INTRODUCTION

A Watershed Management Plan considers all uses, pollutant sources, and impacts within a drainage area. More than 150 Watershed Management Plans have been developed at the local level utilizing the Department of Environment, Great Lakes, and Energy (EGLE) grants from the Nonpoint Source grant program. Watershed Management Plans serve as guides for communities to protect and improve the water quality. Grant funding for implementation of best management practices identified within the Watershed Management Plans is available through the federal Clean Water Act as well as the Clean Michigan Initiative (CMI) Nonpoint Source Pollution Control Grant program. To be eligible for implementation funds, the Watershed Management Plan must meet certain criteria and be approved by the EGLE. The watersheds shown in this document have EGLE approved Watershed Management Plans that meet CMI criteria. Watershed plans approved under Section 319 of the federal Clean Water Act also meet the United States Environmental Protection Agency (USEPA) nine minimum elements, and are eligible for grant funding under 319. Eligibility requirements for funding are included in each Request for Proposals issued through the Nonpoint Source (NPS) program.

For more information about Requests for Proposals, see Grant Applicant Information on the Nonpoint Source home page, [http://www.mi.gov/nps](http://www.mi.gov/nps). For more information about watershed management plans, see Developing an Approvable Watershed Management Plan, [http://www.michigan.gov/deq/0,4561,7-135-3313_71618_3682_3714-69714--,00.html](http://www.michigan.gov/deq/0,4561,7-135-3313_71618_3682_3714-69714--,00.html), or contact Peter Vincent at vincentp@michigan.gov or 517-284-5521.

Lake Huron is one of the Great Lakes. It has a surface area of 23,000 square miles and a watershed of 51,700 square miles. The USEPA and Environment Canada, the parties responsible for development of lakewide management plans do not have resources to initiate such an effort for Lake Huron at this time. As a result, the Michigan Office of the Great Lakes, with the USEPA and Environment Canada as partners, undertook an effort to initiate action on Lake Huron. The Lake Huron Initiative is recognized as an approved watershed management plan under Michigan's CMI rules.

The Betsie River/Crystal Lake Watershed Management Plan was prepared by Networks Northwest and the Crystal Lake and Watershed Association. The plan was approved as meeting CMI and 319 criteria in 2016. The planning area is 154,880 acres in size and is located in portions of Benzie, Grand Traverse, and Manistee Counties. Land use within the planning area consists of 46 percent forest, 15 percent wetland, 13 percent rangeland, 10 percent water, 8 percent agriculture, and 8 percent urban or built. Impaired designated use within the planning area include partial and total body contact recreation. Pollutants addressed include Escherichia coli (E. coli), sediment, and nutrients.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

The Black Lake Watershed Management Plan was approved as meeting CMI criteria in 2002. The Black Lake Watershed is located in northeastern-lower Michigan (Cheboygan and Presque Isle Counties). The planning area is 355,758 acres in size.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.
The Boardman River Watershed Prosperity Plan was prepared by Public Sector Consultants and the Watershed Center Grand Traverse Bay for the Boardman River Watershed Prosperity Leadership Team and was approved as meeting CMI and 319 criteria in 2016. The Boardman River planning area is 182,800 acres in size and is in portions of Grand Traverse and Kalkaska Counties. Land cover within the planning area is 80 percent forest, 11 percent agriculture, 5 percent urban, 2 percent open water, and 1 percent wetland. There were no impaired designated uses as of the writing of this plan. The plan addresses the sources of sediment, nutrients, thermal pollution, pathogens, and oils. The plan also addresses habitat loss, hydrologic flow alteration, and invasive species.

The Burt Lake Watershed Management Plan was developed by the Tip of the Mitt Watershed Council and was approved as meeting 319 and CMI criteria in 2017. Burt Lake planning area is in the northwest portion of Michigan’s Lower Peninsula and is in portion of Cheboygan, Emmet, and Otsego Counties. The planning area is 371,173 acres in size. Land cover within the planning area is identified as 51 percent forested, 15 percent wetland, 9 percent agriculture, 9 percent grassland, 8 percent water, 5 percent scrub/shrub, and 4 percent urban. There are no impaired designated uses as of the writing of the plan. The Burt Lake Management Plan addresses the sources of sediment, nutrients, thermal pollution, pesticides, pathogens, oils, and heavy metals.

The Cedar Lake Watershed Management Plan was developed by Kieser & Associates on behalf of the Cedar Lake Improvement Board. The plan was approved as meeting both CMI and 319 criteria in 2011. The Cedar Lake watershed is located in the southeast corner of Alcona County and the northeast corner of Iosco County. The planning area is approximately 3,613 acres in size. Land cover within the planning area is 37 percent wetland, 26 percent forest, 22 percent high-intensity urban, 10 percent low-intensity urban, 4 percent herbaceous open land, 1 percent park/golf courses. All designated uses within the planning area are met, with the exception of fish consumption. Pollutants of concern in the Cedar Lake Watershed include modified hydrology, invasive species, sediment, nutrients, and pathogens.

The “Cheboygan River/Lower Black River Watershed Initiative 2006-07 Update” was developed by the Northeast Michigan Council of Governments and was approved as meeting CMI criteria in 2004 and 319 criteria in 2007. The plan covers 94,130 acres and is primarily located in Cheboygan County with a portion extending into Emmet County. Land cover within the planning area is 49.6 percent forested, 17.4 percent agricultural, 16.5 percent open land, 6.6 percent water, and 3.7 percent wetland. Designated use addressed within the planning area is other indigenous aquatic life and wildlife. The pollutants of concern in the planning area include sediment, nutrients, toxins, pathogens, invasive species, loss of habitat, and loss of wetlands.

