

# 2018 PCMH Initiative Participation Guide

April 13, 2018

**Special Note:** This guide is an iterative document which will be added to and amended as the PCMH Initiative continues implementation. The Department strongly encourages users to access this guide and associated materials through the SIM PCMH Care Delivery website rather than downloading and/or printing local copies to ensure that the most up-to-date information is always used.

## Introduction

This guide was written to support Physician Organizations (POs) and Practices who are participating in the 2018 State Innovation Model (SIM) Patient Centered Medical Home (PCMH) Initiative. State Innovation Models are Centers for Medicare and Medicaid Services (CMS) initiatives awarded to states to provide financial and technical support to states for the development and testing of state-led, multi-payer health care payment and service delivery models that will improve health system performance, increase quality of care, and decrease costs for Medicare, Medicaid and Children's Health Insurance Program (CHIP) beneficiaries—and for all residents of participating states.

Reinventing Michigan's health care system is one of the State's top priorities. The ambitious vision is shared by individuals and organizations across the State who desire to both improve the health of all Michiganders and have a health care system that provides better quality and experience at lower cost.

The Patient Centered Medical Home (PCMH) Initiative is the core component of the SIM strategy for coordinated care delivery, focusing on the development and testing service delivery models in order to achieve better care coordination, lower costs, and improved health outcomes for Michiganders. This focus is aligned with the overall SIM Care Delivery goals of:

- Championing models of care which engage patients using comprehensive, whole person-oriented, coordinated, accessible and high-quality services centered on an individual's health and social well-being.
- Supporting and creating clear accountability for quantifiable improvements in the process and quality of care, as well as health outcome performance measures.
- Creating opportunities for Michigan primary care providers to participate in increasingly higher level Alternative Payment Methodologies.

## Initiative Operations

To ensure continuity in the 2018 PCMH Initiative, a set of operational requirements were defined in the 2018 Participation Agreement. These requirements support daily functions across the initiative and facilitate regular data maintenance, participant monitoring and compliance, and information sharing.

## Participation Agreements

The PCMH Initiative legal parameters, program requirements, attribution model, and payment model details have been outlined within the 2018 PCMH Initiative Participation Agreement. The PCMH Initiative has developed two versions of the Participation Agreement, designed to support the various ways participants are engaging in this program. While the Initiative is designed for individual practice transformation, each

participating practice has the ability to choose if they will engage in the Initiative independently or via a Physician Organization/Physician Hospital Organization (PO/PHO). Therefore, there is both a [PO Participation Agreement](#) which is signed by the PO/PHO on behalf of all participating practices in their membership, and a [Practice Agreement](#) for individual practices participating without a PO/PHO. Throughout this guide the 2018 agreement is referenced, for continuity it is linked to the PO version of the agreement, although the practice agreement is also available on the MDHHS SIM Care Delivery website.

#### Amendments to Participation Agreement

Amendments to the participation agreement may take place in the event that a participating practice or PO/PHO undergoes any legal name changes, chooses to leave the PCMH Initiative, or is terminated from the Initiative in accordance to the circumstances outlined within the executed agreement.

To amend an agreement for practice or PO/PHO legal name changes or in the event that a practice is choosing to leave the Initiative, the participant should communicate with the Initiative team by completing the [online change form](#).

#### Initiative Payment Model

Participating payers in the 2018 PCMH Initiative include 11 Michigan Medicaid Health Plans (managed care organizations). Additionally, the Initiative team is working with Blue Cross Blue Shield of Michigan and Priority Health to finalize participation which will be centered on multi-payer data sharing in addition to shared care delivery model and HIT/HIE priorities. Additional payers may be added over time as well. Payment for SIM PCMH Initiative beneficiaries attributed to practices will be provided to the participant (the entity that signed the Participation Agreement; PO or practice) via the Michigan Data Collaborative SIM PCMH portal, but is limited to currently participating payers.

Participants will receive payments for attributed [eligible Medicaid beneficiaries](#); these payments will be made directly by each applicable MHP on a quarterly basis. PCMH Initiative participants will receive two types of Per Member Per Month payments:

The Practice Transformation: payment is designed to support needed investment in practice infrastructure and capabilities at a PMPM rate of \$1.25 for all attributed eligible Medicaid beneficiaries.

The Care Management and Coordination: payment is designed to support embedded care coordination services as a PMPM. The PMPM rate is determined by beneficiary age, with two categories: Adult and Pediatric. An individual's age on the last day of the month will be used to calculate age category, Adult or Pediatric, for the purposes of payment. Therefore, if an individual has a birthdate of 1/28/1999, they will be

considered an adult on the January 2018 PCMH Patient List, and for the purposes of Initiative payment.<sup>1</sup> The Care Management and Coordination PMPM will be disbursed at a rate of:

Adult Beneficiaries (19 years and above)

\$3.00 for Adult General Low Income Beneficiaries (TANF)

\$5.00 for Healthy Michigan Plan Beneficiaries (HMP)

\$7.00 for Aged, Blind and Disabled Beneficiaries (ABD)

Pediatric Beneficiaries (18 years and under)

\$2.75 for Pediatric General Low Income Beneficiaries (TANF)

\$5.00 for Healthy Michigan Plan Beneficiaries (HMP)

\$7.00 for Aged, Blind and Disabled Beneficiaries (ABD)

Even though Medicaid funding is structured as a PMPM, practices are required to submit care management and coordination [G and CPT tracking codes](#) to provide insight into the type and intensity of Medicaid member services. Additionally, participating practices are required to maintain specific benchmarks for the two Care Management and Coordination [benchmarks](#) within the [2018 Participation Agreement](#) in order to maintain consistent payment of the PMPM without potential for payment sanctions.

### PCMH Practice and Provider Participation Updates

An accurate list of participating practices and providers is essential to the PCMH Initiative attribution and payment process. Attribution is run monthly and incorporates updates submitted by POs and practices in the previous month. Updates can be made to the following fields:

Practice participation status, name, TIN, practice address, billing address, phone number

Provider participation status, name and NPI

PO name, TIN, billing address

Changes can be made using the online [Provider and Practice Change Form](#).

Multiple changes can be submitted at once by submitting a form at the above link and uploading an excel document with changes highlighted.

The Initiative requires participating organizations to update changes on a rolling basis. In general, changes submitted by the 25<sup>th</sup> of the month will be incorporated in the patient attribution the following month. For example, if updates are submitted via the online change form on January 23<sup>rd</sup>, changes will go into effect on February 1<sup>st</sup>. To verify that changes have been incorporated, a snapshot of the practice and provider data will be sent every quarter. In the future, this step may be replaced with a similar snapshot uploaded monthly to the SIM

Initiative dashboards. As a reminder participants must inform the PCMH Initiative of any changes in accordance with the [2018 Participation Agreement](#).

Questions regarding PO, practice, or provider changes can be sent to the SIM mailbox at [MDHHS-SIMPCMH@michigan.gov](mailto:MDHHS-SIMPCMH@michigan.gov).

Please note that changes sent to SIM PCMH Initiative are for Initiative purposes only and cannot be used to communicate changes directly to the Medicaid Health Plans.

## Core Primary Care (PCMH)

The [2018 PCMH Initiative Participation Agreement](#) outlines six (6) Core Primary Care Requirements for all participating practices. Please reference the 2018 agreement to understand more about these requirements, which have been selected to align with many Patient Centered Medical Home accreditation/designation requirements, and compliment other current initiative, demonstrations, or programs participants may be a part of. One of the requirements does allow the submission of an Alternative Consideration with the return of the signed [2018 Participation Agreement](#).

## Clinical Practice Improvement Activities

The purpose of the PCMH Initiative's practice transformation objectives and aligned [PMPM payment model](#) are to support the advancement of infrastructure within (or accessible to) PCMH practice environments. Practice transformation in this context is not focused on (or funded to support) the act of delivering a service to an individual patient. Rather, practice transformation support in the PCMH Initiative is geared toward building capability and developing structures which make the work of a PCMH participating practice more effective in the required focus areas.

### Practice Transformation Objectives

All SIM PCMH Initiative practices must fulfill the **Clinical-Community Linkage** and **Population Health Management** practice transformation requirements. While both practice transformation elements are required for all participants, the Clinical-Community Linkage requirement particularly will support the continued development of synergies with Community Health Innovation Regions (CHIR) for those practices in SIM regions, which will foster relationships between primary care practices and community.

### Clinical Community Linkages

The Clinical-Community Linkage requirement can be satisfied by maintaining documented partnerships between a Practice (or PO on behalf of multiple Practices) and community-based organizations (such as a CHIR hub, or community case management organizations) which provide services and resources that address significant socioeconomic needs of the practice's population. Refer to the [2018 SIM PCMH Initiative Participation Agreement](#) which includes the required elements of the

Clinical Community Linkage for all participants, however the general elements of the Clinical-Community Linkage are described in the process below:

*Assess Patients' Social Need:*

Assess patients' social needs to better understand socioeconomic barriers using a brief screening tool with all attributed patients (all patients within the practice).

The purpose of screening is to determine whether an individual needs further assessment. The purpose of assessment is to gather the detailed information needed for a treatment plan that meets the individual needs of the patient/client. Many standardized instruments and interview protocols are available to help perform appropriate screening and assessment of patients/clients.

Screening involves asking questions carefully designed to determine whether a more thorough evaluation for a particular problem or disorder is warranted. Many screening instruments require little or no special training to administer. Screening differs from assessment in the following ways:

- *Screening* is a process for evaluating the possible presence of a particular problem. The outcome is normally a simple yes or no.
- *Assessment* is a process for defining the nature of that problem, determining a diagnosis, and developing specific treatment recommendations for addressing the problem or diagnosis.

The intent of the brief social determinants of health screening is to identify barriers that impact a person's ability to achieve optimal health and wellness. The purpose of brief social determinants of health screening is to establish a routinized process through which providers identify (in an actionable manner) social barriers their attributed patient population is facing. Accordingly, the brief screening should not take the place of deeper, more comprehensive assessment processes utilized as part of care management or mandated by other programs, but it should inform those processes.

To support Participants, MDHHS has developed a brief screening tool template and is providing this template that can be used as is, or adapted to meet the needs of the practice environment and the community being served. Questions (or other inputs) utilized in the screening tool must elicit patient assessment responses consistent with the purpose and intent of each topic as defined by the Initiative. However, question (or other input) phrasing, order and the format for administering screening (e.g. choosing different formats to administer the screening such as an EHR template or incorporating into existing patient questionnaires etc.) is flexible.

- PCMHs should not completely remove one or more of the topics/domains contained in the template, although combining and/or rearranging domains is permitted, as long as the intent of each individual domain is maintained (please reference [Appendix B](#): for more details on each required domain and

intent).<sup>1</sup>

- PCMHs located in SIM/CHIR regions should work with their CHIRs (typically through a PO) to use the brief screening tool the CHIR in your area has/is developing.
- The practice must also maintain a screening plan and screening procedure which document brief screening processes.
- The outcome/result of the brief screening tool utilized must be captured in an actionable format to inform required quality improvement activities.

Please see Appendix F “Screening Best Practices” for examples that PCMH Initiative Participants have provided in how they have developed their internal screening plans.

#### *Provide Linkages to Community-Based Organizations:*

Provide linkages to community-based organizations that support patient needs identified through brief screening, including tracking and monitoring the initiation, follow-up, and outcomes of linkages made.

As participants continue to enhance their systems to support the implementation of Clinical Community Linkages, it is important to consider the data elements that will streamline not only the activities related to linking patients to needed resources, but also those data elements that will support internal quality improvement processes. In doing so, the PMCH Initiative encourages participants to consider capturing information regarding the type of linkage made by both SDoH domain (such as Housing), and entity name (such as Michigan State Housing Development Authority). The PCMH Initiative allows participants flexibility in how to document and follow-up on linkages, which should be reflected in an up to date methodology that describes the preparation, initiative and follow-up processes of a linkage.

Please see Appendix G “Linkage Best Practices” for examples that PCMH Initiative Participants have provided in how they have developed their internal linkage processes.

#### *Quality Improvement Activities:*

As part of the Practice’s ongoing population health and quality improvement activities, periodically review the most common linkages made and the outcome of those linkages to determine the effectiveness of the community partnership and opportunities for process improvement and partnership expansion.

Please see Appendix H “Quality Improvement Activities Best Practices” for examples that PCMH Initiative Participants have provided in how they have developed their internal plans to support continued quality improvement around Clinical-Community Linkage design.

---

<sup>1</sup> Version 3.0: 4/13/2018

## Population Health Management

All Participating practices must engage in the Clinical Practice Improvement Activities to support Population Health Management as outlined below.

### *Ensure Engagement of Leadership*

Ensure engagement of clinical and administrative leadership in practice improvement by ensuring responsibility for guidance of practice change (i.e. a Champion) is a component of clinical and administrative leadership roles.

