# EXECUTIVE SUMMARY

---

## Mission Statement

The Michigan Department of Natural Resources (herein DNR or Department) is committed to the conservation, protection, management, use, and enjoyment of the state's natural and cultural resources for current and future generations.

## Department Overview

The Department of Natural Resources was established in 1921 as the Department of Conservation for the purpose of managing and protecting the natural resources of the State of Michigan. Renamed the Department of Natural Resources in 1968, the Department is responsible for stewardship of the state's natural resources and for the provision of public outdoor recreation opportunities. While operating as a stand-alone agency, the DNR works collaboratively with the Department of Environment, Great Lakes, and Energy (EGLE) and the Michigan Department of Agriculture and Rural Development (MDARD).

The DNR administers a variety of programs that are largely managed by the Department's core resource divisions – Fisheries, Forest Resources, Law Enforcement, Parks and Recreation, and Wildlife. Information on the programs administered by these divisions and the infrastructure that supports the programs is provided in the Infrastructure Detail section. There are also administrative divisions (e.g., Finance and Operations, Marketing and Outreach, Michigan History Center) that provide vital services in support of the operations of the Department's programs.

Well-maintained and functional facilities are needed to support programs such as state parks, state harbors and boating access sites, state forest campgrounds, state game areas, wildlife viewing areas, and fish hatcheries, as well as field offices and Customer Service Centers (offices). Nearly all the offices housing resource staff are state-owned facilities managed by the Department.

In addition to its operating infrastructure, the DNR manages extensive infrastructure related to its natural resource management, land management, and recreational responsibilities. This includes, but is not limited to, dams, bridges, trails, roads, harbors, boating access sites, shooting ranges, fish ladders, electrical systems, water systems, and sewer systems. Ongoing maintenance and repairs are needed to preserve the longevity of these assets and ensure the infrastructure remains operable, providing continued support for the programs and overall mission of the DNR. Proactive repair and replacement of critical infrastructure that is rapidly aging and deteriorating has become increasingly difficult due to the lack of available funding. With funding falling dramatically short of the amount needed to maintain, repair, and improve existing system infrastructure, a considerable backlog of necessary repairs and improvements has formed. As maintenance is deferred and needed repairs and improvements continue to go unaddressed due to the lack of available funding, the risk of infrastructure failure increases. As infrastructure failures occur, funding that is available must be directed toward emergency repairs, often at a much greater expense than preventative maintenance, repair, and replacement. The DNR must also plan and provide for unforeseen events such as fires, floods, tornados, storms, wave action, and other weather-related incidents that adversely impact infrastructure.

With the onset of the COVID-19 pandemic during 2020, the public significantly increased its use of the green spaces and recreational options offered by the DNR. This extensive increase in use has highlighted and exacerbated the need for maintenance and replacement of infrastructure.

The DNR is continually searching for opportunities to secure additional financial support and leverage existing funding that is available for capital outlay needs. For instance, the DNR's capital outlay requests frequently include grants-in-aid to maintain, build, and expand locally owned recreational facilities related to boating. These projects further the mission of the DNR without adding to the carrying costs of daily management or maintenance of infrastructure. Also, the DNR submits grant applications to request funding through the Michigan Natural Resources Trust Fund and seeks to fully utilize available federal

funding. Where there is flexibility regarding the allocation of available funding, the DNR looks to established priorities to guide capital outlay planning. Priority projects are identified based on a predetermined strategy focusing on the following factors:

- Operational need
- Preventative maintenance
- Accessibility
- Recreational opportunities in or near urban areas
- Partnering/consolidation
- Energy-efficient facilities

This strategy for capital outlay planning interconnects with the DNR's overarching priorities:

- Protect natural and cultural resources
- Enable sustainable recreational use and enjoyment
- Enable strong natural resource-based regional economies
- Improve upon and build strong relationships and partnerships
- Promote effective business practices and good governance

### **Department Strategies for Prioritization**

The DNR develops its capital outlay plans with a focus on the following factors:

- Operational Need:  
The critical nature of the Department's mission and responsibility to Michigan's citizens, taxpayers, and tourists mandates the Department's facilities be sufficient to meet their service functions. Full utilization of the Department's varied resources is dependent upon sufficient and functional facilities.
- Preventative Maintenance:  
The Department must preserve its existing capital investments to continue to fulfill its mission and provide services to Michigan residents. Effective preventative maintenance practices minimize costs over the long term, prevent health and safety hazards, and allow for minimal interruptions of service.
- Accessibility:  
The Department must strive to ensure that its facilities, programs, and projects are barrier-free and accessible to all users. The Department's goals are to provide accessible recreation opportunities to Michigan residents and visitors and increase opportunities for public access to the state's natural resources.
- Recreational Opportunities in or Near Urban Areas:  
The Department promotes recreation user recruitment and retention through the development and maintenance of facilities in or near urban areas. Additionally, state trail connectivity initiatives help create walkable communities and facilitate restoration of degraded urban natural resources to provide quality outdoor recreation opportunities.
- Partnering/Consolidation:  
Where possible, the Department shares facilities with other state agencies and universities to promote efficiencies and maximize the use of available funding. The Department works with local government agencies and other entities to develop and maintain recreational opportunities for Michigan's residents.
- Energy-Efficient Facilities:  
The Department seeks to reduce greenhouse gas emissions and lower energy costs by promoting energy-efficient facilities, on-site renewable energy, and reduced facility energy consumption. Opportunities include installing energy-efficient lights, solar arrays, water heaters, heating and

ventilation systems, and low-flow plumbing fixtures. Proper maintenance of roofs, installation of building insulation, and the reduction of exterior air infiltration lead to further energy efficiencies.

## **Department-Level Initiatives**

In line with the DNR's strategic focus, the priorities outlined in the Capital Outlay Five-Year Plan for Fiscal Years (FY) 2022 through 2026 were identified based on the following objectives:

1. Keep facilities safe and open to the public.
  - Focus on the most critical needs (e.g., infrastructure that is most at-risk for failure) to ensure facilities are functional and able to remain open to the public.
  - Perform preventative maintenance, as funding permits, to avoid health and safety hazards and to preserve the Department's capital investments.
2. Creatively leverage available funding, albeit limited.
  - Take advantage of opportunities to secure federal funding for projects.
  - Partner with local government agencies through the grant-in-aid program, maximizing project funding by supplementing available state funds with local match dollars.
  - Seek public-private partnership opportunities to secure funding.
3. Increase opportunities for public access to the State's natural resources.
  - Provide barrier-free access to facilities and recreational opportunities.
  - Give special consideration to the location of development as a means of creating new avenues for public access and expanding the user base.
4. Exhibit good environmental stewardship, incorporating energy-efficient and green components into construction projects whenever feasible.
5. Continue to seek sustainable funding sources for the DNR's significant capital outlay needs.

## **Programming Changes**

The Department created a Facility Management System database which contains square footage, construction dates, staffing levels, utility usage, network connectivity, pictures, Geographic Information System (GIS) coordinates, engineering and design plans, equipment manuals, and other related documents on DNR facilities across the state. In 2014 and 2015, the DNR used data in the Facility Management System to develop a "Facility Strategy Plan" to evaluate preventative maintenance and capital improvement needs and to identify ways to improve service delivery through strategic investment. The priorities that emerged from this process were to address maintenance needs of DNR-managed facilities, which average 42 years in age, and the realignment of customer service staff and facilities to fill current voids.

The Department had been working in partnership with the Department of Technology, Management and Budget (DTMB) and the Michigan Department of Transportation (MDOT) to develop an enterprise-wide asset management system to replace the existing database. This partnership has not resulted in an enterprise-wide database. Implementation of an enterprise-wide asset management system is a high priority and a critical need for the Department.

In 2018, the Department formed an Asset Management Steering Committee consisting of division and Executive leadership to review, prioritize, and make decisions on assets based on long-range strategic visions. The workgroup is focused on consolidating office space, strategically replacing outdated facilities, eliminating obsolete facilities, and developing best practices for staff placement.

Part of the strategic realignment was accomplished in 2016 with the relocation of the Rose Lake Field Office to a newly purchased Lansing Customer Service Center located in Delhi Township. This location is in proximity to Michigan State University, a major research and educational partner, as well as major transportation corridors of US-127, I-496, and I-96. This realignment provides closer access for customers and allows for consolidation of staff from other locations. In 2018, a 22,000 square foot storage building was constructed across the street from the Lansing Customer Service Center to

consolidate equipment throughout the area. As a result, the former Rose Lake Field Office and six other storage facilities were demolished in 2019. During the COVID-19 pandemic of 2020, the storage facility has been used to receive, store, and disseminate personal protective equipment (PPE).

Another example of strategic realignment completed in 2016 is the relocation of the Traverse City Field Office. The DNR replaced this facility with an existing property allowing for the consolidation of several leases; better storage facilities for equipment; and location on M-37, a major transportation corridor, resulting in better visibility for and proximity to customers.

The Department acquired a newly constructed customer service center and storage facility in Sault Ste. Marie in January 2020. The new facility replaced a facility constructed in the 1930s and consolidated equipment from the surrounding areas. Upon acquisition of the new facility, ownership of the former field office was transferred to the developer as part of the purchase agreement.

The Department formed sprint teams for renewable energy projects and climate change. A renewable energy contract consultant was hired in 2020 to assist with this effort. The groups are working on project-specific items and are working closely with partners such as EGLE, DTE, Consumers Energy, and other utility providers to reduce energy consumption, costs, and the carbon footprint.

The DNR's Newberry Customer Service Center is within one half-mile of 40 acres of public land. The intent is to construct a state office building on this land to accommodate staffing needs and customer service for the DNR using mass timber construction and other energy efficient elements.

The DNR looks to optimize utilization of current facilities through consolidation of staff and equipment where possible while still providing appropriate resource management and response. The DNR strives to:

- Make facility decisions with a 25 to 50-year perspective based on broad operational needs across the department.
- Identify internal resources and cost savings before requesting funds for new facilities.
- Utilize savings resulting from updated or closed locations to maintain, upgrade, or build facilities needed to meet DNR objectives.

## **INFRASTRUCTURE DETAIL**

---

### **Department Operating Infrastructure General Background**

The Facilities, Operations, and Support Section (FOS) within the DNR Finance and Operations Division (FOD) is committed to maintaining the Department's operating infrastructure, which includes 13 Customer Service Centers (CSCs) and 11 field offices. Refer to Appendix A for a list of the various CSCs and field offices. Historically, the CSCs maintain standard hours when they are open to the public and have on-site staff representation from all DNR divisions. Field offices, while open to the public in certain locations, are staffed with division personnel based upon their geographic location (e.g., primarily supporting state forests in northern Michigan and state game areas in southern Michigan).

The Department's 24 administrative offices are distributed throughout the Upper and Lower Peninsulas. These offices provide administrative support to resource staff and customer service to thousands of telephone and walk-in customers annually. The FOS mission statement is "To provide our internal and external customers with professional, courteous, informative, and timely service while efficiently managing Department facilities in a safe and economical manner." This requires facilities that are accessible, operational, energy-efficient, and safe. The Department strategically considers the location of CSCs and field offices to ensure proximity to population centers, recreation destinations, and transportation travel corridors to provide services and information to as many customers as possible.

### **Inventory/Assessment**

Each year the CSC and field office infrastructure is inventoried and assessed for condition, critical needs, and preventative maintenance requirements. The average age of the CSCs and field offices is 42 years.

The Newberry CSC is leased. The remaining 23 administrative offices are publicly owned facilities. Only five new offices have been built or purchased since 1990 (Detroit CSC, Lansing CSC, Sault Ste. Marie CSC, and two buildings at Traverse City). All remaining state-owned offices need replacement work, accessibility improvements, preventative maintenance, and repairs. Many of the offices need new carpeting, paint, furniture, roofing improvements, and energy-efficiency improvements (e.g., new windows and high-efficiency heating, cooling, lighting, and plumbing systems). Finally, upgrades to support technology, such as improving connectivity to the state network and replacing phone systems, are also needed across the state. The operating facility assessments address maintenance, health and safety, accessibility, and energy efficiency. The facility assessments were completed by four Department employees with over 70 combined years of facility management experience, some with professional skilled trade experience. As the primary facility managers, they coordinate with licensed contractors to identify the scope of work for improvements and the associated replacement costs.

## **Recent Accomplishments**

In 2016 and 2017, conversations with a local landowner and developer were initiated regarding construction of a 20,000-square foot storage building adjacent to the Lansing CSC. This building allowed for the demolition of seven storage buildings (average age of 52 years) on the Rose Lake campus, as well as the elimination of 8,200 square feet of space and the associated annual building occupancy cost of \$47,775. In 2017 a build to suit agreement was executed and construction of the new storage building was completed in August 2018. The Department acquired the building in September 2018 and vacated the seven storage buildings at Rose Lake. Funding for the demolition at Rose Lake was provided by a DTMB enterprise-wide special maintenance allocation. The demolition was completed in October 2019 and the land was returned to its natural state.

Considering limited budgets intended primarily for utility bills, service contracts, and emergency repairs, many of the major capital outlay priority projects for the Department's operating infrastructure remain unfunded. In FY 2018, the Department received \$1,250,000 in financial support from enterprise-wide special maintenance funding appropriated to DTMB for the replacement of the siphon tube at the Shiawassee River State Game Area. This resulted in no funding for the backlog of maintenance items at the CSCs and field offices. In June 2018, the air-conditioning system at the Escanaba CSC failed. DTMB provided \$60,000 to replace the system. In August 2018, a lightning strike compromised a switch gear at a fish hatchery and DTMB provided \$250,000 for repairs.

## **Priorities**

As part of the comprehensive strategy for evaluating facilities across the state, additional locations have been identified as priorities, including the Newberry CSC and Mio and Stephenson Field Offices.

Within one-half mile to the north of the Newberry facility, the Department manages 40 acres of public land that contains a small complex of various storage and workshop buildings at the rear of the property. The Department had preliminary discussions with MDOT regarding the construction of a joint office building in this area. However, those conversations revealed MDOT's desire for a lessor-lessee relationship by which MDOT would lease space from the Department. Based on this information, the Department decided to move forward with planning the construction of a new Newberry CSC and storage facility. The facility would include 13,000 square feet for office and meeting rooms and 18,500 square feet of storage and be manufactured utilizing mass timber technology.

The Mio Field Office is a 6,116-square foot building that was built in 1962. A lease agreement is in place to accommodate Oscoda County Veterans Affairs. The Department's Forest Resources Division (FRD) wants to continue to have a presence in Mio for fire coverage. Staff continue to look for an alternate location to meet the needs of FRD and allow for the demolition of the Mio office building. The storage facility located on the site would be retained. Conversations continued through 2020.

In 2015, a local private developer approached the Department with an interest in acquiring the Sault Ste. Marie Field Office, which comprises 3,122 square feet and was built in 1940. In addition to the age of the structure, deferred maintenance needs, and limited accessibility and storage space, the location is in a

growing commercial district and has limitations with respect to parking, vehicular circulation, and flexibility for mobilization of heavy equipment when responding to fire emergencies. In 2017, a build to suit agreement was executed between the two parties and construction of a new 4,000-square foot CSC and 18,000-square foot storage building began in August 2018. Construction was completed in 2019. The Department acquired the building in January 2020.

Priority projects for the Department's CSCs and field offices have been identified. Economic conditions and available funding will dictate the extent to which the Department is able to complete these projects. Maintenance and improvements will be limited to emergencies if funding is not received for special maintenance. Maintenance and improvements are needed across all 23 state-owned and Department-managed administrative offices. The types of needs identified include: new carpeting, new furniture, exterior and interior painting, energy-efficient HVAC and lighting upgrades, electrical upgrades, new storage garages and pole barns, office renovations and additions, roof replacements, parking lot paving and maintenance, and demolition of vacated and consolidated buildings that are no longer being utilized. Maintenance and improvements are critical to providing functional facilities, minimizing long-term costs, preventing health and safety hazards, and allowing for minimal service disruption. In FY 2020, the Department received an allocation of \$250,000 from the DTMB Enterprise-Wide Special Maintenance Fund for operating infrastructure upgrades, maintenance, and demolition at the CSCs and field offices. Spending restrictions implemented state-wide in response to the COVID-19 pandemic delayed the Department's ability to initiate these projects in FY 2020.

### **Programming Changes**

The Department continues to assess the needs of its offices, as well as the location and number of offices around the state. The Department faces a variety of challenges, including maintenance issues and the inadequacy of facilities to store equipment or accommodate staff. An ongoing objective of the Department is to reduce lease obligations and transition to state-owned facilities that are strategically located and managed by the DNR.

In October 2017, the Department drafted an overall asset management plan that provides a strategic approach for the next five to ten years pertaining to consolidating and realigning its overall footprint, expanding the asset management system used to make decisions, and leveraging division resources. This plan evolved from a 2014 plan and emphasizes optimizing Department resources with respect to sharing and maintaining equipment, managing and improving facilities, and mobilizing skilled labor.

In 2020, the Asset Management Steering Committee, comprised of assistant chiefs from each Division, continued its work to foster and implement strategic asset management principles across the Department. Infrastructure and asset investments are reviewed and coordinated within the Department and with other partners if possible. Assets are managed to maximize value over lifecycles and leverage usage and funding to the fullest extent possible.

## **LAND MANAGEMENT**

---

### **General Background**

The DNR manages approximately 4.6 million acres of public land throughout the state. This land is inventoried in the Land Ownership Tracking System (LOTS), which includes the Minerals Management System and other related subsystems. LOTS maintains the ownership history of DNR-managed public land and is the largest land transaction management system in the state. It serves as the basis for more advanced systems, such as resource mapping, and is used to process real estate transactions from initial stages through posting.

The DNR continues to sell parcels that were identified as "surplus" in a land review completed several years ago. To make effective use of land determined to be surplus, the DNR is working to convey these parcels in a manner that: 1) provides for the continued protection of important natural and cultural resource or recreation values; 2) provides a means to purchase or exchange for more desirable replacement land; and/or 3) supports local economic activities.

The Department's priorities for acquisition include private land in-holdings to consolidate existing public land ownership, land to protect key wetlands, winter deer complexes, land to protect rare species habitats, and land to provide additional public access. Consolidation of land and disposing of non-contiguous land allows the DNR to manage these resources in an effective and efficient manner.

### **Inventory/Assessment**

Pertinent information related to all DNR-managed public land is recorded in LOTS. Assessments of infrastructure condition are ongoing. These assessments are carried out by the appropriate land-managing divisions (Forest Resources, Parks and Recreation, Fisheries, and Wildlife).

