MINUTES

Investment Advisory Committee Meeting

June 8, 2017

Jon M. Braeutigam Chief Investment Officer Bureau of Investments

INVESTMENT ADVISORY COMMITTEE

The Investment Advisory Committee (IAC) held its quarterly meeting on Thursday, March 9, 2017, at the Bureau of Investments, Great Lakes Conference Room, 2501 Coolidge Road, Suite 400, East Lansing, Michigan.

Members Present:

James B. Nicholson, Chair L. Erik Lundberg Reginald G. Sanders Al Pscholka, DTMB

In attendance from the Department of Treasury:

| Treasurer Nick A. Khouri | Jon M. Braeutigam | Gregory J. Parker |
|--------------------------|--------------------|-------------------|
| Jim Elkins | Peter Woodford | Jack Behar |
| Brian Liikala | Patrick Moraniec | Dan Quigley |
| Travis Haney | Marybeth Gienapp | Woody Tyler |
| Dave Klauka | Giles Feldpausch | Ann Storberg |
| Bob Anderson | Semone James Howes | Marge McPhee |
| Janet Sudac | Lori Barrett | Annette Russell |
| Ann Stange | Lauren Lindemulder | Mark Porrell |
| Others in attendance: | | |
| | | |

| Max Kotary | Tim McEnery |
|---------------------|--------------|
| June Morse | Molly Jason |
| Kerrie Vanden Bosch | Dick Holcomb |

Bill Ryan Paul Lerg Greg Valliere

Call to Order

Mr. James B. Nicholson called the March 9, 2017, IAC meeting to order at 9:30 a.m.

Approval of Minutes of December 15, 2016

 Mr. Nicholson asked for a motion to approve the minutes of the December 15, 2016, IAC meeting. Mr. Reginald Sanders so moved, seconded by Mr. Al Pscholka, there were no objections – motion carried.

Executive Summary Tab – Performance Review

• Mr. Braeutigam discussed performance, reviewing the returns and noting the superb returns versus peers. There was a discussion of the return differences versus the policy benchmark and how difficult it was to hit the policy benchmark over the past year.

- Mr. Braeutigam noted that private equity is hard to benchmark over short periods of time. The S&P 500 +300 basis points (bps) was tough to achieve in 2016, therefore returns lagged the policy benchmark last year.
- Mr. Braeutigam discussed the ten-year returns versus the peer median, which was 5.9% versus 5.3% annualized, and over a ten-year horizon on \$62.2 billion of assets, that equates to an additional \$6.1 billion in assets.
- Mr. Braeutigam noted that the returns versus peers ranked #1 over the past three years, #4 over the past five years, and #2 over the past seven and ten years. He also noted that the volatility over the past three and five years was the lowest within the State Street Peer Universe.

Asset Allocation & Performance Tabs

- Mr. Greg Parker discussed asset allocation changes for the calendar year 2016, noting that exposure to risk and equities was lowered and cash was raised by about \$1 billion. Also, some high yield and international equity was added to round out the trading. The plan is now positioned slightly defensive to the target allocation.
- Mr. Parker discussed a brief overview of his assessment of the markets and economy.
- Mr. Parker noted that in 2016 it was not surprising that rates increased, that high yield was an opportunity (the high yield index returned 16.7% for 2016, beating the S&P 500 return of 11.9%), or that value beat the growth style. He stated that structured credit strategies like RMBS, CMBS and CLOs are attractive relative to other strategies. Mr. Daniel Quigley and Mr. Brian Liikala provided a good summary of what is being reviewed and why the opportunities exist.
- Mr. Parker discussed the U.S. economy, noting it is his opinion it is not doing well, though not that badly either. He believes that they are at full employment, that the consumer balance sheets are healthy, and that housing is a tailwind. Mr. Parker commented that housing prices are increasing mainly because of a lack in supply of houses and of low rates. He discussed that it is still hard for lower credit borrowers to get a mortgage, but even if they could, there are not enough workers to build new houses.
- Mr. Parker noted that globally, Japan is getting some desirable increase in inflation expectations and Europe is improving.
- Mr. Parker discussed the risk side for most asset classes, which have a lower than normal return expectation. He stated that many of the general partners are reluctant to put capital to work on the private side and that valuations for U.S. equities are stretched. Mr. Parker noted that from December 2013 to December 2016 the market is up ~ 30%, all due to multiple expansion and dividends. The median S&P 500 stock is at historically high price to earnings multiples (rivaling 1999).

- Mr. Parker noted that the Domestic Equity portfolio is cheaper than the market and globally credit spreads are low, especially for high yield. He stated rates are rising in the U.S. and the Federal Reserve is on deck to increase rates. He noted concern that the Federal Reserve may raise rates faster than what the market is pricing in today.
- Mr. Parker stated that there is a great deal of complacency in the marketplace. He stated the VIX index is hovering around 20-year lows and that the S&P 500 recently hit a streak of going ~ 56 consecutive days without a 1% change in value. Mr. Parker stated that this is a record that shattered the previous record of 34 days. He also stated that since Brexit and Trump, that the UK market and the U.S. markets are both up double digits.

Guest Speaker – Gregory Valliere, Horizon Investments

Mr. Valliere gave a presentation about economic policy topics and political considerations for the year ahead. He also fielded several questions from BOI staff and IAC Board members.

<u>Review of Investment Reports</u> – Received and Filed

- Absolute and Real Return/Opportunistic
- Domestic Equity
- Fixed Income
- International Equity
- Private Equity
- Real Estate & Infrastructure
- Basket Clause

Closing Remarks

Chairman Nicholson thanked everyone for attending the March IAC Meeting.

Next Meeting Date and Adjournment

The next IAC Meeting is scheduled for Thursday, June 8, 2017. The meeting was adjourned by Chairman Nicholson at 11:00 a.m.

Approved:

James B. Nicholson, Chair

EXECUTIVE SUMMARY

Investment Advisory Committee Meeting

June 8, 2017

Gregory J. Parker, CFA Director of Investments – Public Markets Director of Asset Allocation Bureau of Investments

EXECUTIVE SUMMARY

March 2017

Performance

An overview.

| MPSERS Plan (3/31/17) | 1-Year | 3-Years | 5-Years | 7-Years | 10-Years |
|--------------------------------|--------|---------|---------|---------|----------|
| Annualized Returns | 11.2% | 7.2% | 9.5% | 9.5% | 6.1% |
| Policy Return | 11.6% | 7.5% | 9.7% | 9.7% | 6.3% |
| Percentile Peer Median Return* | 11.2% | 6.2% | 8.2% | 8.6% | 5.5% |

*State Street Universe greater than \$10 billion.

