

# Investment Reporting Tool 2.3 Updates

## In Production 12/20/2017

- Ability to sort project list by **all** fields in addition to Project ID (Open to traffic date, classification, improvement type, status, etc.) for your jurisdiction.
- Toggle option to limit map results to only those selected for map display for your jurisdiction (PASER, Bridges, Projects, etc.). The map will default to only show those for your jurisdiction; toggling the option off will show selected map layers for entire State.
- Improved registration messaging to user. Once a user completes the registration form for the IRT, a more prominent and clear message is now presented to the user.
  - *Example: "You have requested access to the following Jurisdictions (.....). You can now close the application. You should receive a confirmation email indicating your approval status within three business days".*
- Ability to export PASER segments for any jurisdiction to downloadable excel spreadsheet for any identified year.
- Corrected "red colored" aerial imagery errors near county lines.
- Changed color/styling of region and municipal planning regions to be more prominent as well as corrected the issue of multiple labels for the same region. This affects both the map within IRT as well as the Interactive Map accessed from the main TAMC site.
- Adjusted the way that Multiple PASER years' worth of data is displayed on map. The colors are no longer transparent (discoloring the roads under the ratings) and they are defaulted to display with the most current year of PASER over top of the previous years. Previous years can be viewed by turning of more current years.
- Compliance Report updated to show what answer the jurisdiction gave to the asset management questions. **Note: The compliance report is only visible to administrators; not typical end users.**