### **Recent Accomplishments**

The DNR is responsible for tracking, reporting, and managing ownership and various complex business transactions related to over six million acres of land. These transactions generate significant revenue for the State of Michigan and its businesses and communities, and require a significant amount of data collection, record keeping, and accounting. To accomplish these tasks, a new software system that integrates several data sources and systems was required. A contract to build such an application was executed with Kunz, Leigh & Associates Inc. in 2016. The application consolidates the legacy LOTS, the Payment In Lieu of Taxes (PILT) database, and the Swamp Tax system into one solution. The application was completed in March 2019. Present fixes and modifications to LOTS that will also facilitate public access to data are being handled by the Department of Technology, Management, and Budget (DTMB).

### **Priorities**

For FY 2021, the DNR's Real Estate and Resource Assessment Sections plan to work with DTMB on launching a public interface that will provide selected LOTS data to the public. DNR parcel, document, and lease information will be housed in a searchable map that will allow the public to search downloaded queried documents. A DNR webserver has been created to host a copy of the LOTS documents (i.e., deeds, easements, and leases). The Resource Assessment Section is working on the public-facing application, which is expected to be published on the DNR's webpage by June 2021.

To expedite the field review process required on land transaction applications received to either purchase or exchange DNR-managed lands, the Department seeks to create an online submittal form for FY 2021 through 2025. Potentially utilizing Environmental Systems Research Institute's (ESRI) technology, the system will provide Geographic Information System (GIS) data on the land, allow for multiple reviews to be completed in real time, and allow the lead land-managing division to monitor and coordinate the review process from a single site.

### **Programming Changes**

Legislation enacted in 2018 removed the cap on the number of acres of public land the DNR can manage. In Public Act (PA) 240 of 2018, the legislature approved the DNR-Managed Public Land Strategy (Strategy) dated July 1, 2013. Beginning July 1, 2021 and every six years thereafter, the DNR shall update the plan including collaboration with local governments and stakeholders. The department is in the process of updating the Strategy for legislative approval. In addition, PA 240 of 2018 requires public notice for sales, purchases, leases, and development on parcels over 80 acres.

The DNR-Managed Public Land Strategy and appendices, PA 240 of 2018, and the number of acres the Department manages are posted on the DNR website, which can be accessed via the following link:

[https://www.michigan.gov/dnr/0,4570,7-350-79136\\_79262---,00.html](https://www.michigan.gov/dnr/0,4570,7-350-79136_79262---,00.html)

In addition, with the enactment of Public Act 238 of 2018, the Legislature implemented requirements regarding applications for land sales and land exchanges. The DNR must make a final decision within six months of receipt of a completed application. There is pending legislation that will extend the time allowed for a final decision to seven months from the receipt of a completed application. More detailed

information regarding lands sales and exchanges can be found on the DNR website, which can be accessed via the following link:

[https://www.michigan.gov/dnr/0,4570,7-350-79136\\_79612---,00.html](https://www.michigan.gov/dnr/0,4570,7-350-79136_79612---,00.html)

## FISHERIES INFRASTRUCTURE, FACILITIES, AND EQUIPMENT

---

### General Background

#### Hatcheries

These facilities include: six state fish hatcheries (Harrietta, Marquette, Oden, Platte River, Thompson, and Wolf Lake); one cooperative Atlantic salmon hatchery (Lake Superior State University); one cooperative lake sturgeon hatchery (Black River Fish Hatchery); two portable lake sturgeon hatchery trailers; six permanent salmon harvest weirs, three of which serve as egg take stations; and more than thirty extensive coolwater rearing ponds. These facilities currently have an estimated capital value of nearly \$145 million. The Department's hatcheries typically produce approximately 7 million trout and salmon and up to 30 million walleye, muskies, and sturgeon annually. At this level of output, approximately 300 to 400 tons of fish are produced each year for stocking in Michigan's public fishing waters. Details about each state fish hatchery are provided below:

- **Harrietta State Fish Hatchery, Harrietta, MI:** The hatchery was first opened in 1901 and is the oldest continuously operating state fish hatchery. Harrietta was completely rebuilt in 1979, with minor improvements completed in 1994 and 1999. It is a major rearing facility for rainbow trout (mostly for inland waters), brown trout (both inland and Great Lakes waters), and Atlantic Salmon (Great Lakes waters).
- **Marquette State Fish Hatchery, Marquette, MI:** The hatchery began operating in 1920 and was substantially renovated in 1994. It is the primary captive broodstock and rearing facility for brook trout that are used in inland waters and lake trout that are used in both inland and Great Lakes waters. The hatchery also rears splake (a brook trout/lake trout hybrid) for both Great Lakes and inland waters. In addition, this hatchery houses the brood stock for the Arctic Grayling reintroduction initiative.
- **Oden State Fish Hatchery, Oden, MI:** Opened in 1921, the facility was completely rebuilt in 2002. This facility is the brown and rainbow trout captive broodstock station and is a major rearing facility for those two species. This hatchery includes an isolated rearing facility with ultraviolet filtration on the effluent to protect the receiving waters. This is the only such isolated rearing facility in the Michigan DNR Fish Production Program.
- **Platte River State Fish Hatchery, Honor, MI:** Opened in 1928, the hatchery raises Coho, Chinook, and Atlantic salmon and incubates walleye. The facility underwent a partial renovation that was completed in 2004. The Platte River State Fish Hatchery is the sole egg take station and production hatchery for Coho salmon in Michigan.
- **Thompson State Fish Hatchery, Thompson, MI:** The hatchery was opened in 1920 and was completely renovated in 1978. The facility can produce a wide range of fish species for both inland and Great Lakes waters because of its unique combination of cold and warm groundwater supplies. Current production includes steelhead, Chinook salmon, and walleye. The Thompson State Fish Hatchery received FY 2016 capital outlay planning funds and FY 2018 construction authorization for improvements to steelhead production facilities, as well as the construction of a coolwater production facility. Construction should be complete by late 2020.
- **Wolf Lake State Fish Hatchery, Mattawan, MI:** Established in 1927, the hatchery was completely renovated in 1983 with minor renovation work on the effluent management system done in 1999. This facility produces a wide range of fish species for both inland and Great Lakes waters. Coldwater species produced at Wolf Lake State Fish Hatchery for Great Lakes waters include steelhead trout and Chinook salmon. Coolwater species that are currently produced in limited quantities at this facility include walleye and muskellunge.

To complete the fish production mission, Fisheries Division maintains a fleet of 17 specialized fish transportation trucks that move fish to stocking sites from fish hatcheries. To further support fish

production efforts, Fisheries Division funds a cooperative Aquatic Animal Health Unit with Michigan State University to diagnose and manage pathogens in both wild and hatchery populations; a cooperative fish marking program that annually marks between three million to eight million fish with physical or chemical marks to allow for program evaluation; and a fish quality program to ensure the fish from the state's hatchery system are able to perform as desired by Fisheries Division managers. To ensure the fish production facilities can produce the required fish, each hatchery has highly trained maintenance staff supported by system-wide fish transportation and electronics specialists. According to industry standards, two percent of the capital costs should be budgeted annually for facility maintenance, assuming the programmed facility life is 50 years.

### Research Stations

Fisheries Division maintains seven research stations, of which five are staffed, and four Great Lakes survey and assessment vessels for the primary purpose of providing scientific information for aquatic resource management decisions. Additionally, Fisheries Division funds a cooperative fisheries research unit, the Partnership for Ecosystem Research and Management, at Michigan State University. Research station activities include monitoring and assessing Great Lakes fisheries, inland fisheries, and other aquatic resources and conducting key management experiments to develop new and test implemented fisheries management tools. Overall, a wide range of specific fisheries issues are investigated to provide supporting information to support fisheries management decisions.

There are four Great Lakes stations:

- Alpena (opened 1969; current location since 1996)
- Charlevoix (opened 1968)
- Lake St. Clair (opened 1968)
- Marquette (opened 1952)

The primary functions of these Great Lakes research stations are to: investigate, monitor, and assess commercially and recreationally important fish species; conduct and evaluate recreational creel surveys; coordinate tagging programs; conduct studies of native and introduced salmonids; sample for invasive species and fish pathogens; map and evaluate fisheries habitat; and evaluate near-shore fish populations. The stations conduct research and stock assessment on the fish populations of the Michigan waters of the Great Lakes, including connecting waters such as the St. Clair/Detroit River System and the St. Mary's River.

The three remaining research stations are inland-focused facilities and include: Hunt Creek Fisheries Research Station; the Institute for Fisheries Research (IFR); and Saline Fisheries Research Station. Hunt Creek Fisheries Research Station is in Montmorency County and opened in 1939. The research area encompasses 3,000 acres and includes several miles of Hunt Creek, seven tributary streams, and four lakes, all within a one-mile radius of the office. While this station has a long legacy of work that is a foundation for coldwater fisheries management nationally, it is currently not staffed by Fisheries Division. However, the station remains open under a cooperative agreement with Lake Superior State University that will continue the option for collaborative investigations with a broad range of partners. The IFR is a cooperative unit of the DNR and the University of Michigan. Established in 1930 and located in Ann Arbor, the station is focused on providing managers with landscape level analytical tools to address specific management challenges including groundwater withdrawal effects, wind power development in the Great Lakes, introduction of invasive species, and other decision support analyses. In addition, IFR staff investigates how to best improve the populations of aquatic species listed as Species of Greatest Conservation Need (SGCN) and are responsible for the development of recreational angler survey tools and oversight of the lake portion of the statewide inland status and trends program. The Saline Fisheries Research Station, located just south of Ann Arbor, has a unique set of experimental ponds that facilitate specialized research studies and will be used to conduct climate adaptation, freshwater mussel investigations, and invasive species research in the near-term in cooperation with a range of partners that currently include the University of Michigan, Central Michigan University, and the U.S. Geological Survey.

## Vessels

The Great Lakes are ecologically significant on a worldwide scale, as they contain 20 percent of the world's fresh water. Michigan operates the largest state fisheries agency vessel fleet in the Great Lakes, justifiably so as Michigan is jurisdictionally responsible for fisheries management in 43 percent of the waters of the Great Lakes.

Fisheries Division's vessel program is used for the purposes of investigating, monitoring, and evaluating the status of the aquatic habitat and fisheries resources of the Michigan waters of the Great Lakes and connecting waters. The Department manages four vessels, each measuring over fifty feet in length (one for each of the four Great Lakes along the Michigan shoreline) and numerous smaller vessels. The large research vessels by Great Lake, currently valued at approximately \$2.0 million dollars each, include:

- Lake Superior - Research vessel (R/V) *Lake Char* (built 2008)
- Lake Michigan - Survey vessel (S/V) *Steelhead* (built 1967)
- Lake Erie - R/V *Channel Cat* (built 1968)
- Lake Huron - R/V *Tanner* (built 2016)

## Fish Ladders and Fisheries Operational Facilities

Fisheries Division has operational and maintenance responsibility for ten major fish ladders along with several smaller fish ladders, as well as several warehouses, shops, garages, and storage facilities that are instrumental to the management of the fisheries in the State of Michigan.

## **Asset Inventory/Assessment**

An inventory is completed annually. The DNR has developed a Facility Management Database for collecting and storing facility assessment and maintenance data. This database allows the DNR to quickly identify facilities with structural and maintenance needs. Capital outlay needs for hatcheries are evaluated and updated annually. Similarly, research vessel and support facility major maintenance schedules are also updated annually. A list of Fisheries Division infrastructure is provided in the Appendix.

## **Recent Capital Project Accomplishments**

A FY 2016 budget appropriation included planning authorization for improvements to the Little Manistee Weir (a key facility for the acquisition of eggs and sperm for the Fish Production Program) and the addition of coolwater production and improved steelhead production capacity at Thompson State Fish Hatchery. Construction authorization for this project was approved during 2018. Design work has been completed and construction started in spring 2019. Completion of construction is anticipated in late 2020. The Fisheries Division received a capital outlay appropriation in FY 2021 to begin to address deferred infrastructure maintenance, improve energy efficiency, and enhance biosecurity at state fish hatcheries.

## **Capital Project Priorities**

Top priorities for FY 2022 through 2026 include the following:

- Maintain and update facilities to increase the efficiency, safety, and longevity of infrastructure and equipment. (DNR Strategies: Preventative Maintenance, Operational Need, and Energy-Efficient Facilities)

## Details

The infrastructure maintained by Fisheries Division has a current capital value exceeding \$190 million, including \$145 million in hatchery infrastructure, \$32 million in fishway infrastructure, and over \$8 million in research vessels. With State Building Authority funding to construct facilities comes an obligation to appropriately maintain the facilities. To properly maintain this level of infrastructure and meet present fisheries management requirements necessitates a minimum two percent reinvestment each year in maintenance which provides for a life expectancy of 50 years for these facilities. Funding allocations for maintenance of facilities within Fisheries Division are below that amount and have been for many years. Thus, the Division has been unable to keep up with the rate of necessary improvements, preventative maintenance, and repairs which has

resulted in the need for large capital outlay projects for complete renovation instead of more manageable annual incremental outlays. Additional funding is needed to begin to address the required upkeep for staff health and safety and to maintain the investment in facilities and equipment that would allow facilities to be operated for the full 50-year planned lifespan.

In addition, improvements are needed to reduce energy usage and make state fish hatcheries a leader in the use of green technology. The unit cost of electricity and fossil fuels, particularly natural gas and diesel fuels, has been on an upward climb and is showing no sign of reversing or leveling off. Since Wolf Lake was rebuilt in 1983, only one of the six DNR-operated hatcheries has been fully renovated and there have been significant advancements in the energy efficiency of electric motors and motor control technology since that time. Similar advancements have occurred in the water and workspace heating industry. The systemwide replacement of inefficient boilers, conversion to natural gas from cost-volatile propane, improved lighting systems, and replacement of low-efficiency doors and windows would help stabilize heating bills. Three of the six hatcheries underwent energy audits in late FY 2016. The remaining three facilities were audited in FY 2017. The result of the six audits is a list of energy efficiency improvement projects that await funding. Additionally, alternative energy technology has improved in recent years to the point where it is now an attractive option. The department has recently begun a renewable energy initiative that seeks to locate solar panel arrays at each of the six hatcheries. Replacement of inefficient electric motors and heating systems will further establish the department as a leader in green technology.

Wildlife diseases have been at the fore of department discussions in recent years. There are a number of known fish pathogens that can cause catastrophic losses in hatcheries. Since the hatcheries were constructed, much has been learned about pathogen control. Retrofitting them with such technology as ultraviolet filters would not only minimize the chance of catastrophic loss of hatchery fish but would also lessen the chance that hatchery fish may serve as a vector for moving pathogens to waters where they are currently absent.

Similarly, two of the four Fisheries Division research vessels are 50 years old and require regular investment to ensure they efficiently and safely meet the current fisheries management information demands for the Great Lakes. One of these older vessels, the R/V Channel Cat – Lakes St. Clair and Erie, is constructed of steel, which requires considerable maintenance compared to newer aluminum alloy vessels. It lacks modern safety features such as a compartmentalized hull and fire suppression system; has insufficient sanitary spaces and potable water systems; and, will need new scientific electronics to successfully complete fisheries assessment missions that require hydroacoustics, towable side-scan sonar, or a remotely operated vehicle. The other older vessel, the S/V Steelhead – Lake Michigan, is at the end of its operational life and should either be replaced with a new vessel at an estimated cost of approximately \$3.5 million or provided with substantial life extension refitting that includes the replacement of the electronics and engine and hydraulics systems, and a full overhaul of the hull and crew quarters at an estimated cost of \$1.7 million. As the newer vessels age, electronic modernization will be needed along with standard maintenance that includes engine and hydraulic tune-ups, and hull inspections and maintenance. The annual cost for these standard maintenance items for the two new vessels is \$100,000. Deferring this maintenance will lead to the degradation of the capacity of the vessel fleet to meet the data needs for DNR fisheries managers, resulting in riskier management decisions that are likely to reduce the annual economic value (exceeding \$1.5 billion) of the Great Lakes fishery to the state.

- Increase the rearing capacity for walleye, muskellunge, and Northern pike by completing the construction of coolwater production facilities at Wolf Lake State Fish Hatchery. (DNR Strategy: Operational Need)

### Details

Demand for coolwater fish (walleye, muskellunge, and Northern pike) far outpaces current production capacity and is perennially unmet. None of the state's six fish hatcheries were originally designed to rear coolwater species. Thompson, Wolf Lake, and Platte River State Fish Hatcheries have been retrofitted to allow for some level of coolwater production, but the level of production is insufficient to meet demand, even when the facilities are operating at full capacity. A lack of separation between coolwater and coldwater fish production increases the risk of disease transfer and the potential for interruptions in fish production and stocking due to fish health concerns.

Completion of the project at the Thompson State Fish Hatchery is moving the state toward a complete coolwater rearing program. However, the construction of a fully outfitted coolwater fish production facility at the Wolf Lake State Fish Hatchery and the addition of new rearing ponds are required to complete the system and significantly increase production capacity to fully meet current and likely future demand for coolwater fish. It is estimated these actions would result in an increase of up to 1.1 million walleye spring fingerlings (a 53 percent increase over 2016 production), as well as the ability to produce millions of additional walleye fry. Significant increases in the production of other coolwater species would also be expected, including more than doubling muskellunge production and restarting the Northern pike production program.

- Secure and improve steelhead trout production by completing critical upgrades at the aging Wolf Lake State Fish Hatchery. (DNR Strategy: Preventative Maintenance, Operational Need, and Energy-Efficient Facilities)

### Details

Currently, the customer demand for the high value steelhead is beyond production capacity of the DNR state fish hatchery system. The nearly 40-year-old electrical distribution system regularly suffers age-related failures that must be addressed as emergencies. To meet this need, improvements are needed at the aging Wolf Lake State Fish Hatchery to upgrade critical aquatic life support systems including modernizing the electrical distribution system, replacing failing automated fish feeders, upgrading water supplies, and improving water heating capabilities. Together with the FY 2016 capital outlay project at the Little Manistee Weir and the Thompson State Fish Hatchery, these upgrades would secure and sustain steelhead production well into the future, meeting demand for this species.

- Improve effluent management at five state fish hatcheries to reduce the potential adverse impact of nutrients from hatchery effluent. (DNR Strategies: Preventative Maintenance, Operational Need, and Energy-Efficient Facilities)

### Details

Effective effluent management is essential to protecting the waters that receive fish production effluent. Changes instituted at Platte River State Fish Hatchery during the 2004 renovation with additional modifications in subsequent years, have proven especially effective with this facility now having some of the lowest phosphorus discharges, given its size and hatchery type, in the U.S. While none of the five other facilities are currently at risk of violating effluent permit limitations, physical changes and structural improvements should be implemented that would limit nutrient discharge even further, reducing potential future state liability in this area. Such changes include the addition of disk or drum filters to remove waste solids as soon as possible in the production cycle; dredging and expansion of settling ponds; the addition of flocculent delivery systems for chemical removal of phosphorus; and the addition of clarifiers or expansion of solids storage facilities.

