

Maternal and Child Health Status Assessment Webinar

MARCH 9, 2017

Welcome and Introductions

- Carrie Tarry, MDHHS
- Trudy Esch, MDHHS
- Robin Orsborn, MDHHS
- Julia Heany, MPHI
- Lauren LaPine, MPHI
- Erin Madden, MPHI

Agenda

- Overview
- Specifics on Steps 4 & 5
 - Maternal and Child Health Status Assessment
- Next Steps
- Questions

★ Steps to cover today

Timeline of Assessments

Within steps 4 & 5, there are three assessments:

1. Community Themes and Strengths Assessment

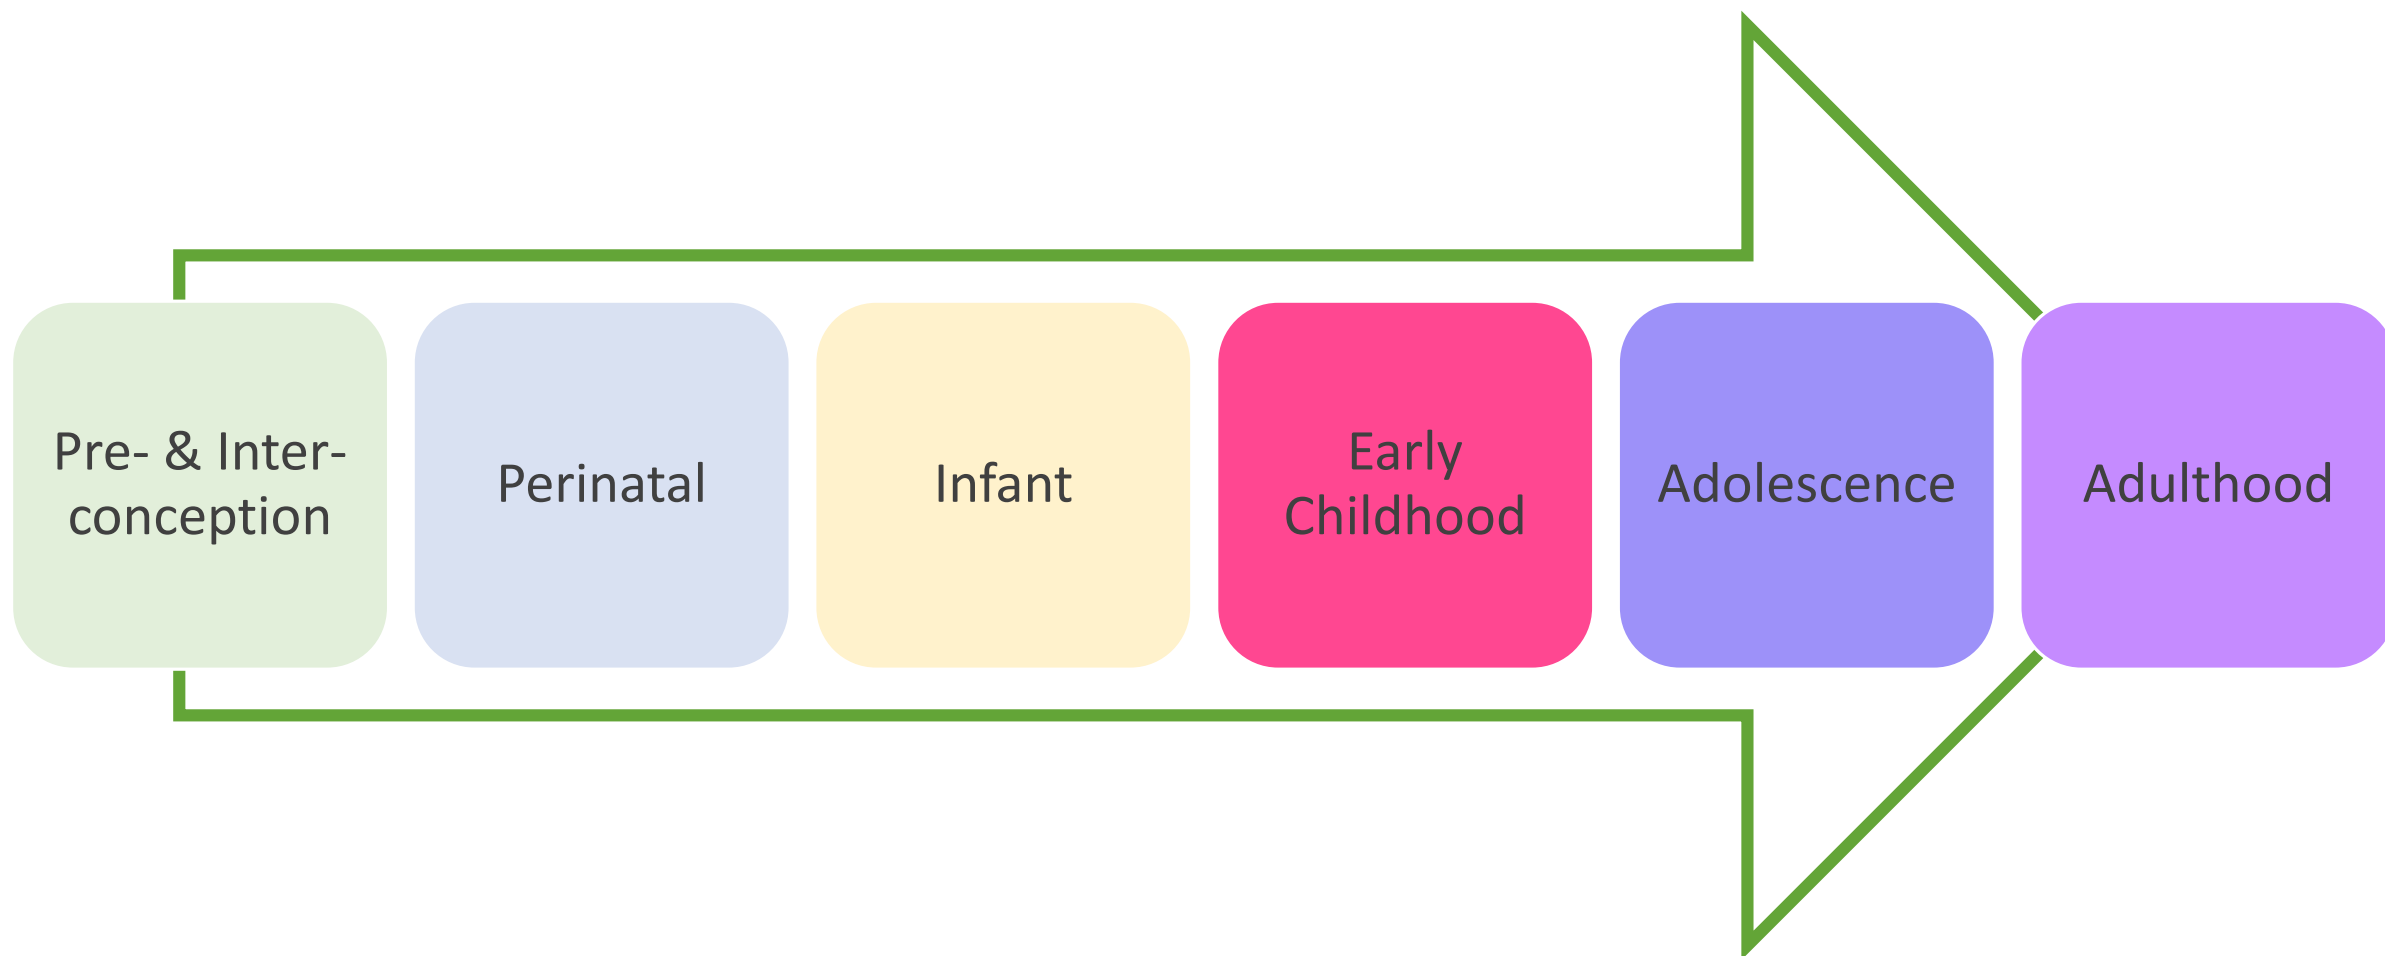

➤ **Covered February 14**

2. Maternal and Child Health Status Assessment

➤ **Covered TODAY** 

3. Maternal Child Health System Assessment

➤ **Covered March 29**

Health Outcomes

Health Behaviors

(e.g., smoking, diet, exercise)

Community Health

(e.g., transportation, food, housing,
employment, education)

Direct & Enabling Services

(e.g., family planning, services for CYSHCN, well woman care,
pediatric care, clinical linkages)

Public Health Systems

(e.g., assessment & planning, convening partners, community education,
policy development & enforcement, surveillance)

Checking In

- How are your Community Themes and Strengths assessment activities unfolding?
- Are there any questions we can answer today?

Maternal and Child Health Status Assessment

Maternal Child Health Status Assessment

The purpose of this assessment is to review population health data to identify:

- health issues where our state faces **disparities** by race, ethnicity, gender, income, or other factors.
- health issues where your community is facing more troubling **outcomes** when compared with the state, other counties, or national standards.

Maternal Child Health Status Assessment

A series of measures was selected for this assessment based on their importance to understanding MCH within communities.

- *Measures reflect each stage of the life course.*
- *Measures of health outcomes, health behaviors, community health, direct and enabling services, and public health systems are included.*
- *State Title V performance measures are included.*
- *Most measures are available at the state and local level; however, some are only available at the state level.*
- *State level data include demographic breakdowns wherever possible.*
- *You can incorporate local data and additional measures as you see fit!*

Maternal Child Health Status Assessment

We will be providing two Excel spreadsheets populated with the majority of the data you will need. Both spreadsheets will be locked for editing.

1. LMCH Status Assessment **State Data Spreadsheet**
 - Includes state-wide data with demographic breakdowns
2. LMCH Status Assessment **County Data Spreadsheet**
 - Includes data that are county/LHD specific

Maternal Child Health Status Assessment

- Table 6 provides the sources of population data used when populating the two spreadsheets.
- For any measures that you add, consider referring to this table when looking for data sources.

Status Assessment Spreadsheet

Within each spreadsheet, there are 6 tabs across the bottom that mirror the “pyramid,” plus a tab for Demographics

- Health Outcomes
- Health Behaviors
- Community Health
- Direct & Enabling Services
- PH Services and Systems