Some sample activities include:

- Appoint clinical and administrative leadership to establish a population health vision for the PO/practice
- Update job descriptions for clinical and administrative leadership to specifically reflect their responsibility for guidance of practice change
- Provide training for clinical and administrative leadership in leading practice change

### *Empanel Patients*

Empanel (assign responsibility for) at least 95% of the Practice's patient population, linking each patient to a clinician or care team. Use the resultant patient panels as a foundation for individual patient and population health management.

Some sample activities include:

- Form a committee to establish a robust attribution and empanelment process that includes ongoing review
- Explore the use of practice registry, EHR or outside product to assist in empanelment
- Hire panel managers to aid in managing patient panels
- Determine the best panel size for each physician considering patient needs and preferences, as well as practitioner/care team preferences, availability, and skills
- Once patients are empaneled, determine a standard risk-adjusted panel size, and actively review and adjust as needs change

Once patients have been empaneled, practices can monitor patient empanelment using the following measures:

- Percentage of patient visits to their designated clinician
- Percentage of patient visits to clinicians other than their designated clinician
- Percentage of total active patients unassigned to a panel

### *Use of Feedback Reports*

Use feedback reports provided by MDHHS, other payers and/or practice systems at least quarterly to implement strategies to improve population health on at least 2 utilization measures and 3 clinical process/quality/satisfaction measures at both practice and panel levels.

In the semi-annual report, the practice will specify which measures they are targeting for improvement, how they will assess the measures and the current baseline for at least one utilization measure and one process/quality/satisfaction measure. Metrics without baseline data cannot be used.

Some sample activities include:

- Develop reports using aggregated data. Describe which measures the practice is targeting for improvement with these reports. Reporting examples include:
  - Develop a quality report for practices using aggregated data information received from all payers to enable quality improvement on individual panel and population health management.
  - Create a portal wherein utilization, quality and patient satisfaction measures can be accessed at any time.
  - Create a utilization report that can identify high utilizers as well as patients who are using the ED for PCP-treatable conditions.
- Implement telehealth as a strategy to improve two utilization measures and three clinical process/quality/satisfaction measures (for example, ED utilization, all cause readmissions, diabetes HbA1c poor control, controlling high blood pressure and patient satisfaction). Review progress quarterly to ensure intervention is making an impact.
- Establish criteria for high-priority patients. Care managers and others involved in patient care review the list, discuss patients with providers, and engage patients in complex care management services. By proactively identifying patients who can benefit from care management interventions, the PO plans to decrease avoidable ED visits and inpatient admissions and improve diabetes HbA1c poor control, controlling high blood pressure and patient satisfaction.

### *Transitioning from 2017 to 2018:*

Participants which selected a Practice Transformation Objective other than Population Health Management in 2017 may continue to pursue that objective (e.g. telehealth adoption) but are required to realign their objective as an activity which corresponds with improving performance on one or more of their population health objectives. The elements of Population Health Management are described below:

For example, a practice that is currently implementing telehealth would be implementing telehealth as a strategy to address Objective 3 “Use of Feedback Reports” through

improving 2 utilization and 3 process/quality/satisfaction measures. In the semi-annual report, the practice will specify which measures are targeted for improvement, how they will assess the measures and the current baseline.

### Practice Transformation Reporting

Practice Transformation Reporting is a requirement that happens semi-annually. This reporting exercise provides insight to the SIM PCMH Initiative team on how each participant is approaching this important task, and also allows for the practice to reach out and request support in achieving their required objectives. Practice Transformation reporting requirements will be released 4 to 6 weeks in advance of the report submission date. Further detail on these dates can be found in the [PCMH Initiative Progress Reporting Section](#) in this guide. To get answers to questions, or to provide feedback on any Practice Transformation Reporting related topics, please send an email to [MDHHS-SIMPCMH@michigan.gov](mailto:MDHHS-SIMPCMH@michigan.gov).

### Care Management and Coordination

The PCMH Initiative is built upon the joint principles of a Patient Centered Medical Home, agnostic across designating bodies. Particular value is placed in core functions of a medical home such as enhanced access, whole person care, and expanded care teams that focus on comprehensive coordinated care. The 2018 Participation Agreement outlines requirements around enhanced access, and care team composition, while this section provides an overview of Care Management and Coordination staffing and services. The definitions for Care Management and Coordination Services, Care Manager, Care Coordinator, Care Team, etc. as provided within the [2018 PCMH Initiative Participation Agreement](#), will be referenced and provides additional context.

#### **Goals of Care Management and Coordination**

- Improve patient's functional health status
- Enhance coordination of care
- Eliminate duplication of services
- Reduce the need for unnecessary, costly medical services

#### Attributes of Successful Care Models

Successful care management and coordination programs to date have some common key elements: 1) The care manager(s) and coordinators are located in close proximity to the PCP and 2) The care manager(s) and coordinators are considered an integral part of the health care team. Care managers and coordinators working remotely, in isolation of the team; have not been shown to be as effective. For additional details see the archived [2017 Participant Guide](#).

## Models of Care Management and Coordination

Care Management and Care Coordination means the application of systems, science, incentives, and information to improve clinical practice and assist patients and their support system to become engaged in a collaborative process designed to manage medical, social, and/or behavioral health needs more effectively. The level of intensity of care management will vary based on the needs of the patients, as to achieve an optimal level of wellness and improve coordination of care while providing cost effective, non-duplicative services.

Care management and coordination provides individualized services to patients at the highest risk, based on defined risk stratification process, and who are likely to benefit from care management interventions. Prioritizing patients who will benefit from care management is a key step. Building care management capability for your practice team includes: addressing the needs of patients who may benefit from longer term care management (longitudinal) and those at increased risk due to emergency department (ED) visit or hospital admission/discharge/transfer (short term or episodic care management).

Longitudinal care management and coordination: focuses on patients identified as high risk or rising risk by your practices stratification approach, who are likely to benefit from ongoing proactive care management. This includes the use of an individualized care plan, centered on the patient's actions and support needs in the management of chronic conditions for care management and care coordination interventions. Building a relationship over time with the patient and their support system and delivery of intensive care management services, are elements of longitudinal care management and coordination.

Episodic care management and care coordination: focuses on provision of short-term care management services, related to acute events such as ED visits, hospitalizations, and new diagnoses. Episodic care management and care coordination services help to address cost savings and patient engagement. Examples of episodic care management and coordination interventions include: medication reconciliation, ensuring patients have timely follow up visits with PCP or Specialist as indicated following hospital admission, discharge, and/or transfer.

## Collaboration and Coordination

Both internal team collaboration and coordination with various partners is imperative to support improved patient outcomes. There are various examples in how the Care Management and Coordination staff team can support both internal collaboration between all members of the Patient Centered Medical Home Team, and external coordination with other clinical providers and community partners.

## PCMH and Team Based Care

The practice team's aim is to meet the majority of the patient population's medical, behavioral, and health-related social needs to support each patient's health goals. Some examples could include:

Team Communication: The practice providers have frequent contact with the practice's Care Managers and Care Coordinators regarding patients receiving active care management and care coordination services. This contact occurs weekly or more frequently as needed to address patient needs. Regular communication supports the providers, care managers and care coordinators efforts to optimally deliver care management services for patients and their support systems. Team huddles at the start of the day when possible, or the use of technology to allow for frequent communication between team members.

Closing gaps in care: A patient registry or registry function within the EHR can be used to generate routine, systematic communication to patients regarding gaps in care. Practice team members have clearly defined responsibilities to operationalize outreach to patients who are either due or overdue for preventive services and/or tests for their chronic condition.

Longitudinal care management: A patient-specific action plan and patient's individual goals are documented in the EHR or electronic care management documentation tool, enabling providers and the practice team members to monitor and follow-up with the patient during subsequent visits.

## PCMH Practice Collaboration with Specialists, Behavioral Health Providers and Community Resources (external to the practice)

Collaborative relationships are established and maintained with entities external to the PCMH such as, Specialists, Behavioral Health Providers, and Community Resource agencies to ensure patient linkages to needed resources are effective and appropriate with the exchange of information both initially and ongoing. The expected outcome of these linkages should be the resolution of the patient's identified needs. The PCMH practice, Specialist, Behavioral Health Specialists, and Community Resource agencies work together to deliver coordinated care and address identified barriers, social needs, for patients and their support systems. This can be accomplished through documenting and implementing care agreements with Specialists or other partners to foster interactions which promote effective and efficient delivery of patient care and coordination.

The PCMH practice should establish collaborative relationships with appropriate community-based agencies and organizations relevant to their patient population needs.

The relationship(s) involve ongoing telephonic, face to face or other modalities for direct dialogue. An area of focus may be to improve the process of linking patients with the community resource and subsequent follow up to assess the patient's outcome and experience.

### Shared Care Plan Development

A shared care plan is a patient-centered health record designed to facilitate communication among members of the care team, including the patient and providers. Rather than relying on separate care or treatment plans from each provider, or organization supporting the patient, a shared plan of care combines all aspects to encourage a team approach to care.

Engaging patients to participate in developing their shared care plan and gaining an understanding of their preferences leads to an increase in shared decision making between patients and providers. Engaging patients in the development of their plan requires participation of multiple members of the care team both internal to the PCMH and with external partners. Depending on the concerns, goals, and needs of the patient, many team members may work with the patient and family member(s) or support system, to identify the health and overall wellness goals. Development of a shared care plan occurs over time and requires multiple interactions with the patient, support system, and extended team. (reference: J. van Dongen, et al. 2016)

Four elements of a shared care plan include:

Current State: Current state includes the patient's background, demographics, functioning, use of medication and usual treatment. The current state element may be continuously adjusted by the health care team.

Goals and Concerns: This involves the patient's goals and concerns and includes information related to the care requirements and goals identified by the patient and the professionals within the extended care team. These goals are in line with the individual's preferences, values, needs and expectations, which is the central focus of the plan.

Actions and Interventions: The actions and interventions are based on the established goals and concerns, and are individualized and tailored per the patient's perspective. Additionally, the plan needs to be kept up to date, ideally is documented using lay terms, and includes aspects to support the patient's emotional, social, and physical needs. Redundancy can be minimized if the interventions are specific, time based, and correspond to the extended care team members involved in supporting the patient.

Evaluation: Evaluation includes the care team members documenting a patient's progress to include successes and struggles and level of participation in goal setting.

This also involves revising the plan of care based on the patient's response and current status. The plan should be up to date and address the patient's emotional, physical, and social needs.

The shared care plan is a living document utilized by members of the care team and includes updates which reflect the patient's current goals and preferences. For additional details regarding development of shared care plans using an electronic health record, engaging patients in their care plan, and to view examples of shared care plans [click here](#).

### Optimizing Care Management and Coordination Staff Teams

Due to a variety of factors including financial and resource limitations, the practice may have Care Manager (CM) and/or Care Coordinator (CC) staff responsible for “day to day clinic work” as well as fulfilling the role of CM and CC. Inherently, this creates challenges for the CM, CC, and the practice team. The CC and CM are tasked with balancing “day to day clinic work” and the care management and coordination services; i.e. delivering episodic and longitudinal care management services. To address this challenge, some practices have utilized the following strategies:

Establish schedules and block a consistent day of the week, or consistent times of day for the CM or CC staff to dedicate to performing key care management and coordination activities. This creates protected time which allows the CM and/or CC staff to focus their efforts on episodic and longitudinal care management.

Review the current duties and responsibilities of each practice team member. Consider if there is potential to utilize the team members time/resources differently, in order to best meet the needs of the practice's patient population. As part of this review, assess if every team member works to the highest level of their scope of practice, licensure, training, and capabilities. This requires support from the practice leaders and champions. The outcome of this review may include: increased awareness of work which provides minimal value, insight about work which may allow a shift in responsibilities for a team member to optimize patient care. An example may be to decrease the administrative non clinical work of the CM or CC, so they have more time to focus on clinical work.

Efforts to optimize the Care Management and Coordination team and how they function within the broader care team is a continuous effort, which can result in greater team efficiencies, potential for cost reduction, and overall increased patient satisfaction.

### Embedded Care Management and Coordination Staff

The PCMH Initiative requires Care Management and Coordination staff to be embedded within the participating practice in which they are serving. While POs or multi-site

practices can hire care management and coordination staff across participating practice locations, the requirement for care management and coordination staff to be embedded remains. The use of the term “embedded” means the care management and coordination staff spends some portion of their time in the physical participating practice location. Face to face time with patients and the practice team is known to contribute to increased success for positive care management outcomes. The care manager should be physically located in the practice and have a work station for the allotted FTE identified for that practice. Due to the variation of population needs for each participating practice, there is no set minimum amount of time for the care management and coordination staff to be physically located in the participating practice.

