R 336.2103a Applicability of rules for mercury emissions.

Rule 1103a. (1) R 336.2104 and R 336.2160 do not apply to affected EGUs for which the federal MATS, adopted by reference in R 336.2502, is an applicable requirement relative to emissions of mercury.

(2) If the federal MATS ceases to be an applicable requirement as to affected EGUs, R 336.2104 and R 336.2160 shall apply beginning with the third calendar month following the termination of the federal

Annual Administrative Code Supplement
2014 Edition

MATS as an applicable requirement or April 16, 2015, whichever is later.

(3) R 336.2104 and R 336.2160 are rescinded 60 days after the entry of a final judgment or order from which no further appeal or review is taken or available in *White Stallion v EP*, No. 12-1100 (D.C. Circuit), upholding the provisions of the federal MATS relative to emissions of mercury.

History: 2014 MR 9, Eff. May 7, 2014.

R 336.2104 Continuous emission monitoring; coal-fired electric generating units at a power plant.

Rule 1104. Unless the federal MATS is an applicable requirement, an affected EGU shall meet both of the following requirements:

(a) Except as provided in R 336.2160, a unit that serves a generator with a nameplate capacity of more than 25 megawatts producing electricity for sale shall install, calibrate, maintain, and operate a continuous monitoring system or a sorbent trap monitoring system for the measurement of mercury.

(b) The owner or operator of any source subject to the provisions of subdivision (a) of this rule shall complete the installation and performance tests of the equipment required by subdivision (a) of this rule and shall begin monitoring and recording by April 16, 2015.

History: 2009 AACs; 2014 MR 9, Eff. May 7, 2014.

R 336.2150 Performance specifications for continuous emission monitoring systems.

Rule 1150. (1) The monitoring equipment required by R 336.2101, R 336.2102, R 336.2103, and R 336.2104 shall be demonstrated by the owners or operators of the monitoring equipment to meet all of the following performance specifications:

(a) Continuous monitoring systems for measuring opacity shall comply with performance specification 1 of appendix B to 40 C.F.R. Part 60, adopted by reference in R 336.1299.

(b) Continuous monitoring systems for measuring nitrogen oxides shall comply with performance specification 2 of appendix B to 40 C.F.R. Part 60, adopted by reference in R 336.1299.

(c) Continuous monitoring systems for measuring sulfur dioxide shall comply with performance specification 2 of appendix B to 40 C.F.R. Part 60, adopted by reference in R 336.1299.

(d) Continuous monitoring systems for measuring oxygen shall comply with performance specification 3 of appendix B to 40 C.F.R. Part 60, adopted by reference in R 336.1299.

(e) Continuous monitoring systems for measuring carbon dioxide shall comply with performance specification 3 of appendix B to 40 C.F.R. Part 60, adopted by reference in R 336.1299.

(f) Continuous monitoring for measuring stack gas volumetric flow shall comply with the requirements of 40 C.F.R. Part 75, §75.20(c) and appendix A and B, adopted by reference in R 336.1802a, or performance specification 6 of appendix B to 40 C.F.R. Part 60, adopted by reference in R 336.1299.

(g) Continuous monitoring for total vapor phase mercury emissions using a sorbent trap monitoring system shall comply with performance specification 12B of Appendix B to 40 C.F.R. Part 60, adopted by reference in R 336.1299.

(h) Continuous monitoring for total vapor-phase mercury emissions using a mercury continuous emission monitoring system shall comply with performance specification 12A of Appendix B to 40 C.F.R. Part 60, adopted by reference in R 336.1299.

(i) ASTM D6784-02, "Standard Test Method for Elemental, Oxidized, Particle Bound and Total Mercury in Flue Gas Generated from Coal Fired Stationary Sources (Ontario Hydro Method)."

(2) The test method in subrule (1)(i) of this rule is adopted by reference. A copy of the test method ASTM D6784-02 is available for inspection and purchase at the Department of Environmental Quality, Air Quality Division, 525 West Allegan Street, P.O. Box 30260, Lansing, Michigan 48909-7760, at a cost as of the time of adoption of this rule of \$57.00. A copy may also be obtained from the ASTM International, 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, Pennsylvania 19428-2959; the ASTM website at www.astm.org or ASTM customer service at service@astm.org; at a cost of the time of adoption of this rule of \$47.00.