- Construct and/or renovate Fisheries field buildings in six locations. (DNR Strategies: Operational Need, Preventative Maintenance, and Energy-Efficient Facilities)

## Details

Fisheries Division needs to replace and/or renovate six field buildings and support facilities that are over 50 years old and in deficient condition: Harrietta Field Building, Lake St. Clair Fisheries Research Station, Charlevoix Fisheries Research Station, Alpena Fisheries Research Station, and the fisheries facilities at the Plainwell and Bay City CSCs. These facilities need modernization of their electrical, plumbing, and data systems; energy efficient improvements including insulation and new doors and windows; fire suppression systems; and additional climate-controlled storage for new automated electronic sensor and measuring systems that will be employed to increase staff efficiency and effectiveness in collecting and analyzing field data. Fisheries Division has been unable to maintain a two percent annual maintenance funding rate. This has resulted in greatly deferred maintenance and improvements needed to enhance staff effectiveness and efficiency and ensure staff health and safety while working in these facilities.

## **Programming Changes**

The Division does not have any current or planned programming changes that are expected to impact its capital outlay needs or approach to managing infrastructure.

## **DAMS AND RESERVOIRS**

---

### **General Background**

There are approximately 2,600 dams around the state that are cataloged in a dam safety database managed by the Hydrologic Studies and Dam Safety Unit of EGLE. These dams were built for a range of purposes including power generation, mechanical power for milling, recreation, and water storage. The American Society of Civil Engineers gave Michigan a “C-” in its 2018 Dam Infrastructure report card stating, “About two-thirds of Michigan’s dams have reached their typical 50-year design life. In the next 5 years, this number grows to approximately 80 percent.”

Approximately 75 percent of the state’s dams are in private ownership and a number have significant issues with title ownership, non-payment of property tax, and/or completely absent or unknown owners and therefore could become tax-reverted to the state. Dams require continuous, often expensive maintenance that many owners are either unable or reluctant to provide. The cost of dam repairs or removals can exceed six figure amounts and many owners cannot afford these expenditures. Removing rather than repairing a failing dam that has no social or economic value provides a greater return on investment due to the elimination of perpetual maintenance costs and allows the rehabilitation of lost riverine habitat for fish and wildlife. Representatives of several communities have approached the Department seeking financial and technical assistance to remove dams rather than repair and maintain these facilities.

Dam removal has many economic and environmental advantages. Dams obstruct recreational use of rivers and impede efforts to create fully navigable water trails throughout the state. Dams also block the movement of fish and other aquatic organisms and disrupt the expected transport of wood, sediment, and nutrients, causing changes in stream configuration and aquatic species composition. This leads to increased fish management costs and a greater reliance on DNR fish stocking to compensate for the loss of stream habitat and connectivity. Impounded water behind dams can be less conducive to aquatic organisms because of poor water quality, abnormally high or low water temperatures, and accumulated sediment. Removal of valueless dams improves stream and river habitat for a range of species, which will result in better fishing, hunting, and trapping opportunities. Removing dams that are in poor condition also eliminates the risk to public safety and downstream property posed by uncontrolled catastrophic dam failure.

It is often far less expensive in the long-term to have a dam removed than to deal with perpetual maintenance of a structure that no longer serves a societal or economic function. Often the cost to repair a dam properly is nearly the same as removal, and removal is a permanent solution to the problems with a structure. The return on investment associated with dam removal can exceed 20:1 when considering

ongoing maintenance costs over the expected life of a dam. This return on investment is greater yet when the benefits to fish and wildlife habitat and aquatic recreation are considered. However, there are dams that continue to provide economic and societal benefits, where an investment in maintenance and repairs is needed and warranted to extend the longevity of the structures and reduce the risk to public safety.

## **Inventory**

The Hydrologic Studies and Dam Safety Unit of EGLE maintains an inventory of dams located in Michigan that meet specific legal criteria. The department maintains a database of DNR-owned and managed dams.

## **Assessment**

The Hydrologic Studies and Dam Safety Unit of EGLE performs ongoing assessments on the condition of dams regulated by Part 315, Dam Safety, of the Natural Resources and Environmental Protection Act, including the state-owned dams managed by the DNR.

## **Priorities**

The DNR seeks to repair and maintain dams that have natural resources value related to fish rearing operations, fish and wildlife habitat, and recreational camping, fishing, and hunting opportunities; and, to remove obsolete dams and those that pose significant safety hazards.

Securing stable funding for the removal or maintenance of valueless dams and assisting public and private entities in similar efforts continues to be a priority of the Department. Some of the potential consequences of failing to address the state's most vulnerable dams in need of investment include:

- More dam failures, with high liability costs due to personal safety issues, property damage, adverse resource impacts, and environmental clean-up related to the failures.
- Loss of recreational and community resources associated with the impoundment created by a dam, where there is social and economic value to the impoundment.
- Increased costs to stabilize structurally deficient dams.
- Increased costs for fisheries and wildlife management due to continuing watershed fragmentation from obsolete and valueless dams.
- Decreased property values in areas affected by dam failures.
- Job losses from reduced tourism in areas where significant resource damage occurs from dam failure.

## **Recent Accomplishments**

There are several processes completed annually to review state-owned dams and determine whether the dams continue to provide value to the residents of Michigan and meet dam safety requirements. Dams meeting the appropriate value criteria are upgraded while those no longer providing value are removed and natural channels restored. Projects are underway to remove dams in historically contaminated river areas, such as the Kalamazoo River Dam and Otsego Dam. These projects involve removal of contaminated sediments, removal of poorly functioning dams, and restoration of the rivers to a condition that enhances recreational value. The following are recent projects.

- Stabilization and partial removal of the Trowbridge Dam in Allegan County to facilitate river restoration. Michigan funded approximately \$3 million and leveraged \$55 million for this project, which will provide benefits to the health and safety of residents, the natural resources, and the local economies.
- Completion of an engineering feasibility study and outreach to the City of Allegan regarding the potential removal of its dam. The Kalamazoo River Natural Resources Trust Council funded approximately two-thirds of this project in coordination with the United States Environmental Protection Agency (U.S. EPA) Superfund process, with Department capital outlay appropriations funding the remaining one-third. This project is expected to progress toward final dam removal designs over the next three years.

- Partial removal of the Otsego Township Dam. DNR funded \$3.5 million for this project, which leveraged a \$35 million remediation project.
- Removal of the remaining portions of the Plainwell dam, which was funded from a settlement with Enbridge. These remaining structures created a safety hazard to the public users and were detrimental to floodplain capacity and function. This project was in partnership with the Kalamazoo River Natural Resource Damage Trustees and U.S. EPA Great Lakes National Program Office.

The Department provides several funding opportunities that allow locally and privately-owned dams to be removed and channels restored. Several of these projects were funded during the last fiscal year. The Department provides technical and financial assistance in completing these projects.

- Removal of Parkville Dam on the Portage River in St. Joseph County through funding to the St. Joseph County Conservation District.
- Removal of the Murray Dam on Big Creek, a tributary to the Au Sable River in Oscoda County through funding to Michigan Trout Unlimited.
- Repair of the Cornwall Flooding Dam in Cheboygan County through funding to Huron Pines.
- Partial removal of Wagar Dam on the Grand River in Ionia County through funding to the Ionia Conservation District.
- Removal engineering and design of Peninsular Paper Dam on the Huron River in Washtenaw County through funding to the Huron River Watershed Council.
- Removal engineering and design for Davisburg Mill Pond Dam on the Shiawassee River in Oakland County through funding to Oakland County Parks and Recreation.
- Removal of Pucker Street Dam on the Dowagiac River in Berrien County through funding to the City of Niles.
- Removal of Trowbridge Dam on the Kalamazoo River in Allegan County through funding to DNR Wildlife Division.
- Removal of Milham Park Dam on Portage Creek in Kalamazoo County through funding to the City of Kalamazoo.
- Removal of Ramus Dam on the East Branch Pine River in Alcona County through funding to Huron Pines.

## **Programming Changes**

The DNR began an effort to streamline and standardize the methodology used to review and fund dam projects. A Dam Management Committee was established, consisting of several Department staff members with experience in the evaluation and construction of dams. The Committee developed a manner for ensuring all state-owned dams are evaluated following a standard process and reporting mechanism. An on-line system was developed for tracking the status and condition of dams. This enables priority funding across the Department to ensure dams are maintained to the appropriate standards and dams lacking recreational and habitat value are removed.

## **STATE FOREST SYSTEM**

---

### **General Background**

At four million acres, Michigan's dedicated state forest system is one of the largest in the nation. The DNR Forest Resources Division (FRD) manages these forests for timber production, wildlife habitat, mineral development, and recreation. FRD completed a revision to its previous strategic plan in 2019, which is used to guide management activities and decision making relative to state forest resources. A copy of the current plan is available on the DNR website and can be accessed via the following link:

[https://www.michigan.gov/documents/dnr/2019StrategicPlan\\_web\\_664890\\_7.pdf](https://www.michigan.gov/documents/dnr/2019StrategicPlan_web_664890_7.pdf)

There are three Regional State Forest Management Plans covering management of the four million acres of state forest land. These are available at the following link:

<http://www.michigan.gov/regionalforestplans>. These plans are being revised, as monitoring of the original plans identified that additional forest inventory information and changing forest conditions were affecting the accuracy of expected harvest levels. While acreage prepared for timber sales is expected to decrease, the revised planning methods promote continued sustainability of management activities in the State Forest. Forest management activities facilitated by FRD under the Good Neighbor Authority agreements with the U.S. Forest Service for Michigan's three national forests continue to remain strong. Access to federal, state, and private timber resources is important to the state's economy. Michigan's state forests provide a consistent supply of wood to help support and maintain a diverse forest products industry. The forest products industry contributes over \$21 billion annually to Michigan's economy and state forests provide a significant portion of the raw material used by the forest products industry.

Timber harvest also produces important wildlife habitat, which benefits hunting and other outdoor recreational activity. Hunters and other outdoor enthusiasts support wildlife habitat management enhancement through license fees and have a significant impact on local economies, contributing over \$2.3 billion annually. Access to natural resources, including wood products and wildlife species, directly supports quality of life and Michigan's economy.

FRD is also responsible for protection from wildfire and for wildfire suppression on nearly 20 million acres of public and private land. Road access for motorized firefighting equipment is important for the protection of life, property, and natural resources. FRD also takes the lead in conducting prescribed burns on DNR-managed land, averaging 90 prescribed burns on 8,400 acres annually. These burns benefit wildlife habitat, assist in the control of invasive species, and reduce woody material in preparation for planting trees.

Management of the state forest system includes responsibility for significant infrastructure such as forest roads and bridges, staff offices, connectivity, garages, and storage facilities. Due to past limited funding and aging infrastructure, there are many forest roads and facilities in need of maintenance, repair, or replacement.

### **Facilities Inventory/Assessment**

The DNR manages many forestry-related buildings that are used to house staff and equipment as well as provide access to the public for information, permits, and timber sale contracts. A list of FRD-managed facilities is provided in the appendix. A DNR-wide initiative was completed in 2013 that collected in-depth information on buildings. The facility inventory was updated in fall 2020 with the assessment of all FRD structures. The collection of this data allows the DNR to make informed decisions for providing safe and functional facilities for staff and the visiting public.

Based on available funding, critical repairs are made annually to ensure employee and public safety, as well as to limit further structural decline. Recent capital outlay investments have begun to address some of the deferred repairs and maintenance, but ongoing investment is needed. The most significant facility issues are identified and prioritized to be addressed.

### **Roads and Bridges Inventory/Assessment**

There are roughly 13,000 miles of DNR state forest roads that require administration and maintenance. The FRD Strategic Plan identified the need for a better inventory of the state forest road system under FRD jurisdiction. With the initial road inventory mandated by Public Act 288 of 2016 now complete, FRD began a comprehensive assessment of associated infrastructure, such as bridges and culverts. A contract awarded in fall 2019 began an assessment in the Western Upper Peninsula (UP). Plans are underway to expand the assessment in 2021 to cover the remainder of the state forest road system.

The thousands of miles of roads located on state forest land are used not only to provide access for timber harvest and wildlife habitat improvement, but also for mining, oil and gas extraction, fire suppression, water access, recreational uses, emergency services, and local traffic. Adverse issues with roads and bridges, particularly environmental issues such as sedimentation or run-off, are reported and

placed in a Resource Damage Report (RDR) database. The repair needs include road and bridge work, as well as recreational trail maintenance projects.

Presently, FRD is responsible for over 200 bridges, many of which are located on recreational trails managed by DNR Parks and Recreation Division (PRD). There are thousands of culverts on the road system, many of which need upgrading or replacement to ensure good passage of fish, to prevent sedimentation from entering streams, and to maintain the integrity of the road.

### **Recent Accomplishments**

To better coordinate capital outlay needs, FRD completed the design and implementation of a database and tool to track project requests, approvals, progress, and completion. In FY 2020, over \$2 million was spent or encumbered on capital outlay projects. Over \$1.2 million was spent on road, bridge, and culvert repair or replacement and over \$800,000 was spent on facility improvements. Significant progress was made on equipment storage facilities, with a new building in Marquette nearing completion, and progress towards another in Gaylord. Work continues on projects that are in various phases of progress including design and construction for higher-value projects, such as bridges.

### **Priorities**

Where possible, FRD seeks to consolidate space with staff from other DNR divisions and other state agencies. Major repairs and renovations of field offices throughout the state are priorities to provide a safe working environment to support the DNR's mission. Having adequate structures in place protects employees, lengthens the lifespan of equipment, promotes public safety, and facilitates public access to DNR staff. The physical location of offices is also reviewed. For example, for the Sault St. Marie Office, a new building was constructed in a location more efficient for operations and yet accessible to the public. This replaced an outdated, insufficient building that was located on a road that made it difficult for rapid fire response. In FY 2021 the department received legislative authorization for the construction of a state-of-the-art mass timber building in Newberry. This new building will consolidate staff and office locations and replace other deteriorated and out-of-date facilities and/or leases. It will include energy-efficient features, as well as showcase the latest developments in Cross Laminated Timber (CLT) construction.

Other priorities include providing access to state forests and road infrastructure that is safe and appropriate. Most of the state forest roads and associated infrastructure (bridges and culverts) need some type of repair or replacement. Recent capital investments have focused on addressing public safety issues and situations where major environmental damage is occurring. Examples include a road washing out or a bridge becoming weight-restricted due to age and deterioration making it unable to support emergency, utility, or logging vehicles. Providing adequately sized structures and regularly maintaining roads helps limit the amount of sediment entering waterways, a significant concern for fisheries habitat and water quality. It also provides access for logging and mining operations, especially where bridges or significant road improvements are needed. Ongoing maintenance and repair of state forest roads and bridges is important for meeting forest certification standards. Forest certification strengthens Michigan's forest products sector and is essential for primary wood producers in Michigan to have continued access to national and international markets.

Maintaining the transportation and infrastructure systems in the state forest provides improved and easier access for firefighters, hunters, anglers, campers, and trail users. In some instances, it facilitates access to private property and infrastructure that is inaccessible by other means. It conserves resources and provides habitat for various fish and wildlife species. It also provides access to wildlife populations and fosters increased participation in hunting, fishing, camping, and other recreational opportunities. Improved access to revenue generating natural resources also supports natural resource management and extraction activities (e.g., harvest of timber, extraction of oil and gas), which provide a critical boost to the state's economy. An important step in maintaining this transportation system is the creation of a thorough inventory of culverts and bridges and identification of location, condition, and priority for replacing unsafe or deteriorated infrastructure. This inventory is underway and is expected to identify additional maintenance, repair, and investment needs. Frequently professional engineering services are

required to adequately appraise the condition of bridges and critical culverts and provide subsequent design and replacement of these structures. Adequate ongoing funding is needed to continue repairs and improvements to the state forest transportation system.

The purchase and use of temporary bridges and crane mats (which facilitate passage across wet areas) has proved invaluable for accessing state forests for timber harvesting, reforestation, wildlife habitat management, and environmental protection. This also provides a temporary solution for access until a permanent structure can be built for roads that need longtime access to public land. The demand for both portable bridges and mats outpaces the supply and because they are deployed and reused multiple times, the useful life may be shortened resulting in the need to acquire more.

Securing funding for much needed capital investment is a top priority. Presently, the Forest Development Fund (FDF), which is comprised of timber harvest revenue from DNR lands, is the primary source of funding for most state forest activities, including wildfire suppression, road and bridge maintenance, and timber management. Access to state forest lands is critical for these functions as well as for providing access to recreational opportunities and mineral extraction. Timber revenue from FY 2016 through FY 2020 has been above long-term averages, providing an opportunity to fund priority capital outlay projects and invest in the infrastructure that provides access to state forest users for many purposes.

### **Programming Changes**

FRD plans to continue to refine the capital outlay database and prioritize projects. Numerous bridge replacement projects were under consideration in 2020 but were delayed due to the COVID-19 pandemic. A project to renovate the Roscommon Conservation Airport is underway, with design nearing completion and plans to bid out construction in FY 2021. Other capital outlay expenditures on facilities continue to focus on green energy projects, such as furnace and insulation replacements and electrical upgrades. The expansion of the road and bridge infrastructure inventory was delayed in FY 2020 but is a priority for FY 2021. This effort is expected to identify additional priority capital outlay projects required to protect and upgrade the state forest road system. Demolition projects, primarily for existing structures on state land acquisitions, were planned to be packaged for bid in FY 2020 but were paused due to spending restrictions.

## **MINERALS MANAGEMENT**

---

### **General Background**

The DNR manages over 6 million acres of mineral estate through its Minerals Management program. The Minerals Management Section (MMS) of the Finance and Operations Division (FOD) supports the state's natural resource-based economy by overseeing the leasing and lease compliance for oil, gas, and mineral resources, as well as for underground natural gas storage rights. MMS also administers the state's mineral rights reunification program, which allows surface owners to apply for the purchase of the state-owned severed mineral rights beneath their property. As of the close of FY 2020, MMS oversees the administration of approximately 618,170 acres of leased mineral rights under 5,088 active leases.

Revenue received from programs administered by MMS is distributed to various funds based on how the mineral rights were acquired. The State Parks Endowment Fund is the largest beneficiary of this revenue, receiving approximately 90 percent. Oil, gas, and mineral royalty revenue is also distributed to the Game and Fish Protection Trust Fund, and an amount less than one percent is distributed to the General Fund from the leasing of natural gas storage rights.