Participants may allocate the care manager and care coordinator staff FTE for each participating practice based on the need of the patient population. It is expected that needs of the patient will guide the staffing model and allocation of FTE for the care manager and care coordinator staff.

## PCMH Initiative Care Management and Coordination Learning Requirements

The [2018 Participation Agreement](#) indicates that Care Managers and Care Coordinators supporting the PCMH Initiative patient population must receive initial care management and self-management training provided or approved by the Initiative in addition to obtaining an additional 12 hours of care management/coordination training (longitudinal training) annually. The initial and longitudinal training requirements are described below.

### Initial Training Requirements

Both Care Coordinators and Care Managers are required to complete a MiCMRC approved Self-Management Training course within the first six months of hire. The MiCMRC has identified a number of approved Self-Management training programs; however, if this course is completed through one of the approved vendors, Michigan Center for Clinical Systems Improvement (MICCSI), Practice Transformation Institute (PTI), or Integrated Health Partners (IHP), then the PCMH Initiative will cover the cost of the course. Care Managers are additionally required to complete the MiCMRC led Complex Care Management Training course within the first six months of hire. The cost of this course for new Care Managers will also be covered by the PCMH Initiative. The table below provides an illustration of the training requirements for Care Managers and Coordinators.

## Initial Learning Requirements for Care Managers and Care Coordinators

| Initial Required Training  | Care Coordinator | Care Manager | Time  |
|--|------------------|--------------|---|
| <b>MiCMRC Approved Self-Management Support Course</b>  | X                | X*           | <a href="#">Click here</a> for details (details of each course) |
| <b>MiCMRC CCM Course</b>   |                  | X            | <a href="#">Click here</a> for details                          |
| <b>SIM Overview Recorded Webinar</b>   | X                | X            | 30 minutes  |
| <b>PCMH, Chronic Care Model, and ACOs Recorded Webinar</b>   | X                | X**          | 20 minutes  |
| <b>Team Based Care Recorded Webinar</b>  | X                | X**          | 45 minutes  |
| <b>Introduction to Social Determinants of Health Recorded eLearning Module</b>   | X                | X***         | 25 minutes  |
| <b>The Role of Care Managers &amp; Care Coordinators in Developing and Maintaining Community Linkages eLearning Module</b> | X                | X***         | 30 minutes  |
| <b>Social Determinants of Health and the Implications for Care Management eLearning Module</b>                             | X                | X***         | 20 minutes  |
| <b>Social Determinants of Health Case Study eLearning Module</b>   | X                | X***         | 20 minutes  |

\*Care managers are strongly encouraged to complete this course prior to registering in the MiCMRC CCM Course.

\*\*Recorded webinar content is included in the CCM course. If a care manager attends the CCM course after January 2017, they do not need to complete the PCMH, Chronic Care Model, and ACO or the Team Based Care recorded webinars. However, Care Coordinators do need to complete.

\*\*\*SDOH eLearning modules are included in the CCM course content. If the care manager attends the CCM course after July 2017, they do not need to complete the eLearning Modules. However, Care Coordinators do need to complete.

To access the above initial learning requirements, [click here](#).

Existing Care Coordinators and Care Managers that have completed the Initial Training requirements as outlined above will not be required to attend the courses again.

Example: If the CM has completed the MiCMRC Complex Care Management in the past, there is no need to repeat this course.

### Longitudinal Learning Requirements

The PCMH Initiative maintains the expectation that all Care Managers and Coordinators will maintain their current licensure/certification, including the requirements to seek continuing education approved by the appropriate professional organization/association. To support this expectation, the Initiative requires each Care Manager and Care

Coordinator must complete a total of twelve (12) hours of education per year. The requirement of training throughout the year is termed “longitudinal learning activity.” This can be satisfied by either:

Twelve (12) hours of MiCMRC webinars/sessions (e.g., topic based live webinars and recorded webinars, web based interactive self-study eLearning modules – Basic Care Management, in person Summit attendance, etc. that offer CE certificates or certificates of completion)<sup>1</sup>, OR Six (6) hours of MiCMRC webinars/sessions PLUS six (6) hours of PO-led, or other related learning activity events. No preapproval is necessary for PO-led or other CE granting care manager, care coordinator training sessions. However, a certificate of completion should be maintained for audit purposes. Alternatively, Care Managers and Care Coordinators may participate in the Institute for Healthcare Improvement (IHI) Open School Person and Family –Centered Care courses to support meeting this requirement. Care Managers and Care Coordinators can register for these courses on the [IHI Open School webpage](#), using the “Complete Access” button, and entering group passcode: **DFDA8BE6** during the registration process.

The MiCMRC hosts live, topic-based webinars and trainings throughout the year, many of which provide continuing education credits. In 2018, MiCMRC will host webinars addressing topics relevant to delivery of care management and coordination for the adult and pediatric population. Additionally, MiCMRC maintains a library of recorded trainings (many offering continuing educations credits) and various resources ranging from sample tools, articles and resources that can be accessed on demand. Access [live and recorded trainings](#), and [resources](#) can be accessed by following the links provided.

Please note, the completion of the initial required training, as stated above, is not included as part of the hours for the required longitudinal training per year. For example, the Complex Care Management course is not counted as part of the twelve (12) hours of longitudinal training. If a Care Coordinator and/or Care Manager is hired during the calendar year, the twelve (12) hours of longitudinal training requirement is prorated based on the date of hire. A general guide for prorating the longitudinal learning requirements will be completion of one hour of longitudinal training per month, using hire date within the calendar year.

### Care Management and Coordination Service Tracking

The PCMH Initiative utilizes a set of Healthcare Common Procedure Coding System (HCPCS) and the American Medical Association's Current Procedural Terminology (CPT) codes to facilitate tracking the provision of Care Management and Coordination Services within the Patient Centered Medical Home. These codes were

---

<sup>1</sup> Version 3.0: 4/13/2018

selected to represent common Care Management and Coordination services relevant to the SIM PCMH Initiative population. A draft code set was shared with providers across Michigan in the fall of 2016 during an open comment period, and the set was finalized based on feedback. In 2018 four additional codes were introduced to meet additional feedback from providers and support learnings from the 2017 PCMH Initiative, and alignment with the expectations of the 2018 Initiative. To review the set of codes used within the 2018 PCMH Initiative, please reference [Appendix C: Care Management and Coordination Tracking Quick Reference](#).

The Care Management and Coordination services outlined by the HCPCS and CPT codes must be provided under the general supervision of a primary care provider. However, many of the services themselves or activities to support the service can be accomplished through coordinated team efforts, maximizing Care Manager and Coordinator skills to engage patients efficiently. While many team members may be involved in the provision of a single service (such as a care transition), the service may only be billed using the National Provider Identifier (NPI) of the primary care provider. Additionally, the date of service reported should be the date the care management and coordination service took place. In some cases, a service may take place over the course of more than one day, in such an event the date of service reported should be the date the service was completed.

#### Care Management and Coordination Service Documentation

Appropriate documentation of Care Management and Coordination services is imperative, not only to support continuity of care between care team members and external partners, but to ensure accuracy in claims submission. PCMH Initiative participants must have a care management and coordination documentation tool, either as a component of an EHR or able to communicate with an EHR to ensure pertinent care management and coordination information is visible to care team members at the point of care. At a minimum, documentation in the care management and coordination documentation tool should include:

- Date of Contact
- Duration of Contact
- Method of Contact
- Name(s) of Care Team Member(s) Involved in Service
- Nature of Discussion and Pertinent Details
- For G9001- Comprehensive assessment results and detailed, individualized care plan
- For G9007- Update(s) and/or additions made to individualized care plan

## Care Management and Coordination Claim Submission

All Care Management and Coordination services provided to eligible SIM PCMH Initiative patients (as identified within the [PCMH Patient Lists](#) produced by the Michigan Data Collaborative), must be submitted to the appropriate participating payers (Michigan's Medicaid Health Plans), to be recognized for Initiative tracking purposes. When submitting these claims, all diagnoses relevant to the care management and coordination encounter should be reported, with diagnosis codes reported in the appropriate order to indicate primary diagnosis.

While the HCPCS and CPT codes are being utilized for tracking purposes, supporting participant [compliance and monitoring](#) and as a part of the [Initiative payment model](#), some participating payers may reimburse specific services, and all payers must reimburse for the provision of transition of care (99495 and 99496) services. Therefore, when participants are submitting claims, they should attach their customary charge to the service in the event the payer will reimburse (according to contractual agreements, and specified fee schedule). If the service is not a reimbursable service (used for tracking purposes only) the participating payer may adjudicate the claim and pay at \$0.00, providing a reason code or explanation indicating that the claim is being accepted for informational purposes only. If a participant should experience any claims rejections, they should [contact the PCMH Initiative](#) with specific examples of the rejections including any reason codes provided by the payer.

## Health Information Technology

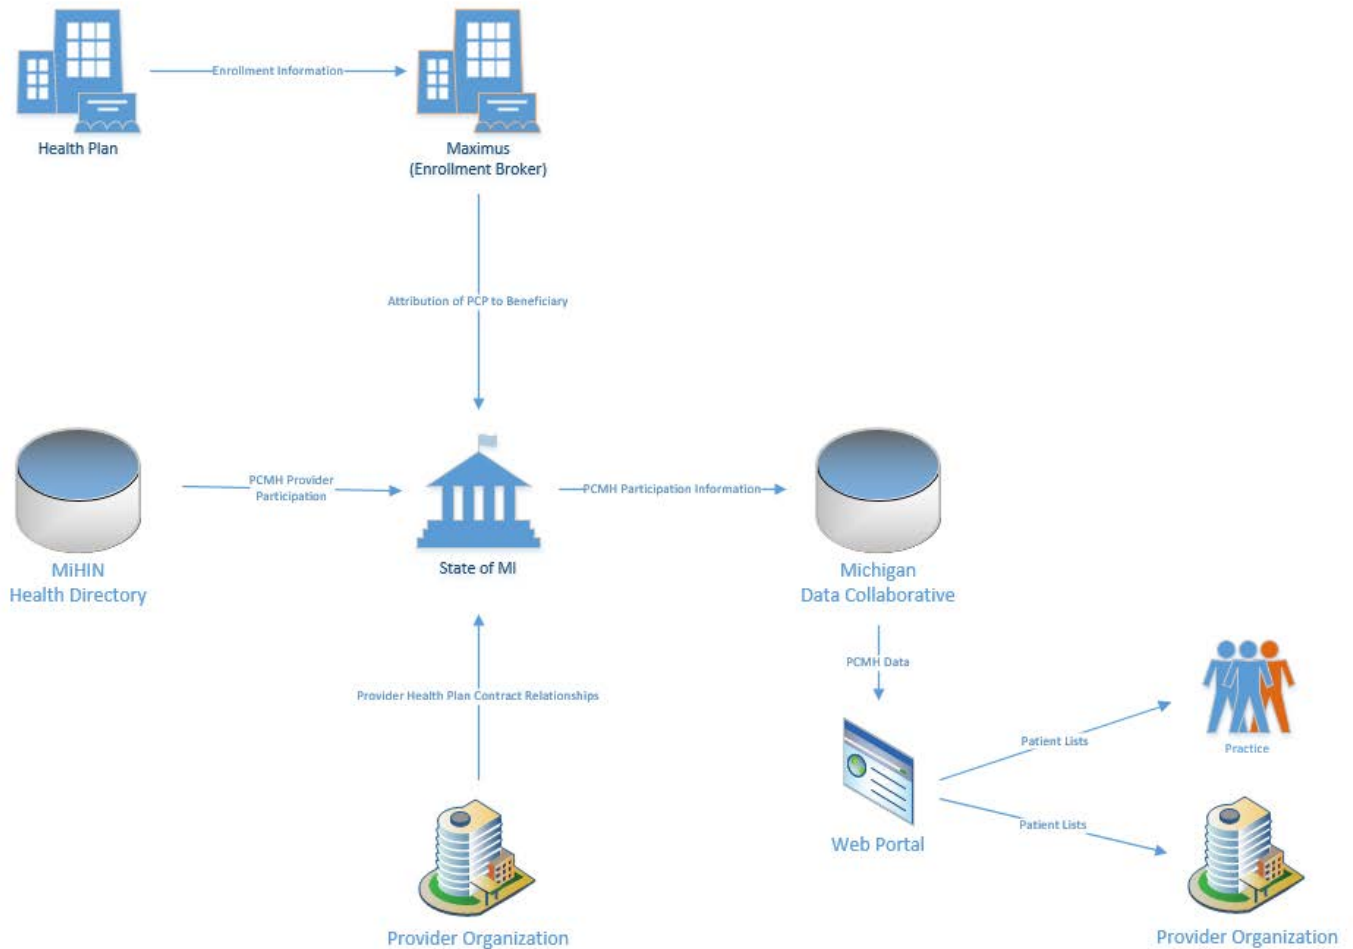

The PCMH Initiative has focused efforts on leveraging existing infrastructure to facilitate continued transformation and the testing of promising practices within primary care and more specifically Patient Centered Medical Home settings. As a foundation, the Initiative has required all participants to possess and utilize a 2014 or 2015 Office of the National Coordination (ONC) Certified Electronic Health Record Technology (CEHRT), to support the testing of the Relationship and Attribution Management Platform (RAMP).