R 336.2151 Calibration gases for continuous emission monitoring systems.

Rule 1151. (1) For nitrogen oxide monitoring systems installed on fossil fuel-fired steam generators, the pollutant gas used to prepare calibration gas mixtures shall be nitric oxide.

(2) For sulfur dioxide monitoring systems installed on fossil fuel-fired steam generators or sulfuric acid plants, the pollutant gas used to prepare calibration gas mixtures shall be sulfur dioxide.

Annual Administrative Code Supplement
2014 Edition

(3) Span and zero gases shall be traceable to national bureau of standards reference gases when these reference gases are available. Every 6 months from the date of manufacture, span and zero gases shall be reanalyzed by conducting triplicate analyses using the reference method in appendix A of 40 C.F.R. Part 60, adopted by reference in R 336.1299, as follows:

(a) For sulfur dioxide, use reference method 6.

(b) For nitrogen oxides, use reference method 7.

(c) For carbon dioxide and oxygen, use reference method 3. The gases may be analyzed at less frequent intervals if longer shelf lives are guaranteed by the manufacturer.

History: 1980 AACS; 1989 AACS; 2014 MR 9, Eff. May 7, 2014.

R 336.2152

Source: 1980 AACS.

R 336.2153 Zero and drift for continuous emission monitoring systems.

Rule 1153. (1) The owner or operator of any continuous emission monitoring system required by this part shall do all of the following:

(a) Subject the instruments to the manufacturer's recommended zero and span check at least once daily, unless the manufacturer has recommended adjustments at shorter intervals, in which case such recommendations shall be followed.

(b) Adjust the zero and span when the 24-hour zero drift or 24-hour calibration drift limits of the applicable performance specifications in appendix B of 40 C.F.R. Part 60, adopted by reference in R 336.1299, are exceeded.

(2) Calibration gases used pursuant to the provisions of subrule (1) of this rule shall meet the requirements of R 336.2151.

History: 1980 AACS; 1989 AACS; 2014 MR 9, Eff. May 7, 2014.

R 336.2154

Source: 1980 AACS.

R 336.2155 Monitor location for continuous emission monitoring systems.

Rule 1155. (1) The owner or operator of a source subject to provisions of this part shall install the required continuous monitoring systems or monitoring devices such that representative measurements of emissions or process parameters from the affected facility are obtained.

(2) When the effluents from 2 or more affected facilities of similar design and operating characteristics are combined before being released into the atmosphere, the owner or operator of a source subject to the provisions of this part may install monitoring systems on the combined effluent. When the affected facilities are not of similar design and operating characteristics, or when the effluent from 1 affected facility is released into the atmosphere through more than 1 point, the owner or operator shall establish alternate procedures to implement the intent of these requirements subject to approval by the department.

R 336.2157 Quality assurance requirements for continuous emission monitoring systems.

Rule 1157. (1) The monitoring equipment required by R 336.2101, R 336.2102, R 336.2103, and R 336.2104 shall perform continuing quality control procedures in accordance with Part 60 Appendix F, adopted by reference in R 336.1299. Monitors installed and certified in accordance with Part 74 Appendix A, adopted by reference in R 336.1802a, and meeting the continuing quality control requirements of Part 75 Appendix B are exempt from the requirements of Part 60 Appendix F.

(2) A continuous stack gas volumetric flow monitor installed for R 336.2104 shall perform continuing quality control in accordance with the applicable quality control and quality assurance requirements of 40 C.F.R. §75.21 and Part 75 Appendix B or Part 60 Appendix F.

Annual Administrative Code Supplement
2014 Edition

R 336.2160 Mercury low mass emitter monitoring methodology.

Rule 1160. (1) Unless the federal MATS is an applicable requirement, beginning April 16, 2015, the monitoring methodology shall meet all of the requirements of this rule.

(2) The owner or operator of an affected unit that emits less than 464 ounces (29 pounds) of mercury per year may use the mercury low mass emitter monitoring methodology after performing initial certification testing. The owner or operator of the affected unit shall perform the initial certification testing and ongoing quality assurance as described in subrules (2) and (3) of this rule. The initial test shall be performed within 60 days of the effective date of these rules or 90 days prior to the compliance date, whichever is later.

