

26. Has Michigan, or have other jurisdictions, incentivized energy storage technologies or included energy storage in a renewable or clean energy standard? Why or why not?

Michigan provides incentives for energy storage in Section 39 of Act 295 in the form of incentive RECs. To date, only the Ludington Pumped Storage Facility has qualified for these incentive RECs.

The self-generation program in California provides incentives for advanced energy storage to those who install their own generation. No programs for storage incentive were found for Michigan's neighboring states.
