APPENDIX D ~~RCTV/KK~~
WORKSHOP PRESENTATIONS

A range of proven techniques for the sliding of bridges and structures

Presented by Brent Archibald, P.Eng.

Acknowledgement

Some of these projects were carried out by
others than Delcan

A Historical Note: Jacques Cartier Bridge - Montreal

Bridge Sliding is not a new initiative:
On October 20, 1957 a 3000 ton truss was
laterally rolled into position as a part of the
raising of the bridge for the St. Lawrence
Seaway. This is the same weight as the
Dundas Street Bridge in Trenton, Ontario
(presented later).

Projects for Discussion

- ◆ Dundas Street Bridge – lateral slide
- ◆ Don Valley Parkway Underpass – jacking and mining
- ◆ West Toronto Diamond – lateral slide

Common constraints which have lead to the implementation of non-traditional construction methods:

- ◆ Maintenance of traffic / operations
- ◆ Maintenance of utilities
- ◆ Maintenance of transportation structures and buildings

Inspiration for Dundas Street Bridge

Qauibrucke Bridge, Switzerland

- ◆ River Limat at Zurich
- ◆ 7800 tonnes
- ◆ 54 hour slide performed by VSL
- ◆ Both bridges slide at once
- ◆ Flexible foundations
- ◆ 20 months saved

Inspiration for Complex Bridges

Bridge Near Landquart, Switzerland

- ◆ Arch Bridge
- ◆ 112 meter (367 ft) span
- ◆ Dual plane guiding system

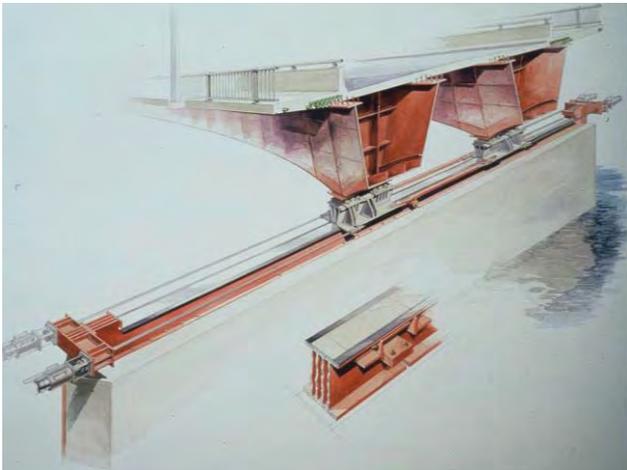

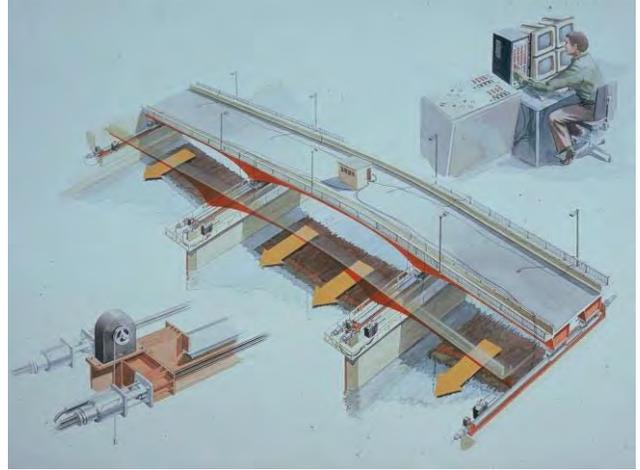

Dundas Street Bridge

- ◆ 3 Span Continuous Bridge
- ◆ 3000 tonnes
- ◆ 4 hour slide
- ◆ 10 meter (33 ft) slide
- ◆ 8 day possession
- ◆ Year 1990

Computer Controlled Jacking System

Delcan

Dundas Street Bridge

System Characteristics

- ♦ Integration with overall bridge design
- ♦ Communication system
- ♦ Central computer control
- ♦ Precision hydraulic jacking system
- ♦ Safety and backup system
- ♦ Maximum cost-effectiveness

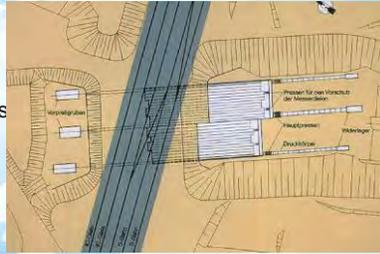

Delcan

Inspiration for DVP Underpass

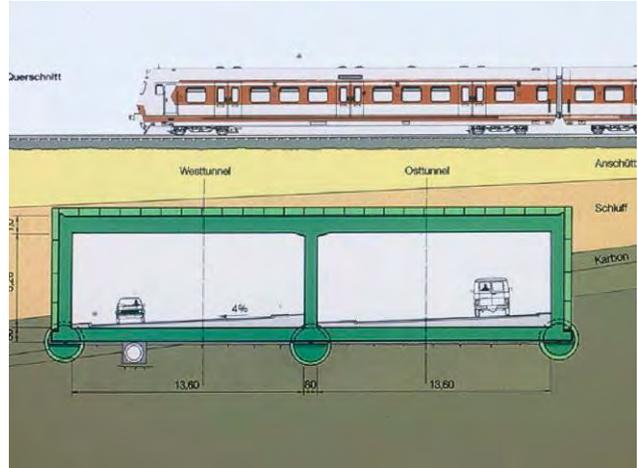

Bochum Underpass

- ◆ Twin cell
- ◆ Totally shielded
- ◆ 5 electrified rail lines
- ◆ Long stroke jacks
- ◆ 3 slide paths
- ◆ Mixed face

Delcan

Don Valley Parkway CPR Underpass

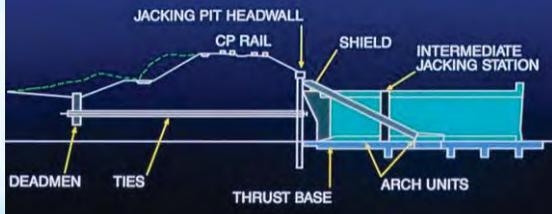

- ◆ Single cell
- ◆ 2000 tonnes
- ◆ 11 day jacking and mining operation
- ◆ 30 meter (98 ft) slide

Don Valley Parkway CPR Underpass

SECTION PRIOR TO JACKING

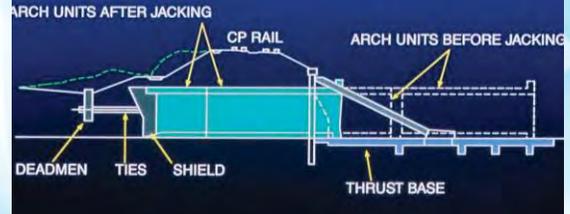

Delcan

Don Valley Parkway CPR Underpass

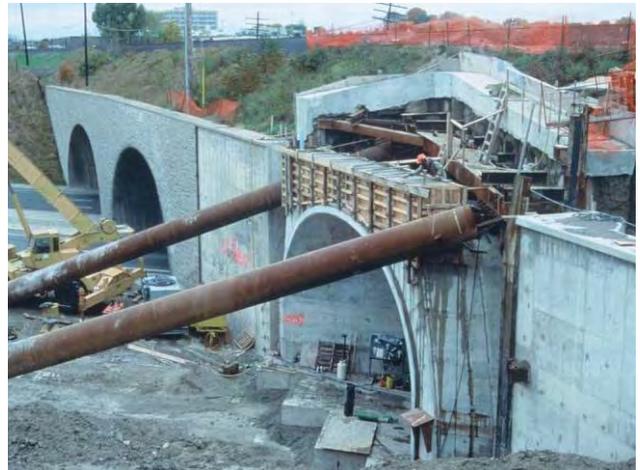

SECTION AFTER JACKING

Delcan

Don Valley Parkway CPR Underpass

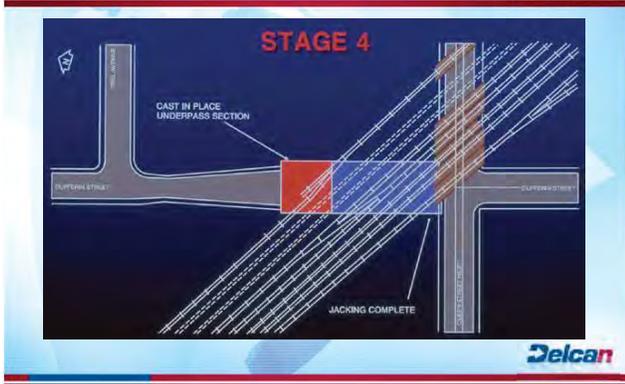

Conclusion

- ◆ Construction completed successfully
- ◆ No damage to existing structures
- ◆ No interference with CP Rail traffic
- ◆ No effect on Don Valley Parkway traffic
- ◆ 6 months ahead of schedule
- ◆ Introduction of new technology to North America
- ◆ Potential application at major transportation corridors

