

Responses to questions received related to Requisition #1398:

- Q1. Would you please give us some guidance as to what are duties and responsibilities will be in this work.
- A1. You would be responsible for taking mobile retro-reflectivity readings using 30 meter geometry on longitudinal pavement markings on state owned roadways in the Regions and TSCs listed in the RFP. You would report out retro-reflectivity in the format shown in the RFP. You would be responsible for defining a condition assessment method for the markings and using this method to rate the longitudinal pavement markings. You would report out this information according to your condition assessment method. Please refer to the RFP for additional duties and responsibilities.
- Q2. We have a system that uses photogrammetry to measure line and pavement marking retro at the 30 meter criteria. Is there any possibility of allowing our system to bid on this project?
- A2. Yes. MDOT has reviewed the technical information provided and will allow you to bid on this project.