- Over the past three, five, seven, and ten years, the returns are much higher than peer median returns. When compared to the State Street Universe of public pension plans greater than \$10 billion, the returns are among the highest. Perhaps as notable, over the past three and five years, the returns were the least risky, as measured by standard deviation of returns.
- The ten-year return includes the impact of the global financial crisis. Over a very long horizon, since 1979, the annualized rate of return on the plan assets have been approximately 9.3%.
- Compounding even slightly higher than peer returns on \$64.2 billion of SMRS assets, significantly adds up over time. For example, the ten-year annualized return of 6.1% compared to the 5.5% peer median return adds roughly \$6.4 billion of value to SMRS over a ten-year period.
- The returns fell below the policy benchmark over the past year by -0.4%. Many of the asset classes posted results in excess of their performance benchmark, however small allocation differences tipped the performance below the policy benchmark.
- For the year ending March 2017, returns matched the peer median return. Differences in asset allocation compared to peers seemed to even out over this time period. Most asset class returns matched or exceeded peer returns.

Asset Allocation

A low return environment.

- Given the historically low rates of return available in the capital markets for safe, short-term bonds, and in order for the assets to earn the long-term actuarial rate of return of 8%, additional risks (primarily equity risk) must be assumed.
- Liquidity is another fundamental risk assumed and it is managed through asset allocation. The plans have outstanding capital commitments to fund approximately \$10.6 billion in illiquid assets, primarily private equity. In the March 2017 quarter, over \$500 million of new commitments were made.
- The combined systems paid out approximately \$2.1 billion net of contributions over the past twelve months ending in March 2017.
- Nearly every asset class over the past year was a net seller, with the lone exception of international equity which had a net inflow of less than \$20 million. As a result, over the past year in round numbers, the allocation to short-term cash increased by approximately \$1.2 billion. The allocation to domestic equity was reduced by \$1.9 billion, private equity by \$665 million, absolute return by \$350 million, real estate by \$160 million, and real return opportunistic by \$156 million.

Capital Markets

Risk assets in focus.

- Capital market assumptions used for determining strategic asset allocations are being reduced across the board. This is the general opinion for most consultants, investment banks, and other market participants. The reason for this is the low interest rate environment caused by the policies of the Federal Reserve and other central banks, as well as the run-up in prices for most risk assets since the depths of the global financial crisis.
- In the U.S. market, at the end of April 2017, the VIX Index and trailing 30-day price volatility of the S&P 500 Index were both measured in the lowest percentiles going back twenty years.
- At its March 2017 meeting, the Federal Reserve Board voted to raise its key interest rate for the second time in the past twelve months. The market is pricing in the probability of at least two additional rate hikes in 2017. Even with additional Fed tightening, monetary policy is more accommodative today than it was in 2015 when the Fed initially began to tighten.
- Currency has played a major role with the underperformance of international equities compared to U.S. equities as all of the underperformance over the past year has been due to the dollar strengthening.

Economic Backdrop

A pretty good U.S. economy.

- The current economic expansion in the U.S. is into its seventh year, ranking it the fourth longest economic expansion in the past seventy years.
- The jobs market is very healthy. The national unemployment rate is 4.5% and the three-month average figures for initial jobless claims is at its lowest level since 1973. In March 2017, there were 5.7 million job openings in the U.S. according to the Labor Department, just below an all-time record.
- The headline Consumers Price Index hit a level of 2.7% during the first quarter. This is the highest level since 2012.

PERFORMANCE

Investment Advisory Committee Meeting

June 8, 2017

Jon M. Braeutigam Chief Investment Officer Bureau of Investments

Bureau of Investments

Mission Statement

The Bureau of Investments continually strives to provide quality investment management services, broad professional expertise, and independent advice to the State Treasurer as fiduciary of the State of Michigan Retirement Systems, and various Michigan trust funds and the State's common cash.

SMRS Goals

Maintain sufficient liquidity to pay benefits.

Meet or exceed the actuarial assumption over the long term.

Perform in the top half of the public plan universe over the long term.

Diversify assets to reduce risk.

Exceed individual asset class benchmarks over the long term.

** Investment Policy Statement; Annualized Returns

*** Actual investments may differ due to changing conditions and the availability of new information

<u>Overview</u>

Softening the outlook for risk assets.

- Capital market assumptions used for determining strategic asset allocations are being reduced across the board, and especially for safer, publicly traded fixed income securities. This is the general opinion for most consultants, investment banks, and other market participants. The reason for this phenomenon is the low interest rate environment caused by the policies of the Federal Reserve and other central banks, as well as the run-up in prices for most risk assets over the past five years after the depths of the Great Recession.
- Perhaps somewhat surprisingly, volatility in the equity market is extremely low. In the U.S. market, at the end of April 2017, the Vix Index and trailing 30-day price volatility of the S&P 500 Index were both measured in the lowest percentiles going back twenty years. Trailing 30-day price volatility for the MSCI ACWI ex USA Index was also low.
- The broad U.S. stock market return for one year ending March 2017 was 17.7%. Growth in earnings and dividend yield accounted for roughly 6.4% of the return, and the rest due to multiple expansion.
- Within international equities, emerging markets have now outperformed developed markets over the past one year, three, and ten years by 5.1%, 0.7% and 1.4% annualized respectively.
- At its March 2017 meeting, the Federal Reserve Board voted to raise its key interest rate for the second time in the past twelve months. The market is pricing in the probability of at least two additional rate hikes in 2017. Even with additional Fed tightening, monetary policy is more accommodative today than it was in 2015 when the Fed initially began to tighten.

Domestic Equity

Some growth in earnings.

- The broad U.S. stock market return for one year ending March 2017 was 17.7%. Growth in earnings and dividend yield accounted for roughly 6.4% of the return, and the rest due to multiple expansion. Year-over-year earnings growth of U.S. equities has actually averaged close to 0% over the past few years. However, growth in U.S. equity earnings has seemingly resumed as the outsized losses incurred in the Energy sector last year have worked their way through the data.
- Valuation metrics are above average and the absolute returns over the next cycle will not likely be as strong as the historical average of 11 12% year-over-year total returns.
- Over the past year ending March 2017, small-cap stocks significantly out-returned large-cap stocks by 8.6%. Over the past three, five, seven, and ten years, however, large have higher returns than small-cap stocks by 3.0%, 1.0%, 0.8%, and 0.6% annualized respectively. Small-cap stocks continue to look expensive both relative to large caps and in absolute terms.
- Over the past year, value style beat growth by 3.2%, and may be a sign of things to come. Timing
 style factors is difficult at best, however in June 2016 it was remarked that after a ten year period of
 growth dominance, historically value has outperformed growth for the next five years by 10%
 annualized. The relative returns of value stocks still have a long way to go to get back to historical
 averages.

International Equity

Currency impacting returns.