Dufferin Underpass - Toronto

Not everything gets to slide

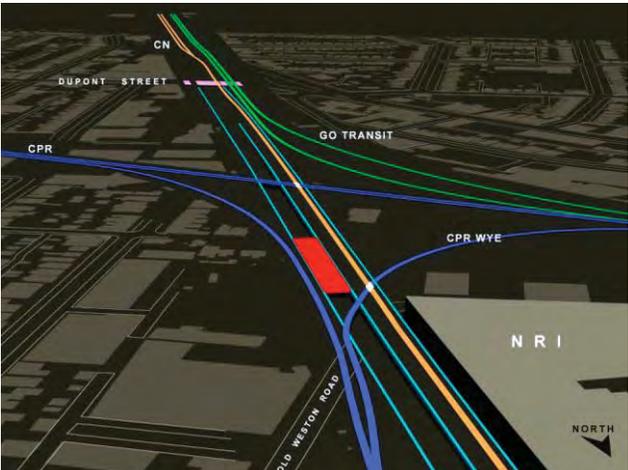

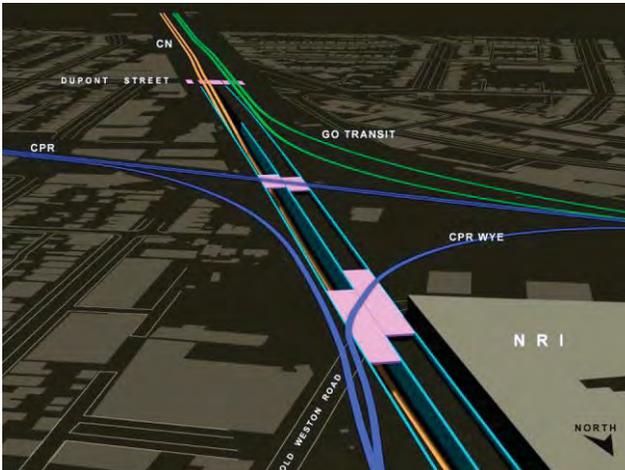

West Toronto Diamond

- ◆ 4 pre-stressed /post-tensioned slab bridges
- ◆ 5m test slides
- ◆ NOTO (2 bridges)
 - 1800 tonnes each
 - 28m (92 ft) slide in 2 hours
 - 24 hr track possession
- ◆ OWR (2 bridges)
 - 4500 tonnes each
 - 80m (262 ft) slide in 6 hours
 - 40 hour possession

West Toronto Diamond

- ♦ Tandem jacks
 - Est. Rate = 20m/hr (65 ft/hr)
- ♦ Single jack
 - Est. Rate = 10-12m/hr (33-40 ft/hr)
- ♦ Bronze on Steel (friction)
 - 15% static
 - 8% dynamic

Shop Trial / Friction Test (cont)

Friction

- ◆ Greased
 - $\mu = 0.074$ (static)
 - $\mu = 0.059$ (dynamic)

- ◆ Oiled
 - $\mu = 0.11$ (static)
 - $\mu = 0.077$ (dynamic)

Delcan

West Toronto Diamond

Conclusion

- ◆ First two slides completed successfully, second two scheduled for summer 2014.
- ◆ Limited interference with CP Rail traffic
- ◆ Eliminated need for track diversion, property and relocation of railway infrastructure.

- Webinars
- Scanning Tours
- Project Reviews
- Project Showcases
- Regional Peer Exchanges

ABC and PBES?

Definition of PBES

PBES are structural components of a bridge that are built offsite, or adjacent to the alignment, and includes features that reduce the *onsite construction time* and *mobility impact time* that occurs from *conventional construction* methods.

Element vs. System?

Elements

Systems

What are PBES?

Elements: single structural component of a bridge

- Deck Element
- Beam Elements
 - “Deck” Beam Elements
 - “Full-Width” Beam Elements
- Pier Elements
- Abutment & Wall Elements
- Miscellaneous Elements

What are PBES?

Systems: - entire superstructure,
- entire superstructure & substructure,
- total bridge

	6-Other Related Information
	120419_ABC_New2_LA 3249- Well Road updated

I-93 Bridge over Loudon Road (Route 8)

Location	City of Concord		
State	New Hampshire		
Owner	New Hampshire Department of Transportation		
Year ABC Built	2010		
State ID #	1574243		
Federal ID #	not available		
Coordinates	Latitude: 45.205816	Longitude: 71.539125	
Contact Person	Ronald L. Finner, Jr., P.E. Project Engineer, Bureau of Bridge Design New Hampshire Department of Transportation Phone: 603-271-2711 Email: rlfinner@dot.state.nh.us		
Mobility Impact Time	ABC: weekend closure (20 hours) to replace each superstructure (total 3-month construction period)	Conventional: night closures	
Impact Category	Tier 1	Tier 2	Tier 3
Benefits	Reduced on-site construction time was important to avoid construction during the summer when two NASCAR Sprint Cup races at the nearby NH Motor Speedway generated increased traffic.		
Description	<ul style="list-style-type: none"> • 42-ft long x 60-ft x 8-ft wide slope-stable bridge • Urban location • Average Daily Traffic count: 70,000 on I-93; 25,000 on Loudon Road • Traffic not affected when bridge is constructed continuously. Full temporary closure of temporary bridge required. <p>Existing Bridge: The bridge consists of two adjacent two-lane superstructures supported by abutment structures. The bridge carries 1-05 northbound and southbound over the Route 8 (Loudon Rd). Each superstructure has two span bays with 7-1/4 spans in total. The approach decks were deteriorated and required replacement.</p> <p>Construction Methods: The replacement of the south-bound portion (one span) was completed in April 2010. Loudon Rd was closed to traffic of 3-00 am and reopened at 6:00 am. I-93 was then reduced to one lane and diverted to the northbound deck. The northbound deck carried full amount of through and local traffic until southbound full span replacement. Full temporary height of 11 ft was maintained and required to be in place throughout deck building. After full height of the 8-ft remainder of the structure.</p> <p>After final channel height, the existing deck and six steel girders were removed and new girders were placed. Full depth full width concrete abutment deck panels were then cast on the new girders. The panels were post-tensioned and a cast in place concrete base was placed at both ends of the span. Both roadway ends required to have 100% of total construction at 7:00 PM on 7/18/10. The final deck was completed during a 10-15 day period.</p>		

U.S. Department of Transportation
Federal Highway Administration

National ABC Project Exchange User's Guide

Intro

The Accelerated Bridge Construction (ABC) Project Exchange is a nationwide repository of projects that have incorporated Prefabricated Bridge Elements and Systems (PBES) with other innovative strategies to accomplish the objects of ABC. The purpose of the site is to share detailed project information and experiences among bridge practitioners located throughout the United States and abroad.

Development and management of this site is through a collaborative effort between the Federal Highway Administration (FHWA) and the American Association of State Highway and Transportation Officials (AASHTO).

The posted information is made available to anyone who has registered and requested site access.

This User's Guide provides detailed information and instructions in the following areas:

- Site structure & navigation
- How to register & request site access
- Using the ABC Project Exchange
- Support

Disclaimer

The State Departments of Transportation (State DOT's) who submitted their information to help develop this site have approved the material contained in the ABC Project Exchange for posting and distribution. All attempts are made to assure the accuracy of the content posted; however, the FHWA, AASHTO, State DOT's and any person or organization that has assisted in collecting and compiling the posted information are not responsible for the accuracy of the material, or the manner in which it is interpreted or used.

Site Structure and Navigation

Site Structure and Navigation

The information in the **ABC Project Exchange** is housed on the **Innovation Exchange** - which is a shared platform for discipline specific groups to exchange information as a means to advance innovations into the transportation industry.

The **Innovation Exchange** is a closed community that resides on the **FHWA's External Collaboration Portal** - which is hosted on the U.S. Department of Transportation's Research and Innovation Technology Administration site (**DOT's RITA site**).

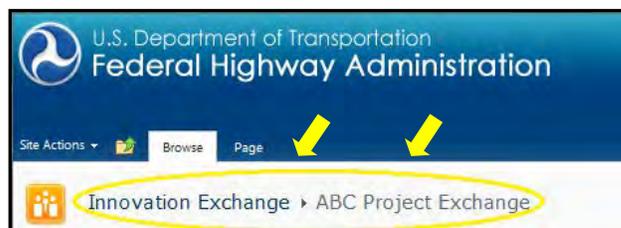

The following demonstrates the hierarchy of the site structure...

DOT's RITA site

FHWA's External Collaboration Portal

Innovation Exchange
ABC Project Exchange

Note: You will be required to **Sign In** when:

- requesting site access to the **Innovation Exchange**
- accessing the **ABC Project Exchange** from the **FHWA External Collaboration Portal**

After successfully signing in, you will be sent to the **DOT's RITA site**. As shown above...

- Select the "**Federal Highways Sites**" tab to return to the **FHWA External Collaboration Portal**.
- Scroll down the page and select the **ABC Project Exchange** link to go directly to the **ABC Project Exchange** welcome page.

