill Drive
2. Location of bridge/culvert along flooding source (in terms of stream distance or cross-section identifier): b/w x-sections 17594 - 17648
3. This revision reflects *(check one of the following)*:

   - [x] New bridge/culvert not modeled in the FIS
   - [ ] Modified bridge/culvert previously modeled in the FIS
   - [ ] New analysis of bridge/culvert previously modeled in the FIS

   (Explain why new analysis was performed)

2. BACKGROUND

Provide the following information about the structure:

1 Dimension, material, and shape (e g two 10 x 5 feet reinforced concrete box culvert; three 30-foot span bridge with 2 rows of two 3- foot diameter circular piers, 40-foot wide ogee shape spillway) 24' wide x 9' rise con-span arch. structure

2. Entrance geometry of culvert/type of bridge opening (e.g. 30° - 75° wing walls with square top edge, sloping embankments and vertical abutments) 45° wing walls with sloping embankments

   HEC-2 with normal bridge routine

3 Hydraulic model used to analyze the structure (*e g., HEC-2 with special bridge routine, WSPRO, HY8*)

If different than hydraulic analysis for the flooding source, justify why the hydraulic analysis used for the flooding source could not analyze the structure(s). *(Attach justification)*

Note: If any items do not apply to submitted hydraulic analysis, indicate by N/A
*** One form per new/revised bridge/culvert**

Sketch the plan view of the structure(s) Show, at a minimum, the skew angle, cross-section locations, distances between cross sections, and length of structure (s).

Please see the attached plan showing the details.

← flow

Attach plans of the structure (s) certified by a registered Professional Engineer.

Culvert length or bridge width (ft)	52 feet
Calculated culvert/bridge area (ft^2) by the hydraulic model, if applicable	167.7 sq. ft.
Total culvert/bridge area (ft^2)	s167.7 ft^2

Loss Coefficients

Entrance loss coefficient ______

Manning's "n" value assigned to the structure(s) 0.023

Friction loss coefficient through structure (s) Modelled as low flow standard step method

Other loss coefficients (e.g , bend manhole, etc.) None

Total loss coefficient ______

Weir coefficient None (all low flow)

Pier coefficient 0.0 (no pier)

Contraction loss coefficient 0.3

Expansion loss coefficient 0.5

4. SEDIMENT TRANSPORT CONSIDERATIONS

1. A. Is there any indication from historical records that sediment transport (*including scour and deposition*) can affect the 100-year water surface elevations? . . . . . ☐ Yes ☒ No

B Based on the conditions (*such as geomorphology, vegetative cover and development of the watershed and stream bed, and bank conditions*), is there a potential for debris and sediment transport (*including scour and deposition*) to affect the 100-year water surface elevations and/or conveyance capacity through the bridge/culvert? . . . . . ☐ Yes ☒ No

2. If the answer to either 1A or 1B is yes:

A. What is the estimated sediment (*bed material*) load?
______cfs (*attach gradation curve*)

Explain method used to estimate the sediment transport and the depth of scour and/or deposition______

B Will sediment accumulate anywhere through the bridge/culvert? ☐ Yes ☐ No

If yes, explain the impact on the conveyance capacity through the bridge/culvert?______

5. FLOODWAY ANALYSIS

Explain method of bridge encroachment
(floodway run) Floodway run based on 0.0' encroachment.
Proposed floodplain boundary is also floodway boundary

Attention Mr. Daniel H. Morgan

Re: Macomb Township FIS
Middle Branch Clinton River

Gentlemen:

Enclosed for your review are the hydraulic calculations used to determine the profiles for the 10-, 50-, 100- and 500-year floods on the Middle Branch of the Clinton River from Hall Road north to Hayes Road at Shelby Township.

The following items are enclosed:

Profile Sheet
Hydraulic Analysis Booklet
HEC-2 Input/Output, Natural Floodway
HEC-2 Input/Output, 0.1' Floodway
IPLOT of the Cross Sections
200' Scale, 2' Contour Work Map
800' Scale, 5' Contour Work Map

If you have questions or comments, please contact me.