The Duncan and Grass Bays Watershed Management Plan was developed by the Tipp of the Mitt Watershed Council and was approved as meeting CMI and 319 criteria in 2016. The planning areas encompasses approximately 12,000 acres and is located within Cheboygan County. Land cover within the planning area is 37 percent wetland, 33 percent forested, 9 percent scrub/shrub, 7 percent urban, 7 percent grassland, 3 percent agriculture, 2 percent barren, and 1 percent water. There are no designated uses impairments within the watershed. Pollutants of concern include nutrients, sediment, oil, grease, heavy metals, pathogens, and pesticides.

The Elk River Chain of Lakes Watershed Management Plan was prepared by the Northwest Michigan Resource Conservation and Development Council. The plan received CMI approval in 1999. The planning area is located in Antrim, Kalkaska, Charlevoix, and Grand Traverse Counties. The planning area encompasses 202,060 acres. Land cover within the planning area is 40 percent forest, 20 percent cropland, 14 percent inland lakes, 10 percent other (roads, urban built-up, recreation, and idle), 8 percent fallow, 5 percent pasture land, and 3 percent orchards. The watershed has no impaired designated uses. The primary pollutants of concern are phosphorus and excessive sedimentation.

The Good Harbor Bay Watershed Management plan was developed by the Good Harbor Bay Watershed Steering Committee and the Leelanau Conservancy and was approved as meeting CMI and 319 criteria in 2015. The planning area is approximately 29,000 acres. Land cover in the watershed is 53 percent forest, 18 percent shrub/grassland, 10 percent agriculture, 7 percent water, 6 percent urban and 1.4 percent wetland. There are no impaired designated uses within the planning area. Uses identified as degraded within the planning area include warm- and coldwater fisheries, other indigenous aquatic life and wildlife, and partial and total body contact. Issues addressed by the plan include loss of habitat, invasive species, water temperature, and hydrologic fluctuation. Pollutants of concern include nutrients, sediment, pathogens, and toxins.

The Glen Lake-Crystal River Watershed Management Plan was prepared by the Leelanau Conservancy and was approved as meeting CMI criteria in 2003 and 319 criteria in 2010. The Glen Lake-Crystal River Watershed is located in Leelanau County and is 29,721 acres in size. Land cover within the planning area is 55 percent forested, 22 percent water, 12 percent open shrub/grasslands, 5 percent residential homes and no data for the remaining percent. There are no impaired designated uses within the plan area with the exception of fish consumption. Pollutants of concern in the Glen Lake-Crystal River watershed are nutrients, sediment, pathogens, toxins, thermal pollution, and changes to hydrologic flow.

The Grand Traverse Bay Watershed Protection Plan was prepared by the Watershed Center Grand Traverse Bay and was approved as meeting CMI criteria in 2003 and 319 criteria in 2006. The watershed covers portions of Antrim, Charlevoix, Grand Traverse, Kalkaska, and Leelanau Counties. The Grand Traverse Bay watershed is approximately 624,640 acres in size. Land cover within the planning area is 50 percent forested, 19 percent agricultural, 15 percent open shrub and grassland, 7 percent urban, 7 percent water, and 3 percent wetland. Designated uses addressed within the planning area include coldwater fisheries and other indigenous aquatic life and wildlife. The Grand Traverse Bay Watershed Protection Plan addresses the sources of sediment, nutrients, thermal pollution, toxins, changes to hydrologic flow, and pathogens.

Watershed Websites

The Greater Bear Watershed Management Plan was prepared by Public Sector Consultants, Inc. for the Manistee County Community Foundation, the Greater Bear Watershed Steering Community, and the Alliance for Economic Success. The plan was approved as meeting CMI criteria in 2000 and 319 criteria in 2014. The Greater Bear Watershed is located in the northwest portion of Michigan’s Lower Peninsula, primarily in Manistee County, with portions extending into Benzie and Wexford Counties. The watershed planning area encompasses approximately 130,800 acres. Land cover within the planning area is approximately 30 percent deciduous forest, 15 percent woody wetland, 15 percent grassland/herbaceous, 12 percent cropland, 10 percent conifer, with the remaining 18 percent mixed land cover types. Designated uses addressed within the planning area include coldwater fisheries and other indigenous aquatic life and wildlife, and total and partial body contact recreation. The Greater Bear Watershed Management Plan addresses the sources of nutrients, sediments, pathogens, habitat degradation, invasive species, and toxic and hazardous materials.

The Herring Lake Watershed Protection Plan was updated by Grobbel Environmental and Planning Associates and the Herring Lakes Watershed Steering Committee and was approved as meeting CMI and 319 criteria in 2018. The planning area is predominantly located within Benzie County and is approximately 16,201 acres in size. Land cover within the watershed is 42 percent forested, 25 percent agriculture, 14 percent range land, 6 percent water, 7 percent wetlands, 2 percent residential and 1 percent commercial. Designated uses addressed by the plan are total and partial body contact. Pollutants and environmental stressors addressed by the plan include nutrients, pathogens, toxins, sediment, invasive species, loss of habitat, altered hydrology, and temperature.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

The Lake Charlevoix Watershed Management Plan was developed by the Lake Charlevoix Watershed Advisory Committee and Tipp of the Mitt Watershed Council and was approved as meeting both CMI and section 319 criteria in 2012. The Lake Charlevoix Watershed planning area is 212,515 acres in size. The planning area is located in portions of Antrim, Charlevoix, Emmet, and Otsego Counties. Land cover within the planning area is 47.8 percent forested, 16.4 percent agricultural production, 12.6 percent wetland, 9.9 percent open, 8.7 percent water and 4.5 percent urban. There are no impaired waterbodies within the Lake Charlevoix planning area. Pollutants of concern include dissolved solids, chlorides, toxic substances, radioactive substances, nutrients, microorganisms, dissolved oxygen, and temperature.