Banner headings similar to what is shown above are captioned in yellow throughout this User's Guide as a navigational aid.

How to Register and request Site Access

Privacy Policy

Your contact information will be required for site access to the ABC Project Exchange. Apart from your first and last name, no other contact material will be posted on the ABC portion of the Innovation Exchange. Sharing of contact information that is not approved for posting on the ABC Project Exchange is considered illegal. For more information related to the privacy policy for the ABC Project Exchange go to the following link: <https://www.transportationresearch.gov/dot/fhwa/SitePages/ContactUs.aspx>.

Registration & Site Access

Access to the **National ABC Project Exchange** is a sequential, two-step process. An overview of the process is shown below:

Step 1: Register an account on the **FHWA's External Collaboration Portal**
[Registration approval occurs within 24 hours]

Step 2: Request Access to the **Innovation Exchange** – which is a closed Community on the **FHWA's External Collaboration Portal** that houses the **ABC Project Exchange**
[Site Access approval occurs within 24 hours]

Note: Registration approval in Step 1 must be received prior to proceeding to Step 2.

Step 1: Registration

- Go to the **FHWA's External Collaboration Portal** Registration link:
<https://www.transportationresearch.gov/dot/fhwa/SitePages/register.aspx>
- Enter the information requested as shown below.

The screenshot shows the registration page for the FHWA's External Collaboration Portal. The page title is "Register an Account". Below the title, there is a red note that says "All Fields are Required". The form contains four input fields: "First Name:", "Last Name:", "Email Address:", and "Organization: (if None, enter None)". At the bottom of the form is a "Register" button. The page header includes the U.S. Department of Transportation Federal Highway Administration logo and a search bar. The breadcrumb trail shows "FHWA > register". A yellow box highlights the top header area, and yellow arrows point to the "register" breadcrumb and the "Register" button.

- For security purposes, two emails will be provided within **24 business hours**. They will include a UserID and Temporary Password required for Step 2.
- Proceed to Step 2. **Site Access** (next page)

Step 2: Site Access

- After a UserID and password is provided from Step. 1, go to the **FHWA's External Collaboration** site: <https://www.transportationresearch.gov/dot/fhwa/default.aspx>
- As shown below, select the **"Sign In"** icon located in the upper right hand corner of the screen...

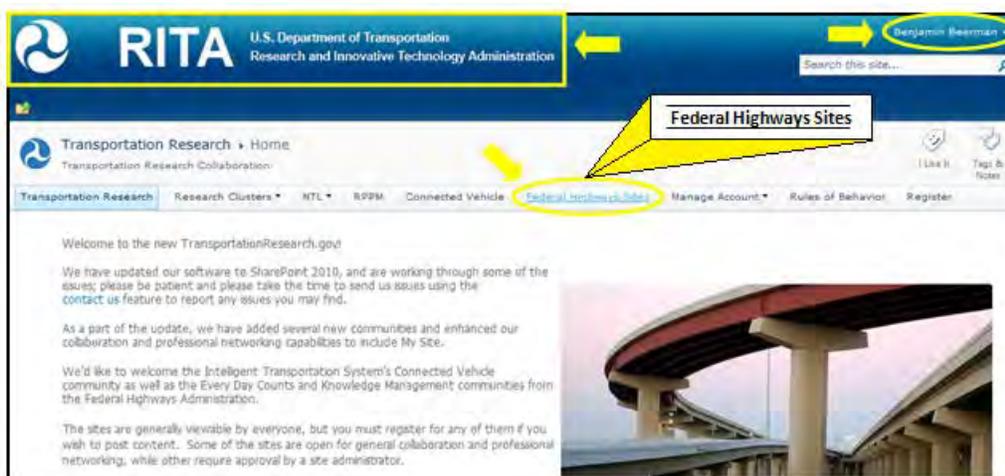

- and the Login Screen as shown below will appear.
- Enter the Information Requested using the UserID and Password provided in Step 1.
- Select the **"Submit"** icon.

A screenshot of the login screen. It features the FHWA logo and the word "Login". There are two input fields: "UserID:" and "Password:". Below the fields is a "Submit" button. At the bottom, there is a link: "Forgot your password? Click [here](#) to reset your password."

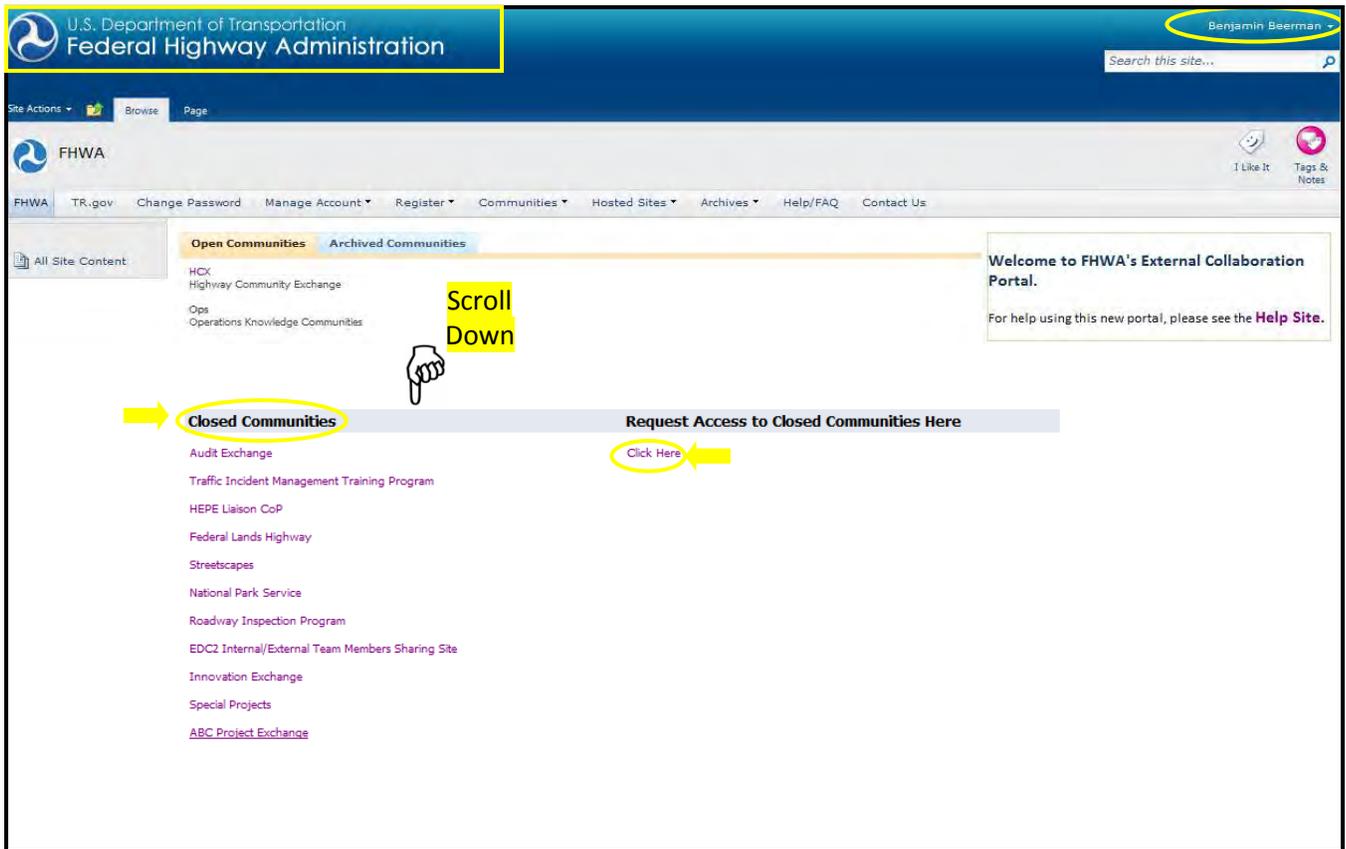

- As shown below, you will be sent to the **DOT's RITA** site.