Sincerely,

Ole Anderson

Bob Waters

HYDRAULIG ANALYSIS

MACOMB TOWNSHIP FIS

J & A File #5850-03-1

TABLE OF CONTENTS

MACOMB TOWNSHIP FIS
MACOMB COUNTY, MICHIGAN
HYDRAULIC ANALYSIS

INTRODUCTION

The river being studied is the Middle Branch Clinton River in Macomb Township, Macomb County, Michigan. The study limits for this river are from the southern corporate limit of Macomb Township at Hall Road (Highway M-59) in section 33 of the Township, upstream to the western corporate limit in section 6 at Hayes Road. Flows at the upstream and downstream ends of this study were those used in the Flood Insurance Studies for Shelby Township and Clinton Township, respectively. Flows for the intermediate locations were taken from the TR-20 model used in the Clinton Township study. These flows have been approved by the Michigan Department of Natural Resources. The date of the field survey was November and December, 1977. The project manager for this analysis was Ole Anderson.

METHOD OF ANALYSIS

Water-surface profiles were computed through use of the COE HEC-2 step-backwater computer program. Bridges which were under low flow conditions for all four flows were coded according to the "normal bridge" routine requirements. For those bridges which experienced pressure or weir flow for any of the four flows, the "special bridge" routine and hand calculations were used to determine the upstream water-surface elevation.

The hydraulic model was developed for the 100-year flow. Valley sections upstream and downstream of bridges were located where full cross-section flow would be developed out of the influence of the bridge constriction. The criteria for placement of these sections was that outlined on pages 18-21 of the HEC Training Document No. 6, Application of the HEC-2 Bridge Routines. Accordingly, the downstream section was placed at a distance of about four times the average length of the side constriction caused by the bridge abutment. The upstream section was placed at a distance about equal to the bridge constriction. If additional sections were found necessary within this distance or if the actual field-surveyed cross section fell within this distance, the intermediate sections were encroached as appropriate.

MACOMB TOWNSHIP FIS
MACOMB COUNTY, MICHIGAN
HYDRAULIC ANALYSIS

SPECIAL SITUATION

For the study area of the Middle Branch Clinton River downstream of 25 Mile Road, maps with a scale of 1 in. = 200 ft. and a contour interval of 2 ft. were available. For the areas upstream of 25 Mile Road, these maps were not available and the floodway and the flooded outline are plotted on maps with a scale of 1 in. = 800 ft. and a contour interval of 5 ft.

An initial HEC-2 computer run was made to define the water-surface elevations of the natural floodway. Several other runs were made with the floodway encroached where possible to produce a rise in the water surface no greater than 0.1 ft. at any point. A HEC-2 computer run using the natural floodway and a HEC-2 run using the encroached floodway (100-year flood profile only) are included with this submittal.

VARIABLES AND COEFFICIENTS

The basis for Manning's "n" value selection came from field inspection and comparison with the photographs and descriptions found on pages 101 to 123 in Open-Channel Hydraulics by Ven Ten Chow, as well as with photographs and descriptions found in the Geological Survey Water-Supply Paper 1849, Roughness Characteristics of Natural Channels.

The roughness factors (Manning's "n") were then adjusted to reconstitute the stage-discharge curve for the Middle Branch Clinton River gage at Macomb. The USGS rating curve along with a curve generated using four simulated flows is included with this submittal. The output summary of the computer run using the four simulated flows is also included. In general, the following ranges of Manning's "n" values were used:

DESCRIPTION	MANNING'S "n"
1. Channel	
a. Sand or silt bottom, no debris, good alignment	0.024 - 0.026
b. Sand bottom, moderate debris or brush	0.035 - 0.038
c. Sand and gravel bottom, heavy debris or brush	0.040 - 0.046
2. Overbank	
a. Farmland, low grass, light brush	0.040 - 0.048
b. Farmland, grass, moderate weeds or brush	0.050 - 0.055
c. High grass, moderate weeds, brush or debris	0.060 - 0.066
d. Heavy weeds, brush or debris	0.070 - 0.080
e. Dense brush and weeds, much debris	0.090 - 0.120

VARIABLES AND COEFFICIENTS (Cont'd)

The contraction and expansion coefficients used ranged from .1 - .5 and .3 - 1.0, respectively. References used in the selection of these values were the HEC-2 Users Manual, Exhibit 2, page 2, and Open-Channel Hydraulics, Ven Te Chow, pages 311 and 468.