(3) For the initial certification testing, the following shall apply:

(a) The owner or operator shall perform mercury emission testing to determine the mercury concentration, for example, total vapor-phase mercury, in the effluent.

(b) Testing shall be performed using 1 of the following mercury reference methods: ASTM D6784-02, adopted by reference in R 336.2150, Method 29, method 30A, or method 30B of Part 60, adopted by reference in R 336.1299. A test shall consist of a minimum of 3 runs at maximum routine load while firing fuel or fuels with the highest mercury content.

(c) The minimum run time shall be 1 hour if method 30A is used. If method 29, ASTM D6784-02, or method 30B is used, paired samples are required for each test run and the runs shall be long enough to ensure that sufficient mercury is collected to analyze. When method 29 or ASTM D6784-02 is used the test results shall be based on the vapor-phase mercury collected in the back half of the sampling train. For each method 29, ASTM D6784-02, or method 30B test run, the paired trains shall meet the relative deviation requirement specified in method 30B. If the relative deviation specification is met, the result of the 2 samples shall be averaged arithmetically.

(d) If the unit is equipped with flue gas desulfurization or add-on mercury emission controls, the controls shall be operating normally during the testing, and for the purpose of establishing proper operation of the controls, parametric data shall be recorded.

(e) A complete test plan and test notification shall be provided to the department 30 days prior to the testing.

(4) Based on the results of emission testing, the following equation shall be used to provide a conservative estimate of the annual mercury mass emissions for the unit:

$$E = N \cdot K \cdot \text{CHg} \cdot Q_{\text{mass}}$$

Where:

E = Estimated annual mercury mass emissions in ounces per year.

N = 8760 hours or the maximum number of operating hours per year allowed by the unit's federally enforceable permit.

K = 9.978 x 10⁻¹⁰ ounces-scm/ μ g-standard cubic foot (scf).

CHg = Highest mercury concentration (μ g/scm) from any test run or 0.05 μ g/scm, whichever is greater.

Q_{mass} = Maximum potential flow rate.

(a) If the estimated annual mercury mass emissions are 464 ounces per year or less, the unit is eligible to use the monitoring methodology of this rule, and mercury continuous emission monitoring is not required.

(b) The results of the testing performed under this rule shall be submitted as a certification application to the department, not later than 45 days after the test is completed. The calculations demonstrating that the unit emits less than 464 ounces per year shall be provided, and the default mercury concentration that will be used for mercury mass emission reporting shall be specified.

(c) Following initial certification the following steps shall be taken:

(i) The default mercury concentration used to estimate the unit's annual mercury mass emissions shall be reported for each unit operating hour and shall be used to calculate hourly mercury emissions.

(ii) The mercury emission testing described in this rule shall be repeated periodically for the purpose of quality assurance, as follows:

(A) If the results of the certification testing under this rule show that the unit emits 144 ounces (9 pounds) per year or less, the first retest is required by the end of the fourth quarter following the calendar quarter of the certification test.

(B) If the results of the certification test under this section show that the unit emits more than 144 ounces per year but less than 464 ounces per year, the first retest is required by the end of the second quarter following the calendar quarter of the certification test.

(C) Retesting shall be required either by the end of the second or fourth quarter following the quarter of the previous test, depending on the results of the previous test. To determine whether the next retest is required within 2 or 4 quarters, substitute the highest mercury concentration from the current test or 0.50 μ g/scm, whichever is greater, into the equation under subrule (3) of the rule. If the estimated annual mass emissions exceed 144 ounces, the next test is due within 2 quarters. If the estimated annual mass emissions are 144 ounces or less, the next test is due within 4 quarters.

(d) The updated mercury default concentration shall be applied beginning with the first unit operating hour after the completion of the retest.

Annual Administrative Code Supplement
2014 Edition

(e) If the unit is equipped with flue gas desulfurization system or add-on mercury controls, the owner or operator shall record the parametric data for each unit operating hour.

(f) An additional retest is required when there is a change in coal rank of the primary fuel or other significant fuel change.

(g) At the end of each calendar year, if the cumulative annual mercury mass emission from an affected unit exceeds 464 ounces, the owner or operator shall install, certify, operate, and maintain a mercury continuous emission monitoring system, or sorbent trap monitoring system, not later than 180 days after the end of the calendar year in which the emissions exceeded 464 ounces.