The Lake Margrethe Watershed Management Plan was developed by Amec Foster Wheeler Environmental & Infrastructure Inc. for the Michigan Department of Military and Veterans Affairs and was approved as meeting CMI and 319 criteria in 2017. The planning area is 9,987 acres in size. Land cover within the planning area is 53 percent forested, 21 percent water, 10 percent urban buildup, 7 percent residential, 6 percent wetlands, and 2 percent rangeland. As of the writing of this plan all designated uses are being met. The plan addresses issues associated with sedimentation, shoreline erosion, nutrients, septic systems, invasive species, and culverts.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.
The Little Manistee Watershed Management Plan was prepared by the Conservation Resource Alliance and received CMI approval in 2000. The planning area encompasses approximately 145,000 acres. Designated uses addressed by the plan include coldwater fisheries, other indigenous aquatic life and wildlife, and total body contact. The primary pollutants are sediments, nutrients, thermal pollution, and bacteria.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

The Bear Creek & Bear Lake Watershed Management Plan was developed by the Muskegon Conservation District. The plan was approved as meeting both CMI and 319 criteria in 2004 and was updated in 2013. The Bear Creek/Bear Lake Watershed is located in west-central Michigan and lies entirely within Muskegon County. The planning area is 19,058 acres. Land use within the planning area is 44 percent forest, 22 percent urban, 6 percent agricultural, 1 percent wetland, and 27 percent other. The watershed’s other indigenous aquatic life and wildlife designated use is impaired by the pollutant phosphorus. The plan also addresses issues associated with coldwater fisheries, partial body contact recreation, and total body contact recreation designated uses. Pollutants impacting these uses are nutrients, sediments, toxic substances, thermal pollution, and pathogens.

The Flat River Watershed Management plan was developed by Streamside Ecological Services for the Kent Conservation District. The plan was approved in 2017 as meeting CMI and 319 criteria. The Flat River planning area is approximately 360,900 acres in size. The Flat River Watershed is in portions of Montcalm, Kent, Ionia, and Mecosta Counties. Land cover within the planning area is 53 percent agriculture, 23 percent forest, 16 percent wetland, 5 percent urban and 3 percent open water. Impaired designated uses include partial and total body contact recreational. The priority pollutant addressed by the plan is E. coli. The plan also addresses sediment, nutrients, and increased water temperature.

The Lake Creek Watershed Management Plan was developed by the Ionia Conservation District and was approved as meeting CMI and 319 criteria in 2015. The plan covers an area of approximately 18,000 acres in Ionia County. Land cover within the planning area is 69 percent agriculture, 16 percent forested, 6 percent wetland, 4 percent developed, and the remaining land cover identified as other. The Lake Creek watershed includes the Lake Morrison Total Maximum Daily Load. Impaired designated uses include warmwater fisheries and other indigenous aquatic life and wildlife. Pollutants of concern include phosphorus, sediment, pathogens, and chemicals. The plan also identifies unstable hydrology and thermal pollution as impacting water quality.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

- Ionia Conservation District
The Lower Grand River Watershed Management Plan was developed by the Lower Grand River Organization of Watersheds and was approved as meeting both CMI and section 319 criteria in 2011. The Lower Grand River Watershed planning area is 1,861,468 acres in size and covers portions of Ottawa, Muskegon, Kent, Allegan, Montcalm, Barry, Eaton, Ionia, Newaygo, and Mecosta Counties. Land cover in the planning area is 51 percent agriculture, 21 percent forest, 12 percent urban, 11 percent wetland, 3 percent open land, and 2 percent water. Impaired designated uses in the watershed include: Total and partial body contact recreation, warmwater fisheries, coldwater fisheries, and indigenous aquatic life and wildlife. Pollutants of concern in the watershed are pathogens (E. coli), sediment, and nutrients.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

The Watershed Management Plan for the Huron River in the Ann Arbor-Ypsilanti Metropolitan Area was prepared by Huron River Watershed Council for the Washtenaw County Drain Office. The plan was approved as meeting CMI criteria in 2000 and 319 criteria in 2008. The Huron River planning area encompasses approximately 576,000 acres of Ingham, Jackson, Livingston, Monroe, Oakland, Washtenaw, and Wayne Counties. Land cover within the planning area is 29.5 percent residential, 27.1 percent forested, 20.9 percent rural, 12.8 percent commercial/industrial, 4.2 percent water, 3.0 percent active construction, and 2.7 percent roadways. Designated uses not being met within the planning area include warmwater fisheries, public water supply intake, other indigenous aquatic life and wildlife, and partial and total body contact recreation. Pollutants of concern in the Middle Huron Watershed are nutrients, altered hydrology, sediment, pathogens, salts, organic compounds, heavy metals, high water temperature, debris/litter, pharmaceuticals, and endocrine disruptors.

The Hodunk-Messenger Chain of Lakes Watershed Management Plan was developed by the Branch County Conservation District and was approved as meeting both CMI and section 319 criteria in 2009. The Hodunk-Messenger Chain of Lakes Watershed planning area covers 39,386 acres in Branch County. Land cover in the planning area is 70 percent agricultural, 15 percent forested, 7 percent urban, 4 percent wetland, and 3.5 percent water. Impaired designated uses in the watershed are Indigenous aquatic life and wildlife, and total body contact recreation. Pollutants of concern in the watershed are pathogens and sediment.

