

STATE OF MICHIGAN  
DEPARTMENT OF AGRICULTURE  
AND RURAL DEVELOPMENT

RICK SNYDER  
GOVERNOR

JAMIE CLOVER ADAMS  
DIRECTOR

**DATE:** December 1, 2016

**TO:** Honorable Mike Green  
Honorable Nancy Jenkins

**FROM:** Matt Blakely, Legislative Liaison

**SUBJECT:** FY 2016 Michigan Agriculture Environmental Assurance Program Annual Report

---

In accordance with Public Act 118 of 2015, Sections 8710 (12), attached is the required report for the Michigan Agriculture Environmental Assurance Program Annual Report

Additional information regarding the grant program may be directed to Joe Kelpinski at (517) 284-5608. Questions regarding funding may be directed to Maria Tyszkiewicz at (517) 284-5722.

# Michigan Agriculture Environmental Assurance Program (MAEAP)

## 2016 Annual Legislative Report

Pursuant to reporting requirements stated in P.A. 118 of 2015, this report is filed with the legislature on behalf of the Michigan Department of Agriculture and Rural Development (MDARD) and the Michigan Agriculture Environmental Assurance Program (MAEAP). The following information is provided to satisfy specific reporting requirements outlined in the legislation. The information is presented in a manner consistent with the format laid out in P.A. 118 of 2015. In some instances, data is presented via attachments to this report to provide more concise information in a format that allows easier review.

The reporting language asks for single year, as well as historical totals for the program. Being the initial year of this report, the FY16 numbers will represent the single year as well as historical numbers for the program for most items. Some specific historical numbers are available and have been provided below dating back to 2002. Not all historical data being asked for in the 2015 legislation was captured in the past. In FY16, MAEAP worked to develop and implement a reporting database that will allow the program to accurately address these remaining items moving forward.

Beginning in February 2016, MAEAP staff met with the Michigan Department of Technology, Management & Budget (DTMB) to begin requirements gathering for a new reporting database for MAEAP. One key objective of the database was the ability to gather information for the program in a manner that allowed MAEAP to answer the specific questions asked for in the annual legislative report. These requirements were released for review in late March to several potential vendors. After receiving bids from three vendors, MAEAP selected Deloitte's Salesforce database software as the platform upon which this database would be built. Construction began in late April and continued into late September, when final testing and acceptance occurred. Training for users of the database began in early October. Training will continue for various users, and various aspects of the database, into FY17.

At this time, MAEAP technicians around the state are inputting participating farm information into the database. Existing information from MAEAP verified farms will be inputted into the database in FY17 by MDARD staff. Full population of the database is expected by early summer of FY17. At that time, MAEAP will be able to generate specific information related to this report, as well as information tailored for MAEAP partners to evaluate and utilize for their needs. This will allow not only numeric tabulation, but also visual representation of program

achievements and a comparison against metrics set to evaluate the effectiveness of the program.

**County and Statewide Total for FY16 for:**

- i. **Conservation Practices Implemented.** When MAEAP technicians work with farms, they don't separate their work into "type" of practice. Technicians report it as "Risk Reduction Practices." This number is inclusive of both Conservation Practices, such as a buffer or filter strip, as well as Technical Assistance Practices, which include things such as a spill kit or pesticide storage signage. As such, for FY16, the reported number represents the combined total of these two items. For FY16, there were 8,885 total risk reduction practices (the combination of technical assistance practices and conservation practices implemented on Michigan farms). The total for FY16 by county are itemized and organized in the attachment titled "***MAEAP Conservation and Technical Assistance Summary.***"
- ii. **Environmental Impacts of Practices Implemented.** Every year, MAEAP publishes a summary of environmental outcomes for the program. These outcomes are based on formulas utilized by the United States Department of Agriculture Natural Resources Conservation Service (NRCS) and the Michigan Department of Environmental Quality (MDEQ) to calculate the effects of conservation practice implementation. This information includes sediment reduction, nutrient loss calculations, as well as a listing of key, high impact best management practices implemented on farms that were verified in MAEAP in the previous fiscal year. This summary has been a limitation, because it does not capture any of the named practices implemented by farmers who are working with MAEAP, but have not yet been verified. The reporting database developed during FY16 will allow the program to show the effects of all farms in the program, not just those recently verified. Currently, the totals cannot be broken down by county. This will be corrected with the implementation of the MAEAP database in FY17. For FY17, farms that were verified within MAEAP had 257,808 acres managed with a nutrient management plan; the amount of sediment reaching waterways was reduced 381,041 tons; the amount of phosphorus runoff was reduced by 651,525 pounds; and nitrogen leaving farm fields was reduced by 1,498,576 pounds. The environmental impact from farms verified in FY16 can be seen in the attachment "***2016 EnviroSummaryInfo.***"
- iii. **Number of Verifications and Reverifications.** In FY16, there were 637 new verifications. This number reflected a record high number of initial verifications for the program. Of that 637 total, 255 were Cropping system, 222 were Farmstead system, 79 were Livestock system, and 81 were in the Forest, Wetland and Habitat system. In FY16, there were 141 total reverifications in the program. Of those 141, 63 were Cropping system, 49 were Farmstead system, and 29 were Livestock system. There were no

Forest, Wetland and Habitat system reverifications as that system was new in FY16. The reverifications were down from the past few years. This is directly attributed to the legislated change from a three-year to a five-year reverification cycle, thus pushing the need for current reverifications out two more years. As a result, reverifications will remain low for FY17 as well. The breakdown by county can be found in the attachment ***“FY16 Breakdown Vers and Revers by County.”***

- iv. **Number of Unique Farms Verified.** In FY16, there were 451 unique sites verified in MAEAP. The county-by-county breakdown of these unique sites is included in the attachment ***“FY16 Unique Sites by County.”***
- v. **Number of Farms in Tiered Recognition System.** There are no farms currently in the tiered system. The tiered system will be implemented in FY17 in conjunction with the new MAEAP reporting database for farms interested in pursuing this option.
- vi. Total area and percentage of this state’s farmland involved- Farms verified in FY16 had a total of 257,808 acres with nutrient management plans or comprehensive nutrient management plans. Based on the 2007 Census of Agriculture, Michigan had 7,803,643 acres of cropland. Based on that number, the acreage of farms verified in FY16 represents slightly over 3% of the total Michigan farmland.

#### **County and Statewide Program Totals To-Date**

- i. **Conservation Practices Implemented.** As mentioned previously, technicians report “Risk Reduction Practices,” which is a combination of the Conservation Practices and Technical Assistance Practices. The total “Risk Reduction Practices” implemented from FY2009 (oldest data on record) to FY2016 totals 48,668 practices combined. The breakout of practice numbers total, as well as by county, can be seen in the attachment ***“MAEAP Technical Assistance and Conservation Summary FY09-FY16.”*** With the implementation of the new MAEAP database in FY17, Conservation Practices will be tracked independently for future reporting.
- ii. **Environmental Impacts of Practices Implemented.** Environmental impacts are only measured from FY13-FY16. MAEAP’s current reporting system is unable to sort this by county. This will be resolved with the new reporting database in FY17. The FY13-16 cumulative numbers for nutrient management plan implementation total 1,104,710 acres; sediment reduction totals 1,653,008 tons; phosphorus reduction totals 2,742,407 pounds; and nitrogen reduction totals 5,968,856 pounds. The MAEAP program totals for FY13-16 can be found in the attachment ***“Total EnviroSummaryInfo.”***
- iii. **Number of New Verifications and Reverifications.** From FY02-16, there were 3,686 new verifications in MAEAP. This includes 1,580 Cropping system; 1,348 Farmstead system; 677 Livestock system; and 81 Forest, Wetland and Habitat system. Over the period FY05-16, there were 1,530 reverifications in MAEAP. This included 597 Cropping

system, 607 Farmstead system, and 326 Livestock system. Verifications and reverification by year can be seen in the attachment ***“MAEAP Verifications Over Time FY16.”*** Verifications and reverifications by county over the lifetime of the program can be viewed in the attachment ***“Verifications, Reverifications and Unique Sites Breakdown By County.”***

- iv. **Number of Unique Farms Verified.** The total number of unique sites verified from FY02 to FY16 is 2,070. The number of unique sites by county can be seen in the attachment ***“Verifications, Reverifications and Unique Sites Breakdown By County.”***
- v. **Number of Farms in Tiered Recognition System.** There are no farms currently involved in the tiered recognition system. This option will be available for producers beginning in FY17.
- vi. **Total Area and Percentage of This State’s Farmland Involved.** Based on the acres in nutrient management plans and comprehensive nutrient management plans from the FY13-16 environmental summary, that acreage totals 1,104,710 acres. The 2007 Census of Agriculture states that Michigan had 7,803,643 total acres of cropland. Based on that number, farms verified in MAEAP currently represent 14% of the cropland in the state of Michigan. Totals by county are not available for this time period.

#### **Summary of Educational and MAEAP Standards Changes**

A summary sheet of standards changes for each system (Cropping; Farmstead; Livestock; and Forest, Wetland and Habitat) are found in the respective attachments for each system: ***“CAS Summary Sheet,” “FAS Summary Sheet,” “LAS Summary Sheet,” and “FWH Summary Sheet.”*** Changes to the educational questions contained within each of the A-Syst tools will be in the form of red-letter strikethrough documents for each system. The only system having educational question changes this year was the Crop-A-Syst documents, pertaining to Invasive Species. The questions for this system can be found in the attachments ***“2016 Nursery Educational Questions,” “2016 Field Crop and Veg Educational Questions,” “2016 Fruit Educational Questions,” and “2016 Greenhouse Educational Questions.”***

#### **Summary of Subcommittee Work beyond Standards**

- i. **Farmstead Committee.** In addition to standards review and revision, the Farmstead committee continues to examine well setback issues related to livestock lots and storages. This is an issue that prevents/hinders many farms from being verified. MDARD engineering staff and the committee have been working with MDEQ to create a

process for individual review of the wells to determine if there is a way to provide variances to existing wells that meet their predetermined criteria.

- ii. **Cropping Committee.** In addition to standards review and revision, the Cropping committee is looking at two emerging and one existing issue. Emerging issues being examined are pollinators and invasive species. The existing issue involves chemigation and fertigation design criteria for wellhead protection. The Cropping committee is developing a series of questions designed to educate producers about the spread and impact of invasive species and the importance of pollinators. The committee is also working with a multi-partner group to address the development of best management practices for farmers utilizing chemigation and fertigation in their irrigation systems. There are no standards in place to ensure wellhead safety when these practices are utilized. The group is developing a series of BMPs to present to MDEQ to allow this important production practice to occur while minimizing potential threats to groundwater aquifers.
- iii. **Livestock Committee.** In addition to standards review and revision, the Livestock committee worked with MDEQ water division staff to develop a “hot” paper. This paper helps livestock farmers with their decision-making process with respect to application of manure on frozen and snow-covered ground by using green colors to denote safer practices and red to denote high risk practices. Winter application is a highly debated topic in the Great Lakes region, and in lieu of eliminating this option for producers, it is the intent of MDARD and MDEQ to do a better job of educating producers on how to make better choices of when and where winter application occurs. This committee is also discussing the addition of educational questions related to the use of dragline systems for manure application. Draglines are highly efficient application systems, but they do have some unique risks. The concern is how will the questions be worded and evaluated by MAEAP staff, as the majority of these systems are owned by custom applicators and not by individual farmers. The option of having a certification program for custom applicators has been discussed as a sidebar to the dragline discussion.
- iv. **Forest, Wetlands and Habitat Committee.** This committee focused strictly on the standards review in 2016. This system was brand new in FY16, and as such, is not as mature as the other systems. MAEAP verifiers brought many questions, concerns and ideas to this committee to help revise the standards as they implemented the system in the field. The committee needed to clarify many standards to allow for confidence in the verification process by MDARD staff.

Farmstead Solid Manure Storage - Design and Construction	9
New Large Quantity Water Withdrawal Registered	9
Forest Roads Established And Maintained To Avoid Erosion	9
IPM Used To Control Pests	9
Spill Prevention Control And Counter-Measure Plan	9
Fertilizer Rates Consistent with MSU/Land Grant Recommendations	9
Diversion of Clean Water from Manure Storage Structures	9
Spill Protection On Tank Fill Pipe	9
Split/Multiple N Fertilizer Application	9
Surface Water - Livestock Yard Setback	8
Manure Storage Runoff Control	8
Landowner Complies With All Relevant Laws And Ordinances	8
Dedicated Pesticide Measuring Devices Used	8
WPS Training	8
Silage Emergency Plan (New)	8
Bedded Manure Storage Design and Construction	8
Irrigation Amount Determined Accurately	8
FMP Prepared By Professional Natural Resource Manager	8
Surface Water - Fertilizer Mix/Load Setback	8
N Fertilizer Rate Determination	8
Water Diverted From Manure Storage	8
Emergency Plans Cover Tire Fires	8
Proper Rinsing of Equipment and Handling of Rinsate	8
Dead Animals: Composting Recordkeeping Meets BOA Requirements	8
Water Bodies Identified And Riparian Management Zones Established	8
BMPs Implemented To Protect Rare And Sensitive Species	7
Beneficial Insect Management	7
Silage: Emergency Plan (revised)	7
Anti-backflow Device for Pesticides and Fertilizer	7
Septic Tank Pumping Interval	7
Forestation Uses Process Ensuring Adequate Stocking	7
Parking Unused Loaded Equipment	7
All Wetlands And Water Bodies Protected From Pollution	7
Irrigation Management Records	7
Unused Well	7
Pesticide Spill Kit	7
Landowner Forestry Management Plan (New)	7
Dead Animals: Composting Process Follows BODA Act	7
Manure Application to Avoid Ponding, Erosion, Runoff	6
Adverse Impact To Endangered And Threatened Species	6
Presence Of Siphons, Manifolds Or Internal Pressure	6
Frost-Free Hydrant	6
Solid Manure Storage Building Construction	6
Restoration Potential Assessed For Non-Forested/Non-Grassland	6
RTF Odor And Site Selection GAAMP Guidelines Understood	6
Soil Characteristic Consideration	6
Landowner Complies With Sustainable Soil And Water Conservation	6
Food Safety Program Written and Implemented	6
Portable Fueling Tank/Transfer System	6
P Fertilizer Placement	6
Tire Fire Emergency Plan (Revised)	6
Manure Rates Compatible with Soils	6
Pesticides Used And Stored According To EPA, SSWQ	6
RTF Site Selection and Odor Control GAAMPs Used-<	5
Pesticide Toxicity And Application Considered For Beneficial Insects	5

## FY 2016 MAEAP ENVIROMENTAL OUTCOMES

Information collected from MAEAP verified farms used to calculate environmental outcomes:

	<b><u>Totals:</u></b>
Acres included in a nutrient plan or CNMP	<b>257,808</b>
Acres of buffer/filter strips	<b>2,046</b>
Acres of cover crops	<b>42,931</b>
Acres of conservation tillage	<b>123,343</b>
Acres of no-till, zone till, or grass cover	<b>66,468</b>
Number of gullies stabilized	<b>1,109</b>
Feet of livestock exclusion	<b>46,730</b>
Size of silage pad (acres)	<b>49</b>
Acres of Pest Management Plans	<b>193,579</b>

This data was then compiled from farms verified in FY 2016, and the following totals were calculated:

Sediment reduced: **381,041** tons

Phosphorus reduced: **651,525** pounds

Nitrogen reduced: **1,498,576** pounds

Biochemical Oxygen Demand BOD (5-day) from silage leachate: **2,893,273** pounds

## MAEAP Technical and Conservation Summary FY09-FY16

### FY2009 THROUGH FY2016 STATEWIDE CONSERVATION AND RISK REDUCTION PRACTICES

PRACTICE DESCRIPTION	NO. OF PRACTICES IMPLEMENTED
Environmentally Sensitive Areas Identified	2,087
Annual Drinking Water Testing	1,671
Drift Management Plan (New)	1,444
Pesticide Drift Management Plan	1,415
Pesticide Storage Signage	1,259
Pesticide Emergency Plan (New)	1,187
Pesticide Spill Kit/Fire Extinguisher	990
Soil Erosion Controlled	981
Emergency Plan (New)	931
Pesticide Spill Kit Availability	808
Emergency Contacts	743
Sharps Disposal	691
Soil Nutrient Records	671
Water Testing Results	669
Odor Management Plan	656
Manure Management Records	643
Triennial Soil Testing	636
Pesticide Application Recordkeeping	633
Pesticide Emergency Plan (revised)	599
Impermeable Surface for Fuel Transfer	572
Pesticide Storage	516
Manure Spill Emergency Plan (New)	507
Use of Anti-Backflow device or use of Air Gap	497
Pesticide Storage Security	479
Fuel Storage Tank Labeling	477
Emergency Plan (Revised)	449
All Nutrient Sources Considered	429
Mixing And Loading Pad Or Mixing In Field	408
Emergency Plan, new: Manure Spill	399
Annual Nutrient Management Plan for Each Field (entire farm)	388
Floor Drains	378
Well - Pesticide Mixing/Loading Setback	348
Well - Pesticide Storage Setback	348
Representative Soil Testing Sampling Procedure	337
Irrigation Record Keeping	335
Livestock Manure Utilization Records	332
Anti-Backflow and Air Gap Maintained when Filling	318
Manure Nutrient Content Determination	315
Pesticide Label Compliance	310
Drift Management Plan (Revised)	298
Bodies Of Dead Animals Handling	295
Pesticide Storage-Impermeable Floor Surface	295
Fuel Storage Tanks Appropriately Designed/Used	249
Pastures Have Current Soil Tests	247
Well - Fuel Storage Setback	244
Field Mixed/Loaded Pesticide Handling	240
Pesticide Containers Triple Rinsed Or Power Rinsed	240
Determination of Fertilizer Rates	235
Dead Animals: Handling of Bodies	234
Abandoned Well Decommissioning	230
Livestock Manure Use Records	226
Adequate Land Base for Nutrients	224
Cover Crop Utilization	224
Fuel Storage Secondary Containment	222
Well Inspection Frequency	221
Emergency Plan (New) - Fertilizer	210
Soil Tests for Nutrients	208
Pesticide Container Handling	205
Impermeable Floor Surface	193
Fertilizer Storage Security	191
Well - Fertilizer Storage Setback	190

PRACTICE DESCRIPTION	NO. OF PRACTICES IMPLEMENTED
Surface Water - Fuel Storage Setback	88
Sprayer Monitored When Being Filled	87
Irrigation Scheduling	86
Soil and/or Tissue Tested at Least Every 4 Years	86
Household/Farm Waste Management	85
Paint/Solvent/Cleaner Disposal	85
Liquid Fertilizer Spill Prevention	83
Conservation Practices Routinely Evaluated	82
Appropriate Liquid Fertilizer Storage	81
Dedicated Pesticide Measuring Devices Used	81
Other Risks To Groundwater And/Or Surface Water	81
Appropriate Fuel Storage Tank Labeling	79
Nutrient Management Records for Soil, Tissue, and Fertilizer	78
Absorbent Materials, Non-Metallic Shovel	76
Appropriate Dry Fertilizer Storage	76
Combined Pump Capacity	74
Pesticide Rinsate Disposal	73
Irrigation System Evaluation for Uniformity	72
Manure P Application Rate Management	72
Surface Water - Fertilizer Mix/Load Setback	71
WPS Training	71
Other Water Quality Risks	70
Well - Manure Storage Setback	70
Appropriate Sprayer Exterior Cleaning	67
Central Notification	67
Emergency Plan (Revised) - Fertilizer	67
Precipitation Leading to Contaminated Run-Off	67
Spill/Leak/Repair Monitoring	67
Weed Management	67
Rain Gauges in All Irrigated Fields	65
Spill Prevention Control And Counter-Measure Plan	64
Fuel Storage Piping, Etc. Appropriately Designed/Used	63
Well - Livestock Yard Setback	63
Manure Application Procedure	62
Pasture Management For Vegetation and Runoff	62
Well - Pesticide Storage Setbacks	62
Livestock Yard Floor	61
Tire Fire Emergency Plan (New)	61
Excess Spray Mixture	59
Pasture Management For Manure Around Water Tanks/Feeders	59
Secondary Containment Required Under Rule 642	59
Annual Nutrient Management Plan for Each Field/Block (entire farm)	58
Fill Opening Separate from Vent Opening	58
Lead Acid Battery Disposal	58
Well Setback from Manure Sources	58
Appropriate Sprayer Interior Rinsing	57
Self-Closing Nozzle	55
Well - Hazardous Product Storage Setback	55
Burn Barrel Ash Disposal	54
Irrigation Application Amount Determination	54
Surface Water - Livestock Yard Setback	54

PRACTICE DESCRIPTION	NO. OF PRACTICES IMPLEMENTED
Other Mercury-Containing Devices	13
Poly Fertilizer Tanks Used Appropriately	13
Poly Tanks Inspected Regularly	13
RTF Site Selection and Odor Control GAAMPs Used-> 50 Animal Ur	13
Triennial Water Testing (once every three years)	13
Irrigation Fuel Tank Meets Setback Requirements	12
Irrigation Sprinkler Nozzle Package Match	12
Irrigation water of adequate quality	12
Liquid Fertilizer Secondary Containment	12
Maintenance of Areas Next to Liquid Manure Structures	12
Manure Storage - Runoff Control	12
Mercury Manometer	12
Anti-backflow Device for Pesticides and Fertilizer	11
Corn Rotation	11
Fall Wheat N Application	11
Liquid Manure Storage Maintenance	11
Manure Application Methods Protect Against Runoff and Erosion I	11
Plan shows food contact surfaces cleaned and sanitized regularly.	11
Property Boundaries Known And Marked	11
Soil Fertility Records	11
Biosolid Nutrient Application Rate Determination	10
Bulk harvesting produce containers cleaned regularly.	10
Dead Animals: Proper Composting Site Selection	10
FMP Addresses All Habitat Types	10
Landowner Has Located And Protected Special Sites	10
Landowner Objectives Written And Included In FMP	10
Manure Applications Managed To Prevent Food Safety Risks	10
Pasture Management Minimal Imported Feed	10
Site Monitored At Least Annually For Changes	10
Triennial Tank Testing (Every Three Years)	10
Type of Well Serving Greenhouse	10
Unused Underground Fuel Storage Tanks > 1,100 Gallons	10
Well Isolation From Temporary Stacked Manure	10
Excess Fertilizer Management	9
Fall Corn N Application	9
Food Safety Plan Written and Implemented	9
Forest Roads Established And Maintained To Avoid Erosion	9
IPM Used To Control Pests	9
Odor Complaint	9
Only new or sanitized containers used for packing produce.	9
Other Contamination Risks	9
Pesticide Labels Read and Followed	9
Proper pesticide records maintained for pesticide applications.	9
Regular Soil Testing	9
Silage Storage Floor	9
Silage: Leachate Collection/Treatment	9
Surface Water - Manure Storage Setback	9
Toilet/hand-washing facility with supplies available if necessary.	9
Unused Aboveground Fuel Storage Tanks > 1,100 Gallons	9
Upright Silage Leachate Collection/Treatment	9
Wastewater Collection and Storage	9
Well Septic Tank/Drainage Field Isolation Distances	9
Dead Animals: Composting Process Managed Through Three Heat	8
Dilute Wastewater Managed Appropriately for P	8
FMP Prepared By Professional Natural Resource Manager	8
Forestation Uses Process Ensuring Adequate Stocking Levels	8
Greenhouse Site Erosion	8
Landowner Complies With All Relevant Laws And Ordinances	8
Manure Stockpiles Managed to Control Odor and Pests	8
No immediate food safety risk to produce.	8
Pesticide Inventory control	8
Plans show water applied to harvested products is safe.	8
Produce and containers kept as clean as possible.	8
Produce contaminated with blood, bodily fluids, handled by policy	8
RTF Odor And Site Selection GAAMP Guidelines Under 50 AU	8
RTF Site Selection and Odor Control GAAMPs Used-< 50 Animal Ur	8
Runoff/Ponding Management	8
Tank Vent Extends Through Roof or Canopy	8

PRACTICE DESCRIPTION	NO. OF PRACTICES IMPLEMENTED
Transportation equipment is clean and sanitary	8
Water Bodies Identified And Riparian Management Zones Established	8
Workers with symptoms of diarrhea, etc, may not handle produce	8
Adverse Impact To Endangered And Threatened Species Avoided	7
All Wetlands And Water Bodies Protected From Pollution And Sedimentation	7
BMPs Implemented To Protect Rare And Sensitive Species And Habitats	7
Bulk produce hauling vehicles cleaned regularly.	7
Clean Water Diverted from Manure/Compost Storage	7
Designated Food Safety Person	7
Distance Between Multiple Fueling Sites	7
Farmstead Stacked Manure Storage - Surface Water Setback	7
Farmstead Temporary Stacked Manure Storage - Surface Water Setback	7
Fuel Tank Registered, Proof Of Registration Displayed	7
Hand-harvesting implements cleaned on a scheduled basis.	7
Heating Oil Tank and Fuel Storage	7
Landowner Forestry Management Plan (New)	7
Manure Storage Outside-Odor Reduction and Pest Control	7
No observation of employee practices unsafe for produce.	7
Records show personnel applying pesticides certified/licensed.	7
Rejected Milk Collection and Storage	7
Restoration Potential Assessed For Non-Forested/Non-Wetland Habitats	7
Sanitation and hygiene policy covers employees and visitors	7
Septic System Size	7
Septic Tank Pumping Interval	7
Silage: Bunker Leachate Collection/Treatment	7
Silage: Pad and Area Kept Clean	7
Solid Manure Storage Design and Construction	7
Unused Well Properly Closed	7
Well - Liquid Manure Storage Setback	7
Well Isolation from Buildings with Bedded Manure Packs	7
Appropriate Liquid Manure Storage Design and Installation	6
Cooling Water	6
Fuel Spill Prevention Control And Counter-Measure Plan	6
Horizontal Sock Well Identified and Isolated	6
Landowner Complies With Sustainable Soil And Water Quality Practices	6
Maintenance Of Areas Near Manure Lagoons	6
Milkhouse Water Septic Treatment	6
Odor Complaints	6
Pesticide Toxicity And Application Considered For Beneficial Insects	6
Pesticides Used And Stored According To EPA, SSWQPs By Certified Applicators	6
Policy requires workers to seek treatment for all injuries.	6
Proper Lot Management Demonstrated	6
Roof Or Canopy 6' Or Higher Than The Top Of The Tank	6
Silage: Bunker Silo Covered	6
Silage: Maintained with Vertical Face	6
Smoking and eating areas separate from produce.	6
Soybean/Alfalfa Supplemental N Application	6
Water Testing Quality	6
All Management Activities Conform To GAFMPs	5
Analysis results of compost or biosolids are maintained.	5
Applicators read and follow label instructions.	5
Appropriate Corrosion Protection	5
Bogs And Fens Identified And RMZs Established	5
Chemigation Interlock and Safety Systems	5
Container Media and Organic Waste Disposal	5
Containers inspected regularly. Repaired or discarded as needed.	5
Crop production is not near livestock operations	5
Crop Rotations Three Years Or Longer	5
Fertilizer Application Rate Determination	5
Field sanitation units number & condition comply with regulations	5
Heating Oil Tank Is Used As Designed	5
Irrigation Runoff and Ponding	5
Irrigation water protected from potential sources of contamination	5
Milking Center Wastewater Handling	5
Only certified applicators apply restricted use pesticides.	5
Person(s) Pumping Septic Tank	5
Pesticide Application Equipment Calibration	5
Pesticide mixing and loading meets isolation requirements.	5

