

Rural Rescue's Michigan Agricultural Accident Systems Farm Rescue Course

<http://www.ruralrescue.com>

Overview - The Farm Rescue Operations course is a comprehensive farm accident rescue course based on real life agricultural accidents. Currently, no training is required of emergency responders for dealing with agricultural accidents. However, specialized training and experience is vital for developing effective response and management of agricultural accident scenes.

Program Goal - The goal of this program is to improve rescue efficiency at a farm scene accident and thereby positively impact patient outcomes. Agriculture is the largest and most dangerous industries in the state, therefore the objective of the training is to improve responder's awareness of agricultural accident hazards and rescue techniques.
