

As of October 2020, the Michigan Department of Environment, Great Lakes, and Energy has collected the following fish samples from the Huron River or nearby lakes. The fillets have been or will be analyzed for PFAS and other contaminants. The Michigan Department of Health and Human Services is evaluating the results for the "Eat Safe Fish" consumption advisories which are based on concentrations of mercury, PFOS, and other contaminants. Anglers should refer to the advice posted on the [Michigan PFAS Action Response website](#) and the [Michigan Eat Safe Fish website](#). ND indicates that PFOS was not detected in the sample. An asterisk (*) indicates that the Pontiac Lake largemouth bass samples were analyzed as whole fish and not as fillets.

Water Body	Location	Latitude	Longitude	Species	Collection Year	PFOS (ppb) Range
Huron River						
Huron River	Pontiac Lake	42.6692	-83.461	Largemouth Bass*	2017	ND - 20.9