### [About the Relationship and Attribution Management Platform \(RAMP\)](#)

The Relationship and Attribution Management Platform has been created to support the identification and capture of relationships between patients/consumers and their healthcare delivery team members, to facilitate the active exchange of necessary information between these identified individuals and organizations, and to provide an infrastructure that is necessary for the PCMH Initiative to be effective.

The Michigan Health Information Network Shared Services (MiHIN), the state-designated entity for health information exchange in Michigan, has been engaged in the RAMP project to leverage the widespread interoperability network MiHIN has

established in the State of Michigan, along with multiple tools and services to support

the goals of this large undertaking.

The State Innovation Model utilizes the RAMP as the foundation for the PCMH Initiative monthly attribution process. Technical details on the attribution process are included in Appendix B: PCMH Initiative Medicaid Attribution Model, of the [2018 Participation Agreement](#). A diagram of the attribution process has been included below to support participant understanding and review of the process. The information transmitted through RAMP for the purposes of attribution supports the development of monthly patient lists as described in the [SIM PCMH Dashboards](#) section of this guide.

***PCMH Initiative Attribution (RAMP)***

## Summary of Use Cases

The work described above includes a number of “use cases” created by MiHIN to facilitate statewide exchange of health information. These use cases supporting the State Innovation Model, and the PCMH Initiative are described below.

### Active Care Relationship Service

The Active Care Relationship Service tracks patient-provider attributions by identifying which healthcare providers have “active care relationships” with patients/consumers. This service acts as the basis of the RAMP by allowing RAMP to match patients/consumers with their attributed care team members. This use case enables organizations to submit data files which record the care team relationships attributing a particular patient with health professionals at that organization. These attributions are then utilized to accurately route information for a patient to all members of their care team. The Active Care Relationship Service also captures key physician organization, practice unit, and additional provider information to support the hierarchical relationships within the Health Directory (discussed below).

The ACRS use case is the foundation for several other use cases, including HPD, ADT and QMI. Therefore participation is crucial, as the ACRS file is used for routing of information for ADT messages and QMI files.

### Health Directory

While multiple organizations track physicians and information on how to contact them (name, address, specialty, national provider identifier, or specific credentialing information), the MiHIN Health Directory also includes the electronic service information required to know how and where health information is to be delivered electronically for each healthcare provider.

### Quality Measure Information

The Quality Measure Information use case enables providers and payers to consolidate and standardize the electronic exchange of quality-related data and performance results. With this use case, providers gain the ability to send one supplemental clinical quality data file in one format and have it distributed to multiple locations, if and as needed.

### Admission-Discharge-Transfer Notifications

Admission-Discharge-Transfer (ADT) notifications can be leveraged to improve patient care coordination through exchange of health information. ADT messages are sent when a patient is admitted to a hospital, transferred to another facility, or discharged from the hospital. These alerts are sent to update physicians, care management teams, and payers on a patient’s status; to improve post-discharge transitions; to prompt follow-up; to improve communication among providers; and to support patients with multiple or

chronic conditions. The use of the ADT feeds and alerts are crucial in supporting active care coordination processes.

### Active Participation in RAMP

PCMH Initiative Participants are required to actively participate in RAMP and the corresponding use cases (described above). To be considered actively participating in the RAMP the following must occur:

- All legal onboarding (execution of all requisite legal documents) must be completed and maintained.
- All technical onboarding must be complete and maintained
- Consistent submission of valid files (as appropriate to each use case – ACRS, QMI), or continuous connect and receipt of notifications (ADT use case).

Should a PCMH Initiative Participant experience a change (such as merger/legal name change, change in EMR, etc.), then it is the responsibility of the participant to maintain active participation in the RAMP. This includes maintenance of all appropriate legal documents, and ensuring smooth transition to new system to limit the potential for disrupted submission (or receipt) of necessary information for any of the required use cases (HD, ACRS, ADT, QMI) within the PCMH Initiative.

[Health Directory](#)

[ADT Notifications](#)

## [Quality Measures Information](#)

### Performance Monitoring and Initiative Feedback

The PCMH Initiative utilizes a number of mechanisms to monitor participants and to provide feedback across the Initiative performance. Each mechanism serves a purpose to facilitate Initiative operations, in addition to providing participants with a mechanism to access important quality and utilization data, or provide the Initiative with valuable feedback. The following section of this guide outline the mechanisms used to support participant monitoring and feedback, these mechanisms have been broken into two focus areas:

Performance Monitoring: Supports the monitoring of quality of care, health outcome, utilization, and cost performance metrics to report progress/successes and enable quality and process improvement for Initiative participants.

Compliance: Ensure PCMH Initiative participants operate in accordance with the requirements of the Initiative upon selection and on a continuous basis during their participation.

### Participant Monitoring

The PCMH Initiative utilizes aggregated data from the participating payers across medical claims, pharmacy claims, and eligibility files to monitor participant performance and compliance. The PCMH Initiative has leveraged the efforts of existing infrastructure and collaborative partnerships as experienced within the [Physician Payer Quality Collaborative \(PPQC\)](#). The PPQC has identified a set of 27 quality measures that had overlap between national and local quality reporting programs.

In order to support participant monitoring, and participants' internal quality efforts, a subset of the PPQC measures were selected for use within quality reporting through the Michigan Data Collaborative SIM PCMH dashboards. Metrics were selected based on multiple considerations, including:

The population being served within the PCMH Initiative.

Whether a particular metric is a CMMI priority metric for SIM.

The ease with which a data aggregator could collect, store, and disseminate the data.

### Performance Monitoring

To facilitate participant performance monitoring, the PCMH Initiative partners with Michigan Data Collaborative (MDC), a non-profit healthcare data organization at the University of Michigan. MDC supports care delivery transformation initiatives across the state of Michigan by providing solutions for data collection, aggregation and visualization, measure calculation, and reporting.

## Database

MDC developed a database to collect the following types of data for the PCMH Initiative:

Claims, eligibility, immunization, and lead screening data  
Clinical/EHR received through the Quality Measure Information use case  
Patient population  
Provider hierarchy (Provider NPI and associated practice and Managing Organization relationship)

**Note:** The database initially includes Medicaid claims data and will include commercial payer claims data and clinical EMR data in the future.

## The SIM PCMH Dashboard

MDC uses the information collected in their database to calculate quality, utilization and cost measures, as well as chronic condition prevalence, which are displayed on the SIM PCMH Dashboard in table and graph formats.

The Dashboard includes pages for each data analysis area: overview (executive summary), tile, quality of care, utilization, comparisons, and reports. From these pages, participants can view demographic information, view chronic condition prevalence, compare measure performance against other entities and published benchmarks, and download reports.

Using the Dashboard, Initiative participants can analyze the data and access reports for their organization.

You can find descriptions for the Dashboard components, instructions for using the Dashboard features, and detailed information about the data in the [SIM PCMH Dashboard User Guide](#).

## Dashboard Releases

Throughout the duration of the SIM PCMH Initiative, MDC will provide regular data updates (releases) to the SIM PCMH Dashboard.

The following releases are targeted for the Dashboard in 2018.

| Release | Reporting Period              | Target Date         |
|---------|-------------------------------|---------------------|
| 3       | October 2016 – September 2017 | End of January 2018 |
| 4       | January 2017 – December 2017  | End of April 2018   |
| 5       | April 2017 – March 2018       | End of July 2018    |
| 6       | July 2017 – June 2018         | End of October 2018 |

*Measures Included in the SIM PCMH Dashboard*

The release of measures on the SIM PCMH Dashboard follows a progressive continuum from claims-based measures to those that are reliant on clinical data. Some quality measures support the QMI use case and goal to report once. As a result:

The SIM PCMH Dashboard releases began in 2017 with Medicaid claims data. Clinical data (through the QMI Use Case) will be added as soon as it is available  
2017

The following measures were the focus of the PCMH Initiative for performance monitoring in 2017. The *Dashboard Release* column indicates the release in which the measure was initially included.

| Measure Group                | Measure Name  | Dashboard Release     |
|------------------------------|---|-----------------------|
| Quality of Care              | Adolescent Immunization   | 2                     |
|                              | Adolescent Well-Care  | 2                     |
|                              | Breast Cancer Screening   | 1                     |
|                              | Cervical Cancer Screening   | 1                     |
|                              | Childhood Immunization Status   | 2                     |
|                              | Chlamydia Screening   | 2                     |
|                              | Diabetes Eye Exam   | 1                     |
|                              | Diabetes HbA1c Testing  | 1                     |
|                              | Diabetes Nephropathy  | 1                     |
|                              | Lead Screening  | 2                     |
|                              | Low Back Pain Imaging<br><b>Note:</b> This measure will be removed with the Release 3 HEDIS 2018 update | 1                     |
|                              | Well Child Visit: 3-6 Years   | 2                     |
|                              | Well Child Visit First 15 Months  | 2                     |
|                              | Utilization   | All-Cause Readmission |
| Emergency Department Visits  |   | 1                     |
| Hospital Admissions          |   | 1                     |
| Chronic Condition Prevalence | Asthma  | 1                     |
|                              | Hypertension  | 1                     |

| Measure Group | Measure Name         | Dashboard Release |
|---------------|----------------------|-------------------|
|               | Obesity Overall      | 1                 |
|               | Obesity – Overweight | 1                 |
|               | Obesity – Moderate   | 1                 |
|               | Obesity – Severe     | 1                 |

2018

The following additional performance monitoring measures are targeted for addition to the Dashboard in 2018. The *Dashboard Release* column includes the release in which the measure is scheduled to be added.

#### HEDIS

SIM PCMH Dashboard Release 1 and 2 measures were calculated with HEDIS 2015 specifications. The quality measures were updated to HEDIS 2018 specifications in Release 3.

| Measure Group                | Measure Name  | Dashboard Release |
|------------------------------|---|-------------------|
| Chronic Condition Prevalence | Diabetes Chronic Condition  | 4                 |
| Quality of Care              | Adult BMI<br><b>Note:</b> This measure is dependent upon receipt of clinical EMR data.                              | TBD               |
|                              | Diabetes Blood Pressure Control<br><b>Note:</b> This measure is dependent upon receipt of clinical EMR data.        | TBD               |
|                              | Diabetes HbA1c Poor Control<br><b>Note:</b> This measure is dependent upon receipt of clinical EMR data.            | TBD               |
|                              | Controlling High Blood Pressure<br><b>Note:</b> This measure is dependent upon receipt of clinical EMR data.        | TBD               |
|                              | Screening for Depression and Follow-Up<br><b>Note:</b> This measure is dependent upon receipt of clinical EMR data. | TBD               |
|                              | Appropriate Testing for Children with Pharyngitis   | 5                 |
|                              | Appropriate Treatment for Children with URI   | 5                 |

| Measure Group                              | Measure Name   | Dashboard Release |
|--|--|-------------------|
|  | Tobacco Use Screening and Cessation<br><b>Note:</b> This measure is dependent upon receipt of clinical EMR data. | 5                 |
|  | Weight Assessment and Counseling<br><b>Note:</b> This measure is dependent upon receipt of clinical EMR data.    | 5                 |
| Quality of Care with QMI Supplemented Data | Adolescent Well-Care Visits  | 4                 |
|  | Breast Cancer Screening  | 4                 |
|  | Cervical Cancer Screening  | 4                 |
|  | Chlamydia Screening  | 4                 |
|  | Diabetes Eye Exam  | 4                 |
|  | Diabetes HbA1c Testing   | 4                 |
|  | Diabetes Nephropathy   | 4                 |
|  | Lead Screening   | 4                 |
|  | Well Child Visit: 3-6 Years  | 4                 |
|  | Well Child Visit First 15 Months   | 4                 |
| Utilization and Cost                       | Acute Admissions (revised from Hospital Admissions)  | TBD               |
|  | Preventable ED Visits  | TBD               |
|  | Readmissions (revised to HEDIS 2018)   | TBD               |
|  | ED Visits (revised to HEDIS 2018)  | TBD               |
|  | Ambulatory Care Sensitive Condition Hospitalizations   | 5                 |
|  | Total PMPM Cost  | 5                 |

#### TBD DASHBOARD RELEASES

Updated timing for measures in the TBD category will be posted on the [MDC website](#), included in dashboard release notes and standard communications.

#### *Quality of Care Requiring EMR (QMI) Data*

The outcome measures that require EMR (QMI) data are still in testing. Once complete data is received the measures will be included in the dashboard.

