Michigan's Maternal Infant and Early Childhood Home Visiting Program (MIECHV)

Summary Report for Fiscal Year 2015

Released March 2016 Prepared by Michigan Public Health Institute

Home visiting programs serve pregnant women and families with children ages birth to age five and help parents develop the skills they need to raise children who are physically, socially and emotionally healthy and ready to learn. The **Michigan Maternal Infant and Early Childhood Home Visiting (MI MIECHV)** program was established to strengthen and improve coordination of services, and identify and provide home visiting services to improve outcomes for families who reside in at risk communities.

The Michigan Department of Health and Human Services (MDHHS) receives MIECHV funding through the Health Resources Services Administration (HRSA). This report describes the performance of MI MIECHV funded Local Implementing Agencies (LIAs) in six federally mandated benchmark areas.

MI MIECHV Summary Report

What is in this report?

This report describes the performance of MI MIECHV funded Local Implementing Agencies (LIAs) in six federally mandated benchmark areas. The body of this report contains data from Fiscal Year (FY) 2015, and the data table in the back of the report provides data from both FY 2014 and FY 2015. The data included in this report are aggregated across all MIECHV funded LIAs.

What do all of these numbers mean?

These data indicate how the MI MIECHV program performed in the six benchmark areas. The demographics presented in the data tables include all individuals who received at least one home visit during each FY. The performance measures are defined and reported in a way that reflects services provided by the LIAs during the indicated FY. The group of people in the denominator will vary across the performance measures and fiscal years. The performance measures demonstrate how the program is operating, not how specific families are doing. The MI Benchmark Plan contains additional details regarding each performance measure.

When were these data collected?

Fiscal Year '15 (FY15) refers to October 1, 2014 through September 30, 2015. Fiscal Year '14 (FY14) refers to October 1, 2013 through September 30, 2014. The data in this report capture information for services provided during FY14 and FY15.

Who is represented in this data?

Each family provides data about a primary caregiver and a target child.

The LIAs serve additional children and caregivers who are included in the demographic numbers but are not included in the performance measures.

Where do these data come from?

Healthy Families America and Early Head Start LIAs funded by the MIECHV program in Michigan submit data to Michigan Public Health Institute (MPHI). Data for Nurse Family Partnership programs come from their data system called Efforts to Outcomes (ETO). MPHI analyzes the data and reports findings to the Michigan Department of Health and Human Services (MDHHS), HRSA, and MIECHV funded LIAs. Data are used for grant monitoring and continuous quality improvement (CQI).

Real Families & Real Change

During FY15 MIECHV funded:

4 Early Head Start LIAs

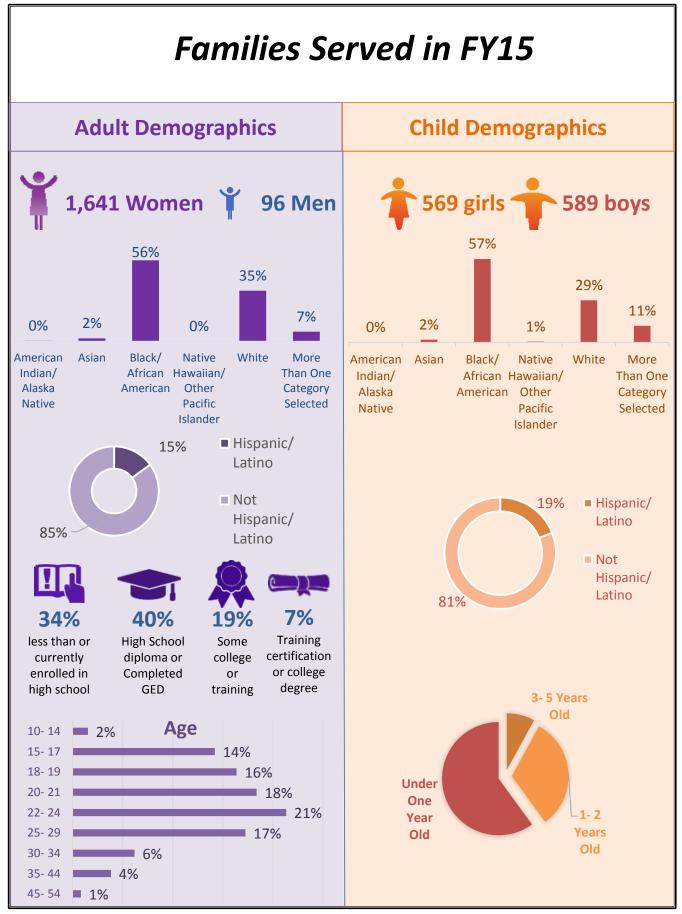

7 Healthy Families America LIAs

9 Nurse Family Partnership LIAs

And touched the lives of:

1,633 families **1,641** women **1,158** children

Page 3

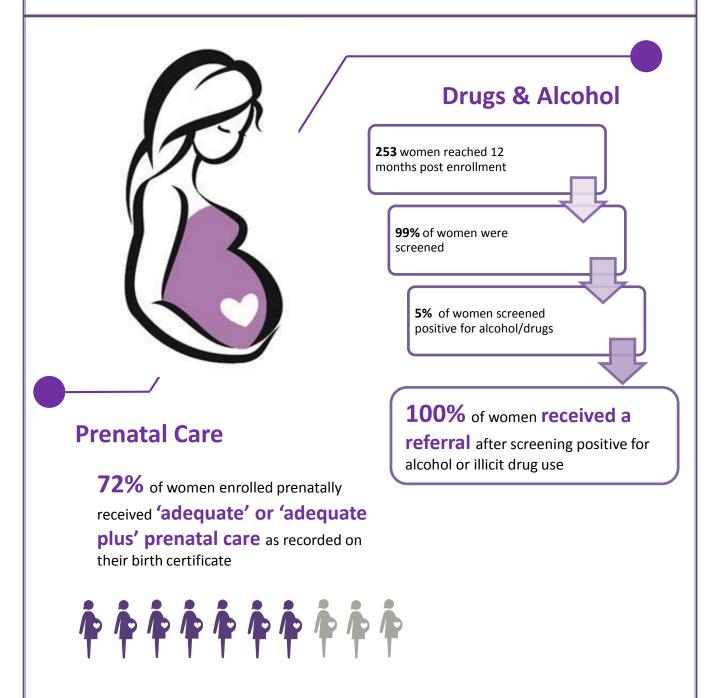

Home Visitors are working with families to help strengthen six benchmark areas:

- Improve maternal and newborn health
- Prevent child injuries, child abuse, neglect, or maltreatment, and reduce emergency department visits
- Improve school readiness and achievement
- Reduce crime, including domestic violence
- Improve family economic self-sufficiency
- Improve the coordination and referrals for other community resources and supports

Maternal & Newborn Health

MI MIECHV LIAs support preconception, interconception, prenatal, and well-child care – including access to birth control, insurance, breastfeeding support, and immunizations. Additionally, LIAs utilize evidence-based screening tools to identify and appropriately refer families who need help with drug and alcohol use or maternal depression.

Maternal & Newborn Health, continued

54% of women received referrals after screening positive for symptoms of maternal depression

253	95%	27%	54%
women reached 12 months post enrollment	of women were screened for maternal depression	of women screened positive for maternal depression	of women received a referral after screening positive

of women enrolled prenatally initiated **breastfeeding** when their babies were born

95%

of women and children had **health insurance** by 6 months of service

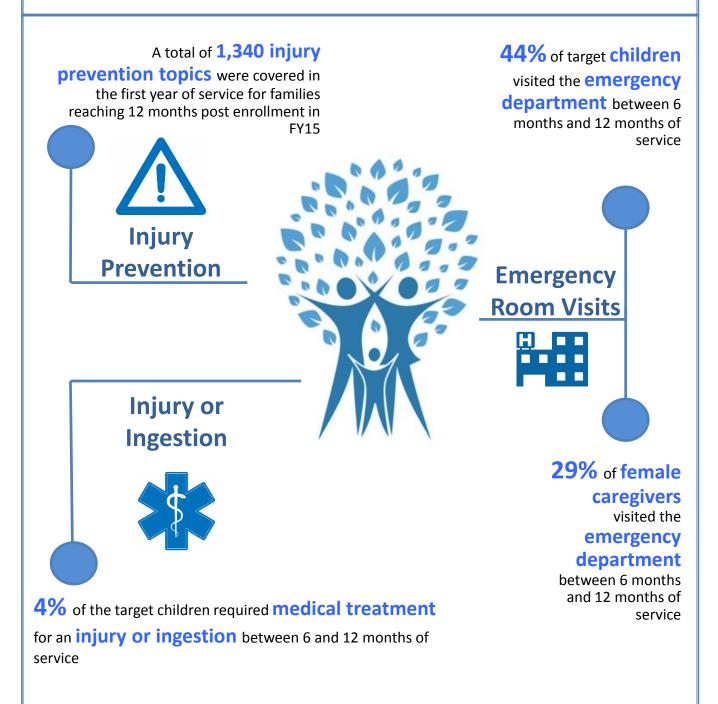

of children completed their most recent well-child visit

Child Injuries, Child Abuse, Neglect, or Maltreatment

Through education, assessment, and support, MI MIECHV LIAs work to decrease visits to the Emergency Department, decrease the need for medical care due to injury/ingestion, and reduce the incidence of child abuse, neglect, and maltreatment. Positive parenting practices are supported through assessment and parent education.

