FURNISH AND INSTALL:

ITEM 37

- 1) VERSALIFT TMD-4050-T Insulated derrick with Turret
mounted winch including the following items:

Boom assembly consists of the lower boom, intermediate boom, upper boom, and extension system. The lower boom is constructed of high strength steel forming a 9.75 x 12.75 rectangular section. The intermediate boom is constructed of high strength steel forming an 8 x 10.13 rectangular section. The upper boom is constructed of high strength, filament wound, epoxy resin, fiberglass with a 7 x 9 rectangular section and incorporates a fiberglass tip.

The extension system includes two double-acting hydraulic cylinders. Each cylinder incorporates dual counterbalance holding valves.

Boom lift cylinders are dual double-acting cylinders equipped with dual counterbalance holding valves and self-aligning spherical bearing. Each cylinder is capable of fully supporting the rated lifting capacity of the derrick.

Turntable is constructed from 5/8 plate wings and a 1.5 thick base plate. The base plate is machined flat to support the rotation bearing.

Rotation drive consists of a hydraulically driven worm and spur gear acting on a shear ball rotation bearing. The gearbox incorporates a load sense feature to measure the side loads applied to the boom. 15,000 lb. maximum capacity turntable winch consists of a worm gearbox, hydraulic motor, holding valve, and drum. At 40 GPM flow, the winch provides an average line speed of 35 fpm.

Hydraulic overload protection is purely hydraulic and uses no electronics or electrical components. The system senses the boom lift cylinder pressure and side loads at the rotation gearbox. When an overload condition is detected, the system disables the following: digger dig, winch raise, boom lower, upper boom extend, and intermediate boom extend. Transferable pole guide can be pinned to

either the inner boom tip or the intermediate boom.
The pole guide includes hydraulic tilt and hydraulic
operation of the pole claws. Holding valves are included to lock both
cylinders in position.

Pole guide interlock prevents inner boom from extending unless either
of the following conditions is satisfied: 1. The pole guide tilt is fully
raised. 2.Or the pole guide is properly pinned to the upper boom.
Continuous rotation is continuous and unrestricted in either direction.
Pins, bearings and lubrication - The main pivot and cylinder joints use
high strength hard chrome plated steel pins with fiberglass reinforced Teflon
non-lube bearings.

Open center hydraulic system uses a tandem gear pump system which
supplies a combined 40 GPM for the digger and winch circuits and 15 GPM
for the boom functions.
50 gallon bulkhead mount reservoir includes cleanout, 10 micron return
filter that can be replaced without draining the reservoir, dipstick,
100 mesh (149 micron) suction screen, gate valve, and magnetic drain plug.

Fiberglass insulation is certified for 46kV and below in accordance
with ANSI A10.31 dielectric rating requirements.
52 in. tall pedestal is a fabricated steel structure incorporating a
1.5 thick top plate which is machined flat to support the rotation bearing.
Sub-frame is full length and constructed of 6 x 6 square tubing and
5/16 plate.

Main outriggers are designed and constructed from high-strength steel.
At maximum extension the outriggers provide 158 of spread and 7.9 of
penetration based on a 40 frame height. Outriggers are equipped with pilot
operated check valves, internal thermal relief valves, and separate operating
controls for each outrigger. Slide pads at each leg ensure smooth operation.
The standard pivot feet swivel a minimum of 10 degrees each way.

Auxiliary A-frame outriggers are designed and constructed from
high-strength steel. At maximum extension the outriggers provide 151"
of spread and 6.1" of penetration based on a 40" frame height. Outriggers
are equipped with pilot operated check valves, internal thermal relief

valves, and separate operating controls for each outrigger. Slide pads at each leg ensure smooth operation. The standard pivot feet swivel a minimum of 10 degrees each way.

Outrigger boom interlock system is designed to prevent the boom from operating until the outriggers contact the ground. It also prevents the outriggers from being retracted before the boom is properly stowed. Outrigger motion alarm will sound while the outriggers are in motion. Riding seat lower controls with T handle consists of a turntable mounted deck, seat, access ladder, and control console. Includes full pressure, full flow hydraulic controls with a single handle joystick for boom raise-lower, rotate, and intermediate boom extend-retract. Additional hydraulic valve levers are included to control winch, dig, upper boom extend, pole guide tilt, and pole claw open-close.