The loss coefficients used in the HEC-2 "special bridge" routine were determined as outlined in Exhibit 2 of the HEC-2 Users Manual. Calculations are included in the appendix.

SYNTHETIC CROSS SECTIONS

Synthetic cross sections used in the hydraulic analysis were developed in two ways. The two methods used were repetition of a field-surveyed cross section with appropriate invert adjustment or interpolating between two field-surveyed cross sections using the Johnson & Anderson, Inc., AVSEC computer program. The AVSEC program develops an average cross section by averaging the overbanks and channel of the two known cross sections. All cross sections and their origins are indicated by the comment cards in the HEC-2 computer program.

Since inverts are known only at field-surveyed cross sections, a straight line is assumed between these known points, with the inverts of the synthetic cross sections adjusted accordingly.

STARTING POINT

Profile computations for the Middle Branch Clinton River were begun at the upstream face of Hall Road (Hwy. M-59) at the corresponding flood elevations determined for the Clinton Township Flood Insurance Study.

JOHNSON & ANDERSON, INC.
CONSULTING ENGINEERS

BY RGW DATE 2-1-78 JOB DESCRIPTION Macomb Twp. FIS SHEET 1 OF 2
SUBJECT M.E. Clinton River JOB NO. 5850-03

Conversion to S.B. @ B.S. #4 (21 Mile Rd.)

1.) Determination of XKOR value

Composite 'n' value

$$n = \frac{(P_1 n_1^2 + \ldots + P_N n_N^2)^{1/2}}{(P_1 + \ldots + P_N)^{1/2}} = \frac{[2(5.5)(0.04)^2 + (100)(0.03)^2 + (100)(0.025)^2]^{1/2}}{[2(5.5) + 100 + 100]^{1/2}} = 0.028$$

$L = 16$ ft

$A = 553.6$ ft.^{2} $P = 210.6$ ft.

$$R = A/P = \frac{553.6}{210.6} = 2.63$$

$$K_f = \frac{29.1 n^2 L}{R^{4/3}} = \frac{29.1(0.028)^2 16}{(2.63)^{4/3}}$$

$K_f = 0.10$

XKOR = 1.0 + K_f + Entrance Loss
= 1.0 + 0.10 + 0.10

XKOR = 1.2

2.) Determination of COFQ value

Weir flow occurs on both sides of the bridge, but not over the bridge itself.

Percent submergence ~ 66 % COFQ = 3.0

JOHNSON & ANDERSON, INC.
CONSULTING ENGINEERS

BY RGW DATE 4-13-78 JOB DESCRIPTION Macomb Twp. FIS SHEET 2 OF 2
SUBJECT M.B. Clinton River JOB NO. 5850-3

Conversion to S.B. @ B.S. # 17 (24 Mile Rd.)

1.) Determination of XKOR value

Composite 'n' value

$$n = \frac{(P_1 n_1^2 + \ldots + P_N n_N^2)^{1/2}}{(P_1 + \ldots + P_N)^{1/2}}$$

$$= \frac{\left[2(9.4)(0.02)^2 + 60(0.02)^2 + 60(0.03)^2\right]^{1/2}}{\left[2(9.4) + 60 + 60\right]^{1/2}} = 0.025$$

$L = 34\ ft.$

$A = 612.4\ ft^2$ $\qquad P = 138.6\ ft.$

$R = A/P = \frac{612.4}{138.6} = 4.42\ ft.$

$$k_f = \frac{29.1\, n^2 L}{R^{4/3}} = \frac{29.1\,(0.025)^2\, 34}{(4.42)^{4/3}} = 0.0852$$

$k_f = 0.09$

XKOR = 1.0 + k_f + Entrance Loss

= 1.0 + 0.09 + 0.5

XKOR = 1.59 ~ 1.6

2.) Determination of COFQ value

Weir flow occurs on the right side of the bridge, but not over the bridge itself.

Percent submergence ~ negligible $\qquad$ COFQ = 3.0

Attention Mr. Daniel H. Morgan

Re: Macomb Township FIS
Middle Branch Clinton River

Gentlemen:

Enclosed for your review are the hydraulic calculations used to determine the profiles for the 10-, 50-, 100- and 500-year floods on the Middle Branch of the Clinton River from Hall Road north to Hayes Road at Shelby Township.

