

IRT Updates Version 2.6

Version 2.6 released on April 9, 2018

Prepared by Joshua Ross 04/13/2018

- 1.) Help icon with a full explanation added for “Estimated Cost” on the road projects form. This should help to clarify the difference between “Estimated Cost” and actual cost entered in ADARS.
- 2.) On user landing page, message is displayed to indicate total number of projects in IRT as well as how many of those projects have a cost entered in ADARS. This will inform the user how many projects they will need to enter costs into ADARS now or in the future.
- 3.) Instructional text displays to user on IRT map so that when you have PASER ratings turned on, you will need to zoom the map in to a certain zoom level before the ratings will draw. This makes the map more efficiently draw as well as informs the user.
- 4.) Enhanced the colors for PASER buttons on the IRT map to better indicate which PASER years are selected.
- 5.) Changes to the PASER export to include entire county rather than limited to individual jurisdiction ownership. A message will now pop open for the user to view additional information about what is being exported. The “Download Paser” button has also been relocated to a more prominent position to the top right of the IRT map page.
- 6.) Expanded the ADARS report to include a column for project cost. This accommodates a user that enters project cost into IRT and then transfers that information to ADARS and would like to have the cost on a tangible report.