- International equities continue to underperform domestic. Over the past one, three, five, seven, and ten years ending March 2017, the international market index, MSCI ACWI ex USA, underperformed the S&P 1500 index by -4.0%, -9.2%, -8.5%, -8.7%, and -5.9% annualized respectively.
- Currency has played a major role with the underperformance of international equities compared to U.S. equities as all of the underperformance over the past year has been due to the dollar strengthening. Over the past three and five year periods, over half of the underperformance of international equity can be explained by dollar strength.
- Within international equities, emerging markets have now outperformed developed markets over the past one, three, and ten years by 5.1%, 0.7%, and 1.4% annualized respectively. Over the past five and seven years developed has outperformed emerging by 4.7%, and 2.9%.
- International equity small-cap stocks slightly underperformed the broader MSCI ACWI ex USA index last year by -0.5%. However, the returns for international small caps were 1.9%, 2.3%, 2.4% and 1.6% higher over the past three, five, seven, and ten years respectively on an annualized basis. The plan is overweight small caps with an allocation of approximately 27.5%.
- The plan is underweight international equity against a global benchmark (approximately 38% versus 48%) though close to the weight of peers; 16.4% versus 17.3%.
- Based on a price-to-earnings valuation multiple, excluding non-earning companies, developed international equity markets trade at approximately a 15% discount to the U.S. counterparts, while emerging markets trade at close to a 30% discount.

Interest Rates

Rising rates.

- At its March 2017 meeting, the Federal Reserve Board voted to raise its key interest rate for the second time in the past twelve months. The market is pricing in the probability of at least two additional rate hikes in 2017.
- In December 2015, the Fed first began to raise interest rates since the end of the Global Financial Crisis. At that time, the real rate was approximately -0.5%. Today, as inflation has trended higher, the real rate is -1.5%. Meaning monetary policy today is even more accommodative than it was at the first rate hike.
- The 10-year U.S. Treasury ended March 2017 at 2.4%, about 60 basis points (bps) higher than one year prior and in line with the two rate hikes. The curve is a little bit steeper than average, potentially an indicator of continued economic growth.
- During March 2017, spreads on investment-grade corporates are at historic averages while spreads on high yield bonds are about 100 bps tighter than average. The plan continues to sell into the high yield market strength.
- Inflation expectations are finally being priced below historical averages. The ten-year breakeven rates at the end of March 2017 were priced just below 2.0%, and right at the long-term inflation target of the Federal Reserve. This is 80 bps higher than the low point of 2016.
- The Barclays Aggregate Index's sensitivity to changes in interest rates is fairly high. At the end of March 2017, the Index had a modified duration of 6.0.

Real Estate

Rich valuations.

- The publicly traded FTSE NAREIT REITs Index was up 5.3% over the past year ending March 2017, with about 4% of the return due to dividends.
- The REIT Index is priced slightly cheap compared to bonds, while other valuation metrics indicate that the index is very expensively priced. In other words, real estate is not expected to deliver high absolute returns over the longer term. However stretched the valuations have become, timing of the softer than normal returns is tricky.

Commodities

Going nowhere.

- Commodities broadly rebounded sharply in early 2016 but have been mostly flat over the past twelve months ending March 2017. The Thomson Reuters CRB Commodity Index increased more than 20% from the February 2016 lows, and more than 9% from a year ago. However, since the 2008 peak in prices, the index has lost 60% of value and the longer term trend in commodity prices remains to the downside.
- Since its 2008 low, the U.S. dollar has increased in value by more than 40%, though the ascension has not been a steady trip. There have been periods of fierce appreciation, periods of moderation, and periods of steadiness. From March of 2016 through March 2017, the value of the U.S. dollar Increased by a modest 6%.

Economic Overview

A very healthy jobs market.

- The most recent reading of the annualized U.S. GDP growth was 0.7%, below the consensus estimate of 1.0%. Current estimates for 2018 GDP growth for the U.S. is 2.3%. Coincidental economic indicators such as the Institute for Supply Management's Manufacturing and Non-Manufacturing PMI Indexes are well above 50, indicating that the U.S. economy is likely to continue to grow.
- Inflation as measured by the headline Consumers Price Index hit a level of 2.7% during the first quarter of 2017. This is the highest level since 2012.
- The jobs market is very healthy. The national unemployment rate is 4.5% and the three-month average figures for initial jobless claims is at its lowest level since 1973. In March 2017, there were 5.7 million job openings in the U.S. according to the Labor Department, just below an all-time record.
- Sceptics to the health of the employment landscape point to the four decade low in the participation
 rate as evidence of slack in the labor force. Much of the participation rate can be explained by
 changes in demographics and disability. In addition, new research from the Federal Reserve
 suggests that the lower participation can also be explained as miss-measuring new types of
 businesses collectively known as the "gig" economy. Examples of these businesses include
 companies like Uber, Lyft, AirBnB, etc. The study suggests that if these income producing activities
 were considered as jobs, then the labor participation rate for ages 25 to 54 would be at historic
 averages going back to 1990.
- The Federal Reserve Bank of Atlanta tracks wage growth of individuals and the trend in wage growth is accelerating. Its three-month median wage growth hit 3.4% in March 2017.
- Housing prices in the U.S are high. This is good for household balance sheets, but may act as a headwind for household formations. According to the U.S. Bureau of the Census the median sales price of new houses sold in the U.S. is \$315,000, up over 20% from the 2007 peak. Low interest rates make housing as affordable as it has been in the past eight years, but less affordable compared to historical trends going back to the 1980s.
- There are increasing concerns that oil and gas production, particularly from U.S. shale, will increase too much more than offsetting announced OPEC cuts. The Baker Hughes U.S. rig count bottomed in May 2016, however by the end of March 2017 the number of rigs had doubled.

ABSOLUTE AND REAL RETURN REVIEW

Investment Advisory Committee Meeting

June 8, 2017

James L. Elkins Director, Private Markets Short-Term, Absolute and Real Return Division

EXECUTIVE SUMMARY

Performance

| MPSERS Plan | 1-Year | 3-Years | 5-Years | 7-Years | 10-Years |
|------------------------|--------|---------|---------|---------|----------|
| Absolute Return | 10.8% | 2.5% | 5.3% | 4.7% | N/A |
| HFRI FOF Conservative* | 5.1% | 1.6% | 3.2% | 2.7% | N/A |

*One month lag on the index

Strategy Update

- The objective of the Absolute Return portfolio is to diversify the total plans' holdings, targeting returns above investment-grade fixed income with lower volatility than the equity portfolio. The portfolio utilizes a diverse mix of managers that invest both long and short to target specific exposures and hedge out unwanted risk.
- In terms of strategy allocations, we continue to remain cautious on taking material directional risks in the portfolio and continue to shift towards more diversifying, lower net exposures in fundamental and quantitative strategies. We will continue to pursue opportunities across diversifying and credit strategies while bringing the allocation to equity strategies down.
- No new investments were made this quarter.