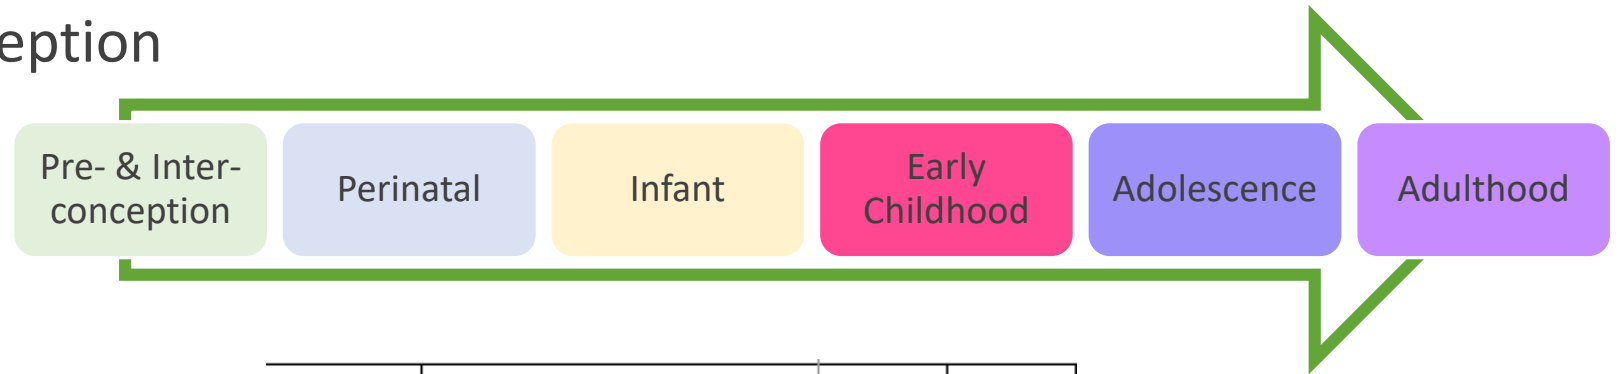

Example Sneak Peek

Status Assessment Spreadsheet

Within each tab, there are a list of measures (including their data source) broken down by phase of the life course. *Each phase is color-coded according to the image below.*

- Pre- and Inter-Conception
- Perinatal
- Infant
- Childhood
- Adolescence
- Early-to-Mid-Adulthood
- Life Course