History: 2009 AACS; 2014 MR 9, Eff. May 7, 2014.

R 336.2170 Monitoring data reporting and recordkeeping.

Rule 1170. (1) The owner or operator of any continuous emission monitoring system required by this part shall submit to the department, within 30 days of the end of a calendar quarter, a written report for each calendar quarter which shall include all of the following information:

(a) Excess emissions and the nature and cause of the excess emissions, if known, as follows:

(i) For opacity measurements, the report shall consist of the magnitude, in actual percent opacity, of all 6-minute averages of opacity more than the applicable opacity standard for each hour of operation (all allowable exceptions are to be deducted before determining the excess averages of opacity). Average values shall be obtained by integration over the averaging period or by arithmetically averaging a minimum of 24 equally spaced, instantaneous opacity measurements per 6 minutes.

(ii) For gaseous measurements, the report shall consist of emission averages, in the units of the applicable standard, for each averaging period during which the applicable standard was exceeded.

(b) The date and time identifying each period during which the continuous monitoring system was inoperative, except for zero and span checks, and the nature of repairs or adjustments made.

(c) If the continuous monitoring system has been inoperative, repaired, or adjusted, and if no excess emissions occurred, include a statement attesting to this fact.

(2) The owner or operator of any continuous emission monitoring system required by this part shall maintain a file of all information reported in the quarterly reports and all other data collected, either by the continuous monitoring system or as necessary to convert monitoring data to the units of the applicable standard, for a minimum of 2 years from the date of collection of the data or submission of the reports.

History: 1980 AACS; 2002 AACS; 2014 MR 9, Eff. May 7, 2014.

R 336.2175 Data reduction procedures for fossil fuel-fired steam generators.

Rule 1175. (1) The owner or operator of a fossil fuel-fired steam generator that is subject to the provisions of this part shall convert gaseous emission monitoring data in parts per million to pounds per million Btu's using either of the following procedures:

(a) When the owner or operator elects to measure oxygen in the flue gases, the measurements of the pollutant concentration and oxygen concentration shall each be on a consistent basis (wet or dry). When measurements are on a dry basis, the following conversion procedure shall be used:

$$E = CF \left(\frac{20.9}{20.9 - \% O_2} \right)$$

When measurements are on a wet basis, alternative procedures approved by the department shall be used.

(b) When the owner or operator elects to measure carbon dioxide in the flue gases, the measurements of the pollutant concentration and carbon dioxide concentration shall each be on a consistent basis (wet or dry) and the following conversion procedure shall be used:

$$E = CF_c \left(\frac{100}{\% C O_2} \right)$$

(2) The values used in the equations in subrule (1) of this rule shall be derived as follows:

(a) "E" is the pollutant emission in pounds per million Btu's.

(b) "C" is the pollutant concentration in pounds per dry standard cubic foot determined by multiplying the average concentration, in parts per million, for each hourly period by 2.59×10^{-9} M pounds per dry standard cubic foot per part per million where M is the pollutant molecular weight in pounds per pound mole (M equals 64.07 for sulfur dioxide and 46.01 for oxides of nitrogen).

Annual Administrative Code Supplement
2014 Edition

(c) "% O₂" or "% CO₂" is the oxygen or carbon dioxide volume, expressed as percent, determined with equipment required by R 336.2101.

(d) "F" or "Fc" is a factor representing a ratio of the volume of dry flue gases generated to the calorific value of the fuel combusted (F) or a factor representing a ratio of the volume of carbon dioxide generated to the calorific value of the fuel combusted (Fc). Values of F and Fc are listed in the standards of performance for new stationary sources, 40 C.F.R. §60.45(f), adopted by reference in R 336.1299.

R 336.2176 Data reduction procedures for sulfuric acid plant.

Rule 1176. The owner or operator of a sulfuric acid plant that is subject to the provisions of this part shall do both of the following:

(a) Establish a conversion factor 3 times daily according to the procedures in the standards of performance for new stationary sources, 40 C.F.R. Part 60.84(b), adopted by reference in R 336.1299.

(b) Multiply the conversion factor by the average sulfur dioxide concentration in the flue gases to obtain the average sulfur dioxide emissions in pounds per short ton.