### **Oil and Gas**

Prior to 2015, nearly all mineral royalty revenue received from the leasing of state-owned minerals came from oil and natural gas extraction. A revenue shift occurred in FY 2015 when the oil and natural gas revenue as a percentage of the total royalty revenue decreased by 12 percent. In FY 2016, this percentage decreased an additional 20 percent. This shift occurred because of a downturn in the oil and

gas industry coupled with the addition of a new metallic mineral mine in the Upper Peninsula. It is anticipated that a similar adjustment of revenue sources will continue over the next five years.

In FY 2017, an uptick in oil and gas leasing activity as compared to the prior two years occurred and was a direct result of a newly discovered oil play in Gladwin County. Innovative non-intrusive exploration methods, such as 3-D geophysical surveys, of state-owned minerals are being pursued by industry experts in cooperation with the DNR. In FY 2018 there was an increase in drilling and permitting due to increases in the market price of both oil and gas. Revenue has remained relatively flat in the last few years. However, revenue declined in 2020 due to the COVID-19 pandemic

### **Natural Gas Storage**

Storage of natural gas in Michigan occurs primarily in depleted oil producing fields. All these storage fields are in the Lower Peninsula. Unlike producing fields, gas storage fields are designed so the entire natural gas capacity can be cycled in and out of the field each year. The geologic structures that make up Michigan's storage fields have a high porosity and are mainly associated with subsurface ancient reefs and pinnacles, making them among the best suited geologic structures for natural gas storage in North America. It is estimated that nearly 690 billion cubic feet (19.5 billion cubic meters) of working gas capacity, some of which is beneath DNR-managed surface, exists in Michigan, which is more storage than in any other state.

### **Metallic Mining**

In FY 2015, the first active new metallic mine began production on state-owned land. Copper and nickel are the primary products produced at the metallic mine. The royalties vary depending on the type of product, amount produced, and the value of the product at the time of sale.

Other mining interests hold state leases for metallic mines or are in the process of acquiring leases. Activity for these sites is either speculative, or in the exploratory or pre-mining stage of development.

### **Non-Metallic Mining**

There are multiple active non-metallic mining operations on or beneath state-managed public land. These mining operations include the extraction of sand, gravel, limestone, dolomite, and salt.

In 2015, the DNR negotiated the completion of a transaction with Graymont (MI), LLC (Graymont). This transaction included an exchange and sale of nearly 10,000 acres of land in Michigan's Upper Peninsula. Graymont determined that high calcium limestone exists beneath the surface of this land. Limestone of this quality has multiple uses and is an important component in the manufacturing of concrete. In 2016, Graymont began limited production of this deposit.

Given Michigan's vast mineral resources, other projects like the Graymont transaction are likely. A general understanding of the mineral potential of public land managed by the DNR is needed.

### **Recent Accomplishments**

In FY 2020, MMS issued 79 new leases covering approximately 6,057 acres, including, eight nonmetallic leases covering just over 600 acres, and 71 oil and gas leases covering approximately 5,457 acres. The COVID-19 pandemic has severely hampered mineral-related activity.

MMS continues to prioritize lease compliance activities. Compliance staff has been working with lessees, operators, FRD, and EGLE to ensure that lease terms are met, and that site cleanup is completed satisfactorily.

## **ENVIRONMENTAL STEWARDSHIP OF MINERAL LEASE SITES**

---

### **General Background**

The MMS, in addition to managing leasing and revenue generated from mineral resources on 4.2 million acres owned in fee simple, also manages these activities for 2.8 million acres of severed mineral rights. The DNR is empowered, in its role as caretaker of this public land and through leasing and granting of easements, to ensure the highest level of environmental stewardship of this public trust land.

Leased sites with active extraction must be reviewed to ensure compliance is being met with the stewardship provisions of their respective leases. Since the mineral resources on many of these leased sites are nearing depletion, it is anticipated that lessees will begin to vacate properties or petition for termination of their leases. Without a formal review of the leased parcels, the state risks inattention to environmental stewardship issues, including pipeline abandonment, site restoration, and lease compliance on DNR-managed public land.

### **Inventory/Assessment**

Mineral resources on many DNR lease sites are depleted or are nearing the end of their economic viability for continued extraction. As such, the plugging and abandonment of oil and gas wells, pipeline abandonment, reclamation of these sites as well as non-metallic extraction sites, and requests for termination of leases is rising. Failure to monitor compliance with lease provisions as a component of lease terminations creates an unacceptable economic risk to the state and potentially places the public use of state land at risk. Lessees need to be held accountable for their actions under the conditions of their respective leases and financial instruments prior to lease termination as well as on an ongoing basis.

### **Priorities**

The following priorities stem from the DNR's commitment to protecting natural resources as well as from increasing public concern regarding environmental stewardship and public safety:

- Compliance with lease conditions
- The safety and integrity of pipelines traversing public land
- The reclamation of mineral extraction sites

To promote the safety of staff and individuals connected with natural resource-based industries (timber contractors and recreational public land users), the DNR makes compliance activities a priority with the goal of ensuring that potential legacy issues related to the termination of these leases is borne by the lessee and not by the State of Michigan.

### **Programming Changes**

MMS does not have any current or planned programming changes. While revenue will fluctuate with the rise and fall of market prices, significant decreases in revenue are not expected.

## **STATE GAME AND WILDLIFE AREAS**

---

### **General Background**

As part of the DNR, the Wildlife Division's mission is to enhance, restore, and conserve the state's wildlife resources, natural communities, and ecosystems for the benefit of Michigan's citizens, visitors, and future generations. Critical to that mission is the protection, restoration, and maintenance of wildlife habitat and user facilities on the state's 100 plus game and wildlife areas consisting of more than 350,000 acres. Annual routine and non-routine maintenance is required to keep DNR-managed areas operational and open for public recreational and educational use. Wildlife Division also has primary management responsibility for certain focus areas within the state forest system, including wildlife flooding, sensitive wetlands, and important deer yards. These areas collectively comprise more than 100,000 additional acres.

Most of Michigan’s wildlife areas are in the southern half of the Lower Peninsula where over eighty percent of the state’s population resides. Less than ten percent of the public hunting land available in the state is in southern Michigan, yet a large percentage of hunting occurs on this publicly owned land. Based on current land use trends on privately-owned land, this acreage will become increasingly important to both wildlife and outdoor enthusiasts.

Wildlife-related recreation is an integral part of Michigan’s recreation and tourist industry. A [recent study](#) was commissioned by the Michigan United Conservation Clubs (MUCC) in partnership with the Michigan State University Eli Broad College of Business and with funding support from the C.S. Mott Foundation. The MUCC report is believed to be the most comprehensive effort to date measuring the annual stateside economic impact by Michigan’s 700,000 hunters and 1.1 million anglers. The study shows that \$8.9 billion from hunting and \$2.3 billion from fishing stems from purchasing gear and clothing, booking hotel rooms, buying meals and more. For every \$1 million spent on hunting and fishing related purchases in Michigan, 19.61 jobs are created for state residents.

In addition, according to a [Congressional Sportsmen’s Foundation study](#), hunters spent approximately \$2.3 billion in Michigan on trip-related expenses and equipment in 2011. In addition, wildlife viewing activities contribute another \$1.2 billion annually to the state’s economy.

The public benefits of these recreational activities are immeasurable. Presently, state game areas provide habitat for numerous wildlife species that can be hunted, such as waterfowl, wild turkeys, and deer. They also provide important habitat for non-hunted wildlife, such as songbirds, raptors, shore birds, and small mammals.

### Inventory/Assessment

- Current Distribution of Public Hunting Land and Michigan Population by Region.

Region	Percent of Public Hunting Land	Percent of Population	Acres Per Person
UP	64	3	20.09
NLP	30	8	3.77
SLP	6	89	0.07

UP = Upper Peninsula; NLP = Northern Lower Peninsula; SLP = Southern Lower Peninsula

- 110 Formally Dedicated Wildlife Division Land Types.
  - 94 State Game Areas (SGAs) - Project areas that are administered and managed by the Wildlife Division.
  - 12 State Wildlife Areas (SWAs) - Like SGAs, these areas are administered and managed by the Wildlife Division. The difference results from the dedication process. These areas were created legislatively or through some other dedication process where the decision makers decided to use this terminology as opposed to the more common SGA. Unlike SGAs, the naming of these areas occurred outside of the Wildlife Division; consequently, the Wildlife Division does not have sole authority to adjust these names for consistency.
  - 1 State Fish & Wildlife Area (SFWA) – This is a joint project with Fisheries Division to manage the acreage for wildlife and sport fish purposes. Augusta Creek SFWA is the only project of this type. Fisheries Division contributed federal Dingell-Johnson funds for this project to protect water quality in Augusta Creek, a trout stream. Wildlife Division administers and manages this area by maintaining a wooded corridor along the stream to maintain cooler water temperatures and to reduce siltation in the stream. The rest of the area is managed as a SGA. This project area is administered and managed by the Wildlife Division.
  - 3 State Wildlife Research Areas (SWRA) - Like SGAs, these areas were originally designed for conducting applied wildlife research by the Wildlife Division. With less research conducted by the Wildlife Division, the areas are functionally managed as SGAs.

- All land holdings are recorded in the Department's land database. An assessment of the condition of support buildings and other infrastructure within State Game and Wildlife Areas is ongoing. Roads and bridges have not been scheduled for assessment due to a lack of available funding.
- A complete list of [State Wildlife/Game Areas](#) may be accessed via the DNR's public website.
- A list of WLD-managed facilities is provided in the Appendix.

## Recent Accomplishments

During FY 2020, the Division continued work on major infrastructure projects, including the following highlights:

- Townline Dam Repair
- Lapeer SGA Storage Building Roof Project
- Nayanquing Point Observation Tower Re-Decking
- Davisburg Trout Pond Dam Removal
- Cusino Research Garage Roof Repair
- Pte. Mouillee Equipment Barn Roof
- Houghton Lake South Flats Dike
- Pte. Mouillee Big Pump South Causeway Repair
- Zone 7 Dike Repairs
- Manistee Marsh Dike Restoration
- Backus Dam Evaluation
- Sage Lake Dam Replacement

## Priorities

The land acquisition and infrastructure maintenance priorities outlined in this section are based on [Wildlife Division's strategic plan – The GPS \(Guiding Principles and Strategies\)](#), as well as the [Department's Public Land Management Plan](#).

The statewide focus is on recreational opportunity and the renovations and repairs needed to maintain facilities and keep infrastructure in a safe and operable condition. The priorities mirror the higher-level priorities and metrics of the GPS, specifically:

### Goal 2: Manage habitat for sustainable wildlife populations and wildlife-based recreation.

- Objective 2.1: Develop and revise management plans and guidance for priority habitats.
- Objective 2.2: Implement and assist others with habitat management for priority species and habitats.
- Objective 2.3: Conduct research, monitoring, and assessments to improve management of wildlife habitat.
- Objective 2.4: Maintain public access and habitat infrastructure for wildlife management purposes.

### Goal 3: Administer and promote effective stewardship of lands for wildlife habitats and wildlife-based recreation.

- Objective 3.1: Protect Department-owned or administered lands and infrastructure acquired and managed for wildlife purposes from uses that interfere with wildlife management.
- Objective 3.2: Align land portfolio with Department and Wildlife Division priorities and goals.
- Objective 3.3: Develop and implement a strategy to assist local and regional decision makers to incorporate wildlife needs and wildlife-based recreation into land use planning, policymaking, and legislation.

## Wildlife Division Acquisition Priorities

- **Michigan Pheasant Restoration Initiative** – This initiative is a partnership with Pheasants Forever, Michigan United Conservation Clubs, U.S. Fish & Wildlife Service, MDARD, local conservation districts, and other conservation organizations to facilitate a revitalization of

Michigan pheasants. The focus is on working with coalitions of private landowners to restore pheasant habitat on fifteen to thirty percent of the landscape within Pheasant Recovery Areas. Targeted acquisitions for the purpose of protecting and maintaining pheasant habitat are a priority.

- **Michigan Waterfowl Legacy Initiative (MWL)** – This initiative is a ten-year cooperative partnership to restore, conserve, and celebrate Michigan's waterfowl, wetlands, and waterfowl hunting community. MWL is for waterfowlers, other hunters, and the general public. The DNR is focused on acquiring key wetlands for the benefit of wildlife species that thrive in those environments and to open additional wetlands to the public for hunting and outdoor recreational activities. In addition, it is important that the DNR address aging pumps and related infrastructure that is inadequate and can no longer function at the levels needed to keep existing wetland areas in optimal condition. In some cases, the existing infrastructure is no longer used as designed, and replacement with simpler structures would improve efficiency and address needs. Without the restoration or removal of failing infrastructure, these managed wetlands will decline in quality, resulting in fewer species using the habitat. This will lead to fewer days afield for hunters and wildlife viewers, negatively impacting license sales and tourism activity.
- **Increased hunting access in southern Michigan** – Acquisitions to expand public access are a priority, particularly in areas with low per capita public hunting acreage and cold spots without hunting access.

### **Wildlife Division Regional Land Acquisition Priorities**

- **Upper Peninsula** – Winter deer habitat, sharp-tailed grouse habitat in Chippewa/East Mackinac Counties, Great Lakes shoreline (piping plovers and other species), rare communities and rare species habitat.
- **Northern Lower Peninsula** – Elk range acquisition, consolidation of Wildlife Division-administered land.
- **Southern Lower Peninsula** – Michigan Pheasant Restoration Initiative, Michigan Waterfowl Legacy Initiative, consolidation within project boundaries – especially providing road access, providing access within fifteen miles of residents, and contiguous forests.

### **Wildlife Division Infrastructure Maintenance and New Construction Priorities**

- **Buildings** – Maintenance, improvement, or construction of facilities (e.g., headquarter buildings, storage structures, outbuildings, fencing, and animal holding facilities within game and wildlife areas).
- **Dams** – Evaluation (ecological, social, economic), maintenance, repair, and/or removal of structures that impede the flow of water.
- **Parking Lots** – Maintenance, improvement, or construction of parking lots for existing game and wildlife areas, as well as landscaping, refuse removal, and renovations to accommodate users with disabilities. Existing parking lots are typically located near established roads, accommodate four to 35 vehicles, and have a compacted gravel surface.
- **Roads and Trails** – Maintenance, improvement, or construction of existing game and wildlife area roads and trails. This includes associated landscaping and compaction of materials to accommodate users with disabilities.
- **Signs** – Routine and non-routine posting and updating of game and wildlife area boundary and information signs. This includes posting on newly purchased properties, conversion of old sign types, posting of informational signs for special habitat projects, and identification of facilities for users with disabilities. Wildlife Division adheres to the general guidelines for the graphic reproduction of the Federal Aid in Wildlife Restoration symbols.
- **Bridges** – Maintenance, improvement, or construction of bridges to keep existing bridges safe and fully functional.
- **Wildlife Structures** – Maintenance, improvement, or construction of nest boxes, denning structures, nesting platforms, and other artificial structures that benefit a variety of wildlife species.
- **Impoundments** – Maintenance, improvement, or construction of impoundments, including weirs, dikes, ditches, water supply channels, tubes, gates, pumps, and dams. Maintenance activities

include associated mowing, vegetation control, tree and brush control, replacement of gravel and fill material, riprap, and fencing. Associated structures include gauging stations, barriers, bridges/crossings, docks, boat rollers, and launch sites. Existing impoundments can be as large as 800 acres. However, most of the impoundments are between two and twenty acres in size.

- **Equipment** – Repair or replacement of heavy equipment used statewide. This includes bulldozers, skidders, choppers, hydromowers, hydromulchers, excavators, backhoes, draglines, trailers, dump trucks, stakerack trucks, pickups, portable pumps, farm tractors, farm equipment, and snowmobiles. Wildlife Division is required to maintain its equipment to ensure it is safe and in operating condition.
- **Refuse Removal** – Major and unexpected clearing of unusual materials resulting from the illegal dumping of unknown materials and chemicals on state wildlife areas that may require hazardous waste handling procedures.

## Programming Changes

There are no significant programming changes expected to impact the Department's capital outlay needs or approach to managing State Game and Wildlife Area infrastructure.

## STATE PARKS SYSTEM

---

### General Background

The Michigan State Parks System, administered by Parks and Recreation Division (PRD), includes 73 state parks, 22 state recreation areas, 4 state scenic sites, 3 historic state parks, 5 state park linear trails, 140 state forest campgrounds, and 2 new properties that have yet to be officially designated. These facilities (249 in total) are dispersed statewide, with approximately one-third located in urban areas. In addition, there are 13,501 miles of designated motorized and non-motorized trails. Historically, much of the Michigan State Parks System was developed with General Fund tax support. During the 1970s, this support accounted for 70 percent of the system's funding. Today, the system's operating and capital improvement needs are largely funded from restricted revenue sources.

This system serves as the backbone of Michigan's \$24.7 billion tourism industry. These lands and facilities offer unique public outdoor recreation opportunities and contain significant natural and cultural resources needing protection. The Department continues to focus on maintaining and improving state parks facility infrastructure, in conjunction with community and private partnerships, to support program operations and land stewardship needs. Priorities for current and upcoming capital improvement projects continue to focus on public health, safety, and welfare issues. Sustainable development is incorporated into all current and future development projects and facility management efforts, along with green technology, energy efficiency, and barrier-free/accessible design considerations.

In 2019, there were approximately 26.6 million day-use visits to Michigan's celebrated state parks. In addition, 3.7 million guests were accommodated in the park's campgrounds and lodging facilities. Individual parks and/or recreation areas can host between a few thousand to over 30,000 visitors daily and are comparable to a small city, with roads, lodging, water treatment facilities, water distribution lines, sewage treatment systems, electrical systems, playgrounds, etc. Unfortunately, much of the infrastructure was developed in previous decades and is greatly in need of substantial repair or replacement.

The Michigan State Parks System will require significant reinvestment to continue to be responsive to customers' needs and reflect current recreational trends appropriate to a state system. PRD has documented 547 priority renovation and upgrade projects, totaling an estimated cost of \$258.1 million (this figure does not include State Waterways, Belle Isle Park, or railway system needs). In addition, PRD has identified over \$4 million in needed renovations and upgrades at other facilities outside the typical state parks program such as, but not limited to, the Ralph A. MacMullan Conference Center, Outdoor Adventure Center, and PRD Sign Shop. The amount of annual funding available to support these basic infrastructure needs continues to fall far short, limiting PRD's ability to adequately address the backlog of maintenance, repair, and improvement projects.