Market Environment

- Multi-Strategy/Event The strategy performed positively for the quarter and ended the period as the largest overall contributor to performance, with most managers performing consistently over the three-month period. Positive performance was driven primarily by managers with broadbased structured credit books, as well as by managers with exposure to select European equities.
- Credit Performance for credit managers was positive for the quarter, as the strategy closed out the period as a material contributor to performance. Residential mortgage and distressed credit managers contributed more positively to performance than their fundamental credit and tradingoriented counterparts. Managers with meaningful exposure to RPLs and RMBS had a strong quarter, with performance driven by positive carry and cash flow generated by mortgage-backed exposures, as well as by spread tightening.
- Equity Performance for equity managers over the course of the quarter was strong, with the overall strategy finishing the period as the second largest contributor to performance. Overall, fundamental managers fared better than their trading-oriented counterparts. Managers with net long exposure to Consumer Discretionary, Financials, and Information Technology names exhibited positive performance.
- Diversifying Performance for diversifying strategies during the period was mixed, but ended slightly positive for the quarter. Gains were driven largely by emerging market managers who delivered consistent, strong returns throughout the period.

Performance

| MPSERS Plan | 1-Year | 3-Years | 5-Years | 7-Years | 10-Years |
|-------------------------|--------|---------|---------|---------|----------|
| Real Return and Opport. | 11.1% | 8.3% | 10.2% | 9.5% | N/A |
| Custom Benchmark | 7.8% | 7.1% | 7.1% | 7.4% | N/A |

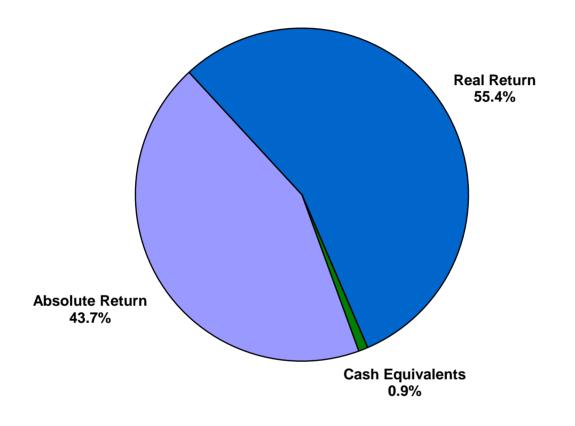

Strategy Update

- The objective of the Real Return & Opportunistic portfolio is to provide an inflation hedge or to gain exposure to attractive opportunities that may not fit in another plan portfolio.
- In terms of strategy allocations, we continue to favor private credit opportunities over equity in most situations due to the expected return for the level of risk.
- The Real Return & Opportunistic portfolio has approximately \$3.3 billion of unfunded commitments. New commitments closed during the quarter include:
 - \$250 million to Kayne Solutions Fund, LP, a debt fund focused on opportunistic and special situations.
 - \$25 million to Renaissance Venture Capital Fund III, LP, a fund of funds focused on venture capital.
 - \$10 million to SJC Direct Lending Fund IA, LP, a secondary purchase of a fund focused on middle market direct lending.

Market Environment

- Senior Secured Credit We expect 2017 to be marked by increased volatility relative to prior years driven by new leadership in Washington, European elections, and central bank activities. While not immune to that volatility, we do believe that the loan asset class should continue to perform well from a fundamental and technical perspective. We expect defaults in the loan market to remain below trend given the lack of any material catalysts to drive a meaningful increase. Technically, loans should continue to benefit from solid demand given their floating rate nature and senior secured status.
- Direct Lending Our managers have been active adding new loans to the portfolio however, capital calls were outpaced by distributions during the quarter as activity during the first quarter of each year tends to be more moderate. Managers continue to have a healthy pipeline of opportunities and expect transactions to progress at a steady pace as we move into the remainder of the year.
- Energy Funds For the quarter, spot WTI crude prices was down 5.8% with long-dated contracts down a similar amount as the resiliency of U.S. shale supply has created doubt that the OPEC production cuts announced in November 2016 will be effective in reducing global inventories back to normalized levels. Spot natural gas prices was down 15.8% as the winter proved to be not as cold as anticipated. Long-dated natural gas contracts were down 2% to 6% for the quarter as the market anticipates production growth to resume in the long-term after production declined in 2016 for the first year since 2005. The STARR division was able to invest additional capital in the space during the quarter at attractive levels and on very advantageous terms. With only approximately 42% of our energy commitments presently invested, a substantial amount of uncalled capital remains ready to capitalize on the opportunities presented by lower oilfield services costs that persist as our managers drill the acreage they leased at distressed prices over the past two years.

FIXED INCOME REVIEW

Investment Advisory Committee Meeting

June 8, 2017

Daniel J. Quigley Senior Investment Manager Long-Term Fixed Income Division

EXECUTIVE SUMMARY

Performance

| Annualized Returns | 1-Year | 3-Years | 5-Years | 7-Years | 10-Years |
|----------------------------|--------|---------|---------|---------|----------|
| MPSERS Plan | 4.3% | 4.1% | 3.7% | 4.6% | 5.4% |
| Bloomberg Barclays US Agg | 0.4% | 2.7% | 2.3% | 3.5% | 4.3% |
| Peer Median Return | 2.7% | 3.3% | 3.3% | 4.6% | 4.8% |
| Percentile Rank vs. Peers* | 29 | 32 | 37 | 52 | 23 |

*State Street Universe greater than \$1 billion

- The outperformance to the benchmark over the past year was due to several key allocation decisions. The portfolio had a shorter duration than the benchmark which helped during the rising rate environment. The portfolio also benefitted from having an overweight in corporate bonds compared to relatively safer RMBS and U.S. Treasury securities as riskier securities generally outperformed.
- In addition, high yield returned 11.4% on a year-over-year (YOY) basis and the structured and global components of the portfolio returned 6.6% and 5.9% respectively. Overall, the externally managed portfolio returned 7.5% YOY, accounting for roughly 75% of the one-year outperformance.

Strategy Update

The goal of the Long-Term Fixed Income Division portfolio is to meet or exceed the returns of the Bloomberg Barclays US Aggregate Bond Index while satisfying the overall characteristics of a core fixed income portfolio; income, liquidity, principal preservation, and diversification from equity market risk.

- The Core-plus strategy implemented to achieve this goal includes:
 - Core: As of the end of March 2017, the allocation to U.S. Treasuries, investmentgrade corporate bonds, government-guaranteed Agency Residential Mortgage Backed Securities (RMBS) and Commercial Mortgage Backed Securities (CMBS) was approximately 64.2%. This includes a 21.1% allocation to U.S. Treasuries, TIPS, and cash.
 - Plus: A strategic, out-of-benchmark, allocation to high-yield corporate debt, securitized credit, and global fixed income strategies as market opportunities allow. This allocation increases the portfolio yield and total return but will result in lower liquidity.

Tactical Update

• The allocation to high-yield strategies was 7.9% at the end of the quarter down from a peak of 14.0% one year prior.

- The allocation to securitized credit, primarily in CMBS, non-agency RMBS, and CLO securities, has increased to 19.0% of the portfolio. The combination of high coupon income (often floating rate) and low duration in these investments is desirable at this point in the interest rate cycle.
- In addition, there is an increased allocation to floating rate securities, including AAA CLO investments and investment-grade floating rate corporate bonds. This allocation accounts for approximately 15% of portfolio assets and should position the portfolio to outperform in a rising interest rate environment.

Market Environment and Outlook

- U.S. Treasury rates increased across the yield curve on a YOY basis. The yield on the 10-year Treasury increased from 1.77% to 2.38% during the past twelve months while 2-year Treasury yields rose from 0.72% to 1.26%. Rising short-term rates were due to 50 basis points (bps) of monetary tightening on a YOY basis from the Federal Reserve. By the end of March 2017, the upper bound Fed Funds rate was 1.0% and markets expect an additional 50 bps of tightening during the remainder of 2017.
- Inflation expectations remain below historical averages, with ten-year breakeven inflation
 expectations ending March 2017 slightly below 2%. With a high degree of conviction, the
 portfolio has maintained an allocation to U.S. TIPS as it is believed that these securities
 will outperform nominal Treasuries should expectations revert to their long-term average.
- Over the previous year, there has been a dramatic recovery in credit, especially in the high-yield market. High-yield spreads ended the quarter at 383 bps, which are over 450 bps lower than the highest levels experienced during 2016. Investment-grade spreads are also lower, tightening roughly 100 bps since February 2016 to 118 bps. This movement has led to strong outperformance in the credit markets over the past year. Because spread levels are below their historical averages, the portfolio has a reduced position.
- The spread on CMBS bonds, particularly on BBB securities, is an area that looks relatively attractive within the fixed income opportunity set. Spreads on BBB securities ended the quarter at 458 bps. These spreads are wide of their five-year average and so the portfolio has increased its allocation to this sector in 2017.

Conclusion

The portfolio remains defensively positioned for rising interest rates. The duration remains short of the benchmark with a focus on intermediate securities. This position is offset through a larger allocation to structured and corporate debt securities which increases the interest income of the portfolio. The strategy is to continue the targeting of these types of investments that offer attractive yield pick-ups for the portfolio as it is likely that price appreciation opportunities are limited in a low-yield environment.

| Percentile Rank vs. Peers* | 30 | 26 | 27 | 34 | 30 |

*State Street Universe greater than \$1 billion

 Total Real Estate and Infrastructure Division (REID) value was \$6.6 billion with a total oneyear return of 8.9%. Outperformance relative to the one-year benchmark was primarily due to REID's strategy to underweight retail and office, and overweight apartments and hotels. This resulted in strong rental income from apartments and hotels, along with appreciation in the medical office and industrial warehouse portfolios. Credit strategies and unique opportunities sourced by staff had realized gains during the period. Global infrastructure investments in North America and Europe also provided above average returns.

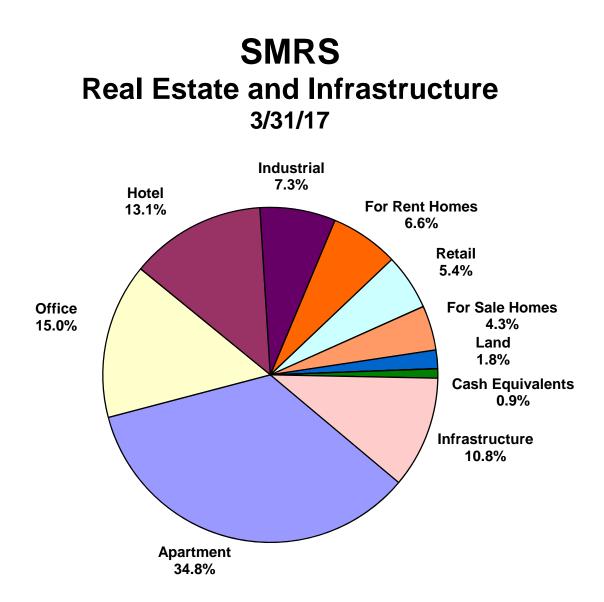

Strategy Update

- REID has been active in the development of urban apartments and warehouses, acquisition
 of properties where REID can add value through management and leasing, and investing in
 various levels of the capital stack through credit strategies. REID has selectively added
 exposure in Europe where value-add opportunities are sourced through managers that
 have an established history and presence in the market.
- The REID has been actively managing the portfolio to reduce risk by selling stabilized assets at attractive capitalization rates where growth in rental income is expected to be limited. The REID has disposed of suburban properties in favor of developing/redeveloping properties in dense urban areas where rent growth and appreciation are strong. The REID is also working with its advisors in executing the disposition of non-strategic properties in secondary markets where illiquidity occurs in periods of slower economic growth.
- The REID has approximately \$1.5 billion in unfunded commitments. New commitments closed during the quarter include:
 - \$40 million in MWT Holdings, LLC, an existing separate account that invests in Class A apartments.
 - \$15 million in Principal Separate Account, for the renovation and re-leasing of an office building located in Minneapolis, MN, managed by Principal Real Estate Investors.
 - \$13 million in RPEP SMRS LLC, for a co-investment in a water line development project in Texas, managed by Ridgewood Private Equity Partners.
 - \$10 million co-investment with Paladin Realty Latin America Investors V, for an investment in shares of a Brazilian office FII (REIT), managed by Paladin Realty Advisors.

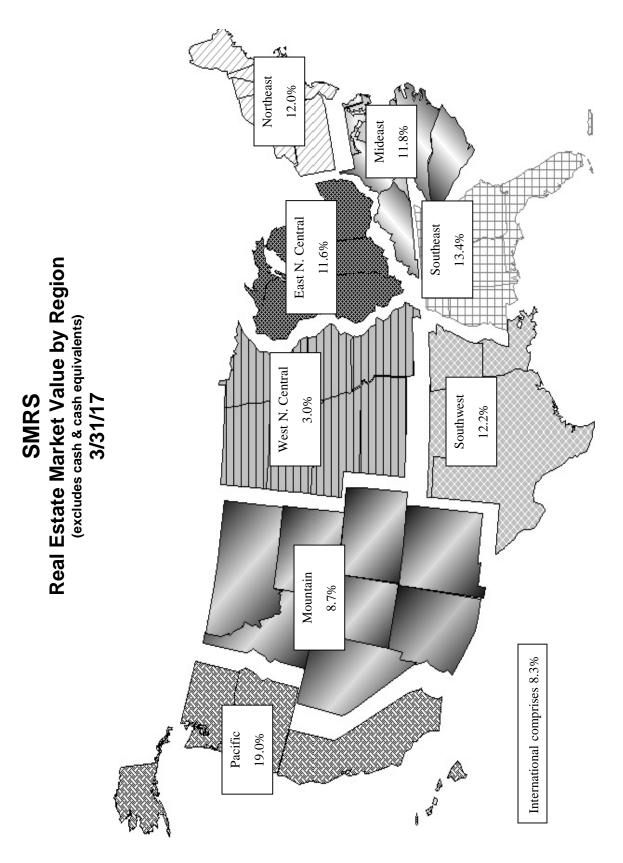

- \$4.5 million in AEW Senior Housing III, a closed-end, commingled fund focused on senior living and memory care properties, managed by AEW Partners.
- The division is being very selective and defensive with new commitments, seeking opportunities that are shorter in duration, deliver more liquidity, produce consistent cash flow, and capitalizing on unique opportunities sourced through REID's extensive network.

