## Varnish! Michigan-Babies Too!

12,707 children were screened

11,525 children had fluoride varnish applied

2 percent of children screened had previous caries

18 percent of children screened were referred for dental care

11 percent of children screened had signs of early childhood caries

57 medical provider agencies participated

4 percent of children screened had untreated, active decay

6 percent of children screened had white spot

The Varnish! Michigan Babies Too! Program encourages medical providers to receive oral health training, perform oral health screenings, apply fluoride varnish and provide guidance to families during well-child visits. This infographic contains information and data from FY 2017-18.