The infrastructure reinvestment strategy is adjusted each year to align funding with the most critical needs. Some of the larger infrastructure projects are integral to customer service and revenue generation but are significant in cost. In many cases, the improvements needed are to provide barrier-free access compliant with the Americans with Disabilities Act (ADA). Additionally, there are critical water and sewer systems that require upgrades to comply with health, safety, and environmental standards. On average, these below-ground utility systems were constructed 40 to 50 years ago, meaning most of these systems are at or nearing their end of life and complete replacements will soon be necessary.

The overall replacement value for Michigan state park infrastructure is over \$1 billion. With many assets nearing the end of their useful life, it is important for PRD to strategically assess, plan, and invest in infrastructure over time rather than react to emergencies as failures occur.

To maximize public recreation and conservation opportunities, PRD leverages partnerships with other agencies, local governments, and private businesses. Recent examples include:

- Menominee River State Recreation Area - a partnership between the states of Michigan and Wisconsin.
- Watkins Lake State Park and County Preserve - jointly owned with Washtenaw County Parks and Recreation Commission and the first state park to be operated in partnership with a county agency.
- Holly Oaks ORV Park - owned by the DNR and developed and operated in partnership with Oakland County Parks and Recreation.
- Belle Isle Park - operated by the state under a lease from the City of Detroit, enabling millions of dollars to be invested through a variety of partnerships and grant opportunities.
- Racer Land Trust – the DNR purchased 334 acres of land along the Saginaw River in the City of Saginaw for a new park to be managed by Saginaw County Parks and Recreation.

The Department continues to explore additional opportunities for partnerships as well as alternative capital improvement funding sources to accelerate capital improvements throughout the Michigan State Park System.

## **Inventory**

To properly identify needs and priorities across the state, PRD inventories all above-ground structures, roads, dams, internal trails, linear trails, and below ground infrastructure systems where possible on an annual or semi-annual basis. Inventories are completed according to applicable state and Department policies. For instance, capitalized facility assets undergo an annual physical inventory and certification. This includes large buildings, infrastructure, and land improvements and captures basic information such as location, size, material, and condition. More specific information such as utility providers, meter numbers, component installation dates, recent renovations and improvement costs are also captured when applicable. PRD also inventories special facility assets, such as smaller buildings and infrastructure systems, which are valued under the \$100,000 capitalization threshold during this annual certification.

Other, more targeted, inventories occur in response to legislative requirements, external inquiries and partnerships, or planning exercises. Examples of these inventories include:

- Public Act 288 requires the annual publication of maps with ORV status for all state forest roads, including PRD managed roads within state park and recreation area boundaries, boating access sites, and state forest campgrounds.
- State Forest Campground boundaries were delineated in 2020 and 88 miles of roads within these boundaries were inventoried as PRD-managed roads.
- Road condition data collected in partnership with MDOT in 2017 was quality checked in 2020. This assessment inventoried and assessed 470 miles of PRD-managed roads, 294 miles of

which were paved and scored an average PASER (pavement surface evaluation rating) of fair, which indicates that these roads do not have much useful life remaining unless they receive adequate preventative maintenance in the very near future.

- In preparation for a traffic flow study and wayfinding improvements at Belle Isle Park, 815 sign assets were inventoried in 2020. Attributes collected include location, sign type, text, construction materials, condition, and photos.

While the inventories are an ongoing effort, as discrepancies are identified, measures are put in place to correct them. The development of an efficient and cost-effective asset management system would support this effort. The Department had been working in partnership with DTMB and MDOT to develop an enterprise-wide asset management system to replace an existing database, however that partnership did not yield the planned outcome. Implementation of an enterprise-wide asset management system is a high priority and a critical need for the Department. The DNR established the Fixed Asset Sprint Team, which has been tasked with reviewing and updating current DNR policies and procedures, which influence the management of Department assets. Such tasks are crucial in the successful implementation of new asset management technology.

With an integrated asset management system, DNR and PRD inventories would be integrated, and processes would be streamlined, including work and project requests, identification and prioritization of needs, and the completion of inventory audits and inspections. The integration into an asset management and operations system will enable PRD to:

- Protect public health and safety of visitors and staff
- Ensure assets are reliable and meet the desired level of service for all users
- Maximize and enhance the long-term utilization and economic life of assets
- Reduce use of non-renewable energy
- Protect and enhance the natural environment
- Meet or exceed regulatory requirements

Current inventoried infrastructure within the Michigan State Parks System (with Belle Isle Park) includes:

- 1,612 buildings
- 470 miles of roads (294 miles of which are paved) within state park and recreation area boundaries
- 13,501 miles of state-designated trails (10,915 miles of which are administered by PRD including 1,466 miles of state designated trails within state park and recreation area boundaries)
- 12,223 improved campsites
- 3,897 primitive campsites
- 126 electrical system components (includes distribution and controls)
- 109 sewer system components (includes distribution, controls, treatment systems, and sanitation stations)
- 37 water system components (includes distribution and controls)

## **Assessments**

One of PRD's primary strategic efforts is to implement management practices that sustain the lifecycle of facilities. Through PRD's General Management Plan process, a thorough review and assessment of each facility is conducted, and long-term goals are identified. As part of this process, inventories are reviewed, and needs are prioritized with substantial stakeholder and public input. This ensures future management and development aligns with visitor needs and desires, while simultaneously providing insight for priority capital improvement investments.

PRD continuously gathers public perspective on facility conditions and improvements and recreational trends by engaging with park visitors through staff and volunteer campground host interactions and

through ongoing surveys of park visitors. PRD's focus on community engagement efforts is increasingly embedded in interactions with stakeholders and communities.

Another way in which priorities are established is through statewide assessments addressing specific, potentially widespread issues. Such assessments include the statewide electrical study, the semi-annual road PASER assessments, wastewater discharge assessments and the upcoming accessibility checklist assessment.

To operate a sustainable parks and recreation system, the scale and size of facilities must reflect available capital improvement funding. Each of these assessments allows PRD to comprehensively evaluate the needs and plan accordingly.

## **Recent Accomplishments and Ongoing Initiatives**

### Capital Improvement Plan

PRD initiates a "call for projects" each fiscal year to collect and prioritize the individual needs of each facility and district and identify emerging health and safety concerns. These lists are then evaluated through a statewide review to align projects for potential funding, allowing staff the opportunity to update, assess, and quantify needs. Collectively, the call for projects, General Management Plans, and the inventory processes provide short and long-term planning strategies based on varying levels of funding, resulting in a capital improvements plan. This plan proposes annual project funding relative to the anticipated availability of fiscal resources and outlines a schedule of public expenditures. It does not address all the capital improvement needs but provides for priority operational and recreational improvements that are needed for the function of the statewide network of facilities, including those that address vehicular and pedestrian circulation, utilities, and buildings.

This capital improvements plan provides a methodology for turning these needs into projects by outlining anticipated funding sources and schedules for study, design, and construction, based on the priority of the need and the availability of funding resources to complete the projects. PRD has been able to reduce the State Parks System infrastructure backlog, through planned approaches to redevelopment, sustainable contraction efforts, leveraging state park monies through grants and partnerships, and ongoing re-evaluation of priority needs.

### High Water Level Impacts

The Great Lakes and inland waters are experiencing the highest water levels since 1986, and storms and wave action are causing shoreline erosion and flooding. High water is also causing the groundwater to be higher. Typical high-water cycles could last for several years depending on the amount of precipitation, runoff, and evaporation that occurs, exacerbating the impact on the shore. The characteristics of the shoreline, which includes bluffs, floodplains, coastal wetlands, and sand dunes, and the level and type of development, determines how high-water levels will impact Michigan State Parks and Waterways facilities. In 2019, it was recognized that high water levels in the Great Lakes and several of the larger inland lakes were starting to adversely affect many parks. This necessitated campsite and other closures resulting in more than \$200,000 in lost revenue for the fiscal year. A tracking map and spreadsheet was started within the enterprise GIS system, and it quickly became apparent that this was going to be a large-scale problem statewide. Many of the priorities for the capital improvements plan for FY 2021 relate directly to impacts from high water levels.

### Sprint Teams

The DNR has initiated several division-wide "Sprint Teams" to investigate and make recommendations on specific issues. PRD is integrally involved in the following:

- Renewable Energy Sprint Team -The focus is on implementing renewable energy options within DNR facilities. The State Park System has been identified as desirable locations to implement solar power to reduce the DNR's carbon footprint and publicly demonstrate the feasibility of renewable energy systems to the public.
- Boundary Review Sprint Team - evaluation of the existing 2004 Project Boundaries to ensure that the DNR's Project Boundaries reflect the most accurate priorities for public land ownership. The

intent of the boundary review is to refocus ownership on priority areas, to ensure quality recreation opportunities, and to protect Michigan's unique features and resources. It is especially important to increase efficiencies in state land management by consolidating ownership, establishing easily recognizable ownership boundaries, resolving conflicting land uses, and reducing the likelihood of private encroachment.

### Alternative Lodging Experiences

In 2020, PRD introduced an innovative program to offer new and unique lodging options to attract new visitors (those who desire to be close to nature, but to whom tent camping or owning an RV is undesirable or impractical) to underutilized or underappreciated destinations. PRD entered into a 20-year lease with two private recreation/camping companies to provide alternative lodging infrastructure and site management and maintenance at five locations, at no cost to PRD. Projects include 22 cabins, cottages, and geodesic domes at three locations, and 20 safari style tent camping sites at two locations.

### Recreation Innovation

In addition to the alternative lodging experiences, PRD continues to bring new and innovative recreational activities to visitors. Recently several parks have added water activities involving inflatable slides and climbing structures. Disc golf has expanded courses to more parks and recreation areas and Muskegon State Park has a zipline under construction. These pilot projects usually involve a concession contract, where costs of infrastructure improvements and maintenance are borne by the concessionaire, which allows PRD to reduce the cost of capital outlay and operations and at the same time provide expanded opportunities to the visitors.

### Green Initiatives

The PRD Green Initiatives Team provides internal financial assistance and guidance toward making PRD a more environmentally sustainable system. A few ways this has been accomplished is through the promotion of a recycling program, use of environmentally friendly materials/products, energy reduction opportunities, and staff/public education programs. This year, the Green Initiatives allocated \$60,000 through the PRD Green Challenge Funding Program to upgrade lighting to LED light bulbs. This helps the Parks System move forward in reducing the carbon footprint.

### **Priorities**

The master comprehensive capital improvement list for priority project funding is maintained and updated annually. Projects are chosen for funding based on the current highest need as determined by PRD's executive leadership (Division Chief and Section Chiefs). To ensure overall statewide priorities are effectively addressed, the following criteria are used to evaluate projects:

- Is a critical need in imminent danger of failure
- Resolves compliance issues (health/safety/welfare)
- Directly serves the public and enhances the visitor experience
- Responds to core infrastructure needs (utilities, buildings, roads, etc.)
- Responds to high profile issues, needs, and local concerns
- Has committed partners and associated funding
- Enhances the ability to generate and sustain revenue
- Improves overall operational efficiency
- Improves employee efficiencies

The following information provides an overview of the most basic priority project needs of the Michigan State Parks System as of July 2020. These lists are not all-inclusive and do not include annual routine maintenance and repair cost needs, but rather focus on the primary support infrastructure that sustains the state parks and recreation system as it is today.

Primary infrastructure needs include:

#### Buildings

- Replacement, repair, and demolition of existing structures (e.g., toilet/shower buildings, headquarters, field offices, cabins, garages, visitor centers, registration buildings, contact stations and beach/bath houses, etc.)
- Approximately 130 projects identified at an estimated cost of \$63.6 million

#### Utilities

- Replacement, repair, and necessary modifications to meet health and safety requirements for utility systems (e.g., water, sanitary, electrical, storm water, gas, and communications, etc.)
- Approximately 83 projects identified at an estimated cost of nearly \$41.6 million

#### Roads and Parking Areas

- Preventative maintenance, repair, and replacement projects to address internal roads according to conditional assessments
- Approximately 76 projects identified at an estimated cost of \$59.2 million

#### Recreational Structures

- Replacement, repair, and modifications to boardwalks, observation decks, fishing piers, floating platforms, playgrounds, and field/court areas
- Approximately 136 projects identified at an estimated cost of \$35.2 million

#### Operational Structures

- Replacement, repair, maintenance, and modifications of bridges, dams, and other operational features
- Approximately 36 projects identified at an estimated cost of \$9.5 million

#### Major Development

- Complex and extensive development and modernization projects typically requiring a phased approach over several years; examples include addressing multiple failing utility, road, and building systems that are inadequate to accommodate current and future visitors
- Approximately 36 projects identified at an estimated cost of \$32.8 million

#### Historical Structures

- Replacement, repair, and accessibility modifications of designated historical structures and amenities
- Approximately 45 projects identified at an estimated cost of \$15.1 million

#### Habitat Restoration

- Invasive species control, natural resource protection, and the restoration of critical or damaged habitats
- Approximately 5 projects identified at an estimated cost of \$1.1 million

Total: 547 Projects at an estimated cost of \$258.1 million

### **Programming Changes**

The primary funding sources which are available and used to support state park and recreation area operations, maintenance, and capital improvements are:

- Recreation Passport Fees Fund – Receives a percentage of revenue from the sale of Recreation Passports.

- Park Improvement Fund – Receives all revenue derived from camping fees, concession fees, leases, gifts and donations, as well as a percentage of the revenue from Recreation Passport sales. The fund was established by 1994 PA 451, Part 741, Sec. 74108 and is constitutionally protected (Article IX, Section 40).
- Parks Endowment Fund – When the accumulated principal balance of the Michigan Natural Resources Trust Fund (MNRTF) reached \$500 million in May 2011, this fund began receiving revenue derived from royalties on the sale and lease of state-owned oil, gas, and mineral rights and associated interest and earnings. The fund was established with the passage of Proposal P in November 1994, is designated in statute by PA 451, Part 741, Sec. 74119, and is constitutionally protected (Article IX, Section 35a).
- New Funding Considerations – To accelerate progress toward accomplishing the long list of capital outlay needs, PRD continues to explore the use of partnerships and alternate funding sources, including State General Fund.

### Impacts of COVID-19

Staff shortages and spending restrictions in 2020 made it difficult to complete both routine and non-routine projects at the local unit level with staff focused primarily on the provision of clean and safe facilities over project completion. Additionally, spending restrictions were implemented resulting in all capital outlay projects being placed on hold. Restarting projects required an extensive approval process. While many of these projects have resumed, the completion dates for others were pushed back by several weeks or months, which caused some Parks and Recreation facilities to remain closed for the entire use season.

### Future Strategy

PRD will continue to focus on the sustainable contraction of park infrastructure to have a system that is viable and self-sufficient, based upon projected revenue and the anticipated levels of available funding for capital improvements. The diversification of recreational facilities beyond the typical hunting, fishing, and camping experiences, and adaptation to meet emerging recreational trends will continue to be a focus in recreational capital improvements.

Based on current and projected funding, the DNR cannot redevelop state park and recreation area infrastructure to the same level and standards at all locations. A strategic approach to capital improvements is needed for system-wide reinvestment. Facilities that have the demand and capacity could expand certain aspects to increase revenue streams (camping, rental structures, day use, etc.), while other locations could reinvent and reduce infrastructure to more appropriately balance visitation (occupancy), staffing levels, and long-term maintenance.

Ultimately, a multi-pronged investment strategy is vital, regardless of the amount of available funding. This investment strategy is critical to the long-term sustainability of the State Parks and Recreation System. A strategic vision is important to purposefully align funding with the renovation, replacement, and reduction of infrastructure to match current recreational needs and emerging trends, while addressing the overlying goal to target and focus efforts to engage people in the out-of-doors, creating life-long memories.

# STATE TRAILS SYSTEM

---

## General Background

The DNR is responsible for the oversight and management of 13,501 miles of state-designated trails. The state trail system is comprised of trails that are owned, managed, maintained, or significantly funded by the DNR. The trails program has grown significantly over the past decade due to the rise in popularity and the expanding demand for recreational trails in Michigan. This inviting network – and the associated quality of life, health, and economic benefits it offers – is fueling Michigan’s drive to be known nationally as “The Trails State.” The trail system offers ample opportunities for bicyclists, hikers, ORV riders, cross-country skiers, snowmobilers, horseback riders, paddlers, and more.

The DNR manages trails in all regions of the state and maintains strong partnerships with other state agencies and public and private entities to facilitate the management and promotion of the trail system. Trail operations and maintenance are accomplished in a variety of ways, depending on the trail uses and the capacity of DNR and local partners. It is commonplace for a segment of trail to be designated for multiple uses (e.g. snowmobile, hiking, bicycling, and equestrian). These shared trails offer more opportunity for trail-based recreation and build a sense of community among trail user groups.

Michigan is fortunate to have a robust motorized trail program, which includes Off-Road Vehicle (ORV) and Snowmobile trails. The operation, maintenance, acquisition, and development of these trails are supported with various federal and state restricted fund sources, including user fees.

The State’s trails are maintained by volunteers, non-profit organizations, friend groups, and trail users who enjoy giving back and volunteering their time. Day-to-day trail management is overseen by the Department on a regional level, however strong partnerships are established at the local level for trail maintenance. This amplifies the capacity of DNR resources and results in more robust trail systems. Once constructed, trails become local and statewide assets demonstrating the impact and vital role of strong partnerships in a successful state trail network.

The Michigan Trails Advisory Council (MTAC) advises the DNR and the governor on the creation, development, operation, and maintenance of motorized and non-motorized trails in the state. MTAC works closely with DNR staff to monitor current trail recreation trends and emerging issues, as well as plan for the management of Michigan’s trail system into the future. MTAC consists of 11 governor-appointed members, who serve terms of four years. Along with MTAC, there are four subcommittees who advise the Department on specific trail types and issues. These subcommittees include:

- Off-Road Vehicle Advisory Workgroup
- Snowmobile Advisory Workgroup
- Non-Motorized Advisory Workgroup
- Equine Trails Subcommittee

## Inventory

DNR Parks and Recreation Division (PRD) maintains a trail inventory through the work of field staff, data provided by partners, and surveys completed in conjunction with construction. Data on infrastructure location, condition, trail mileage, and other assets is stored and maintained as part of DNR’s department-wide GIS system. Utilizing enterprise GIS, DNR tracks geographic location data of trail assets, like trailside amenities and 65 different attributes (e.g., surface type, width, use types) that comprise the spatial inventory of DNR trails.