Market Environment

- High quality core assets, although still in demand by both domestic and international investors, have seen pricing beginning to level off. Development of condominiums in major urban markets has begun to ease, as supply becomes a concern in a few markets. Industrial warehouse construction fueled by fulfillment centers continues to meet growing demand. Senior housing, self-storage and student housing are attracting more investor attention. Lenders have become more selective in quality and location of the collateral and are disciplined in keeping loan-to-value ratios generally below 65%. The U.S. has eased FIRPTA Rules to reduce federal taxes on foreign investors for real estate investments. This will likely encourage more offshore pension funds to invest in the U.S., although foreign investors are awaiting the new Federal Administration's policies and their effect on the market.
- Fund flows to the infrastructure sector continue to remain strong, as investor interest in the
 asset class continues to grow. Opportunities include North American energy, power
 generation, European transportation, and emerging market fundamental infrastructure
 projects. The industry has gained attention from the new Federal Administration's intent on
 rebuilding U.S. infrastructure, however details on investment legal and financial framework
 are limited and will take time to develop. A tight labor market for construction workers could
 inhibit timing of completions.
- In the commercial mortgage-backed securities (CMBS) market, spreads over the swap rate for 10-year AAA-rated securities decreased 14 basis points (bps) from the prior quarter and now stand at 89 bps. The reduced supply of securities due to risk retention rules caused spreads on high-rated securities to tighten. The lower-rated security spreads remain appropriate for the risk. Commercial Mortgage Alert reported that CMBS issuance is projected to be \$75 billion for 2017, mirroring the \$76 billion in 2016. A wave of refinancing for 2007 ten-year vintage loans is appearing at the same time new banking rules by the federal government are being implemented. This is making it more difficult for borrowers to find adequate financing dollars. However, issuers are hopeful the new Federal Administration will relax these rules, helping regional banks participate. Large banks will continue to be the low risk A note lender (<40% LTV), allowing private non-bank lenders to fill the funding gap, where the REID's credit strategy has focused its attention.</p>

INTERNATIONAL EQUITY REVIEW

Investment Advisory Committee Meeting

June 8, 2017

Patrick M. Moraniec, CFA Senior Investment Manager International Equity Division

EXECUTIVE SUMMARY

Performance

| International Equity, Gross | 1-Year | 3-Years | 5-Years | 7-Years | 10-Years |
|-----------------------------|--------|---------|---------|---------|----------|
| Annualized Returns | 13.9% | 2.4% | 5.9% | 5.1% | 1.5% |
| MSCI ACWI ex USA Returns | 13.1% | 0.6% | 4.6% | 3.8% | 0.4% |
| Peer Median Return | 13.5% | 1.5% | 6.0% | 5.3% | 2.2% |
| Percentile Rank vs. Peers* | 33 | 26 | 57 | 62 | 86 |

*Source: State Street Universe greater than >\$1 Billion

- Stock plus led all three investment categories over the last twelve months with excess returns of 4.5% over the MSCI ACWI ex USA. Excess returns were broad based across both developed, 4.7%, and emerging markets, 4.0%.
- Active investments continued to underperform the benchmark by -1.8%. A contributing factor was portfolio's significant underweight, -7.2%, to emerging markets.

Asset Class Goals

- Construct a non-U.S. equity focused portfolio to generate, on a consistent basis, tenyear returns that exceed the MSCI ACWI ex USA by 1.0%.
- Perform in the top half of the public plan peer universe percentile rankings.
- Advance people, processes and technology to continuously improve risk management systems.

<u>Strategy</u>

- General International Equity portfolio strategy.
 - International Equity Division uses three distinct strategies.
 - Index investments, 30% of assets, to gain broad international stock market exposure.
 - Stock plus investments, 32% of assets, to implement a portable alpha strategy.
 - Active investments, 38% of assets, to gain specific international stock market exposure.
 - Company data are aggregated, categorized, filtered and statistically measured to identify investment opportunities across 46 countries, 4 regions, 11 sectors and 6 factors: quality, value, momentum, dividend yield, volatility and size.
 - Quantitative, fundamental and technical processes are used to determine a risk budget and to allocate capital across investment opportunities.
- Quarterly changes to International Equity Division allocation.
 - Allocated \$100 million increasing exposure to quality factor.
 - Total portfolio exposure to quality is in line with the MSCI ACWI ex USA.
 - Increased allocation to build existing relationship with external manager and to increase exposure to quality.

- Quality companies tend to exhibit lower volatility and potentially higher rates of compounding over long investment horizons.
- Moved capital from a developed market index to an active external manager.
- Allocated \$45 million increasing exposure to emerging markets.
 - Portfolio is underweight emerging markets by approximately 2.9%.
 - Valuation data indicates emerging markets remain statistically cheaper than developed markets.
 - Moved capital from internal developed markets stock plus to internal emerging markets stock plus.
 - Underweight remains and plans are in place to further reduce the underweight in the coming quarter(s).

Market Environment and Outlook

- MSCI ACWI ex USA trailing 12-month price-to-earnings ratio is 18.3, slightly lower than the 20-year average of 19.2.
- Forward looking total return on an annualized basis for the MSCI ACWI ex USA index is estimated to be approximately 8.3%. This assumes an 11.5% ROE, in line with the 20-year index average, long-term developed markets growth of 2.5%, and long-term emerging markets growth of 5.0%.
- Countries with ten-year bond yields below 1.3% currently make up approximately 60.0% of the benchmark, e.g., Japan 0.0%, United Kingdom 1.2%, France 0.8%, Germany 0.4%, and Switzerland 0.0%.
- A ten-year blended international government yield of 1.8% implies an international equity risk premium of 6.5%. International bond rates are significantly lower than the United States ten-year note at 2.4%.
- Emerging market valuation spreads remain wider than developed markets despite price appreciation in many emerging markets over the last twelve-months. In addition, the average emerging market company multiple relative to history remains at a larger discount than developed market companies.
- Emerging market factor valuation spreads have decreased in the last twelve months across the six factors. Emerging market valuation spreads, relative to developed market spreads, still remain wider for the majority of factors, indicating broad based value in emerging markets.
- The U.S. dollar peaked in January 2017 and has weakened through the first quarter of 2017. A continuation of this trend in 2017 potentially presents a tailwind for international investment returns.

