

**Summary of
Michigan Department of Environment, Great Lakes, and Energy
Actions in Response to the
United States Environmental Protection Agency
Emergency Administrative Order
Updated: 12/30/2019**

EXECUTIVE SUMMARY:

The United States Environmental Protection Agency (USEPA) Emergency Administrative Order contains 15 overall items to be addressed by the Michigan Department of Environment, Great Lakes, and Energy (EGLE). This update includes status only on items for which progress was made in the last week. It is anticipated that the next update to this summary will be provided on Monday, January 6, 2020.

Paragraph 59 A: LCR Compliance

- The city of Flint (City) continues to make progress on collecting samples for the current LCR monitoring period July 1-December 31, 2019. They have submitted 120 samples and will continue to conduct excavations at these locations to confirm the service line material composition and acquire the requisite number of Tier 1 sites, which is 60.
- The City sent a letter to EGLE on December 27, 2019, requesting an extension for the reporting of the Lead and Copper Tap Monitoring, due January 10, 2020, and their Lead and Copper Sampling Plan, due January 1, 2020. The extension of time would allow the City to continue to identify the service line material at the residences where samples were collected for possible compliance and compile that information for the report. At the same time, the City would also be able to develop a list for future sites for their sampling plan.
