

MPSCS Advisory # 2021 - 01

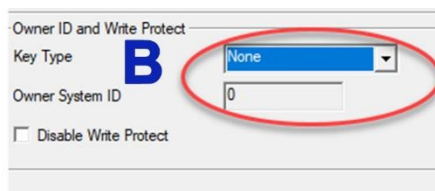

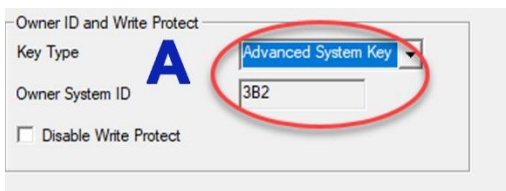

The MPSCS Radio Programming Unit (RPU) is issuing an advisory cautioning against a possible problem with used radios purchased online.

Recently, RPU staff have experienced three different instances of devices that would not successfully accept MPSCS programming because the device was locked with another system key. Without that system key, the device cannot be unlocked when the customer attempts to load the programming.

The accompanying screenshot reading, "Cannot Write to Radio without Advanced Keys" will appear when the customer attempts to load the programming onto a locked radio.

Below are screenshots of the readout if A) the radio is locked; and B) the radio is unlocked.

MPSCS RPU advises agencies to verify with sellers of used radios that the radios have not been previously locked.