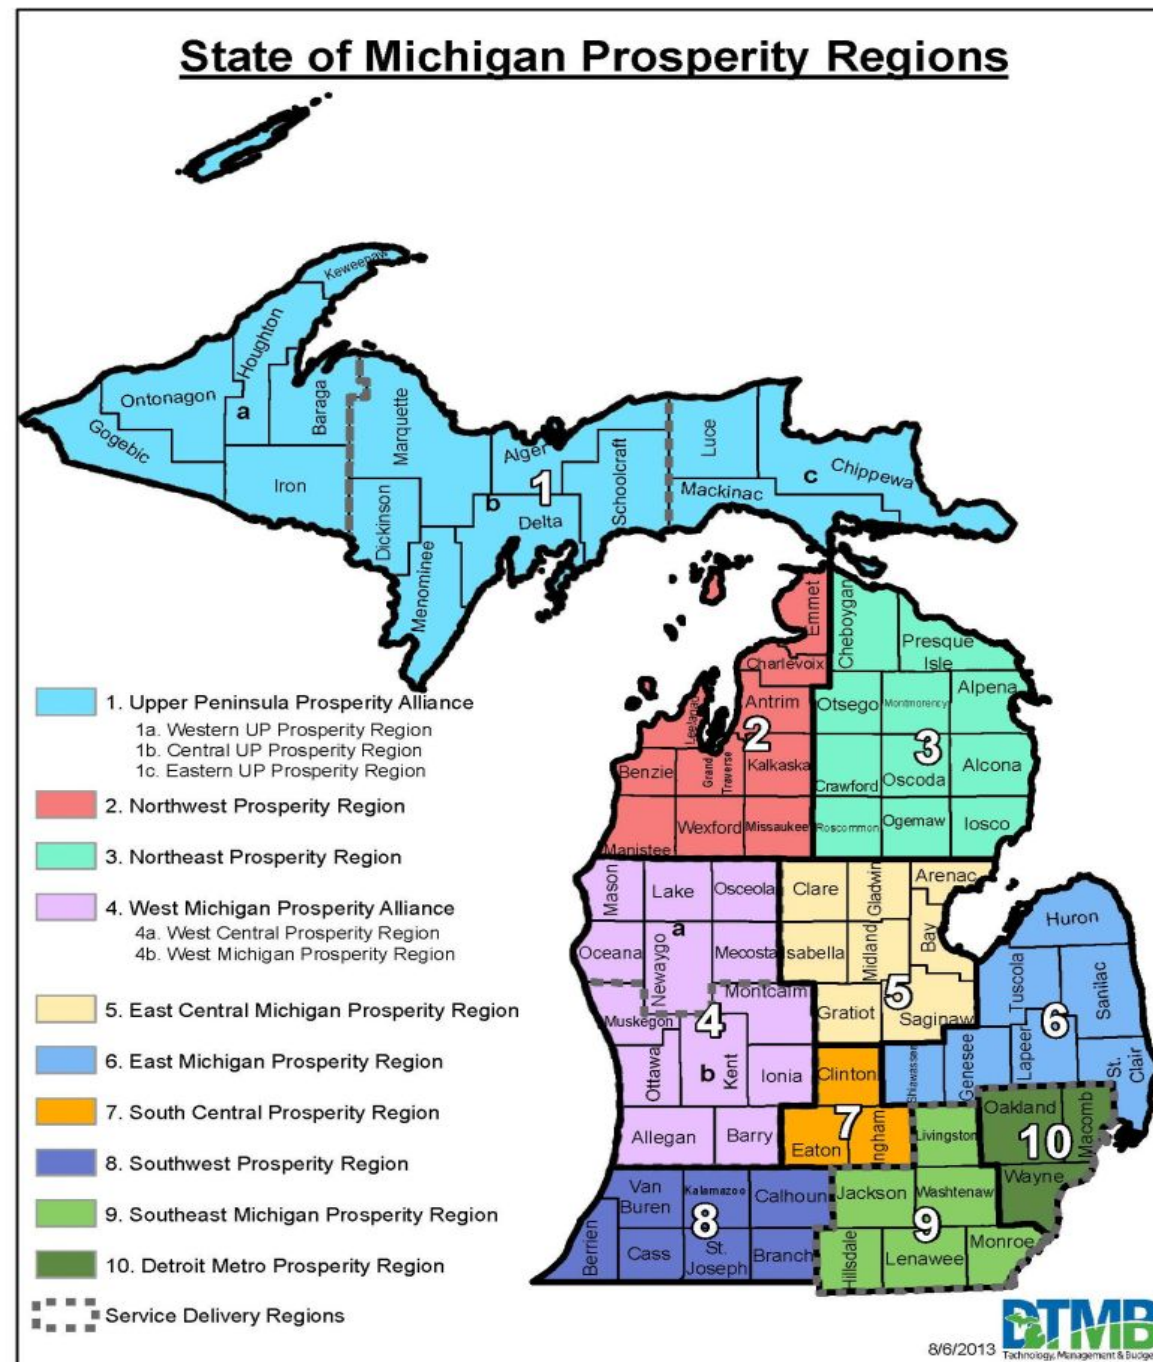

Phase	Measure	Data Source	Year(s)
Pre- and Inter-Conception	% of women aged 20-44 reporting their general health as fair or poor	BRFSS	2015
	% of women with a live birth who had a healthy weight prior to pregnancy	Vital Records	2015
Perinatal	% of live births with a low birth weight <2500g	Vital Records	2015
	% of women with a singleton live birth who achieved the recommended weight gain during pregnancy	Vital Records	2015

**Example
Sneak
Peek**

MI Prosperity Regions

A few measures are broken out by prosperity region; refer to this prosperity region map for guidance, if necessary.

listed across
the top

Phase	Measures	Data Source	Year(s)	Michigan Total	MI County Highest Value
Perinatal	% of women with a live birth who completed an Associates, Bachelor's, Master's, or other Post-Secondary Degree	Vital Records	2015	37.8%	65.8%
	% of children living in households with incomes less than 200% of the federal poverty level	American Community Survey	2015, 5 yr avg.	44.7%	22.7%
	Rate of non-fatal child maltreatment	CPS			
	% of 4th graders scoring advanced or proficient on English Language Arts	M-STEP (Michigan Student Test of Educational Progress)	2015-2016	46.1%	
	% of 4th graders scoring advanced or proficient on Math	M-STEP (Michigan Student Test of Educational Progress)	2015-2016	44.1%	

The county-wide data spreadsheet will look identical to the state-wide spreadsheet, except for the columns at the top. This spreadsheet will display local values for each measure.