## UTILIZATION MEASURE UPDATES<sup>1</sup>

In order to align utilization measures for use in Care Delivery and the state Evaluation, the following changes are in process:

- Hospital Admissions will no longer be generated, instead Acute Admissions will be calculated which are a subset of overall Hospital Admissions.
- Readmissions will update to HEDIS 2018 and also be sourced from Acute Admissions.
- Emergency Department Visits will be updated to the HEDIS 2018 definition.

Detailed definitions for the measures are available in the [SIM PCMH Dashboard Technical Guide](#)

### *MDC Dashboard Reports*

To further support Initiative participants, MDC provides practice-level and managing organization-level reports on the Dashboard. The following reports are included (along with their target delivery timeframes):

| Report Name                | Description   | Target Delivery Timeframe                                 |
|----------------------------|---|---|
| PCMH Patient Lists (PPLs)  | Each month, MDC creates a current list of patients who are attributed to a practice participating in the SIM PCMH project. Both Practice-level and MO-level reports are available as applicable. The patient list includes additional helpful information such as the number of hospitalizations and emergency department visits a patient has had for the last dashboard release reporting period.<br><br>For more information, see the <a href="#">PCMH Patient List Reference Document</a> . | End of the month  |
| Aggregated Patient Reports | MDC generates quarterly aggregate patient reports to assist organizations in reconciling their Medicaid Health Plan payments. The reports contain counts of patients attributed to a provider for each practice for the quarter.<br><br>For more information, see the <a href="#">PCMH Aggregated Patient Report Reference Document</a> .   | Beginning of the month following the close of the quarter |

---

<sup>1</sup> Version 3.0: 4/13/2018

| Report Name               | Description  | Target Delivery Timeframe                                   |
|---------------------------|--|---|
| Care Coordination Reports | <p>These reports provide a view of both the frequency of care management services and appropriate follow-up care for members with inpatient encounters. The following reports are included with each monthly and quarterly release:</p> <p><i>Percentage of Patients Receiving Care Management Service Report</i></p> <p>This report shows the unique number of patients who received a care management service in the measurement month or quarter based on medical claims data.</p> <p><i>PCP Follow-Up after Inpatient Discharge Report</i></p> <p>This report includes the percentage of patients with an inpatient stay who had a follow-up visit with a SIM primary care physician within 14 days of the last discharge date in the measurement month or quarter.</p> <p><a href="#">For more information, see the <u>PCMH Care Coordination Reports Reference Document</u>.</a><sup>1</sup></p> | <p>Monthly – 4 month lag</p> <p>Quarterly – 4 month lag</p> |
| Provider Reports          | <p>MDC will begin generating monthly provider reports in February 2018 following the same cadence as patient reports. These reports were requested so that participating managing organizations and independent practices can easily evaluate the provider, practice and managing organization relationship that applies to each month.</p>  | <p>End of the Month</p>                                     |

| Report Name                             | Description  | Target Delivery Timeframe                     |
|---|--|---|
| Care Coordination Claims Detail Reports | MDC will begin generating care management claims detail reports associated with the totals provided in the <i>Percentage of Patients Receiving Care Management Services Report</i> .<br><br>For more information, see the <a href="#">PCMH Care Coordination Claims Detail Reports Reference Document</a> . <sup>3</sup> | Monthly and Quarterly following CM/CC reports |

The Care Coordination reports have a four-month lag because of timing of data receipt and assuring completeness of data:

- Two months of run-out data are included in each report in order to capture a more complete data set. MDC analyzed data for the Inpatient Follow-Up report, and only about 10% of claims were paid in the month incurred. The month following the incurred had about 48% of the claims records and the second month had about 41%. Without the lag of two months the majority of claims would be missed and your organization would not get credit for work completed.
- Monthly claims data is received in the month following the close of the incurred month. For example, December claims are received towards the end of January.
- Once the raw claims are received, MDC completes quality testing within 5 business days prior to including them into reports to confirm validity.
- MDC generates and test the reports.

The following graphic shows a sample timeline:

### Official Deliverables Calendar

MDC maintains the target dates for upcoming deliverables on the [SIM PCMH page](#) of the MDC website. Adjustments due to holidays, etc. will be communicated in the target dates provided here.

### MDC Deliverables Notification

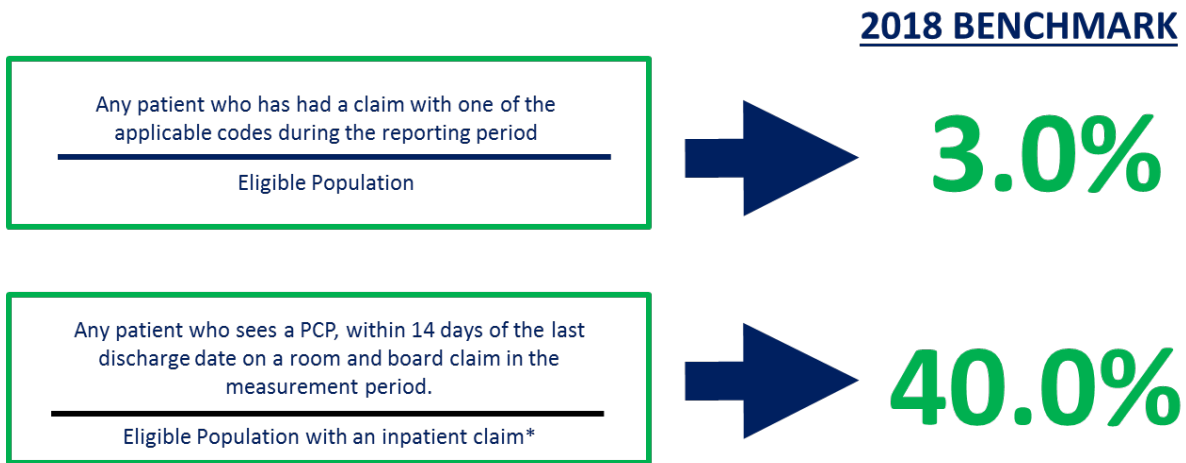

When MDC posts a deliverable that is ready to be viewed/downloaded, an email notification is sent directly to participants who have an active MDC account. Additionally, an announcement is posted on the [SIM PCMH News page](#) of the MDC website.

### Care Management and Coordination Metric Benchmarks

As outlined in the 2018 PCMH Initiative Participation Agreement, all participants are required to maintain care management and coordination performance above benchmarks established by the Initiative on the following two metrics:

The percentage of a Practice's attributed patients receiving care management and coordination services.

The percentage of a Practice's attributed patients receiving a timely (within 14 days) follow-up visit with a Primary Care Provider following a hospital inpatient discharge

\*Excludes any member who had an inpatient stay in a psychiatric facility, or inpatient stay related to pregnancy/birth

With support from the Michigan Data Collaborative, the PCMH Initiative has created monthly reports to support participants in monitoring their progress in achieving these benchmarks. Participant performance related to the benchmarks will be measured quarterly, through reports developed by MDC and placed on the MDC SIM PCMH

dashboard for download. These Care Management and Coordination Reports are described above.

### [Access to the Dashboard and Reports](#)

MDC maintains access control for participants to view the SIM PCMH Dashboard and to download appropriate reports and lists for their Managing Organization (MO) or practice.

If an organization leaves the SIM PCMH Initiative, the provider hierarchy drives the continued access rights. For example, if the organization is part of the project during a report timeframe, they will still have access to that report. Additionally, the organization will continue to be included in the data and have Dashboard access as long as the provider hierarchy indicates that they are part of the project during the reporting period.

The process for requesting and maintaining access is documented in the [SIM PCMH Dashboard Account Maintenance Guide](#).

### Support Documentation

You can find all support documents on the [SIM PCMH Support page](#) of the MDC Website. The following list provides a short description of each support document:

#### *Dashboard documentation*

[User Guide](#) – Includes descriptions of the Dashboard components, instructions for using the features, and detailed information about the data.

[Technical Guide](#) – Provides detailed information about each measure included in the Dashboard.

[Timeline](#) – Visual graphic that displays date-specific information about the data included in the Dashboard.

[Release Notes](#) – Provides details about each dashboard release.

#### *Dashboard Access documentation*

[Accessing the SIM PCMH Dashboard](#) – Provides information and detailed instructions for accessing the Dashboard.

Accessing the SIM PCMH Dashboard Video Demonstrations:

[Dashboard Access Step 1: Setting Up Duo](#)

[Dashboard Access Step 2: Setting Your Level-2 Password](#)

[Dashboard Access Step 3: Setting Up Citrix Receiver to Access the Dashboard](#)

[SIM PCMH Dashboard Account Maintenance Guide](#) – Information about the account process for Dashboard Users and Acknowledgers.

### Additional Information

Use the following MDC resources to find out additional information or make inquiries.

Website: <https://michigandatacollaborative.org/>

General Inquiries: [MichiganDataCollaborative@med.umich.edu](mailto:MichiganDataCollaborative@med.umich.edu)

Account Inquiries: [MDC-Accounts@med.umich.edu](mailto:MDC-Accounts@med.umich.edu)

## Participant Compliance

To support continued progress within the PCMH Initiative and ensure participant compliance with requirements as outlined in the participation agreement, a series of reports, audits and other compliance mechanisms have been developed to facilitate Initiative understanding of how participants are meeting program expectations. Each report has been focused to capture information that will allow for participant requirements attestation, as well as provision of information imperative to program implementation and evaluation. The following section outlines the various mechanisms used to gain information about participants and how they continue to execute participation requirements.

### PCMH Initiative Progress Reporting

The PCMH Initiative Data will track participant progress towards achieving relevant milestones in healthcare delivery transformation and to ensure fidelity to the Initiative model. The Initiative will use several types of PCMH Initiative participant reporting (described below) to accomplish these tasks.

PCMH Initiative participant reporting will be collected through the Qualtrics system using a combination of survey response style questions and spreadsheet uploads. Reports will be due at different intervals depending on the report type:

| Report Title:            | Frequency: | Release:                    | Due Date (s): | Contents   |
|--------------------------|------------|-----------------------------|---------------|--|
| Practice Self-Assessment | Annually   | 4-6 weeks prior to due date | 2/6/18        | Standardized scale and multi-select survey questions for the purposes of assessing overall PCMH practice capability/maturity and how |

| Report Title:             | Frequency:       | Release:                    | Due Date (s):  | Contents   |
|---------------------------|------------------|-----------------------------|--|--|
|                           |                  |                             |  | PCMH capability changes over time  |
| Quarterly Progress Report | Quarterly        | 4-6 weeks prior to due date | Quarter 1 Report: 4/30/18, Quarter 2 Report: 7/31/18, Quarter 3 Report: 10/31/18 | Participating Organization Contacts<br>Care Management and Coordination Staffing Details<br>Participation Requirements Information, Updates and Attestation<br>Participation Experience, Strengths and Challenges  |
| Practice Transformation   | Every Six Months | 6-8 weeks prior to due date | 7/31/18 and 12/21/18   | Includes some survey response style transformation progress questions for response on behalf of multiple practices (if applicable) and a small amount of progress narrative specific to each participating practice's transformation activity to track completion of required/selected objectives. |

*Quarterly Progress Report:*

The quarterly progress report is intended to be a brief report utilized to assess the progress participants are making across multiple areas of the Initiative. The quarterly report will feature spreadsheet-based templates for participating organizations to use in uploading both participating organization contacts. Once completed, the spreadsheets can be saved between quarterly due dates to expedite subsequent reporting cycles (the spreadsheets will only need to be updated with changes that occurred during the quarter). The participation requirements section of the quarterly report is attestation-based, providing survey style questions which confirm a participating organization is following all Initiative requirements for compliance purposes. The participation experience section of the quarterly report will feature a small number of short narrative response and survey questions geared toward understanding how elements of the Initiative are impacting participating practices as well as ascertain participant challenges and opportunities for improvement.

### *Semi-Annual Practice Transformation Report:*

The semi-annual practice transformation report is intended to assess the progress participants are making in implementing the required practice transformation objectives: Clinical-Community Linkages, and Population Health Management. The semi-annual report will feature survey style questions with either multiple choice response options or request detailed narrative on progress. Practices may be requested to upload appropriate documentation to substantiate their reports. Provisions will be made for POs to report on behalf of multiple practices.

### *Annual Self-Assessment:*

Self-assessment reporting will capture details on existing practice capabilities across a number of domains related to care management and coordination, team-based care, quality improvement, patient engagement, leadership, etc. This annual assessment will provide the Initiative the ability to assess what the technical assistance and practice support needs are for participants, while also allowing a standardized system for capturing participant growth. The assessment tool is must be completed at the practice level, therefore in the case of Physician Organizations, or multi-site organizations (such as a Federally Qualified Health Center) each site should complete a separate PCMH Initiative Self-Assessment Tool. Practice transformation, even when directed and supported by consistent organizational leaders, happens differently at the site level. Organizational leaders can compare PCMH Initiative Self-Assessment Tool scores and use this information to share knowledge and cross-pollinate improvement ideas.