The following items are enclosed:

Profile Sheet
Hydraulic Analysis Booklet
HEC-2 Input/Output, Natural Floodway
HEC-2 Input/Output, 0.1' Floodway
IPLOT of the Cross Sections
200' Scale, 2' Contour Work Map
800' Scale, 5' Contour Work Map

If you have questions or comments, please contact me.

Sincerely,

Ole Anderson

Ole Anderson, P.E.

HYDRAULIG ANALYSIS

MACOMB TOWNSHIP FIS

J & A File #5850-03-1

TABLE OF CONTENTS

INTRODUCTION

The river being studied is the Middle Branch Clinton River in Macomb Township, Macomb County, Michigan. The study limits for this river are from the southern corporate limit of Macomb Township at Hall Road (Highway M-59) in section 33 of the Township, upstream to the western corporate limit in section 6 at Hayes Road. Flows at the upstream and downstream ends of this study were those used in the Flood Insurance Studies for Shelby Township and Clinton Township, respectively. Flows for the intermediate locations were taken from the TR-20 model used in the Clinton Township study. These flows have been approved by the Michigan Department of Natural Resources. The date of the field survey was November and December, 1977. The project manager for this analysis was Ole Anderson.

METHOD OF ANALYSIS

Water-surface profiles were computed through use of the COE HEC-2 step-backwater computer program. Bridges which were under low flow conditions for all four flows were coded according to the "normal bridge" routine requirements. For those bridges which experienced pressure or weir flow for any of the four flows, the "special bridge" routine and hand calculations were used to determine the upstream water-surface elevation.

The hydraulic model was developed for the 100-year flow. Valley sections upstream and downstream of bridges were located where full cross-section flow would be developed out of the influence of the bridge constriction. The criteria for placement of these sections was that outlined on pages 18-21 of the HEC Training Document No. 6, Application of the HEC-2 Bridge Routines. Accordingly, the downstream section was placed at a distance of about four times the average length of the side constriction caused by the bridge abutment. The upstream section was placed at a distance about equal to the bridge constriction. If additional sections were found necessary within this distance or if the actual field-surveyed cross section fell within this distance, the intermediate sections were encroached as appropriate.

SPECIAL SITUATION

For the study area of the Middle Branch Clinton River downstream of 25 Mile Road, maps with a scale of 1 in. = 200 ft. and a contour interval of 2 ft. were available. For the areas upstream of 25 Mile Road, these maps were not available and the floodway and the flooded outline are plotted on maps with a scale of 1 in. = 800 ft. and a contour interval of 5 ft.

An initial HEC-2 computer run was made to define the water-surface elevations of the natural floodway. Several other runs were made with the floodway encroached where possible to produce a rise in the water surface no greater than 0.1 ft. at any point. A HEC-2 computer run using the natural floodway and a HEC-2 run using the encroached floodway (100-year flood profile only) are included with this submittal.

VARIABLES AND COEFFICIENTS

The basis for Manning's "n" value selection came from field inspection and comparison with the photographs and descriptions found on pages 101 to 123 in Open-Channel Hydraulics by Ven Ten Chow, as well as with photographs and descriptions found in the Geological Survey Water-Supply Paper 1849, Roughness Characteristics of Natural Channels.

The roughness factors (Manning's "n") were then adjusted to reconstitute the stage-discharge curve for the Middle Branch Clinton River gage at Macomb. The USGS rating curve along with a curve generated using four simulated flows is included with this submittal. The output summary of the computer run using the four simulated flows is also included. In general, the following ranges of Manning's "n" values were used:

DESCRIPTION	MANNING'S "n"
1. Channel	
a. Sand or silt bottom, no debris, good alignment	0.024 - 0.026
b. Sand bottom, moderate debris or brush	0.035 - 0.038
c. Sand and gravel bottom, heavy debris or brush	0.040 - 0.046
2. Overbank	
a. Farmland, low grass, light brush	0.040 - 0.048
b. Farmland, grass, moderate weeds or brush	0.050 - 0.055
c. High grass, moderate weeds, brush or debris	0.060 - 0.066
d. Heavy weeds, brush or debris	0.070 - 0.080
e. Dense brush and weeds, much debris	0.090 - 0.120

VARIABLES AND COEFFICIENTS (Cont'd)

The contraction and expansion coefficients used ranged from .1 - .5 and .3 - 1.0, respectively. References used in the selection of these values were the HEC-2 Users Manual, Exhibit 2, page 2, and Open-Channel Hydraulics, Ven Te Chow, pages 311 and 468.

