Payment of Additional Sets of Signs for Leap Frog Typical

When a Leap Frog Traffic Typical control method is used during a project to increase productivity and mobility, project offices should pay for two (2) additional sets of temporary signing. For example, the additional sets of signing will keep the operation moving, thus lessening the number of days needed to complete the work.

However, if the Contractor decides to stop working, for a planned stop in production, the Contractor would then have an opportunity to reset the signing without a decrease in production. The additional sets of signing in this case would be used for their convenience, and wouldn't be paid for.