Note: your user name shown to the right of the screen indicates that you are **Signed In**

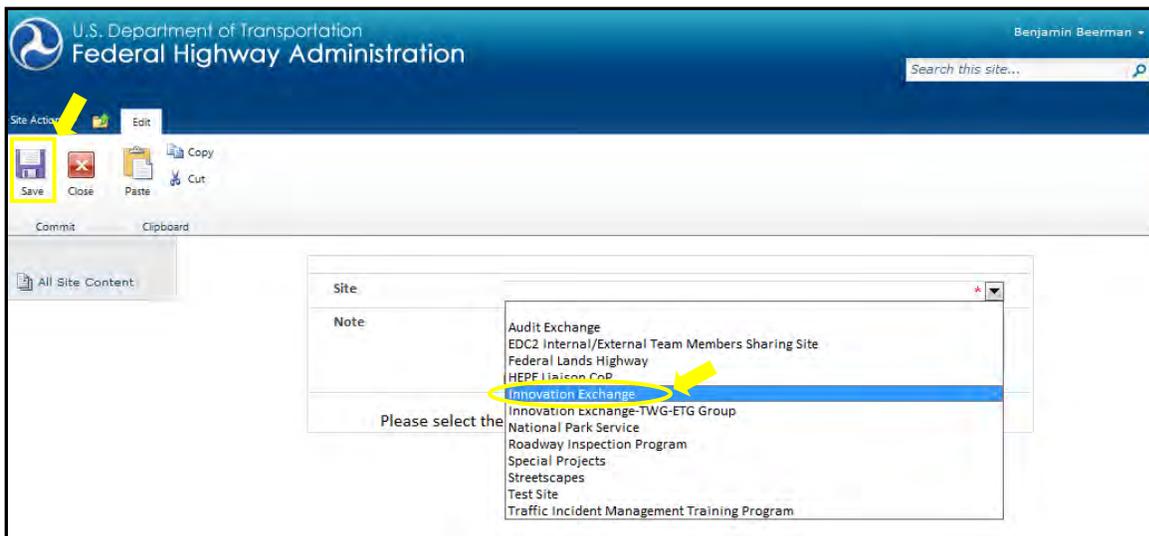

- Select the **"Federal Highways Sites"** tab as shown....

- to be sent back to the **FHWA's External Collaboration Portal** as shown below.
- Scroll down the page to the "**Closed Communities**" heading and
- **Request Site Access** to the **Closed Communities** by selecting the "**click here**" link as shown.

- Select "**Innovation Exchange**" from the pull down menu as shown below...
- In the "**Note**" box type the following: "**Request access to the ABC Project Exchange**"
- Select the "**Save**" icon.

- A second email confirming **Access** to the **Innovation Exchange**, which houses the **ABC Project Exchange** will be provided within **24 business hours**.

Registration and Site Access is now complete.

Once an email confirming you have access to the Innovation Exchange is received, you will be allowed to access to the National ABC Project Exchange.

A partial view of the ABC Project Exchange welcome page is shown below...

The screenshot shows the top portion of a web browser displaying the Federal Highway Administration's website. The header includes the FHWA logo and the text "U.S. Department of Transportation Federal Highway Administration". A search bar is visible in the top right corner. Below the header, there is a navigation menu with items like "FHWA", "TR.gov", "Change Password", "Manage Account", "Register", "Communities", "Hosted Sites", "Archives", "Help/FAQ", and "Contact Us". A yellow box highlights the "Accelerated Bridge Construction (ABC) Project Exchange" link in the navigation menu, with a yellow arrow pointing to it. Another yellow arrow points to the "Page" tab in the site actions menu. The main content area displays the text: "Welcome to the National Accelerated Bridge Construction (ABC) project exchange website. This site provides access to a nationwide repository of ABC projects that have incorporated Prefabricated Bridge Elements and Systems (PBES) and other innovative strategies to accomplish the objectives of ABC."

Using the ABC Project Exchange

- Contents and Organization
- Sign In and Navigation
- Search for project information
- Download and View documents and photos
- The Project Summary Report
- Support

Contents and Organization

The **ABC Project Exchange** contains detailed project information organized by state directory. Within each state directory are project folders that include a **Project Summary Report** (in a MS Word document) and information organized in the following subdirectories:

1. Photos
2. Contract Plans
3. Specifications
4. Bid Tabs
5. Construction Schedule
6. Other related information
 -  Project Summary Report

Note: If a subdirectory is not shown, the information is not available.

To access this information, you must be **Registered** and have **Site Access** to the **Innovation Exchange**.

Sign In and Navigation- after Registration and Site Access

- Go to the **FHWA's External Collaboration Portal** at the following link:
<https://www.transportationresearch.gov/dot/fhwa/default.aspx>
- Select the **"Sign In"** tab as shown below.

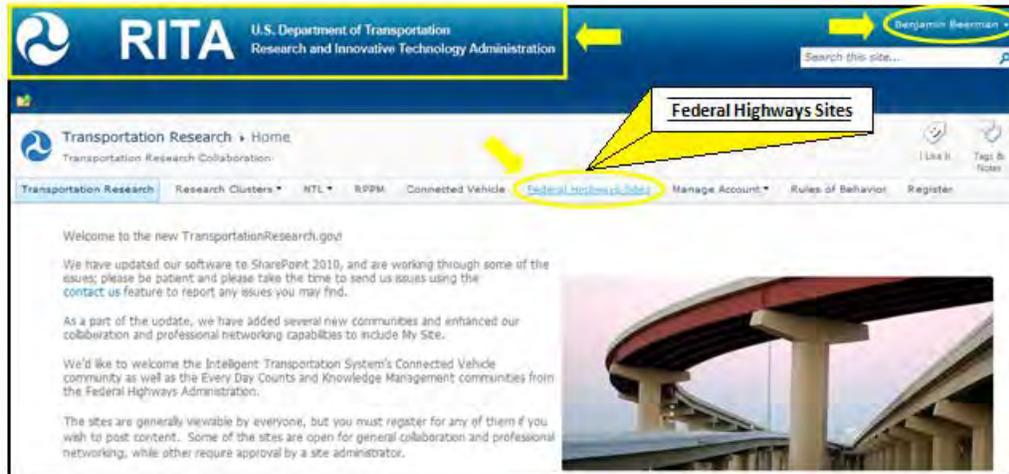

- The following Login window will appear.
- Enter your UserID and Password and click the **"Submit"** icon.

- You will be sent to the **DOT's RITA** site as shown below.

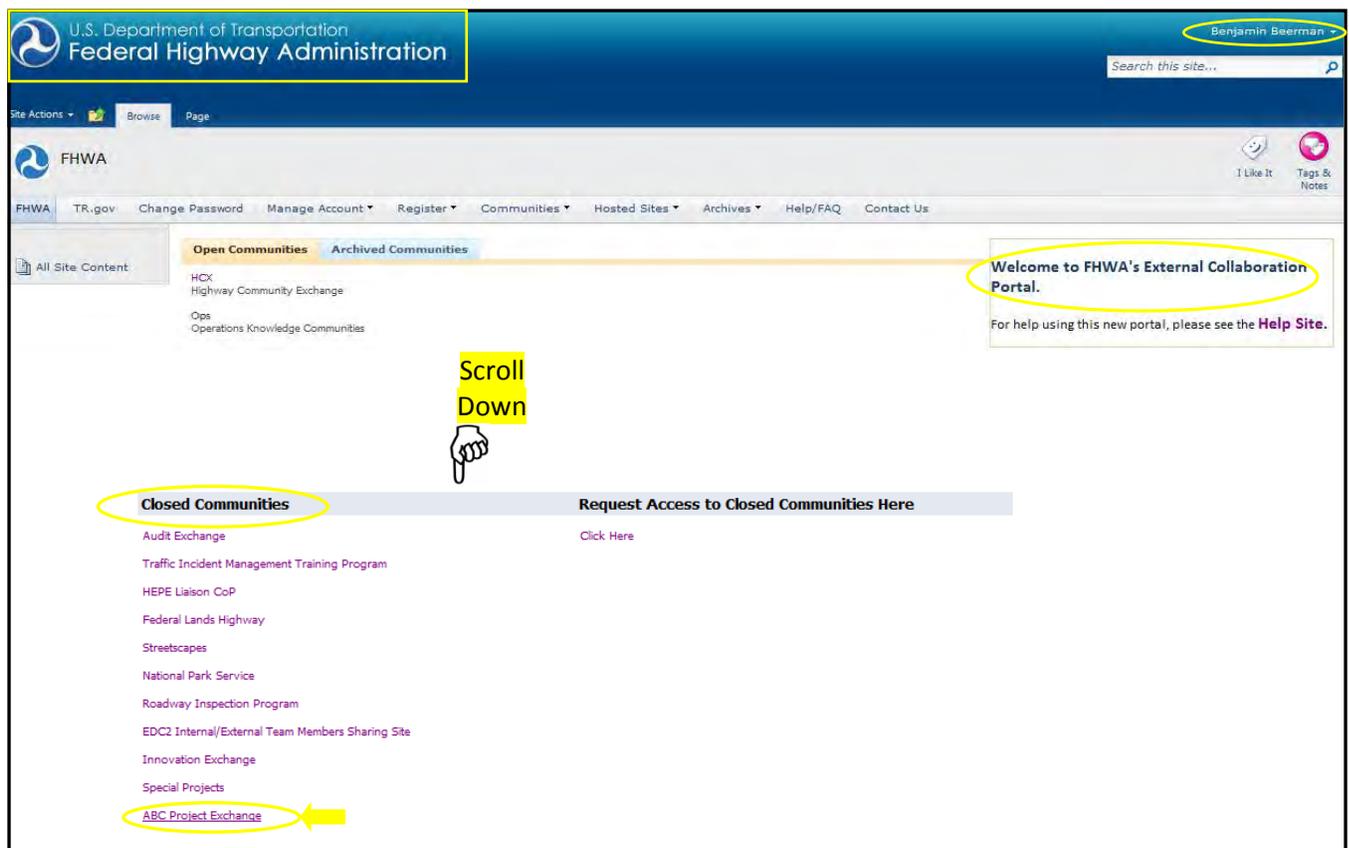

Note: Your user name is shown in the upper right indicating that you are **Signed In**

- Select the **"Federal Highways Sites"** tab as shown.

