Instructions for collection and submission of endocervical, urethral, throat, or rectal swabs for *N. gonorrhoeae, C. trachomatis or T. vaginalis* testing using

GEN-PROBE® APTIMA® unisex swab collection kit

(For vaginal swab collection instructions, see DCH-0972)

I. **Collection kit**
   A. Unit 2 (IATA Category B)-collection kit for endocervical and male urethral swab specimens (white-labeled tube).
   B. Check the expiration date. Do not use an expired collection kit.
   C. Verify the patient's identity at the time of collection. Best practice is to ask patient to spell their first and last name.
   D. **NOTE:** Testing for *T. vaginalis* is not performed on throat, rectal, or male urethral swabs.

II. **Patient preparation and sample collection:**
   A. **Endocervical swab specimens (female)**
      1. Remove mucus from the cervical os and surrounding mucosa using the cleaning swab (white shaft swab in the package with red printing). Discard this swab.
      
      **Note:** Excess mucus can also be removed with a large-tipped swab (not provided).
      
      2. Insert the specimen collection swab (blue shaft swab) into the endocervical canal.
      3. Gently rotate the swab clockwise for 10 to 30 seconds in the endocervical canal to ensure adequate sampling.
      4. Carefully remove the swab and place in transport (See E).
      5. Do not let the swab touch the vaginal mucosa.
   B. **Urethral swab specimens (male)**
      1. The patient should not have urinated for at least 1 hour prior to sample collection.
      
      2. Insert the specimen collection swab (blue shaft swab in the package with the green printing) 2 to 4 cm into the urethra.
      3. Gently rotate the swab clockwise for 2 to 3 seconds in the urethra to ensure adequate sampling.
      4. Carefully remove the swab and place in transport tube (See E).
   C. **Throat swab (male and female)**
      1. Use a tongue blade to hold down the patient’s tongue. Look at the back of the throat and tonsils for inflammation or exudate.
      
      2. Insert the specimen collection swab (blue shaft swab) and, carefully but firmly, rub the swab over the inflamed areas. If there is no inflammation or exudate, rub the swab over the tonsils and posterior pharynx.
      3. Do not touch the cheeks, teeth or gums with the swab.
      4. Carefully remove the swab and place in transport tube (See E)
      5. Do not let the swab to touch the skin or other surfaces.
   D. **Rectal swab (male and female)**
      1. Insert the specimen collection swab (blue shaft swab) into the rectum.
2. Swab the anal crypts just inside the anal ring. Rotate the swab for 2 to 3 seconds.
3. Carefully remove the swab and place in transport tube (See E).
4. Do not let the swab to touch the skin or other surfaces.
5. Avoid fecal contamination as much as possible during the collection. If the swab is grossly contaminated with fecal material, discard it, start with a new kit, and collect another specimen.

E. Transport tube
1. Remove the cap from the swab specimen transport tube. **Do not pour off the liquid preservative contents from the tube.** Immediately place the specimen collection swab into the transport tube.
2. Carefully break the swab shaft against the side of the tube at the scored line, using care to avoid splashing of the liquid. Discard the top portion of the swab shaft, leaving the tip of the swab in the tube.
3. Screw the cap on the transport tube as evenly and tightly as possible. Tape or Para-film® around the cap, but **DO NOT** put tape over the top of the cap.
4. Dispose the rest of the shaft as medical waste.

III. Labeling
A. Label the transport tube with the complete patient name and at least 1 unique identifier (For example: specimen number, date of birth, medical record number, etc.)
B. Enter the required information on the test requisition form (DCH-0583). The patient name and unique identifier on the form must be entered **exactly** the same as the information on the tube.
C. If there are multiple specimens from the same patient, please label the specimen tubes with the source also. The lab may be unable to determine the specimen source if not identified on the tube.
D. If there are multiple specimens from the same patient, use a separate test requisition and collection kit for each specimen.

IV. Package and shipping
A. Specimens should be sent to MDHHS immediately after collection.
B. Insert the specimen and absorbent pad into the small plastic bag provided. Make sure it is sealed. Place in the large plastic bag with the Biohazard symbol (Bio-Bag).
C. Place the completed MDHHS test requisition in the outside pocket of the Bio-Bag. Seal the bag.
D. Close the box and secure with sealing tape on both sides of the flap.
E. Attach the completed address label with the UN3733 label included in kit.
F. Send to the Michigan Department of Health and Human Services, Lansing laboratory as soon as possible (e.g. courier or United Parcel Service (UPS) etc.).
H. The specimen will not be tested if:
   1. The specimen container is received leaking.
   2. The specimen is not properly labeled or the test requisition not completed.
   3. The specimen label does not match the test requisition.
   4. The collection device is expired.
   5. The specimen was collected more than 60 days prior to receipt.
   6. Specimen is collected with the wrong collection device.
V. Packaging and shipping are the responsibility of the shipper. Please be sure it is in compliance with shipping regulations.

Unit 2-Chlamydia & Gonorrhea-Amplified Test-Cervical, Pharyngeal, Rectal, and Urethral Swabs