The Kalamazoo River Watershed Management Plan was developed by the Kalamazoo River Watershed Council and was approved as meeting CMI criteria in 2010 and 319 criteria in 2011. The Kalamazoo River Watershed drains 1,292,800 acres in Southwestern Lower Michigan and encompasses portions of Ottawa, Allegan, Van Buren, Kalamazoo, Calhoun, Hillsdale, Jackson, Eaton, Barry, and Kent Counties. Land cover in the Kalamazoo River watershed is approximately 47 percent agriculture, 30 percent unmanaged terrestrial upland, 15 percent lakes and wetlands, and 8 percent urban. Impaired designated uses within the planning area include other indigenous aquatic life and wildlife, total body contact recreation, partial body contact recreation, and warmwater fisheries, fish consumption. The Kalamazoo River Watershed Management Plan addresses the sources of nutrients, sediments, \textit{E. coli}, mercury, PCBs, and dioxin.

The Little Rabbit River Watershed Management Plan was developed by the Allegan County Conservation District. The plan received CMI approval in 2000. The planning area encompasses 30,850 acres and is predominantly in Allegan County with small portion in Kent and Barry Counties. Land cover within the watershed is 46.8 percent agriculture, 29.8 percent residential, 14 percent forest, 4.5 percent open land, 3.5 percent water and wetland, 0.6 percent commercial and industrial areas, and 0.4 percent both transportation/utilities and extractive/barren. Impaired designated use within the watershed is warmwater fisheries. Pollutants of concern include sediment, nutrients, and high flow.

The Portage and Arcadia Creeks Watershed Management Plan was updated by Western Michigan University and Kieser and Associates LLC for the Portage and Arcadia Creek Steering Committee. The plan updated was approved as meeting CMI and 319 criteria in 2019. The planning area is located in the western portion of the Kalamazoo County and encompasses 43,723 acres. Land cover within the planning area is 49.7 percent open spaces and forest, 26.4 percent by urban areas, 19 percent by agriculture, and 4.9 percent by water and wetland. Designated uses addressed within the planning area include warmwater fisheries, total body contact, and partial body contact. Concerns include increased water volume and temperature and degradation and loss of habitat. Pollutants addressed by the plan include pathogens, sediment, and nutrients.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.
The Portage River Watershed Management Plan was developed by the Calhoun County Conservation District and was approved as meeting CMI and 319 criteria in 2016. The planning area is approximately 125,500 acres in size and is located in Kalamazoo and St. Joseph Counties. Land cover within the planning area is 60 percent agriculture, 18 percent forested, 7 percent wetland, 6 percent urban, 5 percent open field, and 4 percent water. The impaired designated use within the watershed is total body contact. Pollutants of concern include pathogens, sediment, and hydrologic issues.

The Brighton Lake Subwatershed Management Plan was prepared by the Brighton Lake Subwatershed Workgroup and was approved as meeting CMI criteria in 2002 and 319 criteria in 2006. The Brighton Lake Subwatershed is 14,730 acres in size and extends from the headwaters of South Ore Creek downstream to the Brighton Lake. The planning area is located in southwestern Livingston County and comprises all or portions of Hartland, Osceola, Genoa, Brighton, and Hamburg Townships, and the city of Brighton. Land cover within the planning area is 23 percent residential, 20 percent grass/shrub, 18 percent wetland, 16 percent agriculture, 9 percent woodland, 7 percent water, 5 percent commercial, and 2 percent public. The designated use addressed within the plan area is other indigenous aquatic life and wildlife. Pollutants identified as impacting water quality are nutrients and sediment.

The Carrier Creek Watershed Management Plan was approved as meeting CMI criteria in 2000. Carrier Creek is located within Eaton County. It functions as a storm water drain for approximately 11.1 square miles of Delta and Windsor Townships, and the city of Lansing. It is a tributary of the Grand River. The upper portion of the watershed is largely industrial, and the lower portion is mainly residential.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.
The Gilkey Creek Watershed Management Plan was developed by the Center for Applied Environmental Research and was approved as meeting CMI criteria in 2007 and 319 criteria in 2009. The planning area is 9,600 acres in size within Genesee County. Land cover within the planning area is 63.6 percent developed, 33 percent undeveloped, and 3.3 percent agricultural. Designated uses within the planning area not being met include other indigenous aquatic life and wildlife and warmwater fisheries. Pollutants of concern nutrients, sediment, and temperature.

- [Eaton Conservation District](#)
The Mid-Shiawassee River Watershed Management Plan was developed by the Shiawassee Conservation District and has been approved as meeting CMI and 319 criteria. The Mid-Shiawassee River Watershed planning area is 138,178 acres in size and includes the central part of the Shiawassee River Watershed. The planning area is located in portions of Shiawassee, Genesee, Saginaw, and Livingston Counties. Land use within the planning area is 62.1 percent agriculture, 21.3 percent natural areas, 14.4 percent urban areas, and 2.2 percent water and wetland. Designated uses not being met within the planning area include other indigenous aquatic life and wildlife, total body contact, and partial body contact. The Mid-Shiawassee River Watershed Management Plan addresses the sources of sediment and nutrients.

### WARREN DISTRICT CMI WATERSHEDS

#### CMI approved

- Bear Creek (Oakland County)
- Huron Chain of Lakes
- St. Clair County’s NE Watersheds
The Anchor Bay Watershed Management Plan was developed by the Anchor Bay Technical Committee. The plan received CMI approval in 2003 and 319 approval in 2006. The planning area is located in St. Clair and Macomb Counties and encompasses 109,440 acres. Dominant land uses within the planning area include cropland, grassland and shrubs, single family residential, forest, and wetland. Designated uses addressed within the planning area include partial body contact, total body contact, other indigenous aquatic life and wildlife, and warmwater fisheries. The plan addresses nutrients and sediment. Sources of pollutant include industrial discharge and runoff from urban, agricultural, and residential areas within the watershed.

Watershed Websites

- St. Clair County - Anchor Bay
The Bear Creek Watershed Management Plan was approved as meeting CMI criteria in 2000. The planning area is within Macomb and Oakland County and is 13,782 acres in size. The watershed is predominantly commercial and industrial. 