In 2020, additional information was collected or verified for both motorized and nonmotorized trails in state parks, state game areas, private land with use agreements, and linear trails. Work in 2020 was slowed due to COVID-19 restrictions. Other factors that affect the extent of data collection are funding, staff time, proper equipment, and the availability of trained data collectors. The Recreation Trails Program (RTP) has granted funding to FRD Resource Assessment Section (RAS) to map and manage spatial data of Michigan’s Designated Recreational Trails Network. Data collection is coordinated with

PRD Trails Section and Planning and Stewardship Units as appropriate, especially inside state park boundaries.

PRD implemented special trail inventories, including an ongoing project focused on mapping of equestrian trails and facilities in the Lower Peninsula. Inventory is updated on an ongoing basis as trails are developed, reroutes are determined, and as staff can update old data with on-the-ground collection. FRD RAS and PRD staff have identified funding to purchase additional collection equipment and prioritize needed data. Priorities are balanced between what is needed to make informed management decisions (bridge and culvert inventories) and serve the public need (interactive trail maps published on the website and open data portal). Due to the amount of state-designated trail mileage and breadth of geographical distribution this will be an ongoing process.

Trail mileage totals fluctuate regularly due to trail projects, re-routes, construction, and GIS data collection. The current inventory of trails by designated use includes the following:

- Non-motorized – 4,696 miles
- Motorized – 8,095 miles
- Shared Use Motorized and Non-motorized – 710 miles
- State Designated Total – 13,501 miles

### **Assessment**

Trail development and improvement is a top priority in the majority of local park and recreation agency five-year plans, which require public input to inform local recreation priorities. Infrastructure assessment and maintenance is a growing need for DNR-managed trails, ensuring that informed trail management and funding results in a sustainable network of public trails.

In recent years, PRD has prioritized building and maintaining unique partnerships with non-profit groups, local governments, federal agencies, and trail users to manage the state's trail system more effectively. These partnerships allow for more trail-related work to be accomplished and a stronger network of partners working toward a common vision for the benefit of the public. Strong partnerships result in a more effective system for trail management.

Guiding PRD's efforts are several documents and regular communication with users, stakeholders, and partners. The 2018-2022 Statewide Comprehensive Outdoor Recreation Plan (SCORP) highlights the popularity of walking outside and reinforces goals of continuing to create trail connections, maintaining the state trail network, and increasing water trail access and information. Two PRD documents provide guidance for trail objectives: The 2013-2018 Comprehensive Trails Plan and the recently updated 2017-2022 PRD Strategic Plan. Both plans address statewide trail priorities. The PRD Strategic Plan also highlights associated goals, such as invasive species management, partnerships, prosperity, and engaging new and unique users.

### **Statewide Trail Plan Update**

To guide DNR efforts to develop and manage the state trail system, an update to the 2013-2018 Comprehensive Trails Plan was started in fall 2019 and will be completed in summer 2021. The new plan will complement the 2017-2022 PRD Strategic Plan in format and build upon established goals.

The draft goals of the new Trail Plan are:

- Sustainable Maintenance and Development
- Planning and Collaboration
- Marketing, Promotion, and Education
- Funding

Within those draft goals are objectives which address many of the department's priorities of operational need, preventative maintenance, accessibility, recreation in/near urban areas, and partnering. To accomplish this, additional assessment will be needed to balance the resource, public demand, and

budget. This plan will build upon the previous 2013-2018 plan and be clear and concise with robust stakeholder and public input, including balanced representation across all trail user groups and DNR divisions.

## **Recent Accomplishments and Ongoing Initiatives**

- Maintained relationships with partners through COVID-19 spending restrictions and prohibitions on non-essential work.
- Managed trails with record public use while balancing COVID-19 response and infrastructure/public needs.
- ORV license sales are up 16 percent and ORV trail permit sales are up 22 percent through July 2020 from 2019, both are record highs.
- Partnered with Oakland County Parks to open the Holly Oaks ORV Adventure Park.
- Continued to refine PRD's relationship with MDOT to manage \$2.8 million federal Recreation Trails Program funding.
- Partnered with MDOT for engineering and construction oversight on large trail projects.
- Leveraged public dollars to partner with private funding.
- Worked to fill gaps in statewide trail initiatives, such as the Iron Belle Trail and Great Lake to Lake Trails.
- Continued infrastructure projects and trail repairs.
- Continuing infrastructure repairs and assessment of future infrastructure needs related to the 2018 Houghton County flooding incident.
- Continued updating GIS mapping of Michigan's trails system and adding functionality to online resources.
- Renamed the ORV trail system in the Upper Peninsula to use letters to distinguish it from the snowmobile trail system.
- Finalizing the mapping on designated equestrian trails in the Lower Peninsula.
- Permanent trail easement acquisition (including snowmobile easements) have been prepared to close in 2021. Restrictions on spending delayed the acquisitions intended for 2020.

## **Priorities**

To ensure overall statewide priorities are effectively addressed, the following criteria are used to evaluate projects:

- Is a critical need in imminent danger of failure
- Directly serves the public and enhances the visitor experience while protecting natural and cultural resources
- Responds to core infrastructure needs (utilities, buildings, roads, etc.)
- Responds to high profile issues, needs, and local concerns
- Has committed partners and associated funding

Ongoing priorities within DNR Trails are:

- Collaborating with external partners, such as non-profit groups, local governments, federal agencies, and trail supporters to maintain and connect a comprehensive trail network.
- Collaborating with internal partners such as other DNR divisions and state agencies to maintain strong relationships.
- Continuing to work with MOD to develop and promote trail safety and etiquette.
- Completing the new Trails Plan.
- Regularly scheduling inspections and evaluations of trail bridges and culverts.
- Continuing to establish permanent snowmobile trail easements.
- Assessing major trails for infrastructure needs and sustainability.
- Managing grants in a coordinated manner between all programs.
- Working with the MTAC funding subcommittee to propose a funding source for non-motorized trail operation and maintenance.
- Creating a comprehensive plan to measure and monitor trail use across all trail types.

## Programming Changes

Increased trail use has led to additional user conflict, resulted in pressure for more and better trails of all types from users, and highlighted the need for economic partners. The DNR will continue working with local partners on outreach and funding, managing projects, and responding to emergencies, such as the 2018 Father's Day flood in Houghton County.

### Impacts of COVID-19

Staff shortages and spending restrictions in 2020 made it difficult to complete both routine and non-routine projects at the local unit level with staff focused primarily on the provision of clean and safe facilities over project completion. Additionally, spending restrictions were implemented resulting in all capital outlay projects being placed on hold. Restarting projects required an extensive approval process. While many of these projects have resumed, the completion dates for others were pushed back by several weeks or months, which caused some PRD-managed facilities to remain closed for the entire use season.

## MACKINAC STATE HISTORIC PARKS

---

### General Background

The Mackinac Island State Park Commission has statutory authority for the management and development of the Mackinac State Historic Parks (MSHP). This includes Mackinac Island State Park, which encompasses 82 percent of Mackinac Island (roughly 1,700 acres) and is Michigan's first state park, established in 1895. Fort Mackinac, an original 18<sup>th</sup> and 19<sup>th</sup> century military outpost, and several other historic buildings are located within the island park. On the mainland, MSHP operates Michilimackinac State Park which includes Colonial Michilimackinac, a reconstructed 18<sup>th</sup> century military and fur trade center, and Old Mackinac Point Lighthouse. Mill Creek State Park is home to Historic Mill Creek Discovery Park, a 640-acre park featuring northern Michigan's first water-powered sawmill and three miles of nature trails with interpretive signs and high ropes course activities integrated with a natural history interpretation program. (For additional details, please see the appendix for "Mackinac State Historic Parks Properties and Resources.")

### Inventory/Assessment

Because of the scope and diversity of MSHP properties, no single inventory and assessment has been conducted to evaluate the division's infrastructure. Instead, inventories of resources have been conducted in conjunction with other strategic planning processes. They are:

- ***Mackinac State Historic Parks, Strategic Plan, 2020-22.*** This planning document provides specific strategies for improvements in the areas of Museum Programs, Marketing and Sales, Environmental and Park Enhancements, and Finance, Fund Development, and Administration.
- The ***Detailed Architectural Survey and Risk Assessment (DACS)*** report completed in 1997. This report, which was funded by an Institute for Museum and Library Services grant, includes a prioritized list of MSHP historic building preservation projects, which is reviewed and updated annually by the MSHP Historic Preservation Committee.
- Infrastructure projects at the Mackinac Island Airport (which is managed by MSHP) are guided by the five-year ***Mackinac Island Airport Improvement Plan, 2019-2023***, developed in conjunction with MDOT-Aeronautics and contract engineers.
- In 2014 Mackinac State Historic Parks completed a comprehensive ***Park Facility Inventory and Assessment Report***, which identified 148 buildings and structures within the MSHP. Of this number, management identified 38 facilities that need immediate repairs. This inventory and assessment serve as a foundational document for prioritizing future work projects and measuring success.

Projects are prioritized by staff based on the institutional mission and are approved by the Mackinac Island State Park Commission. These priorities include:

- Public health, safety, and welfare
- Preservation of irreplaceable historic structures and resources
- Expanding and improving the public presentation of MSHP's historical and recreational resources

## Recent Accomplishments

In FY 2020, MSHP successfully accomplished several infrastructure improvement and capital outlay projects including:

- Completed and opened the new restroom/shelter building on Mackinac Island
- Completed restoration and installation of the "Mackinac Island Native American Museum" at the Biddle House
- Restored and added exhibits to the second floor of Old Mackinac Point Lighthouse.
- Completed design and secured contractor for installing new apron lighting and a new primary wind cone at the Mackinac Island Airport
- Completed construction of the Commission Board Room addition to the Mackinac Island State Park Commission administrative office in Mackinaw City
- Initiated construction a new warehouse at Michilimackinac State Park
- Assisted MDOT with phases I and II of the Mackinac Island shoreline protection and M-185 road reconstruction project

## Priorities

A list of priority projects has been developed for FY 2021 and beyond. Economic conditions and available funding will largely dictate the extent to which MSHP is able to complete these projects.

### Top Priorities in FY 2021

- Replace the outdated and undersized restroom at Arch Rock in Mackinac Island State Park with a fully accessible restroom/visitor center that will better serve the public.
- Make repairs to the sawmill at Mill Creek State Park.
- Paint multiple structures in Mackinac Island State Park.
- Work with MDOT to complete shoreline protection and road reconstruction project on M-185 in Mackinac Island State Park.
- Repair and improve fire protection systems at all locations.
- Create accessible roadside park along M-185 at old power plant location.
- Replace wind cone and apron lighting at Mackinac Island Airport.

### Priorities for FY 2022-2026

- Construct landscape improvements in the "free park" area of Michilimackinac State Park.
- Reconstruct the historic house on the east end of the Southwest Rowhouse at Colonial Michilimackinac.
- Design and construct box hangers at Mackinac Island Airport.
- Secure additional housing for seasonal staff.
- Repave several sections of Mackinac Island roads.
- Repair and improve the British Landing Dock, Mackinac Island.
- Improve drainage in fort at Colonial Michilimackinac.
- Repair/improve structure to preserve the Power Magazine ruins at Colonial Michilimackinac.
- Create ADA-accessible surface between Colonial Michilimackinac Visitors Center and the fort.
- Provide alternate experiences for visitors with disabilities who are unable to access certain resources and programs.

## Programming Changes

Mackinac State Historic Parks depends on the annual capital outlay appropriation of \$250,000 General Fund to address the backlog of infrastructure improvement and capital outlay projects. The Mackinac Island State Park Commission will expand its efforts to secure additional funding sources, including

support from granting agencies, corporations, foundations, and other State of Michigan sources, such as supplemental appropriations to address capital needs in excess of the annual appropriation.

## **WATERWAYS - HARBORS, DOCKS, AND BOATING ACCESS SITES**

---

### **General Background**

The DNR recognizes the importance of enhancing opportunities for public recreational boating in Michigan. Boating facilities and support services utilized by the public are necessary ingredients in offering quality boating experiences. The economic impact of recreational boating in Michigan is a significant factor in the financial well-being of many communities and the state overall.

The Michigan State Waterways Fund supports boating programs, including boating access sites, harbors, locks, and grants for both state and local facilities under the advice of the Michigan State Waterways Commission. The Harbor system provides safe harbors to boats that cruise the Michigan shoreline, and the Waterways Program continues to strive toward a system where boaters are no more than 30 miles from a safe harbor.

The State Waterways Program provides transient and seasonal boat slips at state-administered harbor facilities along Michigan's Great Lakes shoreline, in addition to recreational boating access to the Great Lakes, inland lakes, and rivers throughout the state. The DNR currently administers 19 state harbors and over 1,100 state boating access sites, developed and undeveloped. The DNR also operates two locks on the Inland Waterway, a chain of rivers and lakes nearly linking Lake Huron with Lake Michigan through the northern part of the Lower Peninsula.

The Grant-In-Aid (GIA) Waterways Program provides grants to local units of government for Great Lakes harbor facilities and boating access site facilities located on the Great Lakes, inland lakes, and rivers. There are 63 GIA harbors, along with over 183 GIA boating access sites that are supported technically and financially by the DNR with Waterways funding. The presence of local harbors and boating access sites enhances the quality of life of Michigan citizens and contributes to local economic growth. To be responsive to local community project needs, the DNR evaluates grant requests on an annual basis.

### **Inventory**

There are 1,228 public boating access sites in the state, of which 1,045 are state facilities administered by the DNR (some are not yet developed). The remaining 183 sites are managed by local units of government in partnership with the Waterways GIA Program. In addition, there are 82 harbors sponsored by the Michigan State Waterways Program. The DNR manages 19 of these harbors, with an additional 63 harbors managed by local units in conjunction with the GIA Program. Another harbor, Ludington Harbor View, is under a partnership whereby the DNR retains ownership and the City of Ludington manages the facility. To complete the public harbor network, there is one harbor managed by the federal government. (For a list of the various state harbors and developed boating access sites, please refer to the appendix.)

The last location inventory was completed in 2008. State waterways inventory information was merged with the Michigan State Parks System inventory in 2009 for comprehensive and consistent management of these state assets.

### **Assessment**

Infrastructure continues to age well past intended life expectancies and greater deterioration of facilities is starting to show despite efforts to extend their lifespan. Most harbor facilities were initially developed over 40 years ago. It is projected that over 50 percent of all harbor facilities have some infrastructure over 30 years old, with a normal life expectancy ranging from 20 to 30 years. For boating access sites, this typical lifespan is even shorter with several beyond their infrastructure life expectancy. Therefore, a rapid succession of requests in the next few years, many in emergency status, for infrastructure replacement and repair is anticipated. This could be amplified due to high-water levels and potential impacts to infrastructure from things like ice forces. Currently, there are nearly 100 active waterways

capital outlay projects in various stages of development. This is in addition to the numerous small, routine maintenance, and repair projects performed by state field staff.

Project infrastructure varies widely between boating access sites and harbors. While boating access sites have little infrastructure (e.g., launch ramps, parking lots, and vault toilets), harbors can be complex, infrastructure-intense facilities. Harbors may contain sheet pile break walls, rubble mound wave protection, shower and restroom facilities, fuel stations, floating or fixed piers, pilings, shore riprap protection, fire-fighting systems, ice damage protection equipment, other special equipment required for public safety, launch ramps, and parking lots. Harbor infrastructure is very expensive, with costs typically ranging from approximately \$4 to \$8 million for a comprehensive upgrade, depending on the facility. Boating access site upgrades typically range from \$20,000 to \$500,000 depending on the scale of the improvements and whether the project is completed in-house with state field staff or contracted out to private companies. Some projects can cost well over \$1 million. However, while projects at harbors typically cost substantially more than those at boating access sites, the number of projects at boating access sites far exceeds the number at harbors.

Each year, all state boating access sites and harbor facilities are inspected. Maintenance, upgrades, and replacements are scheduled annually. Not all improvements can be accomplished due to limited funds, creating a backlog of projects.

Through the yearly call for priority projects, the following were identified going into fiscal year 2021:

#### Parking Lot/Road

- New construction, preventative maintenance, repair, and replacement projects to address internal parking lot and entrance road surfaces at boating access sites and harbor/marina facilities
- 78 projects identified at an estimated cost of \$18.9 million

#### Major Development

- Complex and extensive development and modernization projects typically requiring a phased approach over several years; examples include complete facility redevelopments and new developments of various boating access sites
- 32 projects identified at an estimated cost of \$24.2 million

#### Operational Structure

- New construction, preventative maintenance, repair, and replacement of seawalls, docks, launch ramps, locks/dams, and other operational features
- 12 projects identified at an estimated cost of \$5.3 million

#### Building

- New construction, replacement, repair, and demolition for harbormaster buildings/comfort stations, field offices, pavilions, attendant booths, vault toilets, and other related structures
- 10 projects identified at an estimated cost of \$2.44 million

#### Utility

- New construction, replacement, repair, and necessary modifications to meet health and safety guidelines and requirements for systems such as water, sanitary, electrical, storm water, gas, and communications
- 3 projects identified at an estimated cost of \$240,000

#### Recreational Structure

- Replacement, repair, and modifications to piers and launching platforms
- 3 projects identified at an estimated cost of \$800,000

## Dredging

- Excavation of water substrate within or leading to/from a harbor or a boating access site
- 1 project identified at an estimated cost of \$35,000
- Due to record high water levels, dredging needs were minimal in FY 2020

The GIA program instituted the mandatory submittal of a five-year plan for all harbor facility improvement grant applications. This approach assures there is a framework for identifying GIA facility needs across multiple years and possibly multiple phases. Additionally, inspections of GIA facilities may occur prior to the award of new grant projects, at the end of a grant agreement's obligation, and when other circumstances such as safety issues warrant. Communities are invited to participate with DNR inspectors to receive first-hand knowledge of inspection findings to assist in the correction of deficiencies.

## **Recent Accomplishments/Ongoing Initiatives**

### High Water

- The Great Lakes are experiencing high water levels that have rarely been seen. This has created significant impacts to harbors, boating access sites, and other facilities. Submerged and damaged docks, flooded launch ramps and parking lots, excessive erosion, and electrical system shutdown have been experienced. In many cases, even the complete closure of facilities from public use has occurred. To compound high water, the increase in storm surges, especially on the Great Lakes, has presented PRD with new challenges for boating facility management. The impacts are being monitored and addressed where possible through use of emergency funding and creative thinking. In 2020, GIA program grants were used entirely to address high water damage and repair projects.

### Harbor Electrical System Upgrades

- With the updating of the National Electric Code and adoption by the State of Michigan, changes were made to respond to safety concerns over electric shock drowning at water-based facilities. The DNR has updated four state harbors to respond to the safety concerns and meet the latest codes at the time of their improvement: De Tour, Port Austin, Fayette, and East Tawas. These improvements have not only enhanced safety but provided boaters with notification when issues may be arising from their own vessels. The development of internal protocol and guidance is being finalized to respond to these matters. The GIA program has recently assisted in updating electrical systems at Frankfurt, Harrisville, and Petoskey.