Well - Pesticide & Fertilizer Storage Setback	5
Appropriate Records For Forest Product Harvests And Other Manure	4
Composted manure properly stored; runoff and wind erosion control	4
Container Runoff	4
Dead Animals: Composting Site Capacity Is Adequate	4
Effects of Insecticides On Beneficial Insects	4
Emergency Plan and Contacts	4
Harvest Plan Map Containing All Pertinent Information Is Used For	4
Irrigation Fuel Tank Isolation	4
Livestock access to crop irrigation water system is restricted.	4
Manure Field Stockpile Duration	4
Milkhouse Septic System Management	4
Milking Center Direct Wastewater Discharge	4
No evidence of excessive pests in the business.	4
Off-Target Irrigation Prevented	4
On-Farm Weather Stations or Weather Models Used	4
Only properly registered pesticides used on crops.	4
Pesticide/Fertilizer Chemigation Storage Setback	4
Pesticides and produce never transported in the same vehicle area;	4
Prescribed Burnings Follow Approved FMP And Conform To SSWQ	4
Produce and/or container identified to allow trace back.	4
Produce packing materials protected from contamination.	4
RTF Odor And Site Selection GAAMP Guidelines over 50 AU	4
Septic System Used To Dispose Of Hazardous Chemicals	4
Silage: 3,000 Whole Tires or Fewer Used on Bunker Covers	4
Silage: Bags Watertight and Holes Repaired	4
Tires and Sidewalls Stored Properly	4
Type IIb Public Water Supply Arsenic Test	4
Use of Odor-Reduction Practices During Manure Application	4
Water Diverted From Silage	4
Water for chemigation or fertigation of adequate quality.	4
All Other Habitats Enrolled In Long-Term Or Permanent Conservation	3
Appropriate Dilute Wastewater Management Demonstrated	3
Backflow Prevention on Manure Irrigation systems	3
Fall Sugar Beet N Application	3
Forestland Enrolled In Sustainable Forest Certification Program	3
Growing Media Disposal	3
Harvest equipment and/or machinery in good repair.	3
Inside Greenhouse Weed Control Management	3
Irrigation Water pH and EC Monitoring	3
Irrigation Water pH Management	3
Landowner Forestry Management Plan (Revised)	3
Leak Testing	3
Milk Parlor Cleanup Practices	3
Milking Center Wastewater Pretreatment	3
No evidence of food safety records fraud.	3
Non-Combustible Materials, Vapors Don't Collect	3
Non-Forested/Non-Wetland Habitats Being Restored	3
Permit for Stream Crossing or Livestock Access	3
Pest Resistant Or Tolerant Varieties Planted	3
Pesticide Application Equipment Stored Empty	3
Pesticide Transfer System	3
Plans show pesticide mixing and loading requirements.	3
Policy deals with broken glass or plastic during harvesting.	3
Policy for product contamination from chemicals or other factors.	3
Policy to clean up field sanitation unit leaks or spills.	3
Potential Conflict Between Timber Management And Habitat Development	3

PRACTICE DESCRIPTION	NO. OF PRACTICES IMPLEMENTED
Well Casing at Least 25 feet Deep	2
Aboveground tank > 1,100 gallons secondary containment	1
All glass fixtures on harvesting equipment are protected.	1
Anti-backflow Device Separating Groundwater and Surface Water	1
Appropriate Composting Manure Storage	1
Biomass Harvesting Complies With Mndr Biomass Harvesting Guid	1
Certified Seed Or Plant Materials Used	1
Commercial/Land Grant University Nutrient Testing	1
Container Disposal	1
Crop production modified to address soil contamination risks.	1
Crops and Plant Families Rotated To Break Pest Cycles	1
DEQ or Equivalent Frost-Free Hydrant	1
Drains, Sump, Roof Watr Management	1
Ensure pesticides remain on-target and minimize spray drift?	1
Erosion Management on Roads, Parking Lots	1
Field Stacked Manure Storage - Odor and Pest Control	1
Fisheries Options And Actions Identified Within Plan For All Water	1
Food crop production avoided in fields subject to periodic flooding	1
Greenhouse Poly Recycled	1
Greenhouse Site Runoff Evaluation Frequency	1
Harvested produce is inspected and foreign objects are removed.	1
Heating Oil Tank Used To Store Fuel	1
Horizontal Sock Well Properly Installed, Marked, Isolated	1
Horizontal Sock Wells Clearly Identified And Isolated	1
Impermeable Floor Surface - Fertilizer	1
Irrigation Ponding and Runoff Minimized	1
Irrigation Water Alkalinity Monitoring	1
Manure Composting Storage Duration	1
Manure does not leach or run off into crop production areas.	1
Manure Stockpile Odor and Pests Management	1
Manure Transferred By Hose or Pipelines Properly Monitored	1
Manure/Compost Stockpile Duration	1
MDA Inspection Compliance	1
Milkhouse Septic System	1
Milking Center Chemical Storage	1
Milking Parlor Cleanup Practices	1
Nitrogen Fertilizer Applications	1

Sanilac	Field Temporary Stacked Manure Storage - Odor and Pest Control	3
Sanilac	Hazardous Waste Disposal	3
Sanilac	Household/Farm Waste Management	3
Sanilac	Lead Acid Battery Disposal	3
Sanilac	Livestock Yard Floor	3
Sanilac	Livestock Yard Surface Water Setback	3
Sanilac	Manure Application on Frozen Ground	3
Sanilac	Number Of Fuel Storage Tanks < 1,100 Gallons	3
Sanilac	Poly Fertilizer Tanks Used Appropriately	3
Sanilac	Sara Title III (EHS) Requirements Met	3
Sanilac	Spill Prevention Control And Counter-Measure Plan	3
Sanilac	Spill/Leak/Repair Monitoring	3
Sanilac	Surface Water - Livestock Yard Setback	3
Sanilac	Surface Water - Stacked Manure Storage Setback	3
Sanilac	Temporary Manure Stacking Surface Water Setback and Runoff	3
Sanilac	Temporary Stacked Manure Storage	3
Sanilac	Water Contamination Prevention	3
Sanilac	Absorbent Materials, Non-Metallic Shovel	2
Sanilac	Annual Drinking Water Testing for Nitrate and Bacteria	2
Sanilac	Appropriate Dry Fertilizer Storage	2
Sanilac	Appropriate Solid Manure Storage	2
Sanilac	Appropriate Sprayer Exterior Cleaning	2
Sanilac	Appropriate Sprayer Rinsing	2
Sanilac	Backflow Prevention on Livestock Watering Systems	2
Sanilac	Bunker Silage Leachate Collection/Treatment	2
Sanilac	Conservation and Management Practice Inspection/Evaluation	2
Sanilac	Dead Animals: Composting Process Follows BODA Act	2
Sanilac	Dedicated Pesticide Measuring Devices Used	2
Sanilac	Emergency Control Disconnect	2
Sanilac	Emergency Plan (Revised)	2
Sanilac	Excess Fertilizer Management	2
Sanilac	Farmstead Solid Manure Storage - Runoff Control	2
Sanilac	Farmstead Stacked Manure Storage Duration	2
Sanilac	Farmstead Stacked Manure Storage Location	2
Sanilac	Farmstead Temporary Stacked Manure Storage Duration	2
Sanilac	Farmstead Temporary Stacked Manure Storage Location	2
Sanilac	Fill Opening Separate From Vent Opening	2
Sanilac	Fuel Storage Tank Crash Protection	2
Sanilac	Leaching/Runoff and Toxic Potential Consideration	2
Sanilac	Liquid Manure Loss Through Tile Lines	2
Sanilac	Liquid Manure Storage Freeboard	2
Sanilac	Livestock Manure Records	2
Sanilac	Livestock Manure Utilization Records	2
Sanilac	Livestock Yard Runoff Management	2
Sanilac	Manure Application Methods	2
Sanilac	Manure Nutrient Buildup Prevention	2
Sanilac	Manure Nutrient Utilization Plan	2
Sanilac	Manure Runoff Prevention	2
Sanilac	Manure Runoff Protection	2
Sanilac	Manure Stockpile Duration	2
Sanilac	Manure Storage Capacity	2
Sanilac	Paint/Solvent/Cleaner Disposal	2
Sanilac	Poly Tanks Used as Intended	2
Sanilac	RTF Site Selection and Odor Control GAAMPs Used	2
Sanilac	Silage: Bunker Leachate Collection/Treatment	2
Sanilac	Silage: Bunker Silo Covered	2
Sanilac	Silage: Harvest Moisture Content	2
Sanilac	Silage: Maintained with Vertical Face	2
Sanilac	Stacked Manure Storage Duration	2
Sanilac	Surface Water - Manure Storage Setback	2
Sanilac	Temporary Stacked Manure Storage Location	2
Sanilac	Well - Oil Storage Setback	2
Sanilac	Well - Hazardous Product Storage Setback	2
Sanilac	Well Septic Tank/Drainage Field Isolation Distances	2
Sanilac	Winter Manure Application Procedure	2
Sanilac	All Wetlands And Water Bodies Protected From Pollution And	1
Sanilac	Altered Wetlands Being Restored Following Plan Developed By	1
Sanilac	Appropriate Liquid Manure Storage	1

PRACTICE DESCRIPTION	NO. OF PRACTICES IMPLEMENTED
----------------------	------------------------------

COUNTY	PRACTICE DESCRIPTION	NO. OF PRACTICES IMPLEMENTED
Sanilac	Appropriate Sprayer Interior Rinsing	1
Sanilac	Biosolid Nutrient Application Rate Determination	1
Sanilac	Biosolid Nutrient Content Determination	1
Sanilac	Burn Barrel Ash Disposal	1
Sanilac	Clean Water Diverted from Manure/Compost Storage	1
Sanilac	Crop Rotations Three Years Or Longer	1
Sanilac	Direct Wastewater Discharge	1
Sanilac	Dispenser/Discharge Connection Inoperable When Not Used	1
Sanilac	Fall Sugar Beet N Application	1
Sanilac	Farm Dump	1
Sanilac	Farmstead Solid Manure Storage - Design and Construction	1
Sanilac	Farmstead Stacked Manure Storage - Surface Water Setback	1
Sanilac	Field Stacked Manure Storage - Surface Water Setback	1
Sanilac	Field Stacked Manure Storage Duration	1
Sanilac	Frost-Free Hydrant	1
Sanilac	Fuel Storage Secondary Containment - Above Ground	1
Sanilac	Invasive Species Identified And Under Active Management	1
Sanilac	Irrigation Record Keeping	1
Sanilac	Landowner Forestry Management Plan (New)	1
Sanilac	Livestock Medication Disposal	1
Sanilac	Livestock Yard Drainage Diversion	1
Sanilac	Manure Application Methods Protect Against Runoff and Erosion	1
Sanilac	Manure Application to Avoid Ponding, Erosion, Runoff	1
Sanilac	Manure Phosphorus Application Rates	1
Sanilac	Manure Spreading Application Rates	1
Sanilac	Manure Storage-Odor Reduction and Pest Control	1
Sanilac	Milk Parlor Cleanup Practices	1
Sanilac	Milkhouse Septic System Management	1
Sanilac	Milkhouse Septic System Pumping	1
Sanilac	Odor Complaint	1
Sanilac	Other Mercury-Containing Devices	1
Sanilac	Pasture Management	1
Sanilac	Pastures Have Current Soil Tests	1
Sanilac	Pest Resistant Or Tolerant Varieties Planted	1
Sanilac	Plate Cooling Water Handling	1
Sanilac	Portable Fueling Tank/Transfer System	1
Sanilac	Portion of Animal Feed Produced On Farm	1
Sanilac	Precipitation Leading to Contaminated Run-Off	1
Sanilac	Presence Of Siphons, Manifolds Or Internal Pressure Devices	1
Sanilac	Property Boundaries Known And Marked	1
Sanilac	Rain Gauges in All Irrigated Fields	1
Sanilac	Rejected Milk Collected; Hauled or Fed	1
Sanilac	Rejected Milk Collection and Storage	1
Sanilac	Restoration Potential Assessed For Non-Forested/Non-Wetland	1
Sanilac	Septic System Size	1
Sanilac	Septic System Used To Dispose Of Hazardous Chemicals	1
Sanilac	Silage Emergency Plan (new)	1
Sanilac	Silage Harvest Moisture Content	1
Sanilac	Silage Leachate Ponding	1
Sanilac	Silage Storage Floor	1
Sanilac	Silage: Bunker Storage Floor	1
Sanilac	Silage: Emergency Plan (new)	1
Sanilac	Silage: Emergency Plan (revised)	1
Sanilac	Silage: Leachate Ponding	1
Sanilac	Silage: Pad and Area Kept Clean	1
Sanilac	Silage: Silo Leachate Collection/Treatment	1
Sanilac	Solid Manure Storage Building Construction	1
Sanilac	Solid Manure Storage Design and Construction	1
Sanilac	Soybean/Alfalfa Supplemental N Application	1
Sanilac	Spill Protection On Tank Fill Pipe	1
Sanilac	Storage Signage	1
Sanilac	Surface Water - Temporary Stacked Manure Storage Setback	1
Sanilac	Temporary Stacked Manure Storage - Runoff And Leaching Control	1
Sanilac	Temporary Stacked Manure Storage Duration	1
Sanilac	Triennial Tank Testing (Every Three Years)	1
Sanilac	Type Of Well	1
Sanilac	Unused Underground Fuel Storage Tanks < 1,100 Gallons	1
Sanilac	Upright Silage Leachate Collection/Treatment	1

## **MAEAP ENVIRONMENTAL OUTCOMES**

Information collected from MAEAP verified farms used to calculate environmental outcomes:

	<b><u>Totals:</u></b>
Acres included in a nutrient plan or CNMP	<b>1,104,710</b>
Acres of buffer/filter strips	<b>16,383</b>
Acres of cover crops	<b>153,182</b>
Acres of conservation tillage	<b>480,231</b>
Acres of no-till, zone till, or grass cover	<b>322,507</b>
Number of gullies stabilized	<b>4,829</b>
Feet of livestock exclusion	<b>385,548</b>
Size of silage pad (acres)	<b>125</b>
Acres of Pest Management Plans	<b>1,180,726</b>

This data was then compiled from farms verified and the following totals were calculated:

Sediment reduced: **1,653,008** tons

Phosphorus reduced: **2,742,407** pounds

Nitrogen reduced: **5,968,856** pounds

Biochemical Oxygen Demand BOD (5-day) from silage leachate: **7,351,277** pounds

**Michigan Department of Agriculture and Rural Development**  
**Michigan Agriculture Environmental Assurance Program**  
Cropping Systems Subcommittee

Summary of 2016 Proposed Amendments to Crop\*A\*Syst Educational Questions and Answers

Number	Reason for Change
To be assigned	To raise awareness of requirements pertaining to restricted or prohibited organisms as defined in the Environmental and Natural Resources Protection Act, Part 413.

**Michigan Department of Agriculture and Rural Development**  
**Michigan Agriculture Environmental Assurance Program**  
 Livestock Systems Subcommittee  
Summary of 2016 Proposed Amendments to Livestock\*A\*Syst Standards

Number	Reason for Change
3.10	<b>Records or Evidence column: additional language added to help producers and technicians refer to the appropriate resources on handling milking center wastewater.</b>
7.03	<b>Records or Evidence column: additional language added to help producers and technicians refer to the appropriate resources on pasture management.</b>
13.04	<b>Records or Evidence column: inserted language for Evidence for MAEAP Verification column.</b>

**Michigan Department of Agriculture and Rural Development**  
**Michigan Agriculture Environmental Assurance Program**  
 Forest, Wetlands, and Habitat System Subcommittee  
Summary of 2017 Proposed Amendments to Forest, Wetlands, and Habitat\*A\*Syst

Number	Reason for Change
Header	Title changed from “Sustainable Forestry” to “Sustainable Non-Agriculture Land Management” to broaden the section to include all types of land. All of the risk questions apply to non-forestland as well as forestland.
1.01	Broadens this section to include all types of non-agricultural land, not just forest.
1.02	Broadens this section to include all types of non-agricultural land, not just forest.
1.03	Broadens this section to include all types of non-agricultural land, not just forest.
1.04	Provides further clarification on who can develop a land management plan.
1.05	Broadens this section to include all types of non-agricultural land, not just forest.
1.06	Broadens this section to include all types of non-agricultural land, not just forest.
1.07	Broadens this section to include all types of non-agricultural land, not just forest. Provides clarification that the property should be monitored annually, and not necessarily a specific site.
2.01	Provides clarification that the program is concerned with environmental laws, and that they have been complied with; not just discussed. Incorporates a medium risk question to showcase a landowner working towards compliance.
2.02	Eliminates an unnecessary question.
4.02	Most areas will be in the process of achieving adequate stocking, and will not have already achieved it. Adequate stocking is determined by the landowner’s objectives and desired future conditions. Added bold blue box around Medium Risk answer.
5.04	The amendment makes the risk question and risk levels less restrictive to bogs, fens, and vernal pools.
5.05	No gullyng is very restrictive. Removing the word “forest” makes the question generic to all land types.
5.08	Storage and disposing of pesticides is addressed in Farmstead system.

# Nursery Crop Educational Questions

**A boxed risk level** indicates the level required for environmental assurance verification.

**Bold black print** indicates a violation of state or federal regulation.

**Bold blue italic print** indicates a management practice consistent with a specific 2016 GAAMP.

(Revised Date: 7-14-16)

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>NUTRIENT MANAGEMENT PRACTICES - GENERAL</b>					
<b>1.03)</b> Is the soil pH maintained in the desirable range for the crop(s) being grown?	The soil pH maintained in the desirable range to enhance nutrient availability.		The soil pH is not monitored or maintained in the desirable range.		
<b>NITROGEN MANAGEMENT PRACTICES</b>					
<b>1.14)</b> How are nitrogen fertilizer applications matched to the demand of the crop and the conditions of the soil?	Controlled-release or split nitrogen fertilizer applications.	Single application where leaching or runoff potentials are low.	Single application where leaching or runoff potentials are high..		
<b>FIELD PHOSPHORUS MANAGEMENT PRACTICES</b>					
<b>1.16)</b> Where is the phosphorus fertilizer placed?	All nursery crops P is banded as a starter fertilizer at planting time, or P fertilizer is surface broadcast but incorporated when possible to prevent runoff or applied as a controlled-release fertilizer in container production.	P fertilizer is surface applied and not incorporated where runoff potentials are limited.	P fertilizer is surface applied and not incorporated where runoff potentials are high.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORD OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>MANURE MANAGEMENT PRACTICES</b>					
1.26) Is manure managed to minimize odor?	The cropping system is managed to reduce the frequency and intensity of manure odors.		Manure odors are not minimized.		
<b>SOIL AND WATER CONSERVATION PRACTICES (CONTINUED)</b>					
2.03) Are all streams, wetlands, farm ditches, and other bodies of water in the nursery protected from polluted runoff and sediment with conservation practices?	Filter strips, riparian buffer strips, grassed waterways and other conservation practices are maintained between fields and all surface waters at the nursery.	Conservation practices are maintained on some fields.	No conservation practices are maintained. Nursery stock grown immediately next to surface waters, drainage ditches and roads.		
2.04) Are cover crops planted in fields and driving lanes to prevent soil erosion, trap nutrients and pesticides, and improve soil quality?	Cover crops are included in the crop rotation to protect soil and water resources and control erosion.	Cover crops are used occasionally.	Cover crops are not used.		
2.05) Are soil quality indicators evaluated?	Soil quality indicators (e.g., earthworm populations, water infiltration rates, soil compaction, percent plant and residue cover, pH, cation exchange capacity [CEC] and percent organic matter) are evaluated on all fields.	Some soil quality indicators are evaluated.	No soil quality indicators are evaluated.		
2.06) Are conservation and management practices routinely inspected and evaluated?	Owner or trained individual routinely inspects and evaluates conservation and management practices.	Conservation and management practices are informally evaluated during field operations.	Practices are not inspected nor evaluated.		
<b>PEST MANAGEMENT PRACTICES</b>					
<b>CONTINUING EDUCATION AND KNOWLEDGE</b>					
3.02) How does the grower stay current on new pest management practices and strategies for weeds, insects and diseases?	Attend educational meetings, read educational materials provided by the university or other reliable sources. At least one new pest management practices adopted on a trial basis each year.	Occasionally attends educational meetings and read new pest management materials.	Relies on outdated pest management practices.		

RISK QUESTION	Low Risk – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>CONTINUING EDUCATION AND KNOWLEDGE</b>					
<b>3.03)</b> Does the grower consult with a pest management consultant or service during the growing season?	Employs and independent crop consultant throughout the growing season that is knowledgeable of IPM. OR, Utilizes public reports and services from the university, local agribusiness or other reliable providers.		Rely on outdated pest management practices.		
<b>PEST PREVENTION AND AVOIDANCE</b>					
<b>3.04)</b> Does the grower review previous growing season pest management activities and results?	Previous pest populations, pest suppression activities/pesticide usage and crop yield/injury are reviewed. Records used for future pest management plans.	No.			
<b>3.05)</b> When available, are certified seed or plant materials (tubers, crowns, transplants, etc.) used that are insect, weed and disease-free?	Certified or quality seed and planting materials used whenever possible.	Bin-run or uncertified planting material that is cleaned and treated.	Use saved seed or planting materials that is untreated and potentially infected with insects, weed and/or disease pests.		
<b>3.06)</b> Are pest resistant and tolerant varieties planted?	Pest resistant and tolerant varieties are planted when available.	Varieties without resistance and tolerance are planted, resulting in the need for pest suppression practices.			
<b>MONITORING</b>					
<b>3.07)</b> Are fields scouted for pests during the growing season?	All fields are scouted on a weekly schedule, by a qualified individual trained in IPM. Scouting reports and records are filed.	Fields are scouted at critical times, but not on a weekly basis.	Fields are not scouted.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>MONITORING</b>					
<b>3.08)</b> Are weather conditions relevant to pest management monitored? (i.e. air and soil temperature, precipitation, soil moisture, wind speed and direction, leave wetness, etc.)	On-farm weather station(s) provide data to assist with crop and pest management decisions. OR, MSU Enviro-weather ( <a href="http://www.enviroweather.msu.edu">www.enviroweather.msu.edu</a> ) or other weather-based models are used to assist with crop and pest management decisions.	Consumer weather information used for crop and pest management decisions.	Weather conditions are not considered when making crop and pest management decisions.		
<b>3.09)</b> Does the farm or nursery comply with all MDARD nursery inspection requirements?	Farm or nursery works to comply with all MDARD nursery inspection requirements.		<b>Nursery does not work to comply with all MDARD nursery inspection requirements.</b>		
<b>PEST APPLICATION</b>					
<b>3.10)</b> Are soil characteristics and field conditions considered when making pesticide applications?	Soil characteristics (texture and organic matter) and field conditions (slope and moisture) are assessed when deciding on pesticide application practices. Site-specific or variable-rate technology may be used.	Whole-field application rates are based on the most vulnerable soil type in the field.	Pesticides are applied at full labeled rates without regard to vulnerable soil characteristics or field conditions.		
<b>3.12)</b> Are leaching/runoff and toxicity potentials considered when making pesticide decisions?	Pesticides with the lowest potentials for leaching, runoff and non-target toxicity are always selected for use in fields.	Leaching/runoff and toxicity potentials are occasionally considered when selecting soil-applied pesticides.	Pesticide choice is not based on leaching/runoff and toxicity potentials. Only cost and effectiveness are considered.		
<b>3.14)</b> How are workers and pesticide handlers protected from exposure to pesticides?	<b>Workers and handlers:</b> <b>-Follow specific label requirements.</b> <b>-Are provided decontamination supplies.</b> <b>-Are trained or certified applicators.</b> <b>-Are informed of pesticide applications.</b> <b>-Are provided personal protective equipment.</b> <b>-Are provided emergency assistance, if needed.</b>		<b>Worker Protection Standard requirements are partially met or ignored.</b>	Complete list of worker protection standards can be found at: <a href="http://www.epa.gov/pesticides/health/worker.htm">www.epa.gov/pesticides/health/worker.htm</a> .	

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PEST APPLICATION</b>					
<b>3.18)</b> What management practices are used to prevent the development of pest resistance to certain pesticides.	Pesticides with different modes of action are rotated within a season or from one season to the next or used in tank mixes where permitted. Pesticides at highest risk of resistance are not used when alternatives are available.	Some but not all pesticide modes of action are rotated or tank mixed. Pesticides at highest risk of resistance are used sparingly.	Pest resistance is not considered when selecting pesticides. Refuge requirements for transgenic seed are ignored.		
<b>3.25)</b> Are areas of the nursery set aside as habitat for pollinators?	At least two acres are devoted to conservation of native bees and other pollinators by providing flowers through the season, and this is planted with a specific mix of wildflowers for this purpose.	Some areas of the nursery are set aside to provide flowers for bees and other pollinators.	No habitat is provided for pollinators.	Note: Cost share is available through enrollment in the USDA pollinator conservation programs (e.g., USDA's FSA CRP-SAFE pollinator program).	
<b>3.26)</b> How are beneficial insect populations encouraged?	Field borders and boundaries are managed to encourage beneficial insects. Pesticides are chosen to minimize damage to beneficial insects.	Beneficial insect management is not considered.			
<b>3.27)</b> If a soil fumigant pesticide is used on the farm, is a fumigation management plan (FMP) utilized?	A written, site-specific fumigation management plan that meets US EPA requirements is prepared and utilized before fumigation begins?		<b>A FMP is not prepared.</b>		
<b>SYSTEM MANAGEMENT PRACTICES</b>					
<b>4.03)</b> Is noise control provided when needed?	<b>Noise control provided</b> when needed.	In most areas of concern, noise control is provided when needed.	Noise control is not provided where needed.		
<b>IRRIGATION PRACTICES TO AVOID RUNOFF AND LEACHING</b>					
<b>4.09)</b> Is excess irrigation avoided?	<b>Irrigation water applications in excess of the quantity of water needed to replace the soil/substrate moisture deficit are avoided.</b>	Excess irrigation water applications may occur occasionally.	Excess irrigation water applications are common.		

