

Design Services for Bridge Removal and Replacement QA1
Requisition 1878
11/4/2015

JN 126818D: I-75 over Goddard Road and Sexton-Kilfoil Drain, (B03 of 82191) City of Allen Park, Wayne County, Michigan

Question: Item Z on page 7 of 17 in the RFP talks about ITS design. Is the design of the ITS system part of this project? I didn't see any ITS PPMS Task check nor did I see a prequal listed for ITS. Or, is the ITS system design being performed by others and this project merely needs to accommodate it?

Answer: There is no ITS prequalification listed at this time. Please see revised RFP.

Question: Will MDOT or the consultant team be performing the bridge hydraulic analysis and scour countermeasure design at Sexton Kilfoil Drain?

Answer: MDOT will perform the bridge hydraulic analysis and scour countermeasure design. The hydraulics prequalification was setup as precautionary due to the tight schedule in case the situation/need arises so the schedule can be maintained.