The loss coefficients used in the HEC-2 "special bridge" routine were determined as outlined in Exhibit 2 of the HEC-2 Users Manual. Calculations are included in the appendix.

SYNTHETIC CROSS SECTIONS

Synthetic cross sections used in the hydraulic analysis were developed in two ways. The two methods used were repetition of a field-surveyed cross section with appropriate invert adjustment or interpolating between two field-surveyed cross sections using the Johnson & Anderson, Inc., AVSEC computer program. The AVSEC program develops an average cross section by averaging the overbanks and channel of the two known cross sections. All cross sections and their origins are indicated by the comment cards in the HEC-2 computer program.

Since inverts are known only at field-surveyed cross sections, a straight line is assumed between these known points, with the inverts of the synthetic cross sections adjusted accordingly.

STARTING POINT

Profile computations for the Middle Branch Clinton River were begun at the upstream face of Hall Road (Hwy. M-59) at the corresponding flood elevations determined for the Clinton Township Flood Insurance Study.

BY KGW DATE 2-1-78 JOB DESCRIPTION Macomb Twp. FIS SHEET 1 OF 2
SUBJECT M E Clinton River JOB NO. 5850-03

Conversion to S.B. @ B.S. #4 (21 Mile Rd.)

1.) Determination of XKOR value

Composite 'n' value

$$n = \frac{(P_1 n_1^2 + \dots + P_N n_N^2)^{1/2}}{(P_1 + \dots + P_N)^{1/2}} = \frac{\left[2(5.5)(0.04)^2 + (100)(0.03)^2 + (100)(0.025)^2\right]^{1/2}}{\left[2(5.5) + 100 + 100\right]^{1/2}} = 0.028$$

$L = 16$ ft

$A = 553.6$ ft.^{2} $p = 210.6$ ft.

$$R = A/p = \frac{553.6}{210.6} = 2.63$$

$$k_f = \frac{29.1 n^2 L}{R^{4/3}} = \frac{29.1 (0.028)^2 16}{(2.63)^{4/3}}$$

$k_f = 0.10$

XKOR = 1.0 + k_f + Entrance Loss
= 1.0 + 0.10 + 0.10

XKOR = 1.2

2.) Determination of COFQ value

Weir flow occurs on both sides of the bridge, but not over the bridge itself.

Percent submergence ~ 66 %.   COFQ = 3.0

NOTE: This analysis has assumed that the dredged portion of the low flow channel will not be filled in with sediment.
IF XSEC's are to be used it is suggested flow area below 5887 be deleted at XSEC 13913, with similar deletions up to XSEC 16185.
Impact on 100-yr stage is minimal BEM

NOTE: This analysis has assumed that the dredged portion of the low flow channel will not be filled in with sediment.
IF XSEC's are to be used it is suggested flow area below 588.7 be deleted at XSEC 13913, with similar deletions up to XSEC 16185.
Impact on 100-yr stage is minimal BEM

1) COUNTY: Macomb

2) STUDY NAME: Macomb Twp

3) WATERCOURSE: North Branch Clinton River

4) DOCUMENT TYPE: Hydraulic Analysis

00BREAK00

HYDRAULIC ANALYSIS

Introduction

The stream being analyzed is the North Branch of the Clinton River in the Township of Macomb, Macomb County, Michigan. The study starts from Hall Road, the southern corporate boundary of the Township, to 22 Mile Road (extended). The total reach length is about 5.1 miles. The 10-, 50-, 100- and 500-year flood frequency flows were determined by a gaging analysis method using the records at gaging stations near Meade and Mt. Clemens. These flows have been approved by the Michigan Department of Natural Resources (MDNR), Water Management Division. The project manager of this study is Ole Anderson.

Method of Analysis

The flood profiles were calculated by the HEC-2 computer program developed by the U.S. Corps of Engineers (Reference 1). All bridges have been modeled by the requirements of the HEC-2 normal bridge routine.