RISK QUESTION	Low Risk – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>IRRIGATION</b>					
<b>6.02)</b> Are runoff storage areas sized adequately?	Runoff collection areas can store an average rain event.	Runoff collection areas cannot store an average rain event but do not regularly flood into surface water.	Runoff collection areas overflow regularly and runoff enters surface water.		
<b>6.03)</b> What type of irrigation is used?	Trickle irrigation with in-pot emitters.	Scheduled overhead irrigation based on crop or substrate monitoring.	Overhead irrigation applied at a set rate without regard to crop need.		
<b>NUTRIENTS</b>					
<b>6.04)</b> What fertilizers are used to minimize nutrient loss?	Controlled-release fertilizers or fertigation for in-pot emitters.		Quick-release fertilizers used exclusively. No split applications.		
<b>6.05)</b> Is container stock fertigated with overhead sprinklers?	Overhead irrigation with fertigation is avoided on containers.		Overhead irrigation with fertigation is regularly used on containers.		
<b>SUBSTRATES</b>					
<b>6.06)</b> Is there regular testing of incoming new container media?	Each new load of container media is regularly tested to ensure that physical and chemical properties are correct.	Container media are often tested to ensure that physical and chemical properties are correct.	Container media are not tested.		
<b>6.08)</b> Does the nursery conduct in-house pH and soluble salts testing of container-grown plants?	The nursery regularly does in-house pH and soluble salts testing of container-grown plants.	The nursery occasionally does in-house pH and soluble salts testing of container-grown plants.	The nursery does not do in-house pH and soluble salts testing of container-grown plants.		
<b>SITE</b>					
<b>6.09)</b> Is the site designed to minimize runoff?	Site is graded to minimize runoff. Drainage areas collect additional runoff for reuse as irrigation. Impervious surfaces are minimized or drain to collection areas.	Some slopes on site. Impervious surfaces and fields drain toward buffer strips or runoff collection areas.	Site has extensive sloping. No collection areas for runoff. Extensive impervious areas that drain toward surface water.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORD OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>OTHER CONSIDERATIONS FOR THE CROPPING SYSTEM</b>					
<p><b>7.01) Is a live species, restricted species, or prohibited species on the land or in the waters on the property?</b></p>	<p>Such species is/are not known to be present.</p>	<p>Such species is/are present: BUT</p> <ul style="list-style-type: none"> <li>• It was not knowingly introduced.</li> <li>• It was introduced under a permit, OR</li> </ul> <p>It is possessed under a permit.</p>	<p><b>Such species is/are present:</b></p> <ul style="list-style-type: none"> <li>• <b>It was knowingly introduced without a permit</b> <b>OR</b> <b>It is possessed without a permit.</b><sup>21</sup></li> </ul>		<p><b>Natural Resources and Environmental Protection Act, Act 451, Part 413:</b> <a href="http://legislature.mi.gov/doc.aspx?mcl-451-1994-III-2-1-WILDLIFE-CONSERVATION-413">http://legislature.mi.gov/doc.aspx?mcl-451-1994-III-2-1-WILDLIFE-CONSERVATION-413</a>.</p> <p>“Introduce” and “possess” are specifically defined.</p> <p>Identification guides for some species regulated by Part 413: <a href="http://mnfi.anr.msu.edu/invasive-species/AquaticsFieldGuide.pdf">http://mnfi.anr.msu.edu/invasive-species/AquaticsFieldGuide.pdf</a> <a href="http://mnfi.anr.msu.edu/invasive-species/InvasivePlantsFieldGuide.pdf">http://mnfi.anr.msu.edu/invasive-species/InvasivePlantsFieldGuide.pdf</a></p>

## Field Crop and Vegetable Educational Questions

**A boxed risk level** indicates the level required for environmental assurance verification.

**Bold black print** indicates a violation of state or federal regulation.

**Bold blue italic print** indicates a management practice consistent with a specific 2015<sup>6</sup> GAAMP.

(Revised Date: 7-14-16)

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>NUTRIENT MANAGEMENT PRACTICES - GENERAL</b>					
<b>1.03)</b> Is the soil pH maintained in the desirable range for the crop(s) being grown?	When crops with different target pHs are being grown in rotation, soil pH is maintained for the crop with the highest target pH. OR, For perennial crops, soil pH is maintained in desirable range.	The soil pH is adjusted for the current crop. Rotational crops are not considered.	Soil pH is not maintained in the desirable range.		
<b>1.11)</b> Are poly tanks used as intended?	Yes, Vertical (upright) tanks are used for stationary fertilizer storage, and horizontal tanks with tie-down features are used for stationary storage and/or transportation application.		Vertical tanks are used as mobile nurse tanks or other transportation applications. Vertical tanks are designed for stationary storage.		
<b>1.12)</b> Are poly tanks inspected periodically for structural soundness?	Poly tanks are inspected for crazing (spider webbing) and cracking in the spring and again at the end of the season. Damaged tanks are replaced or used for water.	Poly tanks are inspected and periodically replaced as necessary	Tanks are not inspected regularly. High potential for tank failure is present.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>NITROGEN MANAGEMENT PRACTICES</b>					
1.13) How are nitrogen (N) fertilizer applications matched to the demand of the crop and the conditions of the soil?	Split or multiple nitrogen fertilizer applications are based on pre-sidedress nitrate tests (PSNT) or N credits for manure, legumes and other biological materials.	Split or multiple nitrogen fertilizer applications are based on past practices.	Single application is made where leaching or runoff potential is high.		
1.16) Where is the phosphorus (P) fertilizer placed?	For row crops, all P is banded as a starter fertilizer at planting time. For other crops, P is surface broadcast but incorporated when possible to prevent runoff.	P fertilizer is surface applied and not incorporated where runoff potentials are limited.	P fertilizer is surface applied and not incorporated where runoff potentials are high.		
<b>MANURE MANAGEMENT PRACTICES</b>					
1.30) Does the farm have an odor management plan?	An odor management plan has been developed and implemented. <i>Farm is managed to minimize odor impacts upon neighbors.</i>	A partial odor management plan has been developed and implemented.	No odor management plan has been developed.		
<b>SOIL AND WATER CONSERVATION PRACTICES (CONTINUED)</b>					
2.03) Are all streams, wetlands, farm ditches, and other bodies of water on the farm protected from polluted runoff and sediment with conservation practices?	Filter strips, riparian buffer strips, grassed waterways and other conservation practices are maintained between fields and all surface waters on the farm.	Conservation practices are maintained on some fields.	No conservation practices are maintained. Farm is immediately next to surface waters, drainage ditches and roads.		
2.04) Are cover crops planted to prevent soil erosion, trap nutrients and pesticides, and improve soil quality?	Cover crops are included in the crop rotation to protect soil and water resources and control erosion.	Cover crops are used occasionally.	Cover crops are not used.		
2.05) Are soil quality indicators evaluated?	Soil quality indicators (e.g., earthworm populations, water infiltration rates, soil compaction, percent plant and residue cover, pH, cation exchange capacity [CEC] and percent organic matter) are evaluated on all fields.	Some soil quality indicators are evaluated.	No soil quality indicators are evaluated.		
2.06) Are conservation and management practices routinely inspected and evaluated?	Owner or trained individual routinely inspects and evaluates conservation and management practices.	Conservation and management practices are informally evaluated during field operations.	Practices are not inspected nor evaluated.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PEST MANAGEMENT PRACTICES</b>					
<b>3.01)</b> How does the grower stay current on new pest management practices and strategies for weeds, insects and diseases?	Attend educational meetings, read educational materials provided by the university or other reliable sources. At least one new pest management practices adopted on a trial basis each year.	Occasionally attend educational meetings and read new pest management materials.	Rely on outdated pest management practices.		
<b>3.02)</b> Does the grower consult with a pest management consultant or service during the growing season?	Employs and independent crop consultant throughout the growing season that is knowledgeable of IPM. <b>OR, Utilizes public reports and services from the university, local agribusiness or other reliable providers.</b>		Rely on outdated pest management practices.		
<b>PEST PREVENTION AND AVOIDANCE</b>					
<b>3.03)</b> Does the grower review previous growing season pest management activities and results?	Previous pest populations, pest suppression activities/pesticide usage and crop yield/injury are reviewed. Records used for future pest management plans.	No.			
<b>3.04)</b> When available, are certified seed or plant materials (tubers, crowns, transplants, etc.) used that are insect, weed and disease-free?	Certified or quality seed and planting materials used whenever possible.	Bin-run or uncertified planting material that is cleaned and treated.	Use saved seed or planting materials that is untreated and potentially infected with insects, weed and/or disease pests.		
<b>3.05)</b> Are crops (and plant families) rotated to break pest cycles and to maximize crop yields?	Three year or longer rotations are utilized to break pest cycles and to reduce the need for pest suppression practices.	Short (< 3 year) rotations are utilized because of intensive cropping systems. Cover crops utilized whenever possible to improve system.	No rotation followed. Continuous cropping system results in increased pest pressures and reduced yields.		
<b>3.06)</b> Are pest resistant and tolerant varieties planted?	Pest resistant and tolerant varieties are planted when available.	Varieties without resistance and tolerance are planted, resulting in the need for pest suppression practices.			

RISK QUESTION	Low Risk – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	High Risk - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PEST PREVENTION AND AVOIDANCE</b>					
<b>3.07)</b> Are planting dates adjusted to avoid early and late season pests? (Example fly-free date for wheat planting and early sweet corn for earworm avoidance.)	Planting dates are adjusted to avoid pest damage.	Planting dates are not based on the need to manage pests.			
<b>PEST MONITORING</b>					
<b>3.08)</b> Are fields scouted for pests during the growing season?	All fields are scouted on a weekly schedule, by a qualified individual trained in IPM. Scouting reports and records are filed.	Fields are scouted at critical times, but not on a weekly basis.	Fields are not scouted.		
<b>3.09)</b> Are weather conditions relevant to pest management monitored?	On-farm weather station(s) provide data to assist with crop and pest management decisions. OR, MSU Enviro-weather ( <a href="http://www.enviroweather.msu.edu">www.enviroweather.msu.edu</a> ) or other weather-based models are used to assist with crop and pest management decisions.	Consumer weather information used for crop and pest management decisions.	Weather conditions are not considered when making crop and pest management decisions.		
<b>PEST APPLICATION</b>					
<b>3.10)</b> Are soil characteristics and field conditions considered when making pesticide applications?	Soil characteristics (texture and organic matter) and field conditions (slope and moisture) are assessed when deciding on pesticide application practices Site-specific or variable-rate technology may be used.	Whole-field application rates are based on the most vulnerable soil type in the field.	Pesticides are applied at full labeled rates without regard to vulnerable soil characteristics or field conditions.		

RISK QUESTION	Low Risk – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PEST APPLICATION</b>					
3.12) Are leaching/runoff and toxicity potentials considered when making pesticide decisions?	Pesticides with the lowest potentials for leaching, runoff and non-target toxicity are always selected for use in fields.	Leaching/runoff and toxicity potentials are occasionally considered when selecting soil-applied pesticides.	Pesticide choice is not based on leaching/runoff and toxicity potentials. Only cost and effectiveness are considered.		
3.14) How are workers and pesticide handlers protected from exposure to pesticides?	<b><i>Workers and handlers:</i></b> <b><i>-Follow specific label requirements.</i></b> <b><i>-Are provided decontamination supplies.</i></b> <b><i>-Are trained or certified applicators.</i></b> <b><i>-Are informed of pesticide applications.</i></b> <b><i>-Are provided personal protective equipment.</i></b> <b><i>-Are provided emergency assistance, if needed.</i></b>	Worker Protection Standard requirements are partially met.	Worker Protection Standard requirements are ignored.		

RISK QUESTION	Low Risk – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PEST APPLICATION - CONTINUED</b>					
<b>3.18)</b> What management practices are used to prevent the development of pest resistance to certain pesticides.	Pesticides with different modes of action are rotated within a season or from one season to the next or used in tank mixes where permitted. Pesticides at highest risk of resistance are not used when alternatives are available. Refuge requirements for transgenic seed are followed.	Some but not all pesticide modes of action are rotated or tank mixed. Pesticides at highest risk of resistance are used sparingly.	Pest resistance is not considered when selecting pesticides. Refuge requirements for transgenic seed are ignored.		
<b>3.25)</b> How are beneficial insect populations encouraged?	Field borders and boundaries are managed to encourage beneficial insects.	Beneficial insect management is not considered.			
<b>3.26)</b> Are pesticides selected and applications timed to minimize impact on beneficial insects (natural enemies and pollinators)?	Pesticide toxicity to beneficial insects is considered. Pesticide applications timed to avoid injury to beneficial insect populations.		Broad spectrum pesticides used on a calendar schedule and not timed to avoid beneficial insects.		
<b>3.27)</b> What management practices are used to prevent the development of pesticide resistance (including glyphosate-resistant weeds)?	Pesticides with different modes of action are rotated within a season or from one season to the next or used in tank mixes, where permitted. Pesticides at highest risk of resistance are not used when alternatives are available. Refuge requirements for transgenic seed are followed.	Some but not all pesticide modes of action are rotated or tank mixed. Pesticides at highest risk or resistance are used sparingly.	Pest resistance is not considered when selecting pesticides. Refuge requirements for transgenic seed are ignored.		
<b>CORN MANAGEMENT PRACTICES</b>					
<b>5.01)</b> Is commercial nitrogen applied in the fall for spring-planted corn?	Nitrogen fertilizer is not applied in the fall.		Nitrogen fertilizer is applied in the fall that may be leached from the soil profile.		
<b>5.03)</b> Is corn rotated with other crops for rootworm control?	Corn is rotated annually without the use of rootworm insecticides.	Corn is rotated annually without overuse of rootworm insecticides.	Continuous corn is grown with the use of a rootworm insecticide.		
<b>SOYBEAN AND ALFALFA MANAGEMENT PRACTICES</b>					
<b>5.04)</b> Is commercial nitrogen applied when planting soybeans, or alfalfa?	No nitrogen is applied because soybeans and alfalfa use nitrogen fixed from the air by soil bacteria.	Nitrogen fertilizer is applied to soybeans or alfalfa.			

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>WHEAT MANAGEMENT PRACTICES</b>					
5.05) Are more than 25 pounds of nitrogen per acre applied when planting fall-seeded wheat?	No more than 25 pounds of N fertilizer are applied in the fall.	More than 25 pounds of N fertilizer are applied in the fall.			
<b>POTATO MANAGEMENT PRACTICES</b>					
5.06) Is a cover crop planted after potato harvest?	Cover crop is established to take up any residual nitrogen and to				
<b>SUGAR BEET MANAGEMENT PRACTICES</b>					
5.07) Is commercial nitrogen applied in the fall for spring-planted sugar beets?	No nitrogen fertilizer is applied in the fall.		Nitrogen fertilizer is applied in the fall that may be leached from the soil profile.		
<b>VEGETABLE CROP MANAGEMENT PRACTICES</b>					
5.08) How are manure applications managed to prevent any food safety risk?	Manure application record document manure is incorporated and applied 270 or more days prior to harvest.	Manure application records document manure is incorporated and applied 120 or more days prior to harvest.	Manure is applied less than 120 days prior to harvest.	Note: USDA Good Agricultural Practices ≥120 days before harvest.  FDA Food Safety modernization Act ≥270 days before harvest (proposed).	
5.09) Does the farm business have a food safety plan that is followed to reduce the risk of foodborne illness?	A written food safety plan exists and is being implemented.	Food safety practices are generally followed, but not documented in a written plan.	A food safety plan is not available.	Note: This is a GAP (Good Agricultural Practices) requirement. USDA will not certify the farm without a documented food safety plan.	
5.10) Does the farm business have a person designated to implement and oversee a food safety program?	The designated food safety person is documented in the food safety manual.		There is no designated food safety person.	Note: This is a GAP requirement. USDA will not certify the farm without a documented food safety designee.	
5.11) If a soil fumigant pesticide is used on the farm, is a fumigation management plan (FMP) utilized?	A written, site-specific fumigation management plan that meets US-EPA requirements is prepared and utilized before fumigation begins.		<b>A FMP is not prepared.</b>		

RISK QUESTION	Low Risk – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>VEGETABLE CROP MANAGEMENT PRACTICES</b>					
<b>5.12)</b> Are areas of the farm set aside as habitat for pollinators?	At least two acres are devoted to conservation of native bees and other pollinators by providing flowers through the season, and this is planted with a specific mix of wildflowers for this purpose.	Some areas of the farm are set aside to provide flowers for bees and other pollinators.	No habitat is provided for pollinators.	Note: Cost share is available through enrollment in the USDA pollinator conservation programs (e.g. USDA's FSA CRP-Save pollinator program).	
<b>PASTURE MANAGEMENT PRACTICES</b>					
<b>6.02)</b> Is the area managed as a pasture?	Pasture plants are the only significant feed source. Area is covered with pasture plant species. Manure nutrients are removed by growing vegetation and animal grazing.	Pasture plants are the major feed source. Area is covered with predominantly pasture plant species. Manure nutrients are removed by animal grazing and some scrape and haul from areas where pasture plants do not exist.	Significant sources of additional feed are brought to the area. Area is not covered with predominantly pasture plant species. Manure nutrients are not removed by animal grazing or some scrape and haul from areas where pasture plants do not exist. (These areas are not considered pasture and should be managed as dirt lots. See Farm*A*Syst yard management.)		
<b>IRRIGATION MANAGEMENT PRACTICES</b>					
<b>7.04)</b> Is noise control provided when needed?	<b>Noise control is provided</b> when needed.	In most areas of concern, noise control is provided when needed.	Noise control is not provided when needed.		
<b>APPLICATION PRACTICES TO AVOID RUNOFF AND LEACHING</b>					
<b>7.09)</b> Are split applications of nitrogen fertilizer (fertigation and land applied) used when nitrogen is used in an irrigated field?	After planting, <b>split applications are used to ensure that N is available when plants need it most and to minimize the amount that can be leached.</b> N application does not exceed MSU recommendations.		Majority of nitrogen is applied before or at planting, increasing risk of N leaching.		

RISK QUESTION	Low Risk – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	High Risk - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>APPLICATION PRACTICES TO AVOID RUNOFF AND LEACHING</b>					
7.12) Is excess irrigation avoided?	<i>Irrigation water applications in excess of the quantity of water needed to replace the soil/substrate moisture deficit are avoided.</i>	Excess irrigation water applications may occur occasionally.	Excess irrigation water applications are common.		
<b>OTHER ENVIRONMENTAL RISKS IN THE CROPPING SYSTEM</b>					
8.01) Is a live species, restricted species, or prohibited species on the land or in the waters on the property?	Such species is/are not known to be present.	Such species is/are present: BUT <ul style="list-style-type: none"> <li>• It was not knowingly introduced.</li> <li>• It was introduced under a permit, OR</li> <li>• It is possessed under a permit.</li> </ul>	Such species is/are present: <ul style="list-style-type: none"> <li>• It was knowingly introduced without a permit OR</li> <li>• It is possessed without a permit.<sup>21</sup></li> </ul>		<p><b>Natural Resources and Environmental Protection Act, Act 451, Part 413:</b>  <a href="http://legislature.mi.gov/doc.aspx?mcl-451-1994-III-2-1-WILDLIFE-CONSERVATION-413">http://legislature.mi.gov/doc.aspx?mcl-451-1994-III-2-1-WILDLIFE-CONSERVATION-413</a>.</p> <p>“Introduce” and “possess” are specifically defined.</p> <p>Identification guides for some species regulated by Part 413:  <a href="http://mnfi.anr.msu.edu/invasive-species/AquaticsFieldGuide.pdf">http://mnfi.anr.msu.edu/invasive-species/AquaticsFieldGuide.pdf</a>  <a href="http://mnfi.anr.msu.edu/invasive-species/InvasivePlantsFieldGuide.pdf">http://mnfi.anr.msu.edu/invasive-species/InvasivePlantsFieldGuide.pdf</a></p>

(Revised date: 7/15/16)

### Farmstead System Verification Standards

**A boxed risk level** indicates the level required for environmental assurance verification.

**Bold black print** indicates a violation of state or federal regulation.

***Bold italic blue print*** indicates a management practice consistent with a specific 2015-2016 Right-to-Farm (RTF) Generally Accepted Agricultural Management Practices (GAAMPs).

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>RIGHT TO FARM</b>					
<b>1.00)</b> Has there ever been a formal Right to Farm complaint against the farm?	There has never been a Right to Farm complaint, or the concern was not verified, or the concern was resolved.		There was a formal Right to Farm complaint, and the concern was not resolved.	Producer's verbal indication of compliant history.	
<b>FARMSTEAD SOIL EVALUATION</b>					
<b>1.06)</b> Is the farmstead site subject to visible soil erosion?	Site does not erode.	Slight or occasional erosion with limited risk to surface water.	<b>Significant erosion occurs annually.</b>	No significant erosion present at farmstead.	<b>NREPA PA 451 of 1994, Part 31: Water Resources Protection Act</b>
<b>DRINKING WATER WELL CONDITION</b>					
<b>2.05)</b> What is the condition of the well casing and cap?	No holes or cracks. Cap tightly secured.		<b>Holes or cracks visible. Cap loose or missing. Water can be heard running into well. Exposed well casing bent.</b>	Satisfactory well casing and cap present.	<b>Public Health Code, Public Act 368 of 1978, Part 127: Water Supply and Sewer Systems and/or Safe Drinking Water Act, Pubic Act 399 of 1976</b>

<b>PESTICIDE STORAGE AND HANDLING (CONTINUED)</b>					
<b>3.02)</b> How far is the pesticide storage located from surface water? (drains, streams, ponds, catch basins on farmstead, etc.)	<b>200 feet or greater.</b>	Less than 200 feet with appropriate security measures.	Less than 200 feet.	Appropriate pesticide storage isolation distance from surface water.	<b>20152016 RTF Pesticide Utilization and Pest Control GAAMPs, Section II: Pesticide Utilization and Pest Control Practices, On Farm Storage and Containment of Pesticides, #1, (a.)</b>
<b>3.05)</b> What design features does the pesticide storage have to contain spills and leaks?	Impermeable floor surface does not allow spills to soak into soil. Curb installed on floor to contain leaks and spills or individual package containment.	Impermeable floor surface without curb.	Permeable floor surface (wood, gravel or dirt floor) or impermeable floor with cracks. Spills could contaminate soil. <b>Drain in the floor that discharges to the environment.</b>	Adequate secondary containment for pesticide storage.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>3.07)</b> What level of security is provided for the pesticide storage?	Fenced or locked area, <b>secure from unauthorized access.</b> Storage separate from all other activities.	Storage open to activities that could damage containers or spill chemicals.	<b>Open access to pesticide storage could result in theft, vandalism, and injury to children, pets or wildlife.</b>	Adequate pesticide storage security.	<b>Federal Insecticide, Fungicide and Rodenticide ACT (FIFRA)</b>  <b>20152016 RTF Pesticide Utilization and Pest Control GAAMPs, Section II: Pesticide Utilization and Pest Control Practices, #2 Storage Facility</b>

<b>PESTICIDE STORAGE AND HANDLING (CONTINUED)</b>					
<b>3.13)</b> Have Extremely Hazardous Substances (EHS) been reported to authorities?	No EHS stored or used. Anhydrous ammonia (EHS) is not used on the farm.	EHS stored or used on farm have been identified and reported to local and state authorities (if stored at or above threshold planning quantity).	<b>EHS stored or used on farm have NOT been identified or reported.</b>	Records that indicate EHS have been shared with authorities or that EHS are not used on the farm.	<b>Title III of the Superfund Amendments and Reauthorization Act of 1986</b>
<b>3.14)</b> What is the condition of stored pesticide containers?	<b>Original containers clearly labeled or containers appropriate for pesticide storage that are properly labeled.</b> No holes, tears or weak seams.	Old containers with hard to read labels. Patched containers, metal containers showing signs of rusting.	Containers have holes or tears that allow chemical to leak. <b>Some containers have no labels.</b>	Stored pesticides in satisfactory condition with labels attached.	<b>Federal Insecticide, Fungicide and Rodenticide ACT (FIFRA)</b>  <del>2015</del> <b>2016 RTF Pesticide Utilization and Pest Control GAAMPs, Section II: On Farm Storage and Containment of Pesticides, #2 Storage Facility, (f.)</b>
<b>3.16)</b> Is there a written emergency plan to deal with spills and other farm emergencies?	Up-to-date plan developed and shared with authorities (if required), employees and family members.	More than one-year-old plan or an incomplete plan is available.	An emergency farm plan has not been developed.	An up-to-date emergency plan.	
<b>3.17)</b> Is there a written pesticide drift management plan for applications made at the farmstead?	<b>A written drift management plan is utilized that minimizes off-target drift.</b>	Pesticide applications follow labeled instructions for target pests, but no drift management plan is utilized.	<b>Spraying operations are completed regardless of weather conditions or forecast, and regardless of the potential of off-target drift.</b>	Drift management plan on file.	<b>Michigan Department of Agriculture and Rural Development (MDARD) Pesticide Regulation 637: Pesticide Use</b>  <del>2015</del> <b>2016 RTF Pesticide Utilization and Pest Control GAAMPs, Section II: Pesticide Utilization and Pest Control Practices, Application and Standards for Use, #2 Pesticide Drift</b>

<b>PESTICIDE STORAGE AND HANDLING (CONTINUED)</b>					
3.20) How is the potential reduced for surface and groundwater contamination at the mix/load area(s)?	Mixing and loading pad with curb keeps spills contained. Sumps allow collection and transfer to storage.	Mixing and loading in the field without mix/load pad. Different location every time reduces risks to groundwater. Or, mixing and loading on concrete pad without curbs.	No mixing and loading pad. Permeable soil. Spills soak into ground. Same location every time.	Satisfactory explanation of mixing and loading procedures. No evidence of burned vegetation.	
3.21) How is backflow or back siphoning of pesticide mixtures into the water supply prevented?	<i>Anti-backflow device installed</i> , including reduced pressure zone (RPZ) valve, double check valve assembly or chemigation valve with an internal air gap, or six inch <i>air gap maintained above the overflow level of the tank</i> . Air gap is twice the diameter of the fill pipe or 6-inches, whichever is greater.	Either an <i>anti-backflow device installed</i> , including reduced pressure zone (RPZ) valve, double check valve assembly or chemigation valve with an internal air gap, or six inch <i>air gap maintained above the overflow level of the tank</i> . Air gap is twice the diameter of the fill pipe or 6-inches, whichever is greater.	<b>Neither an anti-backflow device</b> , including a reduced pressure zone (RPZ) valve, double check valve assembly or chemigation valve with an internal air gap, <b>nor air gap maintained</b> .	Anti-backflow device installed, including a reduced pressure zone (RPZ) valve, double check valve assembly, or chemigation valve with an internal air gap, or air gap present or demonstrated.	<b>Public Health Code, Public Act 368 of 1978, Part 127: Water Supply and Sewer Systems and/or Safe Drinking Water Act, Public Act 399 of 1976</b>  MSU Extension Bulletin E-2349: Protect Your Water Supply From Agricultural Chemical Backflow  <i>20152016 RTF Pesticide Utilization and Pest Control GAAMPs, Section II: Mixing and Loading, #4</i>
3.22) How are tank overflows prevented when filling the sprayer?	<i>Sprayer monitored when being filled.</i>		Sprayer seldom or never monitored when being filled.	Satisfactory explanation of spray tank filling procedures.	<i>20152016 RTF Pesticide Utilization and Pest Control GAAMPs, Section II: Mixing and Loading, #5</i>