- Which will bring you back to the **FHWA's External Collaboration Portal** as shown below.

- Scroll Down to the **"Closed Communities"** heading and select the **ABC Project Exchange** tab as shown...

- To arrive at the **ABC Project Exchange** Welcome page

A partial view of the ABC Project Exchange welcome page is shown below...

A screenshot of the ABC Project Exchange welcome page. The page header includes the U.S. Department of Transportation Federal Highway Administration logo and the name Benjamin Beerman. A search bar is located in the top right. The main navigation bar includes 'Site Actions', 'Browse', and 'Page'. Below this, the breadcrumb trail shows 'Innovation Exchange > ABC Project Exchange'. A secondary navigation bar contains links for 'FHWA', 'TR.gov', 'Change Password', 'Manage Account', 'Register', 'Communities', 'Hosted Sites', 'Archives', 'Help/FAQ', and 'Contact Us'. The main content area features a yellow box around the heading 'Accelerated Bridge Construction (ABC) Project Exchange' with a yellow arrow pointing to it. Below the heading is a welcome message: 'Welcome to the National Accelerated Bridge Construction (ABC) project exchange website. This site provides access to a nationwide repository of ABC projects that have incorporated Prefabricated Bridge Elements and Systems (PBES) and other innovative strategies to accomplish the objectives of ABC.'

Search for project information

There are two options to search for project information in the ABC Project Exchange. An overview, and step-by-step instructions is provided below:

Option 1: Uses a **Microsoft Excel Spreadsheet** to give you the ability to search for specific technologies using *key words* from pull down menus (direct method).

Option 2: By **State** directory – which requires you to navigate through individual project folders and subdirectories (indirect method).

Option 1: Search using the Microsoft Excel Spreadsheet

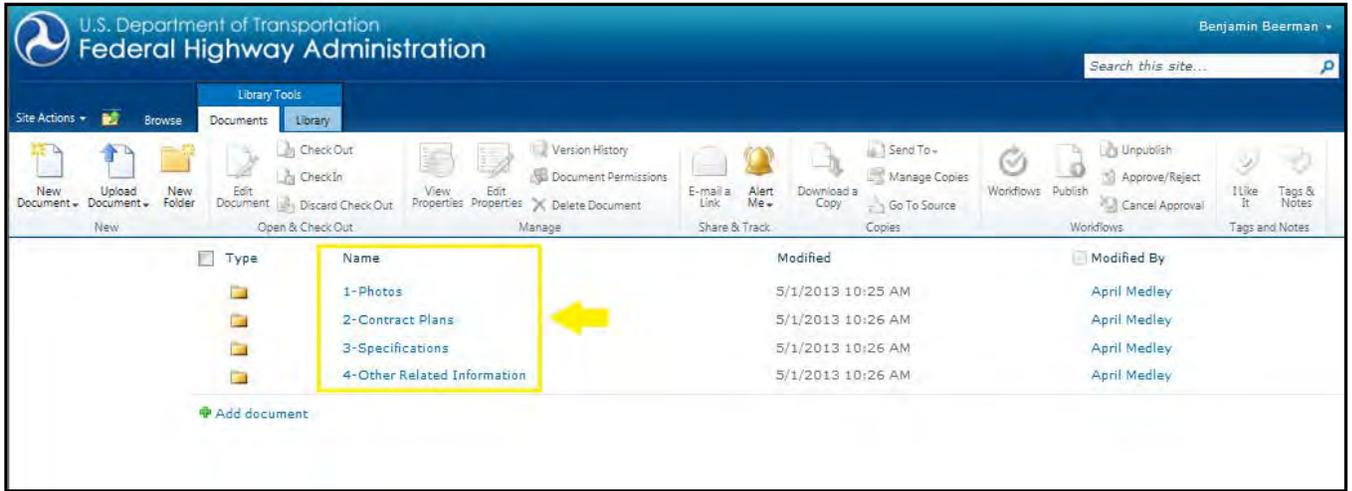

- On the **ABC Project Exchange** welcome page, select the **MS Excel Spreadsheet** link (picture not shown)
- The spreadsheet will open as shown below.
- Search for specific technology using the *key words* in the pull down menus available in the spreadsheet. A glossary of key terms is on the **ABC Project Exchange** welcome page.
- Click the **“Link”** in the spreadsheet to go directly to the project folder.

(note): You must be **Signed In** to activate the spreadsheet hyperlinks.

Below is a screenshot of the spreadsheet filtered for “Modular Decked Beams”....

	B	C	D	L	M	Available Information						AG	AH	AI	AM

Selecting the **“Link”** in the spreadsheet will take you to the project folder that contains the available detailed information. An example is shown below...

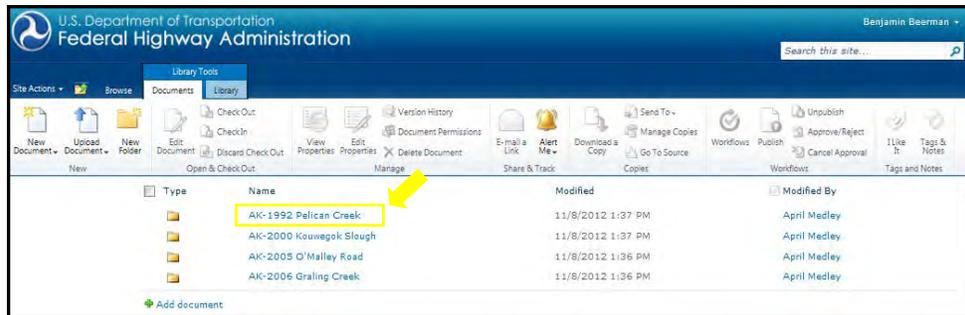

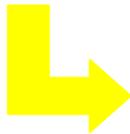

Option 2: Searching by State Directory

- On the **ABC Project Exchange** welcome page, select the **“ABC projects by state”** link

Shown below is the State directory. Selecting a State directory will take you to the posted projects folders. Within each state project folder is the Project Summary Report (MS Word document) and the subdirectories that contain the available project information. An example is shown below...

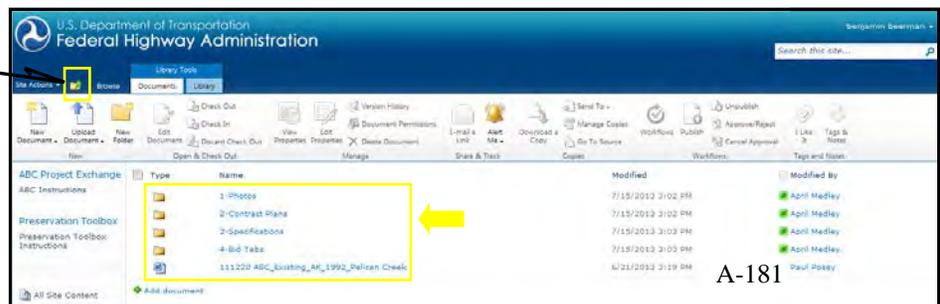

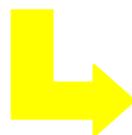

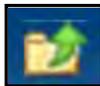

State Directory

Project Folders

Project Subdirectory

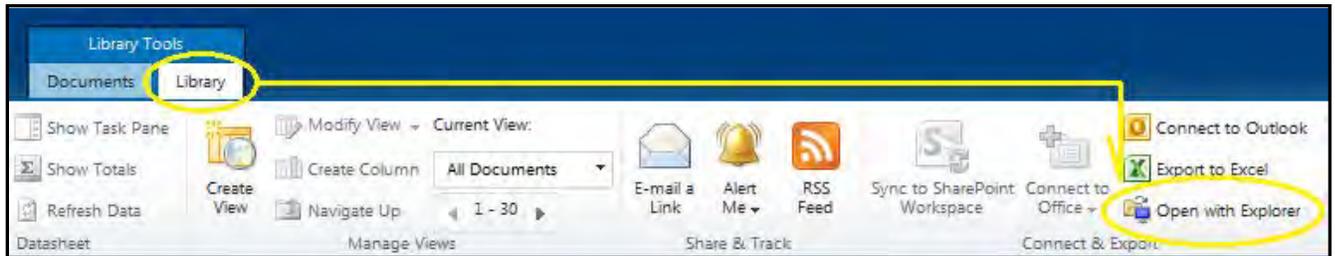

Note: the “folder” icon will allow you to go back.

