EDISON SAULT ELECTRIC COMPANY

Original Sheet No. 9.08

M.P.S.C. No. 8

RATE "1" COGENERATION AND SMALL POWER PRODUCTION

Availability

Available to any generating installation with a capacity of 100 kw or less which employs co-generation or other small power production technology utilizing biomass, waste, renewable resources, or geothermal energy as fuel and which meets the Federal Energy Regulatory Commission's criteria for a Qualifying Facility. Purchases shall be covered by contract.

The terms and conditions under this schedule are controlled by the Michigan Public Service Commission's order in Case No. U-6798 dated August 21, 1984, and by the Code of Federal Regulations, Title 18, Part 292.

Terms and Conditions of Service

Interconnection Costs

1. Obligation to Pay

Each qualified facility shall be obligated to pay all in interconnection costs (as defined in Subpart A, Sub-section 18, CFR 292.101 (b) (7) of the FERC Rule) which the Company may assess against the facility on a nondiscriminatory basis with respect to other customers with similar size and load characteristics. Payment of these costs should be in accordance with the reimbursement procedure outlined below.

2. Reimbursement of Interconnection Costs

The qualified facility shall reimburse the electric utility for interconnection costs in the following manner:

- a. The customer shall install, at his expense, the necessary controlling, additional metering, and protective equipment according to specifications of the utility.
- b. Domestic customers desiring electric service as an auxiliary source of power for wind or solar powered generating equipment shall pay all direct costs of controlling and protective equipment necessitated by the presence of a source of power on his premises.

Issued December 28, 2001, by
Donald Sawruk, President
Sault Ste. Marie, Michigan 49783

Effective for Electric Service Rendered
on and after August 22, 1984,
Issued Under Authority of the
Michigan Public Service Commission
Dated August 21, 1984, in Case No. U-6798

EDISON SAULT ELECTRIC COMPANY

Original Sheet No. 9.08-1

M.P.S.C. No. 8

RATE "1" COGENERATION AND SMALL POWER PRODUCTION (continued)

- c. Additional charges to cover the cost of safety equipment and other local facilities installed by the Company shall be determined by the Company for each case and collected from the customer. The customer shall make a one-time payment for such charges upon completion of the required additional facilities. Other local facilities include primary and secondary line extensions, service drops, transformers, conversion from single-phase to three-phase, refusing, etc.

3. Detent Only

For qualifying facilities interested in producing electricity for their own use not wishing to sell energy or capacity to the Company (thereby avoiding the expense of additional metering) the Company will install a detent on the energy meter to prevent reverse rotation during times when the customer's generation may exceed load. The cost of the installation of the detent will be treated as part of the interconnection cost, and no separate additional monthly metering charge will be required.

Monthly Purchase Price

The operating may elect to sell energy to the Company under one of the following options:

1. The average avoided energy cost, or
2. The qualifying facility may enter into an agreement, with a duration of at least four years, for the sale of both capacity and energy. Such an agreement shall provide for a rate consisting of both an energy component and a capacity component for energy delivered to the Company during "on-peak hours" and a rate consisting of only an energy component for energy delivered during all other hours. The energy component shall be the "average avoided energy cost" in either case. "On-peak hours" means those hours within the definition of On-peak Hours in Consumers Energy's then effective Wholesale for Resale Electric Service Tariff. The capacity component shall be equal to the capacity charge per kilowatt of the then effective Wholesale for Resale Electric Service Contract Rate "WR" of Consumers Energy divided by the number of "on-peak hours" in the month in which such energy is delivered. The qualifying facility must agree to the installation, at its expense, of a dual register time-of-day meter.

Administrative Cost Charge

0.10¢ per kwh purchased.