Child Injuries, Child Abuse, Neglect, or Maltreatment, continued

Prevention in Home Visiting

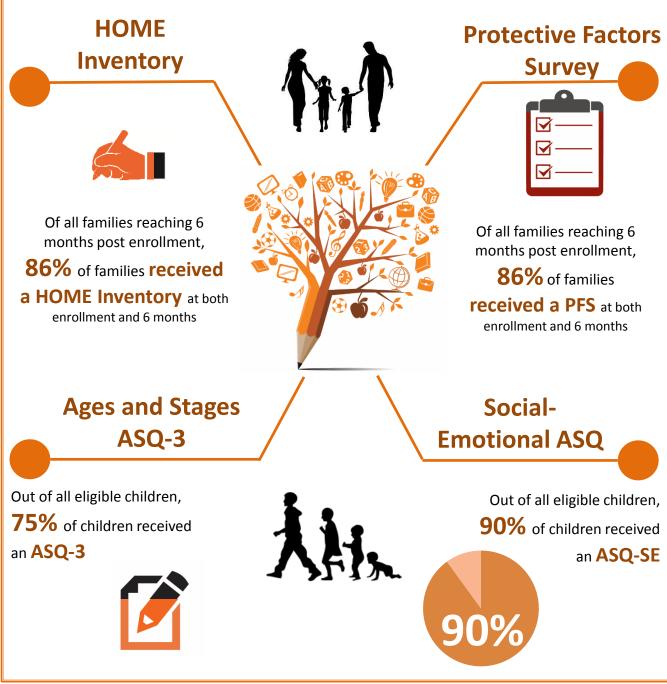

Home visitors work with families to help strengthen parenting skills, and provide links to resources and community supports to help prevent child injuries, abuse, neglect, and maltreatment. Preventing child maltreatment is a foundational goal of home visiting.

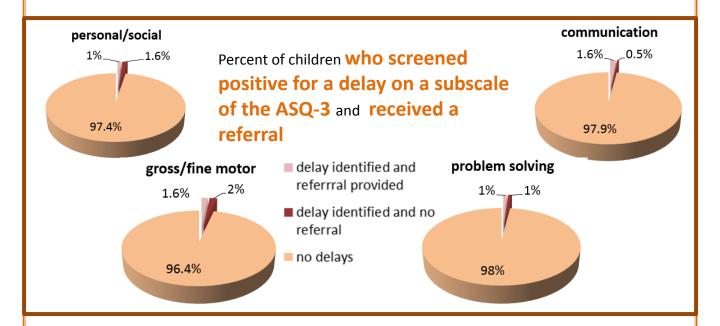

School Readiness and Achievement

MI MIECHV LIAs use developmental screeners (ASQ-3 and ASQ-SE) as well as the Protective Factors Survey (PFS) and the Home Observation for Measurement of the Environment (HOME) Inventory to assess children's developmental needs, parenting practices, and the home environment. These screeners and assessments help identify areas where children and families could use additional support. LIAs also provide supports and referrals to help link families with community partners who can address identified needs.

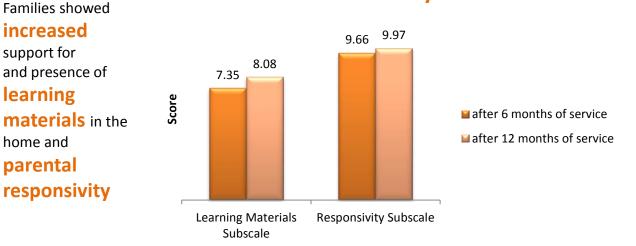

School Readiness and Achievement, continued

LIAs provide support and referrals to help link families with community partners who can address identified needs. **Children** who screen positive for a developmental delay using the ASQ-3 typically receive a referral to additional services such as Early On. They may also receive additional support from their home visitor followed by another screening.

HOME Inventory Scores

Page 10

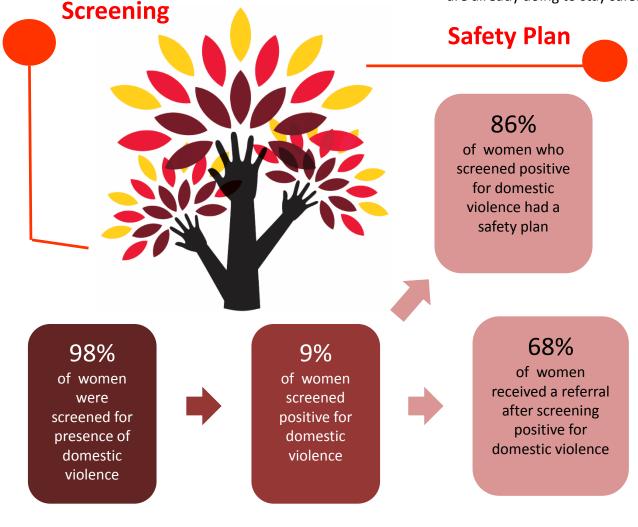

Domestic Violence

MI MIECHV LIAs utilize assessments including the Relationship Assessment Tool and NFP's relationship screener to screen for domestic violence. LIAs provide referrals, education, and develop safety plans to support families who are experiencing domestic violence.