### Harbor Host

- For the 2020 boating season, a harbor host program was piloted at two state harbor facilities. The program offers free dockage for volunteer assistance at the harbors. Both Presque Isle State Harbor and Straits State Harbor piloted the program with great success. The hosts volunteered 30 hours per week and provided extra hands on the dock, eyes and ears after hours, a source of local area information, and assistance with general grounds cleanup. Staff and hosts at both facilities are already planning to improve the program for next year. As the program is fine-tuned, it may be implemented at additional facilities.

### Harbormaster Conference

- After a hiatus, the harbormaster meeting was brought back in recent years to promote communication and collaboration between state and local GIA harbor facilities. The fall meeting is a chance for harbormasters to discuss both the accomplishments and common challenges of operating a marina facility. Unfortunately, the 2019 meeting was canceled, and the 2020 fall meeting was unable to occur due to COVID-19 restrictions. The intention is to resume the harbormaster conference in fall 2021.

### Detroit River Boating Access Study

- The Detroit River Boating Access Study was initiated to review the gap in BAS in the northern Detroit River and provide recommendations to improve public boating access within the city. The

final report was completed in 2019, and recommendations were made to the DNR based on public online and field surveys as well as feedback from the City of Detroit General Services Division (GSD) staff, DNR PRD staff, DNR Law Enforcement Division, and DNR Fisheries staff. The report documented the following: current BAS facilities do not meet the local need; additional public access is desired; the three Michigan counties around the study area account for over 20 percent of all registered boats; DNR Fisheries forecasts that native fish population increases will spur increased fishing; and, report findings predict increased boater attendance in the Detroit River will continue to grow. Recommendations to increase the number of BAS range from immediate management changes in operational policy to long-term plans for future DNR facility development. DNR has added Grayhaven State Harbor site planning for BAS development to the Metro District Waterways Capital Outlay FY 2021 list for consideration. The DNR and the City of Detroit GSD have coordinated to offer short-term dock use to boaters prior to the regular boating season to increase access in spring. The near-term recommendation to identify BAS sites suitable for increased capacity will be completed as part of an East Riverfront Study by GSD in 2021. Future coordination between DNR and GSD will continue as both agencies work to improve boating access to the Detroit River on the public riverfront.

### Partnerships

- DNR and City of Ludington – Harbor View Marina  
Harbor View Marina was under a long-term lease with a local private entity. It was initiated over 20 years ago through the State/Private partnership of the legislatively mandated Harbor Development Program. Unfortunately, prior to expiration of the 25-year lease, the private entity felt they no longer could manage the facility and turned it back over to the DNR. During that transfer, the DNR worked with the City of Ludington to move the management and operation to the City through an agreement. That transfer was completed in 2019, making the facility eligible for future GIA funding opportunities.
- Currently, a team of staff is vetting ideas for potential partnerships at state waterways facilities to potentially grow recreational boating, increase revenue opportunities, and respond to boating trends within the state.

### Aquatic Invasive Species Response

- Aquatic invasive species (AIS) remain a critical component of managing the state's boating access sites, harbors/marinas, and water trails. The Parks and Recreation Division works with the Michigan Invasive Species Program to provide updated signs, pavement stencils, and other outreach materials to relay key information to visitors at facilities. Also, staff work collaboratively to treat and control priority AIS when detected at a location.

### Public Land Strategy

- The Public Land Strategy Sprint Team is updating the land strategy that was developed in 2013. This includes review by staff of several Waterways Program parcels to determine if they support the program and boating facilities or if changes need to be accomplished through either disposal of properties no longer serving a public boating purpose, management transfer, or consideration of other funding sources to manage those lands.

### Sustainable Development/Green Initiatives

- The Renewable Energy Sprint Team is working with Michigan Energy Options to identify DNR facilities that have the potential to add solar energy systems to offset costs as well as provide education in sustainable energy. The state was divided into zones and facilities will be evaluated to determine if they are viable candidates for renewable energy use. The first zone studied was in southeast Michigan. An RFP is being developed and will go out to bid in late fall/early winter 2020. Northwest Michigan will be the next region evaluated.

- In addition to the work of the Renewable Energy Sprint Team, there is work being done with the donations committee to secure funding for small green initiative projects at waterways facilities. This would include lighting upgrades, metered fixtures, recycling, and other items.

### State Projects

- East Tawas State Harbor/Iosco County – Facility Redevelopment completed
- Eagle Harbor State Harbor/Keweenaw County – Facility Study completed
- Union Lake Boating Access Site/Oakland County – Facility Development completed
- Lexington State Harbor/Sanilac County – Harbormaster Building Development planned
- Burt Lake State Park Boating Access Site/Cheboygan County – Facility Redevelopment planned
- Lexington State Harbor Boating Access Site/Sanilac County – Facility Redevelopment planned

### Grant-In-Aid (GIA) Projects

- Clark Township Cedarville Harbor/Mackinac County – Infrastructure Improvements and Redevelopment completed
- Naubinway – Garfield Township Marina/Mackinac County – Breakwater Construction completed
- East Jordan Tourist Park Boating Access Site/Charlevoix County – Facility Development completed
- Petoskey Municipal Marina/Emmet County – Infrastructure Improvements completed
- Saugatuck Coghlin Park/Allegan County – Infrastructure Improvements completed
- City of Harrisville Harbor/Alcona County – Pier Improvements - Phase 1-5: Phases 1-4 completed; Phase 5 awarded and underway
- City of Manistique Municipal Marina/Schoolcraft County – Infrastructure Improvements substantially complete and awaiting the final reimbursement request
- Cheboygan County Marina/Cheboygan County – Infrastructure Improvements design complete and bids under review

## **Priorities**

The current strategy for project funding is to ensure that all facilities are funded at least minimally, to keep them safe and open to the public. Preventative maintenance and proactive replacement schedules have not been options since the number of facilities needing correction or replacement exceeds the funding capabilities. This applies to both state and GIA-operated waterways facilities. To provide basic funding for the needs of the statewide system would require approximately \$17 to \$20 million be spent annually on facility capital improvement upgrades.

Priority projects are selected considering the Department’s strategies of Operational Need, Preventative Maintenance, Accessibility, Recreational Opportunities in/near Urban Areas, Partnering/Consolidation, and Energy-Efficient Facilities. The inclusion of several GIA projects is consistent with the Department’s ongoing commitment to work in partnership with local government agencies and other entities to develop and maintain public recreational boating opportunities.

### State Projects

A list of state waterways infrastructure improvement priority projects is updated and maintained on an ongoing basis. Lump sum funding for state boating infrastructure, maintenance, repairs, and improvements continues to be a priority.

### Grant-in-Aid (GIA) Projects

As a strategy to receive state grant assistance, communities applying for Waterways funding through the GIA program have begun phasing their projects to submit requests for smaller dollar amounts. Though the dollar amounts awarded are smaller, more communities have worked incrementally toward large-

scale harbor improvements using this phased approach. Some typical projects that are priorities for GIA funding include:

- Lump sum funding for local boating facilities repair, maintenance, emergencies, and improvements through grants to local governments
- Harbor Beach Municipal Marina Improvements (Huron County)
- Elmwood Township Marina Improvements (Leelanau County)
- Caseville Municipal Marina Fuel System Replacement (Huron County)
- Northport Municipal Marina Raising Pier and Utilities (Leelanau County)
- Village of Lake Linden Boating Access Site High Water Damage Repair (Houghton County)

## **Programming Changes**

The number of infrastructure capital improvement needs in a harbor system of 83 facilities is significant and each upgrade can equate to millions of dollars in expenditures. However, adequate funding is not available to keep up with the needed repairs. Therefore, it is important the state's harbor and boating access system be evaluated based on several factors including geographic location, feasibility, economics, water dynamics, occupancy, sustainability, and other factors to assess the overall public value.

### Impacts of COVID-19

Staff shortages and spending restrictions in 2020 made it difficult to complete both routine and non-routine projects at the local unit level with staff focused primarily on the provision of clean and safe facilities over project completion. Additionally, spending restrictions were implemented resulting in all capital outlay projects being placed on hold. Restarting projects required an extensive approval process. While many of these projects have resumed, the completion dates for others were pushed back by several weeks or months, which caused some PRD-managed facilities to remain closed for the entire use season.

## **HISTORICAL PROGRAM INFRASTRUCTURE AND FACILITIES**

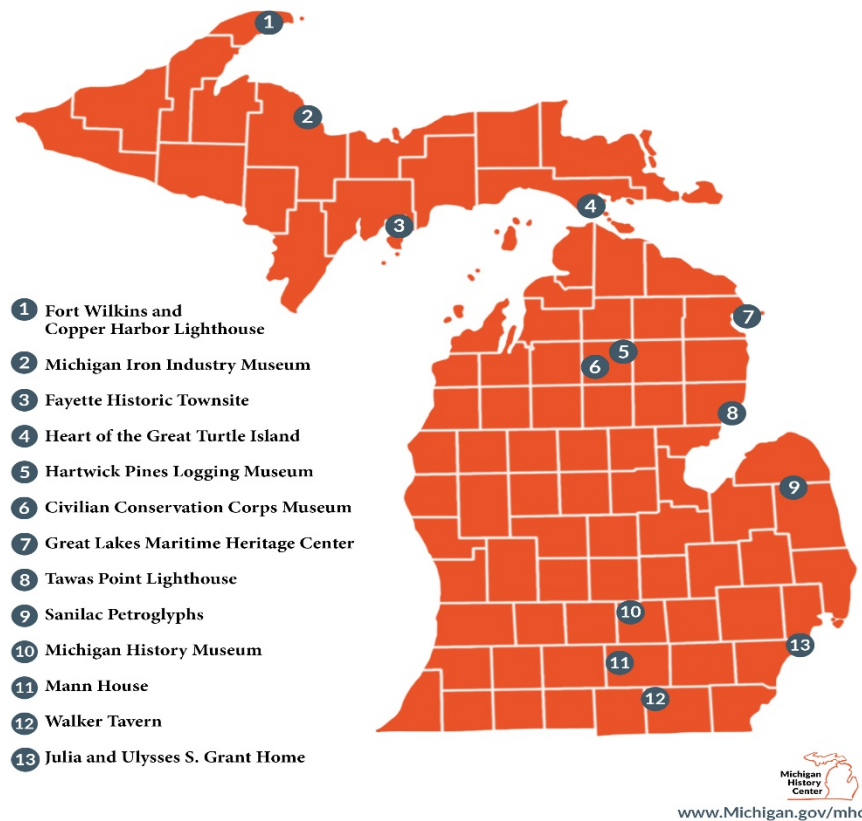

---

### **General Background**

The DNR operates the Michigan History Center (MHC), which includes the Archives of Michigan and the Michigan History Museum System. Both programs share a storage facility in Lansing with DTMB Records Management Services, where historic objects, documents, and photographs are preserved and made accessible to Michigan's citizens for education, research, and inspiration. The Archives of Michigan also has a Lansing storage location for its increased responsibilities for the preservation of probate and circuit court records formerly held by local governments.

The museum system includes the flagship Michigan History Museum in Lansing and eleven historic sites and museums statewide, eight of which are in state parks. The MHC is charged with maintaining the Mann House in Concord, the Iron Industry Museum in Negaunee, and the Grant Home in Detroit. Responsibility for general maintenance of the other facilities is divided between DNR and DTMB. The MHC is accountable for exhibits, interpretive programs, and the care of all historic materials at each of the facilities. More than 450,000 people visit these sites each year.

# Michigan History Center Museums and Historic Sites

## Inventory/Assessment

Assessments of the buildings are completed on an ongoing basis. Strategic interpretive plans help determine the priorities. The most pressing needs are professional-grade specialized storage capacity for the state's museum and archival collections and operational and preventative maintenance.

The storage needs involve capital improvements in both the quality and quantity of storage. The goal is to upgrade and use existing state facilities, including the secure storage space in the former Lottery building, rather than seek the much more expensive solution of a new purpose-built facility.

In FY 2017, a federal grant supported consultants who completed HVAC and fixtures requirements to bring the museum portion of the shared Lansing storage facility up to professional standards and expand the capacity of the storage facility. In FY 2018, the museum was awarded \$250,000 in federal Institute for Museum and Library Services (IMLS) grant funds for a portion of the work, which must be matched with state funding. Additional shelving will be needed for both museum and archives collections.

The MHC has a growing list of deferred maintenance projects that have been identified throughout the museum system, all of which are operational needs in public buildings that serve both residents and tourism. At the Iron Industry Museum in Negaunee, the older portion of the roof needs to be addressed, and the restrooms need repairs of buckled floor tiles and upgrading for accessibility. Regular preventative maintenance needed includes painting of the historic Mann House and upgrades of furnace, electrical, and plumbing systems.

Other projects could increase the value of the sites for tourism. The renovation of the carriage house for public programming space at the Mann House Museum in Concord and bridging the Carp River to get visitors to the site of the first iron forge in Michigan are top priorities.

The other significant needs are at the Michigan State Park sites where maintenance is the responsibility of the Parks and Recreation Division.

## **Recent Accomplishments**

Recent MHC accomplishments include completing the replacement of the two furnaces at the Mann House, which will promote energy efficiency. The MHC also used earned revenues to match the IMLS grant and purchase the shelving for museum storage as planned. Although MHC's admissions and store programs earned the revenue needed to install the shelving (\$60,000), restrictions due to the COVID-19 pandemic have precluded installation.

A grant-funded project has moved the Ulysses and Julia Grant Home from the former State Fairgrounds to Eastern Market, where it will be renovated and repurposed to serve the Detroit community, Michigan residents, and tourists.

## **Priorities**

### Preserving Michigan's Historic Objects

More than 100,000 historic objects are held in trust for the citizens of Michigan at a 31,000-square-foot storage facility in Lansing. This space does not meet national museum standards for the care and preservation of historic artifacts, putting the collection at risk. Nor does it offer any room for expansion as currently configured. Installation of new museum-quality, high-capacity storage fixtures is the top priority. In FY 2021, DTMB will install a new HVAC system to control temperature and humidity. Over the next five years, additional shelving will be needed.

### Preserving Michigan's Archival Documents

In 2017, the State Court Administrator changed how county probate and circuit court records are retained and managed. The result is that the Archives of Michigan began receiving thousands of boxes of paper records requiring preservation and permanent storage. The records document property and land ownership, adoptions, divorce settlements, and other legal matters. They were created between the time each county was organized and 1967. Formerly, the counties were required to keep these records permanently, in some cases leading to storage in wet basements, over-heated attics, and in one case, a former animal shelter. Several counties have experienced damage to records as they wait to transfer them to the archives.

The Archives of Michigan has appropriate storage space for the records, but the space lacks useable shelving for archival records. The boxes holding the records need to be stored on shelves, not pallets. From an operational perspective, constantly moving pallets and sorting through stacked boxes to find individual records requested by government, business, and the public is neither efficient nor safe.

The Five-Year Plan involves space mapping and logistical planning in FY 2021; installation of shelving for 15,000 boxes in FY 2022; and installation of shelving for an additional 20,000 boxes in both FY 2023 and FY 2024. With the project completion in FY 2025, the Archives of Michigan will have 35,000 cubic feet of storage and the ability to accommodate the local government records due for transfer. The total estimated cost is \$75,000.

### Accessing the Carp River Forge Site

This project is an MHC and Iron Industry Museum (MIIM) Advisory Board priority. The MIIM in Negaunee sits across the Carp River from the historic archaeological site of the first iron forge in the Lake Superior iron ranges. However, visitors are unable to access the site because of the river and the deep ravine through which it flows. In this era of social distancing, providing safe outdoor experiences that bridge nature and culture is more important than ever. The Carp River bridge and new trails connecting it to the museum would augment the MIIM's highly used half-mile of trails and provide an additional experience

for visitors following the Iron Ore Heritage Trail, which has a trailhead at the museum. The bridge portion of this project was designed by U.P. Engineers & Architects, Inc. (UPEA) in 2010 but was never built. UPEA estimates a cost of \$50,000 to update and complete the engineering. An additional \$25,000 is needed to plan the trail system. The pedestrian bridge specified in the plan will cost \$320,000 for fabrication and delivery. Site preparation, abutment, pilings, and trail construction would add another \$300,000 to complete this impactful visitor experience upgrade. The total cost is \$695,000.

## Programming Changes

### Aging Exhibits

The oldest exhibits in the Michigan History Museum in Lansing date to 1989. They do not meet today's standards for accessibility, inclusion and equity, or use of technology. Plans are in place for the next major phase of upgrades, which cannot happen without additional funding. The MHC has had some success in obtaining private funding and grants to move forward, but the lack of state funding makes success difficult. These and like changes across the system could greatly increase the tourism value of all the facilities in which the MHC provides interpretation.

### The Grant House

With the decision to repurpose the Michigan State Fairgrounds in Detroit, the state reserved ownership of the house occupied by Ulysses and Julia Grant when he was stationed in Detroit in the late 1840s. That house became the responsibility of the MHC. With grant support and partnership with Eastern Market Corporation, the house has been moved to Eastern Market. In FY 2021, Eastern Market, MHC, and the Michigan History Foundation will work with community members to determine how the house can best serve the community. The MHC and Foundation will also work to raise the funds needed to preserve and renovate the house. Once the house comes on-line as a public facility, it will need preventative and routine maintenance to remain fully functional.

## SHOOTING RANGES

### General Background

The Michigan Department of Natural Resources (DNR) manages five staffed shooting ranges, three leased ranges, eight official unstaffed ranges, and over 100 unofficial ranges that provide shooting opportunities for the public. The leased shooting ranges and several of the staffed shooting ranges generate revenue for the DNR from fees and concessions. The DNR signed a 20-year lease with Michigan Shooting Centers, Inc., beginning on October 1, 2009, for the operation and maintenance of the Bald Mountain and Island Lake shooting ranges. The DNR also has partnered with Michigan Technological University in Houghton County who operates a public, indoor firearm, and archery range as well as the Ogemaw Hills Sportsman's Association who operates a public archery park in Ogemaw County. These partnerships enable the DNR to help fund improvements in exchange for the partners continuing to operate and maintain the public ranges on behalf of the DNR.