It is strongly recommended that the PCMH Initiative Self-Assessment Tool be completed by a multidisciplinary group (e.g., providers, nurses, medical assistants, care managers, other operations and administrative staff) in order to capture the perspectives of individuals with different roles within the practice and to portray the most representative viewpoint of current capabilities. It is additionally recommended that staff members complete the assessment individually, and then meet together to discuss the results and produce a consensus version for final submission via Qualtrics. This discussion is a great opportunity to identify opportunities and priorities for PCMH transformation

### *Participant Input Opportunities*

The PCMH Initiative will provide participants with input opportunities via surveys and committees, along with feedback mechanisms after webinars and in person events. Surveys will be specifically designed to be as concise and simple as possible, while providing targeted feedback to shape technical assistance, reporting or other aspects of the Initiative. The PCMH Initiative is also seeking volunteers to serve on committees (for example the Care Coordination Collaborative Planning Committee and the Summit Planning Committee) to help to make these events as beneficial as possible for all

involved. Event evaluations will be included in all events within the year, and participants are encouraged to complete post webinar and event evaluation forms to provide the Initiative with real time feedback on areas of improvement. Finally, the PCMH Initiative email [MDHHS-SIMPCMH@michigan.gov](mailto:MDHHS-SIMPCMH@michigan.gov) is available to all participants for questions and other input.

## Practice Support and Learning Activities

The PCMH Initiative will facilitate a number of opportunities for participants to engage in collaborative learning, technical assistance, and peer to peer learning. Many of these opportunities/activities are optional; however, participation in the Initiative Quarterly Updates detailed below is required of all participants. To view a calendar of all of the learning opportunities currently being offered, the calendar in the [appendix of this guide](#).

### Quarterly Update Meetings:

The PCMH Initiative will conduct virtual update meetings each calendar quarter. While many opportunities/activities available through the PCMH Initiative are optional; participation in the Initiative Quarterly Updates is mandatory for Physician Organization representatives and key practice staff for practices participating independently. These meetings will provide participants with important Initiative updates and resources for successful participation.

### Practice Transformation Collaborative

The optional Practice Transformation Collaborative will provide participants with an opportunity to engage in learning activities to support continued transformation related to Clinical-Community Linkages

The Practice Transformation Collaborative will provide a forum for participant engagement, learning and continuous improvement around the identification, development and strengthening of practices to improve team based whole person care. This Collaborative will be built upon the principles of peer learning and promising practice sharing and will seek to discover ways to improve patient centered services that embody the PCMH Initiative. While voluntary, this Collaborative will require regular attendance and active participation in order to ensure the best possible learning environment.

The 2018 Practice Transformation Collaborative has been canceled due to limited participant engagement.

The SIM PCMH Initiative team is invested in providing meaningful technical assistance opportunities to participants around the topics of Clinical Community Linkages and

Population Health Management, therefore will continue to explore additional mechanisms to meet participants needs in this area.<sup>1</sup>

### Annual Summit

The PCMH Initiative will support three regional Annual Summits to accommodate participants across the state of Michigan. The annual summit will be geared towards engaging in networking and opportunities to build on the foundation of regular learning opportunities. These regional summits will be open to participant staff including but not limited to administrative staff, care managers and coordinators, quality improvement staff, and other leaders within participating organizations. General regions for the annual summit include the Northern Lower Peninsula, Western Lower Peninsula, and South East or Mid-Michigan. The summits will be held in the fall.

### Care Coordination Collaborative

The State Innovation Model will host Care Coordination Collaborative events in 2018 to support participants in the PCMH Initiative, Medicaid Health Plans, and community partners that are involved in Care Management and Coordination processes (such as Community Health Innovation Region). These events will serve as opportunities to support networking and facilitate exercises to align efforts, reduce duplication, and identify methods of collaboration on shared patients.

### Office Hour Sessions

The PCMH Initiative will offer monthly office hour sessions to provide operational, technical, topic based and current health care policy information in a timely and concise manner. Using a webinar format, PCMH Initiative participants will be able to access sessions that will both inform and allow for peer learning. Topics will be determined based on Initiative current happenings, trends throughout the Initiative and through feedback from PCMH Initiative participants. Sessions will be about 1 hour in length.

### Pediatric Office Hour Sessions

In response to requests for care management curriculum with a focus on pediatric topics, the State Innovation Model PCMH Initiative is providing a series of Pediatric Office Hours in 2018. PCMH Initiative will offer the three Pediatric Office Hour Sessions every 2 to 3 months that will be 1 hour in length and a recording will be available.

---

<sup>1</sup> Version 3.0: 4/13/2018

## PCMH Initiative Communications

The PCMH Initiative currently maintains a general public facing web presence on the [SIM PCMH Care Delivery website](#). The website will include resources for implementing the PCMH Initiative, including information on upcoming events and learning opportunities, Summits, archives of newsletters and webinars, guides to billing, coding and payment and contact information should project participants have questions.

Official PCMH Initiative communications will be facilitated via the MDHHS “Gov Delivery” system. The “Gov Delivery” system is designed as a “send only” system. This system is utilized to send PCMH Initiative monthly newsletters. Additionally, the PCMH Initiative also utilizes the [MDHHS-SIMPCMH@michigan.gov](mailto:MDHHS-SIMPCMH@michigan.gov) mailbox to receive participant questions and other communications.

### PCMH Initiative Monthly Newsletters

The PCMH Initiative will send monthly newsletters to all participants to ensure up to date and timely communication of events, technical assistance opportunities, reporting requirements, data distributions, resource ideas and other current happenings. The monthly newsletter will also include a calendar of events for easy reference of upcoming events and report due dates. Initiative participants are encouraged to provide newsletter ideas via [MDHHS-SIMPCMH@michigan.gov](mailto:MDHHS-SIMPCMH@michigan.gov).

### PCMH Initiative Contacts

The PCMH Initiative is possible through a number of partnerships between the Michigan Department of Health and Human Services and various stakeholders, therefore participants may receive communications from these partners in order to support the overall goals and efforts of the Initiative. These partners include:

The Michigan Health Information Network: for information regarding use cases  
The Michigan Data Collaborative: for information regarding the impact of clinical data on measure results, dashboard access and member list questions  
The University of Michigan: for information regarding project operations  
The Michigan Care Management Resource Center: for information regarding Care Manager and Care Coordinator training and education opportunities  
The Institute for Health Care Improvement: for information and coaching around the Practice Transformation Collaborative and change management

The PCMH Initiative is grateful for your continued work on behalf of patients and families. We recognize that this work is incredibly difficult and a team is available to assist you. Below are the best contacts for the various questions you may have throughout the Initiative.

#### **General Questions:**

## Legend

• Personnel/Population • Organizations • Reform and Innovation • Sites of Care • Payment and Insurance

## A

### ABD •

Aged, Blind and Disabled Medicaid

ABD Medicaid is for adults 65 and older or anyone who is disabled according to Social Security.

### ACRS •

Active Care Relationship Service

ACRS provides the ability to link patients with their care team members (providers who have declared an active care relationship with that patient).

[Learn more](#)

### ADT •

Admission, Discharge, Transfer Notifications

Patients transition from one provider or healthcare setting to another as the patients' health care needs require. These transitions trigger Electronic Health Records to generate ADT notifications that identify the patient along with important details that provide insight to an extremely complex set of care decisions being made by care teams, families and the patient.

[Learn more](#)

## Assessment

A process for defining the nature of that problem, determining a diagnosis, and developing specific treatment recommendations for addressing the problem or diagnosis.

## C

### CAP •

Corrective Action Plan

A response to a compliance warning notification from MDHHS. CAP describes exactly how a SIM PCMH participant will resolve the issue in order to meet the PCMH-SIM compliance.

### CCC •

Care Coordination Collaborative

Supportive networking events designed to facilitate efforts to align, reduce duplication, and identify methods of collaboration on shared patients across SIM participants.

### CCL •

Clinical-Community Linkage

CCLs support referral processes and coordination between clinical care and community-based social services to improve population health.

#### CCSI •

##### Center for Clinical Systems Improvement

Also known as Mi-CCSI. CCSI is an organization that supports its stakeholders and their communities to deploy models that deliver better care for individuals, improved population health and lower cost, promote initiatives supporting clinical integration, and develop and provide care management training.

[Learn more](#)

#### CCM •

##### Complex Care Management

CCM is a set of activities designed to more effectively assist patients and their caregivers in managing medical conditions and co-occurring psychosocial factors.

[Learn more](#)

#### Champion

A Champion has both the vision and authority to drive forward a project within the organization. The champion supports specific change efforts for ongoing practice improvement/organization learning.

#### CHAP •

##### Community Health Accreditation Partner

CHAP is an independent, nonprofit accrediting body for home and community-based health care organizations.

[Learn more](#)

#### CHIR •

##### Community Health Innovative Region

CHIRs are a small number of regional governing bodies launched by the SIM program to define regional health priorities, support regional planning, increase awareness of community-based services, and increase linkages between community and health entities in Michigan.

#### CHW •

##### Community Health Worker

CHW is a front-line public health worker who has a close understanding of the community served, serves as a liaison between health/social services and the community to facilitate access to services and improve the quality and cultural competence of service delivery, and builds individual and community capacity by increasing health knowledge and self-sufficiency through a range of activities such as outreach, community education, informal counseling, social support and advocacy.

[Learn more](#)

#### CM/CC •

##### Care Management and Care Coordination

CM/CC are activities that care manager and care coordinator partner with the practice care team to; effectively empower patients and their families, engage patients in self-

management and health behavior change, positively affect patient self-care practices and decision-making, provide comprehensive assessment and care planning using shared decision making, implement evidence based interventions and advocate for the right care, at the right time and in the right place.

#### **CKS •**

##### **Common Key Service**

The Common Key Service use case provides a consistent and reliable way to match patients across multiple organizations, applications and services, ensuring patient safety and high data integrity when data is shared.

[Learn more](#)

#### **CPC+ •**

##### **Comprehensive Primary Care Plus**

CPC+ is a national advanced primary care medical home model that aims to strengthen primary care through regionally-based multi-payer payment reform and care delivery transformation. CPC+ includes two primary care practice tracks with incrementally advanced care delivery requirements and payment options to meet the diverse needs of primary care practices in the US.

[Learn more](#)

#### **F**

##### **FFS •**

##### **Fee-For-Service**

System of payment in which providers receive reimbursement for each service they perform.

##### **FQHC •**

##### **Federal Qualified Health Center**

Clinics offering comprehensive health care to an underserved population and receive Medicare and Medicaid payment.

#### **H**

##### **HIE •**

##### **Health Information Exchange**

Electronic infrastructure that allows health care professionals and patients to appropriately access and securely transmit a patient's vital medical information across sites of care in many geographic regions of the country.

[Learn more](#)

##### **HMP •**

##### **Healthy Michigan Plan**

The HMP is a new category of eligibility authorized under the ACA. The benefit design of the Healthy Michigan Plan ensures beneficiary access to quality health care, encourages utilization of high-value services, and promotes adoption of healthy behaviors.

## HPD •

### Health Provider Directory

HPD is a foundational service within MiHIN's road map to standardize electronic communications among providers and anyone empowered to access protected health information.

[Learn more](#)

## I

### IHI •

#### Institute for Healthcare Improvement

HIH is an independent not-for-profit organization which promotes care improvement worldwide.

[Learn more](#)

## L

### Linkage

A linkage is a connection to community-based organizations that support patient needs identified through brief screening, it includes tracking and monitoring the initiation, follow-up, and outcomes of the connection.

## M

### MHP •

#### Medicaid Health Plans

### MiCHWA •

#### Michigan Community Health Worker Alliance

MiCHWA is the CHW information hub for the state of Michigan.

[Learn more](#)

### MiHIN •

#### Michigan Health Information Network Shared Services

MiHIN is Michigan's initiative to continuously improve health care quality, efficiency, and patient safety by promoting secure, electronic exchange of health information.

[Learn more](#)

### MiCMRC •

#### Michigan Care Management Resource Center

MiCMRC provides training and support for the statewide Care Management initiatives.

[Learn more](#)

### MPI •

#### Master Patient Index

MPI is an electronic medical database that holds information on every patient registered at a healthcare organization. It may also include data on physicians, other medical staff and facility employees.

## MSA •

Medical Services Administration

MSA oversees the operation of Medicaid plans in Michigan.

## MU •

Meaningful Use

MU is a CMS Medicare and Medicaid program that awards incentives for using certified electronic health records to improve patient care.