Screening for domestic violence

involves various techniques including written questions, oral questions, indirect questions, framing questions, and use of SAFE questions (questions addressing Stress/Safety, Afraid/Abused, Friends/Family, and Emergency plan). A safety plan is a personalized, practical plan that includes ways to remain safe while in a relationship, planning to leave, or after one leaves an abusive environment. Safety planning involves deciding what to do in dangerous situations, identifying safe people and places, and building on what survivors are already doing to stay safe.

Self-Sufficiency

MI MIECHV measures economic self-sufficiency through income, benefits received, and employment/schooling. LIAs support families by connecting them with community resources, helping them achieve stable employment, and supporting them as they enroll in educational programs.

Families are asked to provide this information at enrollment and after 6 and 12 months of participation in the home visiting program. The data below on paid work hours and household income represents all families who reached 12 months post enrollment in FY15 and the average change for families after receiving one year of service as compared to when they enrolled.

Paid Work and Child Care Hours **Adequate Health** Insurance **20%** increase in average number of paid work hours in addition to unpaid 96% of caregivers and target hours devoted to children had adequate infant care after 12 health insurance after 12 months of service months of service **Household Income** and Benefits

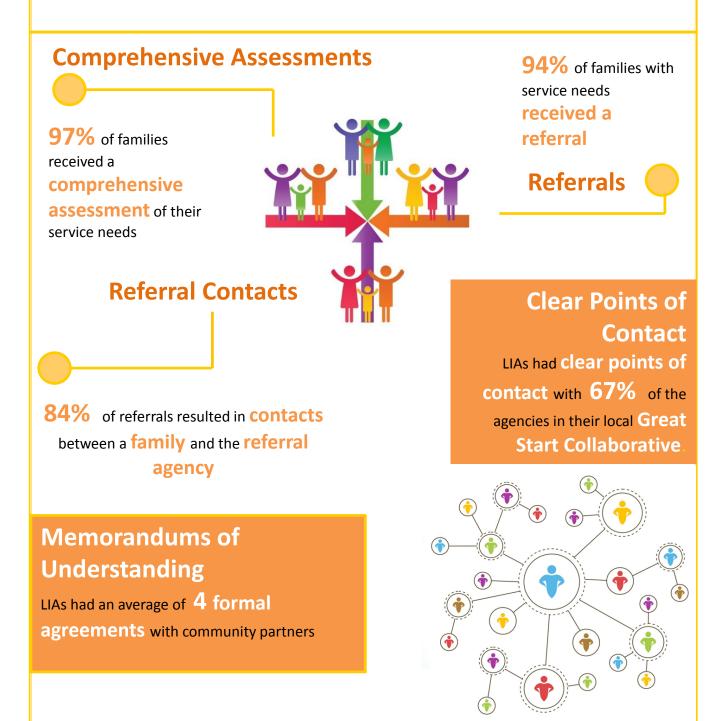

6.5% increase

in average estimated **dollar value** of **household income** and estimated **benefits** after 12 months of service

Referrals for Community Resources

MI MIECHV LIAs create comprehensive networks of support within their communities. Home visiting in Michigan is working to create a safety net of resources and connections for Michigan families, through establishing referral networks with family serving agencies in their communities.

Data Table

What is in the data table?

Definitions of each of the performance measures under the six benchmarks are included in the following table along with the numerator (N), denominator (D), and the percent or average (% or average) for both FY14 and FY15. There are two types of performance measures: group comparison measures and individual comparison measures. Most of the performance measures compare a group of people served in one FY with another group of people who are served the following FY. There are some individual measures that compare data for the same people from one time point to a second time point (identified with a '**' in the data table).

What does improvement over time mean?

Most of the performance measures in this report show how the home visiting programs are doing. An improvement will generally mean that the programs improved the services they provided to the families in one year as compared to the prior year.

Who is included in the denominator?

Each performance measure focuses on a specific sub-population. The MI Benchmark plan (located in the State Plan found on www.michigan.gov/homevisiting/) contains detailed notes on the denominator for each performance measure.

Where can I learn more about these measures?

Additional details regarding the performance measures can be found in the MI Benchmark Plan (located in the State Plan found on <u>www.michigan.gov/homevisiting/</u>).
