

# Documenting Dual Therapy for Uncomplicated Gonorrhea in the Michigan Disease Surveillance System (MDSS) - Surveillance Protocol (V.1: February, 2013)

According to the Centers for Disease Control and Prevention (CDC) published the 2010 STD Treatment Guidelines, <http://www.cdc.gov/std/treatment/2010/>, dual treatment is now standard treatment for uncomplicated gonorrhea.

The MDSS gonorrhea treatment area still reflects mono-therapy for data collection. To record dual therapy, please note the cephalosporin treatment with the radio buttons and note Azithromycin or Doxycycline dual therapy in the "other" field. The other radio button will not populate but the data will be recorded in the text field. MDCH is working to update this form and to add an option for dual therapy. This document will be updated at that time.