- Some measures are available by county, where others are available by local health department
- The data for a multi-county health department are listed under the county that appears first in the spreadsheet

Michigan FIMR Quarterly Meeting
December 1, 2016

Both documents will be
posted to the LMCH
SharePoint

Neonatal Drug Withdrawal among Michigan Infants

- When mothers use illicit or prescription drugs during the pregnancy, infants can present with drug withdrawal symptoms after birth, called neonatal withdrawal syndrome (NWS).
- The risk for NWS is greatest when the mother uses prescription pain relievers known as opioids analgesics or heroin during the pregnancy.^{1,2}
- Between 2000 and 2009, there were a total of 1,509 infants in Michigan hospitalized with a diagnosis of NWS*.

What do I do with all
these data???

Completing the Assessment

Convene partners

- Include people who are comfortable with data, if possible

Set an agenda

- Review one tab at a time, and set a limit for how much time you will spend on each tab

Assign someone to record observations

- Bring a laptop
- Use a complete sentence, and make sure you note the phase of the life course and the measure that led to the observation

As you review these data:

- Note disparities at the state level, considering your demographic profile.
- Identify measures where your LHD's or county's value is lower than the state.
- If you are part of a district health department or working within a region, notice counties with lower values.
- If your LHD's or county's values are generally higher than the state, notice measures where your county falls short of a national target or a high performing department within the state.
- Note strengths!
- Recognize gaps in your data – what aren't you learning about?

Assessing & Understanding Data

After reviewing your data, you will answer the following questions in the Tool...

1. What process did you use to gather your own data (if applicable)? What resources did you use?
2. What data gaps did you encounter?
3. How will you address gaps in data?

Summarizing Key Findings

Use table 7 to summarize your observations:

- Describe your partners' observations under 'Findings.'
- Indicate the phase or phases of the life course reflected in each finding
- Note the measure(s) or data that informed the finding.

Table 7: Health Status Assessment - Key Findings

[illegible]

Example Table 7

Findings	What phase(s) of the life course is (are) the focus of this finding?	What data informed this finding?
African American women in MI are more likely to report that their health is fair or poor and 33% of our county's population is African American.	Pre- and inter-conception	State-level BRFSS, % of African American women between 20-44 reporting their general health was fair or poor
When compared with the State, women in our county are less likely to gain the recommended amount of weight during pregnancy.	Perinatal	Vital Records, % of women in the county with a singleton live birth who achieved recommended weight gain during pregnancy

Group Sharing!!

1. Have any of you participated in a Community Status Assessment before?
2. Could you speak on your experiences with the process?

Additional Notes

Just a Reminder

We will be providing you with the *vast majority** of the data you will need to complete the health status assessment

**There will be a few measures you will need to search for on your own.*

These will be highlighted in **YELLOW*

Technical Assistance

If you need help interpreting trends or using your data, MPHI will be available for Technical Assistance.

You can contact Lauren LaPine at llapine@mphi.org or (517) 324-8368.

Thank you to MDHHS Epidemiology

We would like to acknowledge MDHHS Epidemiology for providing us with the majority of the data for each Health Department!

In addition, we request that all further questions for this process be directed to MPHI (Lauren) or MDHHS (Trudy or Robin). If there are further questions/requests for the Epidemiology staff, we will coordinate the process.

Next Steps

Receiving Data Workbooks

Those LHDs who have submitted steps 1-3 of the LMCH assessment will receive their spreadsheets **first**.

Each LHD will receive 2 data workbooks:

1. A workbook containing state level data
2. A workbook containing data specific to the counties involved with your assessment

Next Steps

- Completed steps 4 & 5 submitted to MPHI by **June 23rd**
 - Email Submissions to:
 - Lauren LaPine, llapine@mphi.org
- Next Webinar: **March 29, 1-3pm**

Questions?

Thank You!