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.
The Belle River Watershed Management Plan was developed by the St. Clair County Health Department and was approved in 2015 as meeting both CMI and 319 criteria. The Belle River planning area is in parts of Lapeer, St. Clair, Oakland, and Macomb Counties. The planning area is covers approximately 145,280 acres. Its land cover is 57.5 percent agricultural, urban 16.9 percent, natural areas 23.5 percent, and water and wetland 2.1 percent. The impaired designated uses within the planning area are other indigenous aquatic life and wildlife, total body contact recreation, and warmwater fisheries. It has been determined that bacteria, sediment, and nutrients are the priority nonpoint pollutants impacting the Belle River Watershed.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.
The Brighton Lake Subwatershed Management Plan was prepared by the Brighton Lake Subwatershed Workgroup and was approved as meeting CMI criteria in 2002 and 319 criteria in 2006. The Brighton Lake Subwatershed is 14,730 acres in size and extends from the headwaters of South Ore Creek downstream to the Brighton Lake. The planning area is located in southwestern Livingston County and comprises all or portions of Hartland, Osceola, Genoa, Brighton, and Hamburg Townships, and the city of Brighton. Land cover within the planning area is 23 percent residential, 20 percent grass/shrub, 18 percent wetland, 16 percent agriculture, 9 percent woodland, 7 percent water, 5 percent commercial, and 2 percent public. The designated use addressed within the plan area is other indigenous aquatic life and wildlife. Pollutants identified as impacting water quality are nutrients and sediment.

- [Huron River Watershed Council](#)
The Clinton River East Subwatershed Management Plan was developed by Tetra Tech, Inc., and was approved as meeting both CMI and 319 criteria in 2007. The Clinton River East Subwatershed planning area is 84,480 acres in size and is located in portions of Oakland and Macomb Counties. Land cover within the planning area is 65.3 percent developed land, 14.6 percent open space, 11.6 percent agriculture, 5.7 percent wetland, and 2.8 percent wooded area. Designated uses not being met within the planning area include other indigenous life and wildlife, warmwater fisheries, total body contact, and partial body contact. The Clinton River East Subwatershed Management Plan addresses the sources of sediment and pathogens.

Watershed Websites

- Clinton River East Watershed Plan
- Clinton River Watershed Council
The Clinton Main Watershed Management Plan was developed by the Clinton Main Subwatershed Advisory Group. The management plan received CMI approval in 2007 and 319 approval in 2010. The planning area is located in Oakland County and encompasses 47,647 acres. Land cover within the watershed is 27 percent single-family residential; 13 percent roads; 12 percent vacant; 10 percent water; 9 percent industrial; 8 percent recreation and conservation; 8 percent public and institutional; 6 percent commercial; 4 percent multiple family residential; 1 percent transportation, utility, and communication; 1 percent mobile home parks; and the remaining 1 percent railroads and extraction. Designated uses addressed within the planning area include navigation, warm- and coldwater fisheries, indigenous aquatic life and wild life, partial and total body contact recreations. The pollutants identified in the plan are, hydrology, sediment, nutrients, bacteria, and temperatures.

**Watershed Websites**

- [Clinton River Watershed Council](#)
The Clinton River North Branch Watershed Management Plan was developed by Tetra Tech for the Macomb County Public Works Department and was approved as meeting both CMI and 319 criteria in 2011. The planning area encompasses approximately 486,400 acres in portions of Lapeer, Oakland, Macomb, and St. Clair Counties. Land cover within the planning area is 49.4 percent agriculture, 14.4 percent residential, 12.3 percent woods and wetlands, 10.7 percent developed open space, 4.1 percent urban and the remaining area had no data available. Impaired designated uses within the planning area include total and partial body contact recreation, warmwater fisheries, and other indigenous aquatic life and wildlife. NPS pollutants of concern include \textit{E. coli}, fecal coliforms, nutrients, oil, grease, and metals.

**Watershed Websites**

- [Clinton River Watershed Council](#)
- [Clinton River North Branch Watershed Plan](#)
The Combined Downriver Watershed Management Plan was prepared by the Combined Downriver Advisory Group and the Alliance of Downriver Watersheds. The plan was approved for CMI and 319 criteria in 2012. The Combined Downriver Watershed is located entirely within Wayne County and encompasses 54,944 acres. Land cover within the planning area is 34.4 percent single-family residential; 16 percent industrial; 15.7 percent transportation, communication and utility; 8.4 percent airport; 8.4 percent commercial; 6.6 percent governmental/institutional; 6.5 percent parks, recreation, and open space; 2 percent agricultural; 1.6 percent multiple-family residential; and 0.5 percent water. Designated use impairments include partial body contact recreation, other indigenous aquatic life and wildlife, and total body contact recreation. Known pollutants include pathogens, sedimentation, low dissolved oxygen, lack of stable flow, and lack of habitat in addition to suspected nutrient pollution.

Watershed Websites

- Alliance of Down River Watersheds
- Combined Downriver Watershed Management Plan
The Ecorse Creek Watershed Management Plan was prepared by the Ecorse Creek Watershed Advisory Group and the Alliance of Downriver Watersheds. The plan was approved as meeting CMI criteria in 2007 and 319 criteria in 2012. The Ecorse Creek planning area encompasses 27,776 acres in Wayne County. Land cover within the watershed is 40.8 percent single-family residential, 23.5 percent TCU, 12.4 percent industrial, 8.6 percent commercial, 4.9 percent governmental/institutional, 2.8 percent airport, and 2.7 percent agricultural. Designated uses not being met within the planning area are total body contact, partial body contact, and other indigenous aquatic life and wildlife. Pollutants of concern are nutrients, *E. coli*, and sediment.

Watershed Websites

- [Ecorse Creek Watershed Management Plan](#)
- [Alliance of Down River Watersheds](#)
The Huron Chain of Lakes Watershed Management Plan was prepared by the Huron Chain of Lakes Steering Committee and the Huron River Watershed Council. The plan was approved as meeting CMI criteria in 2007. The Huron Chain of Lakes Watershed is 161,920 acres in size and is located within Livingston, Washtenaw, and a small portion of Oakland County. Land cover within the planning area is 29 percent residential, 16 percent open grass and shrub, 15 percent agricultural, 14 percent wetland, 11 percent forested, 6 percent commercial/industrial, 6 percent water and 3 percent recreational. Impaired designated uses within the watershed are warmwater fisheries and other indigenous aquatic life and wildlife. Pollutants of concern include nutrients, sediment, pathogens, salts, organic compounds, heavy metals, high water temperature, altered hydrology, and debris/litter.

Watershed Websites

- Huron Chain of Lakes Watershed Management Plan
- Huron River Watershed Council
The Kent Lake Subwatershed Management Plan was prepared by the Kent Lake Subwatershed Workgroup with guidance from the Huron River Watershed Council. The plan was approved as meeting CMI criteria in 2002 and 319 criteria in 2006. The Kent Lake Subwatershed is located in Oakland and small portion of Livingston Counties. The subwatershed is approximately 100,000 acres in size. Land cover within the planning area include 26.8 percent single family, 19.5 percent non-forested open, 11.2 percent woodland, 9.6 percent agricultural, 3.3 percent outdoor recreation, and 1.6 percent industrial. Sediment and nutrients are pollutants of concern within the Kent Lake Subwatershed.

Watershed Websites

- Kent Lake Watershed Management Plan
- Huron River Watershed Council
The Lake St. Clair Direct Drainage Subwatershed Management Plan was developed by Tetra Tech, Inc., and was approved as meeting both CMI and 319 criteria in 2007. The Lake St. Clair planning area is 26,240 acres in size and is located in portions of Macomb and Wayne Counties. Land cover within the planning area is 94.7 percent developed land, 4.6 percent open space, 0.6 percent wetland and 0.1 percent wooded area. Designated uses not being met within the planning area include other aquatic life and wildlife, warmwater fisheries, total body contact and partial body contact. The Lake St. Clair Direct Drainage Subwatershed Management Plan addresses the sources of sediments, low dissolved oxygen, fish kills, pathogens, and the presence of algae from nutrient elevation.

Watershed Websites

- Clinton River Watershed Council
- Lake St. Clair Watershed Plan
The Lower Huron River Watershed Management Plan was prepared by the Lower Huron Watershed Advisory Group and the Alliance of Downriver Watersheds. The plan was approved as meeting CMI criteria in 2007 and 319 criteria in 2012. The Lower Huron River planning area is 47,431 acres in size. The planning area is in portions of Wayne, Monroe, and Washtenaw Counties. Land cover within the planning area is 52.9 percent residential, 15.9 percent industrial, 11.8 percent agricultural, 11.6 percent open, 7.3 percent commercial, and 0.5 percent water. Impaired designated uses within the planning area are partial and total body contact recreation and other indigenous aquatic life and wildlife. Pollutants of concern include pathogens, nutrients, and sediment.

Watershed Websites

- Lower Huron River Watershed Management Plan
- Lower Huron River Watershed
The Pebble Creek Watershed Management Plan was developed by Tetra Tech for the city of Farmington Hills and was approved as Meeting CMI and 319 criteria in 2019. The subwatershed encompasses 14,571 acres and is entirely within Oakland County. Land cover within the planning area is 55 percent single family residential, 17 percent roads and right of way, 10 percent commercial, 9 percent institutional, 4 percent multifamily residential, and 4 percent parks and open space. Designates uses addressed by the plan include warmwater fisheries, other indigenous life and wildlife, and total and partial body contact. Pollutants addressed by the plan include *E. coli* and storm water volume.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

**Watershed Websites**

- [Farmington Hills](#)
Pontiac Creek is a highly urbanized watershed that drains much of the city of Pontiac. The planning area is approximately 6,400 acres in size. The Pontiac Creek Watershed was approved as meeting CMI criteria in 2003 and 319 criteria in 2006. The plan addresses nutrients, suspended solids, and BOD.

**EGLE Nonpoint Source Links**

- [Pontiac Creek Management Plan](#)
The Red Run Subwatershed Management Plan was developed by Tetra Tech, Inc. and was approved as meeting both CMI and 319 criteria in 2007. The planning area is 90,880 acres in size and is located in portions of Oakland and Macomb Counties. Land cover within the planning area is 87.7 percent developed land, 9.3 percent open space, 1.6 percent wetland, 1.2 percent wooded area, and 0.2 percent agriculture. Designated uses not being met are other aquatic life and wildlife, warmwater fisheries, total body contact and partial body contact. The Red Run Subwatershed Management Plan addresses the sources of sediment, pathogens, and channelization.