## P

### PMPM •

Per Member Per Month

PMPM is a capitation payment that payers provide to providers.

### PPL •

PCMH Patient List

PPL provides a current list of patients who are attributed to a practice and participating in the SIM PCMH project.

### PPQC •

Physician Payer Quality Collaboration

The PPQC is a physician-led activity that engages government and commercial payers in an effort to focus quality improvement efforts around a core set of measures and standardize performance report and feedback with health plans.

### PT •

Practice Transformation

PT in the SIM-PCMH context refers to building capability and developing structures which make the work of a PCMH participating practice more effective in the required and selected objective focus areas.

### PTO •

Practice Transformation Objectives

PTO refers to the Clinical-Community Linkage requirement and one selected PT requirement in the SIM-PCMH context.

## Q

### QMI •

Quality Measure Information

QMI use case contains multiple scenarios for sending, receiving, finding and using quality measure information for different quality reporting programs.

[Learn more](#)

### QO •

Qualified Organization

## **R**

### **RAMP •**

#### **Relationship and Attribution Management Plan**

RAMP has been created to support the identification and capture of relationships between patients/consumers and their healthcare delivery team members, to facilitate the active exchange of necessary information between these identified individuals and organizations.

### **Referral**

Directing a patient for further consultation, review or further action. For example, directing a patient to a medical specialist by a primary care physician.

### **RHC •**

#### **Rural Health Clinics**

RHCs are clinics located in rural areas that provide outpatient primary care services and basic laboratory services for Medicaid and Medicare patients.

## **S**

### **Screening**

A process for evaluating the possible presence of a particular problem. The outcome is normally a simple yes or no.

### **SDoH •**

#### **Social Determinants of Health**

SDoH are conditions in which people are born, grow, live, work and age. These circumstances are shaped by the distribution of money, power and resources at global, national and local levels.

### **SIM-PCMH •**

#### **State Innovation Model-Patient Centered Medical Home**

SIM focuses on the development and testing of multi-payer health care payment and service delivery models in order to achieve better care coordination, lower costs, and improved health outcomes for Michiganders. The SIM-PCMH Initiative is the core component of the SIM strategy for coordinated care delivery, focusing on the development and testing of multi-payer health care payment and service delivery models in order to achieve better care coordination, lower costs, and improved health outcomes for Michiganders.

### **SNF •**

#### **Skilled Nursing Facility**

SNF is a type of nursing home recognized by the Medicare and Medicaid systems as meeting long term health care needs for individuals who have the potential to function independently after a limited period of care.

## **T**

### **TANF •**

### Temporary Assistance for Needy Families

TANF program provides temporary financial assistance for pregnant women and families with one or more dependent children. TANF provides financial assistance to help pay for food, shelter, utilities, and expenses other than medical.

### TCM •

#### Transitional Care Management

TCM includes services provided to a patient whose medical and/or psychosocial problems require moderate or high-complexity medical decision making during transitions in care from an inpatient hospital setting, partial hospital, observation status in a hospital, or skilled nursing facility/nursing facility, to the patient's community setting

## Appendix B: Social Determinants of Health Brief Screening Tool

The intent of brief social determinants of health screening is to establish a routinized process through which providers identify (in an actionable manner) social barriers their attributed patient population is facing. Accordingly, the brief screening will not take the place of deeper, more comprehensive assessment processes utilized as part of care management or mandated by other programs, but it should inform those processes

The State Innovation Model is providing this template screening tool to participants, however this tool can be altered to match local needs (e.g. changing how questions are phrased, varying how questions are categorized in domains, choosing different formats to administer the screening such as an EHR template or incorporating into existing patient questionnaires etc.)

Participants cannot completely remove one or more of the topics/domains contained in the template, although combining and/or rearranging domains is permitted

PCMHs located in SIM/CHIR regions should work with their CHIRs (typically through a PO) to use the brief screening tool the CHIR in your area has/is developing.

**Note:** *that the tool provided below is representative of the tool provided during the 2017 calendar year to promote participant development of their own tool (or adaptation of the template). The requirements for the 2018 PCMH Initiative have been updated, expanding the childcare domain to family care (inclusive of child and elder care), removed the clothing and household domain, and added the personal and environmental safety domain. Participants, while allowed to alter the questions used within the screening tool, must ensure that the questions used remain consistent with the intent of the domain as defined by MDHHS. To support participants in ensuring consistency MDHHS has developed both an updated screening tool template and guidance on the intent of each required domain. As stated in the 2018 PCMH Initiative Participation Agreement, participants can work on updating screening tools currently in use to meet the 2018 requirements, but all required elements must be implemented by November 1, 2018<sup>1</sup>.*

## State Innovation Model

### Suggested 2018 Social Determinants of Health Screening Tool<sup>1</sup>

| Domain  | Question  | Response   |           |
|---|---|------------|-----------|
| <b><i>Healthcare</i></b>                        | In the past month, did poor health keep you from doing your usual activities, like work, school or a hobby?         | <b>Yes</b> | <b>No</b> |
|   | In the past year, was there a time when you needed to see a doctor but could not because it cost too much?          | <b>Yes</b> | <b>No</b> |
| <b><i>Food</i></b>                              | In the past year, did you ever eat less than you needed to because there was not enough food?                       | <b>Yes</b> | <b>No</b> |
| <b><i>Employment &amp; Income</i></b>           | Is it hard to find work or another source of income to meet your basic needs?                                       | <b>Yes</b> | <b>No</b> |
| <b><i>Housing &amp; Shelter</i></b>             | Are you worried that in the next few months, you may not have housing?  | <b>Yes</b> | <b>No</b> |
| <b><i>Utilities</i></b>                         | In the past year, have you had a hard time paying your utility company bills?                                       | <b>Yes</b> | <b>No</b> |
| <b><i>Family Care</i></b>                       | Do you need help finding or paying for care for loved ones? For example, child care or day care for an older adult. | <b>Yes</b> | <b>No</b> |
| <b><i>Education</i></b>                         | Do you want help with school or job training, like finishing a GED, going to college, or learning a trade?          | <b>Yes</b> | <b>No</b> |
| <b><i>Transportation</i></b>                    | Do you ever have trouble getting to school, work, or the store because you don't have a way to get there?           | <b>Yes</b> | <b>No</b> |
| <b><i>Personal and Environmental Safety</i></b> | Do you ever feel unsafe in your home or neighborhood?   | <b>Yes</b> | <b>No</b> |
| <b><i>General</i></b>                           | If you answered yes, would you like to receive assistance with any of these needs?                                  | <b>Yes</b> | <b>No</b> |
|   | Are any of your needs urgent?   | <b>Yes</b> | <b>No</b> |

<sup>1</sup> Version 3.0: 4/13/2018

**State Innovation Model**  
**Question Intent by Domain<sup>1</sup>**

| <b>Domain</b>                                   | <b>Intent</b>   |
|---|---|
| <b><i>Healthcare</i></b>                        | Assess patient/client perception of their physical and/or mental health and potential impact on overall wellbeing and independence.   |
|   | Assess healthcare access related to cost, or more broadly, economic stability.  |
| <b><i>Food</i></b>                              | Assess food insecurity, access and affordability.   |
| <b><i>Employment &amp; Income</i></b>           | Assess potential joblessness, and income instability.   |
| <b><i>Housing &amp; Shelter</i></b>             | Assess potential risk of homelessness, and housing instability.   |
| <b><i>Utilities</i></b>                         | Assess risk, not whether there has been a shut off notice or had services shut off, but as a proxy of economic stability. This question intentionally focuses more broadly than service shut off (i.e. includes notices).   |
| <b><i>Family Care</i></b>                       | Assess whether dependent care may be a barrier to (patient, client, beneficiary) taking care of themselves; assess the potential need for respite care and/or any patient concerns around current family care arrangements. |
| <b><i>Education</i></b>                         | Assess patient/client education level, ability for economic independence/stability and potential activation.  |
| <b><i>Transportation</i></b>                    | Assess if transportation, or lack of transportation, is a limiting factor in daily life (i.e. goes beyond medical transportation).  |
| <b><i>Personal and Environmental Safety</i></b> | Assess potential concerns of personal safety in a broad enough sense to capture potential for subsequent domestic violence screening.   |
| <b><i>General</i></b>                           | Identify if any of the needs the patient, client, beneficiary indicated above are already being addressed or not, and whether the patient, client, beneficiary is open to assistance activation.                            |
|   | Assess severity of identified needs.  |

# Appendix C: Care Management and Coordination Tracking Quick Reference

## 2018 PCMH Initiative Care Management and Coordination Tracking Codes Quick Guide

| Code  | Quick Description                             | Formal Description  | Code Purpose  | Provider  | Method  | Max Frequency (Beneficiary)              | Length (minutes, quantity)  | PCP Signature Required | Associated Fee Schedule* | Note   |
|-------|---|---|---|---|---|--|---|------------------------|--------------------------|--|
| G9001 | Comprehensive Assessment                      | Coordinated Care Fee Initial Rate   | Document a comprehensive assessment and development of a care plan with a beneficiary   | CM  | In-person   | Once/year                                | > 30 minutes  | Yes                    | No                       | Date of service should be the date the assessment is completed for patients entering into care management. If patient does not agree to enter into care management, the date of service should be the date of the face-to-face component. All active dx should be reported on the claim.   |
| G9002 | In-person Encounter                           | Coordinated Care Fee Maintenance Rate   | Document any care management or coordination service provided   | CM/CC   | In-person   | Once/day                                 | 1-45 minutes, quantity of one;<br>46-75 minutes, quantity of two;<br>76-105 minutes, quantity of three;<br>106-135 minutes, quantity of four. | No                     | No                       | Can be reported on the same date of service as G9001 if care management and coordination service(s) in addition to the comprehensive assessment are provided.  |
| 98966 | Telephone Services                            | Telephone assessment and management service to an established patient, parent or guardian   | Document any care management or coordination service provided over the telephone or by other real-time interactive electronic communication.  | CM/CC   | Phone OR Real-time interactive electronic communication   | Once/day                                 | 5-10 minutes  | No                     | No                       | Can be reported on the same date of service as G9001 if care management and coordination service(s) in addition to the comprehensive assessment are provided. Should not be used to report routine provider communication such as appointment reminders or test results.   |
| 98967 | Telephone Services                            | Same as above   | Same as above   | CM/CC   | Same as above   | Once/day                                 | 11-20 minutes   | No                     | No                       | Same as above  |
| 98968 | Telephone Services                            | Same as above   | Same as above   | CM/CC   | Same as above   | Once/day                                 | 21-30 minutes   | No                     | No                       | Same as above  |
| 99495 | Care Transition                               | Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge; AND Medical decision making of at least moderate complexity during the service period; AND Face to face visit within 14 calendar days of discharge | Document supportive services for patients experiencing discharge from an inpatient, long term care, skilled nursing, rehabilitation or emergency department environment to a home or community setting. | CM/CC   | Direct contact, telephone, or electronic communication within 2 business days of discharge; AND Face to face visit within 14 calendar days of discharge | Once/transitional care management period | N/A   | No                     | Yes                      | Can be reported on the same date of service as G9001 if care management and coordination service(s) in addition to the comprehensive assessment are provided. Reasonable and necessary evaluation and management services (other than the required face-to-face visit) to manage the beneficiary may be reported separately. Other care management and coordination service(s) may be reported during the transitional care management period. |
| 99496 | Care Transition                               | Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge; AND Medical decision making of high complexity during the service period; AND Face to face visit within 7 calendar days of discharge               | Same as above   | CM/CC   | Direct contact, telephone, or electronic communication within 2 business days of discharge; AND Face to face visit within 7 calendar days of discharge  | Once/transitional care management period | N/A   | No                     | Yes                      | Same as above  |
| G9007 | Team Conference                               | Coordinated Care Fee Scheduled Team Conference  | Document meetings between, at minimum, a beneficiary's primary care provider and care manager or coordinator during which formal discussion of a patient's care plan occurs.                            | 1.PCP+CM/CC; OR<br>2.Primary CM/CC+Specialty CM/CC; OR<br>3.PCP+SCP+CM/CC | Face-to-face, via secure live video conference OR telephone   | Once/day                                 | N/A   | No                     | No                       | Communication should include substantive, focused conversation pertinent to each patient's individualized care plan and goal achievement.  |
| G9008 | Physician Coordinated Care Oversight Services | Coordinated care fee Physician coordinated care oversight services  | Document physician engagement at the initiation of care management  | Physician   | In-person   | N/a                                      | N/A   | No                     | No                       | E&M visit performed by the physician must be simultaneously or previously billed for the patient (for Priority Health: in close proximity to the visit date) Patient/care giver understanding and agreement to care plan 3. Service must include completion of patient assessment. 4. Bill code after the patient enrolls in a care management program.  |
| 98961 | Group Education and Training                  | Formalized educational sessions led by qualified non-physician personnel for patient self-management for 2-4 patients   | Document educational sessions for patient self-management in a group setting  | CM+Other Care Team Members  | In-person   | None                                     | 30 minutes; May be quantity billed.   | No                     | No                       | There must be some level of individualized interaction included in the session. Must use a standardized curriculum   |
| 98962 | Group Education and Training                  | Formalized educational sessions led by qualified non-physician personnel for patient self-management for 5-8 patients   | Document educational sessions for patient self-management in a group setting  | CM+Other Care Team Members  | In-person   | None                                     | 30 minutes; May be quantity billed.   | No                     | No                       | Same as above  |
| S0257 | End-of-life Counseling                        | Face to face or telephonic counseling and discussion regarding advance directives or end of life care planning and decisions  | Document counseling and discussion regarding advance directives or end of life care planning and decisions  | CM+PCP+Other care team members  | In-person OR telephone  | None                                     | N/A   | No                     | No                       |  |