Issued December 28, 2001, by
Donald Sawruk, President
Sault Ste. Marie, Michigan 49783

Effective for Electric Service Rendered

Issued Under Authority of the
Michigan Public Service Commission
Dated August 21, 1984, in Case No. U-6798

EDISON SAULT ELECTRIC COMPANY

Original Sheet No. 9.08-2

M.P.S.C. No. 8

RATE "1" COGENERATION AND SMALL POWER PRODUCTION (continued)

Average Avoided Energy Cost

Average Avoided Energy Cost is the weighted average commodity cost plus fuel and plus synchronization adjustments to the Company by Consumers Energy determined using the most recent Wholesale for Resale Electric Service Contract rate "WR" of Consumers Energy as more fully described in Appendix A to the Settlement Agreement in Case No. U-6798 between the Michigan Public Service Settlement Agreement in case No. U-6798 between the Michigan Public Service Commission Staff and the Company. As noted therein, the average avoided energy cost calculation shall not reflect the weighted value of dump power for qualifying facilities which do not sell energy to the Company for an average period of 35 hours per week during off-peak hours pursuant to a schedule agreed to by the Company.

The Company shall make available, upon request, to co-generators and small power producers, data concerning the present and anticipated future avoided cost on the utility's system. Personnel will be available to explain how to obtain the avoided costs for any particular month.

Notwithstanding anything hereinabove or hereinafter to the contrary, the total rate to be paid a qualifying facility for any kwh of energy delivered to the Company shall not exceed the then applicable total rate per kwh (as calculated on Appendix "C" to the Settlement Agreement in Case No. U-6798) of diesel-generated energy available from Cloverland Electric Cooperative, Inc., under a contract with the Company dated July 1, 1980, as amended, supplemented, or superseded from time to time.

EDISON SAULT ELECTRIC COMPANY

Original Sheet No. 9.09

M.P.S.C. No. 8

RATE "2" COGENERATION AND SMALL POWER PRODUCTION

Availability

Available to any generating installation with a capacity of over 100 kw which employs cogeneration or other small power production technology utilizing biomass, waste, renewable resources, or geothermal energy as fuel and which meets the Federal Energy Regulatory Commission's criteria for a Qualifying Facility. Purchases shall be covered by contract.

The terms and conditions applicable under this schedule are controlled by the Michigan Public Service Commission's order in Case No. U-6798 dated August 21, 1984, and by the Code of Federal Regulations, Title 18, Part 292.

Terms and Conditions of Service

Interconnection Costs

1. Obligation to Pay

Each qualified facility shall be obligated to pay all interconnection costs (as defined in Sub-part A, Sub-section 18 CFR 292.101 (b) (7) of the FERC Rule) which the Company may assess against the facility on a nondiscriminatory basis with respect to other customers with similar size and load characteristics. Payment of these costs should be in accordance with the reimbursement procedure outlined below.

2. Reimbursement of Interconnection Costs

The qualified facility shall reimburse the electric utility for interconnection costs in the following manner:

- a. The customer shall install, at his expense, the necessary controlling, additional metering, and protective equipment according to specifications of the utility.
- b. Domestic customers desiring electric service as an auxiliary source of power for wind or solar powered generating equipment shall pay all direct costs of controlling and protective equipment necessitated by the presence of a source of power on his premises.

Michigan Public Service Commission
Dated August 21, 1984, in Case No. U-6798

EDISON SAULT ELECTRIC COMPANY

Original Sheet No. 9.09-1

M.P.S.C. No. 8

RATE "2" COGENERATION AND SMALL POWER PRODUCTION (continued)

c. Additional charges to cover the cost of safety equipment and other local facilities installed by the Company shall be determined by the Company for each case and collected from the customer. The customer shall make a one-time payment for such charges upon completion of the required additional facilities. Other local facilities include primary and secondary line extensions, service drops, transformers, conversion from single-phase to three-phase, refusing, etc.

3. Detent Only

For qualifying facilities interested in producing electricity for their own use not wishing to sell energy or capacity to the Company (thereby avoiding the expense of additional metering) the Company will install a detent on the energy meter to prevent reverse rotation during times when the customer's generation may exceed load. The cost of installation of the detent will be treated as part of the interconnection cost and no separate additional monthly metering charge will be required.