Watershed Websites

- Red Run Watershed Plan
- Clinton River Watershed Council
The Rouge River Watershed Management Plan was developed by Environmental Consulting & Technology for the Alliance of Rouge Communities. The plan received CMI and 319 approval in 2012. The planning area is approximately 298,240 acres. Land cover within the planning area is 47.2 percent medium density residential area, 10.9 percent commercial area, 9.5 percent by forest or rural open areas, 7.8 percent by industrial areas, 6.6 percent by water and wetlands, 6.0 percent by urban open areas, 5.2 percent by agriculture, 4.1 percent by high density residential areas, and 2.5 percent by highways. Designated uses addressed within the planning area include warmwater fisheries, other indigenous aquatic life and wildlife, partial body recreation, and total body contact recreation. The four primary pollutants affecting the Rouge River are pathogens, flow rate and volume, sediment, and nutrients.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

Watershed Websites

- Friends of the Rouge
The St. Clair County's Northeastern Watersheds Watershed Management Plan (NEW WMP) was developed by the Northeastern Watershed Advisory Group. The NEW WMP was developed using local funding in response to the Phase 2 Storm Water Program and was approved in 2007 as meeting CMI criteria. The NEW WMP encompasses approximately 143,983 acres in portion of St Clair and Sanilac Counties. The NEW also encompasses 46.8 miles of shoreline along Lake Huron and the St. Clair River and contains twenty communities spanning St. Clair and Sanilac Counties.

**Watershed Websites**

- Northeastern Watersheds Management Plan
The Stony Creek Watershed Management Plan was developed by the Stony Creek Stewardship Committee and was approved as meeting both CMI and section 319 criteria in 2006. The Stony Creek Watershed Planning area is 47,360 acres in size and covers portions of Oakland and Macomb Counties. Land cover in the planning area is 32 percent residential, 24.5 percent vacant, 13 percent recreation/conservation, 11 percent agricultural, 9 percent urban, and 7 percent wetland. Impaired designated uses in the watershed include warm- and coldwater fisheries, total and partial body contact recreation, and other indigenous aquatic life and wildlife. Pollutants of concern in the watershed are nutrients, sediment, pesticides, and bacteria.

**Watershed Websites**

- [Stony/Paint Creek Watershed Plan](#)
- [Clinton River Watershed Council](#)
The Stony/Paint Creek Subwatershed Management Plan was developed by the Clinton River Watershed Council and was approved as meeting both CMI and section 319 criteria in 2005. The planning area is 92,160 acres in size and covers parts of Oakland and Macomb Counties. Land cover in the planning area is 38 percent residential, 20 percent open, 15 percent urban, 13 percent recreation and conservation, 6 percent waterbodies and wetlands. Designated uses addressed within the planning area include coldwater fisheries, other indigenous aquatic life and wildlife, and partial and total body contact recreation. Pollutants of concern in the watershed include sediment, nutrients, temperature, and pathogens.

The Chocolay River Watershed Restoration and Adaptive Management Plan was prepared by White Water Associates, Inc. The plan received CMI approval in 2000. The Chocolay River Watershed is located in the northeast corner of Marquette County. The planning area comprises roughly 102,382 acres. Land cover within the watershed is 59 percent forest, 16 percent wetland, 14 percent agriculture, and 11 percent residential and urban areas. There are no identifiable impaired designated uses within the watershed. The pollutant of concern addressed by the plan is sediment.

The Days River Watershed Management Plan was developed by the Delta County Conservation District. The plan received both CMI and 319 approval in 2006. The planning area encompasses approximately 40,594 acres and is located primarily in Delta County with a small portion in Marquette County. The dominant land cover within the watershed is forest. The designated uses addressed within the planning area include navigation, warmwater fisheries, coldwater fisheries, partial body contact, and total body contact. Pollutants of concern include sediments, nutrients, pathogens, increased temperature, and altered hydrologic flow.

The Eagle River Watershed Management Plan was developed by the Houghton Keweenaw Conservation District and was approved as meeting both CMI and 319 criteria in 2008. The Eagle River planning area is located in Keweenaw County and is 13,595 acres in size. Land cover within the planning area is 88 percent forest, 8 percent wetland, 2 percent urban, and 2 percent other (e.g., roads, stamp sand deposits). Designated use addressed by the plan is other indigenous aquatic life and wildlife. The plan addresses copper from stamp sand.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

- Houghton Keweenaw Conservation District
The Fumee Creek Watershed Project Management Plan was developed by the Dickinson County Conservation District and is approved as meeting both CMI and 319 criteria. The Fumee Creek planning area covers approximately 24,500 acres of Dickinson County. Land cover within the planning area is 48 percent forest, 24 percent urban, 5 percent agricultural, 2 percent wetland, and 21 percent other. Designated uses addressed within the planning area include coldwater fisheries and navigation. Pollutants of concern in the Fumee Creek Watershed include sediment, nutrients, hydrologic flow, depressed dissolved oxygen, temperature, exotic species, and pathogens.

Watershed Websites

- Dickinson Conservation District
The Hamilton Creek Watershed Management plan was approved as meeting CMI criteria in 2003. The Hamilton Creek planning area is 18,322 acres in size and is located predominantly within Dickinson County with a small portion in Menominee County.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

Watershed Websites

- Dickinson Conservation District
The Huron Creek Watershed Management Plan was developed by the Michigan Technological University Center for Water and Society. The plan was approved as meeting both CMI and 319 criteria in 2009. The planning area is located in north-central Houghton County and is 2,176 acres in size. Land cover within the watershed is 33 percent forest, 30 percent commercial and residential developments, 17 percent agriculture and rangeland, and 20 percent wetland. Designated use not being met within the planning area is other indigenous aquatic life and wildlife. Pollutants of concern include metals (copper and iron), sediments, “flashy” flow, nutrients, invasive species, and bacteria.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.
The Iron River Watershed Management Plan was prepared by the Iron River Watershed Council and was approved as meeting CMI criteria in 2002. The Council changed its name to the Iron County Watershed Coalition in 2009. The Iron River Watershed is located in southwestern Iron County in Michigan’s Upper Peninsula. The watershed is approximately 61,440 acres. Land cover within the planning area is 57 percent forest, 16 percent urban, 12 percent agricultural, 7 percent wetland, and 8 percent of other. All designated uses within the Iron River Watershed are being met. The Iron River Watershed Management Plan addresses the sources of sediment, acid mine drainage, thermal pollution, nutrients, and toxics (oil, grease, metals).