\*Associated Fee Schedule is determined individually by each Medicaid Health Plan, additionally, MHPs may choose to include codes beyond 99495 and 99496 on their fee schedule

CM: Care Manager  
CC: Care Coordinator

PCP: Primary Care Provider  
SCP: Specialty Care Provider

## Appendix D: Medicaid Beneficiary Inclusion-Exclusion

A Medicaid beneficiary must have full Medicaid coverage and be served through a Medicaid managed care organization (Medicaid health plan) to be attributed to a participating Practice. For purposes of the PCMH Initiative, the benefit plans listed under “included” below are full Medicaid coverage.

| Included Benefit Plans |                                      | Excluded Benefit Plans |   |   |
|------------------------|--------------------------------------|------------------------|---|---|
| BMP                    | Benefits Monitoring Program          | APS                    | Ambulatory Prenatal Services  | Not Full Coverage   |
| MA-HMP-MC              | Healthy Michigan Plan – Managed Care | CSHCS                  | Children’s Special Health Care Services (FFS)                             | Not Medicaid Health Plan                                  |
| MA-MC                  | Medicaid – Managed Care              | CSHCS-MC               | Children’s Special Health Care Services – Managed Care                    | Existing and/or Potentially Duplicative Payment Structure |
| TCMF                   | Targeted Case Management Flint       | HHMICARE               | Primary Care Health Homes   | Existing and/or Potentially Duplicative Payment Structure |
|                        |                                      | HHBH                   | Health Home Behavioral Health   | Existing and/or Potentially Duplicative Payment Structure |
|                        |                                      | Hospice                | Hospice   | Not Medicaid Health Plan                                  |
|                        |                                      | ICF-IID                | Intermediate Care Facility for Individuals with Intellectual Disabilities | Not Medicaid Health Plan                                  |
|                        |                                      | ICO-MC                 | Integrated Care - MI Health Link  | Existing and/or Potentially Duplicative Payment Structure |
|                        |                                      | INCAR-ESO              | Incarceration – Emergency Services Only                                   | Not Full Coverage   |
|                        |                                      | INCAR-MA               | Incarceration - MA  | Not Medicaid Health Plan                                  |
|                        |                                      | INCAR-MA-E             | Incarceration – MA Emergency Services Only                                | Not Full Coverage   |
|                        |                                      | MA                     | Full Fee-for-Service Medicaid   | Not Medicaid Health Plan                                  |

**Not Applicable for Inclusion/Exclusion Decisions**

*The following benefit plans are either not directly relevant to deciding whether or not a beneficiary can be included in the population (dental, mental health etc.) or represent services that are additions/enhancements to the standard Medicaid state plan benefit (waivers etc.).*

- HK-Dental Healthy Kids Dental
- HK-EXP Full Fee-for-Service Healthy Kids Expansion
- HK-EXP-ESO Healthy Kids Expansion Emergency Services Only
- NEMT Non-Emergency Medical Transportation
- PIHP Prepaid Inpatient Health Plan
- PIHP-HMP PIHP Healthy Michigan Plan
- DHIP Foster Care and CPS Incentive Payment
- AUT Autism Related Services
- CWP Children’s Home and Community Based Services Waiver
- HSW Habilitation Supports Waiver Program
- SED Children’s Serious Emotional Disturbance Waiver Program
- SED-DHS Children’s Serious Emotional Disturbance Waiver Program – DHS

## Appendix F: Screening Best Practices

Many of the PCMH Initiative practices have robust procedures for administering the Social Determinants of Health screening. Below are some best practices submitted by participants.

### Screening approach

- Create an office-based process: the front desk provides the tool to the patient, the MA interprets the results, and the CM or provider provides referrals if necessary
- Collect responses either electronically or scan paper and enter results into registry for tracking
- Enter results in the EHR (sections such as visit navigator section, social history - social needs assessment). The information is accessible to the care team.
- A patient note/reminder is placed in the EHR. A screening date is noted with the data to help determine the appropriate next screening date.
- For some practices, information is linked to the community HUB or CHIR

### Screening tool

- Translate tool for patient population if needed: Spanish, Arabic, visual survey (for patients with limited literacy)

### Screening monitoring

- Use patient registry report to identify missed screening
- Use EHR system. For instance, one of the organizations has created an icon that will change color depending on if the screening has occurred during the annual exam. If screening was completed during annual exam, the button turns green or red (green meaning no positive screens identified, red meaning positive screens identified). If screening was not yet completed for patient, button will be purple. Care Team, Providers, and office staff are trained to monitor this icon status as part of daily workflows.
- Monitor each clinic's screening rate and social needs. Primary care leadership expects clinic leadership to be doing continuous quality improvement to increase screening rates and understand social needs at the clinic level.

## Appendix G: Linkage Best Practices

Many of the PCMH Initiative practices have robust procedures for linking patients to appropriate community services. Below are some best practices submitted by participants.

### Linkage process

- Linkages to community partners can be documented as a specialty referral. Referrals made in the system are tracked to identify which referrals were successfully completed and which referrals did not meet the needs of the patients and the reasons why.
- A clinical order for a linkage is created by the provider or care manager. Once resources are provided, the order status is changed to “completed” if no further follow-up is required. If further follow-up is required or requested by parent/guardian, the order can be changed to “scheduled” and further follow-up can be arranged (through appropriate tasking).

### **Linkage follow-up**

- Standard follow-up: Once a referral for a linkage to a community partner has been provided to a patient, the office follows practice standard policy on referrals, which states that after 2 weeks the office will make contact with the patient to determine if their need was met. If after two attempts the patient is still unable to be reached for follow-up, a letter will be sent, and the order will be closed in the Orders Management documentation tool within the EHR.
- Urgency based follow-up: If an urgent SDOH need is identified, the provider or care manager follows up with the open SDOH linkage as soon as possible; If a non-urgent SDOH need is identified, they follow up with open SDOH referrals at the next scheduled appointment.
- The linkage is treated as any other healthcare referral. Each PCMH practice monitors the referral within the appropriate electronic system and runs a monthly report to see the status of the referral. If the feedback loop is not closed then the patient, caregiver, agency or organization is called to determine barriers.

### **Linkage outcome documentation**

The best practice is to map the survey results to a patient registry and create reports. Reports are created to:

- Identify the percentage of patients flagged as having needs within the various domains. Information is then viewed by insurance plan and age groups to determine areas that patients encounter the largest needs.
- Track patients that have reported having a need to ensure patient needs have been addressed.

## Appendix H: Quality Improvement Activities Best Practices

Many of the PCMH Initiative practices have implemented quality improvement activities to ensure all patients receive the Social Determinants of Health screening and are appropriately linked to community services. Below are some best practices submitted by participants.

### Screening procedure quality improvement activities

- Close screening gaps: Map data into patient registry. A report is created to identify patients that may have been missed, which allows CMs/CCs to follow up. Track completion rates. Reviewing the information allows the PO to identify any variation in screening rates between offices and improve overall performance. Efficiency in the office is more difficult to monitor, but an inefficient office process can be identified by a smaller than expected number of completed screenings.
- Identify high frequency community needs and collaborate with available resources in the community. For those needs yielding no responses, the wording for questions will be reviewed to ensure it is clear to get the necessary patient feedback.
- Pilots performed to optimize the screening procedure and identify the circumstances under which screenings are most useful have found the following:
  - Try different approaches for completing the screening (paper/phone)
  - Screening is better received when there is a warm hand off between the MA and CHW when the screening is complete and a need is identified. If the CHW has to call the patients after the visit, the screening is less effective. Even with an up-to-date phone number, patients rarely call back or want to discuss needs over the phone.
  - One PO/practice re-engineered the survey tool to align responses for better patient understanding (yes = need/action needed or no = no need/no action), and developed a text based and visual survey instrument given the spectrum of literacy within the targeted survey population.
  - A PDSA cycle revealed that a brief two sentence introduction by the care manager or support staff of why the screening is being completed was more successful in obtaining a completed screen versus a paper copy of the screen only being handed to the patient.

### Linkage documentation quality improvement activities

- Identify high volume needs within the community. For instance, one PO identified the need for behavioral health needs and pediatric behavior and development programs. The PO SIM leadership began reaching out to community agencies and establishing relationships. By building relationships, both sides will have the opportunity to identify and improve process gaps that hinder optimal patient care and provision of services.
- Review the community resources quarterly. Staff can report any positive and negative circumstances that they found during the linkage process with the community resources. These include but are not limited to: receiving documentation back to the office, any issues that the patient may have reported, any scheduling issues, patient view of resource, etc.

Build a community services document that identifies highly utilized community resources, providing such details as patient population served, waiting list duration (if any), accepted insurance, location, hours of operation, contact person, etc. staff can utilize this document to determine appropriate community partners to link a patient to.

## Appendix I: 2018 Compliance Timeline<sup>1</sup>

### Preface

This guide was written to support Physician Organizations (POs) and Practices who are participating in the 2018 State Innovation Model (SIM) Patient Centered Medical Home (PCMH) Initiative.

To enable further implementation of the core PCMH Initiative components, a wide range of compliance activities have been outlined. All of the requirements outlined in this guide originated in the [Participation Agreement](#) signed by the Participating Organizations, and language will be referenced where appropriate. The guide is organized by month. A short overview of compliance activities for the month are given, followed by requirement details (tracking mechanism, key dates and notes on audits if applicable). For reoccurring requirements, details only appear in the first month in which they are relevant.

The PCMH Initiative is built upon core competencies essential to the operation of the State Innovation Model to ensure the long-term goals of the model are both feasible and effective. Due to this, all practices must maintain PCMH status to participate in the Initiative. The PCMH Initiative will seek to support participants with all other PCMH requirements outlined in the corresponding PCMH Compliance Guide Monthly Checklist and further detail (where appropriate) here:

- Quarterly Report—Initiative participants will be required to submit quarterly reports where they will attest to basic requirements of the Initiative. These reports will be used as the foundation to understand the extent of implementation of PCMH Initiative policies and ensure compliance. However, the PCMH Initiative will also conduct random Administrative Audits.
- Administrative Audits—A random sample will be created in excel using the RAND function. Practices that have been chosen for one area of audit will be excluded from further audits in that calendar year. Selected practices will be contacted and asked to provide the documentation listed in the PCMH Compliance Guide Monthly Checklist.
- MiHIN Use Cases—PCMH Initiative participants will not be required to submit specific documentation regarding their participation in the Use Cases but the Initiative will obtain information from MiHIN regarding this. However, the Initiative may randomly choose practices and request documentation displaying their utilization of these Use Cases. For example: documentation of the ADT Use Case would be a screen shot of the practice's EMR showing a clinical note outlining the corresponding action taken.

---

<sup>1</sup> Version 3.0: 4/13/2018

The PCMH Initiative has also developed a scoring methodology to determine adherence to compliance requirements. This methodology is determined by weighting performance on 18 areas of compliance, including: timely reporting and contracting, care manager at every practice, performance, infrastructure, practice transformation-Clinical Community Linkages and Population Health, technology, etc. When a PO or Practice is found to be out of compliance on a given component, a warning letter will be sent by an MDHHS designee. A template for the Corrective Action Plan is located at the end of this document. If compliance is not met by the dates outlined in the issued Corrective Action Plan, then further consideration by Initiative leadership could result in payment sanctions or removal from the program.

We encourage participants to proactively identify areas of concern with regards to their compliance status and reach out to an MDHHS designee or [MDHHS-SIMPCMH@michigan.gov](mailto:MDHHS-SIMPCMH@michigan.gov) for further technical assistance and support. While the SIM PCMH Initiative will seek to provide support, it's important that participants work to address their compliance concerns and keep themselves up to date on requirements of the Initiative. We appreciate the hard work involved in providing high quality, patient-centered primary care and hope this guide can facilitate PO and practice understanding and implementation of the program requirements, ensuring that the Initiative reaches its goals.