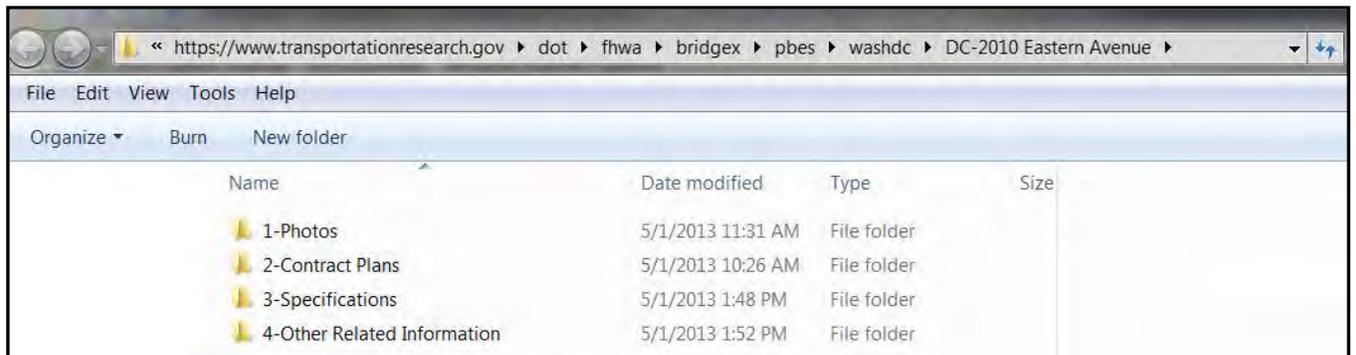

Download and view documents and photos:

All material, including documents and photos, can be viewed and downloaded to your computer.

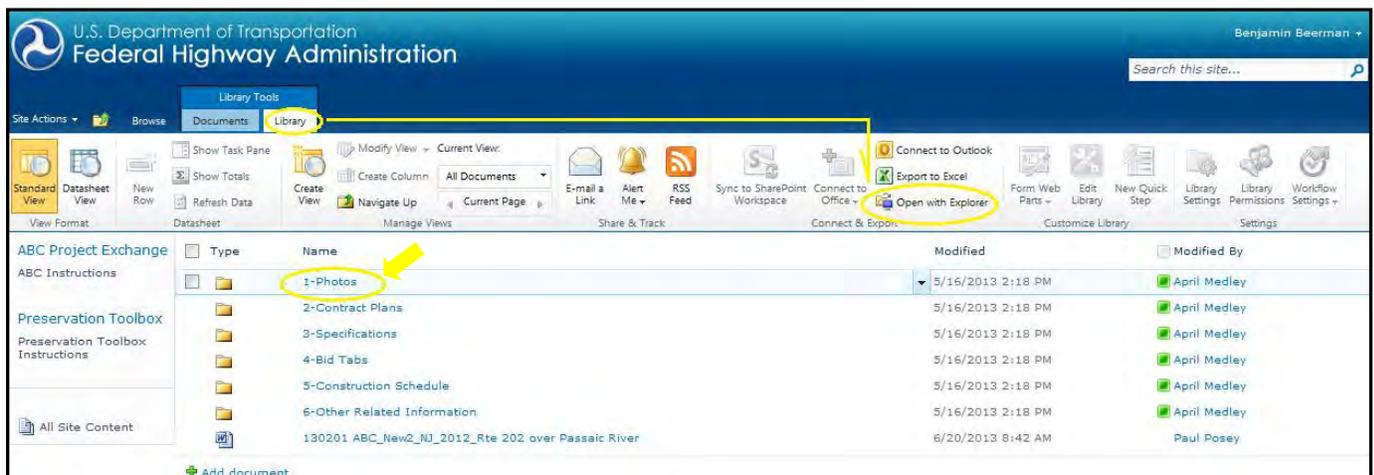

- **To download documents:** From the **Library Tool** bar shown below, click **Open with Explorer**, select the directories, files, or photos needed.
- Material can be **dragged and dropped** to your computer.

Below is a screenshot showing the available information that can be downloaded using the **Open with Explorer** feature. Select the material needed to **drag and drop** them to a location on your computer.

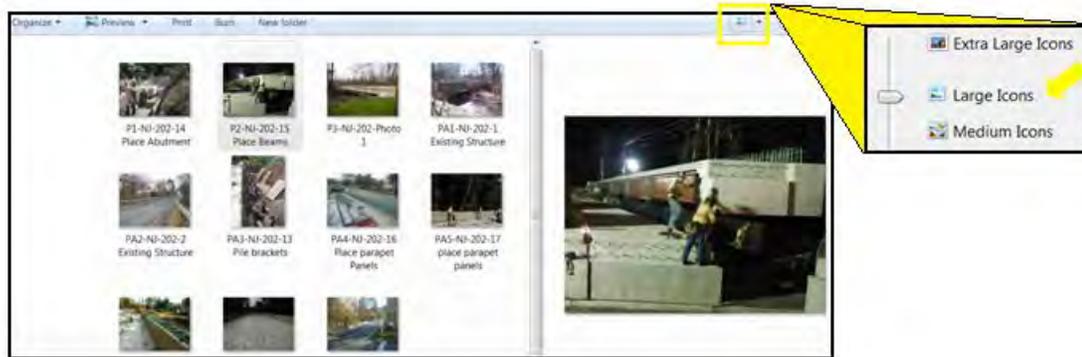

- **To View Photos:** Go to any Photo directory, select the **Open with Explorer** feature.

- Select the “**Large Icon**” option in your Windows Explorer as shown below.
- Photos can also be **dragged and dropped** to your computer.

Below is a screenshot showing how pictures can be viewed using the **Open with Explorer** feature...

The Project Summary Report:

In every project folder resides a MS Word document. This document is the Project Summary report that includes, but is not limited to, the following information:

- Project description
- Owner contact information
- Stakeholder feedback (Owner, Engineer, Contractor, Public, etc...)
- Costs
- Links to Additional Information

You are encouraged to review the material in the Project Summary Report, including any hyperlinks to **additional information** that is included in the write-up.

Route 70 Bridge over Manasquan River (September 11 Memorial Bridge)

Location	State Route 70 over the Manasquan River connecting Brick Township in Ocean County and the Borough of Brillelie in Monmouth County				
State	New Jersey				
Owner	State				
Year ABC Built	2008				
State ID #	1511-150				
NBI #	1511-150				
Coordinates	Latitude: 40.097222				Longitude: -74.085333
Contact Person	Eli D. (Dave) Lambert III, P.E. Director of Bridge Engineering and Infrastructure Management & State Transportation Engineer New Jersey Department of Transportation Phone: 609-530-4235 Email: Dave.Lambert@dot.state.nj.us				
Mobility Impact Time	ABC: reduced use of off-peak single-lane closures and temporary stoppages		Conventional:		3.5 x longer for cast-in-place pier activities compared to precast piers
Impact Category	Tier 1	Tier 2	Tier 3	Tier 4	Tier 5
Primary Driver(s)	<ul style="list-style-type: none"> reduced traffic impacts reduced onsite construction time improved work-zone safety improved site constructability improved material quality and product durability minimized environmental impacts reduced life-cycle cost 				
Description	<ul style="list-style-type: none"> 724-ft-long and 94.67-ft-wide six-span prestressed bulb-tee girder twin bridges (each bridge has two continuous units: 119 ft – 120.25 ft – 120.25 ft) Urban location Average Daily Traffic count: 32,300 (2005) Traffic management alternative, if constructed conventionally: extended use of multiple off-peak single-lane closures and temporary stoppages <p>Existing Bridge: The existing 18-span single-leaf bascule span bridge was 625 ft long and 56.83 ft wide, with full-height concrete abutments, pile bents and solid concrete piers at the bascule span. It had two 11-ft-wide traffic lanes in each direction, with no shoulders. Built in 1936, the bridge was structurally deficient and functionally obsolete, and required replacement.</p> <p>Replacement Bridge: The bridge is on a regional corridor, which is also a coastal evacuation route, and it crosses a navigable waterway. The replacement bridge is 724 ft long. The vertical clearance from 15 ft to 25 ft, and widens the navigation channel from 50 ft to 75 ft. It has two 12-ft</p>

Alternative Analysis for Project Delivery

**Accelerated Bridge Construction/
Structural Slide and Move
Workshop
December 9, 2013**

Haluk M. Aktan
Western Michigan University
Haluk.Aktan@wmich.edu

PROJECT DELIVERY ALTERNATIVES

Conventional Construction (CC)

ABC - Prefabricated Bridge Elements and Systems (PBES) Assembling

ABC - Self Propelled Modular Transporter (SPMT) Moving

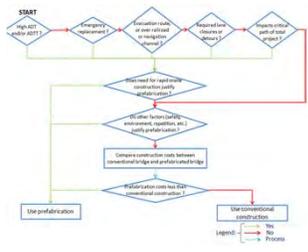

ABC - Bridge Sliding

PROJECT DELIVER ALTERNATIVE ANALYSIS

- Decision-making process to evaluate ABC as a project delivery alternative is evolving:
 - Flowcharts
 - Structured Binary Tables
 - Scoring Models
 - Analytical Hierarchy Process

