NEW MAXIMUM THC CONCENTRATIONS FOR MARIHUANA-INFUSED PRODUCTS

The Bureau of Medical Marihuana Regulation (BMMR) enforce the Administrative Rules under the authority of the Medical Marihuana Facilities Licensing Act (MMFLA).

Administrative Rule 62 (R 333.262) states that marihuana-infused products processed, sold, or transferred through provisioning centers must not exceed the maximum THC levels as established by the department.

For the purposes of maximum THC levels for marihuana-infused products, the department shall publish a list of maximum THC concentration and serving limits.

These limits are listed below:

Type of Marihuana-infused Product	Maximum Concentration of active Delta 9 THC allowable per dose	Maximum Concentration of active Delta 9 THC allowable per container
Edible Product (gummies, baked good, etc.)	50 mg	200 mg
Ingestible Product (capsules, tinctures, etc.)	100 mg	2000 mg
Suppositories (vaginal or anal)	100 mg	2000 mg
Transdermal Patches	100 mg	2000 mg
Topicals (lubricants, spa products, lotions, balms or rubs)	N/A	N/A
Inhalers	50 mg	200 mg
Pure oils or extracts meant for consumption	50 mg	500 mg
Products not listed	10 mg	100 mg

Changes from the previous Emergency Rules include:

- The limits were removed for topicals as they are not designed to be transdermal.
- The limits were lowered for edible max per package to be more in line with other states (Oregon, Washington).
- Package limits were increased for capsules to allow for more in the package.

November 30, 2018

- Dosages were added for products that did not have them; packages will now have clear directions and dosages to ensure patients do not over medicate.
- Patients typically start with 10mg servings; an allowance between 50mg -100mg allows a patient/caregiver to purchase higher strength medicine if needed.