State-managed and partner shooting ranges provide locations for licensed hunters to hone their archery and firearms skills, as well as provide safe and controlled settings for the public to develop skills and proficiency in firearm and archery use to support the growth of shooting sports. The ranges are utilized by hunter education groups, scouting groups, 4-H groups,

#### Ranges Designated by Land Use Order

##### Staffed

**Dansville:** Mason, Ingham County  
**Ortonville:** Ortonville, Oakland County  
**Pontiac Lake:** Waterford, Oakland County  
**Rose Lake:** Bath, Clinton County  
**Sharonville:** Grass Lake, Jackson County

##### Leased

**Bald Mountain:** Lake Orion, Oakland County  
**Cedar Lake Outdoor Center:** Washtenaw County  
**Island Lake:** Brighton, Livingston County

##### Unstaffed

**Algonac State Park:** St. Clair County  
**Echo Point:** Allegan County  
**Supply Road:** Grand Traverse County  
**Lapeer Pit:** Lapeer County  
**Lost Nation:** Hillsdale County  
**Otsego Pit:** Otsego County  
**RAM Center:** Roscommon County  
**Waterloo:** Washtenaw County

persons with disabilities, and other youth and non-traditional user groups as locations to receive hands-on firearm and archer safety education training.

## **Inventory**

An inventory of the structures in the shooting range system was completed in 2014. Staff continues to evaluate and inventory unofficial ranges to determine whether management actions are needed. The DNR plans to review and update this inventory in 2021.

## **Assessment**

Internal assessments of the shooting range program are completed on an ongoing basis.

In 2014, a multi-divisional workgroup was created and tasked with determining a five-year development strategy that would identify areas of shooting conflicts on state land, determine needed improvements, and develop partnerships to grow shooting sports. Prioritization criteria for existing range enhancements and new range development were established and include:

- Evaluating geographical gaps in public opportunities and access to shooting ranges
- Determining a desired density of shooting ranges in relation to population centers
- Addressing issues related to safety, operations, noise, and conflict at shooting ranges
- Embracing and growing partnerships that can support operations, promotion, and the financial match requirements of grants

The DNR will reconvene this work group in FY 2021 to update statewide recommendations and goals related to target shooting.

The current number of designated ranges is inadequate and not geographically distributed to accommodate the growing number of recreational shooters in Michigan. The DNR has identified over 100 locations on DNR-managed public land that are being used by the public as shooting areas. Use of these areas has resulted in numerous conflicts between shooters and area residents, litter on state land, and damage to natural resources (e.g., lead deposits from bullets and damage to marketable timber). Because the DNR manages over 4 million acres of public land, there are considerable options through the state game areas, state forests, state parks, and state recreation areas to relieve the pressure and scrutiny that shooting ranges face from residential and commercial development.

## **Recent Accomplishments**

In September 2015, the DNR received a five-year grant from the U.S. Fish and Wildlife Service (USFWS) in the amount of \$3 million with a 25 percent match requirement (\$1 million) to address the development of shooting ranges in Michigan. This grant is instrumental in the implementation of the five-year development strategy.

From 2015 through 2019, the DNR completed range improvements at Rose Lake Shooting Range and Hal and Jean Glassen Shooting Education Center in Clinton County, Pontiac Lake Shooting Range in Oakland County, Algonac State Park Shooting Range in St. Clair County, Supply Road Range in Grand Traverse County, and Echo Point Shooting Range in Allegan County. During this timeframe, the DNR also completed extensive environmental, site assessment and design work for range improvements in Lapeer, Marquette, Barry, and Ontonagon Counties. These efforts were completed using the funds from the 2015 USFWS grant and required matching funds from private donations, National Rifle Association grants, National Wild Turkey Federation grants, and Michigan Natural Resources Trust Fund grants.

In addition, construction renovation at the Lapeer Pit Shooting Range at the Lapeer State Game Area is scheduled to be completed in 2020 with reopening to the public thereafter.

A final agreement was reached with a private land partner in Marquette County in 2020. The DNR anticipates range planning and design being completed in fall 2020. Despite unforeseen scheduling delays, the DNR anticipates construction of the Marquette range will be completed by September 30, 2021. This project is a priority for the DNR and is made possible through a FY 2018 MNRTF grant, a FY

2018 General Fund appropriation, funds from the original five-year USFWS range development grant, and a new FY 2021 USFWS range development grant.

DNR submitted an additional grant request to the USFWS in 2020, with an anticipated start date of October 1, 2020. This new grant will provide funds for range development in Marquette, Ontonagon, Barry, and Roscommon counties as well as for site remediation work throughout the state. These grant funds will be matched by grants from the MNRTF, land managing division funds, donations, and National Rifle Association grants.

In 2018, site evaluation and design work were completed for improvements to the existing range operated by Lake Superior Sportsman's Club (LSSC) on public land in Ontonagon County. Design components were finalized for the project in 2020, and necessary permits were pulled for the project during 2020. A FY 2020 MNRTF grant was awarded for this project and will provide the required match for the new USFWS grant. The DNR anticipates construction being completed by the end of 2021.

In March 2018, the DNR was awarded an additional grant totaling \$1.25 million from the USFWS for archery and firearm range improvements at non-DNR ranges that are open to the public. This grant allows the DNR to pass-through up to 75 percent of project funding to the partner who in turn provides the necessary 25 percent match. With this funding, construction improvements to the indoor firearms range at Michigan Technological University (MTU) in Houghton County were completed in August 2019. In addition, development of the new archery park in Ogemaw County, through cooperation with the Ogemaw Hills Sportsman's Association, was completed in March 2020. Review of new partner applications has been ongoing since early 2020. The DNR anticipates awarding the remainder of the grant funds by December 31, 2020 with projects being completed in 2021.

In 2020 the DNR completed the acquisition of a parcel of land in Roscommon County. In addition, a FY 2020 MNRTF grant was awarded for Roscommon Range development. The MNRTF grant will provide the required match for the new USFWS grant. DNR staff is in the process of reviewing the property and existing buildings. The DNR anticipates completing public input and finalizing design over winter 2021 with construction beginning in 2021 and completed in 2022. This range will offer one of the few 1,000-yard distance ranges in the Great Lakes area.

The DNR will complete site evaluation and design for a new range at the Barry State Game Area within Barry County during winter 2021. The DNR anticipates construction completion by July 2022. This project will be funded through the new five-year USFWS grant as well as a FY 2020 MNRTF grant.

DNR will be evaluating facilities and needs at both Island Lake and Bald Mountain ranges in 2021. These ranges are managed through a lease and have had little improvement over the last decade. The DNR plans to work with the lessee to come to a mutually agreeable solution that allows expansion of the existing buildings to create meeting space and accessibility improvements to the outdoor range and indoor restrooms.

In addition to range development and improvement activities, DNR staff evaluates target shooting occurrences on public land on an ongoing basis. In 2020, staff recommended that the Rogue River State Game Area in Kent County be closed to target shooting due to safety concerns and user conflicts. In addition, parts of the Muskegon State Game Area were recommended for closure due to safety concerns and user conflicts.

## **Objectives**

The overarching goal of the initial five-year USFWS grant was to expand and improve the number of public shooting ranges in Michigan with a strategic focus on addressing safety and conflict areas. This was achieved by:

- Physical improvements at existing, designated DNR-managed ranges
- Development of new DNR ranges in areas that are under-served
- Expansion of lease/concessionaire agreements to establish a staffing presence

- Provision of financial assistance to non-DNR partner ranges
- Adequate staffing of the DNR shooting range development program

These goals and efforts continue with the FY 2021 five-year USFWS grant. An additional goal of the FY 2021 five-year USFWS grant will be to continue the evaluation of target shooting occurrences on public land and completion of restoration at areas determined to not be suitable for target shooting.

The development of more robust statewide shooting range infrastructure will provide a broader network of opportunities for existing users and growing markets such as families, women, and children. With proximity to public ranges, customers will have easier access and additional options for hunter and shooting programs. Overall, this financial investment in Michigan will grow the number of public ranges, boost visits to shooting ranges, and perhaps increase the number of people participating in hunting sports.

Additional partnerships with local units of government, colleges and universities, and hunting and sporting groups will help expand public access to ranges throughout the state. In addition, expanding and improving partnerships will also result in groups being more involved in operational needs of the shooting ranges. Through the sharing and aligning of resources, the local groups will have access to improved ranges and the DNR will have confidence knowing these partners have a vested interest in the success of their investments.

## **Priorities**

Over the remaining years of the initial USFWS five-year grant period and the subsequent 5-year period of the new USFWS five-year grant, the intent is to focus on expanding shooting opportunities across the statewide network of ranges, both firearm and archery, that are open to the public. The new USFWS grant requires a 10 percent match from other funding sources. The required matching funds have already been secured, in the form of MNRTF grants, for many of the projects planned under the new USFWS grant. The remaining match will include partner in-kind match, private donations, and grants from the National Wild Turkey Federation and the National Rifle Association, and with General Fund support.

The DNR continues to provide the USFWS with site-specific information related to range projects prioritized for completion. This detail includes if the range is already designated; is located where shooting is already occurring on state land in an undesignated manner; or is an existing range operated by a third party but open to the public. Additional information to be provided includes:

- Scope of work statement
- Desired outcomes
- Cost estimate
- Construction documents such as plans and specifications
- Project partners

Priorities are identified by each land-managing division within the DNR based on opportunities as well as safety and conflict concerns. Locations targeted for improvements over the next three years include:

- Newly developed range sites in the following areas:
  - Marquette County
  - Barry State Game Area, Barry County
  - Roscommon County
- Modifications to existing range sites at the following locations:
  - Lake Superior Sportsman's Club Range, Ontonagon County
  - Bald Mountain Shooting Range, Oakland County
  - Island Lake Shooting Range, Livingston County

## **Programming Changes**

The DNR continues to keep range users up to date on events and programming through the GovDelivery function and a shooting range email distribution list. The DNR recently updated the Shooting Ranges

web page to improve information access for users. The DNR has also updated the web page to include all accessible ranges across the state. The DNR does not have any current or planned programming changes that are expected to impact its capital outlay needs or approach to managing infrastructure related to shooting ranges.

## INTERPRETIVE CENTERS

---

### General Background

The DNR operates ten visitor centers, seven at Michigan state parks, two at state fish hatcheries, and one at the Upper Peninsula State Fairgrounds. The visitor centers are generally staffed by full-time interpreters and roughly 25,000 hours of labor by seasonal employees. Tahquamenon Falls State Park is a site where a year-round interpretive program is run without a traditional visitor center. Generally, the DNR Marketing and Outreach Division (MOD) is responsible for programming while Fisheries Division and Parks and Recreation Division are responsible for major maintenance and capital improvements. However, MOD is responsible for both programming and maintenance at the DNR Pocket Park facility located on the Upper Peninsula State Fairgrounds. More than 400,000 people visit these centers annually.

Visitor Centers	
<b>State Parks</b>	
	Carl T. Johnson Hunting & Fishing Center – Mitchell State Park
	Eddy Discovery Center – Waterloo State Recreation Area
	Gillette Sand Dune Visitor Center – Hoffmaster State Park
	Michigan Forest Visitor Center – Hartwick Pines State Park
	Saginaw Bay Visitor Center – Bay City State Recreation Area
	Wilderness Visitor Center – Porcupine Mountains State Park
	Ludington Beach House Visitor Center – Ludington State Park
	Tahquamenon Falls State Park
<b>Fish Hatcheries</b>	
	Michigan Fisheries Visitor Center – Oden State Fish Hatchery
	Wolf Lake State Fish Hatchery Visitor Center

### Inventory/Assessment

An inventory of the DNR’s visitor centers has been completed. Assessments of the condition of the buildings are also performed by Fisheries Division and Parks and Recreation Division staff on an ongoing basis.

### Recent Accomplishments

No significant infrastructure or exhibit improvements were made in 2020. The reconstruction of the log porch on the classroom building and re-roofing on the shooting ranges at the Pocket Park at the Upper Peninsula State Fairgrounds occurred in 2019. Other recent visitor center improvements include new aquariums and other exhibits at the Ludington State Park Beach House in 2016.

### Priorities

The wear and tear of daily use, outdated messaging, and a general lack of interactive and engaging exhibits impede the ability of the DNR to encourage and sustain visits to the interpretive centers. Some examples are listed here:

- Major renovations (exhibits, carpet, lighting, etc.) to each park and hatchery visitor center are needed. Renovations should be accomplished on a rotational basis every year to keep centers relevant.
- The Saginaw Bay and Hartwick Pines Visitor Centers have each been open for 20 years without renovation. Auditoriums intended to tell the story of the park and the department have been closed at Hartwick Pines and the Porcupine Mountains due to a lack of functional audio-visual programming.
- The Eddy Discovery Center in Waterloo State Recreation Area was last renovated in 1999.
- Many of the original exhibits installed in the Porcupine Mountains State Park visitor center in 1983 are still in place. Exhibits in this visitor center are being removed without replacement.

In addition, wayside exhibits along trails and at prominent state park destinations are important and relatively inexpensive methods to inform visitors about special natural and cultural features within the

state parks, each of the state fish hatcheries and on Wildlife Viewing Areas and other state-managed lands around Michigan. The expected life of this type of exhibit is 10-15 years depending on the amount of sun exposure and other factors. Replacing a percentage of these exhibits each year is a priority for MOD.

### **Programming Changes**

Programming at the ten visitor centers has only been slightly modified from past years. This includes manipulating business hours and programming based on visitor surveys and feedback to meet DNR goals and visitor needs as efficiently as possible. None of the changes impact the Department's capital outlay needs or management approach involving infrastructure.

## **IMPLEMENTATION PLAN**

---

Capital outlay appropriations are needed to address priority infrastructure maintenance, repair, and improvement needs across the DNR. Repair and replacement of critical infrastructure that is rapidly aging and deteriorating has become increasingly difficult due to limited funding. Future appropriation requests will reflect the Department's best efforts to leverage available funding and selectively address infrastructure needs based on the priorities laid out in this plan. These priorities are consistent with the Department's capital outlay planning strategy and core strategic goals.

## APPENDIX G – MACKINAC STATE HISTORIC PARKS (MSHP) PROPERTIES AND RESOURCES

---

### I. MACKINAC ISLAND STATE PARK

- National Historic Landmark
- Originally Mackinac National Park (1875-1895)
- Michigan's first state park – 1895
- 1,773 acres, which is 82 percent of Mackinac Island
- Open all the time - 24 hours a day, 365 days a year
- Visitation - Serves 800,000 annual visitors to Mackinac Island, plus daily use by the 500 local residents
- Programs and Responsibilities:
  1. Care for historic buildings on state land
    - a. **Fort Mackinac** 1780-1895
      - Contains oldest buildings in Michigan
      - Outstanding collection of early Michigan artifacts and documents
      - Completely restored since 1958
      - Museum displays, A/V program, and living history programs
      - Major tourist attraction, with annual paid visitation of 210,000
    - b. Other historic buildings located outside Fort Mackinac, including: Biddle House, McGulpin House, Geary House, Fort Holmes, Beaumont Memorial, The Richard and Jane Manoogian Mackinac Art Museum at the Indian Dormitory, Mission Church and Mission House, Island House, Life Saving Station, Governor's Summer Residence
    - c. Supervision and regulation of privately-owned historic houses on state-leased land
  2. Operate Visitor's Center and provide public restrooms for park visitors
  3. Care for natural environment containing forest and wetlands
  4. Maintain 70.5 miles of signed and interpreted roads and trails
  5. Maintain M-185 in cooperation with Michigan Department of Transportation
  6. Provide dock for major construction activities
  7. Operate and maintain year-round airport with a lighted 3,500-foot runway, parallel taxiway, and staffed terminal
  8. Provide land for Island infrastructure systems: water, wastewater, landfill, fire station, and cemeteries
  9. Provide security and public safety:
    - a. Promulgate and enforce state park rules
    - b. Provide police protection through arrangements with state police, county sheriff, city police, and conservation officers
    - c. Assist with fire protection through contract with local municipality, by plowing all streets in the winter, providing two fire engines, and providing land for fire station
  10. License commercial horse-drawn transportation, including fifty-five sightseeing carriages, seventeen taxicabs, eighteen drive-yourself carriages,

and twenty-one livery carriages

11. Acquire (by gift or purchase) additional lands and historic properties, conservation and historic easements, and development rights
12. Lease lands for recreational activities, including golf courses and Great Turtle Park
11. Grant franchises for electricity and cable television
12. Maintain Executive summer residence
13. Maintain and operate Mackinac Island Scout Service Camp, serving 700 boy and girl scouts annually
14. Provide professional historical expertise to local community

## II. MICHILIMACKINAC STATE PARK

- Located in Mackinaw City
- Michigan's second state park
- Thirty-seven acres with 2,100 feet of Great Lakes shoreline
- Programs and Responsibilities:
  1. Reconstruct **Colonial Michilimackinac**
    - a. Site of eighteenth-century fur trading community (1715-1780)
    - b. Major archaeological excavation (1959-present) with over one million artifacts recovered
    - c. Reconstructed palisades and twelve structures
    - d. Museum displays, A/V program, living history programs
    - e. Major tourist attraction, with annual visitation of 100,000
    - f. Museum open May 15-October 15
    - g. National Historic Landmark
  2. Restore **Old Mackinac Point Lighthouse**
    - a. Operated as a lighthouse from 1892-1957
    - b. Includes fog signal building, barn, and associated grounds
    - c. Ongoing restoration, with museum displays, live interpretation, and tours of the light tower
    - d. Major tourist attraction, with annual visitation of 30,000
  3. Operate Visitor's Center and provide public restrooms for park visitors
  4. Provide picnic and bridge viewing areas

## III. HISTORIC MILL CREEK STATE PARK

- National Register Historic Site
- Site of **Historic Mill Creek Discovery Park**
- Located four miles east of Mackinaw City on U.S. 23
- 625 acres with 3,250 feet of Great Lakes shoreline
- Open May 15-October 15, with an annual paid visitation of 40,000
- Programs and Responsibilities:
  1. Site of first industrial site in Northern Michigan (1790-1839)
  2. Major archaeological site with ongoing excavations
  3. Reconstruction and interpretation of Historic Mill Creek Discovery Park: mill dam, sawmill, British workshop, millwright's house, three miles of nature trails with interpretive signs, high ropes course activities integrated with natural history interpretation program
  4. Visitor's Center and concession building with museum exhibits and A/V program

5. Maintenance of natural environment, including a prime trout stream and beaver pond

IV. ADMINISTRATIVE AND RESEARCH OFFICE

- Summer administrative office on Mackinac Island; Winter administrative office in Mackinaw City
- Historical research facility (Petersen Center) in Mackinaw City
  1. 80,000 books, plans, maps, archival documents, photographs, and slides
  2. Archaeological laboratory and artifact storage area with over 1,000,000 artifacts in Mackinaw City
- Historic object storage area (Heritage Center) on Mackinac Island includes original furnishings, decorative arts, tools, firearms, photographs, glass plate negatives, and surface-find artifacts
