**VIA E-MAIL**

Mr. Clyde Edwards, City Administrator  
City of Flint  
1101 South Saginaw Street  
Flint, Michigan 48502

WSSN: 02310  
City of Flint

Dear Mr. Edwards:

**SUBJECT:** Review of Technical, Managerial, and Financial (TMF) Update for the  
City of Flint (Flint)

Thank you for your September 11, 2020, update to Flint's TMF report as required by the Voluntary Agreement between Flint and the State of Michigan (SOM). We understand this update was the result of a comprehensive review of Flint's finances.

In general, the SOM supports the approach presented in the TMF update and looks forward to Flint making progress in utilizing the current water fund balance to further the improvement of the water supply. We appreciate the different approaches taken in the report; however, it appears the cash flow calculations should be what Flint bases its hiring and investment strategy on. We highly encourage Flint to follow the recommendations outlined in the Arcadis report and used in the TMF update. We also encourage Flint to implement its standard operating procedures as soon as possible, but especially those governing valve inspection, testing and maintenance; unidirectional flushing, and conventional flushing for water turnover. Flint should initiate hiring of vacant staff positions at the earliest opportunity or execute a contract to provide those services. We look forward to Flint's implementation of the actions outlined in the report, specifically hiring all vacant positions in 2021 and hiring new positions in 2021 and 2022. The current vacancies are resulting in less operating expenses and artificially inflating the water fund balance. The vacant positions are critical to the proper management of the water supply and must be filled as soon as possible.

We highly encourage Flint to explore all avenues to improve the water fund's financial standing and ensure the water supply is self-sufficient. Flint must continue the installation of new, tamper resistant, water meters to improve its current collection rate. Although a rate increase is not a popular option, it should not be taken out of consideration if all other measures fail. Adequate water rates are critical to self-sustaining water supplies and should be based on solid asset management principles.

Mr. Clyde Edwards