FHWA - PBES Decision-Making (2005)

DECISION-MAKING PROCESSES

- Bridge Construction Plan (BCP) Evaluation Process 2001
 - Decision is based on *Scoring Model*
 - Assign percentage weights (W_i) to each category
 - Rate the parameters listed under each category on an ordinal scale and summed to a total S_{ij} , A_{ij} , C_{ij} , etc.
 - Calculate the final score " F_j " for each BCP alternative

$$F_j = \sum_i (W_i \times S_{ij})$$

	Strategy	Accessibility	Carrying capacity	Schedule	Budget	Other factors	Total
Weights	W_1	W_2	W_3	W_4	W_5	W_6	100%
BCP #1	S_1	A_1	C_1	T_1	B_1	Q_1	F_1
BCP #2	S_2	A_2	C_2	T_2	B_2	Q_2	F_2
...
BCP #n	S_n	A_n	C_n	T_n	B_n	Q_n	F_n

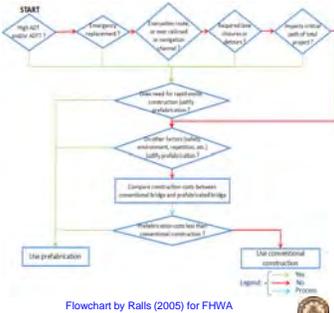

BCP Comparison Objective Matrix
(Source: El-Dinaby and O'Connor 2001)

DECISION-MAKING PROCESSES

■ PBES Decision-Making Model (2005)

- To evaluate the potential and effectiveness of using an ABC for a particular site
- Three sections
- Flowchart
 - Provides an overview of parameters that need to be considered in decision-making

DECISION-MAKING PROCESSES

○ PBES Decision-Making Model (2005)

Question	Yes	Maybe	No
Does the bridge have high average daily traffic (ADT) or average daily truck traffic (ADTT) or is it over an arterial highway, toll-free or urban highway?			
Are the bridge over a national or state highway, or is it on an emergency construction?			
Will it be subject to back-up when using the bridge during construction, or be subject to increased detours during construction of the bridge?			
Is this project an emergency bridge replacement?			
Subject to cost: How far is construction on the bridge during construction?			
Can the bridge be closed during off-peak traffic periods, e.g., nights and weekends?			
Does the bridge have multiple identical spans?			
Can the bridge be grouped with other bridges for economy of scale?			
Will existing construction activities near the bridge be completed quickly enough to enable rapid installation of prefabricated bridge or cast-in-place solution?			
Can alternative for adjacent from project provide site capabilities to allow for prefabrication of components to occur concurrently with the project?			
Do worker safety concerns at the site limit conventional methods, e.g., adjacent project forces or access?			
Is the site an environmentally sensitive area requiring protection (e.g., wetlands, the quality of the air)?			
Is the bridge location subject to construction constraints due to adverse weather, design, etc.?			
Are there existing or scheduled operations of the bridge site that necessitate short construction hour windows or suspension of work for a significant time period, e.g., 24-hour bridge or project forces limiting?			
If the bridge is over a highway for national system of future plans, is prefabrication feasible for replacement/rehabilitation per the requirements of agreement?			
Is the bridge site accessible for delivery of prefabricated components or use of heavy lifting equipment?			

Matrix by Ralls (2005) for FHWA

DECISION-MAKING PROCESSES

■ ABC Decision-Making (2006)

- Decision-making parameters identified thru a survey of 25 U.S. DOTs
- The survey also asked the share of each of 6 major-parameters in the ABC decision-making process, and the significance of the sub-parameters

Parameters and Mean Weights from Survey (2006)

Major-Parameter	Confidence Interval (95%)	Mean percentage weight
Cost	16-31	25
Traffic flow	11-29	20
Safety	11-31	20
Economy	8-18	15
Social	7-16	10
Environment	7-13	10
Total		100

DECISION-MAKING PROCESSES

ABC Decision-Making Model (2006)

○ Evaluation for a specific project

- Each construction alternative is evaluated for its effectiveness: "e" with respect to each sub-parameter
- The total effectiveness under each major-parameter (e_{ix} to e_{6x}) is calculated
- The effectiveness is then multiplied with the major-parameter mean percentage weights (preset weights)
- The resulting vector provides priority percentage of the construction alternatives for that specific project

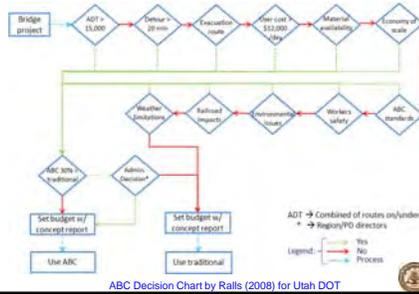

$$\begin{bmatrix} \text{Alternative X} \\ \text{Alternative Y} \\ \text{Alternative Z} \end{bmatrix} = \begin{bmatrix} e_{1x} & e_{2x} & e_{3x} & e_{4x} & e_{5x} & e_{6x} \\ e_{1y} & e_{2y} & e_{3y} & e_{4y} & e_{5y} & e_{6y} \\ e_{1z} & e_{2z} & e_{3z} & e_{4z} & e_{5z} & e_{6z} \end{bmatrix} \begin{bmatrix} w_1 \\ w_2 \\ w_3 \\ w_4 \\ w_5 \\ w_6 \end{bmatrix}$$

Evaluation of Construction Alternatives (2006) for Ohio DOT

DECISION-MAKING PROCESSES

UDOT ABC Decision-Making (2008)

- Extended version of "FHWA – PBES Decision-Making Model"
- The Yes/No option selection was retained; triggering of one Yes on a critical parameter may lead to ABC implementation decision

DECISION-MAKING PROCESSES

UDOT ABC Decision-Making Scoring Model (2010)

- A scoring table and associated flowchart
- One set of parameters utilized rather than grouping under major-parameters and sub-parameters
- Scoring model was utilized
- For a specific site, the values are assigned based on site characteristics (field observation)

ABC rating/parameter: Enter value for each aspect of the project. Attach back-up data if applicable.	
Average Daily Traffic	1 0 No traffic impacts
Condition on and under	1 Low Rate 1000
Rate 1 for Interstate Highways	2 1000 to 10000
	3 10000 to 15000
	4 15000 to 20000
	5 More than 20000
Delay Time	1 0 No delays
	1 Less than 7 minutes
	2 7.5 to 15 minutes
	3 15 to 30 minutes
	4 30 to 60 minutes
	5 More than 60 minutes
Bridge Classification	1 Normal Bridge
	2 Elevated Bridge
	3 Critical Bridge
Clear Costs	1 No clear costs
	2 Less than \$10,000
	3 \$10,000 to \$15,000
	4 \$15,000 to \$20,000
	5 \$20,000 to \$30,000

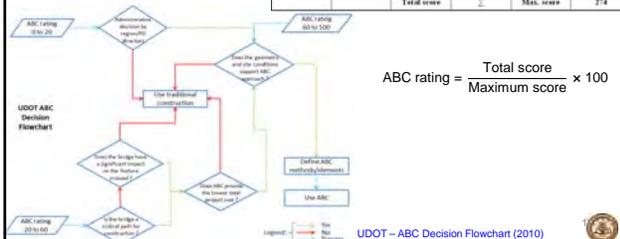

UDOT ABC Scoring Table (2010)

UDOT ABC SCORING MODEL (2010)

- Predefined weights were assigned to each parameter (preset weights)
- The values from field observation are multiplied with preset weights and summed to obtain a total score
- The ABC rating is used in the flowchart to provide the decision

ABC rating	Score	Weight factor	Adjusted score	Maximum score	Adjusted score
Average daily traffic	3X1	10	3X1 * 10	5	50
Delay time	3X2	10	3X2 * 10	5	50
Bridge classification	3X3	4	3X3 * 4	5	20
Clear costs	3X4	10	3X4 * 10	5	50
Economy of scale	3X5	3	3X5 * 3	9	9
Use of optimal details	3X6	3	3X6 * 3	5	15
Safety	3X7	5	3X7 * 5	5	40
Railroad impacts	3X8	5	3X8 * 5	5	25
Weather limitations	3X9	3	3X9 * 3	5	15
	Total score			Max. score	274

$$ABC \text{ rating} = \frac{\text{Total score}}{\text{Maximum score}} \times 100$$

DECISION-MAKING PROCESSES

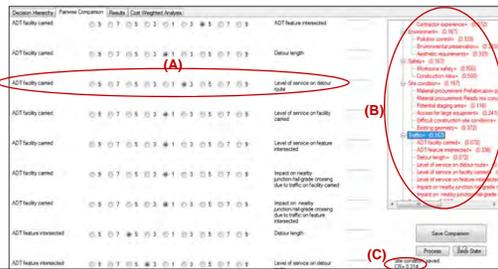

AHP Decision-Making Software (2011)