Monthly Purchase Price

1. Obligation to Purchase

The Company will purchase energy and capacity made available from a qualifying facility under the conditions set forth in 18 CFR 292.303 (a) and 292.304 (d) as described below:

2. Capacity and Energy Rates

Payments for purchases from and rates associated with sales of energy and capacity between the utility and qualifying facilities having a capacity of over 100 kw will be made under negotiated agreements. The capacity rate and energy rates (defined in Appendix B to the Settlement Agreement in Case No. U-6798) will be calculated using the average demand component and energy charges of the then effective Wholesale for Resale Electric Service Contract Rate "WR" of Consumers Energy. For long-term contracts (contracts exceeding 10 years), the Company and the qualifying facility may negotiate rates based on avoided costs associated with building a new power facility or building new transmission lines to obtain additional sources for purchased power. These methodologies and avoided cost data, so established, will be filed with the Commission.

M.P.S.C. No. 8

RATE "2" COGENERATION AND SMALL POWER PRODUCTION (continued)

3. Capacity Purchase Limitations

Capacity purchased from each qualifying facility over 100 kw will be subject to the Company's ability, during any year, to (i) avoid capacity payments from the Company's firm power purchases of (ii) defer capacity additions from planned generation facilities. In the event the Company can no longer avoid capacity from the above sources, the Company may, with the qualifying facility's consent, wheel the qualifying facility's power under a cost plus arrangement (subject to FERC approval and limitations) to other utilities.

Capacity rates for purchases from facilities' construction which commenced prior to November 9, 1978, shall be governed by 18 CFR 292.304 (b) (3). No capacity component will be included in any payments made to qualifying facilities classified as "old facilities" (see 18 CFR Section 292.304 (b) unless (i) substantial proof is shown that the generator and protective equipment have been installed since November 9, 1978, or (ii) substantial proof is shown that (a) the remaining life of the qualifying facilities' equipment is equivalent to "new capacity" and (b) the qualifying facility requires a capacity component to be included in payments made to it for power in order for it to be economically viable or to increase its output.

EDISON SAULT ELECTRIC COMPANY

Original Sheet No. 9.10

M.P.S.C. No. 8

COMPANY SALES TO QUALIFYING COGENERATION AND SMALL POWER PRODUCTION FACILITIES

1. Obligation to Sell

Sub-part C, Sub-section 18 CFR 292.303 (b) and the Michigan Public Service Commission's order in Case No. U-6798, dated August 21, 1984, shall govern the obligation on the part of the Company to sell energy and capacity to qualifying facilities within its service area upon request. Qualifying facilities selling only excess energy or capacity to the utility shall compensate the utility under appropriate rates for: 1) supplementary power, 2) back-up power, and 3) maintenance power where such service is requested of the Company.

2. Rates for Sales

The qualifying facility may elect any of the following options regarding sales made by the Company to such qualifying facility. The election must be made at the time the contract is entered into.

a. Supplemental Power

An operator may contract to purchase power from the Company to supplement his generation. The qualifying facility may receive service under any of the applicable rate schedules currently in effect. A "contract demand" shall be established for such service by mutual agreement between the Company and the operator. The on-peak billing demand shall be the highest 15-minute demand during the on-peak hours, but shall not be less than 60% of the "contract demand" and shall in no case be less than 100 kw. Any on-peak billing demand above the "contract demand" shall be considered as standby service.

b. Original Standby Rate

The qualifying facility may make a monthly payment of \$.60 per kw per day for the highest on-peak demand occurring each day in which standby service is utilized in addition to the otherwise applicable monthly demand charge of the Rate L-G, Large General Service Capacity Charge specified in Company's rate schedule. A maximum demand in kilowatts shall be initially established by mutual agreement for electrical capacity sufficient to meet the maximum standby requirements which the Company is expected to supply. Whenever the standby capacity so established is exceeded by the creation of a greater actual maximum demand, then such greater demand becomes the new standby capacity. The energy charge applicable under this option will be the rate shown for energy charge in Edison Salt Electric Company's Standard Rate Schedule "L-G."

