

SCRAP TIRE MARKET PARTICIPANT DIRECTORY

MICHIGAN DEPARTMENT OF
ENVIRONMENT, GREAT LAKES, AND ENERGY

INTRODUCTION

Michigan's Scrap Tire Program, managed by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) has two primary objectives: 1) to protect human health and the environment through oversight and enforcement of the state's scrap tire (statute Part 169, Scrap Tires, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended) and 2) to support the development of markets and beneficial enduses of scrap tire products.

The Scrap Tire Market Participant Directory provides a resource for municipalities and market participants in Michigan and the Midwest that supports EGLE's dual objectives of end of life tire management and market development. The directory provides a concise listing of service providers ranging from collectors/transporters/processors to companies that generate end-use products. The directory is organized by state.

DISCLAIMER

Listing of companies in this directory does not imply an endorsement of a particular business nor any knowledge of a company's compliance status with state regulations. Information is subject to change.

SOURCES

Independent research and data from the Scrap Tire and Rubber Users Directory, 28th edition, 2019. Published by the Recycling Research Institute, Scrap Tire News (Ms. Mary Sikora)

DEFINITIONS OF SCRAP TIRE REUSE MARKETS

COLLECTOR/TRANSPORTER:

Retrieves tires from local source of whole scrap tires and/or serves as collecting point for drop-off; transports tires to companies that process tires for end-use products and applications.

FUEL USERS:

Facility that uses whole or processed scrap tires for fuel in its operations; includes industrial kilns, paper mills, boilers, and cement plants.

MATERIALS AND TECHNOLOGY SUPPLIER:

Provides a broader array of specialty services and equipment that support the scrap tire market; products and services may include tire wire and fiber recycling, reprocessing, colorants, processing equipment, cryogenic equipment, devulcanization, surface modification, civil engineering, and pyrolysis.

PROCESSOR:

Receives tires from collector for purposes of sorting for reuse, shredding, or other similar operations, ultimately providing either end-use materials or feedstock for next-step participants in the value chain.

RECYCLED RUBBER PRODUCTS:

Produce numerous products for end use, including automotive parts, construction mats, flooring, landscape, athletic fields, and roofing; subcategories are identified via listed abbreviations.

RUBBER MODIFIED ASPHALT:

Produces crumb rubber and additives necessary for creation of rubber modified asphalt.

RUBBER RECYCLER:

Offers a variety of services including custom grinding, compounding and product and materials mix design; these companies handle both tire-derived and non-tire-derived rubber materials.