<b>PESTICIDE STORAGE AND HANDLING (CONTINUED)</b>					
3.23) How are pesticides, additives and water quantities measured when loading the sprayer system?	<i>Measuring devices labeled and kept in pesticide storage area. Devices rinsed and rinse water put into spray tank.</i> Tank capacities labeled.		A variety of unlabeled measuring devices used. Devices may be used for other purposes. Tank capacities not identified.	Set of dedicated measuring devices for pesticides. Spray tank capacities labeled.	<del>2015</del> 2016 RTF Pesticide Utilization and Pest Control GAAMPs, Section II: Mixing and Loading, #3
3.25) What is done with excess spray mixture?	<i>Spray mixture applied to labeled site at or below labeled rate of application.</i>		<b>Spray mixture dumped at farmstead or in nearby field or pond.</b>	Satisfactory explanation of procedures for excess spray mixtures.	Michigan Department of Agriculture and Rural Development (MDARD) Pesticide Regulation 637: Pesticide Use  <del>2015</del> 2016 RTF Pesticide Utilization and Pest Control GAAMPs, Section II: Excess Spray Mixtures and Rinsates
3.26) How is the sprayer system rinsed?	<i>Sprayer system rinsed on pad or in field. Rinse water applied to labeled site at or below labeled rate of application.</i>		Sprayer rinsed out at farmstead. <b>Rinse water dumped at farmstead or in nearby field or pond.</b>	Satisfactory explanation of procedures for rinsing sprayer system.	MDARD Pesticide Regulation 637: Pesticide Use  <del>2015</del> 2016 RTF Pesticide Utilization and Pest Control GAAMPs, Section II: Excess Spray Mixtures and Rinsates
3.28) How are empty pesticide containers rinsed and disposed?	<i>Containers triple-rinsed or power-rinsed, punctured and returned to dealer, or disposed of in a licensed landfill. Bags are returned to dealer or taken to licensed landfill. Properly rinsed containers can be disposed in a dumpster that is taken to a licensed landfill.</i>	<b>Disposal of empty containers and bags on the farm property.</b>	<b>Disposal of partially filled containers. Burning of containers on the farm property.</b>	Rinsed jugs stockpiled for recycling or landfilling. No un-rinsed jugs on farmstead.	NREPA PA 451 of 1994, Part 115: Solid Waste Management and NREPA Part 55: Air Pollution Control Rules  <del>2015</del> 2016 RTF Pesticide Utilization and Pest Control GAAMPs, Section II: Disposal of Pesticide Containers

<b>FERTILIZER STORAGE AND HANDLING (CONTINUED)</b>					
<b>5.02)</b> How far is the fertilizer storage located from surface water? (drains, steams, ponds, catch basins on farmstead, etc.)	<i>200 feet or greater.</i>	Less than 200 feet with appropriate security measures.	Less than 200 feet.	Appropriate fertilizer storage isolation distance from surface water. Note: bulk liquid fertilizer storages installed after August 13, 2008, having a capacity greater than 2,500 gallons, or having combined capacity of all takes greater than 7,500 gallons, must be located 200 feet or more from surface water.	<del>2015</del> <b>2016</b> <i>RTF Nutrient Utilization GAAMPs, Section II: On-Farm Fertilizer Storage and Containment Practices, Fertilizer Storage Facilities, #2</i>
<b>5.04)</b> What level of security is provided for the fertilizer storage?	<i>Fertilizer storage areas, valves, and containers are secured when not in use.</i>	Appropriate conditions are partially met.	Fertilizer storage facilities are not locked or secured by any means. Open access to theft, vandalism and children exists.	Adequate fertilizer storage facility.	<del>2015</del> <b>2016</b> <i>RTF Nutrient Utilization GAAMPs, Section II: On-Farm Fertilizer Storage and Containment Practices, Security for Fertilizer Storage Areas, #1</i>
<b>5.05)</b> Is fertilizer stored in the direct presence of fuel products?	No. <i>Fertilizer is not stored in the direct presence of fuel products <del>or</del> pesticides.</i>		Yes. Fertilizers and fuel products are stored together – posing an increased potential for explosions and significant disposal problems.		<del>2015</del> <b>2016</b> <i>RTF Nutrient Utilization GAAMPs, Section II: On-Farm Fertilizer Storage and Containment Practices, Security for Fertilizer Storage Areas, #1</i>
<b>5.07)</b> How often is the fertilizer storage area inspected for safety concerns?	<i>At least annually.</i>		No regular inspections of the storage facility.	Evidence fertilizer storage is inspected at least annually.	<del>2015</del> <b>2016</b> <i>RTF Nutrient Utilization GAAMPs, Section II: On-Farm Fertilizer Storage and Containment Practices: Fertilizer Storage Facilities, #4</i>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>FERTILIZER STORAGE AND HANDLING (CONTINUED)</b>					
<b>5.08)</b> Is there a written emergency plan to deal with fertilizer spills, discharges and other farm emergencies?	Up-to-date plan developed and shared with authorities (if required), employees and family members.	More than one-year-old plan or an incomplete plan is available.	An emergency farm plan has not been developed.	Up-to-date emergency plan.	
<b>5.11)</b> What kind of structure is used for dry fertilizer storage?	<i>A structure or device capable of preventing contact with precipitation and/or surface water.</i>		Storage allows fertilizer contact with precipitation and/or surface water.	Satisfactory dry fertilizer storage facilities.	<b>20152016 RTF Nutrient Utilization GAAMPs, Section II: On-Farm Fertilizer Storage and Containment Practices: Fertilizer Storage Facilities, #2</b>
<b>5.12)</b> What kind of container is used for liquid fertilizer storage?	<i>Stored in containers approved for, and compatible with, the fertilizer being stored.</i>		Liquid fertilizer stored in containers not approved for/or compatible with the fertilizer being stored. Or fertilizer stored in underground tanks.	Satisfactory liquid fertilizer primary storage containers.	<b>20152016 RTF Nutrient Utilization GAAMPs, Section II: On-Farm Fertilizer Storage and Containment Practices: Fertilizer Storage Facilities, #3</b>
<b>5.16)</b> Is there secondary containment for liquid fertilizer stored on the farm?	All liquid fertilizer is stored with secondary containment.	Containers with greater than 2,500-gallon capacity or all containers located at a single site with a combined total capacity of greater than 7,500 gallons have secondary containment.	<b>Containers with greater than 2,500-gallon capacity or all containers located at a single site with a combined total capacity of greater than 7,500 gallons do not have secondary containment.</b>	Satisfactory liquid fertilizer secondary storage containers, if required.	<b>MDARD Regulation 642, On Farm Fertilizer Bulk Storage</b>

<b>FERTILIZER STORAGE AND HANDLING (CONTINUED)</b>					
<b>5.17)</b> What is the condition of storage tanks, hoses, valves and fittings used for liquid fertilizer?	Tanks, hoses, fittings and valves are in good condition, well maintained and <i>compatible with the fertilizer being stored.</i>	Tanks, hoses, fittings and valves have some rust or signs of wear. Tanks previously used for underground petroleum storage are in good condition and in secondary containment.	Rusty, aged, worn, damaged or leaking storage tanks, hoses, fittings or valves <b>directly discharging to surface waters</b> , or use of underground petroleum tanks without secondary containment.	Satisfactory condition of liquid fertilizer storage system.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>  <i>20152016 RTF Nutrient Utilization GAAMPs, Section II: On-Farm Fertilizer Storage and Containment Practices, Fertilizer Storage Facilities</i>
<b>5.18)</b> How are precipitation and clean-up leakage managed, if it occurs, in the on-farm liquid fertilizer secondary containment facility?	Leakage cleaned up immediately. Appropriate products are used to clean residual fertilizer off the surface of the secondary containment structure. Contained precipitation/fertilizer mixture spread on field at or below agronomic rate.	Spilled fertilizer recovered, but secondary containment surface not cleaned up after a spill or leakage.	Contained leakage not recovered.  Leakage with accumulated precipitation <b>directly discharged in surface waters.</b>	Satisfactory explanation of precipitation and leakage management in the secondary containment facility.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>5.19)</b> How is leakage prevented when filling storage tanks, sprayers or mobile containers?	A permanent or temporary mix/load pad used during loading operations. Spills cleaned up immediately. Or, Fertilizer loaded in the field at different locations every time. Spills cleaned up immediately. Or, Dry couplers used to reduce spills and drips when loading liquid fertilizers. Spills cleaned up immediately.	Drips and leakage contained in buckets placed under couplers. Collected fertilizer reused. Spills cleaned up immediately.	No system in place to capture and prevent spills.  Leakage from hose connections allowed to drain onto unprotected soils.  <b>Spills not cleaned up.</b>	Satisfactory explanation of tank filling procedures.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>

<b>FERTILIZER STORAGE AND HANDLING (CONTINUED)</b>					
<b>5.25)</b> How far is the mixing and loading area from surface water?	200 feet or greater.	Less than 200 feet, with appropriate security measures.	Less than 200 feet, without appropriate security measures	Appropriate mixing and loading area isolation distance from surface water.	
<b>5.26)</b> When not in use, where are park planting and spray supply vehicles (trailers and trucks) parked to protect water resources from accidental fertilizer and pesticide spills and mischievous activities?	Supply vehicle returned to a secure location when not in use. Fertilizer and pesticides (including treated seed) properly stored more than 150 feet down gradient from any well.		Fertilizer and pesticide (including treated seed) supply vehicle left in an unsecured location. Or, Fertilizer and pesticides <b>stored less than 150 feet from any well.</b>	Map showing where vehicles should not be parked adjacent. No evidence vehicles left in unsecure location.	<b>Public Health Code, Public Act 368 of 1978, Part 127: Water Supply and Sewer Systems and/or Safe Drinking Water Act, Pubic Act 399 of 1976</b>
<b>PETROLEUM PRODUCT STORAGE AND MANAGEMENT</b>					
<b>ALL PETROLEUM STORAGE FACILITIES</b>					
<b>6.01)</b> Are fuel storage tanks designed for the way they are being used and compatible with the material stored?	Each tank designed for the way it is being used and compatible with the material stored.		<b>Belowground tank being used for aboveground petroleum storage, aboveground tank being used for underground petroleum storage or tank does not meet specifications for usage.</b>	Fuel tanks used appropriately.	<b>Fire Prevention Code, Public Act 207 of 1941, Section 29.5c</b>
<b>6.02)</b> Are fuel storage piping, secondary containment and related equipment designed for the way they are being used and compatible with the material stored?	Fuel storage piping and equipment are designed for the way they are being used and compatible with the material stored.		Fuel storage piping or equipment not designed for the way it is being used. <b>Belowground piping on all underground tanks or aboveground tanks of greater than 1,100-gallon capacity not corrosion protected.</b>	Fuel storage equipment appropriate for use.	<b>Fire Prevention Code, Public Act 207 of 1941, Section 29.5c</b>

<b>FARM MOTOR VEHICLE STORAGE TANKS WITH CAPACITY EQUAL TO OR LESS THAN 1,100 GALLONS</b>					
<b>6.11)</b> How far is the tank from a storm drain, surface water or designated wetland?	Tank is more than 50 feet away or has some other engineering control present that would control or divert a spill from reaching a storm drain, surface water or designated wetland.		<b>Tank 50 feet or less.</b>	Appropriate fuel storage isolation distance from surface water.	<b>Fire Prevention Code, Public Act 207 of 1941, Section 29.5c</b>
<b>6.15)</b> Are the portable fueling tank and transfer system adequate to reduce risk of environmental contamination?	UL-approved tank and adequate fueling system.	Adequate portable fueling system that reduces risks.	Inadequate portable fueling system that poses risk of environmental contamination.	Adequate portable fueling	
<b>ABOVEGROUND TANKS</b>					
<b>6.18)</b> Is the tank elevated off the ground to protect from corrosion?	Tank stably mounted on solid timbers, solid cement blocks, manufactured cradles or equivalent to protect the tank bottom from corrosion due to contact with ground. The tank is elevated to allow for a visible inspection of all tank surfaces.		<b>Tank is not stably elevated in order to allow adequate visible inspection of all tank surfaces.</b>	Appropriate tank elevation.	<b>Fire Prevention Code, Public Act 207 of 1941, Section 29.5c</b>
<b>6.19)</b> Are siphons, manifolds or internal pressure discharge devices present on tank(s)?	Siphons not present on tank(s). Multiple tanks not connected together (no manifold). No internal pressure discharge device present.	Manifold(s) present on tanks installed prior to 2003. After 2003, tanks that are located within diked containment, equipped with a spill bucket and audible overfill alarm may have top only manifolds.	<b>Siphons or internal pressure discharge device(s) present on tanks installed after 2003.</b>	No siphons or internal pressure discharge devices present. No manifolds present on tanks installed after 2003 Unless additional protection factors are present.	<b>Fire Prevention Code, Public Act 207 of 1941, Section 29.5c</b>

<b>FARM MOTOR VEHICLE FUEL STORAGE TANKS WITH GREATER THAN 1,100 GALLONS CAPACITY</b>					
<b>6.26)</b> Is the tank registered and is valid proof of registration displayed?	The above-ground storage tank with capacity greater than 1,100 gallons is registered, and valid proof of registration is available.	The total volume of fuel storage on site is less than 10,000 gallons. <b>The tank is not registered, or valid proof of registration is not available</b> , but an inspection finds it meets all applicable boxed MAEAP requirements in the Petroleum Products Storage and Management Section.	<b>The tank is not registered and/or the tank does not bear a UL tag, and/or valid proof of registration is not available.</b>	Aboveground storage tank is registered or there are minimal environmental risks.	<b>Fire Prevention Code, Public Act 207 of 1941, Section 29.5c</b>
<b>6.27)</b> Does tank fill pipe have spill protection?	Spill protection (catch basin) installed and maintained on tank fill pipe.		<b>Tank fill pipe does not have spill protection.</b>	Catch basin installed on fuel tank.	<b>Fire Prevention Code, Public Act 207 of 1941, Section 29.5c</b>
<b>6.28)</b> Is there an emergency control disconnect for electrically operated fuel systems?	Emergency control disconnect located 20 to 100 feet away from dispensing area.		<b>No emergency control disconnect present.</b>	Appropriate disconnect control present.	<b>Fire Prevention Code, Public Act 207 of 1941, Section 29.5c</b>
<b>6.29)</b> Are there absorbent materials, a container with lid and a non-metallic shovel to deal with a petroleum spill?	Spill kit present.		<b>No spill kit.</b>	Spill kit present.	<b>Fire Prevention Code, Public Act 207 of 1941, Section 29.5c</b>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>ABOVEGROUND STORAGE TANKS WITH GREATER THAN 1,100 GALLONS CAPACITY</b>					
6.30) Does the tank have secondary containment?	Double walled tank or tank within diked area.		No secondary containment.	Appropriate secondary containment.	Fire Prevention Code, Public Act 207 of 1941, Section 29.5c
6.33) Is there crash protection for the tank and piping?	Guard posts or appropriate barrier installed for crash protection.		No crash protection.	Crash protection present for fuel tank.	Fire Prevention Code, Public Act 207 of 1941, Section 29.5c
<b>UNDERGROUND STORAGE TANKS WITH GREATER THAN 1,100 GALLONS CAPACITY</b>					
6.36) Has the underground fuel tank (installed before August 1, 2003 with a capacity of less than 1,100 gallons) been tested for leaks within the past three years?	No leaks detected.		No testing.	Appropriate report indicates no leaks present.	

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>UNDERGROUND TANKS WITH GREATER THAN 1,100 GALLONS CAPACITY (CONTINUED)</b>					
<b>6.37)</b> Does the underground storage tank (installed after August 1, 2003 with a capacity of less than 1,100 gallons) meet Flammable Liquid Combustible Liquid (FLCL) rules?	Leak detection system in place. Tank has corrosion protection, spill bucket installed and overflow prevention in place (alarm or shutoff valve).		FLCL rules not met.	Tank meets FLCL rules.	Fire Prevention Code, Public Act 207 of 1941, Section 29.5c
<b>6.40)</b> Is the underground tank registered, and is valid proof of registration available?	The underground storage tank with capacity greater than 1,100 gallons is registered and proof of registration is present.		The tank is not registered, and/or proof of registration is not present.	Underground storage tank is registered.	Fire Prevention Code, Public Act 207 of 1941
<b>6.44)</b> Are there any unused underground fuel storage tanks on the farm?	No, tanks have been removed from the ground and the site. Excavation site checked for evidence of contamination (site assessment). Any contamination present was properly handled.	Underground tanks have been removed or filled with inert solid material. A site assessment has not been completed.	In-ground tank has been left unused for 12 months. Tanks greater than 1,100 gallons have been removed or filled with inert material but a site assessment has not been completed.		
<b>OTHER PETROLEUM PRODUCT STORAGE</b>					
<b>6.45)</b> Is the heating oil tank for a farm building being used as designed?	Tank is labeled and used as designed.	Tank is not labeled and used outdoors.	Tank is not being used as designed.	Proper management of an unused underground fuel storage tank(s).	
<b>6.46)</b> Is a heating oil tank being used to store diesel fuel?	Yes, but tank is labeled as a UL 80 tank and is being used as designed.		Tank is not labeled or is not being used as designed.	Heating oil storage tank is appropriate.

<b>WASTE MANAGEMENT</b>					
<b>7.05)</b> How is waste oil disposed?	Recycled.	Burned in waste oil heater or furnace.	<b>Dumped on the farm.</b>	Evidence of proper oil recycling or disposal.	<b>NREPA PA 451 of 1994, Part 111: Hazardous Waste Management</b>
<b>7.06)</b> How is used antifreeze disposed?	Recycled.	Disposed of in municipal sewer (with municipality's approval).	<b>Dumped on the farm.</b>	Evidence of proper antifreeze recycling or disposal.	<b>NREPA PA 451 of 1994, Part 111: Hazardous Waste Management</b>
<b>7.08)</b> How are lead-acid batteries disposed?	Recycled.		<b>Disposed of or stored on the farm.</b>	Evidence of proper battery recycling.	<b>NREPA PA 451 of 1994, Part 111: Hazardous Waste Management</b>
<b>7.09)</b> How are paints, solvents, and cleaners disposed?	Used up, taken to household hazardous waste collection or recycled.	Liquid evaporated in open air, sludge taken to licensed landfill.	<b>Burned or disposed of or stored on the farm.</b>	Evidence of proper recycling or disposal.	<b>NREPA PA 451 of 1994, Part 111: Hazardous Waste Management</b>
<b>7.11)</b> Are used motor oil, new oil and hydraulic oil stored in acceptable containers and properly isolated from drinking water wells?	Oil in acceptable containers stored on impermeable floor or in secondary containment, and with reasonable isolation from any well <b>and does not discharge to surface water.</b>	Oil stored in acceptable containers, but with inadequate isolation from any well <b>and does not discharge to surface water.</b>	Oil stored in leaking containers. Evidence of oil soaking into the soil <b>and/or does not discharge to surface water.</b>	Acceptable oil storage demonstrated.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>7.12)</b> Are there any storage tanks being used to store motor oil, new oil, hydraulic oil, or any other petroleum product underground?	There are no storage tanks in use underground.	Yes. The tanks meet all the applicable underground storage tank standards found in the Petroleum Product Storage and Management section of the Farm*A*Syst (FAS107).	<b>Yes. But the tank does not meet the standards found in the Petroleum Product Storage and Management section of FAS 107.</b>		<b>FAS 107, Farm*A*Syst Part 211, Underground Storage Tank Regulation of Act 451 of 1994.</b>
<b>7.123)</b> Are floor drains present in farm buildings?	No floor drains. Or, all drains go to an appropriate system designed for the materials drained.	Floor drains are made inoperable except when used for appropriate materials, or materials are stored in secondary containment to prevent leaks from entering drain.	<b>Floor drains are discharged to surface water, are vulnerable to spills, or drain hazardous materials to inappropriate systems.</b>	Quantities of hazardous materials stored in secondary containment or floor drains plugged to prevent spills or major losses from entering the drain.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>7.134)</b> Is there a mercury manometer on the farm?	No mercury manometer.		Mercury manometer present.	No mercury manometer gauges on the farm.	

RISK QUESTION	Low Risk – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>SEPTIC SYSTEM MANAGEMENT</b>					
8.01) Is the farm bathroom connected to a septic system to treat the waste?	Farm bathroom is connected to a septic tank and drainage field, or to another system approved by the Local Health Department.		<b>Sewage added to manure or building pit. No septic system. Direct discharge of wastes to environment.</b>	If there is a farm bathroom, it must be connected to a functioning septic system. Human waste must not be added to livestock manure storage.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act and Grade A Milk Law, Public Act 266 of 2001</b>
8.06) Who pumps out the septic tank?	Licensed septage hauler.		Farmer/self or unlicensed contractor.	<b>Satisfactory explanation of tank pumping procedures.</b>	<b>NREPA PA 451 of 1994, Part 117: Water Supply and Sewer Systems</b>
<b>GENERAL LIVESTOCK MANAGEMENT</b>					
9.01) If the farm has 50 Animal Units or more, was the Michigan Right to Farm GAAMP for Site Selection and Odor Control for New and Expanding Livestock Facilities (Site Selection GAAMPs) used to site new or expanding livestock production facilities constructed after June 1, 2000?*	Farm has expanded since 2000 and has <b>MDARD Site Selection GAAMPs verification</b> . MDARD verification is required for sites housing 500 AU or greater in a Category 1 location or 250 AU or greater in a Category 2 location.	Since 2000 the farm expanded to house between 50 and 499 AU in a Category 1 location or between 50 and 249 AU in a Category 2 location and the producer used the Siting Checklist and determined the site meets all of the <b>Site Selection GAAMPs Standards</b> . s, but has	The farm has expanded since 2000 and does not meet all of the <b>Site Selection GAAMPs</b> standards or the determination has not been made.	Consistent with Site Selection and Odor Control GAAMPs.	<b><del>2015</del>2016 RTF Site Selection and Odor Control for New and Expanding Livestock Production Facilities GAAMPs, Section III: Determining Acceptable Locations for Livestock Production Facilities</b>

\* This question does not apply to farms where siting is not applicable, such as farms located in municipalities with populations greater than 100,000 where a zoning ordinance has been enacted to allow for agriculture. In addition, siting does not apply to research and educational institutions, or other locations as determined by MDARD.

RISK QUESTION	Low Risk – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>GENERAL LIVESTOCK MANAGEMENT (CONTINUED)</b>					
<b>9.01a)</b> If the farm has less than 50 Animal Units, was the Michigan Right to Farm Site Selection GAAMP used to determine the site category for facilities constructed after June 1, 2000?*	The farm proactively achieved verification under the <b>Michigan Right to Farm Site Selection GAAMPs</b> .	Land use zoning allows for agriculture or the location has been determined to be a Category 1, 2, or 3 site and is not required to complete the <b>Site Selection GAAMPs</b> verification process.	The farm has been determined to be a Category 4 location and is not eligible for MAEAP Livestock or Farmstead verification.	Zoning map or zoning use description provided or category determination provided by MDARD. (See FAS 112S)	<b>20152016 RTF Site Selection and Odor Control for New and Expanding Livestock Production Facilities GAAMPs, Section III: Determining Acceptable Locations for Livestock Production Facilities</b>
<b>9.04)</b> Is there an emergency plan in place in the event of a manure spill?	Up-to-date written plan available and understood by all farm employees.	Incomplete or out-of-date action plan available.	No emergency action plan that deals with manure spills.	Up-to-date emergency farm plan.	

\* This question does not apply to farms where siting is not applicable, such as farms located in municipalities with populations greater than 100,000 where a zoning ordinance has been enacted to allow for agriculture. In addition, siting does not apply to research and educational institutions, or other locations as determined by MDARD.

<b>LIQUID MANURE STORAGE SYSTEMS</b>					
<b>10.02)</b> Are structures properly maintained?	Structure is properly maintained and in good condition. No damage to the liner or breaches evident. No visible signs of issues with push-off ramps, load-out areas, pumps, piping, etc.	Structure appears to be in good condition.	Lining material integrity broken. Evidence of overflow. Coarse-textured soils, no clay liner. Evidence of extensive cracking, leaning, etc. Structure needs repair.	MAEAP manure storage review sheets completed. (See FAS 112S). Additional criteria may be required for CNMP development.	NRCS 313, Waste Storage Facility
<b>LIQUID MANURE STORAGE SYSTEMS (CONTINUED)</b>					
<b>10.03)</b> What design standards are utilized for liquid storage structures?	As-built documentation is available. <b><i>Construction design for manure storage and treatment facilities meets standards and specifications in accordance with MI NRCS-FOTG, Concrete Manure Storages Handbook (MWPS-36), Circular Concrete Manure Tanks publication TR-9 (Midwest Plan Service, 1998).</i></b> For steel: Manual of Steel Construction, American Institute of Steel Construction. For concrete: Building Code Requirements for Reinforced Concrete, ACI 318, American Concrete Institute. For earthen storage, the permeability of the earthen liner is known and the earthen storage meets NRCS standard 313: Waste Storage Facility. No evidence of overflow.	Storage was designed and built by professionals, but the as-built design standards are unknown. The storage structure meets the requirements as outlined in Extension Bulletin FAS112S.	Storage was designed and built without engineering standards.	Appropriate manure storage design and installation demonstrated. Completed MAEAP manure storage review sheets or as-built engineering standards available. (See FAS 112S)	NRCS 313, Waste Storage Facility MSU Extension Bulletin FAS112S: Manure Storage Review Worksheets <del>2015</del> <b>2016 RTF</b> <b><i>Manure Management and Utilization GAAMPs, Section IV: Construction Design and Management for Manure Storage and Treatment Facilities, #26</i></b> Midwest Plan Service, 1998

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>LIQUID MANURE STORAGE SYSTEMS (CONTINUED)</b>					
<p><b>10.04)</b> How is freeboard maintained and overflow prevented in storage structures?</p>	<p>Minimum freeboard is known and observed. <b><i>A minimum freeboard of 12 inches (6 inches for fabricated structures) plus the additional storage volume necessary to contain the precipitation and runoff from a 25-year, 24-hour storm event.</i></b> Freeboard markers are in place.</p>	<p>No evidence of manure overflowing storage.  Safe freeboard level is known but not visibly marked.  Freeboard not always maintained.</p>	<p>Evidence that manure overflowed the storage structure. Freeboard level is unknown and unmarked.</p>	<p>Appropriate manure storage management demonstrated. Safe freeboard level indicated on storage. Runoff is calculated.</p>	<p>NRCS 313, Waste Storage Facility  <b><i>20152016 RTF Manure Management and Utilization GAAMPs, Section IV: Construction Design and Management for Manure Storage and Treatment Facilities, #28</i></b></p>
<b>LIQUID MANURE STORAGE SYSTEMS (CONTINUED)</b>					
<p><b>10.05)</b> Is clean water (i.e. roof and surface runoff) diverted away from the manure storage facility?</p>	<p>Clean water is diverted away from the manure storage.</p>	<p>Clean water is not diverted, but storage is designed to accommodate the additional water while still maintaining the freeboard.</p>	<p>Potential exists for overflow of manure storage.</p>	<p>Appropriate manure storage management demonstrated. Clean water diverted from manure storage.</p>	