Variables and Coefficients

The roughness factors (Manning's "n") were determined by comparing the descriptions in Ven Te Chow's Open-Channel Hydraulics (Reference 2) with photographs and field descriptions of the sections taken in the Township by survey crews in January 1978. To reflect the changes in cross-section geometry, the contraction and expansion coefficients used in this study were 0.3 and 0.5, respectively; "n" values are indicative of summer conditions.

Starting Conditions

The starting water-surface elevations for the North Branch of the Clinton River at the Township of Macomb were obtained from the Township of Clinton Flood Insurance Study done by Johnson & Anderson, Inc.

The stationing of this study is in feet from the mouth of the North Branch of the Clinton River.

Discussions

1. In general, the study area is very flat such that a significant reduction in the floodway can be expected without raising water-surface elevations by more than 0.1 ft.

2. There are several small footbridges inside the golf course at the study area. Due to the high submergence, these footbridges were not taken into consideration.

3. Ten year flood at 21 Mile Road appears to be pressure flow. A hand calculation has been checked. It was found that the headwater elevation obtained from hand-calculation was almost the same as that obtained from HEC-2 (only 0.02' difference).

```

The questionable flow distribution is due
to [illegible] or S-shaped alluvial valley.
Based on the topo furnished it appears
to be reasonable the shifting of flow.

```

HYDRAULIC ANALYSIS

Introduction

The stream being analyzed is the North Branch of the Clinton River in the Township of Macomb, Macomb County, Michigan. The study starts from Hall Road, the southern corporate boundary of the Township, to 22 Mile Road (extended). The total reach length is about 5.1 miles. The 10-, 50-, 100- and 500-year flood frequency flows were determined by a gaging analysis method using the records at gaging stations near Meade and Mt. Clemens. These flows have been approved by the Michigan Department of Natural Resources (MDNR), Water Management Division. The project manager of this study is Ole Anderson.

Method of Analysis

The flood profiles were calculated by the HEC-2 computer program developed by the U.S. Corps of Engineers (Reference 1). All bridges have been modeled by the requirements of the HEC-2 normal bridge routine.

Variables and Coefficients

The roughness factors (Manning's "n") were determined by comparing the descriptions in Ven Te Chow's Open-Channel Hydraulics (Reference 2) with photographs and field descriptions of the sections taken in the Township by survey crews in January 1978. To reflect the changes in cross-section geometry, the contraction and expansion coefficients used in this study were 0.3 and 0.5, respectively; "n" values are indicative of summer conditions.

Starting Conditions

The starting water-surface elevations for the North Branch of the Clinton River at the Township of Macomb were obtained from the Township of Clinton Flood Insurance Study done by Johnson & Anderson, Inc.

The stationing of this study is in feet from the mouth of the North Branch of the Clinton River.

Discussions

1. In general, the study area is very flat such that a significant reduction in the floodway can be expected without raising water-surface elevations by more than 0.1 ft.

2. There are several small footbridges inside the golf course at the study area. Due to the high submergence, these footbridges were not taken into consideration.

3. Ten year flood at 21 Mile Road appears to be pressure flow. A hand calculation has been checked. It was found that the headwater elevation obtained from hand-calculation was almost the same as that obtained from HEC-2 (only 0.02' difference).

```

The questionable flow distribution is due to meandering or S-shaped alluvial valley. Based on the topo furnished it appears to be reasonable the shifting of flow.

```

MACOMB TOWNSHIP

STANDARD NOTES

Notify the Macomb Township Building Department and Sewer & Water Department (286-0621) a minimum of 48 hours prior to the start of construction.

All construction must be conforming to the current standards and specifications adopted by Macomb Township.

Call MISS DIG (1-800-482-7171) a minimum of 48 hours prior to the start of construction.

All soil erosion and silt must be controlled and contained onsite.

All excavation under or within 3 feet of public pavement, existing or proposed shall be backfilled and compacted with sand (Class II MDOT - minimum).

The Contractor is responsible for all damage to existing utilities.

The Contractor is responsible for obtaining all Macomb Township permits including a permit to occupy public utility easements or public right-of-way.

Trench backfill in County R.O.W. shall conform to M.C.R.C. requirements and be subject to the approval of the M.C.R.C. Engineer.

All work on the Lewis Drain relocation shall comply with the current standards and specifications of the D.N.R. and the Macomb County Drain Office.

All work within the Tilch Rd. R.O.W. shall conform to the current stds. & specs. of the Macomb County Road Commission.
