

# Forest Pest Alert

## Asian Longhorned Beetle

*(Anoplophora glabripennis)*

Adult Asian  
Longhorned Beetle

*Joe Boggs, OSU Extension*

- ✓ Larvae feed in tunnels (called galleries) in the wood of tree branches and trunks.
- ✓ Maple trees are the Asian longhorned beetle's (ALB) favorite host. More than 1 billion maple trees grow in Michigan. ALB can attack and kill many other tree species, including poplar, willow, sycamore, and horse chestnut.
- ✓ ALB populations are known to be present in areas of southern Ohio, Massachusetts and New York.
- ✓ ALB can be transported into new areas in logs and firewood.
- ✓ If you see a suspect tree or beetle, take photos, record the location, collect any suspect beetles in a jar and report it to the following:
