

Riverside Provisioning

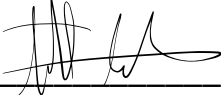

Social Equity Plan

To Whom It May Concern:

Riverside provisioning will be implementing a secure source of product to our patients and recreational users via vertical integration within the establishments over the next few months. Currently we have been at the mercy of medical growers and have not yet increased our prices to our patients to incur the influx in product cost which we at Riverside have incurred. We currently remain consistent with low prices and will not punish our patients due to the lack of resources for medical grade cannabis. Once our vertical integration is completed at Riverside and the grow facilities (medical and recreational) is completed we will be able to provide medical grade and recreational grade cannabis for an amazing \$10 a gram across the board. We will also do our best to bring back the \$200 an ounce special on Tuesdays. We found it to be that the patient could feasibly afford and appreciate the \$200 an ounce price on a regular basis.

Our demographics in Crawford county are at the basis of a low to median income amount based on the consensus. With this information Riverside Provisioning will continue to strive for fair prices and put patients over profits as we have done in the past.

Thank you
