

Trapnet locations – December 5, 2016

These are the latitude/longitude coordinates in degrees and decimal minutes units for state-licensed commercial fishing trapnets in central Lake Huron. These coordinates can be converted from degrees and decimal minutes to 'degrees minutes seconds' or to other units by visiting this convenient [online tool](#). These nets are limited to state-licensed operations. Tribal commercial nets permitted north of Thunder Bay, Lake Huron under the 1836 Consent Decree are not included in this list of net locations. Also state-licensed commercial net locations in Saginaw Bay or off of Oscoda are not listed here. This listing is intended to assist anglers fishing with downriggers and other gear to avoid trapnet entanglement. These coordinates are provided by the state-licensed commercial fishers and shared here by the DNR.

IMPORTANT: There is some degree of error with all GPS equipment and thus these coordinates should be considered as approximate. These coordinates are not a substitute for due-diligence by all boaters and anglers to visually watch for net buoys and to avoid those locations. The Michigan DNR makes no warranty or guarantee to the accuracy of these net location coordinates and reminds users that other nets may exist for which GPS coordinates are not provided here.

Latitude (Degrees Decimal minutes)	Longitude (Degrees Decimal minutes)
44 51.423	083 15.614
44 51.132	083 15.132
44 54.838	083 17.569
