

Varnish! Michigan Program (Formerly Babies Too!) 2019-2020

Rationale:

- Tooth decay is the most common chronic disease of childhood. The pain, suffering and costs of treating primary teeth for dental decay are preventable.
- By performing a caries risk assessment, anticipatory guidance and applying fluoride varnish as soon as the primary teeth erupt much of the Early Childhood Caries (ECC) process can be prevented.
- Medicaid is reimbursing medical providers for providing oral screenings and applying fluoride varnish to their 6 mos.-5 age child patients. Physicians, nurse practitioners, and physician assistants are recognized Medicaid billable medical providers for these two oral health services.
- The Michigan Department of Health and Human Services, through the Varnish! Michigan Program, will supply a pre-determined amount of free fluoride varnish as a start-up incentive through an agreement with the agency and MDHHS, to medical providers to use on this age group with special consideration for children 0-3 yrs. Oral screening data will be collected by the agency for MDHHS use for as long as free varnish is supplied.

Objectives:

- To encourage medical providers to incorporate oral screenings and apply fluoride varnish to infant and toddler teeth during office visits.
- Referral to a dental home by age 1 is indicated, especially for children in the high or moderate risk category.
- Free fluoride varnish is to be supplied by MDHHS- Oral Health Unit as a start-up incentive and as supply is available. (Not to exceed 200 applications in a 3 month period). Training, education resources, and technical assistance will be provided free too, as long as the agency participates for a maximum of 3 years.
- An online or onsite training is recommended to be able to bill Medicaid and **required first** to participate in the Varnish! Michigan Program: **Smiles for Life Course 6**. See: [On-Line Oral Health Training for Medical Providers](#)
- **An additional Varnish! Michigan Program training is required for physicians and other staff involved in the MDHHS fluoride varnish program. This is offered either on-site or via a live webcast.**
- Medical provider agencies participating in the Varnish! Michigan Program will be required to collect certain oral screening data on each child fluoride varnish is applied. Quarter reports are mandatory and used for surveillance purposes for the state of Michigan. This data will be used by MDHHS for the enhancement of future programs in Michigan.
- If your agency is interested or you have questions, please contact Susan Deming.