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>SOLID-BEDDED MANURE STORAGE SYSTEMS</b>					
<p><b>10.06)</b> At the farmstead, where is manure temporarily stored?</p>	<p><i>Manure is temporarily stacked on an impermeable pad with sides.</i> Runoff does not flow onto neighboring property or into surface waters.</p>	<p><i>Manure is temporarily stacked on the ground with appropriate management to minimize leaching and prevent runoff flow onto neighboring property or into surface waters – such as rotating locations, complete periodic removal of manure, seeding of previous location and records documenting location used.</i></p>	<p>Manure is temporarily stacked on the ground without appropriate management to minimize leaching and prevent all runoff such as rotating locations, complete periodic removal of manure, seeding of previous location and records documenting location used. For example: manure is stacked in the same location every year, piles are located within 50 feet of surface water, and/or there is evidence that <b>manure-contaminated runoff flows to surface water</b> or to adjacent property.</p>	<p>Appropriate temporary manure stacking demonstrated at the farmstead for surface water and groundwater protection.</p>	<p><b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b></p> <p><b><del>2015</del>2016 RTF Manure Management and Utilization GAAMPs, Section III: Odor Management, Farmstead Stockpiling, #15 (General Guidance)</b></p>
<p><b>10.07)</b> How far are the buildings with bedded packs from a well?</p>	<p>Isolation distance is maximized to the extent possible but is not <b>less than 75 feet for public wells</b> and <b>50 feet for private wells</b>.</p>		<p><b>For public wells: less than 75 feet.</b></p> <p><b>For private wells: less than 50 feet.</b></p>	<p>Appropriate well isolation distance for the type of well (public or private) or approved health department deviation for well isolation.</p>	<p><b>Public Health Code, Public Act 368 of 1978, Part 127: Water Supply and Sewer Systems and/or Safe Drinking Water Act, Public Act 399 of 1976</b></p>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>SOLID-BEDDED MANURE STORAGE SYSTEMS (CONTINUED)</b>					
<p><b>10.08)</b> At the farmstead, what management practices are used to reduce odors and pests from outside manure stockpiles?</p>	<p><i>Stockpiled manure is at least 50 feet away from property lines or 150 feet away from non-farm homes and stockpiled manure is covered with a tarp, fleece blanket, straw, woodchips or other materials or additives to reduce odors and pests.</i></p>	<p><i>Stockpiled manure is at least 50 feet away from property lines or 150 feet away from non-farm homes or stockpiled manure is covered with a tarp, fleece blanket, straw, woodchips or other materials or additives to reduce odors and pests.</i></p>	<p>Stockpiled manure is closer than 50 feet to property lines or 150 feet to non-farm homes and stockpiled manure is not covered. No additives are used to reduce odors and pests.</p>	<p>Appropriate temporary manure stacking demonstrated at the farmstead.</p>	<p><del>2015</del>2016 RTF <i>Manure Management and Utilization GAAMPs, Section III: Odor Management, Farmstead Stockpiling, #15 (General Guidance)</i></p>
<p><b>10.09)</b> At the farmstead, what management practices are used to reduce odors and pests from outside temporary stacks or solid manure storage structures.</p>	<p>Less than 90 days. Stacked in different locations each time.</p>	<p>More than 90 days, but <i>less than 365. Stacked in different location each time.</i></p>	<p>365 days or more. Stacked in same location each time.</p>	<p>Manure not stacked for more than 365 days.</p>	<p><del>2015</del>2016 RTF <i>Manure Management and Utilization GAAMPs, Section III: Odor Management, Farmstead Stockpiling, #15 (General Guidance)</i></p>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>SOLID-BEDDED MANURE SYSTEMS (CONTINUED)</b>					
<b>10.10)</b> How far away is the well from temporary manure stockpiling or transfer areas?	Isolation distance is maximized to the extent possible but is not less than 75 feet for public wells and 50 feet for private wells.		<b>Isolation distance is less than 75 feet for public wells and 50 feet for private wells.</b>	Appropriate well isolation distance for the type of well (public or private) or approved health department deviation for well isolation.	<b>Public Health Code, Public Act 368 of 1978, Part 127: Water Supply and Sewer Systems and/or Safe Drinking Water Act, Pubic Act 399 of 1976</b>
<b>10.11)</b> At the farmstead, how are solid manure storage structures designed and constructed?	Constructed with a floor of concrete, or equivalent material, and with walls that prevent leachate from entering surrounding soils. Roof or cover prevents rainfall from entering storage.	Constructed with floor of compacted asphalt or fine- or medium-textured soils. Leachate will have direct contact with earthen floor or side walls. Leachate and rainfall/snowmelt runoff discharged into a designed system.	Earthen floor constructed with coarse-textured soils. Rainfall and leachate will have direct contact with earthen floor or sidewalls. Runoff and leachate are uncontrolled and <b>discharge directly to surface water.</b>	Appropriate manure storage design and management for leachate/runoff.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>10.12)</b> How are animal facilities with bedded manure packs designed and constructed?	Constructed with a floor of impermeable material or fine-textured soil. Adequate bedding is provided to maintain solid nature of manure. No rainfall or runoff enters the manure area. No waterers in the building.	Medium- to fine-textured soils, limited bedding provided, some rainfall or runoff enters manure area. Waterers in the building.	Building has an earthen floor on coarse-textured soil. <b>Contaminated runoff discharges directly to surface water.</b>	Appropriate manure storage design and management for leachate/runoff.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>SOLID-BEDDED MANURE STORAGE SYSTEMS (CONTINUED)</b>					
<p><b>10.13)</b> Is runoff from manure storage area(s) directly discharging to surface or groundwater?</p>	<p><i>Provisions made to control and/or treat runoff from stored manure.</i> A designed and maintained vegetative infiltration area or runoff storage basin effectively handles storage runoff.</p>	<p>Inadequate runoff control. Signs of manure runoff past perimeter of vegetated area or exceeding storage basin capacity.</p>	<p><b>Manure storage runoff discharges directly to surface water.</b></p>	<p>Appropriate runoff control from manure storage area(s).</p>	<p><b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b></p> <p><del>2015</del><b>2016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control and Wastewater Management, #2</b></p>
<b>LIVESTOCK LOT MANAGEMENT</b>					
<p><b>11.01)</b> How far is the livestock lot located from any well? (Private wells include irrigation, livestock watering, cooling etc.)</p>	<p>Fifty feet or more from residential wells (75 feet from the farm well for dairies or farms with employees).</p>		<p><b>Less than 50 feet from residential wells (less than 75 feet from the farm well for dairies or farms with employees).</b></p>	<p>Appropriate livestock isolation distance from water well(s).</p>	<p><b>Public Health Code, Public Act 368 of 1978, Part 127: Water Supply and Sewer Systems and/or Safe Drinking Water Act, Public Act 399 of 1976</b></p>
<p><b>11.02)</b> How far is the livestock lot from surface water?</p>	<p>Livestock lot is more than 300 feet from surface water and, <i>runoff control protects neighboring land areas and prevents direct discharge to surface waters or groundwater.</i></p>	<p>Livestock lot is less than 300 feet from surface water and, <i>runoff control protects neighboring land areas and prevents direct discharge to surface waters or groundwater.</i></p>	<p><b>Evidence that manure-contaminated runoff flows from lot to surface water or to adjacent property.</b></p>	<p>Appropriate livestock isolation distance from surface water.</p>	<p><b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b></p> <p><del>2015</del><b>2016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control and Wastewater Management, #2</b></p>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>LIVESTOCK LOT MANAGEMENT (CONTINUED)</b>					
<p><b>11.03)</b> What efforts are made to divert unwanted drainage from upslope watersheds and roof water from becoming contaminated with manure?</p>	<p><i>Provisions are made to collect, store, utilize and/or treat manure accumulations and contaminated runoff from outside open lots used for raising livestock.</i> Clean runoff is diverted away from the livestock lot.</p>	<p>Most roof water and upslope watershed drainage are diverted around livestock lot. Water that contacts manure is treated or contained and applied to cropland.</p>	<p>No clean water system in place. Most roof water and upslope watershed drainage runs through lot.</p>	<p>Appropriate clean water management for livestock lot(s).</p>	<p><b>2015</b><del>2016</del> <i>RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control and Wastewater Management: Outside Lots, #11</i></p>
<p><b>11.04)</b> How is livestock lot runoff managed to protect surface water, groundwater and/or neighboring properties?</p>	<p><i>All lot runoff is directed to a properly designed and maintained runoff storage basin, or runoff is directed to a designed settling basin and vegetated infiltration area where vegetation is annually harvested. No evidence of runoff to surface water, groundwater and/or neighboring properties, or ponding in low areas.</i></p>	<p><i>No evidence of runoff flow to surface water</i> or ponding in low areas. Vegetation or cropland that is annually harvested exists between lot and surface water.</p>	<p>Evidence of runoff <b>discharging directly to surface water</b> or intermittent waterway.</p>	<p>Appropriate runoff control for livestock lot(s).</p>	<p><b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b></p> <p><b>2015</b><del>2016</del> <i>RTF Manure Management and Utilization GAAMPs, Section II, Runoff Control and Wastewater Management, #2 and Outside Lots, #11</i></p>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>LIVESTOCK LOT MANAGEMENT (CONTINUED)</b>					
<b>11.05)</b> How often is manure scraped and removed from livestock lots?	<i>Manure is scraped and removed periodically from livestock lot or other heavy use areas.</i>		Manure is seldom scraped and removed from lot and feeding and watering areas.	Appropriate manure management in livestock lot(s).	<del>2015</del> <b>2016</b> <i>RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control and Wastewater Management, #11 (General Guidance)</i>
<b>11.06)</b> What type of floor or base does the livestock lot have?	Properly maintained concrete or compacted asphalt.	Continuous-use, compacted dirt or compacted gravel. Minimal plant material growing.	Poorly compacted dirt or gravel layer as indicated by plant growth.	Appropriate floor or base in livestock lot(s).	
<b>SILAGE STORAGE</b>					
<b>12.04)</b> Does untreated silage leachate or polluted runoff run to a low area and pond?	<i>Provisions are made to control and/or treat leachate to protect groundwater and surface water.</i>		Silage leachate ponding and/or runoff are evident.	No evidence of leachate runoff and/or ponding.	<del>2015</del> <b>2016</b> <i>RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control and Wastewater Management, #4</i>
<b>12.06)</b> Are silage leachate and polluted runoff collected and/or treated?	<i>Provisions are made to control and/or treat leachate to protect groundwater and surface water from a direct discharge. (Includes capturing of leachate from drains.) Designed system or management controls are in place.</i>	Designed system in place but not maintained.	No system in place. OR, lack of appropriate management. OR, <b>Directly discharged to surface water</b> or groundwater.	Appropriate silage leachate management.	<b>NREPA PA 451 of 1994, Part. 31: Water Resource Protection Act</b>  <del>2015</del> <b>2016</b> <i>RTF Manure Management and Utilization GAAMPs: Section II: Runoff Control And Wastewater Management: #4</i>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>BUNKER SILOS</b>					
<b>12.08)</b> What type of floor does the silage storage have?	Concrete or compacted asphalt No cracking (cracks that a finger can fit into or spider webs) or cracks are repaired.	Earthen floor with fine-textured soils (clay, clay loam, silty clay loam, sandy clay, sandy clay loam and silty clay).	Earthen floor has permeable soils or concrete, asphalt or lined surface with many cracks.	A maintained impervious surface or fine-textured earthen floor.	
<b>BUNKER SILOS (CONTINUED)</b>					
<b>12.12)</b> Does an emergency plan exist for times when leachate production exceeds current management controls?	An up-to-date written plan is available and understood by all farm employees.	Emergency action plan is incomplete or out-of-date.	No emergency action plan that covers excess leachate.	An up-to-date emergency action plan.	
<b>12.15)</b> In the case of a tire fire, does the farm have an up-to-date emergency farm plan?	The farm has an up-to-date emergency farm plan that is understood by employees.	More than one-year-old plan or an incomplete plan is available.	<b>No emergency farm plan when more than 3,000 whole scrap tires are stored on the farm.</b>	An up-to-date emergency action plan.	<b>NREPA PA 451 of 1994, Part 169: Michigan Scrap Tire Regulation</b>
<b>UPRIGHT SILOS</b>					
<b>12.16)</b> If there is a floor drain, is leachate collected, treated and/or stored and applied at agronomic rates?	All leachate is collected, treated, and/or stored and applied at agronomic rates.		Leachate is not collected and <b>directly discharges to surface water.</b>	Appropriate silage leachate management demonstrated.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>SILAGE BAGS</b>					
12.22) Is there a mechanism for collecting or treating accumulated leachate?	Yes, leachate is collected and does not pond or reach surface water.		No, <b>Leachate runs from bags to surface water.</b>	Any leachate managed properly.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>MILKING CENTER WASTEWATER TREATMENT</b>					
13.03) How is plate cooler water handled?	100% of plate cooler water is reused for livestock watering or other livestock-related use or, permitted for discharge.	Less than 10,000 gal/day are discharged onto ground surface. Discharged water does not intercept surface water.	<b>More than 10,000 gal/day are discharged onto ground surface or intercept surface water without a permit.</b>	Appropriate cooling water management demonstrated.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>TOTAL COLLECTION METHOD. IF THIS METHOD IS NOT USED, SKIP TO THE NEXT SECTION.</b>					
13.04) Is all wastewater collected and stored?	Wastewater is stored, used or hauled daily.	Wastewater passes through a properly functioning filtration system.	<b>Wastewater is directly discharged to a lake, drainage ditch, stream or field.</b>	Appropriate collection of wastewater demonstrated. Records of application.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
13.05) Is rejected milk collected and stored?	Rejected milk is stored, hauled out or fed.		<b>Milk is discharged,</b> put into septic system or put into treatment strip.	Appropriate rejected milk management demonstrated.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>MILKING SYSTEM SEPTIC SYSTEMS. IF THIS METHOD IS NOT USED, SKIP TO THE NEXT SECTION.</b>					
13.06) Is the septic system managed adequately to handle the volume of wastewater?	The septic system <i>is managed in a manner to prevent pollution to waters of the state.</i>		The septic system is not managed adequately and <b>discharges directly to surface water.</b>	Reject milk properly managed. System operating effectively, without evidence of a discharge.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>  <del>2015</del> <b>2016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control And Wastewater Management, #3</b>
13.08) Is all milkhouse wastewater treated by the septic system?	All milkhouse wastewater is treated by the septic system.		Some wastewater is not treated or is <b>discharged to tile, inlet or drainage ditch.</b>	Collection and treatment of all wastewater demonstrated.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>MILKING CENTER WASTEWATER TREATMENT</b>					
<b>13.09)</b> What are the parlor cleanup practices?	Milk, milky rinse water, manure, and feed waste are land applied or otherwise appropriately utilized, and are never discharged to septic or other infiltration type treatment systems.	Some milk, milky rinse water, manure, or feed waste is discharged to septic or other infiltration-type treatment systems. Systems are monitored and managed for proper operation.	Significant milk, milky rinse water, manure, or feed waste is discharged to septic or other infiltration-type treatment systems. Wastewater is <b>discharged directly to surface water.</b>	Appropriate milking center cleanup practices demonstrated.	
<b>APPLICATION OF WASTEWATER TO VEGETATED INFILTRATION SYSTEM. IF THIS METHOD IS NOT USED, SKIP TO THE NEXT SECTION.</b>					
<b>13.11)</b> Does the system handle the capacity of milking center wastewater generated?	Infiltration area effectively treats the quantity of wastewater generated. <i>Treatment area is managed to prevent pollution to waters of the state.</i>	Infiltration area effectively treats the quantity of wastewater generated, but shows minor erosion, wastewater ponding or burned vegetation.	Infiltration area has excessive erosion, wastewater ponding or burned vegetation.	Properly operating system confirmed by visual inspection of vegetated infiltration system.	<del>2015</del> <b>2016</b> RTF <i>Manure Management and Utilization GAAMPs, Section II: Runoff Control And Wastewater Management, #3</i>
<b>13.12)</b> How is the designed infiltration system maintained?	<i>Vegetation maintained and harvested at least once per year.</i> Accumulated solids removed, if needed.	Occasional maintenance.	No maintenance.	Vegetation maintained and harvested. Records of maintenance.	<del>2015</del> <b>2016</b> RTF <i>Manure Management and Utilization GAAMPs, Section II: Runoff Control And Wastewater Management, Infiltration Areas, #7</i>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>DIRECT DISCHARGE TO SURFACE OR GROUNDWATER</b>					
<b>13.13)</b> Is wastewater directly discharged to a lake, drainage ditch, stream or field?	<i>Milk parlor and milkhouse wastewater are managed in a manner to prevent discharge into waters of the state.</i>		Milking center wastewater is <b>discharged directly to surface water.</b>	No discharge present.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>  <del>2015</del> <b>2016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control And Wastewater Management, #3</b>
<b>OTHER ENVIRONMENTAL RISKS IN THE FARMSTEAD SYSTEM</b>					
<b>14.01)</b> Are there other activities, products, processes/equipment, services, by-products, and/or waste at this farmstead that pose contamination risks to groundwater or surface water?	No additional risk(s) identified.	Plan to mitigate the identified contamination risk(s).	No plan to mitigate identified contamination risk(s).	No other environmental risks found at farmstead.	

## Fruit Educational Questions

**A boxed risk level** indicates the level required for environmental assurance verification.

**Bold black print** indicates a violation of state or federal regulation.

***Bold blue italic print*** indicates a management practice consistent with a specific 2016 GAAMP.

(Revised Date: 7-14-16)

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>NUTRIENT MANAGEMENT PRACTICES - GENERAL</b>					
<b>1.02)</b> Do soil sampling procedures adequately represent field conditions?	One composite sample is taken from uniform field areas of less than 40 acres. For tree fruit, samples are taken from under trees (weed sprayed, cultivated or mulched areas).		One composite sample taken from areas greater than 40 acres.		
<b>1.03)</b> Is the soil pH maintained in the desirable range for the crop(s) being grown?	The pH is adjusted to desirable range before planting and maintained for current crop.	Soil pH is maintained and/or adjusted for current crop on the basis of soil analysis after planting.	Soil pH is not maintained in the desirable range.		
<b>1.10)</b> Are poly tanks used as intended?	Yes, Vertical (upright) tanks are used for stationary fertilizer storage, and horizontal tanks with tie-down features are used for stationary storage and/or transportation application.		Vertical tanks are used as mobile nurse tanks or other transportation applications. Vertical tanks are designed for stationary storage.		
<b>1.11)</b> Are poly tanks inspected periodically for structural soundness?	Poly tanks are inspected for crazing (spider webbing) and cracking in the spring and again at the end of the season. Damaged tanks are replaced or used for water.	Poly tanks are inspected and periodically replaced as necessary	Tanks are not inspected regularly. High potential for tank failure is present.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>NUTRIENT MANAGEMENT PRACTICES - GENERAL</b>					
<b>1.12)</b> How are N fertilizer applications matched to the demand of the crop and the conditions of the soil?	N rates are based on tree/plant vigor, production quality, pruning practices and periodic tissue analysis, and do not exceed MSU recommendations.	Nitrogen rates are based on previous practices that match inputs with plant needs, but sometimes exceed MSU recommendations.	Nitrogen rates are not based on nitrogen monitoring or plant assessment and often exceed MSU recommendations.		
<b>MANURE MANAGEMENT PRACTICES</b>					
<b>1.26)</b> How are manure applications managed to prevent any food safety risk(s)?	Manure application records document manure is incorporated and applied 270 or more days prior to harvest.	Manure application records document manure is incorporated and applied 120 or more days prior to harvest.	Manure is applied less than 120 days prior to harvest.	Note: USDA Good Agricultural Practices ≥120 days before harvest.  FDA Food Safety Modernization Act ≥270 days before harvest (proposed).	
<b>SOIL AND WATER CONSERVATION PRACTICES</b>					
<b>2.03)</b> Are all streams, wetlands, farm ditches, and other bodies of water on the farm protected from polluted runoff and sediment with conservation practices?	Filter strips, riparian buffer strips, grassed waterways and other conservation practices are maintained between fields and all surface waters on the farm.	Conservation practices are maintained on some fields.	No conservation practices are maintained. Farm is immediately next to surface waters, drainage ditches and roads.		
<b>2.04)</b> Are cover crops planted to prevent soil erosion, trap nutrients and pesticides, and improve soil quality?	Cover crops are included in the crop rotation to protect soil and water resources and control erosion.	Cover crops are used occasionally.	Cover crops are not used.		
<b>2.05)</b> Are soil quality indicators evaluated?	Soil quality indicators (e.g., earthworm populations, water infiltration rates, soil compaction, percent plant and residue cover, pH, cation exchange capacity [CEC] and percent organic matter) are evaluated on all fields.	Some soil quality indicators are evaluated.	No soil quality indicators are evaluated.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORD OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>SOIL AND WATER CONSERVATION PRACTICES (CONTINUED)</b>					
<b>2.06)</b> Are conservation and management practices routinely inspected and evaluated?	Owner or trained individual routinely inspects and evaluates conservation and management practices.	Conservation and management practices are informally evaluated during field operations.	Practices are not inspected nor evaluated.		
<b>PEST MANAGEMENT PRACTICES</b>					
<b>3.01)</b> How does the grower stay current on new pest management practices and strategies for weeds, insects and diseases?	Attend educational meetings, read educational materials provided by the university or other reliable sources. At least one new pest management practices adopted on a trial basis each year.	Occasionally attend educational meetings and read new pest management materials.	Rely on outdated pest management practices.		
<b>3.02)</b> Does the grower consult with a pest management consultant or service during the growing season?	Employs and independent crop consultant throughout the growing season that is knowledgeable of IPM. OR, Utilizes public reports and services from the university, local agribusiness or other reliable providers.		Rely on outdated pest management practices.		
<b>PEST PREVENTION AND AVOIDANCE</b>					
<b>3.03)</b> Does the grower review previous growing season pest management activities and results?	Previous pest populations, pest suppression activities/pesticide usage and crop yield/injury are reviewed. Records used for future pest management plans.	No.			
<b>3.04)</b> When available, are certified seed or plant materials (tubers, crowns, transplants, etc.) used that are insect, weed and disease-free?	Certified or quality seed and planting materials used whenever possible.	Bin-run or uncertified planting material that is cleaned and treated.	Use saved seed or planting materials that is untreated and potentially infected with insects, weed and/or disease pests.		
<b>3.05)</b> Are crops (and plant families) rotated to break pest cycles and to maximize crop yields?	Three year or longer rotations are utilized to break pest cycles and to reduce the need for pest suppression practices.	Short (< 3 year) rotations are utilized because of intensive cropping systems. Cover crops utilized whenever possible to improve system.	No rotation followed. Continuous cropping system results in increased pest pressures and reduced yields.		

RISK QUESTION	Low Risk – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORD OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PEST PREVENTION AND AVOIDANCE (CONTINUED)</b>					
<b>3.06)</b> Are pest resistant and tolerant varieties planted?	Pest resistant and tolerant varieties are planted when available.	Varieties without resistance and tolerance are planted, resulting in the need for pest suppression practices.			
<b>MONITORING</b>					
<b>3.07)</b> Are fields scouted for pests during the growing season?	All fields are scouted on a weekly schedule, by a qualified individual trained in IPM. Scouting reports and records are filed.	Fields are scouted at critical times, but not on a weekly basis.	Fields are not scouted.		
<b>3.08)</b> Are weather conditions relevant to pest management monitored? (i.e. air and soil temperature, precipitation, soil moisture, wind speed and direction, leaf wetness, etc.)	On-farm weather station(s) provide data to assist with crop and pest management decisions. OR, MSU Enviro-weather ( <a href="http://www.enviroweather.msu.edu">www.enviroweather.msu.edu</a> ) or other weather-based models are used to assist with crop and pest management decisions.	Consumer weather information used for crop and pest management decisions.	Weather conditions are not considered when making crop and pest management decisions.		
<b>PEST APPLICATION</b>					
<b>3.09)</b> Are soil characteristics and field conditions considered when making pesticide applications?	Soil characteristics (texture and organic matter) and field conditions (wind speed and direction, slope and moisture) are assessed when deciding on pesticide application practices. Site-specific or variable-rate technology may be used.	Whole-field application rates are based on the most vulnerable soil type in the field and field conditions.	Pesticides are applied at full labeled rates without regard to vulnerable soil characteristics or field conditions.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORD OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PESTICIDE APPLICATION (CONTINUED)</b>					
<b>3.11)</b> Are leaching/runoff and toxicity potentials considered when making pesticide decisions?	Pesticides with the lowest potentials for leaching, runoff and non-target toxicity are always selected for use in fields. Some spray applications delayed to non-rainy periods. Mulches and ground covers used under trees to prevent leaching.	Leaching/runoff and toxicity potentials are occasionally considered when selecting soil-applied pesticides.	Pesticide choice is not based on leaching/runoff and toxicity potentials. Only cost and effectiveness are considered.		
<b>3.13)</b> How are workers and pesticide handlers protected from exposure to pesticides?	<b><i>Workers and handlers:</i></b> <b><i>-Follow specific label requirements.</i></b> <b><i>-Are provided decontamination supplies.</i></b> <b><i>-Are trained or certified applicators.</i></b> <b><i>-Are informed of pesticide applications.</i></b> <b><i>-Are provided personal protective equipment.</i></b> <b><i>-Are provided emergency assistance, if needed.</i></b>	<b>Worker Protection Standard requirements are partially met.</b>	<b>Worker Protection Standard requirements are ignored.</b>		
<b>3.17)</b> What management practices are used to prevent the development of pest resistance to certain pesticides.	Pesticides with different modes of action are rotated within a season or from one season to the next or used in tank mixes where permitted. Pesticides at highest risk of resistance are not used when alternatives are available. Refuge requirements for transgenic seed are followed.	Some but not all pesticide modes of action are rotated or tank mixed. Pesticides at highest risk of resistance are used sparingly.	Pest resistance is not considered when selecting pesticides. Refuge requirements for transgenic seed are ignored.		
<b>3.23)</b> How is pesticide spray drift minimized when using an air blast sprayer?	Do not spray when the wind speed is greater than 10 mph. Do not spray during thermal inversions. Cut off spray for missing trees in the row.		Drift minimization is not considered when using an air blast sprayer.		

RISK QUESTION	Low Risk – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORD OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PESTICIDE APPLICATION (CONTINUED)</b>					
<b>3.25)</b> Are pesticides selected and applications timed to minimize impact on beneficial insects (natural enemies and pollinators)?	Pesticide toxicity to beneficial insects is considered. Pesticide applications timed to avoid injury to beneficial insect populations.		Broad spectrum pesticides used on a calendar schedule and not timed to avoid beneficial insects.		
<b>3.26)</b> Are areas of the farm set aside as habitat for pollinators?	At least two acres is devoted to conservation of native bees and other pollinators by providing flowers through the season, and this is planted with a specific mix of wildflowers for this purpose.	Some areas of the farm are set aside to provide flowers for bees and other pollinators.	No habitat is provided for pollinators.	Note: Cost share is available through enrollment in the USDA pollinator conservation programs (E.g., USDA's Farm Service Agency [FSA] Conservation Reserve Program-State Areas for Wildlife Enhancement [CRP-SAFE] pollinator program).	
<b>3.27)</b> Is habitat provided to enhance populations of natural enemies and beneficial organisms?	Ground cover plantings/mulches used under plants and in drive rows for alternative nutrient management and beneficials. Flowering plants provide for season-long nectar and pollen, and habitat provided to enhance natural enemy populations.	Ground covers/mulches used under plants.	Management of beneficial organism is not considered.		
<b>3.28)</b> Are cultural practices managed to enhance populations of beneficial natural enemies (NE)?	Use alternate-row mowing method for insect control, NE enhancement and pollinator preservation. Maintain mow-free strips around planting perimeter for natural enemy and pollinator preservation.	Maintain mow-free strips around planting perimeter for natural enemy and pollinator preservation.	Beneficial insect management is not considered.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORD OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PESTICIDE APPLICATION (CONTINUED)</b>					
<b>3.29)</b> If a soil fumigant pesticide is used on the farm, is a fumigation management plan (FMP) utilized?	A written, site-specific fumigation management plan that meets US EPA requirements is prepared and utilized before fumigation begins.		<b>A FMP is not prepared.</b>		
<b>IRRIGATION SYSTEM MANAGEMENT</b>					
<b>5.02)</b> Is noise control provided when needed?	<i>Noise control is provided</i> when needed.	In most areas of concern, noise control is provided when needed.	Noise control is not provided when needed.		
<b>IRRIGATION APPLICATIONS PRACTICES TO AVOID RUNOFF AND LEACHING</b>					
<b>5.09)</b> Are split applications of nitrogen fertilizer used when nitrogen is applied in an irrigated field?	<i>Split applications of nitrogen fertilizer are made when nitrogen is used in an irrigated field.</i> N application does not exceed MSU recommendations.		Nitrogen fertilizers are applied through irrigation on the basis of visual crop symptoms. Total N applied exceeds MSU recommendation.		
<b>5.11)</b> Is excess irrigation avoided?	<i>Irrigation water applications in excess of the quantity of water needed to replace the soil/substrate moisture deficit are avoided.</i>	Excess irrigation water applications may occur occasionally.	Excess irrigation water applications are common.		
<b>OTHER CONSIDERATIONS FOR THE CROPPING SYSTEM</b>					
<b>6.01)</b> Does the farm business have a food safety plan that is followed to reduce the risk of foodborne illness?	A written food safety plan exists and is being implemented.	Food safety practices are generally followed, but not documented in a written plan.	A food safety program is not available.	Note: This is a GAP (Good Agricultural Practices) requirement. USDA will not certify the farm without a documented food safety program.	
<b>6.02)</b> Does the farm business have a person designated to implement and oversee a food safety plan?	The designated food safety person is documented in the food safety plan.		There is no designated food safety person.	Note: This is a GAP (Good Agricultural Practices) requirement. USDA will not certify the farm without a food safety designee.