Rule 1199. The requirements of R 336.2101, R 336.2102, and R 336.2103 do not apply to either of the following:

(a) A source subject to a new source performance standard promulgated in the standards of performance for new stationary sources, 40 C.F.R. Part 60, adopted by reference in R 336.1299.

(b) A source is not subject to an applicable emission standard.

R 336.2413 Waivers to commence construction and operation.

Rule 1413. (1) Before the approval of a permit to install required pursuant to these rules, a clean corporate citizen may request a department waiver to proceed with construction and, if desired, operation of process or process equipment at an existing stationary source. The request for a waiver shall be in writing, shall be accompanied by an administratively complete application for a permit to install, shall not include proposed process or process equipment prohibited by federal requirements from commencing construction or operation before issuance of an approved permit, and shall be signed by the owner or the owner's authorized agent. The request for a waiver shall be automatically approved 15 calendar days after receipt of the request and required information, unless, within the 15-calendar-day period, either the request is denied in writing for cause by the department or an extension of up to 15 additional calendar days is specified in writing by the department. If the time period is extended, the request for a waiver shall be automatically approved at the end of the extended time period, unless the request for a waiver is denied by the department within the extended time period.

(2) If a waiver is approved, the clean corporate citizen applicant shall comply with all of the following provisions:

(a) Submit all pertinent information, including plans and specifications, necessary for a technically complete application for a permit to install as soon as is reasonably practical.

(b) Be authorized to proceed to construct and operate the process or process equipment according to the terms of the approved waiver at the applicant's own risk.

(c) Comply with all federal, state, and local air quality requirements applicable to the process or process equipment covered by the approved waiver at all times. The applicable requirements may include, but not be limited to, any of the following:

(i) Emissions limitations.

(ii) Operation limitations.

(iii) Fuel limitations.

(iv) Emissions testing.

(v) Continuous emissions monitoring.

Annual Administrative Code Supplement
2014 Edition

(vi) Notifications.

(vii) Recordkeeping.

(3) Operation of the process or process equipment under a waiver does not relieve the applicant from civil fines for violations of the provisions in subrule (2)(a) to (c) if any of the following are met:

(a) The applicant failed to act promptly to correct the violations after discovery.

(b) The applicant failed to report the violations to the department within 24 hours of discovery.

(c) The violations pose or posed a substantial endangerment to the public health, safety, or welfare.

(d) The violations were intentional or occurred as a result of the applicant's gross negligence.

(4) The term of the initial waiver shall be for the period requested, but not more than 1 year from the date the request is received by the department. After a waiver to construct or operate is approved pursuant to subrule (1) of this rule, the clean corporate citizen permit applicant may apply for 1 extension to the term of the initial waiver. A waiver extension application shall be in writing, shall state the reasons for the need of the extension, shall be submitted not later than 30 days before the end of the term of the initial waiver, and shall be signed by the owner or the owner's authorized agent. The waiver extension application shall be acted upon by the department within 30 days of receipt of the extension application. The department shall determine the term of the extension, but the total term of the initial waiver plus extension shall not exceed 18 months.

(5) A waiver approved pursuant to subrule (1) of this rule shall be revoked by the department for cause, including, but not limited to, the termination of the permit applicant's clean corporate citizen designation or a finding by the department of noncompliance with applicable state or federal air quality requirements related to the process or process equipment, exclusive of the state requirement to obtain an approved permit prior to construction or operation of the process. The applicant shall have an opportunity to present information to the department before revocation action is taken. A waiver revocation shall be in writing by the department. There is no formal appeal of the department's revocation decision.

(6) A clean corporate citizen may operate a process or process equipment pursuant to a waiver to operate approved pursuant to subrule (1) of this rule until 1 of the following occurs:

(a) The permit to install for the process or process equipment is approved, at which time the waivers approved pursuant to subrule (1) of this rule become void.

(b) The term of the approved waiver and extension, if applicable, expires.

(c) The permit for the process or process equipment is denied, at which time the waivers approved pursuant to subrule (1) of this rule become void.

(d) The waiver is revoked by the department.