Conclusion

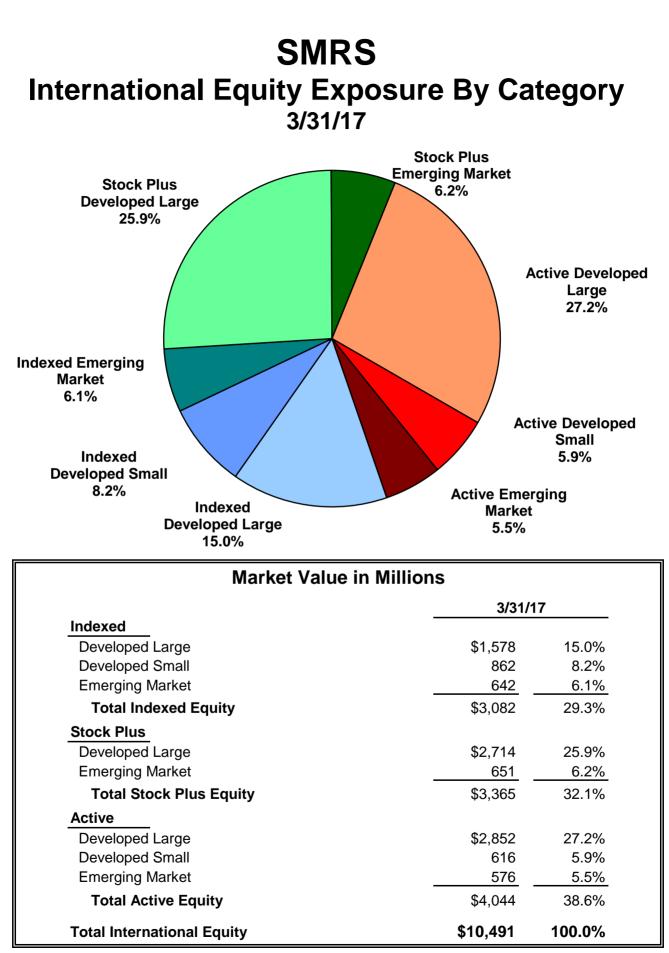

International equity markets continue to offer an attractive equity risk premium relative to international ten-year government bonds. Emerging markets are particularly attractive due to wider valuation spreads and further reduction of the portfolio's underweight potentially increases return while reducing tracking error.

DOMESTIC EQUITY REVIEW

Investment Advisory Committee Meeting

June 8, 2017

Jack A. Behar, CFA Senior Investment Manager Domestic Equity Division

EXECUTIVE SUMMARY

Performance

| Total Domestic Equity, Gross | 1-Year | 3-Years | 5-Years | 7-Years | 10-Years |
|------------------------------|--------|---------|---------|---------|----------|
| Annualized Returns | 16.6% | 9.2% | 13.1% | 12.4% | 7.5% |
| S&P 1500 | 17.7% | 10.3% | 13.3% | 13.0% | 7.7% |
| Peer Median Return | 17.4% | 9.2% | 12.7% | 12.3% | 7.3% |
| Percentile Rank vs. Peers * | 62 | 46 | 32 | 46 | 33 |

*State Street Universe greater than >\$1 Billion

- Domestic Equity outperformed its peer group over three, five, seven and ten year periods, while underperforming during the past year. Based on a recent assessment by Aon-Hewitt, the Domestic Equity Portfolio is estimated to have a 15-20 basis points (bps) cost advantage over its peers, further widening its outperformance gap over the past three and five years.
- Like many active managers, the Active Domestic Equity Portfolio has struggled to outperform the S&P 1500 over the past few years, impacting longer term benchmark performance comparisons.
 - Two years ago at this time, the portfolio was outperforming the S&P 1500 over one, three, seven and ten year time periods. Longer term numbers can and do change quickly because of shorter term performance.
 - A long-term investment horizon is required to have a successful active manager program. Research has shown that most managers that ultimately outperform go through significant periods of underperformance along the way.
 - Two thirds of successful managers experience three consecutive years of underperformance along the way to long-term outperformance.
- Weak relative performance over the past year was in large part due to driven holdings in Verizon Communications, Gilead Sciences and CVS Health. All three of these companies are a force in their respective industries, earn returns on equity at or well above the market's 14.5% long-term average, and yet are priced at a 25%-50% discount to the market multiple.

Asset Class Goal

To provide the SMRS with long-term U.S. equity market returns or better by investing in a diversified and attractively valued portfolio at a low cost.

Strategy Update

• SMRS has both an index-like cost structure and a value orientation, both of which are predictors of future relative performance according to academic studies.

- In addition, SMRS has begun the process of hiring specialized managers for the purpose of achieving a more consistent relative performance. The goal is to shift the active management performance curve up, such that periods of outperformance are more frequent and periods of underperformance less so.
 - In March of 2017, an options-based overlay program, managed by Mellon Capital, was added to the portfolio. The strategy has delivered excess returns over the S&P 500 of 300 bps since its inception in 1987, and it has done so with relative consistency.
 - At its current allocation, it is estimated that this program can add 20-40 bps per year to annualized returns.
 - The use of low cost portable alpha strategies is also being researched.
- With the addition of Mellon Capital, the domestic equity portfolio would outperform the S&P 1500 by ~12% were it to appreciate to the market multiple of 18x from where it stands now at 16x. It is expected for the multiple to at least partially converge with that of the S&P 1500 over the next five years.
 - Moreover, the portfolio has a higher dividend yield than the benchmark generating \$40 million more per year in cash - alongside measurably higher rates of capital reinvestment.
- The domestic equity portfolio remains overweighted to both the financial sector and to defensive stocks and underweighted to commodity related exposure.
- If PE ratios do not converge, we expect long-term outperformance based on a higher net dividend yield (dividends + buybacks) than the benchmark alongside higher rates of earnings reinvestment.

Market Environment and Outlook

- At ~20x normalized levels of earnings, equity markets are on the rich side relative to history, but still reasonably priced for an environment where bond yields stay low. Price to earnings multiples should be higher than their historical average in an environment where bond yields are lower than they have been historically.
- Assuming 4.5% long-term expected earnings growth (roughly in-line with nominal GDP), and the market's average long-term return on equity of 14.5%, the S&P 1500 is expected to pay out 70% of its earnings.
 - This equates to a 3.4% total shareholder yield, or 1.4% in share count reductions via buybacks on top of the current 2.0% S&P 1500 dividend yield.
 - The market is thus poised to return an estimated 7.9% (3.4% shareholder yield plus 4.5% earnings growth) in an environment where multiples do not change.
- This compares favorably to the 30-year U.S. Treasury at 2.7%, and unfavorably to the historical compound annual return for the S&P 500 from 1928 2016 of 9.5%.

PRIVATE EQUITY REVIEW

Investment Advisory Committee Meeting

June 8, 2017

Peter A. Woodford Senior Investment Manager Private Equity Division

EXECUTIVE SUMMARY

Performance

| MPSERS Plan | 1-Year | 3-Years | 5-Years | 7-Years | 10-Years |
|----------------------------|--------|---------|---------|---------|----------|
| Annualized Returns | 10.1% | 10.9% | 13.7% | 14.3% | 11.4% |
| Benchmark Return | 15.2% | 12.1% | 17.8% | 16.8% | 11.2% |
| Peer Median Return | 10.1% | 8.3% | 10.7% | 11.4% | 8.2% |
| Percentile Rank vs. Peers* | 53 | 17 | 11 | 9 | 7 |

*State Street Universe greater than \$1 billion

- Private Equity returns have been strong relative to peer median returns, ranking in the top 7% of peers over the past ten years.
- It is not unusual for private equity returns to lag the public market benchmark return in up markets and lead the public market benchmark in down markets. The past seven years have been no exception due to market volatility and the third longest expansion in U.S. history. However, over the past ten years, a full market cycle, the Private Equity Division has delivered 3.9% annualized excess returns over the S&P 500 (ten year S&P 500 return 7.5%).