## Greenhouse Educational Questions

**A boxed risk level** indicates the level required for environmental assurance verification.

**Bold black print** indicates a violation of state or federal regulation.

**Bold blue italic print** indicates a management practice consistent with a specific 2015~~6~~ GAAMP.

(Revised Date: **7-18-16**)

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>GREENHOUSE SITE/SOIL EVALUATION</b>					
<b>1.01)</b> What is the texture of the dominant soil (zero to five feet deep) at the greenhouse site?	Very Fine-textured soils: clay, clay loam, silty clay loam, sandy clay, sandy clay loam, and silty clay.	Medium-textured soils: loam, silt loam, sandy loam and silt.	Course-textured soils: sand, fine sand, very fine sand, loamy very fine sand.		
<b>1.02)</b> What is the depth of the topsoil and subsoil (A & B horizons)?	Greater than 40 inches.	30 to 40 inches.	Less than 30 inches.		
<b>1.03)</b> What is the depth to the seasonal high water table?	Greater than six feet.	Three to six feet.	Less than three feet.		
<b>1.04)</b> What is the soil organic matter content?	Greater than four percent.	One to four percent.	Less than one percent.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>GREENHOUSE SITE/SOIL EVALUATION</b>					
<b>1.05)</b> What is the makeup of the geological materials more than five feet underground?	Low-permeability materials: silt, clay, shale, claystone.		Highly permeable materials: sand, gravel, fractured rock, karst limestone.		No significant erosion present at the greenhouse.
<b>WATER WELL CONDITION</b>					
<b>2.01)</b> How old is the well that serves the greenhouse?	Less than ten years old.	Ten to twenty five years old.	More than twenty five years old, or age is unknown.		
<b>2.02)</b> What kind of well(s) are present?	Drilled and grouted.	<b>Drilled and not grouted</b> or driven point or water jetted.	Large diameter (Twelve to forty eight inches) dug well, or construction is unknown.		
<b>2.03)</b> Is the greenhouse well classified as a private or public water supply?	Private: potable water for drinking or domestic or greenhouse purposes for family members only.	Public: water for drinking or household/greenhouse purposes to persons other than the owner and family (greenhouse with employees or that is open to the public).			
<b>2.04)</b> What is the slope from the well to potential contamination sources?	Well is upgrade from all contamination sources.	Well is at grade from most contamination sources.	Well is downgrade or in a depression relative to contamination sources.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>WATER WELL CONDITION</b>					
<b>2.06)</b> From the well installation record, is there a protective soil layer (confining material) in the soil formation?	Continuous clay or shale layer more than ten feet thick. Or, Continuous clay mixture more than twenty feet thick.	Clay or shale layer less than ten feet thick. Or, Clay mixture less than twenty feet thick.	No protective layer (unconfined aquifer).		
<b>2.07)</b> What is the depth of the well casing?	More than 100 feet. Or, Minimum of 60 feet with ten feet of clay or twenty feet of clay mixture (confining material.)	At least twenty five feet, but no confining material.	<b>Less than twenty five feet, or no casing.</b>		
<b>2.08)</b> What is the casing height above grade?	Twelve inches or more.	<b>From grade level to less than twelve inches.</b>	<b>Below grade or in a pit or in a basement.</b>		
<b>2.09)</b> What is the well capacity?	25 gallons per minute or less.	Greater than 25 gallons per minute.			
<b>2.10)</b> When was the last time the well was inspected by a professional well driller or pump installer?	Within the past ten years.	Between ten and twenty years ago.	More than twenty years ago, or don't know when the well was last inspected.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>WATER WELL CONDITION</b>					
<b>2.15)</b> Are the greenhouse site, or portions of the greenhouse site, included in a community wellhead protection area?	No.	Yes or don't know, and soil characteristics and greenhouse operations pose minimal risks to groundwater.	Yes, and soil characteristics and/or greenhouse operations pose significant risks to groundwater.		
<b>2.16)</b> If a frost-free yard hydrant is connected to a water system, is the hydrant MDEQ-approved?	MDEQ-approved yard hydrant protects water supply from contaminated water back-siphoned into the hydrant's drain valve. Or, <b>Yard hydrant is not MDEQ-approved</b> , but an anti-backflow valve is installed between the hydrant and the water source.		<b>Yard hydrant is not MDEQ-approved</b> and there is no anti-backflow valve.		
<b>2.17)</b> If the drinking water well serves 25 or more people for 60 consecutive days (type IIb public water supply), has it been tested for arsenic?	Drinking water tested on a quarterly basis. Average arsenic level is less than 10 ppb.		<b>Drinking water is not tested.</b>		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PESTICIDE STORAGE AND HANDLING</b>					
<b>3.03)</b> How are pesticides delivered to the greenhouse?	Just-in-time delivery provided by dealer or greenhouse employee to mix/load site.	Responsible, trained farm employee or family member or dealer transports pesticides to storage.	Untrained greenhouse employee or family member transports pesticides.		
<b>3.04)</b> Where are pesticides stored?	Storage building is locked and separate from all other buildings.	Storage is within the head house or greenhouse but isolated and locked.	Storage is in high traffic area and unlocked.		
<b>3.06)</b> What type of pesticide storage shelving is used?	Metal or plastic shelving, with shelf lips to prevent containers from falling. And, Dry formulations are stored on upper shelves and liquids on lower shelves.	Metal or plastic shelves without lips. Or, Wood shelves, covered with an epoxy paint or plastic liner.	Bare wood shelving without lips. Or, No shelves, pesticides containers are on the floor where they may be damaged.		
<b>3.10)</b> What total quantities of pesticides are stored on the greenhouse site?	No pesticides stored at any time, or only seasonal use	One gallon to ten pounds or more of each pesticide in long-term storage.	More than 56 gallons or more than 55 pounds of each pesticide in long-term storage.		
<b>3.11)</b> What quantities of liquid pesticides are stored?	No liquids – all dry formulations.	Some liquid formulations stored.	More than 55 gallons of liquid formulations stored.		
<b>3.12)</b> Are pesticides with high leaching potential stored?	No pesticides stored, or only pesticides with low leaching potential.	Pesticides with low and medium leaching potential stored.	Pesticides with high leaching potential stored.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PESTICIDE STORAGE AND HANDLING</b>					
<b>3.15)</b> How are pesticide inventory control and disposal of unwanted products managed?	Pesticides accurately inventoried. Old product used first. Unusable product disposed of through Clean Sweep program.	Some inventory process maintained. Unsure of status of unusable product in storage.	No pesticide inventory maintained. Unusable product maintained in storage for indefinite time.		
<b>3.24)</b> How are pesticide products transferred from their containers to the sprayer tank?	Closed system for all liquid and dry product transfers.	All liquid and dry products hand-poured. Mixing/storage tank opening easy to reach.	All liquid and dry products hand-poured. Mixing/storage tank opening hard to reach.		
<b>3.27)</b> How is the exterior of the sprayer cleaned?	Sprayer washed on pad. Wash water collected and applied to labeled crop.		Sprayer washed at greenhouse site. <b>Rinse water dumped in greenhouse or in nearby area or pond.</b>		
<b>3.29)</b> What type of pesticide containers are purchased?	Where available, all pesticide products are purchased in recyclable or returnable containers to reduce the number of empty containers that require disposal.	Some pesticide products are purchased in recyclable or returnable containers.	Most pesticides are purchased in containers that require special handling or treatment before disposal.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PESTICIDE HANDLER AND WORKER SAFETY</b>					
<p><b>4.02)</b> How are handlers/workers informed of risks associated with pesticide applications?</p>	<p><i>Central notification of pesticide applications is provided. Display includes EPA-approved safety poster, emergency medical information and pesticide application information.</i></p>	<p>Central notification provided, although not all posting requirements are met.</p>	<p>No central notification provided.</p>		
<p><b>4.03)</b> What supplies are provided to handlers/workers for pesticide decontamination?</p>	<p><i>Clean water, soap, disposable towels and clean coveralls (handlers) are available for all handlers/workers within one-quarter.</i></p>	<p>A decontamination site is provided, although not all WPS requirements are met.</p>	<p>A decontamination site is not available.</p>		
<p><b>4.04)</b> How are workers notified of pesticide applications?</p>	<p><i>Oral and/or posted warnings about pesticide application provided.</i></p>		<p>No notice about pesticide application provided.</p>		
<p><b>4.05)</b> Who provides and maintains personal protective equipment (PPE) and trains handlers in its use?</p>	<p><i>All label-required PPE provided and maintained by employer. Training on use of PPE provided.</i></p>	<p>WPS requirements for PPE partially met.</p>	<p>PPE not provided.</p>		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>FERTILIZER STORAGE AND HANDLING</b>					
<b>5.03)</b> Is the fertilizer storage facility (both liquid and dry) identified with a sign?	Storage facility labeled "Fertilizer", or the fertilizer containers labeled with fertilizer analysis.	No sign.			Note: Bulk liquid fertilizer storages installed after August 13, 2008, having a capacity greater than 2,500 gallons, or having combined capacity of all tanks greater than 7,500 gallons, must be located 200 feet or more from surface water.
<b>5.11)</b> What is done with excess fertilizer solutions at the end of the greenhouse season?	Fertilizer solutions applied to crop at or below agronomic rate. Or, Excess fertilizer concentrates returned to dealer.	Excess fertilizer stored until next year.	Excess fertilizer solutions applied to crop without agronomic considerations. <b>Fertilizer solution dumped on the greenhouse site or in nearby field or pond.</b>		
<b>PETROLEUM PRODUCT STORAGE AND MANAGEMENT</b>					
<b>6.05)</b> Is the fill opening separate from the vent opening?	Yes.		<b>No.</b>		
<b>6.07)</b> Does the tank have secondary containment?	Double-walled tank with continuous space between the two walls, tank in concrete vault or tank in diked area.	No secondary containment for tanks equal to or less than 1,100 gallons capacity.	<b>No secondary containment when combined aboveground storage capacity is 1,320 gallons (55-gallon containers or larger) or aboveground tanks is greater than 1,100 gallons.</b>		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PETROLEUM PRODUCT STORAGE AND MANAGEMENT</b>					
<b>6.08)</b> If a combined aboveground petroleum storage capacity of greater than 1,320 gallons (counting 55-gallon containers and greater) is present and could reasonably discharge into navigable waters of the United States, has a spill prevention control and counter-measure (SPCC) plan been developed?	Plan developed and copy present at greenhouse facility.		<b>No plan.</b>		
<b>6.09)</b> What is the maximum fuel storage capacity (in aggregate) at the greenhouse?	48,000 gallons or less in UL 142 single- or double-walled tanks; or 80,000 gallons or less in fire-rated tanks.		<b>Greater than 48,000 gallons in UL 142 single or double wall tanks; or greater than 80,000 gallons in fire rated tanks.</b>		
<b>MOTOR VEHICLE FUEL STORAGE TANKS WITH CAPACITY EQUAL TO OR LESS THAN 1,100 GALLONS</b>					
<b>6.10)</b> Does each tank's fill opening have a lockable closure?	Fill pipe equipped with a lockable closure.		<b>No lockable closure on fill pipe.</b>		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>MOTOR VEHICLE FUEL STORAGE TANKS WITH CAPACITY EQUAL TO OR LESS THAN 1,100 GALLONS</b>					
<b>6.12)</b> How far is the (non-fire protected) tank from buildings and property lines?	-More than 40 feet from a building, structure or a property line. -More than 25 feet from a public way.		<b>-Located inside a building -40 feet or less from a building, structure or a property line. -25 feet or less from a public way.</b>		
<b>6.13)</b> How many tanks (equal to or less than 1,100 gallons are at each site at one facility?	Three or fewer.		<b>More than three.</b>		
<b>6.14)</b> How far apart are fueling sites at the facility?	100 feet or greater.		<b>Less than 100 feet.</b>		
<b>ABOVEGROUND TANKS</b>					
<b>6.16)</b> Is the tank labeled according to its contents with letters three inches or more in height?	Yes, labeled according to contents (Gasoline or Diesel) and with the following: "FLAMMABLE" (OR "COMBUSTIBLE") and "KEEP FIRE AND FLAME AWAY". If tank is not a fire-protected type, it is also labeled: "KEEP 40 FEET FROM BUILDINGS."		<b>Tank labeled with contents. Tanks storing gasoline not labeled: FLAMMABLE - KEEP FIRE &amp; FLAME AWAY. Tanks storing diesel not labeled: COMBUSTIBLE – KEEP FIRE &amp; FLAME AWAY.</b>		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>ABOVEGROUND TANKS</b>					
<b>6.19)</b> Is the tank dispenser (top-opening tank) or discharge connection (gravity discharge tank) made inoperable when not in use?	Yes, locked or otherwise made inoperable.		<b>No.</b>		
<b>6.20)</b> Does the top-opening tank pump discharge or gravity discharge tank have a self-closing nozzle?	Yes.		<b>No.</b>		
<b>6.21)</b> If a single-walled tank is in a dike with rain protection, is the roof or canopy and supports constructed of non-combustible material and designed so vapors don't collect?	Yes.		<b>No, combustible materials used or design is such that vapors collect under the roof or canopy.</b>		
<b>6.22)</b> If the tank is covered, are roof and canopy supports located on edge of dike or outside diked area?	Yes.		<b>No.</b>		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>ABOVEGROUND TANKS</b>					
<b>6.23)</b> If the tank is covered, is the lowest elevation of the roof or canopy six feet or higher above the top of the tank?	Yes.		<b>No.</b>		
<b>6.24)</b> If the tank is covered, does the normal tank vent extend through the roof or canopy?	Yes.		<b>No.</b>		
<b>UNDERGROUND STORAGE TANKS</b>					
<b>6.27)</b> Do tank(s) or piping that are in contact with the soil have corrosion protection on all parts?	Yes, properly engineered, installed, maintained, and inspected (every three years). Corrosion protection provided for tank, piping or portions in contact with the soil.		<b>No, tank or piping in contact with soil without corrosion protection or unmaintained protection. Not inspected at least once every three years.</b>		
<b>6.28)</b> Are there any unused fuel storage tanks on the farm?	If tank present, it has been emptied, cleaned of liquid and sludge, rendered vapor free and safeguarded from trespassing.		<b>Tank present and not empty, clean and/or vapor free. Tank fill opening not secured to prevent trespassers from putting chemicals in tank.</b>

<p><b>6.37)</b> Is the tank labeled according to its contents with letters three inches or more in height?</p>	<p>Yes, labeled according to contents (Gasoline or Diesel) and with the following "FLAMMABLE (or COMBUSTIBLE) LIQUIDS" and "KEEP FIRE AWAY."</p>		<p><b>Tank not labeled.</b></p>																	

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>ABOVEGROUND STORAGE TANKS WITH CAPACITY GREATER THAN 1,100 GALLONS</b>					
<b>6.38)</b> Are there any unused fuel storage tanks on the farm?	If aboveground tank present, it has been emptied, cleaned of liquid and sludge, rendered vapor free and safeguarded from trespassing.		<b>Aboveground tank present and not empty, clean and/or vapor free. Tank fill opening not secured to prevent trespassers from putting chemicals in tank.</b>		
<b>UNDERGROUND TANK WITH CAPACITY GREATER THAN 1,100 GALLONS</b>					
<b>6.40)</b> If there is an underground fuel storage tank (UST) greater than 1,100 gallons on the farmstead is there a State of Michigan certified operator for the farm?	Yes.		<b>No.</b>		Note: See Underground Storage Tank information at the Michigan Department of Licensing and Regulatory Affairs (LARA): <a href="http://www.michigan.gov/lara/0,4601,7-154-35299_42271_4115_4238---,00.html">www.michigan.gov/lara/0,4601,7-154-35299_42271_4115_4238---,00.html</a> .
<b>6.41)</b> Did a professional (trained and certified by the tank manufacturer) install the tank?	Professional installation.		<b>No.</b>		
<b>6.42)</b> Is there insurance or demonstration of financial responsibility should there be a fuel release?	Yes, meet the \$500,000 financial responsibility level for tanks less than 10,000 gallons.		<b>Unable to demonstrate financial responsibility for third party injury and property damage due to accidental release.</b>		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>WASTE MANAGEMENT</b>					
<b>7.01)</b> How are household waste and waste generated at the greenhouse managed?	All waste recycled or disposed of in a licensed solid waste facility or incinerator.		Household waste burned on site (if allowed by local government). <b>Greenhouse waste burned on site.</b>		
<b>7.02)</b> Is there a trash dump?	No dump or dump property cleaned up and closed.	Dump exists but is not being used.	Dump still in use.		
<b>7.03)</b> If a household trash burn barrel or incinerator exists, how are ashes disposed of?	Ashes collected and disposed at a licensed landfill.	Ashes stored or disposed on the greenhouse site more than 300 feet from a well or surface water.	Ashes stored or disposed on the greenhouse site within 300 feet of a well or surface water.		
<b>7.04)</b> How are hazardous product containers (treated seed packages, fertilizer bags, chemical containers, etc.) disposed?	Recycled or reused appropriately. Or, Disposed at a licensed landfill, or hazardous waste collection service used, or returned to the dealer.		<b>Empty and partially filled containers burned or disposed on the greenhouse site.</b>		
<b>7.07)</b> How are scrap tires disposed?	Recycled.		<b>Disposed on the greenhouse site.</b>		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>WASTE MANAGEMENT</b>					
<b>7.10)</b> How far from water wells are hazardous products stored?	For private wells: 150 feet or greater. Or, With secondary containment, 50 feet or greater. Or, For public wells (dairy farms or farms with employees): More than 800 feet from the farm well. Or, Approved isolation distance deviation for the well. Or, Between 75 and 800 feet with approved storage and well, and protective site features.		For private wells: <b>Less than 150 feet without secondary containment, or less than 50 feet with secondary containment.</b>  For public wells (dairy farms or farms with employees): <b>Less than 800 feet from the farm well.</b>		
<b>7.13)</b> Are there mercury-containing devices on the farm? (Examples include fluorescent lights, thermostats, thermometers, irrigation switches, septic lift station switches and other switches.)	No.	Some mercury-containing devices in use. Proper disposal methods when replaced.	Yes, many mercury-containing devices.	Examples: recycling centers or return to retailer.	
<b>7.15)</b> How often is greenhouse poly changed?	Using poly or covering that will last for three or more years.	Price is the primary factor; purchase product that lasts only one to two years.			

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>WASTE MANAGEMENT</b>					
7.17) Are bio-degradable containers used?	Incorporating bio-degradable containers in program.	Have not considered or studied the use of bio-degradable containers.			
7.19) Are other materials recycled?	All paper, cardboard, plastic containers, aluminum and steel recycled.	Most recyclables are recycled.	Only deposit can/bottles are redeemed.		
<b>SEPTIC SYSTEM MANAGEMENT, NOTE: COMPLETE THE REMAINDER OF THIS SECTION ONLY IF THE GREENHOUSE HAS A SEPTIC SYSTEM</b>					
8.02) Is the septic system adequately sized to treat wastewater generated in the greenhouse?	Septic system designed to handle more wastewater than required.	Capacity just meets wastewater requirement.	Design capacity is much less than potential flow of wastewater. Or, No septic system; <b>direct discharge of wastes to environment.</b>		
8.03) What is the age of the septic system?	Less than five years old.	Six to twenty years old.	More than 20 y ears old.		
8.04) What distance separates the septic system components from water wells?	Greater than 50 feet from private wells (75 feet from public wells, including greenhouse with employees or that is open to the public).		<b>Less than 50 feet from a private well (less than 75 feet from public wells, including greenhouse with employees or that is open to the public.)</b>		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>SEPTIC SYSTEM MANAGEMENT, NOTE: COMPLETE THE REMAINDER OF THIS SECTION ONLY IF THE GREENHOUSE HAS A SEPTIC SYSTEM</b>					
<b>8.05)</b> When was the last time the septic tank was pumped out?	Within the past five years.	Between five and ten years.	More than ten years ago.		
<b>8.07)</b> How is the drain field protected from traffic, deep-rooted plants and structures?	Vehicles and other heavy objects or activities kept away from drain field area. No deep-rooted plants, pavement or structures over the drain field.		Vehicles, livestock, heavy objects or other disturbances permitted in area. Trees planted in or directly next to the drain field.		
<b>8.08)</b> Are there any signs of trouble with the septic system?	Greenhouse sanitary drains flow normally. No sewage odors inside or outside. Soil over drain field firm and dry. Well water tests negative for coliform bacteria.	Greenhouse sanitary drains run slowly or soil over drain field is sometimes wet.	Sewage odors noticed in the greenhouse or near the drain field. Drains plugged or backed up. Soil wet or spongy in the drain field area. Well water tests positive for coliform bacteria.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>SEPTIC SYSTEM MANAGEMENT, NOTE: COMPLETE THE REMAINDER OF THIS SECTION ONLY IF THE GREENHOUSE HAS A SEPTIC SYSTEM</b>					
<b>8.09)</b> What records are maintained on the septic system?	Good map and records of system repairs and maintenance are kept.	Some records maintained.	No map and maintenance records kept.		
<b>8.10)</b> What kinds of greenhouse cleaners, solvents and other chemicals are poured down the drain?	Moderate use of cleaning products that end up in wastewater. Hazardous chemicals never poured down the drain or toilet.	Moderate use of cleaning products. Small amounts of hazardous chemicals poured down drain or toilet.	Heavy use of cleaning products. <b>Septic system used to dispose of hazardous chemicals (solvents, degreasers, acids, oils, paints, disinfectants, pesticides).</b>		
<b>8.11)</b> How is the water softener recharge handled.	Underground drainage separated at least 50 feet from well and septic systems (75 feet from the farm well for greenhouse with employees or open to the public).	Open ditch, farm field drain.	Septic system.		
<b>8.12)</b> How are discharges from footer drains, basement sumps and roof drainage handled?	Grassed area, open ditch, field drain.		Directed into the septic system.		
<b>NUTRIENT MANAGEMENT PRACTICES</b>					
<b>9.01)</b> How are pH and electrical conductivity (EC) meters used to manage fertilizer use?	Meters – pH and EC – are present at all times for monitoring container substrate before and after planting and during growing. Instruments are calibrated regularly.	Either a pH or an EC meter is available to do trouble-shooting when necessary.	Neither a pH nor an EC meter is available.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>NUTRIENT MANAGEMENT PRACTICES</b>					
<b>9.02)</b> How often is irrigation water monitored for alkalinity?	Water tested before every crop cycle to determine alkalinity.	Water tested once every one to five years to determine alkalinity.	Water never tested or tested for alkalinity only if there is a crop nutrition problem.		
<b>9.03)</b> How often is premixed medium monitored for pH and EC?	Each shipment of premixed medium is tested for its pH and EC.	Several samples of premixed medium are tested during the season for pH and EC.	Premixed medium is not tested for pH or EC.		
<b>9.04)</b> How often is on-site-mixed medium monitored for pH and EC?	Growing medium is tested at least weekly for pH and EC.	Growing medium is tested periodically for pH and EC.	Growing medium is not tested for pH or EC or, is tested only when there is a problem.		
<b>9.05)</b> How often is irrigation water monitored for pH and EC?	Irrigation water is tested for pH and EC weekly.	Irrigation water is tested for pH and EC periodically.	Irrigation water is not tested. Or, Tested for pH and EC only when there is a growing problem.		
<b>9.06)</b> How are the fertilizer stock tanks near injectors protected from leaking into groundwater?	Stock tank on concrete floor with a curb and a catch basin installed.	Stock tank on a concrete floor, no curb, or in plastic secondary containment.	Stock tank on a permeable surface.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>NUTRIENT MANAGEMENT PRACTICES</b>					
<b>9.07)</b> How are aboveground ebb and flow storage tanks protected from leaking into groundwater?	Tanks in an isolated area, on a concrete floor with a curb and a catch basin installed.	Tanks in a traffic area on a concrete floor, no curb.	Tanks on a permeable surface, not barricaded.		
<b>9.08)</b> How are underground ebb and flow storage tanks protected from leaking into groundwater?	Concrete structure, treated with impermeable material on the inside and outside, with catch basin below.	Concrete structure, treated with impermeable material on one side, no catch basin.	Concrete structure, no treatment of surface.		
<b>9.09)</b> How often is nutrient testing done by a commercial laboratory or land-grant university?	Medium and tissue testing done several times a growing season through commercial laboratory or land-grant university.	Medium and tissue testing done through commercial laboratories or land-grant universities once a growing season.	Greenhouse company has rarely used the services of a commercial laboratory or land-grant university.		
<b>9.10)</b> How is slow-release fertilizer used in the operation?	Slow-release fertilizer is used only in those crops that require high nutrient levels or are in hard-to-get-to places.	Slow-release fertilizer is used on crops requiring a lot of watering (leaching).	Slow-release fertilizer is used on all crops because of convenience.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>NUTRIENT MANAGEMENT PRACTICES</b>					
<b>9.13)</b> How are nitrogen fertilizer applications determined?	Nitrogen fertilizers are applied according to container substrate tests and crop requirements.	Nitrogen fertilizers are applied according to visual observation or past practices.			
<b>9.15)</b> How is P management changed when phosphoric acid is used to acidify irrigation water?	Phosphoric acid credited, phosphorus fertilizer reduced.		No changes in phosphorus fertilizer applications.		
<b>10.01)</b> What is the water source?	Municipal supply.	On-site well.	Stream, river or pond.		
<b>SOIL AND WATER CONSERVATION PRACTICES</b>					
<b>11.01)</b> What percent of the parking lot area is covered with impervious surfaces?	Less than five percent.	Five to twenty percent.	More than twenty percent, and no provision to manage runoff.		
<b>11.02)</b> How is greenhouse roof runoff water handled?	A retention pond, settling basin or man-made wetland to capture greenhouse runoff water and hold it.	Plans being made to build either a retention pond, settling basin or man-made wetland to capture greenhouse roof runoff water and hold it.	No roof runoff system in place.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>SOIL AND WATER CONSERVATION PRACTICES</b>					
<b>11.03)</b> How is the greenhouse site contoured to reduce runoff?	Site is contoured or graded to slow runoff and increase water infiltration.		No site improvements to slow runoff and increase water infiltration.		
<b>11.04)</b> Are vegetative buffer strips used to reduce runoff?	Plant material such as grass, shrubs or trees used to slow water movement to streams lakes and wetlands.		The use of a buffer strip has not been considered as a means of slowing water movement off the site.		
<b>11.05)</b> How are drainage ditches and drain tiles managed?	Annually maintained in accordance with local government regulations.	Drainage ditches or drain tiles checked and maintained every two to five years.	Drainage ditches or drain tiles have not been maintained.		
<b>11.06)</b> How is erosion minimized on roads, parking lots and traffic areas?	Built and maintained to minimize erosion.	A small amount of erosion does occur on the roads and parking lots.	Erosion from the parking lots/roads can be a problem and pose a risk to surface water.		
<b>11.07)</b> How often is the greenhouse site evaluated for runoff problems?	Site is evaluated after each renovation or addition.	Site evaluated every three to five years, after a number of renovations or additions.	Runoff occurs on a regular basis. No plan to address problem.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PEST MANAGEMENT PRACTICES</b>					
<b>12.01)</b> How does the grower stay current on new pest management practices and strategies for weeds, insects and diseases?	Attends educational meetings, reads educational materials provided by the university or other reliable sources. At least one new pest management practices adopted on a trial basis each year.	Occasionally attends educational meetings and reads new pest management materials.	Relies on outdated pest management practices.		
<b>12.02)</b> Does the grower consult with a pest management consultant or service during the growing season?	Employs an independent crop consultant throughout the growing season that is knowledgeable of IPM. Or, Utilize public reports and services from the university, local agribusiness or other reliable providers.		Relies on outdated pest management practices.		
<b>PEST PREVENTION AND AVOIDANCE</b>					
<b>12.03)</b> Does the grower review previous growing season pest management activities and results?	Previous pest populations, pest suppression activities/pesticide usage and crop yield/injury are reviewed. Records used for future pest management plans.	No.			
<b>12.04)</b> When available are certified seed or plant material (tubers, crowns, transplants, etc.) used that are insect, weed and disease-free?	Certified or quality seed and planting materials used whenever possible.	Bin-run or uncertified planting materials that are cleaned and treated.	Use saved seed or planting materials that are untreated and potentially infected with insect, weed and/or disease pests.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PEST PREVENTION AND AVOIDANCE</b>					
<b>12.05)</b> Are pest resistant and tolerant varieties planted?	Pest resistant and tolerant varieties are planted when available.	Varieties without resistance and tolerance are planted, resulting in the need for pest suppression practices.			
<b>12.06)</b> Are greenhouses scouted for pests during the growing season?	All greenhouses are scouted on a weekly schedule, by a qualified individual trained in IPM. Scouting reports and records are on file.	Greenhouses are scouted at critical times, but not on a weekly basis.	Greenhouses are not scouted.		
<b>12.07)</b> How are weeds outside the greenhouse controlled?	Herbicide selection and rates are based on weed species present; scouting and thresholds are used. Where appropriate, cultural and mechanical practices are used to suppress weeds and minimize weed seed survival (cultivation, cover crops, weed barrier, mowing, etc.).	Pre-emergent and post-emergent herbicides used outside of buildings are selected on the basis of past performance, weed history, cost or ease of application.	Herbicides used outside of buildings are selected primarily on the basis of price or ease of application. Little consideration is given to weed species present or runoff/leaching potential or other methods of control.		
<b>12.08)</b> How are weeds inside the greenhouse controlled?	Hand removal, weed barrier or other cultural practices.	Herbicide used with attention to a specific greenhouse use label.	Herbicide used without attention to a specific greenhouse use label.		
<b>12.09)</b> Are sticky card traps used?	Use sticky cards at regular intervals to detect insect pests.	Sticky cards are used on some crops and read every two weeks.	Sticky cards are not used.		
<b>12.10)</b> Are biological control agents used?	Use biological agents to reduce or eliminate the use of pesticides.	Use biological agents in conjunction with pesticides for efficient pest control.	Not considering the use of biological agents.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PEST PREVENTION AND AVOIDANCE</b>					
<b>12.11)</b> Are human toxicity or health risks considered when choosing pest control materials?	Use only insect growth regulators (IGRs) or other new low-risk compounds instead of more toxic pesticides.	Incorporate IGRs or low-risk compounds into the program when able.	Satisfied with current higher toxicity pesticides. Does not consider human health risk in pesticide selection.		
<b>12.12)</b> Are low restricted-entry intervals (REIs) pesticides ( $\leq 12$ hours) used?	Low-REI pesticides make up 100 percent of the program.	Low-REI pesticides make up about 50 percent of the program.	Disregard REIs when selecting and applying pesticides.		
<b>12.13)</b> Are pH and alkalinity of water used with pesticides checked?	Check pH and alkalinity of water source every six months, realizing that both factors can affect pesticide effectiveness.	Alkalinity and pH of water source used for pesticides checked every one to three years.	Alkalinity and pH of water source not checked or checked only if the pesticide is not working.		
<b>12.14)</b> Are pest problems spot treated?	Pesticides are applied only to infested plants.	Pesticides are applied to infested plants and surrounding plants.	The entire greenhouse range is treated on a regular basis.		
<b>PESTICIDE APPLICATION</b>					
<b>12.17)</b> What management practices are used to prevent the development of pest resistance to certain pesticides?	Pesticides with different modes of action are rotated within a season or from one season to the next or used in tank mix where permitted. Pesticides at highest risk of resistance are not used when alternatives are available.	Some but not all pesticide modes of action are rotated or tank mixed. Pesticides at highest risk of resistance are used sparingly.	Pest resistance is not considered when selecting pesticides.		