- Developed by Oregon State University under a FHWA pooled fund study
- Based on Analytical Hierarchy Process (AHP)
- A Microsoft Visual Studio.NET application to evaluate between conventional and ABC alternatives
- The user can: i) edit/view the decision hierarchy, ii) perform pair-wise comparisons, iii) view results, and iv) perform cost weighted analysis

AHP FOR DECISION-MAKING (2011)

- Pair-wise comparisons of unrelated parameters (A)
- Repeated pair-wise comparison steps (B)
- The pair-wise comparison process need to be repeated until AHP consistency ratio (CR) < 0.10 is achieved (C)
- The cost weighted analysis requires neglecting the cost related parameters in the pair-wise comparisons and entering the total project cost instead

OSU – AHP Decision-Making Software (2011)

DECISION-MAKING MODEL

- Requirements for a useful and robust tool
 - Incorporation of project-specific quantitative data
 - Incorporation of life-cycle (LCC) cost data and user cost (UC) models
 - Input from multiple experts for collaborative decision making
 - Automation to improve usability and efficiency of the decision-making process along with addressing the sensitivity of results
 - Decision making method with mathematical validity

IMPLEMENTATION

33

- Stadium Drive (I-94 BR) over US 131 in Kalamazoo County, Michigan
 - Single structure
 - Year built = 1963
 - Length = 236.91 ft
 - Width = 85.30 ft
 - Skew = 5°
 - No. of main spans = 4
 - Max. span length = 81.99 ft
 - Underclearance = 14.83 ft
 - ADT = 29,643 (2007 data)
 - Future ADT = 41,774 (2018 estimate)

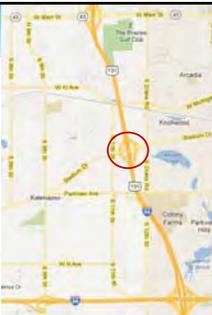

34

IMPLEMENTATION

- Full bridge replacement
- Project delivery alternatives → ABC Vs. CC

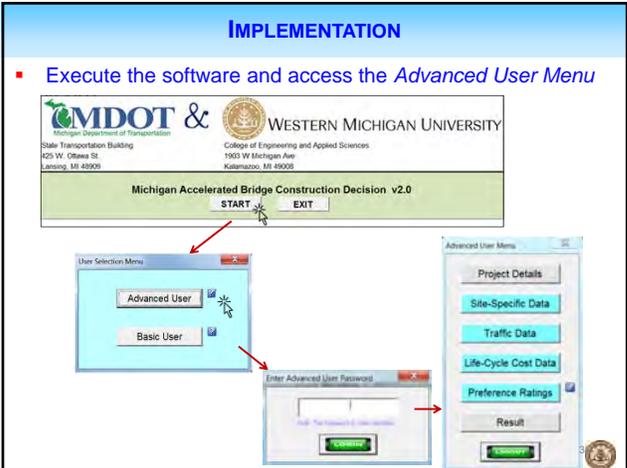

Bridge replacement considerations

- Underclearance ≥ 16.25 ft
- Alignment change
(Requires changing the elevation of the approach, abutments, bent cap(s), and girders)
- Two-exit and two-entrance ramps
(Need to be closed for either staged construction or full closure)
- Project planning
(Recommend *full closure* to resolve project complexities and to improve safety (FHWA2003))
- Ramps closure & construction duration impact
(Significant impact to the stakeholders including the WMU)

IMPLEMENTATION

- Execute the software and access the *Advanced User Menu*

IMPLEMENTATION

- Advanced User enters the Project Information

Project Information

Name: Stadium Drive
 Date: 9/1/2013
 By (advanced user): JBA

Description: I-96 SR over US-131, Kalamazoo County. This is the major route to the Western Michigan University and to two hospitals, Sturgeon and Graham. This is also a major route to Kalamazoo downtown.

Parameter	Rating Significance	Original Scale Rating	Comments Provided by (User-2)	Comments Provided by (User-1)
Initial construction cost	Minor benefit / Highly constrained	8	Cost differential is quite large.	We get federal funds for construction.
User cost	Not significant / Extremely significant	5	ABC really helps reduce user cost	ABC has a significant impact
Life-cycle cost	Not significant / Extremely significant	9	ABC really reduces LCC	ABC significantly reduces LCC
Economic impact on surrounding businesses	Insignificant impact / Economic impact	9	Businesses get LCC'd during construction	Businesses get LCC'd during construction
Work zone traffic risk	Not significant / Extremely significant	7	Just high traffic, the accident risk is high	Compared to similar projects, we can manage it
Construction risks (associated with the proposed ABC technology)	Not significant / Extremely significant	5	Contractor has some experience	Contractor has some experience
Stakeholders' limitation	Not significant / Extremely significant	7	Historic as well as other named businesses will be constrained	A major state to university and other businesses
Environmental protection	Minor / Extremely significant	3	Nothing significant	Requires protection due to use by businesses
Aesthetic requirements	Not a concern / Required	5	Urban area aesthetics important	Not in a historic site
Temporary Closure Limitations	Low / High	4	Medium-high	Medium-high
Cost	Low Potential / High Potential	3	Low potential	No potential

Operational analysis completed! Please use the "Result" option from the Menu to view the result.

IMPLEMENTATION

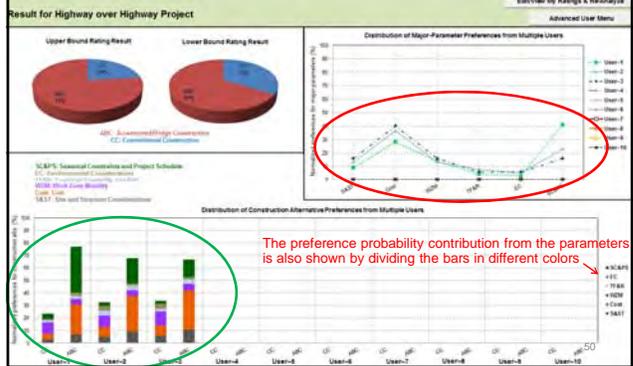

- Click on the **Result** command button

This button will be inactive until the current user clicks **LOGOUT** and the subsequent user logs in.
 Note: This is programmed so that all the user ratings and respective comments are preserved under corresponding user numbers.

IMPLEMENTATION

- Pie charts (Figure-top left) show the upper and lower bound of user data.
- Line chart (Figure-top right) shows the distribution of major-parameter user preferences.
- Bar chart (Figure-bottom) shows *Preference Probabilities* of project delivery alternatives.

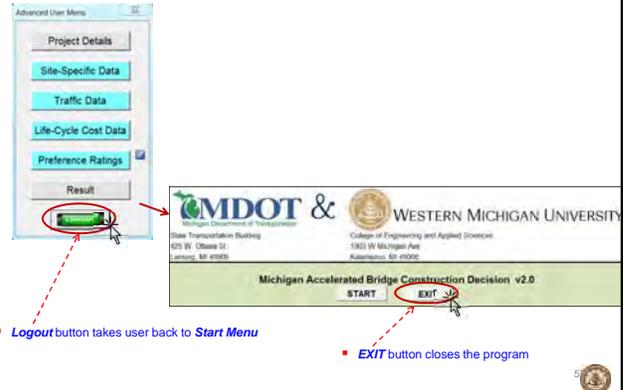

IMPLEMENTATION

- Tabular format of Preference Probabilities Bar Chart

Users or Decision Makers	Construction Alternatives	Site and Structure Considerations (SASC) (%)	Cost (%)	Work Zone Mobility (WZM) (%)	Technical Feasibility and Risk (TFAR) (%)	Environmental Considerations (EC) (%)	Seasonal Constraints and Project Schedule (SCAPS) (%)	Overall Preference (%)
User-1	ABC	10	5	10	10	10	10	20
	ABC	10	10	4	10	10	10	11
User-2	ABC	10	5	5	4	4	10	10
	ABC	10	10	10	10	10	10	10
User-3	ABC	10	10	10	10	10	10	10
	ABC	10	10	10	10	10	10	10
User-4	ABC	10	10	10	10	10	10	10
	ABC	10	10	10	10	10	10	10
User-5	ABC	10	10	10	10	10	10	10
	ABC	10	10	10	10	10	10	10
User-6	ABC	10	10	10	10	10	10	10

User-9	ABC	10	10	10	10	10	10	10
	ABC	10	10	10	10	10	10	10
User-10	ABC	10	10	10	10	10	10	10
	ABC	10	10	10	10	10	10	10

IMPLEMENTATION

- Exit and forward the file to subsequent Basic User.

Logout button takes user back to Start Menu

- EXIT button closes the program

FINAL NOTES

- The decision-making process is based on site-specific data.
- Methodology integrates quantitative data to assist user in qualitative decisions.
- Experts opinions are based on their experiences on “recent projects” and NOT on pair-wise comparisons.
- The AHP consistency of results are assured by Eigenvalue analysis.
- The decision-making model is limited to typical bridges of short and medium span and less than 30° skew.
- The model is being extended to incorporate all ABC alternatives.
