

IRT Updates Version 2.4

Prepared by Joshua Ross 01/12/2018

- 1.) Definitions for 4 project classification definitions included in the “?” help hyperlink on the project form for user reference.
 - a. Reconstruction
 - b. Rehabilitation
 - c. Heavy CPM
 - d. Light CPM
- 2.) A jurisdictions status will be automatically moved to “Complete” when the Asset Management Questionnaire is completed.
- 3.) Improved visibility of “checked” vs. “unchecked” boxes on map layers to better indicate to user whether the layers are on or off (thickened black outline on box). This was a cosmetic fix for usability, not functional.
- 4.) Removed “All Years” option from the Advanced Compliance Report. This will make the reports more concise.
- 5.) Ability to use the identify tool in the IRT map to graphically identify specific road and bridge projects and export those identified projects to a spreadsheet. This will assist users wanting to communicate issues with specific projects to others.
- 6.) Additional filter added to project list to allow user to limit project results based on road name. This will assist users to focus on all projects related to a specific road.