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>PESTICIDE APPLICATION</b>					
<b>12.24)</b> Is pesticide application equipment ever stored with leftover product?	Application equipment is always stored empty.	Occasionally leftover product is stored in application equipment.	Storage of leftover product in application equipment is a standard operating procedure.		
<b>12.25)</b> Is loaded pesticide application equipment ever left unattended?	Sprayer containing pesticide(s) is never left unattended.	Pesticide handlers on occasion are called away from spraying activities.	Leaving sprayers with pesticide unattended is a common occurrence.		
<b>12.27)</b> How often is pesticide application equipment tested?	Application equipment is tested annually to determine if it is working properly.	Application equipment is tested only if there is time.	Application equipment is tested only if it has been broken and repaired.		
<b>OUTDOOR PRODUCTION CONTAINER MANAGEMENT (IF YOU DO NOT HAVE OUTDOOR CONTAINERS, PLEASE SKIP.)</b>					
<b>13.02)</b> Are runoff storage areas sized adequately?	Runoff collection areas can store an average rain event.	Runoff collection areas cannot store an average rain event but do not regularly flood into surface water.	Runoff collection areas overflow regularly and runoff enters surface water.		
<b>13.03)</b> How is the pH of irrigation water managed?	Sulfuric acid is used to lower the pH of irrigation water.	Nitric acid or phosphoric acid is used to lower the pH of irrigation water. Nutrient credits are taken for the acidified irrigation water.	Nitric acid or phosphoric acid is used to lower the pH of irrigation water. Nutrient credits are not taken for the acidified irrigation water.		
<b>13.04)</b> What type of irrigation is used?	Trickle irrigation with in-pot emitters.	Overhead irrigation with scheduled irrigation (split applications).	Overhead irrigation.		
<b>13.05)</b> What fertilizers are used to minimize nutrient loss?	Controlled-release fertilizers used or multiple applications of liquid fertilizer with minimal leaching potential.		Minimal use of controlled-release fertilizers. Use liquid fertilizer with high leaching potential.		
<b>13.06)</b> Is container stock fertigated with overhead sprinklers?	Overhead irrigation with fertigation is avoided on containers.		Overhead irrigation with fertigation is regularly used on containers.

### MAEAP Livestock System Verification Standards

(Revised Date: (7-15-16))

**A boxed risk level** indicates the standard required for environmental assurance verification.

**Bold black print** indicates a violation of state or federal regulation.

**Bold Italic blue print** indicates a management practice consistent with a specific ~~2015~~2016 Right to Farm (RTF) Generally Accepted Agricultural Management Practice (GAAMPs).

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>Whole Farm Nutrient Balance</b>					
<b>1.01)</b> Is there adequate land base for all nutrients used on the farm?	There is adequate land base or manure is sold or transferred off site.	Lacks adequate land base but fields test low ( <b>&lt; 75 PPM</b> ) in phosphorus and manure applications can be balanced on nitrogen basis.	Lacks adequate land base.	Complete Manure Management: Getting Started (see Supplement) or use NRCS farm nutrient balance spreadsheet.	<del>2015</del> 2016 RTF Manure Management and Utilization GAAMPs, Section V: Manure Application to Land, Manure Nutrient Loading, #33
<b>Farm Site Review</b>					
<b>2.01)</b> Has there ever been a formal Right to Farm complaint against the farm?	There has never been a Right to Farm complaint, or the concern was not verified, or the concern was resolved.		There was a formal Right to Farm complaint and the concern was not resolved.	Producer's verbal indication of complaint history.	
<b>2.02)</b> Do rain, snow (including plowed snow) roof water or surface water come into contact with manure, compost, feed/silage, livestock lots or travel lanes resulting in contaminated runoff?	There is no clean water contact with the listed areas, or contaminated <b>runoff is collected or treated</b> and does not discharge directly to surface water.		Areas are exposed to rain/snow or surface water, and runoff is not collected or treated. <b>Runoff discharges directly to surface water.</b>	Visual inspection of the farmstead. Visual inspection of flow patterns are most apparent during or shortly after a rainfall event and/or thaw.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>  <del>2015</del> 2016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control and Wastewater Management, Outside Lots, #11

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>Farm Site Review (continued)</b>					
<b>2.03)</b> If surface drains are present around the farmstead, what are they collecting and where does the runoff end up?	Surface drains do not capture contaminated runoff or there are surface drains <b>but runoff is collected or treated</b> and does not discharge directly to surface water.		Surface drains collect contaminated <b>runoff and discharge directly to surface water</b> or run to low areas and pond.	Visual inspection of the farmstead. Visual inspection of flow patterns are most apparent during or shortly after a rainfall event and/or thaw.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>  <b>20152016 RTF Manure Management GAAMPs, Section II: Runoff Control and Wastewater Management, #2</b>
<b>Milking Center Wastewater</b>					
<b>3.02)</b> How is plate cooler water handled?	100% of plate cooler water is reused for livestock watering or other livestock-related use or permitted for discharge.	Less than 10,000 gal/day are discharged onto ground surface. Discharged water does not intercept surface water.	<b>More than 10,000 gal/day are discharged onto ground surface or intercept surface water without a permit.</b>	Appropriate cooling water management demonstrated.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>3.03)</b> What are the parlor cleanup practices?	Milk, milky rinse water, manure, and feed waste are land applied or otherwise appropriately utilized, and are never discharged to septic or other infiltration type treatment systems.	Some milk, milky rinse water, manure, or feed waste is discharged to septic or other infiltration-type treatment systems. Systems are monitored and managed for proper operation.	Significant milk, milky rinse water, manure, or feed waste is discharged to septic or other infiltration-type treatment systems. Wastewater is <b>discharged directly to surface water.</b>	Appropriate milking center cleanup practices demonstrated.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>3.04)</b> Is all wastewater collected and stored?	Wastewater is stored, used, hauled daily or passes through a designed treatment system.	Wastewater passes through a properly functioning filtration system.	<b>Wastewater is directly discharged to a lake, drainage ditch, stream or field.</b>	Appropriate wastewater management is demonstrated. No direct discharge.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>3.05)</b> Is rejected milk collected and stored?	Rejected milk is stored, hauled out or fed.		<b>Milk is discharged,</b> put into septic system or put into treatment strip.	Rejected milk is properly managed.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>Milking System Septic Systems. If this method is not used, skip to the next section.</b>					
<b>3.06)</b> Is all milkhouse waste water treated by the septic system?	All milkhouse waste water is treated by septic system.		Some waste water is not treated or <b>is discharged to tile, inlet or drainage ditch.</b>	Collection and treatment of all wastewater is demonstrated.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>3.07)</b> Is the septic system managed adequately to handle the volume of wastewater?	Septic system is <b>managed in a manner to prevent pollution to waters of the state.</b>		Septic system is not managed adequately and <b>discharges directly to surface waters.</b>	System operating effectively, without evidence of a discharge.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>  <b>20152016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control and Wastewater Management, #3</b>
<b>Application of Wastewater to Vegetated Infiltration System. If this method is not used, skip to next section.</b>					
<b>3.10)</b> Does the system handle the capacity of milking center wastewater generated?	Infiltration area effectively treats the quantity of wastewater generated. <b>Treatment area is managed to prevent pollution to waters of the state.</b>	Infiltration area effectively treats the quantity of wastewater generated, but shows minor erosion, wastewater ponding or burned vegetation. (Medium Risk should have blue border, approved last year in FAS 107, Farmstead System but was missed in editing.)	Infiltration area has excessive erosion, wastewater ponding or burned vegetation.	Properly operating system confirmed by visual inspection of vegetated infiltration system. <i>Refer to Guidelines for Milking Center Wastewater (Wright and Graves, 1998) and Milking Center Wastewater Guidelines (Holmes and Struss, 2009) for more information.</i>	<b>20152016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control And Wastewater Management, #3</b>
<b>3.11)</b> How is the vegetated infiltration system maintained?	<b>Vegetation maintained and harvested at least once per year.</b> Accumulated solids removed, if needed.	Occasional maintenance.	No maintenance.	Vegetation maintained and harvested. Records of maintenance kept.	<b>20152016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control And Wastewater Management, Infiltration Areas, #7</b>

<b>Liquid Manure Storage Systems</b>					
<p><b>4.03)</b> What design standards are utilized for liquid manure storage structures?</p>	<p>As-built documentation is available. <i>Construction design for manure storage and treatment facilities meets standards and specifications in accordance with MI NRCS-FOTG, Concrete Manure Storages Handbook (MWPS-36), Circular Concrete Manure Tanks publication TR-9 (Midwest Plan Service, 1998).</i> For steel: Manual of Steel Construction, American Institute of Steel Construction. For concrete: Building Code Requirements for Reinforced Concrete, ACI 318, American Concrete Institute. For earthen storage, the permeability of the earthen liner is known and the earthen storage meets NRCS standard 313: Waste Storage Facility. No evidence of overflow.</p>	<p>The storage was designed and built by professionals, but the as-built design standards are unknown. The storage structure meets the requirements as outlined in Extension Bulletin FAS 112S.</p>	<p>Storage design is unknown and conformance has not been determined or the system is not functioning properly.</p>	<p>Appropriate manure storage design and installation demonstrated. Completed MAEAP manure storage review sheets or as-built engineering standards available. (See FAS 112S)</p> <p>System analysis procedure (seepage meter) provides evidence storage meets conformance standards.</p>	<p>NRCS 313, Waste Storage Facility</p> <p>MSU Extension Bulletin FAS112S, Manure Storage Review Worksheets</p> <p><del>2015</del><b>2016 RTF Manure Management and Utilization GAAMPs, Section IV: Construction Design and Management for Manure Storage and Treatment Facilities, Construction Design, #26</b></p> <p>Midwest Plan Service, 1998</p>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>Liquid Manure Storage Systems (continued)</b>					
<b>4.04)</b> Are structures properly maintained?	Structure is properly maintained and in good condition. No damage to the liner or breaches are evident. No visible signs of issues with push-off ramps, load-out areas, pumps, piping, etc.	Structure appears to be in good condition.	Lining material integrity broken. Evidence of overflow. Coarse-textured soils, no clay liner. Evidence of extensive cracking, leaning, etc. Structure needs repair.	MAEAP manure storage review sheets completed. (See FAS 112S) Additional Criteria may be required for CNMP development.	NRCS 313, Waste Storage Facility
<b>4.05)</b> Are areas adjacent to manure storage structures properly maintained?	Banks are mowed and inspected regularly for potential problems. No brush, trees or animal burrows present.	Banks are not mowed regularly. Woody plant material present.	Lack of maintenance around storage site and/or numerous areas in need of repair and/or burrows present.	MAEAP manure storage review sheets completed. (See FAS 112S)	NRCS 313, Waste Storage Facility
<b>4.06)</b> Is clean water (i.e. roof and surface runoff) diverted away from the manure storage facility?	Clean water is diverted away from manure storage.	Clean water is not diverted but storage is designed to accommodate the additional water while still maintaining the freeboard.	Potential exists for overflow of manure storage.	MAEAP manure storage review sheets completed. (See FAS 112S)	
<b>4.07)</b> How is freeboard maintained and overflow prevented in storage structures?	Minimum freeboard is known and observed. <b><i>A minimum freeboard of twelve inches (Six inches for fabricated structures) plus the additional storage volume necessary to contain the precipitation and runoff from a 25-year, 24-hour storm event.</i></b> Freeboard markers are in place.	No evidence of manure overflowing storage.  Safe freeboard level is known but not visibly marked.  Freeboard not always maintained.	Evidence that manure overflowed the storage structure. Freeboard level is unknown and unmarked.	Appropriate manure storage management demonstrated. Safe freeboard level indicated on storage. Runoff is calculated.	NRCS 313, Waste Storage Facility  <b><i>20152016 RTF Manure Management and Utilization GAAMPs, Section IV: Construction Design and Management For Manure Storage and Treatment Facilities, Management, #28</i></b>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>Solid-bedded Manure Systems and Composted Manure Systems</b>					
<b>5.01)</b> How are animal facilities with bedded manure packs designed and constructed?	Constructed with a floor of impermeable material or fine-textured soil. Adequate bedding is provided to maintain solid nature of manure. No rainfall or runoff enters the manure area. No waterers in the building.	Medium- to fine-textured soils, limited bedding provided, some rainfall or runoff enters manure area. Waterers in the building.	Building has an earthen floor on coarse-textured soil. <b>Contaminated runoff directly discharges to surface water.</b>	Appropriate manure storage design and management for leachate/runoff control.	<b>NREPA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>5.02)</b> At the farmstead, where is manure temporarily stacked?	<i>Manure can be temporarily stacked on an impermeable pad with sides. Runoff does not flow onto neighboring property or into surface waters.</i>	<i>Manure stacked on the ground with appropriate management to minimize leaching and prevent runoff flow onto neighboring property or into surface waters - such as rotating locations, complete removal of manure, records documenting timing of removal and location used and seeding of previous location.</i>	Manure is temporarily stacked on the ground without appropriate management to minimize leaching and prevent all runoff such as rotating locations, complete removal of manure, seeding of previous location and records documenting location used. For example: manure is stacked in the same location every year, piles are located within 50 feet of surface water, and/or there is evidence that <b>manure-contaminated runoff flows to surface water</b> or to adjacent property.	Appropriate temporary manure stacking demonstrated at the farmstead for surface water and groundwater protection.	<b>NREPA 451 of 1994, Part 31: Water Resource Protection Act</b>  <i>20152016 RTF Manure Management and Utilization GAAMPs, Section III: Odor Management, Stacked Solid Manure, #15 (General Guidance)</i>
<b>5.03)</b> At the farmstead, how long is manure temporarily stacked?	Less than 365 days with complete removal of manure.		Greater than 365 days without complete removal of manure.	Manure not stacked for more than 365 days. Refer to manure application records.

<b>Solid-bedded Manure Systems (continued)</b>					
5.07) In the field, how is manure temporarily stockpiled in relation to surface water?	<i>Manure stockpiles are kept a least 150 feet from surface waters or areas subject to flooding unless conservation practices are used to protect against runoff and erosion losses to surface waters.</i>		Manure stockpiles are closer than 150 feet to surface waters or areas subject to flooding, and conservation practices are not used to protect against runoff and erosion losses to surface waters.	Appropriate temporary manure stacking demonstrated in the field for surface water protection.	NREPA PA 451 of 1994, Part 31: Water Resource Protection Act  <i>20152016 RTF Manure Management and Utilization GAAMPs, Section III: Odor Management, Stacked Solid Manure, #15 (General Guidance)</i>
5.08) In the field, what management practices are used to reduce odors and pests from manure temporarily stockpiled?	<i>Stockpiled manure is at least 150 feet away from non-farm homes and stockpiled manure is covered with a tarp, straw or other materials or additives are used to reduce odors and pests.</i>	<i>Stockpiled manure is at least 150 feet away from non-farm homes.</i>	Stockpiled manure is closer than 150 feet to non-farm homes.	Appropriate manure stockpiling demonstrated for odor and pest control.	<i>20152016 RTF Manure Management and Utilization GAAMPs, Section III: Odor Management, Stacked Solid Manure, #15 (General Guidance)</i>
5.09) In the field, how long is manure temporarily stockpiled?	<i>Manure is spread as soon as field and weather conditions allow, and does not exceed six months; or if covered with an impermeable cover, twelve months.</i>		Manure stockpiled for more than six months without a cover, or more than twelve months with an impermeable cover.	Manure not stockpiled for more than 365 days. Refer to manure application records. For CNMP's manure may be stockpiled in the field for 20 days on soils with a High N Leaching index and 90 days on soils with a Medium N Leaching index. NRCS standard 634.	<i>20152016 RTF Manure Management and Utilization GAAMPs, Section III: Odor Management, Stacked Solid Manure, #15 (General Guidance)</i>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>Outside Livestock Lot Management</b>					
<b>6.01)</b> How far is the livestock lot from surface water?	Livestock lot is more than 300 feet from surface water and <i>runoff control protects neighboring land areas and prevents direct discharge to surface waters or groundwater.</i>	Livestock lot is less than 300 feet from surface water and <i>runoff control protects neighboring land areas and prevents direct discharge to surface waters or groundwater.</i>	Evidence that manure-contaminated runoff flows from lot and <b>discharges directly to surface water</b> or to adjacent property.	Appropriate livestock isolation distance from surface water.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>  <i>20152016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control and Wastewater Management, Outside Lots, #11</i>
<b>6.02)</b> What efforts are made to divert unwanted drainage from upslope watersheds and roof water from becoming contaminated with manure?	<i>Provisions are made to collect, store, utilize and/or treat manure accumulations and contaminated runoff from outside open lot(s) used for raising livestock.</i> Clean water is diverted away from the livestock lot(s).	Most roof water and upslope watershed drainage are diverted around livestock lot(s). Water that contacts manure is treated or contained and applied to cropland.	No clean water system in place. Most roof water and upslope watershed drainage runs through lot(s).	Appropriate clean water management for livestock lot(s).	<i>20152016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control and Wastewater Management, #2 and Outside Lots, #11</i>
<b>6.03)</b> How is livestock lot runoff managed to protect surface water, groundwater and/or neighboring properties?	All lot runoff is directed to a properly designed and maintained runoff storage basin, or runoff is directed to a designed settling basin and vegetated infiltration area where vegetation is annually harvested. <i>No evidence of runoff to surface water, groundwater and/or neighboring properties,</i> or ponding in low areas.	<i>No evidence of runoff flow to surface water</i> or ponding in low areas. Vegetation or cropland that is annually harvested exists between lot and surface water.	Evidence of runoff flow <b>discharging directly to surface water</b> or intermittent waterway.	Appropriate site management for livestock lot(s). Producer records of manure scraping/collection should be kept and evaluated to assess risk reduction.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>  <i>20152016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control and Wastewater Management, #2</i>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>Outside Livestock Lot Management (continued)</b>					
6.04) How often is manure scraped and removed from livestock lot(s)?	<i>Manure is scraped and removed periodically from livestock lot(s) or other heavy use areas.</i>		Manure is seldom scraped and removed from lot and feeding and watering areas.	Appropriate manure management in livestock lot(s).	<del>2015</del> 2016 <i>RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control And Wastewater Management, Outside Lots, #11 (General Guidance)</i>
6.05) What type of floor or base does the livestock lot(s) have?	Properly maintained concrete, compacted asphalt, or other equivalent material.	Continuous-use, compacted dirt or compacted gravel. Minimal plant material growing.	Poorly compacted dirt or gravel layer as indicated by plant growth.	Appropriate floor or base in livestock lot(s).	
<b>Pasture Management</b>					
7.01) Are there current soil tests on the pastures?	<i>All fields are sampled and tested on a regular basis, at least every one to four years, depending on crops being grown and the cropping system.</i>	Most fields are sampled and tested every one to four years. Producer plans to bring all field soil tests up-to-date within the next three years. (See also 10.01)	Fields have not been tested within the past four years.	Field names or map. Acres in the cropped portions of the field. Up-to-date soil test reports or schedule to bring all tests up-to-date. If pursuing a CNMP, soil samples should be taken every three years or more frequently.	MSU Bulletin E498S: Sampling soils for fertilizer and lime recommendations, frequency of soil sampling  <del>2015</del> 2016 <i>RTF Nutrient Utilization GAAMPs, Section III: Fertilization Practices for Land Application, Soil Fertility Testing and Tissue Analysis, #7</i>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>Pasture Management (continued)</b>					
<p><b>7.02)</b> What is the condition of pasture vegetation?</p>	<p>Pasture is well-managed with all areas vegetated. <i>Runoff from pasture feeding and watering areas travels through a vegetated filter area to protect surface and groundwater.</i> Or no contaminated runoff is noted.</p>	<p>Pasture is well-managed and vegetated except in feeding and watering areas, which are scraped. <i>Runoff from pasture feeding and watering areas travels through a vegetated filter area to protect surface and groundwater.</i> Or, no contaminated runoff is noted.</p>	<p>Pasture is overgrazed with bare spots. Erosion may be present. <b>Runoff from pastures is carrying sediment and nutrients to surface waters</b> or neighboring property.</p>	<p>No direct discharge from pasture(s).</p>	<p><b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b></p> <p><i>20152016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control And Wastewater Management, Pasture Systems, #10</i></p>
<p><b>7.03)</b> How is the pasture managed to protect surface water?</p>	<p><i>Livestock are excluded from actual contact with streams or watercourses except for controlled crossings and accesses.</i> Flash grazing may be implemented to control vegetation between fenced-in areas.</p>	<p>Herd density in the pasture is such that the stream bank remains vegetated with no eroded areas. Animals are not allowed to congregate under trees close to the waterway causing bare areas. And/or the practices of flash grazing is being implemented to control vegetation between fenced-in areas. (Medium Risk should have blue border, approved last year in FAS 110, Cropping System, but was missed in editing.)</p>	<p>Runoff results in <b>direct discharge to surface waters</b>. Livestock have free access to streams or watercourses, causing erosion.</p>	<p>Pasture managed to protect surface water from erosion and contamination demonstrated. Refer to <i>Prescribed Grazing 528 (USDA-NRCS-MI eFOTG) or Acceptable Practices for Managing Livestock along Lakes, Streams and Wetlands (E-3066, MSUE, 2008) for more information.</i></p>	<p><b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b></p> <p><i>20152016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control And Wastewater Management, Pasture Systems, #9</i></p> <p>NRCS Prescribed Grazing (528)</p> <p>MSU Extension Bulletin, Acceptable Practices for Managing Livestock Along Lakes Streams and Wetlands (E3066)</p>

