

**Highway Bridge Report - Listed By Route**

The Michigan Department of Transportation regularly inspects the thousands of bridges and overpasses on our state's highways. MDOT employs more than 20 bridge inspectors who have specialized training and work in teams of two. They evaluate bridges and assign condition ratings using a rating system established by the federal government.

**What's included in the bridge condition report?**

The most recent report shows the condition scores and sufficiency ratings for all highway bridges longer than 20 feet, as of May 18, 2017.

**Stats at a Glance:**

This report lists 4478 bridges, of which 228 are structurally deficient. This data is current as of May 18, 2017.

**NOT covered in this report:**

- Structures 20 feet or less in length. MDOT inspects these shorter structures, but they are not included in this report.
- The Ambassador Bridge in Detroit. This bridge is privately owned and operated.
- The Mackinac, International and Blue Water bridges are inspected annually, exceeding federal requirements. These three bridges are managed by bridge authorities, and their ratings are not included in the report posted to the Web.

**Contents:**

Condition of state highway bridges listed by route..... 2

What is NHS Status..... 143

Bridge condition definitions..... 143

Bridge structural elements..... 144

National Bridge Inventory rating scale.....145

## What is NHS Status?

The Highway Bridge Report indicates which routes are included in the National Highway System (NHS). The NHS is approximately 160,000 miles (256,000 kilometers) of roadway important to the nation's economy, defense, and mobility. It includes:

- The Interstate Highway System
- Routes that provide access to a major port, airport, or public transportation facility
- Routes that provide access between major military installations
- Routes that are important to the United States' strategic defense policy

You can learn more about the NHS and view maps of the system at the Federal Highway Administration Web site:

<http://www.fhwa.dot.gov/hep10/nhs/>

## Bridge Condition Definitions

The Federal Highway Administration has established definitions for the terms below. Structural deficiency ratings are based on the National Bridge Inventory ratings scale.

**Structurally Deficient (SD) Status** - A highway bridge is classified as structurally deficient if the deck, superstructure, substructure, or culvert is rated in "poor" condition (0 to 4 in the NBI rating scale). A bridge can also be classified as structurally deficient if its load carrying capacity is significantly below current design standards, or if a waterway below frequently overtops the bridge during floods.

## Bridge Structural Elements

Using the National Bridge Inventory rating scale (established by the FHWA), bridge inspectors rate these structural elements for each bridge:

**Deck:** The portion of the bridge that supports the superstructure and distributes all bridge loads to the ground surface.

**Superstructure:** The portion of the bridge that supports the deck and connects one substructure element to another.

**Substructure:** The portion of the bridge that supports the superstructure and distributes all bridge loads to the ground surface.

**Culvert:** (not pictured) A pipe or small structure used for drainage under a road, railroad, or other embankment. A culvert with a span length greater than 20 feet is included in the National Bridge Inventory and receives a rating using the NBI scale.

## National Bridge Inventory Rating Scale

Inspectors rate Michigan's bridges using the National Bridge Inventory (NBI) 0 to 9 scale. Inspectors give a rating to each of a bridge's primary elements: deck, superstructure, and substructure.

### 9 - EXCELLENT CONDITION

8 - VERY GOOD CONDITION - no problems noted.

7 - GOOD CONDITION - some minor problems.

6 - SATISFACTORY CONDITION - structural elements show minor deterioration.

5 - FAIR CONDITION - all primary structural elements are sound, but may have minor corrosion, cracking, or chipping. May include minor erosion on bridge piers.

4 - POOR CONDITION - advanced corrosion, deterioration, cracking, or chipping. Also, significant erosion of concrete bridge piers.

3 - SERIOUS CONDITION - corrosion, deterioration, cracking and chipping, or erosion of concrete bridge piers have seriously affected deck, superstructure, or substructure. Local failures possible.

2 - CRITICAL CONDITION - advanced deterioration of deck, superstructure, or substructure. May have cracks in steel or concrete, or erosion may have removed substructure support. It may be necessary to close the bridge until corrective action is taken.

1 - "IMMINENT" FAILURE CONDITION - major deterioration or corrosion in deck, superstructure, or substructure, or obvious vertical or horizontal movement affecting structure stability. Bridge is closed to traffic, but corrective action may put it back in light service.

0 - FAILED CONDITION - out of service - beyond corrective action.

N - Not applicable

**NOTE:** The Highway Bridge Report shows some bridges built in 2015, 2016, and 2017 as structurally deficient. These bridges are either under construction or the construction has recently been completed and the updated bridge inspection report has not yet been entered into the database.