The Les Cheneaux Watershed Management Plan was prepared by the Chippewa Luce Mackinac Conservation District and was approved as meeting CMI criteria in 2005 and 319 criteria in 2006. The Les Cheneaux Watershed is 73,600 acres in size and is in portions of Mackinac and Chippewa County. Land cover within the planning area is 71 percent forested, 16 percent wetland, 1 percent agricultural, 8 percent urban, and 4 percent open and barren lands. All designated uses in the planning area are meet. The Les Cheneaux Watershed Management Plan addresses the sources of pathogens, toxics, nutrients, hydrologic flow changes, sediments and invasive species.

Watershed Websites

The Lower Dead River Watershed Management Plan was developed by the Marquette County Conservation District and the Central Lake Superior Watershed Partnership. The plan received CMI approval in 2003, and 319 approval in 2006. The planning area is located in Marquette County and is comprised of 14,246 acres. Land cover within the planning area is, 78.5 percent forest, 15.5 percent urban, 2.8 percent open field, 2.1 percent water, 0.9 percent wetland, 0.1 percent agricultural, and 0.1 percent barren. There are no impaired designated uses within the watershed. Designated uses addressed within the planning area include public water supply, navigation, coldwater fisheries, and other indigenous aquatic live and wildlife. The primary pollutants are sediment, nutrients, and hydrologic flow.

The Munising Bay Watershed Restoration Project and Water Quality Management Plan was developed by the Alger County Conservation District. The plan was approved as meeting CMI criteria in 2002. The planning area encompasses approximately 30,350 acres and is located entirely within Alger County. Land cover within the planning area is 74 percent forest, 13 percent wetland, 10 percent urban areas, and 3 percent agriculture. Designated uses addressed within the planning area include other indigenous aquatic life and wildlife and coldwater fisheries. Pollutant addressed is sedimentation.

The Munuscong River Watershed Management Plan was developed by the Chippewa Luce Mackinac Conservation District and was approved as meeting both CMI and section 319 criteria in 2010. The Munuscong River planning area is 149,100 acres in size. The planning area is located in portions of Chippewa and Mackinac Counties. Land cover in the planning area is 40 percent wetland, 28 percent agriculture, 23 percent forested, 5 percent open, and 3 percent urban. Impaired designated uses in the planning area include indigenous aquatic life and wildlife, partial body contact, and total body contact. Pollutants of concern include pathogens, sediment, and temperature.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

- Chippewa Luce Mackinac Conservation District
- Munuscong River Watershed
The Otter River Watershed Plan was developed by the Sturgeon/Otter River Watershed Council and received CMI approval in 2000. The planning area, located in Houghton, Baraga, and Ontonagon Counties and encompasses 106,350 acres. Land cover within the planning area is 89.1 percent forest, 5.4 percent agriculture, 3.5 percent urban roads, and 2 percent wetland. Designated uses addressed within the planning area include coldwater fisheries, warmwater fisheries, aquatic life and wildlife, and navigation. The primary pollutants in the watershed are sediments and hydrologic flow.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

Watershed Websites

- Friends of the Land of Keweenaw
The Partridge Creek Watershed Management Plan was developed by AECOM in Marquette. The plan was approved as meeting both CMI and section 319 criteria in 2011. The planning area covers 1,780 acres in Marquette County. Land cover is identified as mostly forested, with some residential. Impaired designated uses in the watershed include warmwater fisheries, aquatic life and wildlife habitat, partial and total body contact recreation, and coldwater fisheries. Mercury is the major pollutant of concern in the Partridge Creek Watershed.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.
The Pilgrim River Watershed Management Plan was developed by the Houghton Keweenaw Conservation District and was approved as meeting both CMI and 319 criteria in 2012. The Pilgrim River Watershed planning area covers approximately 15,546 acres of land in Houghton County. Land cover within the Pilgrim is 58 percent forested, 25 percent open, 12 percent wetland, 4 percent developed, and 1 percent lake and ponds. Designated uses within the watershed area being met.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

Watershed Websites

- Houghton Keweenaw Conservation District
The Pine Creek Watershed was approved as meeting CMI criteria in 1999. The Pine Creek Watershed is approximately 47,350 acres and is located within Dickinson County. The planning area is predominantly forested watershed. Pollutants of concern include sediment, nutrients, and pesticides.

For a copy of the approved watershed management plan, please contact NPS Program District Staff for your area or the NPS Program Watershed Planning Coordinator.

Watershed Websites

- Dickinson Conservation District
The Salmon Trout River Watershed Management Plan was developed by the Superior Watershed Partnership and was approved as meeting both CMI and 319 criteria in 2007. The Salmon Trout River planning area is located in the northwest portion of Marquette County and is 31,687 acres in size. Land cover within the planning area is 88 percent forest, 6 percent wetland, 4 percent barren (rock outcrop) and 1 percent water. Designated uses addressed within the planning area include coldwater fisheries, other indigenous aquatic life and wildlife, and public water supply (groundwater). The Salmon Trout River Watershed Management Plan addresses the sources of sediment, acid mine drainage, heavy metals, nutrients, and toxins.

- Houghton Keweenaw Conservation District
The Two Hearted River Watershed Management Plan was developed by the Superior Watershed Partnership in cooperation with The Nature Conservancy. The plan received both CMI and 319 approval in 2008. The watershed is predominantly located in Luce County with a small potion in Alger County. The planning area is 132,478 acres in size. Land cover is 83 percent forest, 17 percent wetland, 1 percent shrubland, and 1 percent water. There are no impaired designated uses, but the plan addresses issues with the coldwater fisheries, other aquatic life and wildlife, and public water supply. The primary pollutant of concern is sediment.

**Watershed Websites**