<b>General Silage Storage (continued)</b>					
<b>8.05)</b> Does an emergency plan exist for times when leachate production exceeds current management controls?	An up-to-date written plan is available and is reviewed with all applicable employees.	Emergency action plan is incomplete or out-of-date.	No emergency action plan that covers excess leachate.	An up-to-date emergency action plan.	
<b>8.08)</b> In the case of a tire fire, does the farm have an up-to-date emergency farm plan?	The farm has an up-to-date emergency farm plan which is reviewed with all applicable employees.	More than one-year-old plan or an incomplete plan is available.	<b>No emergency farm plan when more than 3,000 whole scrap tires are stored on the farm.</b>	An up-to-date emergency action plan.	<b>NREPA PA 451 of 1994, Part 169: Michigan Scrap Tire Regulation</b>
<b>Bunker Silos</b>					
<b>8.09)</b> What type of floor does the silage storage have?	Concrete, compacted asphalt, or equivalent material. No excessive cracking (cracks that a finger can fit into or spider webs) or cracks are repaired.	Earthen floor with fine-textured soils (clay, clay loam, silty clay loam, sand clay, sandy clay loam and silty clay).	Earthen floor has permeable soils. Or, concrete, asphalt or lined surface contains many cracks.	A maintained impervious surface or fine-textured earthen floor.	
<b>Upright Silos</b>					
<b>8.13)</b> If there is a floor drain, is leachate collected, treated and/or stored, and applied at agronomic rates?	All leachate is collected, treated, and/or stored and applied according to nutrient management plan.		Leachate is not collected and/or <b>directly discharges to surface water.</b>	Appropriate silage management demonstrated.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>Silage Bag Management</b>					
<b>8.17)</b> Is there a mechanism for collecting or treating or utilizing accumulated leachate?	Yes, leachate is collected and does not pond or reach surface water.		No. <b>Leachate runs from bags to surface water.</b>	Appropriate silage management demonstrated.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>

<b>Manure Spreading Plan</b>					
<b>10.01)</b> How often are fields tested for nutrient levels (P, K, Ca, Mg) and pH?	<i>All fields are sampled and tested on a regular basis</i> , at least every one to four years, depending on crops being grown and the cropping system.	Most fields are sampled and tested every one to four years. Manure is not applied to fields without a current soil test. Producer plans to bring all field soil tests up-to-date.	Fields have not been tested within the past four years.	Field names or map. Acres in the cropped portions of the field. Up-to-date soil test reports or schedule to bring all tests up-to-date. On farms pursuing a CNMP, soil samples must be taken every three years or more frequently.	MSU Bulletin E498S, Sampling soils for fertilizer and lime recommendations, frequency of soil sampling. <b>20152016 Manure Management and Utilization GAAMPs, Section V: Manure Application to Land, Soil Fertility Testing, #29 Current RTF Nutrient Utilization GAAMPs, Section III: Fertilization Practices for Land Application, Soil Fertility Testing and Tissue Analysis, #7</b>
<b>10.02)</b> Do soil sampling procedures adequately represent field conditions?	One composite sample is taken from uniform field areas of 15 to 20 acres or from uniform management areas on grid or zone sampling procedures.	One composite sample is taken from uniform field areas of 20 to 40 acres.	One composite sample is taken from areas of greater than 40 acres.	Predominant soil types/soil maps. Cropping histories. Proper soil sampling procedure.	MSU Bulletin E498, Sampling soils for fertilizer and lime recommendations
<b>10.03)</b> How is the nutrient content of manure determined?	<i>Laboratory analysis for percent dry matter (solids), ammonium, and total N, P and K.</i>	Book values or standard nutrient content values used.	Manure nutrient content is unknown or not considered.	All manure analyses or book values on file.  Multiple manure samples collected over one to two year period provide evidence of manure nutrient values.	<b>20152016 Manure Management and Utilization GAAMPs, Section V: Manure Application to Land, Manure Analysis, #31</b>
<b>10.04)</b> How are desired application rates achieved?	Manure analysis (book value, manure test, or mass balance) and <i>field application rates are known.</i>		Application rate is not known.	Rate of manure applied known for all spreaders. Records indicate date of calibration.	<b>20152016 Manure Management and Utilization GAAMPs, Section V: Manure Application to Land, Method of Manure Application, #34</b>

<p><b>10.07)</b> What manure management records are maintained?</p>	<p>Complete application <i>records of manure analysis, soil test results and rates of manure application for individual fields are maintained.</i></p>	<p>A minimum of one season of manure application records, or partial manure application records have been kept. Complete manure application records will be kept immediately and will be available for review at the time of re-verification.</p>	<p>Minimal or no records maintained.</p>	<p>Additional nutrient management records that are needed.</p> <ul style="list-style-type: none"> <li>• Date(s) of manure application and incorporation when applicable.</li> <li>• Rate of manure application.</li> <li>• Weather conditions during application of manure (e.g., sunny, 70 degrees F).</li> <li>• Field conditions during application of manure (wet, dry, frozen, etc.)</li> <li>• Manure/wastewater quantities produced and nutrient analysis results.</li> <li>• Records of rental or other agreements for application of manure/wastewater on land not owned by the producer.</li> <li>• Record of manure/wastewater sold or given away to other landowners.</li> </ul>	<p><del>2015</del><b>2016 RTF Manure Management and Utilization GAAMPs, Section V: Manure Application to Land, Management of Manure Applications to Land, #40</b></p> <p>Additional records required are:</p> <ul style="list-style-type: none"> <li>-Dates(s) of manure application and incorporation when applicable.</li> <li>-Rate of manure application.</li> <li>-Weather conditions during application of manure</li> <li>-Field conditions during application of manure</li> <li>-Manure/wastewater quantities produced and nutrient analysis results</li> <li>-Records of rental or other agreements for application of manure/wastewater on land not owned by the producer</li> <li>-Records of manure/wastewater sold or given away to other landowners</li> </ul>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>Manure Spreading Plan (continued)</b>					
<p><b>10.08)</b> Are weather forecasts monitored when making decisions about field applications of manure?</p>	<p>Weather forecasts are monitored before field application decisions. Manure applications are delayed if excessive precipitation is predicted. Manure is not applied if greater than or equal to 70% probability of more than 0.5 inches of precipitation is forecasted within the next 24 hours.</p>	<p>The weather forecasts are monitored but manure applications are based on when the storage is full or timing is convenient. Application may be made when excessive precipitation is predicted</p>	<p>The weather forecasts are not monitored. Manure applications made regardless of weather forecasts.</p>	<p>Producer has a procedure in place to monitor weather forecasts prior to making decisions about field application(s) of manure. Manure is not applied when excessive precipitation is predicted.</p>	
<p><b>10.09)</b> How are manure nitrogen application rates managed?</p>	<p><i>Manure nitrogen rates do not exceed requirements of the crop</i> and are credited toward fertilizer needs. Pre-sidedress nitrate test (PSNT) may be part of the program.</p>	<p>Manure nitrogen credits are considered but not to their full extent.</p>	<p>Commercial nitrogen is not reduced to account for manure nitrogen credits.</p>	<p>Manure rates do not exceed crop N needs, consistent with GAAMPs.</p>	<p>MSU Bulletin E2904: Nutrient Recommendations for Field Crops in Michigan</p> <p><i>20152016 RTF Nutrient Utilization GAAMPs, Fertilization Practices for land Application, Nitrogen Management Practices, #10a</i></p> <p><i>20152016 RTF Manure Management and Utilization GAAMPs, Section V: Manure Application to Land, Manure Nutrient Loadings, #32</i></p>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>Manure Spreading Plan (continued)</b>					
10.10) How are manure phosphorus application rates managed?	<i>High testing fields (&gt;150 ppm Bray P1) do not receive manure, and fields between 75 and 150 ppm P receive no more than four years, crop P205 removal if one-year application, is impractical.</i>	High testing fields (>150 ppm Bray P1) removed from spreading plan, but crop removal rates are not followed.	Manure application rates are not based on soil tests and/or crop removal rates.	Manure rates do not exceed crop P needs. If developing a CNMP, refer to USDA-NRCS 590 Standard.	<b>20152016 RTF Nutrient Utilization GAAMPs, Section VIII: Land Application of Conditionally-Exempted Organic By-Products, Composted Organic By-Products, and By-Product Liming Materials, #27</b>  <b>20152016 RTF Manure Management and Utilization GAAMPs, Section V: Manure Application to Land, Manure Nutrient Loadings, #33</b>
10.11) Are odor reduction practices utilized when manure is land applied?	<i>Manure is incorporated within 48 hours or injected into the soil.</i>	If manure is not incorporated within 48 hours: <b>Conservation practices</b> (residue management, cover crops, perennial crops, etc.) <b>are used to protect against runoff and erosion losses to surface waters</b> or fields are snow covered or frozen preventing incorporation or injection.	All manures are surface applied and may not be incorporated until field is covered or until spring tillage.	Manure application records. Incorporation exceptions include: pastures or forage crops, or fields where crop residues are retained for erosion control or records show fields were snow covered or frozen preventing incorporation or injection.	<b>20152016 RTF Manure Management and Utilization GAAMPs, Section V: Manure Application to Land, Method of Manure Application, #35</b>
<b>Conservation Practices for Fields used for Manure Application</b>					
11.01) Are manure applications managed to avoid ponding, soil erosion and/or runoff?	<i>Liquid manure applications are being managed in a manner to optimize nutrient utilization and do not result in ponding, soil erosion losses, or manure runoff to adjacent property, drainage ditches or surface water.</i>	Some consideration is given to ponding, soil erosion and/or runoff.	Ponding, soil erosion and/or runoff are not considered. Manure <b>directly discharges to surface water.</b>	No evidence of manure ponding, soil erosion and/or runoff.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>  <b>20152016 RTF Manure Management and Utilization GAAMPs, Section V: Manure Application to Land, Method of Manure Application, #36</b>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>Conservation Practices for Fields used for Manure Application (continued)</b>					
<b>11.02)</b> Have environmentally sensitive areas been identified (land near surface water, highly erodible soils , soils with high leaching or runoff potentials, wells and surface inlets) that require additional management when applying nutrients (manure and fertilizers)?	Environmentally sensitive areas are identified. Family members, employees and contractors are aware of and understand the management practices to protect these areas.	Some environmentally sensitive areas are identified.	Environmentally sensitive areas are not considered.	Sensitive areas identified on field maps with appropriate management or setbacks: <ul style="list-style-type: none"> <li>• Areas next to surface water.</li> <li>• Fields with shallow ground water.</li> <li>• Fields with water wells.</li> <li>• Areas near surface water inlets.</li> <li>• Fields with highly erodible soils.</li> <li>• Fields with highly leachable soils.</li> <li>• Fields with high runoff potential.</li> </ul> Training/communication plan to inform workers and contractors of appropriate management or setbacks is in place.	
<b>11.03)</b> How are fields selected for spreading on frozen and snow-covered ground?	No applications on frozen or snow covered ground without injection or incorporation.	Manure Application Risks Index (MARI)has been completed for each field receiving manure on frozen or snow covered ground. Frozen or snow covered fields receiving manure have met MARI criteria for either Very Low or Low rating <b>and no liquid manure is applied on slopes greater than 3%, and no solid manure is applied to slopes over 6%.</b>	Applications are made to fields where runoff to water resources may occur.	MARI completed for each field receiving winter manure application, or spreading plan does not include winter spreading.	NRCS MARI  <b>20152016 RTF Manure Management and Utilization GAAMPs, Section V: Manure Application to Land, Timing of Manure Application, #39</b>

<b>Manure Pipeline, Hose and Irrigation System Management (continued)</b>					
<b>11.13)</b> Is care taken to ensure that irrigated manure does not flow into subsurface drains?	Field conditions are monitored before, during and after irrigation, and liquid manure is prevented from reaching tile lines. Appropriate measures are taken to avoid surface water discharges.		No care is taken to monitor field conditions, tile drains, etc., when irrigating liquid manure. <b>Direct discharge to surface water.</b>	No evidence of manure flow into surface drains.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>11.14)</b> If there are instances where diluted wastewater (≤ 1 percent solids) is applied to fields testing over 150 ppm P soil test, can the farmer document appropriate conditions for application?	<ul style="list-style-type: none"> <li>- <i>Growing plants in the application area.</i></li> <li>- <i>Wastewater application rate supplies less than 75% P crop removal.</i></li> <li>- <i>Annual sampling of wastewater P content.</i></li> <li>- <i>Soil P test levels decline over time.</i></li> <li>- <i>No other P applied to field.</i></li> <li>- <i>Tile drain fields monitored for manure flow.</i></li> </ul>	Appropriate conditions are partially met.	Appropriate conditions for dilute wastewater application are not present.	Appropriate dilute wastewater management demonstrated. Refer to the Manure Management and Utilization GAAMPs. Note: The CNMP guidelines and NRCS Nutrient Management Practice standard (590) require the use of the Michigan Phosphorus Index (PI) when wastewater is applied to fields testing over 150 ppm P soil test. A PI of 17 or lower is needed.	<del>2015</del> <b>2016 RTF Manure Management and Utilization GAAMPs, Section II: Runoff Control and Wastewater Management, Land Application of Runoff, #6</b>
<b>Emergency Plan and Employee Training</b>					
<b>12.01)</b> Is there an emergency plan in place in the event of a manure spill?	Up-to-date written plan available and understood by all appropriate farm employees. <i>All uncontained spills or releases should be reported to the MDARD Agriculture Pollution Emergency Hotline: 1-800-405-0101, or the MDEQ Pollution Emergency Alerting System: 1-800-292-4706</i>	Incomplete or out-of-date action plan available.	No emergency action plan that deals with manure spills.	Up-to-date emergency farm plan, such as MSU Extension Bulletin E-2575 “Emergency Planning for the Farm”.

<b>Mortality Management and Veterinary Waste Disposal</b>					
<b>13.01)</b> How are animal mortalities handled?	Animals are buried, incinerated (requires permit), land filled, placed in a compost pile or picked up by a rendering service, anaerobically digested or other methods as approved by the Director of MDARD. Mortality is removed within 24 hours of death or stored for a maximum of seven days at 40 degrees F or a maximum of 30 days at 0 degrees F before proper disposal of the carcass. Records of mortality disposal, including burial, are kept on file and available for inspection.		<b>Animals are not buried, incinerated, land filled, placed in a compost pile or picked up by a rendering service within 24 hours of death. Or, stored for more than 7 days at 40 degrees F or more than 30 days at 0 degrees F before disposal of the carcass.</b>	Disposal of dead animal bodies is done according to the Bodies of Dead Animals Act (BODA), as amended in 2007. Up-to-date forms on file for verification. (See FAS 112S.)  Forms for recording mortality disposal including burial record forms and compost record forms are available on the MAEAP website at: <a href="http://www.maeap.org/get_verified/livestock_system">http://www.maeap.org/get_verified/livestock_system</a> .	<b>Bodies of Dead Animals Act, Public Act 239 of 1982, as amended in 2008.</b>
<b>13.02)</b> If mortality composting is used, what are the isolation distances for the composting site?	Static pile site is located at least 200 feet from waters of the state, 200 feet from any well, 200 feet from nearest non-farm residence and 2 feet above seasonal high water table.		<b>Site is located less than 200 feet from waters of the state, 200 feet from any well, 200 feet from nearest non-farm residence, and 2 feet above seasonal high water table.</b>	Isolation distances meet BODA requirements. The BODA supplement, available at the MAEAP.org website, has been completed and reviewed.	<b>Bodies of Dead Animals Act, Public Act 239 of 1982, as amended in 2008.</b>
<b>13.03)</b> Is the site properly selected?	Site was properly selected for compost system regarding setbacks and composting method.		Site was NOT properly selected for compost system regarding setbacks and composting method.	Combining mortality from multiple sites may make the farm a large CAFO. See: <a href="http://msue.anr.msu.edu/news/can_combining_mortality_composting_from_two_separate_farms_constitute_a_caf">http://msue.anr.msu.edu/news/can_combining_mortality_composting_from_two_separate_farms_constitute_a_caf</a>

<b>Mortality Management and Veterinary Waste Disposal (continued)</b>					
<b>Mortality Composting</b>					
<b>13.04)</b> Is the compost system sized to handle the normal, expected mortality for the facility?	System capacity is adequate for the mortality at all times.	Capacity is normally adequate; however, system capacity is at times exceeded because of normal fluctuations in mortality rate.	System is sized inadequately to handle the volume of mortality for the operation.	Properly operating compost system confirmed by visual inspection of mortality compost.	
<b>13.05)</b> Does the composting process follow standards identified in the Bodies of Dead Animals Act, (BODA), as amended in 2008?	Current BODA standards followed.		<b>BODA standards not followed.</b>	Practices are followed as described in the Michigan Animal Tissue Composting Operation Standard (MATCOS), available online at: <a href="http://www.michigan.gov/documents/mda/BODA_Composting_Operational_Standards_216592_7.pdf">http://www.michigan.gov/documents/mda/BODA_Composting_Operational_Standards_216592_7.pdf</a> . The BODA supplement has been completed and reviewed.	<b>Bodies of Dead Animals Act, Public Act 239 of 1982, as amended in 2008.</b>
<b>13.06)</b> Is compost actively aerated and temperature monitored at least weekly through three heat cycles?	Yes		<b>No</b>	Compost is properly managed.	<b>Bodies of Dead Animals Act, Public Act 239 of 1982, as amended in 2008.</b>
<b>13.07)</b> Are records of compost management being kept according to BODA?	Yes	Partial composting records have been kept. Complete composting records will be kept immediately and will be available for review at the time of re-verification.	<b>No</b>	See FAS 112S, Proper Disposal of Dead Animals Worksheet for the required compost records.	<b>Bodies of Dead Animals Act, Public Act 239 of 1982, as amended in 2008.</b>

<b>Mortality Management and Veterinary Waste Disposal (continued)</b>					
<b>13.08)</b> How are animal health care needles and syringes disposed?	Sharps are put into a puncture-resistant container, labeled and taken to licensed landfill.		<b>Disposal at landfill without protective containment, or disposed of on the farm.</b>	Presence of a sharps disposal container.	<b>Public Health Code PA 368 of 1978, Part 138: Medical Waste Regulatory Act</b>
<b>Odor Management</b>					
<b>14.01)</b> If the farm has 50 Animal Units or more, was the Michigan Right to Farm GAAMPs for Site Selection and Odor Control for New and Expanding Livestock Facilities (Site Selection GAAMP) used to site new or expanding livestock production facilities constructed after June 1, 2000*	Farm has expanded since 2000 and <i>has MDARD Site Selection GAAMP verification</i> . MDARD verification is required for sites housing 500 AU or greater in a Category 1 location or 250 AU or greater in a Category 2 location.	Since 2000 the farm expanded to house between 50 and 499 AU in a Category 1 location or between 50 and 249 AU in a Category 2 location and the producer used the Siting Checklist and determined the site meets all of the Site Selection GAAMP Standards.	The farm has expanded since 2000 and does not meet all of the Site Selection GAAMP standards or the determination has not been made.	Conformance with Site Selection and Odor Control GAAMPs	<del>2015</del> <b>2016 RTF Site Selection and Odor Control for New and Expanding Livestock Production Facilities GAAMPs</b>
<b>14.02)</b> If the farm has less than 50 Animal Units, was the Michigan Right to Farm GAAMPs for Site Selection and Odor Control for New and Expanding Livestock Facilities (Site Selection GAAMP) used to determine the site category for facilities constructed after June 1, 2000*	The farm proactively achieved verification under the <i>Michigan Right to Farm Site Selection GAAMP</i> .	Land use zoning allows for agriculture or the location has been determined to be a Category 1, 2, or 3 site and is not required to complete the Site Selection GAAMP verification process.	The farm has been determined to be a Category 4 location and is not eligible for MAEAP Livestock or Farmstead verification.	Zoning map or zoning use description provided or category determination provided by MDARD. See FAS 112S	<del>2015</del> <b>2016 RTF Site Selection and Odor Control for New and Expanding Livestock Production Facilities GAAMPs</b>

RISK QUESTION	LOW RISK – 3 (RECOMMENDED)	MEDIUM RISK – 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	RECORDS OR EVIDENCE FOR MAEAP VERIFICATION	REFERENCE OR GUIDANCE DOCUMENT
<b>Odor Management (continued)</b>					
<b>14.04)</b> Does the farm have an odor management plan?	An odor management plan has been developed and implemented. <i>Farm is managed to minimize odor impacts upon neighbors.</i>	A partial odor management plan has been developed and implemented.	No odor management plan has been developed.	A written odor management plan has been developed and reviewed. (See FAS 112S Odor Management Plan.)	<del>2015</del> 2016 RTF <i>Manure Management and Utilization GAAMPs, Section III. Odor Management, #12</i>
*These questions (14.01 and 14.02) do not apply to farms where the Site Selection GAAMPs are not applicable, such as farms located in municipalities with populations greater than 100,000 where a zoning ordinance has been enacted to allow for agriculture. In addition, the Site Selection GAAMPs do not apply to research and educational institutions, or other locations as determined by MDARD.					
<b>Other Environmental Risks in the Livestock System</b>					
<b>15.01)</b> If the groundwater and surface water pumps have a combined capacity to pump more than 100,000 gallons per day (70 gallons per minute) for agricultural purposes has “water use” been registered and reported to the State of Michigan?	Pump capacity is less than 100,000 gallons per day (70 gallons per minute), OR, registered and reported annual water use to Michigan Dept. of Agriculture and Rural Development.		<b>Pump capacity is greater than 100,000 gallons per day (70 gallons per minute) and water use is not reported to the State of Michigan.</b>	Farm records indicate compliance.	<b>NREPA PA 451 of 1994, Part 31: Water Resource Protection Act</b>
<b>15.02)</b> Are there other activities, products, processes/equipment, services, byproducts, and/or wastes at this farm that pose contamination risks to groundwater or surface water?	No additional contamination risk(s) are identified.	Plan to mitigate the identified contamination risk(s).	No plan to mitigate identified contamination risk(s).	No other environmental risks found.

## Protect Special Sites

Protect Special Sites					
RISK QUESTION	LOW RISK - 3 (RECOMMENDED)	MEDIUM RISK - 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	YOUR RISK	REFERENCE OR GUIDANCE DOCUMENT(S)
<b>3.01)</b> Has the landowner made a reasonable effort to locate and protect special sites?	If special sites are thought to be present, then best management practices are included in forest management plan and are properly implemented on the property.		No effort was made to determine if there were special sites on the property.		<ul style="list-style-type: none"> <li>Michigan Natural Features Inventory</li> <li>State Historic Preservation Office</li> <li>American Forest Foundation 2010-2015, Standards of Sustainability for Forest Certification, February 2010; Standard 7.1.1.</li> </ul>
<b>3.02)</b> How are special sites identified and treated on the property?	The management plan identifies special sites and the forest management plan contains activities to maintain special sites.	The management plan identifies special sites.	Treatment of special sites is not contained in the management plan.		
<b>3.03)</b> Are historical or archaeological artifacts or areas located on the site?	Landowner minimizes impact to sites and, if applicable, contacts the State Historic Preservation Office for technical assistance in historic site preservation.	Landowner minimizes impact to site.	<b>Landowner does not minimize impact to site.</b>		<ul style="list-style-type: none"> <li><b>National Historic Preservation Act of 1996, as amended</b></li> <li>State Historic Preservation Office</li> </ul>

## Reforestation and Afforestation

<b>4.02)</b> Is reforestation or afforestation achieved by a suitable process that ensures <del>adequate stocking levels</del> <b>desired future conditions</b> ?	Forestland or potential forestland has achieved a planned, adequate stocking of desired species reflecting the landowner's objectives and appropriate to the site and resource conditions.	Forestland or potential forestland has not achieved adequate stocking of desired species that are reflected in the landowner's plan and objectives, and is appropriate to the site and resource conditions.	<p><del>No provision for reforestation or afforestation where desired.</del></p> <p><b>No plan is in place to achieve desired future conditions.</b></p> <p>AND</p> <p><del>Low or poor stocking of forestland or potential forestland.</del></p> <p><b>There is inadequate stocking.</b></p>		<ul style="list-style-type: none"> <li>American Forest Foundation 2010-2015, Standards of Sustainability for Forest Certification, February 2010; Standard 3.1.</li> </ul>
---	--	---	---	--	--

A boxed risk level indicates the level required for environmental assurance verification (MAEAP verification).

## Air, Water, and Soil Protection (cont.)

RISK QUESTION	LOW RISK - 3 (RECOMMENDED)	MEDIUM RISK - 2 (POTENTIAL HAZARD)	HIGH RISK - 1 (SIGNIFICANT HAZARD)	YOUR RISK	REFERENCE OR GUIDANCE DOCUMENT(S)
<b>5.04)</b> Have <b>all wetlands including, but not limited to:</b> bogs, fens, swamps, marsh, -or vernal pools been identified?	<b>Wetlands including, but not limited to:</b> Bbogs, fens, swamps marsh, or vernal pools have been identified and Riparian Management Zones (RMZs) established <b>in the LMP</b> . Prior to any management activities, a plan <b>addressing soil erosion and sedimentation</b> that follows <b>Sustainable Soil and Water Quality Practices (SSWQP) for forestland and/or Soil and Sedimentation Manual (MDEQ)</b> is developed and communicated. Plan is developed by appropriate resource professional.	<b>Wetlands including, but not limited to:</b> Bbogs, fens, swamps, marsh, or vernal pools have been identified. No <b>Land Management Plan</b> has been developed. Qualified Logging professionals are used for timber harvests, <b>if timber harvesting occurred.</b>	<b>Wetlands including, but not limited to:</b> Bbogs, fens, swamps, marsh, or vernal pools have not been identified. Untrained contractors/property owners conduct activities <b>in or</b> around these features.		<ul style="list-style-type: none"> <li>SSWQP Section 5</li> </ul>
<b>5.05)</b> Are <b>forest roads and trails</b> established and maintained to avoid soil erosion?	<b>Forest Roads</b> roads show <b>no minimal</b> gullyng or resulting sedimentation. Construction and maintenance has been done in accordance with SSWQP.	Some construction and maintenance has been done in accordance with some SSWQP.	Soil erosion, gullyng or sedimentation is occurring and road needs to be relocated.		<ul style="list-style-type: none"> <li>SSWQP Section 6</li> <li>Local ordinance(s)</li> </ul>
<b>5.06)</b> If used on the property, how is prescribed burning performed?	Prescribed fire done according to the approved forest management plan and with pre-fire planning which conform to the SSWQP and a burning permit obtained.	Prescribed fire is done with pre-fire planning, but does not conform to the SSWQP.	Prescribed fire is done without an approved forest management plan or pre-fire planning and does not conform to the SSWQP.		<ul style="list-style-type: none"> <li>SSWQP Section 14</li> </ul>
<b>5.07)</b> How is management to control pests, pathogens and unwanted vegetation taking place?	Integrated pest management to control pests, pathogens and unwanted vegetation is in place.	Integrated pest management to control pests, pathogens and unwanted vegetation is planned, but not yet implemented.	No pest management is conducted.		<ul style="list-style-type: none"> <li>SSWQP Section 14</li> </ul>

A boxed risk level indicates the level required for environmental assurance verification (MAEAP verification).