Digger assembly consists of the digger hanger (which is automatically transferred from the lower boom to the intermediate boom when the auger is unstowed) and the auger stow bracket includes an over-stow protection valve. Winch line is 1 diameter x 100 ft. Stable Braid
8.5 ton rated swivel hook
Digger drive is two speed 12,000/3,000 ft-lb. with 2-5/8 in. hex 72 in. Kelly Bar (auger extension) for 2-5/8 hex drive to 2-5/8 auger
Auger - 18 in. auger with Rock Ripper Head
Auger stow sling with 7/8 diameter synthetic rope.
Digger/winch pressure gage on the lower control panel senses the pressure generated while using the digger and winch.
Boom load indicator gauge on the lower control panel senses the pressure generated in lower boom cylinders as a percentage of maximum.
Custom load capacity chart.
Engine start/stop control operated by a toggle switch at the lower controls. Throttle control is variable speed foot operated pedal used to control the engine speed from the lower control station.

Tool/Pole puller tool circuit consists of a hydraulic sectional valve with integrated adjustable flow control and pressure relief. The 3-position control valve allows operation of a tamper or pole puller, while still allowing operation of the digger at the same time
Complete unit is primed and painted prior to assembly. The standard

FURNISH AND INSTALL:

ITEM 52 CONTINUED PART 2:

1) PP20 20YD PowerPak (Flat Tailgate)

Simple yet robust, the PowerPak is available with an air-over-hydraulic system with a programmable logic controller.
This 3rd generation PLC features a rugged mobile controller that can handle the severe shock and vibrations that refuse trucks experience. Many of our competitors instead use a delicate printed circuit board designed for industrial PLC systems.

Contract No. 240000000168

Agricultural, Grounds, Turf, Earth Moving, and Roadside Maintenance Equipment

SCHEDULE B PRICING MATRIX

1. The Contractor must provide a pricing schedule for the proposed Contract Activities using Microsoft Excel. The pricing schedule should be submitted in a modifiable format (e.g., Microsoft Word or Excel); however, you may also submit an additional pricing schedule in a non-modifiable format (e.g., PDF). Failure to complete the pricing schedule as requested may result in disqualification of your proposal.
2. Price proposals must include all costs, including but not limited to, any one-time or set-up charges, fees, and potential costs that Contractor may charge the State (e.g., shipping and handling, per piece pricing, and palletizing).
3. The Contractor is encouraged to offer quick payment terms. The number of days must not include processing time for payment to be received by the Contractor's financial institution.
Quick payment terms: __n/a__ % discount off invoice if paid within _____ days after receipt of invoice.
4. By submitting its proposal, the Contractor certifies that the prices were arrived at independently, and without consultation, communication, or agreement with any other Contractor.
5. All items below for PURCHASE shall be evaluated based on a single purchase at each prosperity region (13 single purchases). If delivery pricing is per mile, the delivery cost shall be calculated from the nearest dealer location to the estimated central location of each region. Mileage is calculated one way.
 - a). (Purchase price x 13) + (Delivery cost at all 13 prosperity regions) + (13 Hours of training) or
 - b). (Purchase price x 13) + (Mileage rate x mileage from nearest dealer to each estimated central prosperity region) + (13 Hours of training)
6. All items below for RENTAL shall be evaluated based on a combination of a single daily, weekly, and a monthly rental in each prosperity region. Delivery and pickup shall be calculated for each single rental (13 x 3 = 39 single purchases). If delivery/pickup pricing is per mile, the delivery/pickup cost shall be calculated from the nearest dealer location to the estimated central location of each region. Mileage is calculated one way for each pickup and delivery.
 - a). (Daily rental price x 13) + (Delivery and pickup cost at all 13 prosperity regions) + (Weekly rental price x 13) + (Delivery and pickup cost at all 13 prosperity regions) + (Monthly rental price x 13) + (Delivery and pickup cost at all 13 prosperity regions) or
 - b). (Daily rental price x 13) + (Delivery and pickup mileage rate x mileage to and from nearest dealer to each estimated central prosperity region) + (Weekly rental price x 13) + (Delivery and pickup mileage rate x mileage to and from nearest dealer to each estimated central prosperity region) + (Monthly rental price x 13) + (Delivery and pickup mileage rate x mileage to and from nearest dealer to each estimated central prosperity region)

7. Refer to "Standard Contract Terms", section 7, regarding administration fee.