Strategy Update

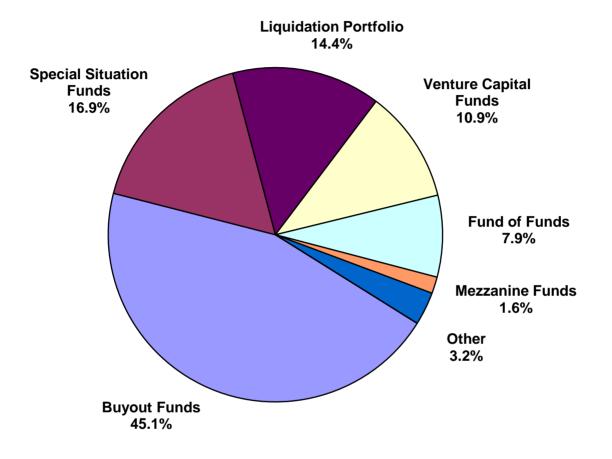

For the twelve months ending 3/31/17, the Private Equity Division returned approximately \$665 million, net of contributions, to the pension fund. Although the pace of distributions has slowed, distribution activity should remain healthy as long as the economic recovery continues. General Partners are incentivized to exit investments at current valuations.

The strategy for the next twelve months will focus primarily on existing sponsors raising successor funds. This will be a combination of both buyout funds and venture capital funds seeking new commitments. The Private Equity Division has also tilted slightly towards middle market buyout funds in an attempt to diversify its exposure to mega funds. Co-investments will play an increasingly important role in both averaging down costs and targeting specific investments with attractive risk/return characteristics. An effort to consolidate the portfolio to gain scale and improve performance is in the planning stages.

- Commitments closed during the fourth quarter include:
 - \$100 million to Genstar Capital Partners VIII, a middle market buyout fund
 - \$35 million to The Huron Fund V, a lower middle market buyout fund
 - \$6.2 million for a secondary acquisition of TCW/Crescent Mezzanine Partners (various funds)

Market Environment

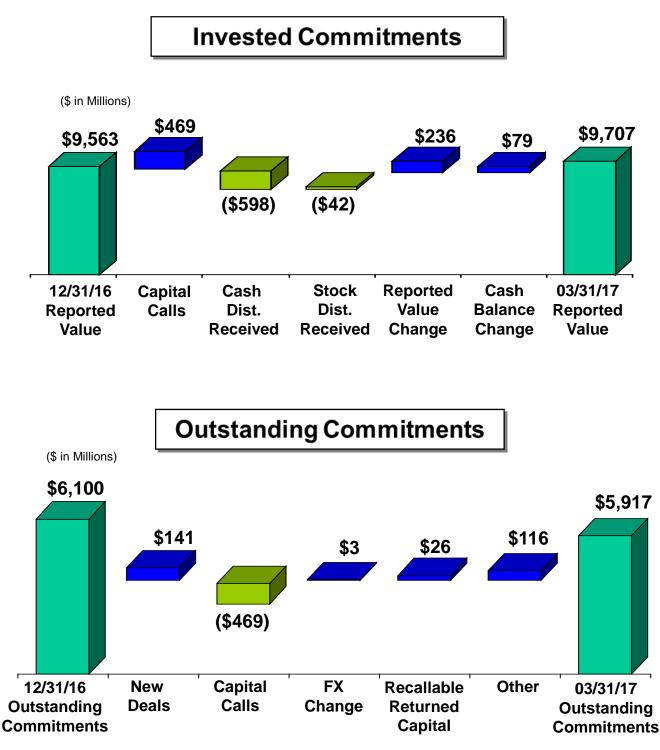

- Private equity investment activity remains muted due to high entry multiples, macroeconomic uncertainty and concerns over market volatility. Private equity valuations were impacted by the continued fallout from the Brexit referendum in June of 2016, the contentious elections in the U.S and France, recent and anticipated Fed rate hikes and the forthcoming election in Germany.
- The Federal Reserve's low interest rate policies and global stimulus have made it
 exceedingly difficult to invest money into new deals at attractive entry prices. As a
 result, private equity sponsors have sat largely on the side-lines or have been forced
 to evaluate non-traditional opportunities to put money to work. According to Preqin,
 private equity assets under management was \$2.49 trillion, as of June 2016, an alltime high. Dry powder held by private equity funds was \$820 billion as of December
 2016. Twenty-six percent of the aggregate capital raised and closed in 2016 is held
 by 10 funds. There appears to be a significant amount of consolidation taking place
 within private equity.
- The sell side has been active for the same reason that the buy side has been muted; particularly an environment of lofty valuations and low interest rates. This is clearly still a seller's market. Thirty percent of fund managers queried by Preqin expect exit activity to increase in 2017, while forty-six percent expect it to remain at current levels. That said, distributions have been slowing. Furthermore, increased regulation aimed at limiting risky lending by Wall Street Banks has reduced the amount of debt available, forcing private equity firms to contribute more equity. Looking forward, high entry multiples along with interest rate hikes and multiple compression on exit, will likely diminish returns for private equity.
- Deal pipelines remain robust with some of the best investment opportunities seen in years. However, private equity firms are paying rich multiples for growth companies and unlevered cash flows. The Private Equity Division will remain opportunistic and continue to focus on co-investments, direct secondaries, commingled funds and other market driven opportunities.

State of Michigan Retirement Systems

BASKET CLAUSE REVIEW

Investment Advisory Committee Meeting

June 8, 2017

Karen M. Stout, CPA, CGFM Administrator Trust Accounting Division

SMRS Basket Clause Investments 3/31/17

| Asset Class | Value |
|-------------------------------------|------------------------|
| Total Absolute Return | \$4,060,597,845 |
| Total Real Return and Opportunistic | 934,662,992 |
| Total International Equity | 283,408,680 |
| Total Long-Term Fixed Income | <u>60,169,834</u> |
| Total Basket Clause Investments | <u>\$5,338,839,351</u> |

The basket clause investments at March 31, 2017, were \$5.3 billion or 8.3% of the total portfolio value of \$64.2 billion.

The Public Employee Retirement System Investment Act, 1965 PA 314, MCL 38.1132 *et seq*, authorizes the State Treasurer to invest up to 30% of the system's assets in investments "not otherwise qualified under the act." MCL 38.1140d(1). Commonly referred to as Section 20d (after the authorizing section of PA 314) or Basket Clause investments, this provision gives the State Treasurer the flexibility to take advantage of market opportunities not specifically authorized in PA 314 while conserving protections against imprudent investment.