(7) The department shall deny a permit to install after a waiver has been granted or approved pursuant to subrule (1) of this rule if the information, including plans and specifications, provided by the applicant shows that cause exists for denial pursuant to section 5510 of the act or if the applicant has not provided the information necessary for a technically complete application in a timely manner. An appeal of a denial shall be made pursuant to section 5505(8) of the act.

History: 1997 AACCS; 2014 MR 18, Eff. September 24, 2014.

R 336.2414 Rescinded.

History: 1997 AACCS; 2014 MR 18, Eff. September 24, 2014.

R 336.2415 Plantwide applicability limit permit for clean corporate citizen.

Rule 1415. (1) A clean corporate citizen may request that the department issue a plantwide applicability limit permit that establishes a federally enforceable emissions cap for 1 or more pollutants at an existing stationary source pursuant to this rule.

(2) For a clean corporate citizen, the department may, after notice and opportunity for public participation pursuant to section 5516 of the act, issue a plantwide applicability limit permit to install which includes terms and conditions necessary to assure compliance with applicable air quality regulations at the stationary source and which allows the clean corporate citizen to undertake changes, without a permit to install, as long as compliance with the plantwide applicability limit permit is maintained.

(3) A clean corporate citizen may request that the plantwide applicability limit permit establish an emissions cap set equal to actual emissions plus the significant emissions for each pollutant being considered in the plantwide applicability limit application. Alternatively, the plantwide applicability limit permit may, at the request of a clean corporate citizen, establish an emissions cap set equal to existing allowable emissions, if the levels of the emissions are consistent with state and federal requirements.

(4) In addition to the information required by R 336.1203 and other applicable rules, an application for a plantwide applicability limit permit pursuant to this rule shall include all of the following information:

(a) Identification of all past technology determinations that are the basis for existing emission and operation limitations at the stationary source.

Annual Administrative Code Supplement
2014 Edition

(b) Identification of the plantwide applicability limit requested and supporting documentation for both the point and fugitive emissions to be included in the plantwide applicability limit permit.

(c) For a plantwide applicability limit permit based on existing allowable emissions, identification of all emissions offsets previously provided for the stationary source.

(d) The proposed recordkeeping, monitoring, and reporting that would be used to demonstrate compliance with the emissions cap and any individual technology limitations that are to be maintained within the plantwide applicability limit permit.

(e) A proposed periodic review process that describes the mechanism for making adjustments to the plantwide applicability limit permit limits for cause. An example of cause is a new applicable requirement.

(f) The proposed procedure to be followed to ensure a clean corporate citizen does not modify the stationary source to exceed the emissions cap in the plantwide applicability limit permit.

(g) The proposed procedure to ensure that a clean corporate citizen does not modify the stationary source to cause or contribute to violations of the national ambient air quality standards.

(5) The department shall not approve a plantwide applicability limit permit to install if any of the conditions in R 336.1207 (1)(a) to (d) exist.

(6) The department shall not approve a plantwide applicability limit permit to install unless the permit provides for all of the following:

(a) A requirement that the clean corporate citizen notify the department of the commencement of construction and operation for either of the following for which a permit to install is not required pursuant to the plantwide applicability limit permit:

(i) A source subject to standards of performance for new stationary sources or national emission standards for hazardous air pollutants.

(ii) A source that has the potential to emit more than 50% of the prevention of significant deterioration significance level.

(b) A requirement that, before the addition of new process or process equipment, other than process or process equipment exempted by R 336.1278 to R 336.1290, a clean corporate citizen shall determine that the proposed new process or process equipment is in compliance with the provisions of R 336.1224 and R 336.1225.

(c) A requirement that a clean corporate citizen is not relieved of the responsibility of complying with applicable control technology requirements.

(d) Limits on a pollutant-specific basis and limits on other air contaminants that are not included in the emissions cap.

(e) Recordkeeping, monitoring, and reporting requirements necessary to assure compliance with the plantwide applicability limit permit.

(f) A future review of the plantwide applicability limit permit and the conditions that could affect the limit or limits.

(g) A requirement that a clean corporate citizen shall comply with all applicable air quality regulations, except for the requirement to obtain a permit to install pursuant to R 336.1201.

(h) A provision for reopening the terms and conditions of a plantwide applicability limit permit if a clean corporate citizen's designation is terminated pursuant to MCL 324.1417.
