Highlights

The labor force participation rate is a measure of the labor force as a percent of the 16+ civilian non-institutional population. During the latter half of the twentieth century, the labor force participation rate increased dramatically, largely driven by an increasing number of women joining the labor force. Since 2001, the rate has steadily declined, exacerbated by the 2001 and 2008 recessions. The labor force participation rate in Michigan remained unchanged over the month.

Highlights

The U-6 is an alternative measure of labor underutilization. The U-6 includes the total unemployed, plus all marginally attached workers (individuals who have given-up looking for work), plus total employed part time for economic reasons, as a percent of the civilian labor force plus all marginally attached workers. By definition, the U-6 is higher than the U-3, the official unemployment rate. In Michigan, the U-6 measured 12.0 percent for the twelve month period ending third quarter 2015, the lowest rate since before the beginning of the Great Recession. The U-6 for the U.S. is 10.8 percent.

#Δ / Year	9,519
%Δ / Year	▲ 4.5%
Gross Job Losses	186,360
#Δ / year	-7,032
%Δ / year	● -3.6%

Highlights

Gross job gains are the sum of increases in employment from expansions at existing establishments and the addition of new jobs at opening establishments, with zero employment in the third month of the prior quarter. Gross job gains for 4th quarter 2014 were higher than the prior year by 4.5 percent job growth from business expansions.

Gross Job Losses are the result of contractions in employment at existing establishments and the loss of jobs at closing businesses, with positive third month employment in the prior quarter and none in the current quarter. Gross job losses in the 4th quarter 2014 were down by 3.6 percent over the year primarily due to fewer job losses from business contractions.