EDISON SAULT ELECTRIC COMPANY

Original Sheet No. 9.10-1

M.P.S.C. No. 8

COMPANY SALES TO QUALIFYING COGENERATION AND SMALL POWER PRODUCTION FACILITIES (continued)

c. Maintenance Power

Standby power for maintenance shall be available to an operator for a maximum of 30 consecutive days once per calendar year upon 90 days' written request by the operator and agreement by the Company as to when the maintenance power will be supplied within the calendar year. At least 60 days prior to the commencement date of the requested period of maintenance power, the Company will notify the operator as to whether it is in agreement with the period of maintenance power. During the period of maintenance power, the charge of \$.60 per kw per day under the Optional Standby Rate shall be waived. The operator will pay the demand charge provided for in Edison Sault Electric Company's Standard Rate Schedule "L-G." The energy charge per kwh applicable under this option shall equal the maximum per kwh charge for any kwh in the "L-G" rate.

d. "On-peak hours" and "on-peak" means or relates to those hours within the definition of On-peak Hours in Consumers Energy's then effective Wholesale for Resale Electric Service Tariff.

POWER SUPPLY COST RECOVERY

A. PSCR Factors:

All rates for metered and unmetered electric service shall include an amount up to the Power Supply Cost Recovery Factor (the PSCR Factor) for the specified billing period as set below. The PSCR Factor for a given month shall consist of an increase or decrease of .01067 mills per kWh for each full .01 mill increase or decrease in projected power supply costs for that month above or below a cost base of 30.4 mills per kWh, rounded to the nearest one-hundredth of a mill per kWh. The projected power supply costs per kWh shall equal the total projected net power cost in that month divided by the sum of that month's projected net kWh generation and net kWh purchased and interchanged.

B. Monthly Reports:

Not more than 45 days following the last day of each billing month in which a PSCR Factor has been applied to customers' bills, the Company shall file with the Commission a detailed statement for that month of the revenues recorded pursuant to the PSCR Factor and the allowance for the cost of power supply included in the base rates established in the latest Commission Order for the Company and the cost of power supply.

C. Annual Reconciliation:

All fuel cost and purchased and net interchanged power revenues received by the Company, whether included in base rates or collected pursuant to a fuel and purchased power cost adjustment clause or a power supply recovery clause, shall be subject to annual reconciliation with the cost of fuel and purchased and net interchange power. Such annual reconciliation shall be conducted in accordance with the reconciliation procedures described in section 6j(12) to (18) of 1939 PA 3, as amended, including the provision for refunds, additional charges, deferral and recovery, and shall include consideration by the Commission of the reasonableness and prudence of expenditures charged pursuant to any fuel and purchased power cost adjustment clause in existence during the period being reconciled.

Should the Company apply a lesser factor than above, or if the factor is later revised pursuant to Commission Order or 1982 PA 304, the Company will notify the Commission if necessary and file a revision.

EDISON SAULT ELECTRIC COMPANY

Original Sheet No. 11.01

M.P.S.C. No. 8

EXPERIMENTAL RENEWABLE ENERGY RIDER

Availability

Available to all customers who elect to pay a premium on their electric usage for the company to obtain electricity from generating sources that are fueled by renewable resources. Customers must enroll to be served under this Rider. Once a customer has enrolled, service will continue under this Rider until the customer terminates the enrollment.

Rate

In addition to the customer's normal energy charge as indicated in the rate schedule under which the customer is served, there will be a renewable adder per kWh based on the level of participation selected by the customer as follows:

<u>Participation Level</u>	<u>Renewable Percentage</u>	<u>Adder</u>
Hydro Base*	40%	0.00 cents per kWh
Hydro Base, plus Renewable Energy	60%	0.41 cents per kWh
Hydro Base, plus Renewable Energy	80%	0.82 cents per kWh
Hydro Base, plus Renewable Energy	100%	1.22 cents per kWh

*The hydro base represents the electricity generated from hydroelectric sources that comprise approximately 40% of total generation resources that the Company already obtains to meet the power supply requirements of its customers. This rider is for customers who desire to have a greater percentage of their electricity generated from renewable resources, such as wind, solar, water, biomass and geothermal.

Conditions of Delivery

In addition to the rate above, all rates and conditions of delivery of the respective rate schedule under which the customer is served are applicable.
